EX-PRESIDENT GROVER CLEVELAND.

THE REVIEW OF REVIEWS.

VOL. VI.

NEW YORK, AUGUST, 1892.

No. 31.

THE PROGRESS OF THE WORLD.

*Our
Tedious
Campaigns.*

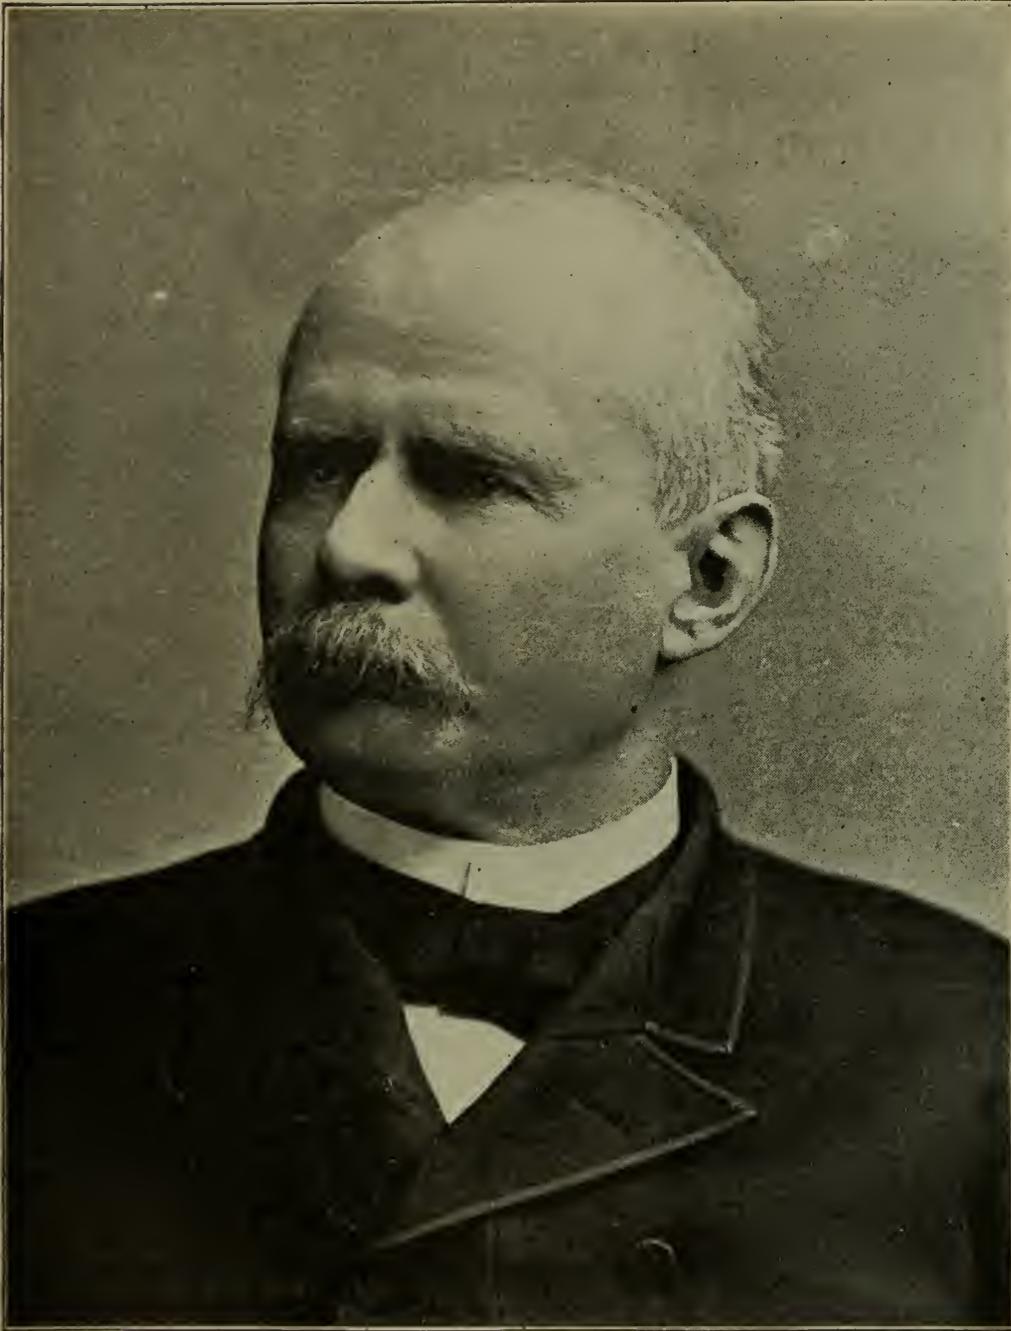

There is a striking contrast between the rapidity with which political campaigns are fought out and their results made effective in England, and the long period through which the process is distributed in this country. The Salisbury Parliament was prorogued on June 28, and the election of a new House of Commons was ordered to take place within the first three weeks of July, while the writs required the assemblage of the Parliament on August 4. Thus within a few days after the elections have resulted in their favor, the Liberals will be in active exercise not only of the legislative but also of the executive power. In this country, the interval of some twenty weeks that usually elapses between the great conventions that frame platforms and select candidates and the elections in November, makes the formal campaign too long and wearisome, and subjects the party organizations to undue strain and temptation. The machinery becomes too elaborate and formidable. Campaigning becomes too much a matter of dollars and executive details. Instead of helping public opinion to form itself and express itself in a proper fashion, these over-organized party machines are tending to become inimical to a normal and wholesome play of public opinion such as ought to dominate the situation.

Then, even if the Democrats should be successful, after this deliberate campaign, in securing Mr. Cleveland's election, they must wait seventeen weeks longer, after the people have given their verdict, before the vast power of the Presidency is transferred from the vanquished to the victor. Moreover, unless the unusual expedient of a special session should be adopted, the new Congress to be chosen in November would not assemble at Washington until a period of fifty-six weeks has been consumed in waiting. The methods of our federal system fairly require a measured and deliberate rate of movement in our electoral processes; but there would be no loss or danger in the adoption of quicker and less cumbersome ways. At least, the custom of later nominations would be advantageous. It would be better for the country if September rather than June were the convention month. The business of Congress was prac-

tically suspended for several weeks by the recent conventions, which for obvious reasons ought not to have been held until the session had been completed and its work had gone upon record.

*Mr. Cleveland's
Nomination.*

So swift is the march of events, and so little contemplative is the mood of our people, that the great conventions are already like ancient history. Their results have been accepted as a matter of course, and their dramatic details, which so engrossed the nation's attention a month ago, are almost forgotten. There is general agreement in the opinion that both of the principal parties made decisions in accordance with the better sentiment of their adherents. Mr. Cleveland was overwhelmingly the choice of the Democrats of the country. If this had not been so the opposition of the New York delegation would have defeated him. Powerful efforts were made to convince the convention that the selection of Mr. Cleveland in the face of a unanimous protest from the New York delegates would mean the certain loss to the Democratic party of that necessary State. But the convention was skeptical. It is true that the representatives of the protesting Syracuse convention were not admitted to a share in the formal work of the Chicago body; but the May movement had made it clear that the Hill men and the Tammany "braves" were not the only Democrats in the Empire State; that in point of fact Mr. Cleveland was far from being forlornly friendless in his own State, and, indeed, that his alleged unpopularity there was largely mythical. An instructed delegation working under the unit rule may seem very formidable, but it is shorn of much of its influence when it is found to misrepresent the sentiment of the voters at home. Mr. Hill's great February delegation held together at Chicago in splendid form, and did everything for their candidate that mortal men could have been expected to do. But their cause had become discredited in the period between February and June, and they waged a bootless fight. Mr. Hill had become impossible, and there was no rallying ground for the opponents of the "man of destiny."

(From a photograph by C. M. Bell, Washington, D. C.)

HON. ADLAI E. STEVENSON, OF ILLINOIS,
Democratic Nominee for the Vice-Presidency.

*As to
Convention
Tactics.*

The parallel between the strategies of the two great conventions was strikingly similar. In each, there was a candidate and an opposition. Mr. Blaine was not a candidate at Minneapolis in the sense in which the word is commonly used at conventions, and his name was only used as a focus for the opposition to Mr. Harrison. All that the Harrisonian leaders had to do was to muster their forces and assure themselves of their own strength by a test vote early in the convention. They quickly found that they had a majority of the delegates, and the knowledge of this fact was enough to hold all their men in line. For why should any desert when the victory was assured? Similarly, at Chicago, Mr. Whitney's perfectly simple and straightforward tactics speedily evolved certainty out of a

seemingly chaotic situation. He proved to the Cleveland men, to their entire satisfaction, that if they would only keep together the day was theirs, because they had the requisite strength. It is sometimes thought by outsiders that this business of convention management is full of impenetrable subtleties and mysteries. But Mr. Whitney, who general-ized the Cleveland cause at Chicago with a mastery so universally acknowledged, and Mr. Depew, who was generalissimo for the Harrisonians at Minneapolis, would both disclaim having done anything that was not altogether plain, obvious and frank, and perfectly comprehensible to the average citizen. Mr. William C. Whitney came away from Chicago with enough new prestige and popularity completely to turn the head of a man less normally balanced. All factions bowed to his leadership, and nobody seemed to be more spell-bound with admiration than the defeated Tammany men themselves.

*Tammany
and Its
Crack Orator.*

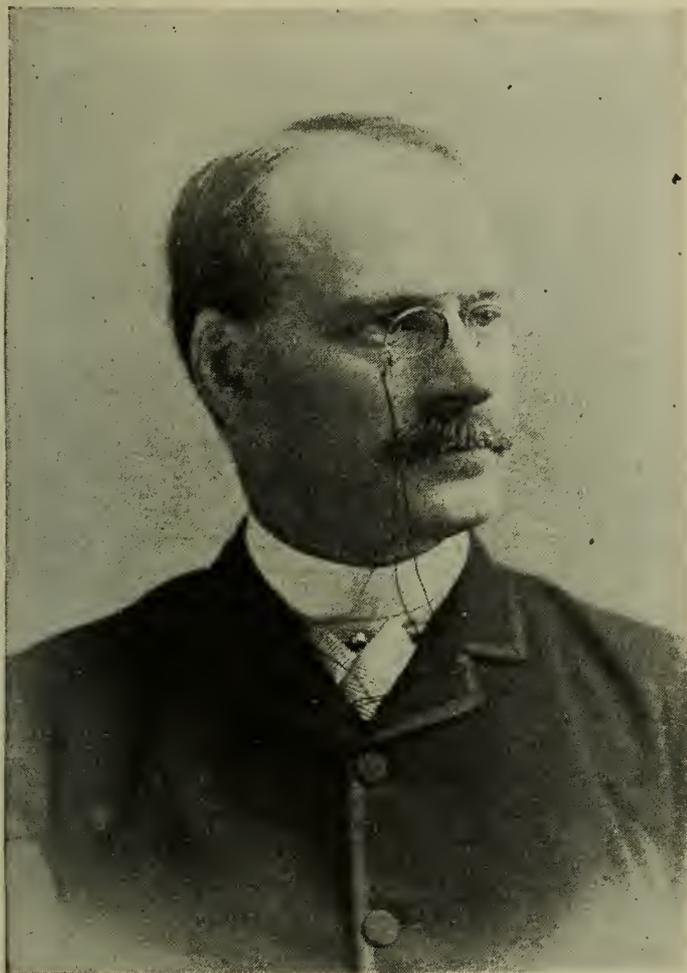

If Tammany failed in its main purpose at Chicago, it was enabled, nevertheless, to maintain a very striking, and, upon the whole, a very dignified position. It was not humiliated by the admission of the Syracuse contestants, and it was fortunate in being able to command, from its own ranks and from sympathizers in other delegations, the most effective and brilliant oratory that was heard in the convention. Its favorite spokesman was its own Bourke Cockran, who is one of the New York members of Congress, and whose speech representing the view of his organization was by far the most powerful one, considered as an effort in political oratory, that all the conventions of the year have evoked. Mr. Cockran is a man in the vigor of his early middle age, being barely forty years old; and if he continues in the careful study of politics and oratory—and should add thereto the ambition to become a statesman—he may hope to make a high mark

in our public life. But he will commit a grave mistake if he sells his talents to the over-zealous and facile service of so unscrupulous an organization as Tammany. He would do better to espouse the service of his party as a whole. Public opinion is of no consequence to a body organized on the absolute and military model. Mr. Cockran has, doubtless, at least read a recent article in a leading periodical credited to the pen of Mr. Richard Croker—though quite commonly said to have been written by Mr. Cockran himself—which gives an authoritative account of Tammany's organization. Mr. Cockran is fitted to do battle in the wide, free political arena, where great oratory has its legitimate field; and he ought not to be content with making brilliant apologies for so shameless and inexcusable a political conspiracy as Tammany actually is. Tammany, be it

HON. W. BOURKE COCKRAN, OF NEW YORK.

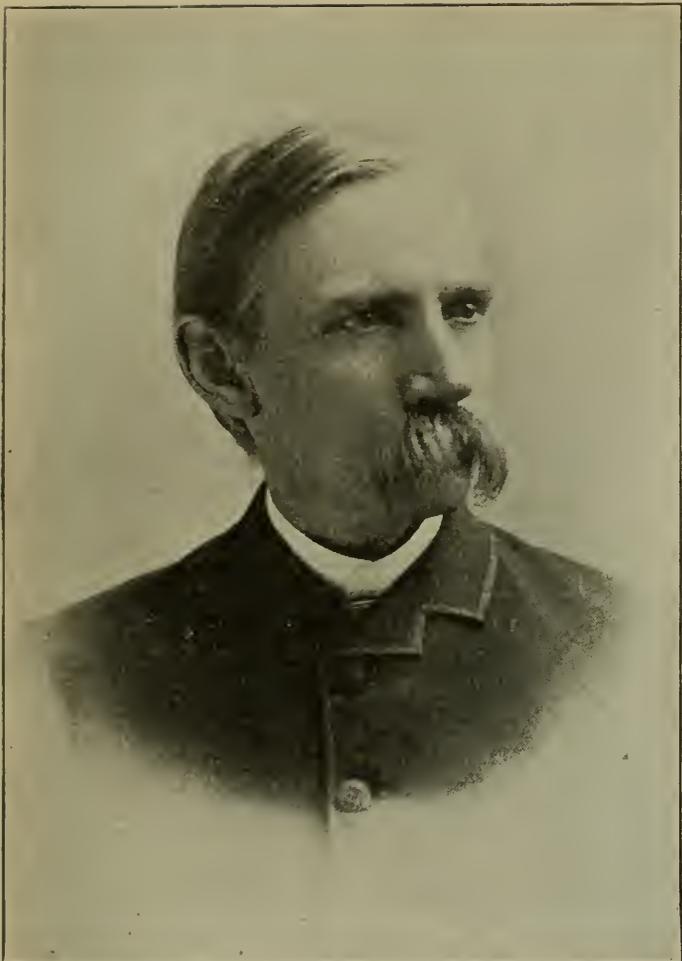

Patrick Collins on the closing day brought in a resolution for smaller conventions in future. It is true that the Chicago convention was scandalously mismanaged so far as the distribution of admission tickets was concerned. In all that belonged to the strictly local aspects of the affair, the Chicago gathering was as ill-ordered as the Minneapolis gathering was superbly planned and executed. It is not strange that there should be sharp protests against convention abuses, and especially against a packing of the galleries with thousands of shouters whose presence is intended to interfere with calm deliberation. Dr. Andrew D. White, whose views are given elsewhere in this number of *THE REVIEW OF REVIEWS*, states most completely the case against the galleries. General Collins, President White and the other protestants against the mob aspects of the national conventions are doubtless right in the main; yet we must be allowed to hope the reaction may not be too sweeping. It has not been sufficiently pointed out that no real attempts have been made, hitherto, to secure quiet and order in the convention halls. The long periods of applause, when thousands of men yell like maniacs and disport themselves with the measured but furious frenzy of a lot of Soudan dervishes, are carefully arranged and precisely timed as to occasion and exact duration. The galleries are not to blame, for these demonstrations have come to be as artificial and meaningless as the howling of hired mourners at an oriental funeral, and

HON. WILLIAM C. WHITNEY, OF NEW YORK.

said in passing, having declared at Chicago that New York could not possibly be carried for Cleveland, is now professing great enthusiasm for the ticket.

The Bigness of Our Political Conventions. Those who sat in the vast wigwam at Chicago through the turbulent sessions of the convention, with storms of a tropical violence raging outside and twenty thousand people vociferously taking part in the proceedings within, while the amiable chairman with his *dolce far niente* manner languidly fingered the gavel as he chatted with the guests of honor on the platform,—can never forget the mighty show. Gen.

HON. WILLIAM L. WILSON, OF WEST VIRGINIA,
Chairman of the Democratic National Convention.

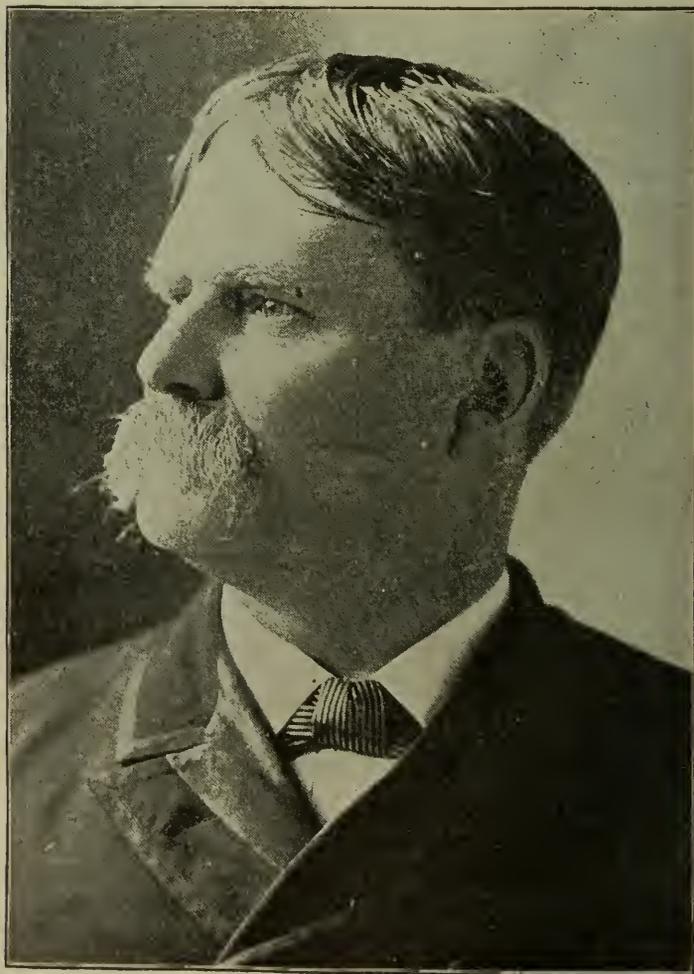

the political leaders can stop them if they choose to do so. No burst of spontaneous enthusiasm ever produces shouting that lasts more than two or three minutes. All the rest is "worked up." There is inspiration in an assembly of American freemen many thousands strong who have gathered from every State, district and county, and from almost every town and hamlet in the Union. The great conventions should certainly be brought under better regulation; but it would be a pity to attempt to prevent the concourse of political clubs and party workers by the thousand, in addition to the delegate body. The Chicago convention degenerated at times into a mob-governed assembly; but, after all, the thousands of spectators seemed to be average Democrats, and they wrought no irreparable harm. Eight or ten thousand people could be managed, if the tickets were suitably distributed. The great convention is an education to young citizens who are privileged to attend it, and it should be open to the public so far as may be possible in view of its deliberative character and its important business.

*The Tariff
and the
Democracy.*

The most pointed and stirring incident in the Chicago convention was the controversy over the tariff plank of the platform.

The committee on resolutions, after great deliberation, had brought in a report in which the subject of

the tariff was covered in paragraphs so carefully guarded and qualified as to make it appear that the party's position was that of moderate protection. Mr. Neale, of Ohio, offered as a substitute a short, ringing resolution denouncing "Republican protection as a fraud," and placing the Democratic party in the position of an advocate of a strictly revenue tariff. This terse plank, moreover, declared that a protective tariff is unconstitutional. Senator Vilas, of Wisconsin, who seems to have been largely responsible for the platform, defended the committee's report, and Mr. Henry Watterson took the floor as chief spokesman for the substitute. The amendment was adopted with genuine enthusiasm; and the position of parties is therefore clear and unmistakable on this issue. The Republicans are for the protective features of the tariff and the Democrats are against them. It is a bold and unequivocal position that the Democrats have now taken as a free-trade party. This resolute front may add to their strength in some quarters while, like all bold and aggressive positions, it must of course cost something in other directions. The ardor of the galleries for the substitute resolution was very obvious. The platform is in the same spirit as Mr. Cleveland's message to Congress in 1887, in which he attacked the tariff with a vigor that aroused the country. Of course it would not be fair to interpret the platform as meaning that the Democrats, if

HON. HENRY WATTERSON, OF KENTUCKY.

in possession of all the branches of the government, would immediately sweep away every protective schedule from the tariff and substitute a revenue tax on tea, coffee and a few other staple imports, on the British principle. But we are to understand that they would bring about such a change as soon as they thought it could be done without serious disaster to existing industries.

*The Democratic
Position
on Silver.*

The Democratic convention shrank from the danger of a free-silver plank, and imitated the Republicans in adopting a conciliatory and ambiguous indorsement of a bi-metallism to be so safeguarded that no harm to anybody should ever result from it. The attitude of the

silver dollars, by voting for the Stewart bill; but they were entirely aware that the measure could not become a law, and they were merely posing for the elections this fall. In the South and West the free-silver heresy is so strong that many a Democratic congressman has feared to go back and face his constituents without having made a satisfactory record at Washington on the coinage question.

*Do the
Republicans
Favor a
"Force Bill?"*

The most careful study of the Republican platform on the question of a "free and honest popular ballot" does not make it clear whether or not there was intended an indorsement of the Lodge bill or some similar measure for the federal supervision of presidential and congressional elections. The plank simply demands that "the integrity of the ballot and the purity of elections shall be fully guaranteed and protected in every State." But it studiously omits any allusion to federal regulation. The Democrats, who declare that the Republican attitude makes the so-called "Force bill" the dominant issue of the campaign, would seem to be taking a good deal for granted. Nobody could well twist the plank into a demand for strong federal control of elections, except by reading it in the light of the unsuccessful efforts made to enact the Lodge bill in the last Republican Congress. But in view of that measure, the country had a right to expect a clear and straightforward utterance this year. Let us quote the "plank" in full as adopted at Minneapolis:

We demand that every citizen of the United States shall be allowed to cast one free and unrestricted ballot in all public elections, and that such ballots shall be counted and returned as cast; that such laws shall be enacted and enforced as will secure to every citizen, be he rich or poor, native or foreign born, white or black, this sovereign right guaranteed by the constitution. The free and honest popular ballot, the just and equal representation of all the people, as well as their just and equal protection under the laws, are the foundation of our republican institutions, and the party will never relent its efforts until the integrity of the ballot and the purity of elections shall be fully guaranteed and protected in every State.

This is simply a general declaration in favor of the protection of the ballot in *all* public elections. There is no mention made of any special means to be taken to secure justice in *federal* as distinguished from State, county, municipal, township or school district elections. Yet the Democratic platform, adopted some two weeks later, devotes a long chapter to denunciation of the "Force bill," and makes the following allusion to the Republican plank quoted above:

The Republican party has defiantly declared in its latest authoritative utterance that its success in the coming elections will mean the enactment of the Force bill and the usurpation of despotic control over elections in all the States. Believing that the preservation of republican government in the United States is dependent upon the defeat of this policy of legalized force and fraud, we invite the support of all citizens who desire to see the constitution maintained in its integrity with the laws pursuant thereto which have given our country a hundred years of unexampled prosperity; and we pledge the Demo-

SENATOR W. F. VILAS, OF WISCONSIN.

platform on the coinage question is, however, really a very significant one when it is remembered that a tremendous attempt was made to have an out-and-out free-silver plank inserted, and that this pressure was successfully resisted. In nominating Mr. Cleveland, the Democratic party understood perfectly well that they were erecting a barrier against such free-coinage measures as the Bland bill and the Stewart bill. So far as the two great parties are concerned, the silver question cannot be made a square issue in this campaign. The great majority of Democrats in both Houses of the present Congress have, since the nominations, put themselves on record as favoring the immediate opening of the mints to the free coinage of

cratic party, if it be intrusted with power, not only to the defeat of the Force bill, but also to relentless opposition to the Republican policy of profligate expenditure.

The Democratic platform-makers chose to read into the Republican declaration a definite policy, which the Republicans had not avowed in plain words. Nevertheless, the tone of the speeches at the Minneapolis convention, and the recent history of the party's legislative programmes, would fairly indicate some purpose to take up the Lodge bill again if a Republican Congress should be elected.

*An Explicit
Statement
Desirable.*

The New York *Sun*, followed by some other Democratic organs, insists upon making the "Force bill" the one issue of

the campaign. But its purpose evidently is to obscure the tariff issue, which both sides have practically agreed to hold up as the real matter in contention, just as the Irish question has been the real battleground in the British elections. Nevertheless, the question of the African vote in the South will have its important place, and the Republican party has not done itself credit in its attempt to evade the issue. It could have said in its platform: "We pledge ourselves to the enactment of a law that shall bring federal elections under the control of the general government in order to secure the unhampered exercise of the franchise to every citizen, especially to the citizens of African descent in the South." Or it could have said: "Much as we deplore what we deem to be a practical disfranchisement of Republican voters of African descent in the Southern States, we do not regard it as at present expedient or wise to demand a federal control of elections; and we, therefore, exhort all citizens everywhere to do their utmost to make all public elections fair and just, under the existing and time-honored system of local management and control." In our opinion, the party would have added much to its strength if it had adopted the second of our proposed substitutes. But if it had adopted the first, it would at least have had credit for the courage of its convictions. Instead, however, of declaring the one thing or the other, it has used mere phrases to cover up its real intentions, and it deserves nothing but censure for its evasion. Both races in the South had a right to expect a clear expression, and both parties in the North had a like right. From the point of view of mere vote-catching, nothing could be more stupid than the position in which the party is placed. There is only one fair inference, and that is that the Republican leaders were inclined toward federal supervision, but were afraid to say so frankly. The policy is not one that the country is prepared to indorse. It prefers that the whole question of races in the South should, for a period of years at least, be left by common consent to the South itself, to be worked out through experience and through the soothing and healing processes of time. The day is coming when the colored men themselves will ask deliverance from threats of an outside interference that can only do them harm. It is a "home rule" question, pure and simple. The best thing for Ulster,

as for every other section and element in Ireland, will be a home government for Ireland. In like manner, the best thing for the colored race, as well as for every other element in the South, will be a once-for-all abandonment of the idea that any good thing is ever to come from Northern interference by way of Washington. This may be a hard saying to some conscientious white men in the North, and to some unfortunate colored men in the South; but it is clear, honest truth. And in the end there is health and saving grace in the unadulterated truth, however bitter it may taste at first.

*Some Incidents
and Personages
at Chicago.*

The Democracy had taken full possession of Chicago for convention purposes when the sudden death in that city of Mr. Emmons Blaine brought the sorrowing father and mother from Maine to attend the funeral. The generous expression of sympathy with the distinguished Republican statesman, unanimously voted by the Democrats, was a tribute from party foes that must have touched him deeply. It was one of the most memorable incidents of the convention. An occasion such as this mammoth gathering always adds greatly to the fame and subsequent influence of a few men who display qualities of superiority as leaders or as impressive speakers. Mr. Wilson, of West Virginia, won laurels as a brilliant orator, but was voted by everybody a singularly inefficient presiding officer. Mr. Whitney, Mr. Watterson, Mr. Cockran and ex-Governor Campbell, of Ohio, were, in addition to Chairman Wilson, the gentlemen who perhaps more than any others won new favor by contact with the multitude. It is a rare man whose subtle spell of personality can touch so vast a throng. Senator Vilas had made his mark in preceding conventions. Senator Daniels, of Virginia, was one of the most eloquent speakers, as he was also one of the most picturesque figures, of the convention.

*The Nominee
for
Vice-President.*

The Vice-Presidency is an honor that should be held in higher appreciation by public men, and it is a position that should be taken very seriously by the country. Two Vice-Presidents since the war have served almost full terms in the White House. A public man who aspires to the Presidency violates sound traditions when he refuses to obey the call to serve as Vice-President. In recent days such eminent men as Logan, Hendricks and Thurman have taken this view, and have accepted nominations to the Vice-Presidency as a patriotic duty. It was a high honor that the Democracy conferred upon the Hon. A. E. Stevenson, of Illinois, when he was named as Mr. Cleveland's colleague. He is not well known to the country, but it is remembered of him that he represented the Greenback party in Congress some ten or twelve years ago, and that he was the particular Assistant Postmaster-General in Mr. Cleveland's administration who retired some forty thousand Republican postmasters and filled their places with new men of his own political faith. Personally, Mr. Stevenson is vouched

for as an amiable and agreeable gentlemen. It had been expected that ex-Governor Gray, of Indiana, would be put on the ticket with Mr. Cleveland, but the anti-Cleveland elements in the convention chose to support an Illinois candidate. Among Democrats in general Mr. Stevenson's nomination is very well received.

What "might have been" at Omaha. The People's party, on the eve of its assembling at Omaha, announced its intention to offer the country a genuine sensation and to lift the political situation well out of traditional ruts, by nominating Judge Walter Q. Gresham for the Presidency. Judge Gresham is an Indiana Republican of great prominence. He was a distinguished general of volunteers in the civil war, and afterward was made a United States judge in his own State. President Arthur, having appointed

HON. JAMES G. FIELD, OF VIRGINIA,
People's Party Nominee for Vice-Presidency.

him Postmaster-General and afterward Secretary of the Treasury, restored him to the federal bench again before retiring from the White House. In 1884 and 1888 Judge Gresham was strongly urged as the most available Republican candidate for the Presidency. Several decisions and actions in his judicial capacity affecting the management and control of railways, notably his dealings with the Wabash system, have given him a great popularity with the so-called "anti-monopolists." If a man of Judge Gresham's record and standing could have been induced to leave his old party and assume the rôle of a Moses for the new movement, there would have been a great stirring up of dry bones. The People's party would have carried several States, and would have upset all calculations in a number of others. The Omaha gathering was raised to the highest pitch of expectancy by assurances

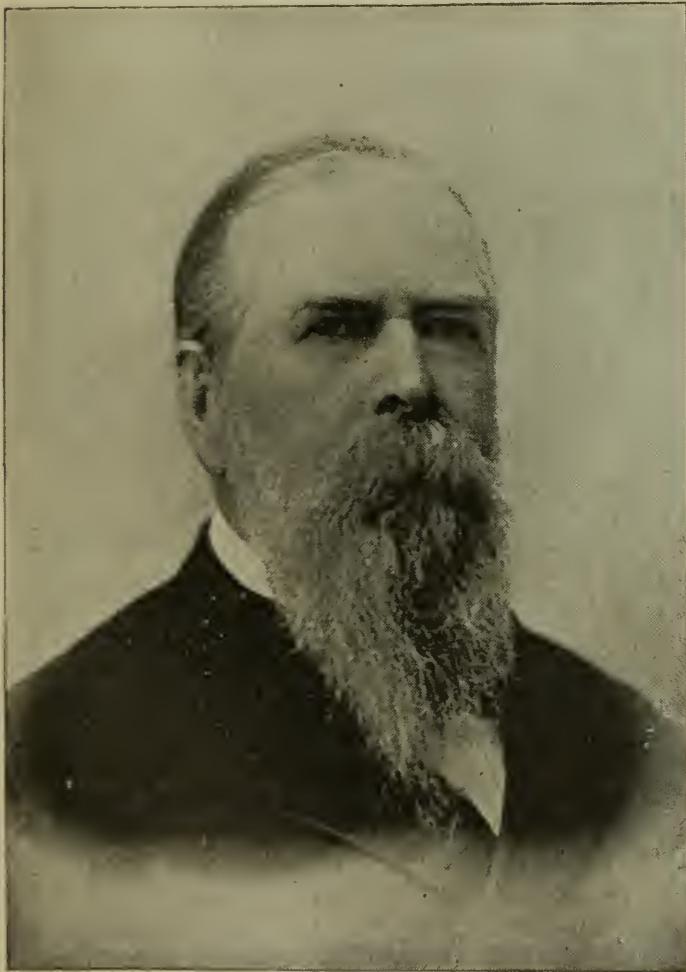

HON. JAMES B. WEAVER, OF IOWA,
People's Party Nominee for Presidency.

from leading members of the party that the Judge would accept a unanimous nomination. Unquestionably he could have had the warm support of all the delegates. But everything was spoiled by the Judge's final refusal. There ensued the usual convention struggle, resulting in the nomination of Hon. James B. Weaver, of Iowa. As a matter of policy, Mr. Weaver's nomination was a mistake. A new party can only rise to strength by leading away masses of men from other parties. But the masses will not readily flock to new standards, except under the generalship of some trusted leader who goes with them. There are plenty of Republicans and Democrats who could be brought into the third-party fold if their own political heroes should say "come." But Mr. Weaver has belonged to the group of third-party "come-outers" for so many years that his name is not one to conjure with in either of the old camps. He is a public speaker of great force and ability; but his nomination suggests too strongly the abortive third-party movements of the past to excite much hope or enthusiasm. He is not exactly the sort of a Moses who can frighten Pharaoh into fits, or bring convincing plagues upon the monopolistic oppressors of Israel. The wicked politicians of the Republican and Democratic parties breathed easier and ate with better appetites when the Gresham bogie disappeared and they found their familiar old enemy, General Weaver, in the lead of the People's movement.

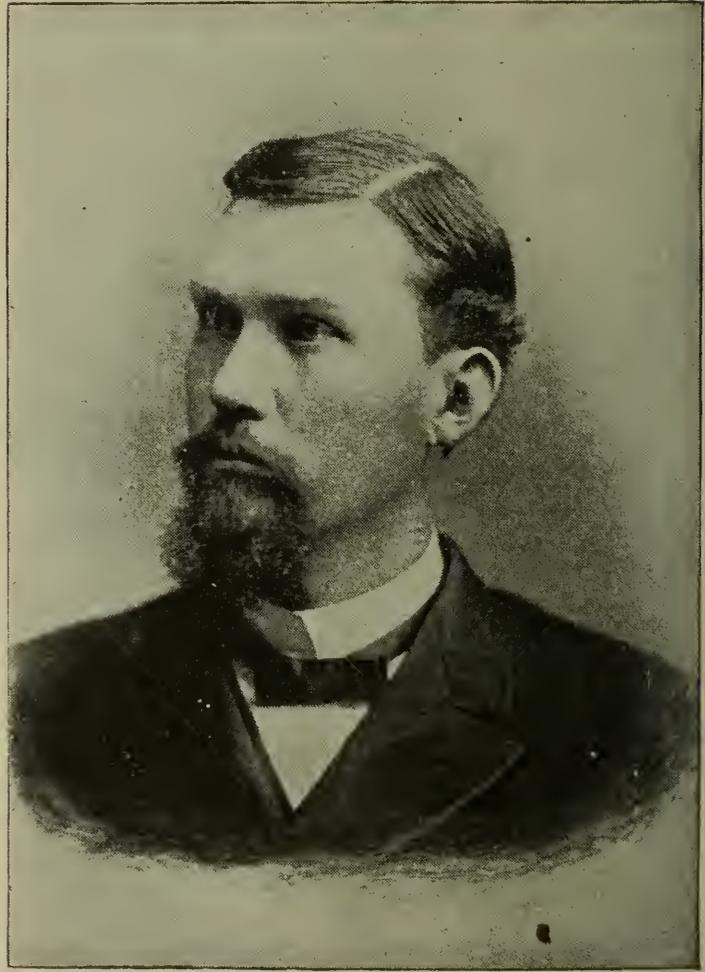

*The Meaning
of the
Movement.*

Yet the movement is not to be treated with disdain. It is not a perfectly well articulated or formulated movement; nevertheless it stands for a class of social-economic reforms that have a real meaning. The People's party demand the nationalization of railroads and of various other corporate or monopolistic services; and they will some day bring these questions to a front place. They are advocating a series of monetary measures that are more significant in their motive—which is to weaken the position of banks and money brokers—than in the details of their *modus operandi*. This party is the only one of the four in the field that is squarely committed to immediate free-silver coinage at the 16 to 1 ratio.

monetary questions, the tariff, immigration, alien land-holding, railroads, mob law, public money and sectarian schools, arbitration and a seventh day of rest, and comparatively little to say on the prohibition issue. There was a debate on silver, and the free-coinage plank originally reported was finally forced out of the platform. Our prohibition friends are now the declared enemies of a protective tariff, are by implication in favor of free coinage, are committed to the doctrine of the direct issue of treasury notes for money, are with the People's party in demanding government control of railroads and telegraphs, are against all alien land-holding, and are in favor of woman's suffrage. The People's party, by the way, does not mention this suffrage question, and

GEN. JOHN BIDWELL, OF CALIFORNIA,
Prohibitionist Candidate for Presidency.

REV. J. B. CRANFILL, OF TEXAS,
Prohibitionist Candidate for Vice-Presidency.

*The Prohibition
Party
in 1892.*

The Prohibitionists are a doughty and unterrified folk, but this is not their year. Their convention at Cincinnati undertook to widen the range of the Prohibitionists' creed so far as possible, and most of the delegates would have been glad to fuse with the People's party if that organization could have been induced to put in its platform a resolution favoring the total suppression of the liquor traffic. The Cincinnati meeting was large and full of militant ardor, and it adopted a platform that has a great deal to say about

the Prohibitionists are alone in their support of the reform. Questions like prohibition cannot be kept burning at white heat all the time, and the supporters of the Cincinnati convention must be content to occupy fourth place in the public's attention through the pending campaign. General John Bidwell, of California, who is their nominee for the Presidency, is an estimable gentleman of high standing and wide experience, and Mr. Cranfill, of Texas, who is the nominee for the Vice-Presidency, is one of the orators of the Southern temperance movement.

*The
Troubles at
Homestead.*

The eventful month that these pages have to summarize has furnished one topic that can only be taken up with reluctance and pain. So shockingly unnecessary have the troubles at Homestead been, that it is with something of indignation that one approaches a consideration of them. It would seem as if experience ought to have taught employers and workmen at Homestead enough to have adjusted the wage scale for less than 10 per cent. of the men engaged there without a resort to methods that would have disgraced the so-called dark ages. The wrath of a fair, sensible man is kindled, because neither side seemed disposed to behave kindly or considerately at the outset, nor deeply solicitous to avert a situation that must inevitably tempt men to violence, and bring sorrow into hundreds of innocent homes. Both parties knew perfectly well the fearful responsibilities they were assuming. The points of disagreement between them were not vital. The existing scale, the retention of which the men insisted upon, was one that the company could have continued to pay without any very appreciable loss or difference. Yet the new scale that the company insisted upon was not an unreasonable revision in view of changed circumstances, and it left the pay of the men better than when the old scale was adopted three years ago. Legally, the company had a perfect right to say: We will offer such and such wages; we will not confer with our men on the wages question; we will not recognize their trade union; we will lock them all out after such a date if they do not choose to accept our terms, and in utter disregard of them and their families and their little homes on the hillside we will bring in new men from other neighborhoods and will proceed to do as we wish in our own works. But morally it had no right to say anything of the kind. Its doctrine turns back the dial fifty years. The ethics of trades unionism and of these conflicts between capital and labor have made some progress; and nobody has more fully recognized the mutual duties of employers and men, at these critical moments of strain, than has Mr. Andrew Carnegie himself in his published articles. The laws of the nation protecting iron and steel manufactures, and the laws of Pennsylvania giving advantageous charters of incorporation to commercial enterprises, have enabled Mr. Carnegie and his associates to bring together under one control a series of establishments that constitute the greatest iron and steel plant in the world. The nation and the State have dealt so broadly and generously by them, and they have so prospered under conditions which have enabled them Midas-like to turn iron into gold, that they would seem to have owed it to the nation and State to keep peace with their men and to avert the public scandal and disgrace of an open war in Homestead between their employees and their hired companies of private soldiery. Mr. Frick and his partners, so far as we can see, kept quite within the letter of their rights; but it would have been a much more gentlemanly thing, and in far better taste, not to have permitted the outbreak of the troubles they fully anticipated. There are plenty of

employers who have the superb business talent of knowing how to prevent such troubles. A little more of tact, humor and friendliness, and a little less of square-toed insistence upon his very obvious lawful rights ought to have rendered it quite possible for Mr. Frick to effect a peaceful settlement.

*The
Conduct of
the Strikers.* Of course the strikers made haste as fast as possible to put themselves in the wrong. They almost invariably do so. A moderate and properly conducted strike is a contradiction of terms. A strike in a great establishment like Carnegie's is war—it is something infernal, and there is no keeping it within decent bounds. The situation did not justify the men in taking extreme

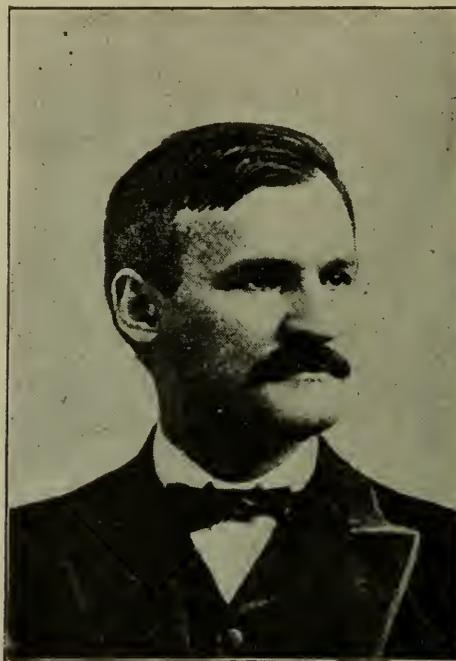

MR. ANDREW CARNEGIE.

measures. They should have demanded arbitration on the points at issue; and then, if Mr. Frick refused to arbitrate, or to discuss, or to negotiate, or to be anything else than imperative and arbitrary, they should have made their protest in a dignified way, appealed to the enlightened and humane opinion of the country, and gone peaceably to work on the new scale. When as strikers they possessed themselves of firearms, they forfeited all title to sympathy. They had not a shadow of excuse for trespassing on the company's property. The very fact that they armed themselves and acquired dynamite condemns them absolutely. If Mr. Frick had been proposing to bring to Homestead a mercenary army to compel these

strikers to resume work against their will, they would have had an excuse for taking arms in self-defense—providing there were serious doubt of the ability of the civil authorities to protect them. As matters stood, their assumption of arms had the look of murder about it, and their storing of dynamite put them on the plane of anarchists. Their conduct is a foul blot upon the respectable history of trades unionism, and it costs the just cause of labor an amount of sympathy and friendliness that years of good behavior can hardly restore. The attack upon the Pinkerton watchmen was that of a mob seized with homicidal frenzy. Pinkerton watchmen are no better and no worse than other watchmen. The strikers had no just grievance against them. The question whether or not the "Pinkerton men" should be legislated against is purely one of public policy, involving the dignity and welfare of the State. Should not the State be so fully prepared to maintain peace and order, directly and in its own name, that it could well forbid the employment of special bodies of armed private guards, considering them a menace rather than an aid to peace and order? That is all there is of the question. But the strikers had no more ground for attempting to massacre the guards hired through the Pinkerton agency than for blowing up the Homestead schoolhouses with dynamite. Various labor organizations have announced that they will now proceed to form military companies and to drill diligently in order to be able, when similar occasions arise in the future, effectually to massacre all "Pinkerton men," and presumably to force recalcitrant employers to accept strikers' terms. All such propositions are treasonable under our laws, and should be treated as such. They are anarchistic plots against existing social rights and institutions; they are con-

spiracies to commit murder, and they are treason against the State. America will see fair play; and it wants neither a Pinkerton soldiery in the pay of millionaire corporations, nor drilled anarchists exploiting

GOVERNOR PATTISON, OF PENNSYLVANIA.

Winchesters and dynamite and instituting reigns of terror in the sacred name of labor.

*The
Sluggish
Commonwealth.*

The State of Pennsylvania, which is the *tertium quid* in the Homestead insurrection, surprised the country by the slowness and reluctance with which it entered upon the exercise of its sovereign function and plain duty. The commonwealth exists, primarily, for the sake of maintaining public order. After some days of triumphant anarchy the State aroused itself and quiet was restored. It would have been well if there had been a swifter assertion of the majesty of the law and the supremacy of the commonwealth. But when the State moved, there was no thought of resistance to its authority.

*Arbitration
the Only
True Remedy.*

Where is the remedy to be sought for such disastrous dead-locks between labor and capital? Look first at the nature of the trouble. Our old-fashioned schoolmasters were fond of asking their green pupils to explain what would happen if an irresistible force encountered an impenetrable and immovable body. Associated capital, aided by our corporation laws, may in a given region and industry do away altogether with a competitive demand for labor. Thus the workman may find only one buyer in the market for his skill and muscle. In like manner the labor unions may be so well organized that the one buyer of labor is practically obliged to deal with one seller. How shall the resulting dead-lock be adjusted? Something suggesting the encounter of the irresistible force with the immovable obstacle has happened. Both parties occupy positions theoretically impregnable, yet theoretically ruinous.

MR. HUGH O'DONNELL, OF HOMESTEAD,
Chairman of Strikers' Advisory Committee.

The manufacturing plant is worthless without workers, and the men will starve unless they have work. There is no such thing as a basis of agreement between the two parties that would appear ideal and perfect to both. There must be concessions and compromises. If the differences cannot be adjusted by mutual consent, there remains the palpable resort to arbitration as a *modus vivendi*. Arbitration may be voluntary or it may be compulsory. Voluntary arbitration is best, but it presupposes the existence, in good working order, of the rudimentary principles of Christianity. For, without them, men will refuse to arbitrate just at the moment when arbitration is most necessary. Vital Christianity was not in large stock on either side at Homestead; otherwise, so relatively small a margin of difference as lay in dispute would have been adjusted without strain by an easy process of voluntary arbitration. Since practical Christianity and good business sense, both of which agree in pointing to voluntary arbitration as the obvious remedy for dead-locks like the Homestead affair, are not sufficiently diffused among employers or employed to save the public peace and order, it follows that for certain purposes the law ought to provide a plan of compulsory arbitration.

*Why Arbitration
Should be
Compulsory.*

The law has permitted Mr. Carnegie and Mr. Frick to consolidate great interests and to perpetuate their unified power by means of incorporation. Why should not the law say that all corporations employing more than a specified number of men should, under certain carefully defined conditions, be obliged to arbitrate points of difference arising between them and their workmen, and to accept the results of such arbitration? If capitalists object to such restrictions, there is nobody to compel them to avail themselves of the advantages of incorporation. Hiding behind corporation methods, employers are learning to shirk that personal and individual responsibility that formerly mitigated some of the horrors of industrial conflict. The demand for compulsory arbitration in the case of large employing corporations is reasonable, and it is necessary for the well-being of the State. The Commonwealth of Pennsylvania has some rights that deserve consideration; and all this social turmoil and great cost of military interference at Homestead would have been avoided by the simple expedient of a law compelling Mr. Frick to justify his new scale, upon demand of the men, in a court of arbitration. If he had been sustained, the men could have done nothing else than go back to work peaceably. If they had chosen to rebel against the court's decision, the sharp condemnation of public opinion, backed up by the force of the civil authorities, would have made their position hopelessly weak. Property massed in the corporate form holds at present an undue advantage over mere individual men. The creature is tending somewhat to overshadow the creator. The workmen at Homestead had better abandon their insane and criminal resort to weapons of violence, and use the grand weapon that their position as sovereign

American freemen gives them. Their remedy is at the ballot. Organized and unorganized labor should pass the word along their lines to cast no votes for any candidate for the legislature or the governor's chair who will not pledge himself not only in favor of the exclusion of "Pinkerton mercenaries," but also in favor of a law compelling large industrial corporations to arbitrate questions of difference with their men, and to abide by the results for a year—at the end of which either party may seek and obtain a new arbitration. Is this plan revolutionary? Well, so are privately supported armies revolutionary, and so are anarchistic outbreaks revolutionary. The fact is that inasmuch as the huge amalgamations of corporate power and wealth are a new evolution in our indus-

MR. HENRY C. FRICK,
Chairman of the Carnegie Steel Company.

trial system, and inasmuch as certain phases of the existing solidarity of workingmen's bodies are a new evolution, it is quite time that we should have a corresponding evolution of the law governing corporations and regulating the relations between capital and labor. The corporations will fight against any new measures to control them and to make them better peace-keepers, and will proclaim vociferously that doctrinaire socialists and destructive anarchists are trying to despoil them and to take away their heaven-born right to do as they will with their own. But their arguments will be humbug. Their rights are to be respected, but they are only earth-born;

and they must not be run counter to those rights and interests of living men that are indeed heaven-born and inalienable. Let the workmen quit fighting and go peacefully to their places; but let them do some new and hard thinking and some effective voting. The establishment of the new land courts in Ireland, which have the power to intervene between landlords and tenants and fix the amount of rents, are an innovation a hundred times more radical than our proposed court of arbitration to adjust the questions at issue between corporations and their employes. Workingmen have this moderate and lawful remedy in their own hands, for they are invincible at the polls when they choose to exercise their political power for their own well-being.

*The Liberal
Victory
in England.*

The British elections have been held, with the main result that was generally anticipated—Mr. Gladstone's success in securing an opposition presumably strong enough to displace Lord Salisbury's ministry. The majority is much smaller than the Liberals had expected, and not half as great as mathematical deductions from the course of the by-elections had indicated. The Conservatives worked desperately and took advantage of every possible minor issue and local diversion. They will not yield gracefully; and it is understood that Lord Salisbury and his ministers will face the new parliament on August 4 and decline to resign their posts and emoluments until the House has passed a specific vote of want of confidence. Thus the actual transfer of power may not be made until after several days of friction and debate, in which the Unionists will try their best to make Mr. Gladstone disclose the details of his Home Rule bill, hoping thus to secure the disaffection from him either of the Irish members on the one hand, or else of a portion of the English and Scotch Liberals on the other. But Mr. Gladstone is likely to surmount these obstructions in brief order and win his well-earned premiership. What he may do after that will appear in due time, and prophecy at this moment would be absurdly useless. The Gladstonian Liberals in the House are a little more numerous than the regular Conservatives, and the main body of Irish Nationalists, who are thus far in full harmony with Mr. Gladstone, are about seventy strong, as against only forty-four of the Chamberlain Liberal Unionists, who are in full alliance with the Conservatives. Besides these four

groups there are nine Parnellite Irish members, and four English Labor members. The Conservatives and Unionists number 314, and the opposition as a whole is 356. But nobody knows how the four "Laborists," as they are now called, or the nine Parnellites will array themselves. Mr. Gladstone bids

(From a photograph by H. E. Simpson, Toronto.)

HON. EDWARD BLAKE.

fair to have a small but reliable working majority for his principal purposes.

*Incidents of
the
Elections.*

Among the interesting incidents of the elections was the great reduction of Mr. Gladstone's support in his own constituency of Midlothian (Scotland) on account of his understood sympathy with the disestablishment of the "Kirk," the State church of Scotland. Mr. John Morley's narrow escape from defeat at the hands of the voters of Newcastle was another unpleasant surprise for the Liberals. The success of Sir Charles Dilke in getting back into parliamentary life in the face of the best public sentiment of all parties and

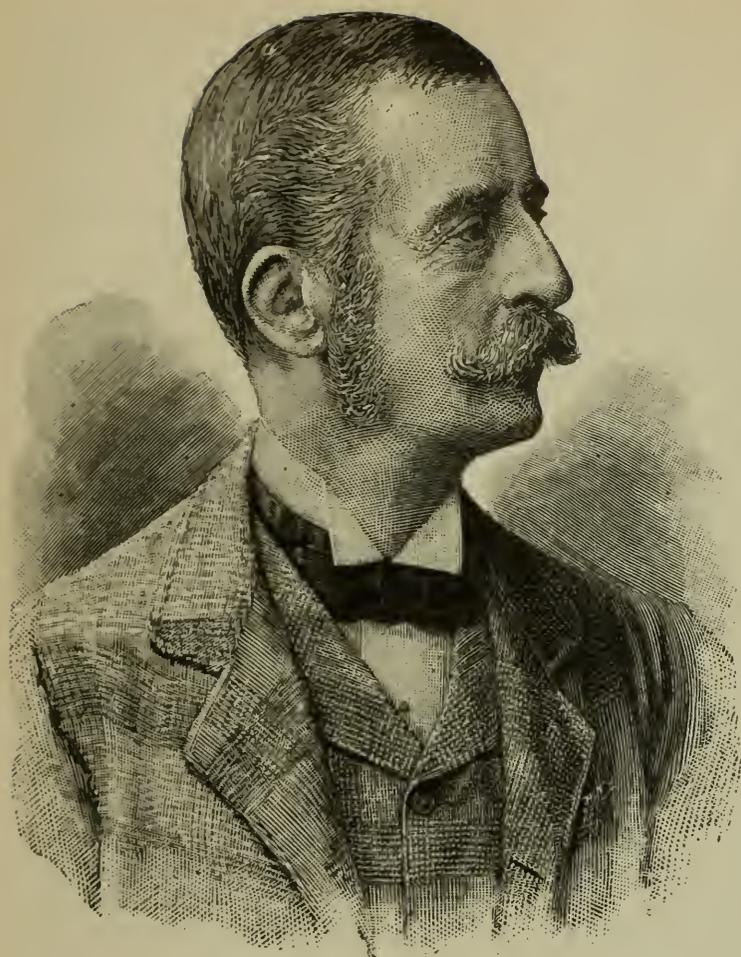

elements is neither creditable to that gentlemen's sense of decency and good taste nor is it any gain to the Liberal cause. Sir Charles had promised to eschew public life until he had cleared his reputation. He returns to Parliament in contempt of that promise. A pleasanter incident is Mr. Edward Blake's entry upon a British parliamentary career. Mr. Blake has earned the reputation of being the most talented statesman Canada has produced in our day. A year or more ago he voluntarily withdrew from Canadian parliamentary life. At the invitation of the Irish party he consented some weeks ago to go to Ireland and become a candidate. He will be a powerful reinforcement on the Irish benches of the House of Commons, and will be of service in the task of keeping the Irish members in line with Mr. Gladstone's policy. The curious fiasco of Mr. Henry M. Stanley's attempt to get into Parliament as a Chamberlainite from a London constituency was one of the sensations of the campaign. Mr. Stanley will have small sympathy on this side of the water. With Henry M. Stanley posing as an enemy of Irish Home Rule, with William Henry Hurlbert's notorious misrepresentations of the Irish question in the interest of Tory landlords, with George Washington Smalley sneering perennially at Mr. Gladstone in the *New York Tribune*, and with Harold Frederic playing the part of facile journalistic tool for the desperate scheme to rehabilitate Sir Charles Dilke, we have a very sorry quartet of American meddlers in English politics; and it is scant credit they do to the opinions and convictions of the Republic that they so egregiously misrepresent. Their performances are a source of mortification to the mass of right-thinking Americans.

Mr. Stead's comments upon the final result of the great battle of the ballots do not reach us in time for use in this number of the REVIEW; but his sketch of the situation and the outlook, written and sent us as the elections were fairly coming on, is the more interesting now that we can read it in the light of the results. It is as follows: "The one prediction which at the end of June was almost universally believed to be safe was that Mr. Gladstone would have a majority sufficient to establish a Liberal Government in Downing Street. The precise figures varied indefinitely, but that the great law of Swing-Swang would assert itself once more was regarded on all hands as a foregone conclusion. Mr. Gladstone, the Unionists expected, would have a majority of from 40 to 50, reckoning the Irish Home Rulers as Gladstonians. The Liberal expectations varied from 70 or 80 to 160. The most exact and detailed calculation as to the probabilities of the polls was that made by my successor at the *Pall Mall Gazette*, who ciphered it out at a Liberal majority of 94. These calculations were based upon the results of the bye-elections, which had gone in almost unbroken series for the Liberals. If the general election were to go as the byes have gone, the Liberals would have been safe for a three-figure

majority. Against this there had to be put three considerations which might vitiate the calculations of the experts of electoral meteorology: (1) The fact that the six years' work of the Government had now for the first time been brought fairly before the electors; (2) the disturbing influence of the split in the Irish ranks; and (3) the realization of the possibility that Lord Rosebery may not be able to curb the scuttling tendencies of the "Little Englanders" of his party. Add to these disturbing elements the fact that the Liberals were too sanguine to work with desperation.

The Insincerities of Party. "It can hardly be said that the great issues which are decided at the General Election have been kept free from the disturbing influence of mere *ad captandum* appeals which have little or nothing to do with the main question. To read many of the speeches it might be imagined that the most important question before the country was whether or not the Government acted fairly in rendering it impossible for Londoners to vote on Saturday. That was the Liberal red herring, which seemed to be prodigiously admired by many of the more cunning wirepullers, whose estimate of the intelligence of the workingman appears to be as low as their own appreciation of the ethics of electioneering. To try to substitute a vote of resentment at the infliction of a personal inconvenience, for a deliberate judgment on the question as to which of two policies is best calculated to promote the interests of the commonwealth, may appear to be good electioneering; but as it is bad morality it will not be found to be the best policy.

The Orange Scarecrow. "The Unionists had their red herring, which was only a shade less disreputable than the Gladstonian claptrap about the Saturday polling. The Ulster bogie has been overdone. There is no doubt a perfectly fair and legitimate use to be made of the reluctance of Belfast to acquiesce in the establishment of an Irish parliament in Dublin. But to make the exaggerated nervousness of a few intelligent well-to-do North of Ireland men—who, all told, are not as numerous as the Londoners who live within sight of my office window—the pivot of a great Imperial question, is not exactly an attempt to see life sanely and to see it whole. Whatever may be the importance of Belfast and its appurtenances, the wishes of its inhabitants are not and ought not to be the determining factors in the great controversy. Ministers, however, imagined that they could make some running out of the comparatively trivial detail, and it has been exaggerated beyond all the bounds of reason and common sense. It is a similar temptation to that which led their opponents to make such a monstrous fuss about Mr. O'Brien's breeches. Such reliance upon what is accidental and of the fringe, to the o'ershadowing of what is vital and of the essence, does not indicate a very high conception of the intelligence of King Demos on the part of his courtiers.

THE DUKE OF ABERCORN,
Chairman of the Ulster Convention.

*Theatricals
in
Politics.*

"No wise man underrates the importance of sensationalism in politics, or, for the matter of that, in any other department of life. But seldom has any political party relied so much upon a theatricality on the eve of a General Election as the Unionist administration did in the case of the Ulster convention. This convention was a remarkable tribute to the importance of what may be described as the magic lantern in politics. It was very cleverly organized, regardless of expense. Seventeen thousand pounds, it is said, were spent in getting together twelve thousand delegates at a cost of nearly thirty shillings a head, in order to throw, as it were, upon a great sheet, a vividly colored picture of one of the permanent elements of difficulty in the Irish problem. The difficulty exists. But the way in which it has been presented to the public by the sensational artists of Belfast bears about the same relation to the true facts that the picture on the screen bears to the actual image on the slide in the lantern. The spectacle was an imposing one, and the appeal of the Protestant minority was artfully made to the strongest latent instincts of Englishmen and Scotchmen. But it is rather too late in the day to attempt to conjure with the old watchwords of ascendancy and intolerance. British democracy could only admit the plea of 'Protestant Ulster' by repudiating the

principles on which every English-speaking community outside Ireland is at present organized.

*Home Rule
as in
London.*

"The manifestoes of the Liberal leaders left the question of the exact nature and scope of the Home Rule to be offered to Ireland in a condition of judicious and carefully-guarded obscurity. The Irish are to have a parliament and an executive, which is to have full control of all local Irish affairs, but it is to be a strictly subordinate statutory assembly, whose acts will be subject to the veto of the Crown, which, being interpreted, means the majority of the House of Commons. The Irish members are to remain in the House of Commons. Beyond that all is veiled in uncertainty, and every one is left to interpret Home Rule in his own way. There is only one safe formula of Home Rule, and that is Home Rule in Ireland as in London. As London has its County Council, which will soon have its own executive and control its own police, the Irish will have their parliament; but there will be no more reason then for excluding the Irish members from Westminster than there is now for banishing the representatives of the metropolis. And whatever the more reckless advocates of complete independence may say, Mr. Parnell was of opinion that it did not matter much what limitations were placed on the Parliament in Dublin so long as the Irish brigade at Westminster was maintained at its full strength.

*The Rival
Manifestoes*

"Mr. Gladstone's manifesto was not a very rousing or inspiring document. The only passage in it which touched the nation was the closing reference to the fact that it was the last appeal which he would probably ever make to the suffrages of his countrymen. Lord Salisbury's appeal to the nation, which was wisely addressed to the electors direct, was even more disappointing than Mr. Gladstone's. It was long, somewhat verbose, and made far too much of the protest of Ulster. Neither Mr. Gladstone nor Lord Salisbury coined a single telling phrase or memorable sentence. What is much more serious, neither address was calculated to remind the electors of the Empire, of which they are the trustees, of the immeasurable issues which depend upon their vote in the vast continents beyond the seas. Yet the chief importance of Home Rule lies in the effect which it will have upon the future of the English-speaking world in continents the very existence of which was ignored in the electoral manifestoes of the rival leaders.

*A Colonial
Appeal.*

"The best, much the best, appeal to the nation, both for the Empire and for Home Rule, was that which was made by Mr. Cecil Rhodes, the Prime Minister of the Cape. As it was ignored by the press, which published acres of verbiage from party hacks, it may be well to quote a word or two from the utterance of this Imperial statesman:

'Your people do not know their greatness. They possess one-fifth of the world, and do not know that it is slipping from their grasp. They spend their time in dis-

cussing personal trivialities, or the question of the compensation for beer houses, *et hoc genus omne*.

‘Although you are the greatest people that the world has ever seen, you have one great fault. You do not know your strength, your greatness and your destiny, and you waste your time dabbling in minor local matters, as the repair of the parish pump or the squabbles of petty factions. Home Rule, you say, will lessen that absorption in trivialities and parochialities. It will do much more if you but grasp it firmly and see what it leads to.

‘For Home Rule leads to federation, or it leads to disintegration. There is no other alternative. Grasp that idea firmly; recognize that in the American Constitution you have the solution to the most of the questions that are troubling you, and how can you say that the unity of the English-speaking world is doomed forever to be an idle dream?

‘As for the immediate issues, take care that the Empire suffers no harm. For what does the Empire mean? It means the generalization throughout the world—or so far as the red line of British dominion extends—of the advantages of which you yourselves possess. Paint as much of the map of the world red as you can, and do not wash out the red when once it has been laid on, for that British red signifies the reign of industrialism as opposed to militaryism, of free trade as opposed to protection, of religious liberty as against religious persecution, of fair play between man and man, and a fair chance for the honest man to make his way. It means keeping open the unoccupied territories where your increasing population may have a chance to thrive and not to starve. We are at work in South Africa. The telegraph is already as far north as Zambesi, and will soon extend northward to the great central lakes. I hope that when we are advancing in the south on the Zambesi you will be not retreating in the north from the Nile.’

*Rosebery
and the
Foreign Office.*

“The week before the polls opened a damaging report was circulated to the effect that Lord Rosebery did not intend to take office in the new ministry—supposing that Mr. Gladstone came back with a majority. The rumor, at first scouted as preposterous, gained some degree of credence from the circumstantial manner in which it was circulated. It was stated that it was fully understood that Lord Kimberley was to be the new Foreign Secretary if Mr. Gladstone had a majority of more than fifty. If his majority was under fifty Lord Rosebery could not be dispensed with. But if it was over fifty Lord Kimberley was to be Foreign Secretary. The reason for this was said to be the determination of a small but pertinacious section of the Radical party to attempt to buy the friendship of France by the evacuation of Egypt. Sir W. Harcourt and Mr. Labouchere were alleged to be the authors of this design, relying upon the notorious desire of Mr. Gladstone and Mr. Morley to get out of Egypt at the first feasible opportunity. The publication of this report created much consternation in the Liberal ranks. It would handicap Home Rule too heavily to saddle the Home Rule party with a proposal to revolutionize the foreign policy, in order to pursue the *ignis fatuus* of an alliance with a power whose only avowed object is to bring about a convenient occasion for making a European war, in which she might regain her lost provinces.

*The Grand
Old
Dialectician.*

“Mr. Gladstone’s election address may not have been up to his former high level; but the interview which he had with the deputation from the London Trades’ Council on the Eight-Hours Day was simply beyond praise. The past master in the art of tongue fence had his visitors at his mercy. His questions were as rapier thrusts, and when the deputation left he had done more to let the sawdust out of the Eight-Hours Bill than could have been effected by a long parliamentary debate. Nothing could have been better, both in matter and in manner, and it was quite refreshing to find Mr. Gladstone was still capable of saying No, plainly, simply, and without a circumbendibus. He does not practice that much; but on occasion he can put his foot down as heavily as any of the children of men.

*Nonconformists
and the
Election.*

“Mr. Disraeli makes one of his wire-pullers in ‘Coningsby’ exult over his shrewdness on discovering the political importance of the Wesleyan. The politicians as a class have only waked up to the importance of the Nonconformists of all sorts at this election. The chief hopes of the Unionists were staked upon the chance that the bitter cry of the non-Episcopalian Protestants in Ireland might touch the heart of the English Nonconformist. But the Nonconformist seemed little moved by the plea from Ulster. There were fifty Congregationalists seeking election, thirty-eight Wesleyans and nearly a score of Quakers, and they were also to a man Gladstonian Home Rulers. Whatever the election may have brought forth, it seems to be beyond doubt that there will be more Nonconformist M. P.’s in the next House of Commons than in any previous Parliament.

*An Example
for
Homestead.*

“The immense power of good that can be wielded by the Christian Church if it would bestow a little more attention upon the great and crying needs of the human race has been happily illustrated by the successful intervention of the Bishop of Durham in the coal strike, which has cost the north country some three millions sterling. The strike, which from the first was most ill-advised and suicidal, lasted for months, and might have been going on to-day but for the personal intervention of the Bishop in the interests of peace. Dr. Westcott may write many commentaries on the Pauline Epistles; but nothing he can write will equal the good which he did when, with Christian love and consecrated common sense, he stood up as a daysman between the disputants and restored industrial peace to his distracted diocese. The miners resumed work at the full reduction of 10 per cent. originally demanded by the employers, who, however, had raised their demands to 13½ per cent. in the course of the strife. The reconstitution of a living church in actual touch with the world is the greatest want of the day, and such action as that of Bishop Westcott shows that after all the belt may not be so hopelessly off the old driving-wheel as some pessimists would have us believe.”

*Women
in
Politics.* The manner in which ambitious ladies in England join in their husbands' electoral canvass is wholly puzzling to the average American. Mrs. Henry M. Stanley is, as everybody knows, a charming lady, and her remarkable performances on the stump, full of the most extravagant laudations of her husband's greatness and his title to immortal fame, are a sort of thing so utterly foreign to anything that could possibly happen in American politics as to be incomprehensible on this side of the Atlantic. Lady Dilke, in like manner, is reported to have speechified through Sir Charles' canvass in the Forest of Dean, and to have assured her hearers that her husband was by all odds the greatest and the ablest man in England. And these are but two instances out of many. As an American contrast, we have Mr. Cleveland's simple but conclusive reply to letters addressed to his wife, asking permission to use her name in the formation of ladies' Democratic influence clubs. He wrote as follows :

Mrs. Cleveland has referred to me your letter informing her of the organization of the "Frances Cleveland Influence Club." It is by no means pleasant to dissent from the methods which sincere friends adopt when their efforts not only demonstrate their friendliness, but when they also seek to subserve the public good and are, therefore, engaged in a patriotic service. It is, however, impossible for us to approve of the use of Mrs. Cleveland's name in the designation of the clubs designed to do political work. We trust you will not undervalue our objection, because it rests upon the sentiment that the name now sacred in the home circle as wife and mother may well be spared in the organization and operation of clubs created to exert political influence.

Perhaps no wife in the history of our American politics ever gave closer attention to all that con-

MRS. HENRY M. STANLEY.

cerned the political fortunes and career of her husband than Mrs. John A. Logan, and her knowledge of politics, both theoretical and practical, made her the most indispensable adviser and assistant the lamented Illinois Senator ever possessed in all his long years before the public. But it would be hard to imagine Mrs. Logan as fighting her gallant husband's battles in rancorous disputations on the hustings, after the fashion of the English ladies who have ambition for their husbands. Her influence was exerted in a wholly different way. The esteem in which Mrs. Logan is held, it should be remarked in passing, is shown in the full newspaper accounts of remarkable fêtes and receptions given in her honor at

Minneapolis a month ago. She is, perhaps, the best representative who could possibly be named of an American woman in politics in a strictly American manner.

*Bismarck
and "that
Young Man."*

The marriage of Count Herbert Bismarck in Vienna has been the signal for an outburst of Bismarckian wrath, which threatened at one time to have somewhat deplorable consequences. The old Chancellor went to the Austrian capital to be present at the wedding, but was refused an audience by the Emperor Francis Joseph, whose discourtesy was probably due to a hint from Berlin. Prince Bismarck, who had been received with popular demonstrations all the way through Southern Germany, and who was welcomed with enthusiasm in Vienna, bitterly resented this slight, and, as his wont is, took no pains to conceal his chagrin. In innumerable interviews he expressed his disgust at the mistake he made in recommending General Caprivi to the Emperor, and denounced the policy of the government in good set terms. He did not even spare the Emperor, to whom he constantly referred as "that young man" whose conduct was imperiling the safety of Germany and the peace of Europe. Oddly enough, he announced that the Kaiser was succumbing to the English influences which surround his mother, and declared that it was much more to Germany's interest to make friends with Russia than with England, seeing that England in all probability after the general election would become the supporter of France. According to Bismarckian precedents, the Prince ought to have been arrested and sent to Spandau to wait his trial; and for a moment it seemed as if "that young man" was thinking of doing unto Bismarck as Bismarck had done unto Dr. Geffcken. A menacing article appeared in the Ministerial organ, but fortunately it was not followed up by any action. Bismarck is merely as Napoleon was at St. Helena, with the disadvantage of having his remarks reported from day to day instead of having them bottled up by an attendant Boswell for publication after his death. "He says! What does he say? Let him say!" is the only remark which "that young man" should make when the ex-Chancellor of Germany growls out his protest against the imperial boycotting to which he is subjected.

*The Czar
at Kiel.*

The Czar has met the Kaiser at last. He paid the long postponed return visit at Kiel, where the Imperial interview seems to have passed off very well. At the same time that Czar and Kaiser were drinking each other's healths at Kiel, the Grand Duke Constantine was being received

with enthusiasm at Nancy, whither he had repaired to attend the fêtes and to remind the French that the ghost of the Franco-Russian alliance is not yet finally laid. Even in Paris, however, it is now understood that the Czar has no intention of drawing the sword. He has too much to do at home. His ambition is, not to sully his reign by a single war. He has succeeded hitherto, and there is no reason why he should not be

MRS. JOHN A. LOGAN.

equally successful in the future. In the warfare against the famine that threatens to become chronic there is a nobler field for the energies of the Empire than in helping France to slaughter Germany in order that Elsass-Lothringen may once more be called Alsace-Lorraine.

*The
Belgian
Elections.*

The Belgian elections have been held, with results not reassuring to the Clericals. The Clerical ministers have not been turned out, but their majority has been so reduced that all hope of obtaining a two-thirds majority necessary for the revision of the constitution has been abandoned, unless the King comes to the rescue, which is not impossible. It would be a pity if the experiment of the Referendum should not be tried in Belgium as well as in Switzerland. There seems to be no serious opposition to universal suffrage, and the Socialists at Brussels were delighted with the result of the voting.

*The Pope
and the
Republic.*

The Pope's action indorsing the French Republic has practically destroyed the Royalist cause in France. Of the Royalist deputies, who number eighty, only eight could be found to protest against the Papal summons to cease their fooling and use their energies for something more practical than the vain attempt to galvanize into life a monarchy as dead as Queen Anne. When the Comte de Mun grounded arms and saluted the Republic at Leo's bidding, even the Orleanist princes must have seen that all was up. The action of the Pope was bold and statesmanlike. What a pity it is that there is no Supreme Pontiff who can write to Leo XIII as peremptory a summons to cease wailing over the loss of his useless and embarrassing temporal power, and to apply himself to the defense of the true interests of the Church in Italy! For is not the Vatican doing exactly what the Pope condemned in the French Royalists? Is it not wringing its hands over the dear dead past, to the sacrifice of the living issues of the present?

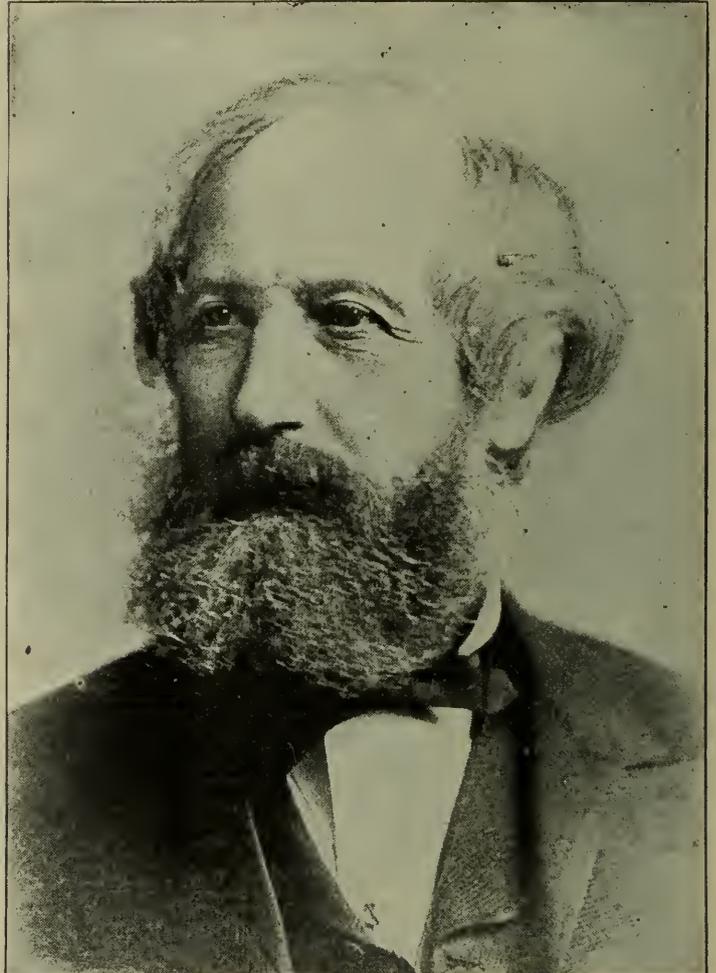

*Some Recent
Appointments.*

The recent appointments of President Harrison have won high commendation. Hon. John W. Foster's promotion in the State Department to the high Cabinet place left vacant by Mr. Blaine's retirement was with one accord, including Mr. Blaine's own voice, pronounced the best possible thing under the circumstances. Gen. Geo. D. Johnston, of Louisiana, a Democrat, has been named for the Civil Service Commission—an ideal appointment. Hon. Andrew D. White's nomination for the Russian mission is universally praised. The transfer of Mr. Snowden from Athens to Madrid and of Mr. Beale from Persia to Greece are among the diplomatic changes. Mr. George Shiras, of Pittsburgh, a lawyer of national fame and spotless repute, has been nominated for the vacant place on the Supreme Bench.

*Four
Lamented
Americans.*

Among our illustrations are portraits of four Americans who have passed away since the last number of the REVIEW presented its obituary record—each of whom was widely known and each of whom moved in a sphere of activity and association quite distinct from those occupied by the others. Mr. Cyrus W. Field has left a name that will always be remembered for his great achievement in projecting, undertaking and completing the Atlantic cable. He lived to a great age, in the enjoyment of world-wide renown, ample wealth and the friendship of the great men of all countries. He was the most distinguished of a group of brothers, each of whom stands almost pre-eminent in his walk of life. Professor Dwight, of New York, is another of the four. He made the Columbia Law School the best known and most popular institution of its kind in this or any other country, chiefly through his marvelous gifts as an expositor of legal principles and his winning sympathy with the neophytes of his profession. Mr. Emmons Blaine is another. His very sudden death gave pain to a host of friends in his own social and business

circles, but it was felt as an especial shock in the political world because of the warm interest in which the bereaved statesman, his father, is generally held. Following as it did not long after the death of Mr. Walker Blaine, and other bereavements in the circle of the Blaine family, the death of this eldest remaining son, almost without any warning of illness, brought a weight of new grief to Mr. Blaine that might well have crushed a younger and stronger man. The fourth of the group whose portraits we publish is the Rev. B. W. Chidlaw, D.D., who as a

(From a photograph by Falk, New York.)

THE LATE CYRUS W. FIELD.

Welsh lad of ten years went with his parents into what was then the wilderness of central Ohio, in the year 1821. He graduated at Miami University in 1833 (the institution which afterward graduated both of the present Republican candidates, Messrs. Harrison and Reid), and entering the Presbyterian ministry, he began a career of eloquent and useful service, which continued without intermission for nearly sixty years. Through some fifty-seven years he was connected as a missionary or superintendent with the American Sunday School Union; and probably no other man has ever formed as many new Sunday schools as Mr. Chidlaw. In the best sense he was one of the makers of Ohio. He had gone in June to visit his native Wales; and he died there in July, on the threshold of his eighty-second year.

RECORD OF CURRENT EVENTS.

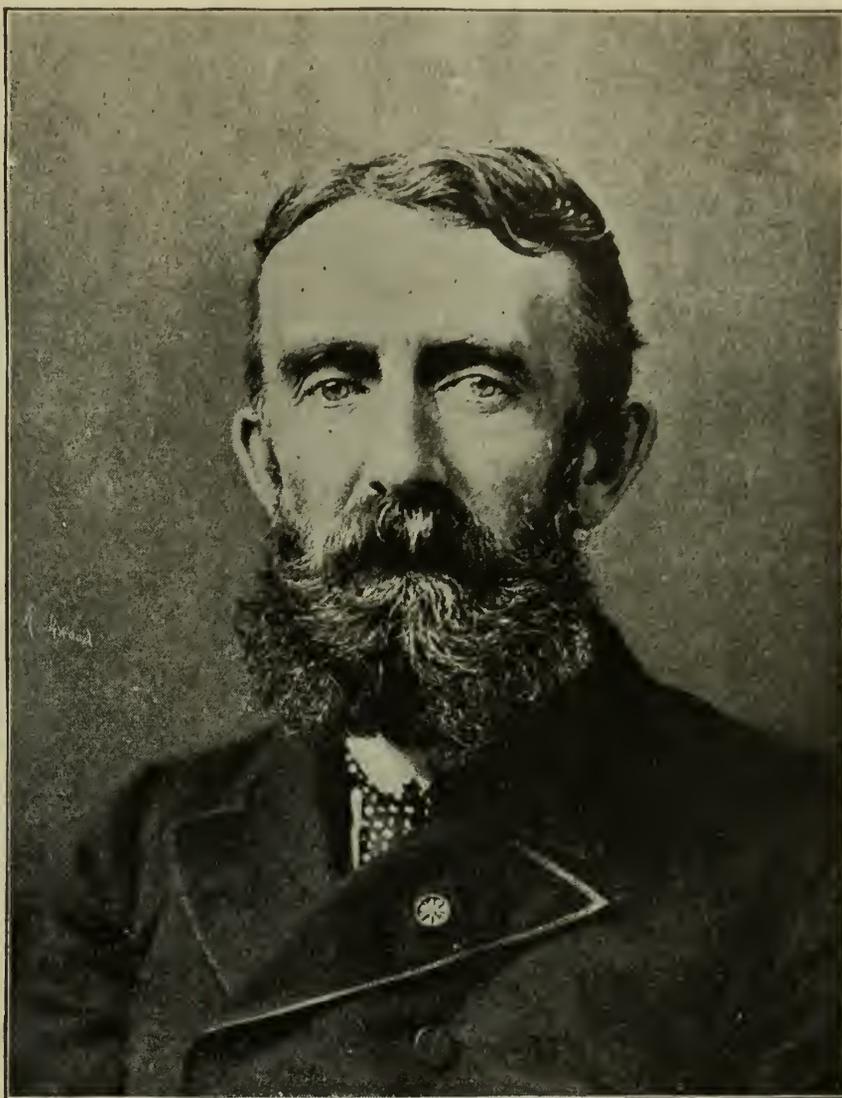

June 16.—Southern Minnesota visited by a destructive tornado....Mr. Gladstone informs a deputation from the London Trades Council that he cannot take up the Eight-Hour question, but must devote the remainder of his life to the cause of Home Rule....Mr. William B. Prescott re-elected president of the International Typographical Union.

June 17.—Ten thousand delegates to the Ulster convention in Belfast protest against Home Rule....The President of Venezuela resigns....The Michigan Supreme Court renders a decision sustaining the constitutionality of the Miner Electoral law; the case to be taken to United States Supreme Court.

June 18.—Ex-Secretary William C. Whitney assumes leadership of the Cleveland forces in Chicago....Mr. Gladstone addresses a gathering of Non-conformists at Clapham....Indictments against the Maverick Bank Directors quashed in Boston... General E. Burd Grubb, United States Minister to Spain, returns home....The King of Dahomey places himself under the protection of Germany.... Demonstration at Dresden in honor of Prince Bismarck.

June 19.—The Liberals win the municipal elections at Rome Prince Bismarck is enthusiastically received by the people of Vienna...The Governor of the Brazilian State of Rio Grande do Sul is deposed by the adherents of Da Fonseca....Militia sent to the Minnesota Company's mines, Tower, Minn., to quell a possible riot among the laborers....Delegates from the Syracuse convention are refused permission to contest the seats of the New York delegation to the Chicago Democratic convention.

June 20.—Hon. W. C. Owens, of Kentucky, chosen temporary chairman of the Democratic National Convention....

HON. ANDREW D. WHITE, OF NEW YORK,
Appointed United States Minister to Russia July 21, 1892.

THE LATE REV. B. W. CHIDLAW, DIED JULY 13, 1892

President Harrison sends a message to Congress recommending retaliation against Canada for her discriminations against American vessels....President Harrison is officially informed of his renomination....The Greek cabinet resigns....Premier Giolitti announces that the Italian financial situation is greatly improved.

June 21.—The first session of the National Democratic Convention held in Chicago....Count Herbert Bismarck and Countess Margarethe Hoyos are married in Vienna....Ravachol, the French anarchist, is brought to trial charged with committing five murders... Mr. Whitelaw Reid is officially notified of his nomination... Issue of an ukase authorizing the exportation of all grains and their products from Russia with the exception of rye, rye flour and bran.

June 22.—The permanent organization of the Democratic National Convention is effected with Representative William L. Wilson, of West Virginia, as chairman....Ravochal found guilty of murder and sentenced to death....The McCarthyite leaders issue an appeal to Irishmen in America for aid....Formation of a new Greek cabinet with M. Tricoupis as Prime Minister.... Lord Rosebery resigns the chairmanship of the London County Council.

June 23.—The National Democratic Convention nominates Mr. Grover Cleveland for President on the first ballot, the vote for the highest three candidates being: Cleveland, 616 $\frac{1}{8}$; Hill, 113; Boies, 103; Mr. Adlai E. Stevenson, of Illinois, nominated by the convention for Vice-President; The convention adjourns....Mr. Gladstone issues his election address.

June 24.—The nineteenth annual session of the National Charities and Correction Conference opens at Denver.... Mr. Balfour issues his election address.... Disastrous floods in Illinois.

June 25.—The Iron League discharges fifteen hundred employees who are identified with the Knights of Labor.... Spontaneous combustion causes a fire in the Department of Engraving and Printing in Washington.... Twelve people are killed in a collision on the Pennsylvania Railroad near Harrisburg.... Captain Henry Borup, U. S. A.,

(From a photograph by Sarony, New York.)

HON. THOMAS H. CARTER, OF MONTANA,

Appointed Chairman of the National Republican Committee July 16, 1892.

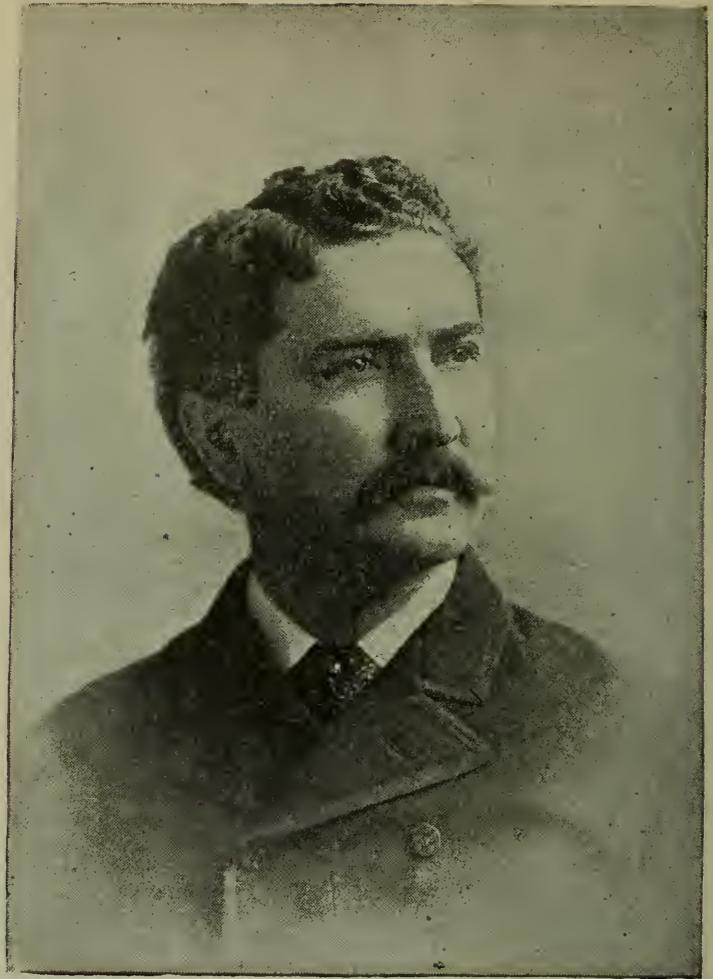

is accused in Paris of selling to Germany and Italy documents concerning French defenses; He is recalled by the United States Government pending investigation of the charges.... Mr. Gladstone while driving through Chester is injured in the eye by a missile.

June 26.—The first series of elections for the Mexican President held.... Bismarck enthusiastically received at Kissingen.... A number of persons drowned and much damage done to property by storms in Iowa and Illinois.

June 27.—The Republican National committee, in session at Washington, D. C., unanimously elects Mr. W. J. Campbell, of Illinois, as chairman.... Lord Salisbury issues an election address.... An expedition starts from New York to the relief of the Peary Arctic explorers.

June 28.—The British Parliament dissolved.... The Second Congress of the Chamber of Commerce of the British Empire opens in London.... The Louisiana legislature passes a resolution urging Congress to amend the Constitution so as to provide for the election of United States Senators by a direct vote of the people.... The new battle ship Texas launched at Norfolk, Va.

June 29.—The National convention of the Prohibition party is opened in Cincinnati.... The Senate passes the Pension Appropriation bill; total amount appropriated,

HON. WILLIAM F. HARRITY, OF PENNSYLVANIA,
Appointed Chairman of the Democratic National Committee,
July 21, 1892.

\$144,950,000.... The nomination of Hon. John W. Foster as Secretary of State confirmed by the Senate.... The Norwegian cabinet resigns.... Mr. Gladstone opens his Midlothian campaign.

THE LATE MR. EMMONS BLAINE, DIED JUNE 18, 1892.

PRINCE FERDINAND, OF BULGARIA, AND HIS BETROTHED, PRINCESS MARIE, OF EDINBURGH.

June 30.—The Homestead Steel Works near Pittsburgh, Pa., are closed; three thousand workmen idle....The Chautauqua Assembly begins its nineteenth season of summer work....The Norwegian Storthing adjourns for an indefinite period....The Berlin Academy of Sciences confers the Helmholtz gold medal upon William Thompson, the celebrated English scientist.

July 1.—The Prohibition National convention nominates Mr. John Bidwell, of California, for President of the United States, and Mr. J. B. Cranfill, of Texas, for Vice-President....The Stewart-Morgan Free Silver bill passed in the Senate by a vote of 29 to 25....King Humbert, of Italy, asked to appoint an arbitrator to take part in the settlement of the controversy between the United States and Great Britain regarding the Behring Sea....The British elections begin...Lord Randolph Churchill is returned to Parliament without opposition....The Inman Line steamship City of Chicago goes ashore on the Irish coast, near Kinsale, in a fog.

July 15.—General Sir Arthur Edward Hardinge, K. C. B., Equerry to the Queen of England....Thomas Cooper, of London, Eng., the former chartist leader.

CURRENT HISTORY IN CARICATURE.

Mr. Gould, of the "Pall Mall Budget."

THE increasing importance of caricature in politics is shown by two notable publications which appeared on the eve of the British election. One is the "Elector's Picture Book," published by the *Pall Mall Gazette*, being

MR. F. CARRUTHERS GOULD.

compiled principally from caricatures which Mr. Gould has contributed to the pages of the *Pall Mall Gazette* and the *Pall Mall Budget*. Mr. Gould is quite in the first rank of English political caricaturists. As an artist he is not in the same category as Mr. Tenniel; but as a caricaturist, especially in hitting off the characteristics of those whom he selects for his victims, he has a wider range and a much more biting pencil than the "Grand Old Man" of *Punch*. There is a tendency in Mr. Gould to harp too much upon one characteristic; for instance, the upper teeth of Mr. W. H. Smith become almost as monotonous as Mr. Chamberlain's eye-glass. Mr. Gould is a good hater, and he takes good care not to spare the objects of his antipathy. Mr. Chamberlain, who is a favorite subject of Mr. Gould's pencil, is by no means a favorite with Mr. Gould as a politician. On the whole, however, Mr. Gould's humor is playful, and he differs very much from most caricaturists in being a keen politician.

The other publication is by no means as interesting as the "Elector's Picture Book;" it is the "Coming (?) Gladstone," and is the work of a very fervent, not to say bigoted, Unionist. The author is the one who was responsible for the "Irish Green Book," a publication which has now reached its fortieth thousand.

The caricatures which we present this month relate chiefly to the American and British campaigns. *Judge* emphasizes the situation in which the Democrats have been placed by the renomination of President Harrison, representing Mr. Dana, Mr. Watterson and other of the party's great editors as in despair on finding that their "thunder" powder was all used up in 1888. J. Keppler, Jr., in his spirited cartoon "They're Off!" conceives of the pending contest as a great race between "High Protection" and "Tariff Reform;" and Bengough, of *Grip*, changes the scene from the turf to the pugilistic arena, where these issues are being "fought to a finish" by their respective champions.

The English caricatures, to say the least, are apropos—they all deal with Mr. Gladstone. In the course of his long political life Mr. Gladstone has been contorted by your caricaturist into almost every conceivable form, and has been put through exercises compared to which wood-chopping is but child's play. The latest attitude he has been made to assume is that of tempting the British Lion with a Home Rule bone. And there is much truth in this German representation by *Kladderadatsch's* artist. For, considering Mr. Gladstone's narrow and uncertain majority, the feat of feeding the flesh-and-blood lion in its cage is scarcely more difficult than that—which the "Grand Old Tamer" is billed to perform—of forcing a Home Rule bill through the House of Commons. *Judy*

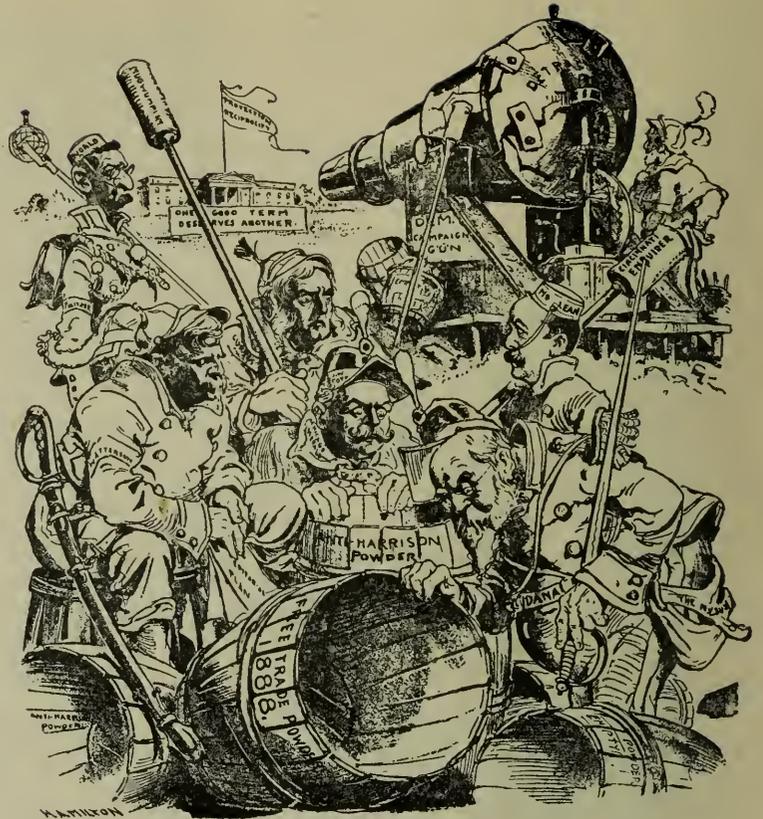

A specimen of Mr. Gould's Work.—From the "Elector's Picture Book."

represents Mr. Gladstone and Mr. Harcourt as attempting to cross the chasm between themselves and power on a *pons asinorum* of their own design and construction—the base of the *pons* formed of a slender and shaky piece of timber labeled “Home Rule.” In the second of the cartoons which we reproduce from *Grip*, Mr. Gladstone is found in a heated controversy with an Ulsterman who insists that the Right Honorable gentleman’s “Home Rule” scheme means to “Protestant” Ulster simply “Rome Rule.” The fierce opposition which Mr. Henry M. Stanley, lately of the United States, has encountered in the British elections as Liberal-Unionist candidate for Lambeth is forcibly suggested in the fourth cartoon on page 27.

GROVER CLEVELAND: A CHARACTER SKETCH,

BY GEORGE F. PARKER.

I. TRAINING—RAPID ADVANCEMENT.

FOR ten years Grover Cleveland has been in the full blaze of publicity. There is scarcely a nook or corner of his life that has not been traversed. He has probably been brought more into contact with his countrymen and in a more familiar way than any other man in the history of politics in so brief a time. As a rule, rise to prominence is gradual. Beginning with some small office in a neighborhood, the average man in public life "works himself up." But here is one who sprang almost at a single bound into the very highest honors. It was only seven or eight months after he had assumed the duties of a municipal office in a comparatively small city until he was nominated for the office of Governor of the greatest State in the Union, while the circumstances surrounding the canvass for this office and the phenomenal majority with which he was elected brought him at once into notice. When such a man appeared in public life, and he a resident, too, of a State which had long dictated to his party, it was only natural that he should at once be looked upon as a probable candidate for the Presidency. But in spite of this it is hard to believe even now that the leap from a quiet, unobtrusive, active though energetic professional career in Buffalo to the great office of President of the United States was made in a little less than three years. There is nothing in history like it, and he would be a rash man indeed who would undertake to predict that any such thing would ever occur again.

But this sudden prominence came to a man who, well fitted though he has proved himself to be for the office, had to demonstrate this fitness at every turn. He had no easy task, either, to do this and at the same time to perform, even to his own satisfaction, the exacting duties of the great offices to which he was called one after the other in such quick succession. All the traits of such a man were, of course, familiar to his friends and neighbors in the quiet town in which he lived; but neither he nor his character or fitness was known to the great outside public.

Mr. Cleveland never had even the most remote idea that anything like a great and overwhelming responsibility would ever come to him. Like the great mass of men who make up the business and professional world, he had gone in and out among his neighbors doing his work, and doing it faithfully and well, satisfying his conscience, his friends and his constituency when his duties had been of a public character. Neither seeking nor expecting prominence, he had no biographers; almost devoid of the vanity that induces men to push themselves into prominence, or that prompts them to keep every "scrap and scrimption" that may have been written

about them, this man started in public life even with the world, so far as knowledge of him by the latter was concerned. He had no self-prepared biographies, no literary bureaus, and had made few speeches that had been reported or published.

A greater interest, therefore, attaches to the character and career of a man of this kind than to any other. If he had come up in the usual way through the Common Council, the State Legislature, or the Lower House of Congress, a great mass of gossip and knowledge would have been accumulated about him. But he was simply a plain, unpretending lawyer, who had little to do with or for the public. His business had been satisfactory and remunerative. He had done his duty to his clients, but his ways of doing it were not such as to point him out to the local newspapers as a man who must always be watched lest he should say or do something that would make him noted or notorious.

When, in December, 1882, Mr. Cleveland went to Albany to be sworn in as Governor he was probably known by fewer people in his State, both in personal appearance and in character, than any man who had ever been elected to this office. In spite of this fact, in two years he had gained such a position by reason of his service; the sturdiness of his character had become so well recognized; his fitness for the public post which he then held, and that to which he had been elected by the suffrages of his countrymen, had been so well demonstrated that, when he went to Washington to assume on March 4, 1885, the duties of the most august dignity in the world he had already become one of the best known of men. Much of this was due to his position, but more of it to the fact that he was a man of plain, simple traits, with no illusions about himself; without any of those concealments which some men find profitable, and with a conscientious regard for the right rarely equaled in any walk of life. By this time many people had observed his deportment and his habits of work and thought. His mental and moral characteristics had become as familiar as his figure.

During the intervening years, acquaintance with Mr. Cleveland's character and characteristics has naturally become much closer than with any other man in the country. As year after year has been passed in public service or in private life scarcely less public, the qualities noted and emphasized during the first two years of work and knowledge have become more and more prominent. There has been little change in the first general estimate made of him. Everybody knew from the first that he was a man of unwearying industry, persistent application and determination sufficient to carry him over any and all

difficulties. They know these things now still better. Not one of these traits has been developed since his entrance into public life. He did not become a student of public questions merely because he was made Governor or President. He was a student before. So far as he was concerned, it was only opportunity that came, and that he was able to meet it was, of course, due to his ability and training, how ever little the public might know of them.

It is, however, fitting, at this time, when he is again a candidate for the highest honors the world can bestow, that an attempt should be made to enumerate the elements that have enabled him to fill with acceptance such a lofty place, and to gain a unique position in the affections of his countrymen. I have already given some attention to the difficulties incident to such a summary or estimate. No two men look at a character with the same eyes any more than they do at a landscape. Each has his own point of view. Each sees something that the other does not; so that an estimate made by one man of another must of necessity be imperfect. By the very nature of the case, it must be subject to criticism, because no other man can be expected to take exactly the same view. This may be due to the fact that this other man has had no opportunity to see this character just as the friendly writer himself may have looked upon him; but it is, nevertheless, a difference that must be recognized by both writer and reader.

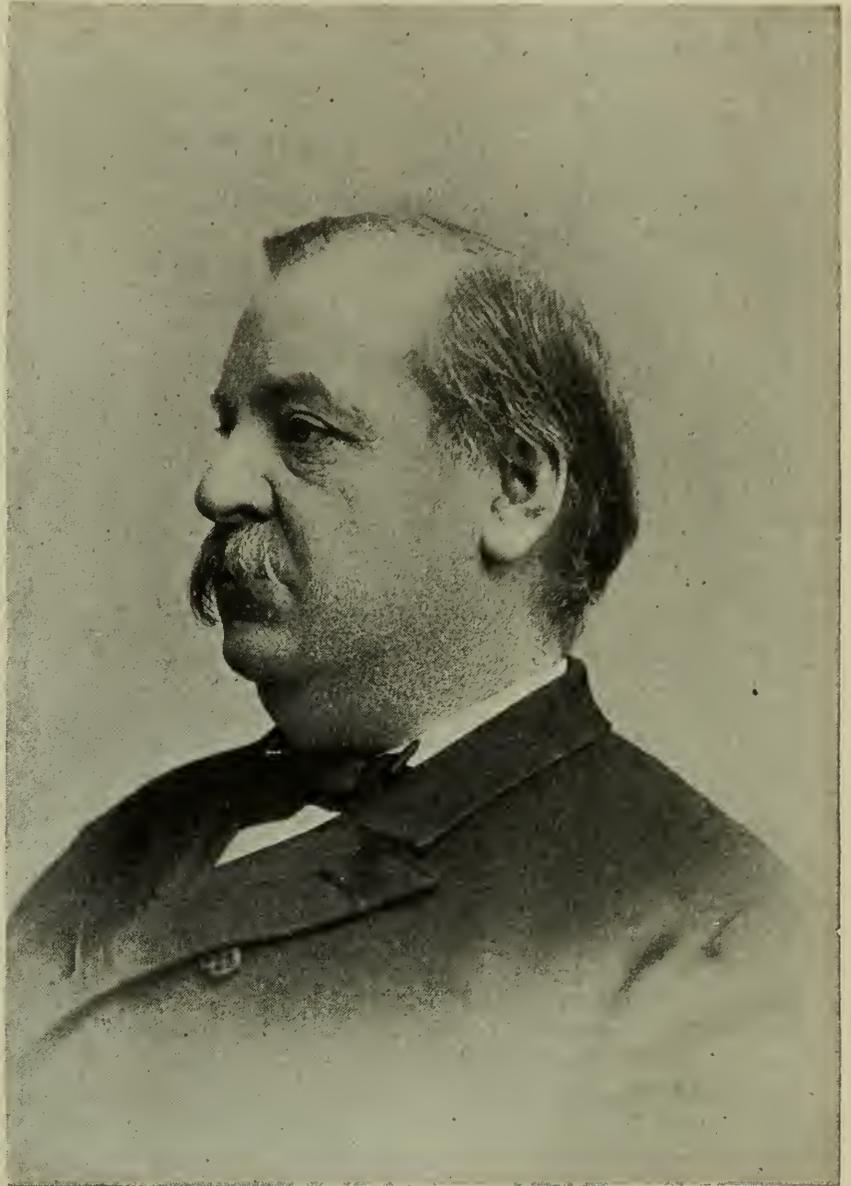

II. HABITS OF WORK—SOME PECULIARITIES.

Mr. Cleveland has always been a hard and systematic worker. He is not a man who waits for moods. When he has something to do, he does it. Whether it be getting a case ready for court, the making of an argument, the preparation of a speech, or the dispatch of the great mass and variety of executive business that may come to his attention as an official, he never waits for to-morrow to do to-day's work. If he has letters to write that ought to be written to-day, "ought" with him means "must."

When in 1863 he became an assistant to the District Attorney of Erie County, he formed the habit of working until late in the night—a habit that then became so fixed that he has never since been able to break it. He then found that, as a great burden was put upon him day by day, he must sit down after hours to draw indictments and prepare cases for court the next morning. Consequently, he continued his labors until late in the night or early in the morning hours. Always a sound sleeper, he is one of those fortunate individuals who do not need so much of it as the average man engaged in intellectual occupa-

tion. He always found that in those late night or early morning hours, his ideas came to him better than during the busy hours of the day.

But it is not for this reason alone that he has acquired and maintained this habit. It was the necessity for doing two men's work that has led him to give sixteen hours a day to his labors rather than eight.

MR. GROVER CLEVELAND.

No doubt, if left to his own volition, he would do like other men, and would enjoy the leisure to come from shorter hours; but he has never yet been able to avail himself of this. In his early professional work, as already narrated, he was compelled to employ his time to the utmost. After he had been sheriff, his professional advancement was rapid, so that he never found time then, in the great increase of business that came to him, to give himself any rest.

The same thing was true when he became Governor. Thrown unexpectedly into an office with duties of which he was not familiar, cast into a kind of life that made it necessary to learn many new things, he kept up his old habits. He simply went to

work and learned how to do these things. His good sense and ability came to his aid ; but, with him, hard work has, after all, been the secret of his success. He went through the Governorship in just this way. During the two years he was there, night after night he considered pardon cases, bills sent him from the legislature and all the varied business that belongs to a great executive office. He never shirked anything, as some Governors before him had done. Whenever a thing had to be done, he either did it himself or saw that it was done satisfactorily by somebody, and even in the latter case he might review the work in some such way as to assure himself that it had been done properly. Only upon such terms as these would he consent to give his approval to any measure, to make an appointment, or to grant pardon even for the smallest offense.

When he went into the Presidency, the demands upon him were still greater. In spite of the fact that he had there a cabinet that considered and adjudicated the great mass of public business, he soon found that there were as many questions that must be considered entirely by himself, and a conclusion reached upon them, as he had found while in the Governorship of the State of New York. In order to do this, and to give the necessary attention to the day duties of his office, he was compelled to filch time from the night to consider carefully and to his own satisfaction the great mass of legislative and executive business.

The result was that his average time of going to bed during the four years of the Presidency was probably two o'clock in the morning. Hours and hours after everybody else had left the Executive Mansion, he would be still pouring over papers in a rapid but most methodical way. No detail was too small to engage him, if he thought that the question at issue deserved or demanded attention. In fact, a question that many men might pass over by taking the opinion of a clerk or certainly that of a cabinet officer, would seem to him as urgent as the conclusion or ratification of a treaty, or the veto of a great legislative measure, and would often get as much of his attention. The big things would take care of themselves, while the little ones must have attention from him, or they would, in many cases, be entirely neglected.

Many a convict owed his pardon to the careful study of his case made by the President of the United States in the wee sma' hours of the morning, when the great mass of his countrymen were asleep. Many a big or little jobber found his way to the Treasury blocked merely because the President deemed it his duty to sit up until daybreak in order to put a stone in his path, and thus to protect the taxpayers from spoliation.

He was greatly assisted in his work by a memory of a peculiar kind. He has not one of those phenomenal verbal memories that enables him to recall everything, good or bad, that he has ever read ; but if he goes over a series of papers or documents, however large the collection or great the variety of subjects that it may treat, he can then turn them face up,

and as he runs them over again one by one can recall every important incident in them. Forming his opinions clearly as he goes along, writing with facility, thinking clearly, reaching a conclusion in every question upon grounds of a purely moral character, he was thus enabled to write veto messages when necessary, to prepare memorandums or applications for pardon, and in general to reach its conclusions with such promptness that very little of his own time was consumed with each case. The questions considered in this way were those that the ordinary President would never have called to his attention, and in the aggregate they gave him an amount of work that he was only able to do by reason of having a good constitution and by unwearied devotion to what he deemed his duty.

Take the matter of pardons. During his term of office, he filed more than 400 memorandums in such cases, each of which required work, whether the applications were granted or denied. Here was a man who had robbed a national bank ; there one who had forged a government note ; again, it would be a poor Indian out on some of the reservations, probably condemned to death for some comparatively venial offense. In the greater of these cases, he would probably reach his conclusion more easily than in that of the poor Indian. Many times, in going over a case of this kind, he would find something which did not seem to him clear — something that the Pardon Clerk had perhaps passed upon almost without question. It would probably be some knotty point of law or fact, which might only attract the attention of a judge watchful for every point. Many and many a time, while such a study was going on, the President would stop his examination of the case, send not only for the ordinary papers prepared in the Department of Justice for the use of the President in such cases, but for the original record containing the testimony, running perhaps into hundreds of pages of type-written matter. Then he would sit down and go over it as carefully as if he were a judge deciding whether the evidence would warrant him in holding an accused man for trial.

This was merely his way. He felt that when any man's life or honor were at stake, and a great nation in its confidence had put upon him the duty of protecting the rights, even of the humblest individual, he would do it, no matter what labor involved nor how it affected his personal comfort. Indeed, everything of this kind, however petty, which might seem to the ordinary comparatively insignificant, had stirred his conscience. He had a duty to do, and no power on earth could keep him from doing it, or from bringing to bear upon this the same judgment and discretion that he would give to the determination of some policy of administration.

Wonder is sometimes expressed at the great popular feeling that has shown itself for this man during the last four years. But there is nothing strange about it. It is merely the natural, inevitable result of doing his duty at every point, and to his appreciation of the great honors that have been conferred upon him,

together with their resulting responsibilities. However intimately any man may be acquainted with a public character, none can really know him better or recognize in general more thoroughly the large traits of his character than do the multitude of his countrymen. The popular heart is always looking for such men; the popular appreciation is always certain when they are found. These do not need to be told of all these personal traits, nor to know all the ins and outs of a man's habits or character, or all the various elements that have entered into his life, in order to appreciate and know him. This is why Grover Cleveland has been the only President of our later day who has retired from office and still retained the confidence and love of his countrymen each day increasing in measure.

Mr. Cleveland has always made his work more difficult for himself by answering letters with his own hand, as well as by doing all work—legal and otherwise—in this way. Accurate as he is in expressing his thoughts, he has never practiced the art of dictation. While Governor and President, the great mass of his letters was, of course, disposed of by his private secretary, Colonel Lamont; but with retirement to private life, he again took up his old habit of answering them autographically. The number of these that he has written during the past three and a half years is almost infinite. In spite of the fact that most of his correspondents have written him only to give him an idea of the political sentiment of a State or district, and have insisted that their letters needed no answer, the mass of correspondence of this character that he has treated as personal has probably been larger than that of any other ten men in public life.

Then, too, there has been a class of letters that he has always felt called upon to answer as fully as possible. He has been everywhere recognized as the apostle and representative of Tariff Reform, and the disciples of it have labored apparently under the impression that it was necessary for him to do much of the work. So he has written letter after letter, treating almost every phase of the question, and has thereby done much to keep that great problem before the people of the country in an intelligent way. It is an interesting fact, too, that no two of these letters have treated the question from the same point of view; and when it is borne in mind that he has always shown himself utterly indifferent to their fate, and has consequently kept no copies, the result is most surprising. This comes from no great knack of memory which enabled him to recall exactly what he had said upon a previous occasion, but from the fact that he treated the question in each case as if this phase of it were new to him, as well as to his correspondent and the public, which it was almost sure to reach. He has thus been able to demonstrate not only a wonderful familiarity with the question in all its phases, but to treat it as it affected the interests of an industry or a district.

Since his entrance upon public life Mr. Cleveland has not been what may be termed a general reader.

He reads much and studies a great deal, but naturally most of both reading and study have of late years been devoted to political questions. He has never given much time to novels, though from his earliest days he has been a lover of poetry. While he seldom quotes it in his public addresses, he often recalls the days when he was a student of the best English poets, and fondly recounts the pleasure he found in their reading and study. He has a good general knowledge of the political history of his country; few men of mature years have a better. He knows especially well the traits of the public men who have made his country what it is. He has apprehended correctly the character, individually as well as collectively, of these men in every period of our history; and when he has occasion to speak or write about them, he does not do so at random. He then takes up his studies anew and gets himself into what may be termed the atmosphere of the men and of their times.

During the past few years he has had little opportunity to read merely for pleasure—consequently, nearly all of it has been done with a purpose. He reads few newspapers, but goes over these few well and thoroughly, so far as he is interested. He has a horror of the average sensational news page—filled as it is with matter hurtful to the morals of the individual and to the home. He deprecates this tendency, and in many of his speeches has referred to it with deep feeling.

But in spite of the fact that he does not read many papers, he finds out what many of them are saying. During recent years, he has been compelled to accept other people's reading, so far as this related to the details of many political questions. As he does not care much more for the compliments that the newspapers shower upon him in such numbers than he does for the occasional bitter criticism, so he has never used any of the accepted means for keeping himself informed as to what the papers may say of him. He has never patronized a clipping bureau, nor asked his friends to keep him supplied with such matter.

Yet few men know more editors of newspapers, and certainly none knows more of the character of more newspapers than he does. How he does this is a mystery, and yet there is scarcely a paper of importance anywhere that he does not know something about it, or have an idea of its editor, though he has seldom seen the one, and has never come into personal relations with the other. This comes no doubt from meeting so many men and from the faculty he has cultivated of getting from them what they know or what has occurred in their immediate neighborhoods of interest to the world in general, and especially the knack of getting a great deal of political information from a brief interview.

III. AS A PUBLIC SPEAKER.

As a rule, men in public life have kept themselves in thorough training as speakers by reason of the offices they have either sought or held. Many have had legislative careers; others have been successful

stump speakers, who have talked freely and fully upon almost every subject. Quite as a rule, too, they are partisans. Whether or not their efforts are devoted to the consideration of questions purely political, they are, generally speaking, almost entirely lacking in the judicial quality. Many are ranting tirades against individuals or causes, while such speeches are seldom carefully prepared, and still more rarely reported with anything like accuracy.

But during the whole of his public life—throwing out of view the early professional position as a prosecutor, and his service in the sheriff's office—every important speech has been carefully prepared, and when it has been published at all, has been reported with almost absolute accuracy. He has always deemed it his duty to give his hearers the best ideas that he had. Carefully writing his addresses, revising them when necessary—although he has great facility in careful and precise expression—he has been enabled to appear before the public with a serious argument deliberately expressed as his latest opinion upon the question under consideration. The fact that his public career has been comparatively brief, has contributed to this result, but this fact, of itself, explains many things in the man's character. It indicates that he has never been a self-seeker. He has waited until things have come to him, rather than go out on the highways of political life to seek them. In fact, there has never been a time in his career when he could with truth be subjected to the charge that he was seeking a public position. However small, it has come to him, and however large he has still pursued the same policy. Writing to a young friend immediately after his election to the Presidency, he could, therefore, say with truth: "I never sought an office of any kind in my life, and if you live and follow my advice, I am certain that you will thank me for it some day." He has, therefore, felt perfectly free to express his opinion. If he has felt that it was necessary to lecture a legislative body or a political leader, he has never been afflicted with the idea that such a body or man could have a political rod in pickle for him. So he has maintained the youthful habit of telling the truth, and he has done it with such bluntness that everybody could recognize it as a truth that he was determined to impress upon his hearers, and so far as his own duties went to carry into effect.

Mr. Cleveland's speeches are almost entirely devoted to practical questions. While he seldom takes up any problems in which sentiment does not bear a great part, nearly everything that he has said shows that he is merely giving the conclusions of a man of intellect and high character—conclusions that come as the result of hard study and a knowledge of human nature, and of the conditions that he has observed. In many cases it has been necessary for him to make a study of special trades, or methods, or ideas in order to treat intelligently some question to be discussed. Even then the quality most valuable was his strong common sense. He never pretends to an intricate knowledge of everything relating to a particular question, but has a talent amounting to

genius for discovering salient points and for treating of general principles in a plain, straightforward way. In all cases he does this so thoroughly and well that his hearers recognize that he is giving them the result of his best thought, and many times see that he is instructing them in the higher branches of their own business on matters which they themselves ought to know better than he in all their bearings and inferences.

The power to do this comes from the habit of thoroughness, maintained even when his life was filled with many duties and honors. From the very beginning he had the faculty of going to the bottom of things, and now when he makes a speech on any question, even though it be one with which he may not be familiar in all its bearings, he goes directly to his task, studies it with as much care as a school boy might con his lessons, and never takes a position upon it until he has satisfied himself of the correctness of his view. It is, therefore, no wonder that a man who applies such tests as these to himself should have become popular with the people of his country. Most men are so circumscribed in their ideas; their purposes are so narrow, the localism with which they are surrounded is always so apparent, that they cannot be expected to take large views of the public questions with which they have to deal. In fact, very few of them treat of new and serious problems. They go on year after year reiterating the same old ideas, recounting the same stories without making progress, and naturally they are passed in the race of life, and while comparatively young find themselves justly classed as Bourbons and reactionaries.

Mr. Cleveland has never been subject to any such a charge, because he has kept himself thoroughly in sympathy with the ideas and the impulses of his age. If he makes a speech or writes a letter about any public question, it is only after due deliberation. If he then gives the impression of feeling cock-sure of his opinion on some problem, it is because he has a right to do so from having formed it by a careful study of it in all its relations.

Mr. Cleveland's manner before an audience is pleasing. He has enough confidence in himself to put him at his ease. He either has the natural gift for it, or has acquired the knack of getting into close sympathy with his audience. This is not done by any of the means usually employed by the off-hand speaker. Whenever he speaks extemporaneously at all, he does it well; but he seldom permits himself to speak unless he has had reasonable notice and time for preparation. As he never talks at random, he naturally does not care to trust himself to the spur of the moment, however, full he may be of the subject of which he is to treat.

Few men have a better faculty of acting what they speak. On some occasions he has done this with great effect. His speech before the Reform Club, in December, 1890, had in it a great deal more of the humorous element than he generally indulges in. As, with his usual deliberation, he made thrust after thrust at the men he was criticising, he imitated with much success the tone of voice and manner of each.

Of course, no man would do this who had not had an opportunity to see and know the peculiarities of a great number of public men, but Mr. Cleveland has had this and has improved it, perhaps unconsciously, to his own advantage.

While he has not changed his manner of speaking since he retired from the Presidency, he has certainly enriched it. This is probably the result of giving more time to the study, not only of the questions upon which he has treated, but to the manner of delivery. But he has always had that earnestness of manner, and has dealt so seriously and universally with questions that are interesting, that this careful preparation, added to his exalted position among his countrymen, have been elements contributing to give him this command over an audience. He is not an orator who attempts to move his hearers by appeals to all the emotions; with him appeal lies rather in good sense and reason.

He has little about him of the ordinary stump speaker. While he might, no doubt, if he had cultivated it in his earliest days, have attained excellence in this, as he has in many other lines of work, he never did so; and would perhaps look upon himself as placed at a disadvantage if he was expected to make such a canvass. In the first place, his speeches are short. He has made none that would occupy an hour in delivery—even in the cool and deliberate way in which he speaks. Of late there has been something of a tendency toward elaboration, although this does not indicate that he is coming to use more and more words to express an idea, but that because of his position and the importance of the questions he treats, his view has become so enlarged that it cannot now be given in the few pithy sentences formerly employed.

Each sentence is given its proper weight. He does not declaim, in spite of the fact that his memory is so accurate as to carry him through even his longer speeches almost without the change of a word. He seldom interpolates, although it occasionally happens that, at the last moment, some happy thought will come to him, and he will insert it after the printed slip has been given to the newspapers; but these cases are rare, and much of the influence which he has wielded since his retirement to private life has been due to the fact of this careful preparation, and to his care to give his hearers, and the vast body of readers behind them, always the best thought that he had on the topic treated.

IV. OPINIONS ON PUBLIC QUESTIONS.

There will be found in his opinions a consistency of view that is quite remarkable. Whatever the question, his habit of expressing his opinion upon it only after careful study, has enabled him to know what he wants to say without the necessity of changing or shifting. While I have no intention of quoting at any length from his writings and speeches * now ac-

cessible in something like connected form I venture to give a few short extracts, illustrating his ideas on some of the more important issues with which he has been so prominently identified. Among these is the question of Civil Service Reform, the agitation for which reached an important stage just as Mr. Cleveland was entering actively upon public life. Indeed, the Congressional elections of 1882, which turned out of place and power a Congress that had shown a great contempt for this question, called attention to the matter in such a way that at the second session of the same Congress, the basis of the present Civil Service law was adopted.

Mr. Cleveland was then Mayor of Buffalo, and a candidate for Governor of the State. In a letter to the New York Civil Service Reform Association, in which he set forth his views on this question, he said:

“If places in the public service are worth seeking, they should be the reward of merit and well-doing, and the opportunity to secure them on that basis should be open to all. Those holding these places should be assured that their tenure depends upon efficiency and fidelity to their trusts, and they should not be allowed to use them for partisan purposes. The money they earn they should receive and be allowed to retain, and no part of it should be exacted from them by way of political assessments.

“It seems to me that very much or all of what we desire in the direction of civil service reform is included in the doctrine that the concerns of the State and nation should be conducted on business principles, and as nearly as possible in the same manner that a prudent citizen conducts his private affairs.”

In his first message to the legislature of New York he recommended the adoption of the present State Civil Service law. And in his second and last message, congratulating the people of the State upon the successful inauguration of the new system, he took occasion to say:

“New York, then, leads in the inauguration of a comprehensive State system of civil service. The principle of selecting the subordinate employees of the State on the ground of capacity and fitness, ascertained according to fixed and impartial rule, without regard to political predilections and with reasonable assurance of retention and promotion in case of meritorious service, is now the established policy of the State. The children of our citizens are educated and trained in schools maintained at common expense, and the people, as a whole, have a right to demand the selection for the public service of those whose natural aptitudes have been improved by the educational facilities furnished by the State. The application to the public service of the same rule which prevails in ordinary business, of employing those whose knowledge and training best fit them for the duties at hand, without regard to other considerations, must elevate and improve the civil service and eradicate from it many evils from which it has long suffered.”

Going from one dignity to another, Mr. Cleveland has merely retained the same principles, the same demand that the business of politics should be conducted on the same principles as any other kind of business. This was probably never better defined than in the following extract from his letter to Dorman B. Eaton,

* “The Writings and Speeches of Grover Cleveland,” edited by George F. Parker. New York: The Cassell Publishing Company.

accepting the resignation of the latter as a member of the Civil Service Commission of the United States :

"I believe in civil service reform and its application in the most practicable form attainable, among other reasons, because it opens the door for the rich and the poor alike to a participation in public place holding. And I hope the time is at hand when all our people will see the advantage of a reliance for such an opportunity upon merit and fitness instead of upon the caprice or selfish interest of those who impudently stand between the people and the machinery of their government. In the one case, a reasonable intelligence, and the education which is freely furnished or forced upon the youth of our land, are the credentials to office ; in the other, the way is found in favor, secured by a participation in partisan work often unfitting a person morally, if not mentally and physically, for the responsibilities and duties of public employment."

In his first message to Congress, he took occasion to answer some criticisms that had been made upon the working of the law under his own administration. He recognized, what few of the more extreme among the advocates of civil service reform could, how many difficulties there were in the inauguration of a new system so long as the adherents of a single party only were considered. He discovered better than most men what advantage had been taken of the law by men who had secured their places under the most odious features of the old system so much reprobated by every real friend of civil service reform. This definition was so concise that it will bear repetition here :

"The allurements of an immense number of offices and places, exhibited to the voters of the land, and the promise of their bestowal in recognition of partisan activity, debauch the suffrage and rob political action of its thoughtful and deliberative character. The evil would increase with the multiplication of offices consequent upon our extension, and the mania for office holding growing from its indulgence, would pervade our population so generally that patriotic purpose, the support of principle, the desire for the public good and solicitude for the nation's welfare would be nearly banished from the activity of our party contests, and cause them to degenerate into ignoble, selfish and disgraceful struggles for the possession of office and public place.

"Civil service reform enforced by law came none too soon to check the progress of demoralization. One of its effects, not enough regarded, is the freedom it brings to the political action of those conservative and sober men who, in fear of the confusion and risk attending an arbitrary and sudden change in all the public offices with a change of party rule, cast their ballots against such a change.

"Parties seem to be necessary, and will long continue to exist ; nor can it be now denied that there are legitimate advantages, not disconnected with office-holding, which follow party supremacy. While partisanship continues bitter and pronounced, supplies so much of motive to sentiment and action, it is not fair to hold public officials, in charge of important trusts, responsible for the best results in the performance of their duties, and yet insist that they shall rely, in confidential and important places, upon the work of those not only opposed to them in political affiliation, but so steeped in partisan prejudice and rancor that they have no loyalty to their chiefs and no desire for their success. Civil service reform does not exact this, nor does it require that those in

subordinate positions who fail in yielding their best service, or who are incompetent, should be retained simply because they are in place.

"The whining of a clerk discharged for indolence or incompetency, who, though he gained his place by the worst possible operation of the spoils system, suddenly discovers that he is entitled to protection under the sanction of civil service reform, represents an idea no less absurd than the clamor of the applicant who claims the vacant position as his compensation for the most questionable party work."

He has consistently held the views thus expressed while holding three important offices and since his retirement from the Presidency. There is nowhere an intimation in address, letter or message that he has any regrets for the position that he has taken, or that he is other than a devoted advocate of this important reform.

It is not inapt either to refer to his position on questions of taxation and revenue. In his speech accepting the nomination for Mayor of Buffalo, he said :

"I believe that much can be done to relieve our citizens from their present load of taxation, and that a more rigid scrutiny of all public expenditures will result in a great saving to the community. I also believe that some extravagance in our city government may be corrected without injury to the public service."

The day after his inauguration as Mayor, he sent to the Common Council a preliminary message which bears the same relation to a municipal office as does an inaugural address to that of the Governorship or Presidency. In this he enlarged upon the principle already alluded to by declaring that :

"We hold the money of the people in our hands to be used for their purposes and to further their interests as members of the municipality ; and it is quite apparent that when any part of the funds which the taxpayers have thus intrusted to us is diverted to other purposes, or when, by design or neglect, we allow a greater sum to be applied to any municipal purpose than is necessary, we have, to that extent, violated our duty. There surely is no difference in his duties and obligations, whether a person is intrusted with the money of one man or many. And yet it sometimes appears as though the office holder assumes that a different rule of fidelity prevails between him and the taxpayer than that which should regulate his conduct when, as an individual, he holds the money of his neighbor.

"It seems to me that a successful and faithful administration of the government of our city may be accomplished by bearing in mind that we are the trustees and agents of our fellow-citizens, holding their funds in sacred trust, to be expended for their benefit ; that we should at all times be prepared to render an honest account to them touching the manner of its expenditure, and that the affairs of the city should be conducted, as far as possible, upon the same principles as a good business man manages his private concerns."

In his first message as Governor, he said :

"Let us enter upon the discharge of our duties fully appreciating our relations to the people and determined to serve them faithfully and well. This involves a jealous watch of the public funds and a refusal to sanction their appropriation except for public needs. To this end all unnecessary offices should be abolished, and all employments of doubtful benefit discontinued. If to this we add the en-

actment of such wise and well-considered laws as will meet the varied wants of our fellow-citizens and increase their prosperity we shall merit and receive the approval of those whose representatives we are, and, with the consciousness of duty well performed, shall leave our impress for good on the legislation of the State."

During the canvass of 1884 Mr. Cleveland made only two set speeches, one of them at Newark, N. J., in the county in which he was born. In that speech he said :

"In common with other citizens they [*i. e.* the workmen] should desire an honest and economical administration of public affairs. It is quite plain, too, that the people have a right to demand that no more money shall be taken from them, directly or indirectly, for public use than is necessary for this purpose. Indeed, the right of the government to exact tribute from the citizen is limited to its actual necessities, and every cent taken from the people beyond that required for their protection by the government is no better than robbery. We surely must condemn, then, a system which takes from the pockets of the people millions of dollars not needed for the support of the government, and which tends to the inauguration of corrupt schemes and extravagant expenditures."

In his inaugural address as President, he further enlarged upon this question :

"It is the duty of those serving the people in public place closely to limit public expenditures to the actual needs of the government economically administered, because this bounds the right of the government to exact tribute from the earnings of labor or the property of the citizen, and because public extravagance begets extravagance among the people. We should never be ashamed of the simplicity and prudential economies which are best suited to the operation of a republican form of government and most compatible with the mission of the American people. Those who are selected for a limited time to manage public affairs are still of the people, and may do much by their example to encourage, consistently with the dignity of their official functions, that plain way of life which, among their fellow-citizens, aids integrity and promotes thrift and prosperity."

It is not necessary to enlarge upon this question. Since the message of 1887, he has been looked upon as the one man who represented this demand for fiscal reform ; and I have given these extracts only for the purpose of showing that the message in question was no new thing ; that he did not have to train himself or to be trained in order to reach the conclusions therein enunciated. That message was merely the logical working of his mind, and when a favorable opportunity presented itself he took occasion to direct the attention of his countrymen to a mighty evil with a courage and an intelligence that have never been equaled in the history of our country.

It may not be improper also to append two short expressions of his views on a political question which has gained a good deal of importance during the past two years by the successful effort made, in the House of Representatives during the first session of the Fifty-first Congress, to pass what is known as the Force bill. He has never had occasion to speak much on this question, simply because since the time of his appearance in politics, such a thing as the Force bill was an impossibility. It was he who first took his countrymen en-

tirely away from the war period. But when he has expressed his opinion on this question, there has never been any doubt about his position upon it, as will be shown by these extracts :

From a speech delivered at Montgomery, Ala., in October, 1887 :

"Your fellow-countrymen appreciate the value of intimate and profitable business relations with you, and there need be no fear that they will permit them to be destroyed or endangered by designing demagogues. The wickedness of those partisans who seek to aid their ambitious schemes by engendering hate among a generous people is fast meeting exposure ; and yet there is and should be an insistence upon a strict adherence to the settlement which has been made of disputed questions and upon the unreserved acceptance of such settlement.

"As against this I believe no business considerations should prevail, and I firmly believe that there is American fairness enough abroad in the land to insure a proper and substantial recognition of the good faith which you have exhibited. We know that you still have problems to solve involving considerations concerning you alone—questions beyond the reach of Federal law or interference, and with which none but you should deal.

"I have no fear that you will fail to do your manful duty in these matters ; but may I not, in the extension of the thoughts which I have before suggested, say to you that the educational advantages and the care which may be accorded to every class of your citizens have a relation to the general character of the entire country as intimate and potential as your production and the development of your mineral resources have to its material prosperity?"

From his speech in Philadelphia, January 8, 1891 :

"When we see our political adversaries bent upon the passage of a Federal law, with the scarcely denied purpose of perpetuating partisan supremacy, which invades the States with election machinery designed to promote Federal interference with the rights of the people in the localities concerned, discrediting their honesty and fairness, and justly arousing their jealousy of centralized power, we will stubbornly resist such a dangerous and revolutionary scheme, in obedience to our pledge for "the support of the State governments in all their rights."

There is scarcely a speech or a letter of Mr. Cleveland's in which he has not emphasized the responsibility of officials to the people. From his entrance into public life as Mayor of Buffalo—since which time his public utterances are all well known—he has never failed to insist upon this as the one vital and important element in our politics. In accepting the nomination for Mayor, he said :

"There is, or there should be, no reason why the affairs of our city should not be managed with the same care and the same economy as private interests. And when we consider that public officials are the trustees of the people, and hold their places and exercise their powers for the benefit of the people, there should be no higher inducement to a faithful and honest discharge of public duty,"

In accepting the nomination for Governor of the State of New York, he said :

"The importance of wise statesmanship in the management of public affairs cannot, I think, be over-estimated. I am convinced, however, that the perplexities and the mystery often surrounding the administration of State concerns grows, in a great measure,

out of an attempt to serve partisan ends rather than the welfare of the citizen.

"We may, I think, reduce to quite simple elements the duty which public servants owe, by constantly bearing in mind that they are put in place to protect the rights of the people, to answer their needs as they arise, and to expend, for their benefit, the money drawn from them by taxation."

And in the closing paragraph of his first annual message to Congress in December, 1885, he reiterated with almost pathetic emphasis his opinion on this question when he said :

"I commend to the wise care and thoughtful attention of Congress the needs, the welfare and the aspirations of an intelligent and generous nation. To subordinate these to the narrow advantages of partisanship, or the accomplishment of selfish aims, is to violate the people's trust and betray the people's interests. But an individual sense of responsibility on the part of each of us, and a stern determination to perform our duty well, must give us place among those who have added in their day and generation to the glory and prosperity of our beloved land."

V. THE COURAGE OF HIS OPINIONS.

Mr. Cleveland has never failed to show the courage of his opinions on an important question. This is shown not only in the expression of his views on questions of taxation and revenue, but on almost every other with which he has had to deal. From that day in June, 1882, when he sent to the Common Council a message vetoing an ordinance awarding a street contract, he has never hesitated to speak to his countrymen with all the force that his character and position could command. At that time he used this plain language :

"This is a time for plain speech, and my objection to the action of your honorable body now under consideration shall be plainly stated. I withhold my assent from the same, because I regard it as the culmination of a most barefaced, impudent and shameless scheme to betray the interests of the people and to squander the public money.

"I will not be misunderstood in the matter. There are those whose votes were given for this resolution whom I cannot and will not suspect of a willful neglect of the interests they are sworn to protect ; but it has been fully demonstrated that there are influences, both in and about your honorable body, which it behooves every honest man to watch and avoid with the greatest care.

"When cool judgment rules the hour the people will, I hope and believe, have no reason to complain of the action of your honorable body. But clumsy appeals to prejudice or passion, insinuations, with a kind of a low, cheap cunning, as to the motives and purposes of others, and the mock heroism of brazen effrontery, which openly declares that a wholesome public sentiment is to be set at naught, sometimes deceive and lead honest men to aid in the consummation of schemes which, if exposed, they would look upon with abhorrence.

"If the scandal in connection with the street-cleaning contract, which has so aroused our citizens, shall cause them to select and watch with more care those to whom they intrust their interests, and if it serves to make all of us who are charged with official duties more careful in their performance, it will not be an unmitigated evil.

"We are fast gaining possession in the grades of

public stewardships. There is no middle ground. Those who are not for the people, either in or out of your honorable body, are against them and should be treated accordingly."

Indeed, no man in our history has felt so free to lecture the legislative bodies with which he had to deal, or the people who were exploiting some doctrine, as Mr. Cleveland has done. Sometimes it has been when he could wield great power, and then again he has pursued the same course when he was only a private citizen. His public career bristles all over with this kind of courage, which is indeed bravery of the highest order. He has not stopped to think about the personal effect of such lectures to legislative bodies or of plain-speaking letters to the promoters of political movements. If he makes up his mind that a proposed project or a practice is wrong, or that the ideas back of a given movement are dangerous, he does not stop for a moment to consider the effect for his own political chances. Indeed, there is nothing to indicate that such a thing ever enters his mind. When he sees an abuse, he evidently looks upon it as something that ought to be corrected, and he concludes that if he has any power in the matter he will exercise it at once and as positively as he can. He vetoed the bill reducing fares on the elevated roads to five cents, when most men would have declared that he was taking his political life in his hands. In this case, and perhaps in many others, probably greatly to his own surprise, he found that the thing he had done merely because he himself had deemed it right, had made the same impression upon the public mind. As a result, he was stronger after such action than before.

So it was during the Presidency with his veto of pension and public building bills. He never stopped to inquire whether he would or would not get the votes of men who had been soldiers or of the great number of people dependent in one way or another upon the success of such legislation. No man in his senses would charge that he was an enemy of the deserving soldier. If proof were needed his entire record would enable him successfully to meet such a charge, as from the earliest days of his career he has shown the utmost tenderness for everything that bore the slightest relation to the defenders of the Union during the war. But he thought he saw a great wrong in many of the private pension bills presented to him ; so, while he signed some 1200 of them, he took occasion to veto perhaps one-fifth of this number. These were the bills that would not stand the rigid investigation to which he subjected them. Whatever the committees of both Houses of Congress did, he, by delving deeper than any of them—though no deeper than they ought to have gone—discovered that many of them were unworthy of support.

It is difficult to particularize where there are so many cases of this great civic courage, but his position on the free coinage of silver ought perhaps to be cited as another and conspicuous one. For a great many years there has been a demand which seemed many times to be general in favor of the free and unlimited coinage of silver at the old and recognized

ratio. The question had been much juggled with, until the minds of many men not inclined to support schemes looking to the debasement of the coinage had become confused. But from the beginning Mr. Cleveland saw clearly the effect that would follow the adoption of this scheme, and even before he assumed the duties and responsibilities of the Presidency, he embraced an opportunity to give his views on the question. He was not an enemy of silver, or of its use as money; but he was opposed to the Government taking this product and giving it an artificial value or a position that it did not deserve, and that he knew would be hurtful to the interests of the country. In his first annual message he repeated and enlarged his arguments at length, with the result that during his entire administration no serious consideration was given to the question of the free coinage of silver. Almost the moment that he left office this old demand arose again, and it was only a little more than a year after his successor was inaugurated until he had signed a silver bill which was perhaps the most pernicious and dangerous one ever presented to an American President, and is now so regarded by the Senator whose name it bears. There are not many people who would question what Mr. Cleveland would have done if he had been President when such a bill reached him.

While this bill was under discussion a public meeting was called in the city of New York, to consider the attitude of the business men of the city of his residence. To this gathering he sent a letter of less than 200 words which has been, perhaps, the most efficient document of its length ever written by a public man in this country. It may not be amiss to quote some of it, even at this day:

"It surely cannot be necessary for me to make a formal expression of my agreement with those who believe that the greatest peril would be invited by the adoption of the scheme embraced in the measure now pending in Congress for the unlimited coinage of silver at our mints. If we have developed an unexpected capacity for the assimilation of a largely increased volume of this currency, and even if we have demonstrated the usefulness of such an increase, these conditions fall far short of insuring us against disaster if, in the present situation, we enter upon the dangerous and reckless experiment of free, unlimited and independent silver coinage."

It would be difficult for any man to compress into the same space more sound sense and plain speaking than in this letter, and yet no one had the least reason for surprise that Mr. Cleveland had written such a letter. It is true that he was a private citizen, but he was nevertheless asked in this capacity to join with his neighbors in opposing the adoption of a certain policy. It was in no way incumbent upon him to send any answer at all. If he was looking for new honors, he had only to say nothing, and a presidential nomination would come to him without question. But he did not think of nominations or elections. He saw an opportunity to do good, and he embraced it without delay. There were those even at the time who predicted that the writing of this letter would greatly strengthen him with the country, but there were

many thousands more, whose judgment and opinions might have been deemed just as valuable, who asserted that Mr. Cleveland had merely committed political suicide.

The truth is that the letter in question changed the course of public sentiment, and bids fair to change the course of history itself. His service to the cause of honest money could not be computed, and yet, after the lapse of a little more than a year he has been able not only to command an almost unanimous nomination of his party for the Presidency, but to defeat any and all efforts to carry out the policy against which he then committed himself. Too much credit cannot be given to the statesman who, in an emergency like that, threw the weight of his great name into the balance.

But this act was only typical of his whole career. Whether he has been called upon to use his influence in a local, a State or a national contest, nobody has ever questioned what his position would be on the great questions of the day. If any question arises looking to the preservation of the public honor or credit, if any reform of abuses is agitated, good men everywhere will know where they find Mr. Cleveland.

VI. SOME OF HIS NOTABLE SAYINGS.

It has fallen to the lot of few public men to contribute to current discussion and to political literature so many strong, virile sayings as Mr. Cleveland has done during the past ten years. Such sayings are merely the natural result of the vigorous thought of a strong man. He never strains after effect, or writes or speaks merely for the sake of talking. He probably never sat down with the deliberate intention of trying to write a sentence that should be epigrammatic in form, but as he has always said just what he thought on every question, regardless of any effect it might have on his own fortunes, he has developed the faculty of expressing himself with directness, plainly, without evasion, to the point, and with no attempt whatever at style or fine expression.

So many phrases and words used by him have passed into political literature that a larger number of such are credited to him in a recent encyclopedia of American literature than to all other Presidents together. From his attitude on Civil Service Reform have come the phrases "Offensive Partisans," "Pernicious Activity" and "Obtrusive Partisanship." It was natural that his horror of corrupt methods in politics and his inherent honesty should lead him to characterize bribery as "a pernicious agency" and to declare that "The franchise is not debauched in the interests of good laws and good government." Always a consistent friend of labor and the laboring man, it was only natural for him to declare that "Labor is the capital of our workingman," and that "Honor lies in honest toil." His early training as the son of a clergyman would suppress surprise that he should declare that "A citizen is the better business man if he is a Christian gentleman;" or that "Our public life can no more be higher and purer than the life of the people than a stream can

rise above its fountain or be purer than the stream from which it has its source." The man who declared in October, 1884, that "Every cent taken from the people beyond that required for their protection by the government is no better than robbery" might naturally be expected to describe our present tariff laws as "The vicious, inequitable and illogical source of unnecessary taxation," and to denounce, as he did in his last message, "The communism of combined wealth and capital, the outgrowth of overweening cupidity and selfishness." It would be hard to make sensible people believe that the man who declared it his purpose to make "The pension roll a roll of honor" is the enemy of the soldier; and it was logical that he should make the definition that "The true soldier is a good citizen," or that he should declare that "The best soldier should be the best citizen."

There are some newspapers that "Violate every instinct of American manliness and in ghoulish glee desecrate every relation of private life," but it is not every President of the United States who either would or could say it so directly and emphatically. Some Senators of the United States may have had to go to the dictionary to find out what "innocuous desuetude" meant, but the phrase will nevertheless long remain as an accurate statement of the conditions he described. "Though the people support the government, the government should not support the people," is concise as a definition and accurate as a truth in political economy, as is also his declaration that "The government is not an almoner of gifts among the people." So, becoming indignant at the attempt of Congress to pass the direct tax bill, he referred to it as "a sheer, bald gratuity." Even in his professions of partisanship he says many things very concisely. In accepting the nomination for mayor of Buffalo, in October, 1881, he declared: "I am a Democrat," which, though not an epigram, is at least an earlier statement of the profession of faith claimed for a long time by a man who repeated it many years later. But when he enunciated the theory that "Party honesty is party expediency," he certainly gave his political friends watchwords that may well bear quotation.

It was left for his private secretary and faithful friend, Daniel S. Lamont, to give form to the saying: "Public office, a public trust;" but this was merely the sententious phrase of a newspaper man making a heading for a political pamphlet. He found his warrant for this, as some writers of headings do not, in the text of the pamphlet, where Mr. Cleveland, in accepting the nomination for Mayor of Buffalo, had declared that "public officials are the trustees of the people," while, in his first message to the Buffalo Common Council, he reminded that body that its members were "the trustees and agents of their fellow-citizens." Still later, when accepting the nomination for Governor in September, 1882, he had said: "Public officers are the servants and agents of the people."

Not one of these sayings is ignoble, or expresses any sentiment that is unworthy or has a personal sting in

it. They merely show how he has condensed into brief space much of the best political thought of his time. They are thoroughly in keeping with his character, and many of his speeches or messages might stand upon these extracts without the context.

VII. PROFESSION, APPOINTMENTS AND FRIENDSHIPS.

It has always been said that Mr. Cleveland had some doubt, before his nomination for Sheriff of Erie County in 1870, about the propriety of a lawyer accepting such an office, but that his friends insisted it would enable him to get away from the mere bread-winning work that he had always engaged in and to give his time to the careful study of his profession. But whatever his own opinion may have been, it is certain that, as the result of these three years of rest from active work, he went back to his profession a ripened lawyer. At once there came to him a practice different in both degree and kind. He did then, as he had done before, a great amount of work for people who could never pay for it, and he kept that up as long as he was engaged in active practice. This was merely his way of doing a charitable act to many people whose interests might otherwise be neglected; and this of itself, while it was done with purely philanthropic purpose and long before he was chosen to office or thought of for it, had much to do with giving him the excellent and accepted position among his neighbors that he had in Buffalo.

His practice was of a high character. He was especially noted for his excellence as an equity lawyer. He always presented his case in court well and concisely. He never indulged in loose, ranting argument then any more than he does now; and much of the excellence of his later speeches on political and social questions is due to the care with which he applied himself to his legal tasks from the earliest days of his entrance upon his profession.

It was only natural that a man holding the views Mr. Cleveland did from the earliest day concerning the responsibility of officials to the people and to a reform of the civil service, that he should take the greatest care in making appointments. This showed itself during his service as Governor. In spite of many difficulties he never failed to improve the *personnel* or the efficiency of an office when he made a change in its head. As was natural, he appointed his own political friends to important places. He was, of course, dependent upon them for the carrying out of his ideas and policies; but mere partisan service did not count for much with him; nor was he inclined to give way to recommendations, however largely they might be signed. He always had a way of coming into personal contact as far as possible with the applicants for places, after he had obtained from their friends all the information possible. He probably made, both as Governor and as President, fewer appointments of a character purely personal than any other man who ever held these offices. He soon found out with almost unerring clearness whose recommendations he could take. If

a man imposed upon him once and induced him to make a bad appointment he had no hesitancy in accepting the responsibility for it himself, and in relieving the incumbent at the earliest moment; nor did he leave such an official long in doubt as to what his removal meant, nor fail to rebuke him and his backer for the means they had used to deceive him.

No man in our history has done more to elevate the character or to raise the standard of appointments to office. He did not care whether a man was old or young; whether he was rich or poor. If a candidate for office presented himself, the first question he would ask would be concerning his character, and the next as to his fitness for the work to be done.

Probably no President ever had more difficulties to surmount in this respect than he. Excluded from participation in Federal politics, as his party had been for nearly a quarter of a century, no man who had not observed closely could know how hard it was to find men with any training whatever in public life; and in many cases, where they had this training, it had been perhaps in legislative work, which did not of necessity fit a man in a large degree for efficient executive work. Nevertheless, the result of Mr. Cleveland's care, and of the conscience he brought to his work has been a very decided improvement in the morals of public life. He not only made politics something more than a mere hunt for spoils, but he demanded that the men appointed to place under the government should have such character and fitness as would commend them to their neighbors and enable them to exercise for themselves and for the administration which they represented a beneficent influence upon politics.

Mr. Cleveland's method of dealing with his cabinet advisers while President was sensible. He never assumed to do everything in all the departments. He recognized that the vast mass of public business must be done without any intervention from the President, even though he must be held responsible for its proper conduct. In all of the problems submitted to him he was free, helpful, studious of the closest details, so far as he must give attention to them, and quick to decide what demanded his time. He had, while President—as in everything else that he undertakes—the faculty of going to the bottom of a question; and he had also the gift—rare, even among well-trained men—of writing out with accuracy a statement of a given question. If there was a memorandum to be prepared at a cabinet meeting, or a statement to be given to the public, even though it might relate to a matter with which the head of the department was most familiar—something of so much importance that every member of the cabinet would probably be called upon to write his statement of it—the President would usually participate. By common consent, his would many times be accepted as the strongest and best constructed memorandum of them all. He never did such work with any desire or intention of dominating his cabinet, but only for the purpose of helping to a decision that should be satisfactory.

However such questions were submitted to him many times and settled in this way.

His relation to his cabinet advisers was agreeable at every point. He did not indulge in any of the favoritism that so often enters into official associations of this kind. At the same time no man was encouraged to do the work of a man at the head of another department, and no subordinate was led to believe that he was bigger and more important than his superior; consequently his administration was freer from those official jealousies that so often arise than any known for many years. The President and his advisers were not only official associates; they were personal friends. And it is interesting now to find that all the men who came into the closest official relations with the President, during the four years of hard work, retain for him not only that respect and regard which his position and character command, but that love and veneration which do not always follow.

Few men are more warmly attached to personal friends than Mr. Cleveland has shown himself. He does not make friends of every man he meets, but once made he attaches himself to them with all the strength natural to the character of a man of great personality. He may not do everything that a self-seeking friend might want if he had such an one, but there has been no man in public life to whom his mere personal friends had more reason to be attached than to Mr. Cleveland. He is watchful of their interests and seeks opportunities to advance them—never forgetting at any time the interests of the public service.

Not only is this true, but the number of friends made since his entrance upon public life is astonishing. The official relations into which he was thrown with members of his cabinet produced their natural results when men of warm hearts are brought together in the making of those friendships almost as strong as those formed even in youth. This attachment between himself and some of the members of his cabinet—in fact, all of them—is something that the public knows little about—however well it may think it knows the man. Some of the men called about him had been long in politics and had indulged by themselves and their friends those ambitions for the highest place in the land to which every American is supposed to look forward. But the moment they came into relations with their official chief, the attachment became not merely chance or official, but close and personal.

This is due largely to the fact that he has no jealousies. The fact that he has been preferred for great honors does not lead him to belittle the ambitions of other men. He continually keeps in mind the fact that every man has a right to his aspirations and ambitions, and however these may clash with his, so long as the steps leading to them are honorable, straightforward and manly, they could excite no jealousy or resentment—none of those petty feelings that disfigure so many men.

As he is generous in this respect, so he is in every other. Accustomed during his early days to the hardships that come to those who must struggle to make their way in life; frugal by nature, as well as by habit so far as his own comfort or demands are concerned, he is generous to a fault to others. This generosity not only leads him to do kindly acts so far as they relate to his own family and friends, but many persons whom he never saw draw upon him every year for money and time that he is ill able to give.

His tastes are simple. He has never manifested any desire for that ostentation so common in these days, and no care for the high living after which so many public men struggle. He recalls always with pleasure his own early struggles and the habits and tastes of the plain people with whom his lines were cast during those formative days.

Never a hero worshipper himself, he cannot understand the development of this tendency in others. If any man should say to him that he was a great man, and his inmost thoughts could be fathomed he would no doubt manifest wonder that anybody thought him so, and declare his own surprise that he had risen to such heights. There is about him none of the vanity developed in so many men in place, and that disfigures many who rise even to petty dignities. In his own life, he is as simple in his tastes and desires as if he were still a struggling lawyer in Buffalo and he has never been quite able to understand why he should be made the subject of so much adulation from his fellow-men.

VIII. FAITH IN THE PEOPLE. GENERAL ESTIMATE OF HIS WORK.

Mr. Cleveland has always had a strong and abiding faith in the people. He has been with and of them. From his earliest days, he has been thrown into close relations with people of every kind. Men engaged in every sort of occupation and profession have come under his notice with the result that he probably knows the impulses that move them perhaps better than any public man that this country has ever seen. And he has gained their confidence by reason of the fact that he has not truckled to them. He has never given up his own opinions to please anybody, nor has he ever played the demagogue. There can nowhere be found in any of his addresses a single utterance that looks like an attempt to gain votes from the whole people or from a class by appeals to their prejudices.

Knowing by association, as well as by study, the character of his countrymen, he has never been found among those who despair of the final success of a good cause. He has always looked upon the promotion of the healthful and patriotic impulses of his countrymen as natural and right. He has felt that left to themselves the people would generally do right in the final success of which he firmly believes. There is never the absence of hope, however bad the conditions, and if these conditions have fallen into the hands of bad men he does not believe that they will always continue in power. He trusts the intelligence and virtue of his countrymen to save them from

perils that may seem imminent. At the same time he believes in making the most persistent and intelligent efforts to induce his countrymen to reach a right decision on such questions with as little delay as possible. He is not one of those professional optimists who believe that because a thing is American it must be good. He sees and knows that ills affect the body politic here just as they do in other and older countries. They may be different, and the remedies to be applied certainly are different. But he does not allow himself to believe that an evil will correct itself, or that things will, as the phrase goes, "come out all right," merely because it is recognized that they are not what they ought to be.

On the other hand, he never permits himself to indulge in that wild pessimism which so often disfigures the character and utterances of public men who do or see done what they think ought to be corrected at once. Back of everything is a patriotic impulse and exhortation to care and watchfulness; the promotion of the best interests of the people as they may show themselves to intelligent and benevolent-minded men. Upon whatever subject he may speak, he always exhorts his hearers to activity in season and out, in the work of arousing the best sentiments among his countrymen. He shows at all times that he is affected in every fiber of his character by sentiment, so deeply seated that nothing can eradicate it. This sentiment never takes the form of mere gush or sentimentality. His pathos does not descend to bathos.

No public document of the same length, ever issued in this country, has had so large a circulation in the same time as Mr. Cleveland's Tariff Message of 1887. It was not that it represented anything new to the country, but that the man who wrote it had the courage to see the peril into which the country had been drawn by the adherence to a bad and dangerous policy, and was willing to stake his political fortunes upon the correction of these wrongs. It would be a mistake, however, to look upon the Message of 1887 as a mere discussion of the tariff question. It was this, and as such it was both intelligent and effective; but its influence upon our politics has been, and bids fair to be, so far-reaching that in the end it will insure, not a mere change from a bad and foolish to a sound and sensible fiscal system, but the regeneration of our politics.

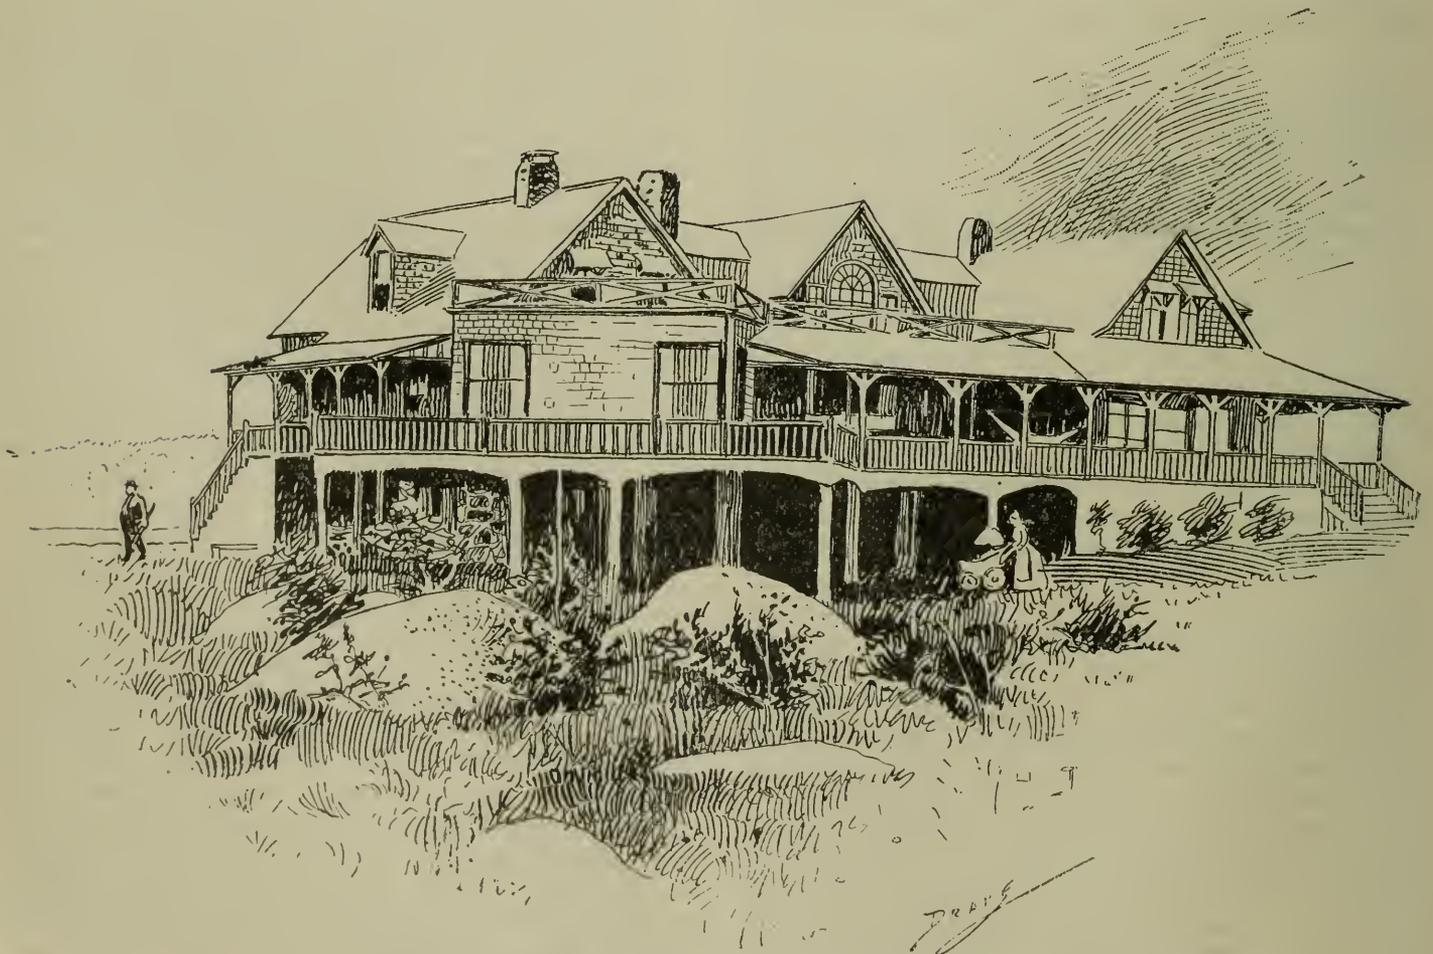

If the movement resulting from it is carried to its logical conclusions, it means that selfishness shall not add the power of government to the force that it already possesses. That great message has reorganized and rejuvenated one political party; in due course of time it is bound to have the same effect upon any and all parties, whatever the name, or however great or small they may be. It has created new political conditions, and will bring in others still unthought of. Nominally, the man who wrote this message and brought these moral forces into politics was defeated in 1888. In reality he was the most successful public man known to our history. The seeming defeat of that day, whatever may be the end of the questions then discussed, or whatever may be

the result of this or any other election to follow, was not a defeat at all; it was a victory for moral principles in politics, and for a man who was ready to do anything to promote these principles. It has put new life into our politics, and taken us out and far away from the consideration of old and sectional questions that should have been dropped long before, and has brought to the front new problems of every kind.

Mr. Cleveland enjoys now, as he has for years, and in a larger degree than any man known to the political history of this generation, the confidence of his countrymen. This is due to service as well as to character. It is universally recognized that while he was in power the rights of every man, race or interest were made secure. Under his wise administration sectional questions and race differences became things of the past. No other President had ever been able to bring about this result, and if he had done nothing else, he would be entitled, because of it, to the highest homage that his countrymen could pay him. Business men in the North perceived at once the advantages offered them. They knew that the investment of their accumulations in the South—for the first time recognized to be a comparatively undeveloped section—was no longer to be put in peril by legislative or executive action which might in any way imperil these interests.

This confidence, however, was not confined to any section or to any interest. It was felt in every trade, business or calling and by men holding every variety of opinion. Such a policy insured a wise economy in every branch of the government service; the preservation of the remnant of our public lands; the absence of mere partisan considerations from the public service; the building of an effective navy; the rebuke of political selfishness; the prudent and moderate conduct of foreign affairs; a wise conservatism in the financial policy of the government. It was based upon opposition to State socialism as it manifested itself in everything from protection to pauperism; to combinations, whether they take the form of trusts or log-rolling appropriations through Congress; to the dangerous and indefinite purchase of silver for coinage by the government and to unnatural fear of foreign competition.

In all these things Mr. Cleveland represented at once the conservatism and the common sense of his countrymen. That he was able to carry out so many positive policies, and to destroy or injure so many dangerous tendencies, certainly entitle him to the confidence he has received, and give warrant to the country that whatever fortune may still have in store for him the people of a great nation will be the winners if he is again intrusted with power.

"GRAY GABLES," MR. CLEVELAND'S SUMMER HOME.

“CAHENSLYISM” VERSUS AMERICANISM.

BY AN AMERICAN CATHOLIC EDITOR.

(THE REV. JOHN CONWAY, A.M., EDITOR OF “THE NORTHWESTERN CHRONICLE.”)

CHAPTER I. THE FOREIGNIZING CONSPIRACY BEGINS.

THE Catholic Church in the United States is a very strong body. In the late census, Superintendent Porter gives the number of its communicants as 6,250,045. It is stated in the official bulletin issued by the Department of the Interior that these figures do not include baptized persons under nine years of age. A great many others who might properly be called Roman Catholics are not included in the number given. Representative men of their Church set down the total number of Catholics in the United States as being over 10,000,000.

Thus Roman Catholics form almost one-sixth of the whole population. They come from many lands; they are found in every State and Territory of the Union. The country cannot afford to be indifferent to the methods and aims of this powerful body. Later developments of the machinations of some of its members present abundant material for a social and political study.

The foreign dispatches which have appeared in the press of this country during the past year should open the eyes of all true Americans to the gravity of the subject. There is no doubt as to the substantial accuracy of these dispatches. The Archbishop of St. Paul vouches for that. To a representative of *The St. Paul Pioneer Press* His Grace says: “The dispatches as received by the press in America are undoubtedly correct. Those coming from Rome merit special reliance, since the accredited agent of the associated press in Rome as regards Catholic news is an ecclesiastic of high position and possessed of the surest means of obtaining information.”

The conspiracy has been growing for several years. As early as 1884 a petition signed by eighty-two German priests was sent to Rome. Its ostensible object was to remove certain supposed grievances under which the German clergy were said to labor, particularly in the Archdiocese of St. Louis. The Archbishop of this See is the Most Rev. Peter Richard Kenrick. He is a man of retired habits and scholarly attainments. It is generally believed that the German priests have their own way in his Archdiocese. Their interests are almost entirely looked after by a German Vicar-General. Though the petition presented to the Propaganda in 1884 was a total failure, still the men at work here were not discouraged.

In the year 1886 the Rev. P. A. Abbelen went to Rome and presented another petition from the St. Louis priests to the Propaganda. The Rev. Mr.

Abbelen is a priest of the Archdiocese of Milwaukee and is said to be a man of considerable ability. Some who know his attainments express surprise at his lending himself to an intrigue of that sort. Be this as it may, it is certain that he did champion the cause of foreignism as stoutly as he could. The expenses of his trip to Rome were paid by the German priests of St. Louis. His mission to the Vatican was kept secret as long as possible. Archbishop Ireland, of St. Paul, Minn., and Bishop Keane, of the Catholic University, Washington, D. C., happened to be in Rome at the time. These two prelates let in the light upon the work which the Milwaukee clergyman was prosecuting in the name of the German priests of St. Louis.

The petition presented by Father Abbelen seems at first sight very innocent. He asked for the removal of some grievances which did not exist. This was for the purpose of preparing the way for other demands. And it is in connection with these other demands, as I shall show later on, that conspiracy against this country is to be found. His work at Rome on this occasion left the petitioners in a worse condition than before. He asked that German-speaking parishes be put on an equal footing with English-speaking ones. As a matter of fact, the bishops of this country declare that such has always been the case. He asked that all newcomers be assigned to a church of their own language; Rome decided that they are free to go to any church they please.

Americans will rejoice at this, because it shows that Rome looks upon German-speaking churches as mere temporary expedients and the language of this country will be spoken in them sooner or later. Another sound American principle is found in the reply of the Propaganda regarding the schools to which children must go. The children of German-speaking parents are not under any obligation to go to a school where a foreign language predominates. The severe rebuke to Father Abbelen and the petitioners by the Propaganda in telling them never again to present certain queries contained in their memorial is also noteworthy. But the outcome might have been very different were it not for the vigilance of Bishops Ireland and Keane. These prelates explained the state of affairs in this country and presented a counter petition. The petitioners were signally defeated. They lost rather than gained. But they bided their time and the conspiracy thickened.

If there were question of disagreement about a mere ecclesiastical policy among Catholics an outsider would have no reason to interfere. Then it were a domestic dispute to be fought out by ecclesiastics themselves. But it is more than this. A political move is covered under the name of religion. The prime movers in this contest profess to be influenced by a burning zeal for the salvation of the souls of the immigrants. If this be the object of these men their action is an impeachment of the Roman Catholic Episcopate of the United States. Acts speak louder than words, and the actions of these men say as clear as a clarion note to the bishops of this country: "You are neglecting the immigrants." I am not writing in defense of bishop or priest or Catholic Church or any other church. The spokesmen of the Catholic hierarchy of America, however, say that the constant effort of the bishops is to provide for all Catholics of foreign tongues priests of their own nationality.

The Catholics of America might be willing to tolerate the grumblings of foreign-speaking Catholics here. But when European Catholics undertake to tell the Vatican the policy which should be pursued by the Catholic Church in America it is no wonder that the home members of the Church resent such interference. When German priests in America talked of appealing to Bismarck to settle an ecclesiastical difference; when representatives of European powers use their influence at the Vatican for the furtherance of foreign interests in the Catholic Church in America; when foreign diplomats speak of the great national influence it would give their countries if a foreign policy were pursued in the affairs of the Catholic Church in America, then the subject assumes a political importance, and Americans, regardless of their religious belief, cannot afford to overlook it. The heart of the nation went out in gratitude to Senator Davis, of Minnesota, when he recently stated in the United States Senate, that Cahenslyism is a greater menace to our country than is the Chinese question. With characteristic perseverance, the man after whom

the foreign ecclesiastico-civil policy known as Cahenslyism is called, attempted a defense of his position as against the brilliant Senator from Minnesota.

The following extract from the memorial presented last year by Herr Cahensly to the Propaganda shows treason against this country:

"Moreover, this question affects the interest of the countries from which emigration takes place. *Through their immigrants the nations are acquiring in the great Republic an influence and an importance of which they will one day be able to make great profit.* These nations are so well aware of this that they are doing everything in their power to have those of their nationalities settled in the United States develop and strengthen themselves in every respect. The time has come when governments can no longer remain indifferent to this grave and important question. For example, is it a matter of no consequence to England, Ireland, France, Germany, Italy, Canada, Austria, Hungary, Spain and other governments, that they number in a youthful country, and one full of prospects, millions of fellow-citizens, forming part of the nation, and taking an active part in industry, commerce, politics, social life, and public affairs? It must not be lost sight of that the American nation, the people of the United States, is not a people of one race only, but of all races, of all nationalities. Every race, every nationality may take its place in the sunlight. Precisely owing to this fact, and because religion is the corner-stone and the key-stone of every social edifice, the nations have an immense interest in their emigrants being represented in the episcopate of the United States by bishops of their own. And therein lies the reason why all the nations, whose populations are emigrating to the great republic are expecting from the paternal solicitude of the Holy See, the bishops whom their dearest interests call for."

Is it not treason against this country to invite foreign powers to settle an American question and to offer these powers, by way of compensation, a profitable influence and importance here?

CHAPTER II. THE AMERICAN SIDE OF THE PLOT.

The men chiefly interested in the advancement of what has come to be known as the Cahensly movement live on this side of the Atlantic. The men on the other side are mere figureheads. Those who work most strenuously for the success of the movement belong to three classes. First, the journalists in the German language encourage foreignism. From the beginning of the discussion to the present time not a single paper printed in German took the part of the United States. This omission has been very remarkable at times. The Pallium was conferred on Archbishop Katzer, of Milwaukee, on August 26, 1891. Cardinal Gibbons preached an excellent sermon from an American standpoint. Among other admirable things he said:

"The Catholic Church in the United States has

been conspicuous for its loyalty in the century that has passed away, and we, I am sure, will emulate the patriotism of our fathers in the faith. Let us glory in the title of American citizen. We owe an allegiance to our country, and that country is America. We must be in harmony with our political institutions. It matters not whether this is the land of our birth or of our adoption. It is the land of our destiny. Here we intend to live and here we hope to die. And when our brethren across the Atlantic resolve to come to our shores, may they be animated by the sentiments of Ruth when she determined to join her husband's kindred in the land of Israel, and may they say to you, as she said to her relatives: 'Whither thou hast gone I also shall go, where thou dwellest I also shall dwell, thy people shall be my people and thy

God my God! The land that shall receive thee dying in the same will I die, and there will I be buried.’”

This address was ignored by the German press of the United States. Nor is the fault of the German press merely one of omission. It is shocking to read the contemptuous language used in reference to American principles by the Catholic papers printed in the German language. I say advisedly the Catholic papers, for the German Lutheran press shows more respect for American ideas. The former use the word *Americanization* as one of reproach and contempt. They hate American bishops, and they have not the courtesy to conceal that hatred. What I say here requires no proof further than a reference to the Catholic press as printed in the German language. The German press in this country is impelled to aid foreignism by a motive of self-preservation as well as by other considerations. The German language will disappear with foreignism, and that disappearance means the death of the German press in the United States.

The second class who aid in this conspiracy is made up of priests. Many of these have come to this country late in life. They have not been able to shake off the influence of their early environments. They have shown themselves to be utterly incapable of grasping American modes of thought and the progressive spirit which pervades the people. The priestly promoters of foreignism belong chiefly to the Archdioceses of St. Louis and Milwaukee. St. Louis is even more aggressively foreign than Milwaukee.

Here the conspiracy was hatched years ago; here, also, a desperate attempt is being made to secure a German successor to Archbishop Kenrick. The German clergy carried things so much their own way in the Archdiocese of Milwaukee that the English-speaking priests there found it necessary to establish themselves in an organization for self-defense. Some German-speaking priests have made themselves singularly conspicuous in this movement. Chief among these is the Rev. P. A. Abbelen, already mentioned in connection with the petition drawn up by the German priests of St. Louis in 1886, and brought to Rome by the Milwaukee priest. It is worthy of note that this petition is almost verbally the same as the memorial presented by Herr Cahensly last year. Almost equally active with Father Abbelen have been the Rev. William Tabbert, of Covington, Ky., and the Rev. W. Faerber, of St. Louis, Mo. It was the former who managed to obtain by peculiar pretenses the Pope's blessing for the meetings of the *Deutscher-Priester-Verein* previous to the past year. Last year it was obtained lawfully by Bishop Ryan, of Buffalo, who took care to impress upon the German-speaking clergy and laity assembled there that the blessing was procured through him. Father Faerber was a leading spirit at the Buffalo convention held last September, and indeed has been officiously active since the beginning of the conspiracy. To him hied Cahensly's envoy, the youthful Baumgarten, of Rome, when he arrived here. Other tireless workers in the cause of foreignism are Very Rev. H. Muehlsiepen,

Vicar-General of St. Louis; Rev. H. Meissner, of the diocese of Fort Wayne, Ind.; Rev. George Bornemann, Reading, diocese of Philadelphia; Rev. Wm. Nets-tracter, Wilmette, diocese of Chicago; Rev. John B. Duffner, Pittsburgh; Rev. P. Hoelscher, Buffalo; Rev. A. H. Walburg, Cincinnati. This last-named clergyman is known as the author of a mischievous pamphlet published in 1889, and entitled *The Question of Nationality in its Relations to the Catholic Church in the United States*.

But the priest who, next to Father Abbelen, did the quietest and most effective work in aid of foreignism, is a Canadian clergyman by name Villeneuve. A congress was held at Liège in September, 1890. Its object was to discuss social questions. Father Villeneuve was present and sought and found an opportunity to speak of the emigrants to the United States. He stated that the Roman Catholic Church in America had lost 20,000,000; that these millions had passed over to Protestantism or to Indifferentism; that the cause is the absence of clergy who speak languages other than English. Then to give his speech the appearance of accuracy he added: "The newspapers publish glowing articles on the progress of Catholicism in this country; the truth is that there are 7,000,000 Catholics, whereas there ought to be 25,000,000."

Father Villeneuve's grave charge against the American Episcopate may have served its purpose at the congress, but his figures were too grossly wrong to stand the test of light. Even the professed enemies of the Roman Catholic Church in the United States admit that she has a membership of 10,000,000, and Catholic writers who have studied the question on the spot say that the "leakage" in the Church is very small. A desperate attempt was made to associate the name of the Catholic University of America with the movement. It was a bold stroke thus to use an institution intended for the higher education of the American clergy. Success seemed for a time to attend the efforts of the intriguers to capture the chief Catholic educational institution in the country.

Monsignor Schroeder, a professor of theology there, demeaned the university by taking part in the Pittsburgh convention of 1889, a gathering assembled for the furtherance of foreignism; and he followed up this action by writing an article in glorification of the movement, for the pages of *The Catholic World*. The professor of canon law and one or two other professors also favored foreignism, so that the Catholic University of America was fast getting the reputation of not being in touch with American life and thought. It is, however, a hopeful sign that there are some priests of the German race who try to confute their fellow ecclesiastics of foreign ideas and to get them into harmony with American thought. The chief of these are the Rev. John Gmeiner of the Archdiocese of St. Paul, and the Rev. George Zurcher of the diocese of Buffalo. Father Gmeiner has fought the battle of American autonomy for years, and has received some cruel wounds in the contest. Father Zurcher is a temperance reformer and thoroughly alive to the best interests of church

and country. Monsignor Cluever, of the diocese of Albany, should also be mentioned as a priest who has done good service for Christianity in the United States by opposing every effort to plant European principles on American soil.

The third class favorable to foreignism is made up of some German-American bishops. Among these Archbishop Katzer, of Milwaukee, holds a first place. This is quite intelligible if he be a protégé of Mr. Cahensly's, as that gentleman claims. Mr. Cahensly says that all the Archbishops of the United States, with the exception of Archbishop Corrigan, of New York, did their utmost to defeat the appointment of Mgr. Katzer to the See of Milwaukee. The fact that the American Archbishops failed is evidence that some European influence must have been at work in the Propaganda. Be that as it may, the Archbishop of Milwaukee has not repudiated the patronizing claims of Herr Cahensly. Bishop Wigger, of Newark, is also noted for aiding foreignism. Bishop Zardotti, of St. Cloud, may likewise be mentioned as one who lends a helping hand. There are a few others, but as they have not publicly declared their policy, I will not mention them here.

On the other hand, Cardinal Gibbons and Archbishop Ireland have given expression to the sound views held by the great body of the American Episcopate on this question. Speaking to a representative of the Associated Press on the 2d of last July, 1891, Cardinal Gibbons said:

"We trust that the letter of the Holy Father will serve to restrain foreigners from any hasty or unwarrantable interference with our domestic affairs in the future. They seemed to be impressed with the idea that the Catholics in the United States are simply an aggregation of foreigners, while in reality they are made up of natives, some of whose ancestors, especially in Maryland, have been settled in the country for several generations."

Still earlier in the fray the Archbishop of St. Paul gave expression to very decided views in an interview accorded to a representative of *The Pioneer Press*. The following extracts are taken from that interview:

"What is the most strange feature in this whole Lucerne movement is the impudence of the men in undertaking to meddle, under any pretext, in the Catholic affairs of America. This is simply unpardonable, and all American Catholics will treasure up

the affront for future action. We acknowledge the Pope of Rome as our chieftain in spiritual matters and we are glad to receive direction from him. But men in Germany, or Switzerland, or Ireland, must mind their own business and be still as to ours. Nor is this the most irritating fact in this movement. The inspiration of the work in Europe comes, the dispatches tell us, from a clique in America. Even if the dispatches had been silent on this matter, we would have known that this is the truth. For the last five or six years there has been a determined effort on the part of certain foreign-born Catholics in America, priests and laymen, to obtain the control of Catholic matters in America. Poles in the West, French Canadians in the East, Germans West and East, have been at work in this direction. Germans sent in 1886 a representative to Rome to obtain pro-German legislation; they have since formed societies, notably the *Deutsch-Amerikanischer Priester-Verein*, for this purpose. I am quite sure I am right, when I bring home to this verein the whole promptings of this Lucerne proceedings.

* * * * *

"There is not the slightest possibility that any result will come from this Lucerne conference, except it be this result, to lead to the utter extinction of all foreign animus among us. The bishops of America are fully able to ward off all foreign invasions and to maintain the Church on thorough American lines. If they did not themselves have the courage and the common sense to do so, the Catholic people, whatever the race origin of these, would compel them to do their duty. Nor will the authorities in Rome listen for a moment to Cahensly or his friends. The well-known policy of Rome is to trust the hierarchy of each country, and to encourage in each country Catholicity to the manner born." Since the Archbishop of St. Paul put himself so squarely on record as a defender of American institutions, no effort has been spared by the Cahenslyites to discredit him in Rome. The bitter attacks made upon Archbishop Ireland by reason of the parochial-public schools of Faribault and Stillwater were in reality a result of his stand against Cahensly and his fellow conspirators. This is clear from the fact that similar school arrangements have existed without protest in dioceses presided over by German bishops, as, for instance, Milwaukee, Green Bay, Denver and St. Cloud.

CHAPTER III. THE CONSPIRACY DEEPENS AT HOME AND ABROAD.

The organization known as the *Deutsch-Amerikanischer-Priester-Verein* is at the bottom of the whole movement. This society of German-speaking priests was organized in the spring of 1887. The men who sent a clerical envoy to Rome the previous year were the same who organized the *Priester-Verein*. They are German-speaking priests, mostly from St. Louis. These men have worked with a steadfast energy which would call forth admiration were the cause not quite so ignoble. Throughout the whole discussion

they have shown considerable shrewdness. They have endeavored to make it appear to be a controversy between Germans and Irish. In this way they would be more likely to succeed. Not a word is said of Americans and not a thought given to union or to amalgamation. As a matter of fact, a large body of the Catholics were born here, and they do not want to be set down as foreigners.

The plot widens and deepens. The Poles also have asked for recognition on the plea that they are Poles.

So have the French Canadians. Premier Mercier expressed his regret that there was no Canadian bishop of an American See to be present at the Centennial celebration held in Baltimore in 1889. He also asked that a Canadian be appointed to the See of Ogdensburg. His regret was a rather curious response to the courtesy of the American prelates in inviting him to be present at the Baltimore festivities. The request of the subsequently discredited official of a petty English province, that a Canadian be appointed bishop of an important See in the Empire State of New York, was naturally very provoking to American Catholics.

Foreign-born Catholics, priests and laymen, have aimed for years at getting control of the Catholic Church in America.

Laymen, as a rule, do not take a very active part in the work. Many Catholics of German birth or extraction do not wish to be considered as foreigners. Whilst the laity were present at the Buffalo meeting, their part in the proceedings of the convention was very small. The conspirators try to use the Catholic Church in the United States in what they profess to be the interests of the immigrants, and in their zeal they utterly ignore the existence of all other Catholics. They want to get a preponderance in the Episcopate of this country.

There has been no attempt made to exclude foreign-born ecclesiastics from preferment in the Catholic Church. But the contention is that they should get no recognition on the grounds of their foreign nationality. Zeal and ability and the other qualities mentioned by St. Paul as necessary or desirable are those which should be taken into consideration in the appointment of bishops, and not nationality. If the selection is to be made on national lines the Bohemians, the Spaniards, the Danes, the English, the Scotch, the Negroes, the Indians, etc., would have a right, as well as the others, to claim that bishops be appointed from their respective nationalities.

The plan of the plotters also includes the preservation and the propagation of the German language in the United States. At the Buffalo meeting it was laid down that membership in the *Priester-Verein* is open to all Catholic clergymen of German extraction, and also to those priests who, regardless of nationality, speak the German language.

The following sentence from a plank in the platform adopted at that meeting shows plainly that one of the objects of these men is to keep up the German language in this country :

“We demand the full right and liberty to retain, without interference from any one, our German mother tongue, together with the language of the country.”

Two languages cannot be on an equal footing in any country. If English is to be the language of this country then German cannot be put on a par with it, and the only way it can be admitted is as an accomplishment. The ugly discussion over the Bennett law in Wisconsin was in reality an outcome of this foreign movement. There were a few objectionable details of minor moment in the law, but the under-

lying principle had for its object to advance the interests of the language of the country. The promoters of foreignism attacked the law as radically wrong and they succeeded in doing the very odious thing of dragging in the Catholic Church in Wisconsin to help their schemes.

The movement has been carried outside the domain of ecclesiasticism. The aid of foreign powers has been invoked. Representatives of several European countries have been asked and have given their influence in its favor at the Vatican.

Herr Cahensly, the Austro-Hungarian representative at the Vatican, has so persistently connected himself with this plot that he has enriched the English language with a new word, Cahenslyism. In the early days of the Land League in Ireland a certain obnoxious individual, by name Boycott, opposed the popular cause and was severely ostracised for his pains. His name has found its way into the dictionaries. The lexicographers of the present define *boycott* to be an organized attempt to coerce a person into compliance with some demand by combining to abstain from having any business or social relations with him. The lexicographers of the future will define *Cahenslyism* to be a combined effort of ecclesiastics and journalists, mostly German, with the representatives of foreign powers for the purpose of promoting foreignism in this country and for using the Roman Catholic Church as a means to that end.

Next to Herr Cahensly the most outspoken foreign representatives are Herr Von Schloezer and Premier Mercier. Queen Victoria's now deposed representative from Quebec no longer carries weight, and is wholly discredited. But the Prussian ambassador had an eye to the practical. When Archbishop Katzer was appointed to Milwaukee, Herr Von Schloezer said that the appointment was very favorable to German interests. He meant, of course, the political interests of the German nation. Signor Volpilandi spoke for the house of King Humberto. Thus there are Germans, Austrians, Italians, Canadians, etc., striving for spiritual supremacy and political advantages for their respective nations and basing their claims upon the fact that they are foreigners. These claims should have been satisfied shortly after Columbus' discovery of America. It is a little too late to bring them up when the country has a population of nearly 70,000,000, most of whom are intensely American; it is somewhat of an anachronism to make them on the eve of the four hundredth anniversary of the great discovery by the Genoese navigator.

Other foreigners of less note contributed their little help to the cause. Such is Herr Lieber, a member of the German Reichstag. He crossed the ocean twice in the interests of foreignism. He addressed the German convention held in Cincinnati in September, 1888. He was here last year also and delivered addresses to the Germans in different parts of the country. He is known as an ardent adherent of Cahenslyism in its worst forms. Herr Baumgarten is the name of another, a very young man, who has

been used to promote what I am fully justified in calling Cahenslyism. In order to give this young man, who is an ecclesiastical student in Minor Orders, some importance in the United States, an attempt was made to have him the bearer of gifts from Pope Leo to Archbishop Kenrick on the occasion of that prelate's golden jubilee. The attempt failed.

Nevertheless, Herr Baumgarten came to this country, tarried with congenial companions in St. Louis, and went to the Buffalo convention. Here it was deemed advisable to conceal his presence, but the effort failed, and considerable merriment was caused by the attempt of a smart reporter to secure by hook or crook the undelivered speech of Paul Maria Baumgarten. While in St. Louis the young man was interviewed. *The St. Louis Republic* of August 29 gives an account wherein, speaking of the need of national priests and bishops, he says: "Why, when Sts. Peter and Paul's Cemetery in this city was dedicated, Archbishop Kenrick delivered the address, which Father Goller had to translate to the audience." According to the logical consequence of the standard set up by Herr Baumgarten, in order to be an American bishop one should be a Mezzofanti. Thus far American prelates have so opposed foreignism as to make it a flat failure, and Pope Leo XIII has done honor to himself by declaring that Catholic bishops in America

shall not be appointed on national lines. Still the conspiracy goes on, and the thinking ask themselves, What next?

Since the subject has been carried outside the domain of ecclesiastical questions and into the region of international life, it becomes a duty of every one interested in the welfare of this country to watch the movement closely and to take action accordingly. Viewed by an outsider as a question merely between ecclesiastics, the scheme seems very impertinent. For it is a bold effort to further introduce, and to keep alive, foreign principles, and to subordinate American interests to European ones. But as the representatives of foreign powers have taken a hand in it, there is a duty to be discharged by the American people regardless of their religious belief. That duty is, not to allow any foreign power to use the Roman Catholic Church, or any other Church, to further in the United States the influence of European nations as indicated by Herr Cahensly. If European nations interfere officially in this question, then, as a matter of self-protection, the United States should also take official action. It is a singular coincidence and a gratifying thought to the people of the Northwest, that two Minnesotians, Archbishop Ireland and Senator Davis, should be the first to warn the United States of the danger arising from the ecclesiastical and political intrigue known as Cahenslyism.

UNIVERSITY EDUCATION FOR WOMEN.

SOME NOTES OF PROGRESS CHIEFLY IN EUROPE.

THE United States confessedly leads the world in the provision of educational opportunities for women. But the recent announcement that hereafter the post-graduate courses at Yale University would be thrown open without discrimination to properly qualified members of the gentler sex is plainly indicative of another large sphere of opportunity and advantage that is soon to be available for women of scholarly ambitions. Yale will only be the pioneer. Doubtless the day is not far distant when the Johns Hopkins, Columbia and Harvard will in like manner extend to women the benefits of their special and advanced courses.

The opening of undergraduate courses in men's colleges to young women pupils is an entirely different sort of question. In all the great Western universities the co-educational system is in operation without any limits or qualifications whatsoever, and there are numerous co-educational academies and colleges in the East. But there would seem to be no urgent reason why the friends of the higher education for women should insist that ordinary undergraduate courses in all existing colleges for men should be opened to women, unless they can make it clear that otherwise there are large numbers of young women desirous of college training who have not access to suitable institutions.

Considerations which may appeal strongly to many

parents in favor of the separate education of girls through the disciplinary and collegiate periods of instruction cannot be said to apply with any weight whatever when students reach the mature and self-directing period of post-graduate study. The opportunities for undergraduate work are not one whit better in Harvard, Yale and Princeton than they are in forty other American colleges. And in reality the smaller colleges offer many advantages which cannot be had at any price in the institutions which base their pretensions to being "great" colleges merely upon the great number of students whom they are obliged to instruct and care for at a given time. Inasmuch as there are now provided for our young women a series of institutions of such rank and strength as Bryn Mawr, Smith, Vassar and Wellesley, besides a great number of co-educational colleges, the opportunities for undergraduate instruction in America may be regarded as practically equal for the two sexes.

But, hitherto, the women have been narrowly and needlessly excluded from opportunities for advanced study and investigation of a kind not easy to duplicate and not practically possible to attain in a separate institution designed for women alone. The step taken by Yale is therefore a hundred times more important and more advantageous to women, than if the undergraduate courses at Yale had been opened

to the other sex, while the post-graduate courses had been kept for men exclusively.

Some recent innovations and agitations across the Atlantic will be of interest to the American friends of woman's education.

In the United Kingdom the University of St Andrews (Scotland) has admitted women to everything. This has had some curious results. Among others it seems to have prompted Sir J. Creighton Brown to deliver a lecture concerning the brains of men and women, the gist of which is that, physiologically, women are born inferior to men, and that it is no use trying to pretend that they are otherwise. To quote the exquisite phrase of this specialist in lunacy, "that which has been settled millions of years ago by the prehistoric protozoa, from whom we are supposed to be descended, cannot be reversed by acts of Parliament or the resolutions of Women's Righters." This doctrine of the infallibility of the remote protozoa is not a dogma that is likely to commend itself to the women of to-day. They are, of course, not able to do everything, but equally with the protozoa of the prehistoric ages they have a right to decide and to influence, so

DR. MRS. KEMPIN.
Privat-docent, Zürich University.

far as they can, the shape of their brain convolutions. The process is slow, but every little counts; and a full-grown woman has at least as much right to decide the shape of her own brain as have those interesting protozoa who are elevated to the rank of a scientific substitute for God Almighty.

University of Zürich of Mrs. Kempin as Privat-docent. Mrs. Kempin is a Swiss lady who was graduated at the University of Zürich as Doctor of Laws (Dr. jur.), who afterward spent some years studying the institutions of America, and who has the proud distinction of being the first of her sex to be appointed Privat-docent in a Swiss university. The University of Zürich is distinguished for the leading part which it has taken in the education of women. It was one of the earliest universities to open its doors to women students, and to this day it stands in the forefront of this great and hopeful movement. From 1864 to 1890, four hundred and eighty-four women have been entered as students, of whom fifty-seven have taken degrees. At present, eleven per cent. of the students are women, or fifty-eight out of five hundred and forty-three. Of these, twenty-seven are Russian, sixteen German, five American, and two British. To admit women students is one thing, and

sign of the times, was gotten up principally by Mr. W. Steadman Aldis and Miss Lilian Edgar, M.A., portraits of whom are sent us from New Zealand. It is indeed cheering when from the New Britain of the South Seas comes so bold a challenge to one of the oldest of the universities in favor of

RECTOR SCHNEIDER.

what should be regarded as one of the elementary rights of those human beings who happen to be denied by custom the right to wear trousers. That a human being has a right to be educated, even if it wears petticoats, is a formula which has not yet gained full acceptance in the academic centers of the Western world.

It is, however, on the Continent that the cause of woman's education has the most victories to win. It is with great satisfaction that friends of the cause have received reports as to the successful establishment in the

PROFESSOR MEILI.

The University of Cambridge some time ago received a memorial from New Zealand praying that university degrees should be conferred upon women. This New Zealand petition, which is a very significant

to allow them to teach is another. We are not yet up to the level of the old University of Bologna, but we are on our way, and it is very satisfactory to see so able a lady as Mrs. Kempin giving lectures in a university in our time.

When she was installed as Privat-docent, a public dinner was given in her honor, which was attended

PROFESSOR W. STEADMAN ALDIS.

by representative women students from most of the countries of Europe. Germany, Switzerland, Russia, Servia, Austria, England, Bulgaria and the United States were all represented. The dinner was not only notable because of the event which it commemorated, but because from that dinner sprang the determination to establish a European counterpart of the American Association of Collegiate Alumnae. This association is a society of ladies who have graduated at standard colleges and universities. The association is designed to promote the true interests of woman's education and to help overcome the obstacles which necessarily confront those who are pioneers in

a good cause. Mrs. Kempin was appointed first president of the European Woman's University Association, and it is proposed that all woman's societies in Europe, the United Kingdom and the United States should be affiliated to this central association.

Professor Schneider, the present Rector of the university, is notable as having been the warmest friend of the women who studied at Zürich University. A somewhat melancholy interest attaches to the other portrait, which is that of Professor Meili, who superintended Mrs. Kempin's earlier studies in law, and who gave her a very flattering certificate as to her capacity and attainments. Unfortunately, this professor, who so honorably distinguished himself in helping to begin a career which has become famous, no sooner saw that his pupil was able to take rank as a Privat-docent than he went over to the ranks of the enemy and became one of the most vehement opponents of this tardy recognition of the capacity of woman to teach.

It is almost inconceivable that at this time of day the most cultured nation of Europe, which Germany is supposed to be, should be in a condition of almost heathen darkness in relation to the higher education of women. The sapient German male has decided that culture is "a kind of thing that doesn't agree with ladies." There is not at the present moment in the whole length and breadth of the German Fatherland a university which admits women as a matter of right to its lectures.

This is a very deplorable state of things, but fortunately it is recognized as deplorable by the present Prussian Cultus Minister at Berlin, who is believed to be too civilized to regard this denial of higher education to one-half of the German subjects as other than a survival of barbarism. Herr. Bosse is an enlightened minister, who, like his young imperial master, is somewhat in advance of his age; and he has to contend, in the attempt to secure some rudimentary recognition of women's rights with regard to education, with a mass of trade-union jealousy on the part of the professoriate, which has come to regard the profession of teaching, in its higher branches, at least, as the exclusive monopoly of the male. Woman has no rights in a German university. Fortunately, even in the German Fatherland, the movement in favor of the recognition of the right of women to a complete education is making headway. Here and there women are to be heard pleading in favor of this right. In Baden there has been a somewhat venement controversy; and in one department of the ancient University of Heidelberg, where a more liberal set of professors reigns, there has been some attempt made to recognize women as students. But, notwithstanding these occasional light gleams out of the darkness, it may be said that darkness is upon the face of German culture, so far as women are concerned.

HOW TO LEARN A LANGUAGE.

BY PROFESSOR BLACKIE, OF EDINBURGH.

THE intelligent public is certainly under great obligations to the editor of THE REVIEW OF REVIEWS for the publicity which he gave in his last number to Professor Gouin's book on the studying and teaching of languages. Taken along with the account given in the April number of the *Journal of Education* on the method of linguistic training used in the great schools of Wiesbaden, the facts and principles set forth in this volume should certainly set the teachers of languages in our English schools, great and small, seriously to consider whether there is not something radically wrong in their handling of this important branch of popular education. No doubt teachers are proverbially the most unteachable of all classes of the community; but in the present age, when intelligence is being so widely spread, and in this Empire of Great Britain, whose friendly communications with all sorts of foreign nations from the Atlantic to the Pacific is so necessary for business, for pleasure and for policy, it is surely not too much to expect that the public will feel their own power and know their own interest in this matter, and let all schoolmasters and all professors understand that it is not by the conning of dead rules and the spelling of dead books that a living knowledge of that most vital of all living things called language is to be acquired, but by habitually breathing the atmosphere of articulate voice, and thinking, hearing and speaking in direct connection with the environment of the learner. This is the method of nature; and, apart from nature, all the most curious grammatical machinery and bookish apparatus will remain as far removed from a heart-inspiring and brain-furnishing knowledge of a language as a photograph, even the best, is from the living countenance of which it is the lifeless expression. The knowledge of any language is a living growth, and, like all growths, depends on a living and a graduated practice. As the practice of the eye teaches the artist to see open secrets, which no bookish talk about seen objects could reveal, so the practice of the ear in articulate speech forms a living bond between objects and feelings in articulate voice which no dead record of speechless signs can create. As we learn to play golf, not by books on the game, but by using our arms and our legs, and our calculating glance on the golf ground, so we learn languages, by using our ears and our tongues in the first place, and books only in a secondary way where vocal exercise fails. The perfect use of a language can be learned without books, as no doubt it was by Homer and the great school of bards that preceded and followed him; but with books alone no man can attain to a living mastery of any form of human speech, any more than he could learn to swim without plunging into the water.

What a painful, weary, and fruitless process it is

to study a language through the eye, to the neglect of the natural organ the ear, Professor Gouin shows in an extremely curious, interesting and instructive piece of biographical detail. In principle I certainly agree with him, as in fact every man must do whose healthy instincts have not been perverted by the formalism and the pedantry of the schools; but my experience has happily been in no wise so painful, and I found the right way to learn a language at an early period of my life, without wandering far into the wrong. No doubt at Aberdeen, where I was brought up, the colloquial method was not used, as it might certainly have been, to season and to facilitate the exact Latin scholarship for which that city has long been famous; but when once released from the scholastic leading-strings and left free to complete my linguistic study on my own hook, I seem early to have fallen into the natural plan of using my ear and my tongue to supply the winged words which the scholastic method of creeping through printed sentences failed to produce. I remember well in my study when about fifteen years old, defacing the white front of my mantel-piece with sounding sentences from Cicero, which, in imitation of my model, I then flung forth with the living voice, and got practically into the habit of thinking and of speaking in the dead language which the scholastic method of reading and writing had never cared to do; and that this, my practice was exceptional, I learned in the following fashion. After finishing my Arts course at the age of 17, I studied theology under Principal Laurence Brown, father of the late Dr. Brown, Professor of Greek in Marischal College. The principal was a man of sound learning, and, having studied abroad, had brought home with him from Holland the practice, common in the Dutch universities at that time, of speaking and lecturing in the tongue of Cicero and Cæsar. Among the discourses which the young theologians had to deliver in presence of the professor one was in Latin; and on each occasion when a Latin discourse was read by the student it was the practice of the principal to invite criticism from every student who might care to stand up; but in a Latin discourse it was only natural, the professor thought, that the criticism should be in the same language; and on this he wisely insisted. But the young evangelists had been taught only to read and write Latin; so they remained dumb, which appeared to be rather stupid; and I, having trained myself to declaim to an imaginary somebody in my own private chamber, thought that there was no reason why I should not open my mouth with Ciceronian phrase in presence of a real one; and accordingly, on a certain day, when the usual appeal had been made by the professor, feeling some critical motion in my breast, I stood up and got on fluently with my Latin com-

mentary. This gave me confidence; and better than confidence, a great laudation from the reverend principal, which gave me a notable start in academical life as a good Latin scholar.

I should not have entered into these personal details had it not been for the precedent shown me by M. Gouin in your May number; and no doubt, in this question, facts will justly be held not the least powerful of the arguments. I may therefore, without offense, further state that when some three years afterward I went across the Channel to study in Germany, I found no difficulty in conversing in Latin with the students in the Schnellwagen who were traveling with me from Hamburg to Gottingen, in which, of course, I was aided, not only by my previous habit of using my ear and my tongue and not my eyes only in the study of Latin, but by the fact that I spoke Latin not in the barbarous style of English scholars, but with the broad sound of *a* and the slender sound of *i* which belongs to Scotland in common with Italy and the rest of Europe. Of German I knew not a word at this time. I went to the famous university on the banks of the Leine to study German, and after five months I knew it as well as my mother tongue. This is exactly the point which M. Gouin brings out. Any language, he says, taught in the natural way by the practice of the ear and tongue, and not by the conning of abstract rules and the spelling of dead books, may be learned in five or six months. I acquired a perfect mastery of that language in five months—more perfect than I had of Latin in as many years. How was this? Not from any special craniological bump that my brain case may exhibit for the study of language—far from it! I never cared for language merely as language; I desired it only to shake hands and hearts with my fellow-beings; and I learned German and other languages just as children learn their mother tongue—by moving perpetually in the element where the language is spoken, and where the hearing and the speaking is as natural and as necessary to the waking intelligence of a child as the inspiration and the expiration of the air is to the living play of the lungs. Well, how did I proceed? I chose history as a subject conversant with matters that belong to the catholic use of language among educated men. I attended daily Professor Heeren's lecture on the European "Staaten System," and took regular lessons in German from an accomplished native teacher. To this I added the text book used by the professor, daily intercourse with native students, and constant reading of easy German books; and by this combination of social intercourse, primary training of the ear and secondary use of relative books both in reading and writing, before five months were expired I could understand every word uttered by the professor, and fight my own way among the natives, as easily as if German had been my mother tongue. And, as I said before, this was the natural and necessary result not of any special talent in me, but of the circumstances in which I was placed, and of the determination to use them for a special end in a natural manner. Man is by nature a speaking animal, and he will learn to

speak any language as naturally as pigs squeak or larks sing, if he will but try. Let him plant the seed in the true soil of living nature, and the growth will be as certain as it is swift and fruitful.

Let us now ask in detail what are the points of the process by which children learn their mother tongue, and not only one mother tongue, but two or three, or half a dozen, if circumstances are favorable; for bilingual and trilingual peoples grow up in certain social surroundings just as naturally as monolingual. The points are as follows:

1. The child, moved by a healthy curiosity, is vitally touched by the objects which surround it, and hearing these objects indissolubly associated with certain spoken sounds, it instinctively, from the mimetic nature of man, repeats the name as often as the object is presented.

2. The repetition of the sound made—without any trouble—causes it remain a permanent possession of the young speaker; for the memory depends always on these two things—the force of the original impression, and the frequency of its repetition.

3. The power of different objects to produce specific differential emotions on the mind of the young creature inspires it with a desire to express these emotions—which desire, being responded to by the nurse and mother, gradually furnishes the speaker with an array of the most useful verbs, adjectives, interjections and other parts of speech.

4. These primary elements being once evolved, the growing child is, by its careful mother, taught to connect the individual words, whether expressing objects or emotions, in such a way as to form a regular sentence, according to the normal use of the full-grown language; that is, to speak grammatically, without the study of grammar.

5. After this books and reading may fitly come in, but always, of course, in a secondary way. To supply the want of objects, which are the natural material for language, pictures and picture-books will come in; and when a nurse or a mother cannot always be able to tell a good story, story books in an easy style will fill up the vacant hours of the learner; but whenever possible, living scenes and notable localities should always precede the reading, as giving a more lively and a more permanent impression than the lifeless record of books.

6. For the perfecting of a knowledge of language a special culture of the memory and the imagination is necessary. This culture should proceed in such a fashion as to render the learner as much as possible independent of books and paper, which, however, useful for record, as Plato in the "Phædrus" long ago remarked, are rather hurtful to the development of a strong memory and a vivid imagination. The man whose memory depends on a book is like a landlord who devolves the care of his estate on his man of business or his factor. The knowledge which he does not use he will forget, and become the slave where he ought to be the master, as on the stage we see sometimes actors who know their parts imperfectly waiting awkwardly for a prompter.

So much for the method of nature in the easy, un-

conscious style of infantine and puerile life through the social intercourse of the family by the living voice mainly, with the aid of books in a supplementary way, as in these days generally, or without books altogether, as in the case of Homer and other early national bards. Our next question is, How is this method of nature affected by the change which takes place when a full-grown young person is set, in a formal manner, to learn a strange tongue systematically? It is effected in three ways, and in all the three to the advantage of the full-grown student: First, he is now arrived at the full use of his powers, and can grasp firmly where once he could only touch lightly, and walk stoutly over long distances, where he could only trip within a narrow field; again, he can submit himself to a regulated scale of advance under the calculated guidance of a professional teacher: and, thirdly, he can set himself with a will to stick to any piece of ordered work with continuous endeavor, till it be achieved in such fashion that the linguistic acquisitions of his full growth, compared with his earliest style, are as a firmly compacted architecture compared with the accidental picking up of pebbles from the sand. The result of this three-fold change in capacity and circumstance ought unquestionably to be that a foreign tongue studied by a full-grown youth may be learnt more perfectly in five months than by a growing child in five years. And why is it not so? Simply because the teacher, instead of helping Nature wisely, and giving greater scope and a more regulated impulse to her action, flings her method overboard altogether, and transfers the function of the ear to the eye, and substitutes, systematically, the stringing together of formal sentences and abstract rules for the living play of the voice in the practice of intelligent intercourse; and so it happens that on this perverse method we see daily in the schools, after three or four years' persistent application, the most apt scholars creeping painfully along from sentence to sentence in a dead book, instead of flapping free wings in an atmosphere of natural music and unstudied eloquence. Hence the meagreness of the linguistic fruits in so many of our high-class schools—a growth all briars and no berries.

What apology, I would now ask in conclusion, do our teachers give for the maintenance of a method of teaching languages so contrary to nature, to common sense and to practical utility? First, they say specially with regard to dead languages, that as they are studied to be read and not to be talked, books and readers, dictionaries and grammars furnish both the substance and the form of linguistic study in their case. The answer to this is plain: talking makes reading more easy, and the command of the language, as Quintilianus has it, more perfect *dicendo scribimus facilius*; besides that, the character of the language, as a music of speech, can never be acquired by poring over a dead record. Again, our teachers will say that man is not a parrot, and the conversational method

tends to make him one. The answer to this is equally plain: man, in his mimetic function, when learning language, is, and must be a parrot, but he is a parrot and something more. This something more is "reason," and to the action of this something more, in the acquisition of a language, no wise advocate of the method of nature can have any objection. Have grammar and grammar rules, by all means, but let them follow, or *go pari passu*, with living practice—not precede it, much less exclude it formally. A primer for any language can be made so as to be at once colloquial and constructive; so I have shown for myself in Greek;* and the teacher who cannot use this method from his own stores, in any language which he professes to teach, is, in my opinion, unfit for his business.

These are the ostensible reasons; but the real reasons, it is easy to see, are bad habits, a power which rules other worlds than the pedagogic more powerfully than wisdom; then conceit and the show of infallibility which teachers, like priests, are ready to assume; and, lastly, laziness; for, as the Wiesbaden educationists wisely observe, it is easier for a teacher to remit the learner wholesale to a dead book than to march forward with him to a vocal contest like a general with his soldiers to a battle. Nay, it is quite possible that on the bookish plan a man may teach a language of which he knows nothing more at starting than his disciple; the paradigm of the noun or the verb may be the lesson of the day, and the teacher who has mastered it completely and knows nothing more may perform his function of bookish indoctrination creditably, without knowing more of the language than a blind man does of vision, who finds his way, staff in hand, stone by stone, over a pool.

Two cognate points I would fain discuss here, but for want of space must content myself with the bare mention. The one is that the method of nature here advocated applies to dead languages as well as to living, it being as easy to look the sun in the face and say *helios* as to say *sun*, the only difference in the practical work of the school being that whereas in the case of living languages accomplished speakers can everywhere be easily found; in the case of dead languages, a special arena of linguistic gladiatorship is necessary in order to equip the teacher for his work. The other point on which I am willing to enlarge, on any occasion, and challenge contradiction from any convocation of scholars in Europe, but can only state here, is that Greek is not, as some ignorantly suppose, in any sense a dead language, but in every sense a human form of living speech, and, like German or French, is studied most efficiently in the land where it is spoken, and that, of all absurdities practiced by men pretending to be wise, the greatest is that of pronouncing the noblest of all languages with an arbitrary English accentuation, contrary alike to philological science, learned tradition and practical utility.

* A Greek primer, colloquial and constructive. Macmillan. London, 1891.

CO-OPERATIVE HOLIDAY TRAVELING.

THE TOURING GUILDS OF LONDON, LIVERPOOL AND MANCHESTER.

IT is a genuine pleasure to know that an appreciative description of the good work that some enterprising person, or group of persons, is carrying on for the welfare of the community, has led other people to engage in similar beneficial undertakings. Thus, it is gratifying to be assured that descriptions in these pages of the London Polytechnic Institute and its holiday excursion parties have actually resulted in the formation of American groups, clubs and classes based upon the general methods of the Regent street center. Our account of the great excursions which Mr. Hogg and Mr. Mitchell will bring next year to the Chicago World's Fair has inspired not a few Americans, remote from Chicago, with the idea that their young people also might well be planning for a co-operative visit, at reduced rates and under safe and agreeable auspices, to the wonderful aggregation of attractions that will be opened to the world on the lake shore at Jackson Park.

There are, in fact, many indications that this idea of co-operative vacation traveling will be taken up with great enthusiasm by progressive Young America. The most gigantic young folks' excursion ever witnessed on this continent has just been directed toward New York City as its Mecca. In our May number we made due announcement of the forthcoming July meeting of the Young People's United Societies of Christian Endeavor, and predicted that there would be an attendance from all parts of the country that would aggregate twenty-five thousand delegates. Now that the convention is over, the best estimates place the actual attendance at above thirty-five thousand. New York has never been visited by a large company of people whose presence has been more heartily welcomed. The meetings of the convention were themselves highly successful, and the primary object of the gathering was well and usefully carried out.

But apart from this immediate object, the convention possessed very great elements of interest considered as an instance of co-operative holiday traveling. To a vast majority of the thirty-five thousand young people who were brought to New York from every nook and corner of America, the experience was educative to a degree that could hardly be overestimated. The railroads for the most part co-operated in all the plans in such a manner as to give the largest amount of valuable experience that could be derived from the excursion. Thus, many of the excursion trains from the West stopped a number of hours in Chicago, and halted in like manner at Niagara Falls, while the delegate bodies from other parts of the country were enabled also to make the most of opportunities for sight-seeing *en route*.

In and about New York, moreover, the hotel and boarding house accommodations had been co-operatively secured in advance, and there were ample opportunities provided for sight-seeing in the great metropolis as well as for attendance upon the sessions of the convention. It is fair and truthful to say that the people of New York City, as a body, are extremely local and narrow in the range of their information. Not one in a thousand of them, apparently, had ever heard of the Christian Endeavor movement, or knew anything of the great annual conventions which had been held elsewhere by these societies of young people. The amazed and kindly interest which the metropolis manifested was even a more marked and novel circumstance than the wonderment and curiosity shown by the visitors themselves as they studied the sights of New York. The "Christian Endeavorers" certainly made a great impression just where such an impression was least expected by anybody. All the impulses and agencies for Christian service in New York will have been visibly and permanently reinforced by this brief invasion of thirty or forty thousand young men and young women—especially the young women—wearing the white badges of the Christian Endeavor Society.

The experiences of the present summer ought, then, to encourage at least a million young Americans, all the way from New York to San Francisco, to enter upon plans for some profitable and interesting co-operative journey next year. To this end, partly by way of general stimulus and partly by way of practical hints as to matters of detail, it may be well to lay before American readers an account of several very successful co-operative traveling clubs and societies that young men and women of moderate means have formed in England. Inasmuch as our readers have already been told something of the various summer outings and holiday excursions managed under the auspices of the Polytechnic Institute, we shall give more space and attention here to several other organizations.

In the democratic days of what an indignant person once stigmatized as "this so-called nineteenth century," intelligent travel surely ought to be regarded not merely as a luxury attainable only to the wealthy few, but as a real necessary of life to the hardworking many. As Mr. Goschen once told the University Extension Students of London, the means of livelihood are by no means synonymous with the means of life. An artisan, a girl in the civil service, a clerk in a city office, are not necessarily alive because their work procures them food and lodging and clothes to their back. For the conditions of modern existence have been known to create animated machines hav-

ing the form of human people, but denying the power thereof. No doubt the true philosopher can pursue the even tenor of his or her way independently of externals, even in a solitary lodging in a monotonous back street. But at the same time it is easier for those who desire to keep their vision on the heights intent, and though cloistered fast to soar free, to understand and to realize at all adequately the teaching of Epictetus or Thomas à Kempis, if they can summon at will—

Through the great town's harsh, heart-wearying roar, the musical splash of a mountain torrent, or can fall back in memory upon, say, that afternoon in early spring, when, pilgrims in deed and in truth as never before, they climbed the olive-clad slopes of Monte Subasio to the little white town of Assisi, over which still broods in holy peace, with a literalness that may be felt, the spirit of St. Francis the pure in heart.

Unlimited increase in the number of those whose object in going abroad is to "do" as much as possible and to demonstrate their own superiority to "foreigners," is not a thing which lovers of their own species can regard with altogether unmixed satisfaction. Nor is it with a view to increase the number of the "cheap tripper" species that this paper has been written. But it is believed that there are many among the working classes (in the broader sense of the term), men and women of hard-working lives, moderate purses, simple tastes, modest assumptions, and willingness to learn, in whose lives even three weeks in a foreign land, or in a distant part of one's own country, may become a joy for ever. For one of the most real uses of travel lies in the prospect of the travelers returning home, not with any mere vulgar satisfaction at having "donè" so much, but with a deeper and wider comprehension of historical and human solidarity, and with a quickened, humbler and more passionate perception of the quiet unobtrusive beauty lying hidden away both in external nature and in human nature in many a highway and byway of their native land.

But what possible chance is there for the city clerk, the elementary-school mistress, the artisan, on their small incomes ever to make were it even but a fraction of the "grand tour" once considered to be an indispensable part of a liberal education? Not only to visit, but to visit with understanding, in congenial social and intellectual companionship, the ancient historical cities of South Germany, or France, or Belgium, still less that earthly paradise of art and poetry, the north of Italy? Can it really be done from England at a moderate expense during the annual holiday of a fortnight or three weeks—all that the average young man or woman in business is likely to get?

Even so. It is not only theoretically possible, but it has actually been done, and not once or twice only, but several times. It can be done again, provided you know how to do it; in which last is the gist of the whole matter. How it is done the present paper will endeavor to show.

HOW THE TOYNBEE TRAVELERS' CLUB BEGAN.

Some five or six years ago a small knot of friends—four or five clerks, schoolmasters, artisans, or shop-assistants—began to meet regularly at Toynbee Hall, Whitechapel, London, to read and discuss the works of Mazzini. As time went on a desire, at first without form and void, gradually took the shape of a projected pilgrimage some fine day to the great Italian patriot's grave in the Campo Santo at Genoa. It was a fascinating project. But was it feasible? Under modern conditions of life it was of course quite out of the question for any half dozen to go alone, on account of the heavy expense. But the expense might be very considerably lessened by adopting co-operative principles. Why should not the members of the Mazzini class throw open their plan to the students attending some of the other classes? And why not include in the pilgrimage places of wider general, historical and artistic interest than Genoa alone could furnish?

So Florence was decided on as the goal, and the idea was tentatively broached in a circular issued to the general body of students during the winter session of 1887-8 by the Education Committee of Toynbee Hall, and circulated among working men and women hitherto unambitious of travel. Soon vistas of immense possibilities disclosed themselves. The project had undoubtedly "caught on."

A special committee *ad hoc* was appointed from among those who had the project most at heart, and practical preparations immediately began. On the night of the Wednesday preceding Easter some eighty men and women invaded Liverpool Street Station, and started for Antwerp by the Harwich night boat.

Few of those who are now elected fresh into the Toynbee Travelers' Club, and there find their proceedings for the most part so peacefully cut out for them, can realize what an undertaking that first expedition was. Probably none but those who were comparatively young would ever have tried to carry it through, not because they were blind to the difficult nature of the enterprise, but because they saw the difficulties and regarded them with hopeful contempt. "You know" said Mazzini ("the Chief") to the conspirators on the Motterone in Meredith's *Victoria*, "My faith is in the young." To begin with, out of a total of eighty (a number which, keeping in view the special educational and social objects of the club, experience proved to be quite a third too large) only some seven or eight had ever been abroad before. Very few could speak anything but English. The foreign coinage was puzzling. The members' acquaintance with each other was almost entirely confined to casual meetings in the lecture room or the library, or on Saturday afternoon excursions with the Students' Union. Would eighteen days' travel under circumstances of necessarily close contact make them all cordially hate one another, or the reverse? Fortunately the balance was speedily seen to incline most decidedly to the side of the reverse. Sleeplessness, dirt and discomfort—the inevitable concomitants of a prolonged journey—only served to bring the mem-

bers' best and most unselfish qualities out into strong relief.

Antwerp was reached at about ten o'clock the following morning, and, as the Bâle train did not leave till the evening, the day was spent in church and picture gallery and in the Plantin printing Museum. At five o'clock the pilgrims turned up at the station, tired but enthusiastic, with no more apprehension in regard to the ensuing twenty-eight hours' railway journey to Milan than if it had been a mere stroll across the street. When on the following morning the sun rose, a "sight of glory, sight of wonder," over the Black Forest the pilgrims found themselves and their baggage still united, and not, as certain croakers had pessimistically predicted, "impartially distributed throughout the railway termini of Western Europe." Yet it must be confessed that, when they reached Lucerne toward ten o'clock, exhausted and grimy, but well satisfied with each other, it was somewhat of a relief to find that a friendly avalanche on the St. Gotthard had completely blocked the line and made it out of the question to reach Milan until the next day. It was then that the party first learned what a Swiss hotel is capable of on an emergency. They were temporarily stranded in the waiting-room while the chiefs of the committee went down to the Hotel des Balances on the Reuss to interview Herr Zähringer, a staunch friend then and now; and in about half an hour there might have been seen a long procession of pilgrims bearing Gladstone bags being billeted by their chiefs with perfect *sangfroid* and dispatched straight up to their rooms to get ready for *déjeuner*.

But one might dilate forever upon the incidents, comical and otherwise, of that memorable expedition, and that, to paraphrase Horace, is a thing forbidden alike of gods and men and editors. It must suffice to say that Milan was at last reached shortly before midnight on the following evening, the avalanche at Brughasco having been safely surmounted and a great snow battle fought over its *débris* by the Mazzinities of the party *contra mundum*, a proceeding which the Swiss railway guard surveyed with deep interest and characterized as "une grande lark;" that Easter Sunday was spent in the Lombard capital, especially beneath the vaulting of that "anthem in stone and poem in marble" the Duomo, and on the roof, whence the plain of Lombardy lay open to view, backed by the great perpendicular wall of the Alps; that the pilgrims started on their travels again late that night, were evicted in a body from the train—owing to the break-down of a railway bridge—in a mountain pass in the Apennines at the unholy hour of half-past three; that this last obstacle was successfully surmounted by torchlight and an antediluvian *diligence*; and that the eighty finally tramped into Florence at about eight o'clock a.m., firmly convinced that each and all had lived through a whole century of experience since leaving London barely five days before.

If the journey out conferred a century of experience, the nine days at Florence and the return *via* Pisa and the Genoese Riviera conferred about five centuries more. Such wealth was there of natural beauty

in color and form, of historical association, of daring conception and virile execution in stone and color; so genuine the kindness shown by resident Florentines and English friends with Oxford and Cambridge* connections; so pleasant to live a frank, unconstrained life among kindred spirits, with whom these common experiences would form a permanent bond of sympathy and social union after returning to London—from first to last the expedition in many ways surpassed its promoters' most sanguine expectations.

CONSTITUTION OF THE TOYNBEE CLUB.

The Toynbee Travelers' Club is now an organized body of some two hundred members, meeting on an average once in three or four weeks throughout the year at Toynbee Hall, Whitechapel, and the proud possessor of a formally drawn up constitution. The constitution in its practical aspects may be roughly defined as an Autocratic-democracy, a form of government known of old to Timoleon the Liberator of Syracuse, as well as to Mazzini and Daniele Manin. Candidates for election are first of all informed in print that "the object of the club is not merely to promote pleasant trips, but its aim is educational, and its basis mutual helpfulness." The educational side, apart from the actual solid work accomplished during the expedition itself, is promoted by means of lectures on foreign art, history, natural history, and politics. These lectures are delivered, or papers read, at the club meetings, sometimes by members themselves, but more often by specialists from the Universities or elsewhere. Among those to whose kindness lectures at Toynbee Hall and in Italy have been due are Senator and Signora Villari (of Savonarola fame), Dr. Mandell Creighton (now Bishop of Peterborough), "Vernon Lee," Mr. Leslie Stephen, Miss Farnell, and many others. The club possesses a small but useful collection of books bearing on foreign subjects presented by members and friends, and a fine series of photographs, purchased by co-operation, of places already visited.

The officers of the club, elected by full members at the annual meeting in the autumn, are President, Secretary, Treasurer, Auditor, and a Committee of eight, which last appoints an assistant secretary and a librarian. All office is entirely honorary, and to all are persons of either sex equally eligible. It may be noted here that the social and general value of the club is due in no small measure to the unconstrained and non-conventional intermingling and co-operation of men and women on an equal footing. As a general rule no minor of either sex is admitted. Hence the chaperone is an unknown and unneeded institution, East London men and women over twenty-one being alike almost invariably active and independent members of society.

The secretary and treasurer are committeemen *ex*

* Toynbee Hall was founded in East London in 1884 by members of the Universities of Oxford and Cambridge, to be a residential club for University and other men, and a center for social and industrial investigation, for educational, recreational, and other work undertaken by the residents and their many non-resident friends and fellow-workers.

officio. It is upon these two officers, who practically created the club, that the main burden of management and leadership has hitherto lain. To their unremitting care and business-like habits from the very first the success of the club has been in no small measure due.

Membership is open to persons connected with Toynbee Hall, and is of four grades: Members, Honorary Members, Probationers and Associates. (1) The "Members" are the main body of the club, in full possession of all its rights and privileges as set forth in the constitution. (2) "Honorary Members" are persons elected as a mark of gratitude and esteem for special kindness or service rendered to the club. They include Professor Villari, the Minister of Public Instruction under the Italian Government, one of the club's oldest and best friends. (3) "Probationary Members" are *bona fide* students of Toynbee Hall of a certain standing, to whom provisional membership may under certain conditions be granted for a period of six months, at the expiration of which time the probationer who has now taken part in an expedition may, on the recommendation of the committee, be elected by the club as a full member.

It has often been supposed by those not in any way connected with Toynbee Hall that its Travelers' Club is a kind of tourist agency open to all comers. This is not the case. The club was, and is, intended for Toynbee students and for them alone, and even these cannot become members unless they fulfill certain required conditions. This is needful, considering the close personal contact between members involved on a T. T. C. expedition, the liberty they enjoy, and the frank and kindly mutual helpfulness which is so important and pleasing a feature of the club.

A *bona fide* Toynbee student, then, wishing to become a member, has to send in his or her application to the secretary on a printed form supplied for that purpose, stating the applicant's acceptance of the principles and aims of the club as therein set forth, to specify the branch of study in which he or she is a student, and to furnish two references personally known at Toynbee Hall. If on inquiry these latter prove satisfactory, the applicant may then be recommended by the committee for election as a probationer for six months. Should the probationer at the end of that time have been found to be in any way an undesirable member or one out of harmony with the general spirit of the club, he or she is not recommended for further election and simply disappears. It says something, perhaps, for Toynbee students as a whole, and for the care exercised by the committee, that in no case has it ever been necessary to resort to expulsion, and that of all the members admitted up to the present only 2 or 3 per cent. have been avowedly "not recommended" for the continued membership they might desire.

(4) "Associates" are comparatively few in number, and can only be elected when there is a vacancy, the number being limited and fixed. They are persons admitted for some special reason who are not eligible as probationers, and are often near relatives and friends of regular members. All associates must, on

the recommendation of the committee, be re-elected every six months.

The ordinary expenses of management—apart, of course, from those incurred on an expedition, which are borne by each member for himself—are met by an annual subscription per member of 2s. An associate's subscription is 2s. 6d., and a probationer's 1s. 6d. for the half year. Any member of any grade (except honorary members) absent from three meetings of the club in succession without valid excuse, and any member whose subscription is three months in arrear, is liable to "lapse" from the club.

The constitution further provides that at any rate one expedition shall be organized every year, and that such expedition shall be entirely under the control of the committee or of such persons as the committee shall appoint.

The following analysis of the occupations of members of the T. T. C. may be not without interest from a "democratization of knowledge" point of view. Members and re-elected associates are included, but not probationers or honorary members. The slight numerical preponderance of women over men in the subjoined list disappears when it is remembered that, with one exception, all the honorary members are men, and that the proportion of the sexes in the whole club is therefore about equal:

	Women.	Men.	Total.
Civil Service: Post Office.....	—	10	10
“ “ Other departments.....	—	8	8
Clerks and salesmen.....	3	14	17
Domestic: Married.....	13	—	13
“ Unmarried.....	5	—	5
Miscellaneous: Architects (2), basket maker, bookbinders (2), brush-maker, builder, chemist's assistant, hospital nurse, L.S.B. Kindergarten instructor, journalists (2), lecturers (2), librarian, printers (2), reporter, sculptor, secretary, shopkeepers (4), solicitors (2), solicitors' clerks (2), watchmaker, woodcarver.....	7	23	30
Teachers: London School Board..	45	16	61
“ Other.....	9	—	9
	<hr/>	<hr/>	<hr/>
	82	71	153

The foregoing list shows, amongst other things, that educational foreign travel is evidently valued by teachers, than whom few possess more extensive opportunities of passing on what they have themselves acquired. From this fact and from another, viz., that necessarily only a very small percentage of those working even under the London School Board alone, to say nothing of other boards, are eligible to one local club on a special basis like the T. T. C., it may reasonably be inferred that the organization of similar clubs in other districts, or within teachers' guilds and unions, would meet with ready support.

HOW A T. T. C. EXPEDITION IS WORKED.

Let it be supposed that the club committee contemplates organizing a foreign expedition of some fifty members. The first question to decide—and it should be decided *at the very least* some four months in ad-

vance—is the date. Northern or Central Europe may be visited at almost any time except in the winter; the north and center of Italy in spring and autumn. Italy, the Alpine regions excepted, should be avoided after May, on account of the heat. Rome and the south of France and Italy can be visited in the winter; but the cities in the great alluvial plains between the Alps and the Apennines should be avoided during the winter months owing to their piercing cold. In all cases, however, it is well to ascertain beforehand, if possible from some one personally acquainted with the locality, particulars as to the climate of given places at given seasons.

The route will be roughly planned out at the same time as the date. The T. T. C. has so far organized expeditions to Florence, Venice, Tuscany, Switzerland and Paris. Three weeks in Switzerland in the summer costs about the same as an expedition to Italy of similar length in the autumn or spring, the longer railway journey in the latter case being balanced by the greater average cost of living in the former. A week in Paris may be spent for £5, and the same sum will cover a week in Belgium, including, say, Antwerp, Brussels and Waterloo, Ghent and Bruges. A very interesting fortnight might be enjoyed among ancient South German towns, such as Nuremberg and Augsburg, or among the French Gothic cathedrals, Amiens, Notre Dame, Rouen and Abbéville. But as preparations for a greater expedition will more or less include those for a less, we will take the outline of a journey to Venice, nearly one thousand miles from London, as being fairly comprehensive.

The route decided on, and quotations as to fares (second class) obtained in writing from the railway companies, a provisional itinerary is drawn up, the halting-places considered, and a quotation obtained from each hotel (consult Baedeker, or any trustworthy guide-book revised up to date) of reduced pension charges per head per diem, to include bed, meat breakfast, late dinner, lights and attendance. The tariff varies in Italy (exclusive of Rome) from about 7 or 7½ francs a day at Florence in the season to 5 francs at smaller places. Swiss quotations vary greatly,—*e.g.* Grindewald or Lucerne 7½ francs, Zermatt (before the railway) 7 francs, Berne 6 francs, and less-frequented places even so low as 4½ and 5 francs. This does not include fees to hotel servants, which are disbursed by the treasurer at the rate of about 5 francs a day for the party. In an expedition to Rome expenses would be higher all round.

The date, the route and the probable cost having been carefully worked out, the results are embodied in a circular issued to the club, in which notice is also given of forthcoming lectures (arranged for by the committee) on the history, art, etc., of the places to be visited, and a list of books which members will do well to read beforehand and on their return. The latest date for names to be handed in should be at least four weeks before starting, in order to avoid almost certain confusion, and not improbably difficulties involving unnecessary expense with hotels.

As soon as all the names have been sent in they are

carefully organized into groups. Much of the success of the expedition will depend on this, and it is impossible to forecast the amount of friction that may be caused by faulty, injudicious or careless arrangements. The *raison d'être* of the "group" is that the chief may know while *en route* exactly where to find any member at any moment, and that he may be able to communicate instructions to the whole party at a minute's notice. In the T. T. C. the party is broken up into groups of seven or eight members, each group containing, so far as possible, an equal number of women and men. The group is placed under a leader or "guide," and is known by a letter of the alphabet. Thus, the guide of Party B is held responsible by the chief for the safety and welfare *en route* of all the members of his group. He has to collect them in good time at the stations, to see that all the group luggage is together and plainly marked by the pink club label stamped B. He has to see the members and their luggage into their compartment (all together wherever possible), to be the medium to them of all instructions from headquarters, and to collect from them any small sums for extras which have been disbursed on their account by the treasurer. Each group contains also a lady "guide," generally a member of some standing in the club, who can help newer members to feel at home, and generally to look after points about which no general rules can be laid down beforehand. The group arrangement is mainly with a view to the actual journeying; when once destinations are reached it is, of course, not considered desirable that the members of any traveling group should be in any way isolated from the others. It is well to have one or two "unattached" men outside all the groups, to act as generally useful lieutenants to the chiefs—*e.g.*, to "scour" railway carriages and hotel rooms at the last moment to see that no item of personal property has been overlooked by its owner. One of the party acts as postman; he obtains from hotel managers or the post offices a sufficiency of stamps and post cards of the country to furnish to members who may require them, and keeps the accounts of the same. Another member should be placed in charge of the "medicine chest"—a few simple remedies for those temporary ailments likely to result from sudden changes of climate and temperature. They are best carried in a light satchel with a shoulder strap, and should, if the itinerary furnishes the opportunity of any mountain climbing, include arnica.

Before starting, the T. T. C. issues a short list of "Hints to Travelers." Luggage must not exceed a medium-sized Gladstone or similar bag small enough to go in the rack of the carriage. Each member may also have a bundle of wraps, a handbag or basket (a satchel with shoulder-strap is most useful) for provisions and other traveling accessories. In other words, members are not supposed to bring more luggage than each can carry for him or herself all at once. Before starting the treasurer should get about £20 changed (at any money changers in the city) into gold and silver current in the countries to be visited,

and each member will do well to obtain from him a few francs' worth of change for small extras *en route*. English notes and gold can be exchanged at any good hotel. The gold and silver coinage of Belgium, France, Switzerland, and Italy is current in each of these countries alike. Beware of acquiring much copper or nickel, which is only current in the state that issues it, and of obsolete (*e. g.*, Papal) or South American or Greek coins, occasionally palmed off on the unwary. It is not necessary for each member to be provided with a passport, though there should be at least one in the party. There are more or less strict Customs examinations on the frontiers, but the T. T. C. has now come to be recognized at one or two Continental Custom Houses as a respectable institution, and the officials, owing to courteous representation on the part of the T. T. C. chiefs, and also, perhaps, to the palpable difficulty of forcibly evicting fifty people at once should they be inclined to the doctrine of passive resistance, have now ceased to rouse the party from their weary slumbers and drag them into the Custom House in the middle of the night.

Considering the reduced rates at which such a party as the one indicated above is received per head at the hotels, it is not to be expected that each member can be provided with a separate bedroom. Hence in the T. T. C. it is the custom to have a list drawn up before starting of twos and threes who will agree to share a room. To have this clearly understood beforehand saves trouble. As a rule the food provided in the hotels where the T. T. C. has stayed is excellent, both in quality and quantity. The committee's charges, according to the estimate previously announced, paid to the treasurer (in installments if desired) by each member before starting, vary (for Italy, exclusive of Rome) from £10 to £13, and cover railway fares and lodging with two good meals a day. All other meals, wine (usually), fires in bedroom, tram or train fares for excursions, etc., are extras, and are paid for by each member at the time. These extras will, of course, vary, but with care and economy 30s. or £2 should suffice on a three weeks' expedition. Subjoined is a specimen bill from the T. T. C. expedition to Venice in 1889 (eighteen days away from London, *via* Harwich and Antwerp, Lucerne, and Milan, and back), two nights being spent on the boat and two in the train :

It is, of course, to be borne in mind that in a club of the nature of the T. T. C. all office is honorary and absolutely gratuitous. The chief's very onerous work is done as by friends for personal friends. Hence, anything but a kindly give-and-take make-the-best-of-things spirit (even when you are compelled, under penalty of being left behind, to breakfast somewhere between 3 and 5 a.m.) would be simply fatal to the usefulness of the expedition. For consider what the chiefs have to do. In their hands is all the finance, railway coupons, hotel bills, &c. Some one must be able to speak fluently the language of the country. Some one must telegraph on for reserved carriages to the next changing place, and write two or three days before arriving at each hotel for a list of the rooms placed at their disposal, and the accommodation in each. The tickets must be *viséd* (on Italian lines at each starting station).

On arrival the sight-seeing must be carefully organized, and those friends who have perchance offered their courteous assistance interviewed. Perhaps the most difficult of the leaders' many tasks is to make all things work together in harmony, and to inspire the party generally with the desire to go and do likewise; to resist the temptation of allowing the mechanical operation of "serving tables" to engross their time and strength to the exclusion of those social and intellectual aims which are the *raison d'être* and the very life blood of the club. If any body of students can find one or two such leaders, or, better still, if such leaders can find themselves, let them bestir themselves and go. Europe is within their grasp.

THE LIVERPOOL "CARAVANS."

The Toynbee Travelers' Club may be not unjustifiably considered as to some extent the parent of some three or four educational traveling clubs on similar lines; inasmuch as it not only showed by its own achievements that co-operative traveling was within the range of the practical politics of the higher education, but its officers were able to place at the service of those who wished to follow suit some of the harvest of experience which they themselves had reaped.

First among these societies stands the very successful "Caravan" of the Liverpool Teachers' Guild; the name, it may be said by way of explanation, having been bestowed haphazard upon the party in the first instance by a Milanese hotel proprietor, and subsequently adopted by the club as a distinctive and original designation. The Liverpool Teachers' Guild is a useful society of some 550 members; teachers in secondary and elementary schools and others interested in the theory and practice of education, women predominating. The Guild holds its fortnightly meetings at University College. Early in 1889 it occurred to some of the members to ask, "Why should not the Guild do like Toynbee Hall, and organize an expedition to Florence next Easter?" A first "Caravan" was formed, consisting of seventy-seven teachers and their friends. The Caravan was organized on the small group system for greater convenience *en route*,

and left Liverpool for Florence on April 16, returning on May 10. Not only were several days spent at Florence, but something was also seen of Antwerp, Milan, Pisa, Como and Brussels. The cost of railway ticket and hotel charges (accommodation and two good meals a day) was about £12. 12s. At Antwerp the public authorities opened the museums and "monuments historiques" to the party; but, on the whole, Liverpool has generally preferred to do its sight-seeing on the individual rather than the co-operative basis, and so has not since asked for the privilege of free admission to museums, generously granted to educational bodies by the Italian Government.

The first Caravan was so successful that its promoters wished to see the expeditions placed on a permanent basis. This was done early in 1890, and the Caravans are now organized by a Traveling Committee of the Guild. The method of procedure is as follows:

1. A circular is issued to the whole Guild suggesting an expedition, with its probable date.

2. Those members who wish to take part in it send in their names and a deposit of 10s. This last forms an instalment of the committee's charges, but is forfeited to defray expenses should the member afterwards withdraw his or her name.

3. A meeting is called of those who have entered their names. These decide in orthodox democratic fashion the exact route and destination, and the halting places out and home, and authorize the chief of the party to carry out, so far as may be possible, their wishes.

4. The chief then communicates with the railway companies, hotels, etc., and prints the results in a circular.

5. Members have to organize themselves into small groups (of this the committee declines the responsibility), the lists of groups are printed (members who will agree to share a room being bracketed), and a copy is sent to each member, and also to the various hotel proprietors, in order that the party may be comfortably billeted.

Since the Caravans were thus organized on a permanent basis, annual expeditions have been successfully carried out. At Easter, 1890, a large party (seventy) visited Venice by the Harwich, Rotterdam, Rhine, and Brenner route, halting at Cologne going, and at Munich and Cologne coming back. Verona was unable to cope with so large a party of "forestieri"—perhaps the hotel-keepers took alarm, remembering that a smaller party of the Toynbee travelers the year before had been with some little difficulty accommodated; so the extra three days that would otherwise have been given to Verona were spent very enjoyably at Venice. The cost (railway and hotel bills) was about £12, and the party were eighteen days away from home.

In 1891 the Caravan organized an expedition in the summer to Switzerland instead of to Italy. Forty-four members went from Liverpool to Lucerne together on August 4. At Lucerne, however, the re-

sponsibility of the committee ended. The party broke up into small self-formed groups of seven or eight; and, until these all reassembled at Lucerne for the journey home at the end of August, each group was entirely responsible for itself, making all its own hotel arrangements, choosing its own route and leader, and generally acting on Home Rule principles. The committee had, however, drawn up and printed a useful little pamphlet containing particulars of twelve enjoyable routes, with names of hotels, *pensions* or inns, and "sights," together with a few general hints. The cost as far as Lucerne and back came to £5. 2s. 10d. per head. Expenses of living, etc., while in Switzerland naturally varied, according to the ambition of the members; but, speaking generally, the average expense per head was probably altogether about £15. For Easter, 1892, two expeditions were arranged: one by the committee to Paris, from April 14 to 29 inclusive, of seventy or eighty members; and a second and much smaller party, arranged independently by some forty members themselves, who had been disappointed at the idea of not seeing Italy this year, to Rome. The cost of the fortnight's expedition to Paris was calculated at about £6. 10s.; that of the eighteen days' expedition to Rome at £14. 10s. or £15.

The Teachers' Guild Caravans have been of inestimable service in the social development of the Guild. Once for all they have broken down that barrier of reserve and isolation between individual members which militate so strongly against corporate life in great towns. Once for all the spirit of isolation gave way to a spirit of mutual respect and reliance, and to a genial confidence of members in each other. People who had traveled together for 2,000 miles, who had seen each other successfully surmounting incidents which tried both patience and endurance, and brought out the capacities of each one's character for a public-spirited unselfishness, could never again regard their fellow-travelers as merely so many undistinguishable units. The great difficulty in all overgrown modern cities is the awakening of its corporate soul. Perhaps these humble co-operative pilgrimages may in their quiet way contribute their quota to that end. Who knows?

As regards the effect of the pilgrimages on the members themselves, that is a point which cannot be tabulated in statistics. But it may be remarked generally that an educational expedition to Italy may mean, for those who live simple and natural lives of hard work, perhaps of drudgery of a monotonous nature in a grimy manufacturing or shipping city, nothing less than the birth of a *vita nuova*—a sudden awakening to the majesty and the beauty of the world of nature and the world of art. The history of painting and architecture, the history of mediæval Florence and Venice, the names of Giotto and St. Francis, of Dante and Carpaccio and Perugino, are henceforth and forever not mere abstractions, but realities of the most living and inspiring kind. Real, too, is the meaning of color and light in a southern latitude; real and vital the significance of the words, "I will lift up mine eyes unto the hills, from whence

cometh my help." Nor are the jokes and incidents of the journey the least pleasant items to recall in after days: how the captain of a group alighted at a Dutch station to search for bread, and being attired in cricket cap and "blazer" was detained by the station authorities as an escaped lunatic, and only allowed to proceed by the next train on his satisfying them that he was perfectly harmless; or how the train suddenly went on at Coblenz leaving one member vainly endeavoring to escape from detaining officials, and how when the train pulled up at the next station the lost one was descried triumphantly driving up in a cab.

THE MANCHESTER TOURING CLUBS.

There are two clubs of this name in Manchester, one dating from 1890, and connected with the various educational institutions of the town, and the other a new institution, which has recently organized an excursion more on the Polytechnic lines, and has, somewhat unfortunately, given itself the same designation as the older club.

The educational club was started with an expedition at Easter, 1890, to Florence. Its aim is distinctly educational, and teachers have the first choice, after whom come University Extension and Art students and persons who are able to afford assistance in the organization of tours. This club is perhaps rather more exclusively a middle-class club than either the Toynbee Hall one or that of the Liverpool Guild; for although clerks and artisans would be admitted if qualified under the rules, the time and cost would be practically prohibitive. The members of the club are (1) those who took part in the first expedition, and (2) those who have taken part in subsequent expeditions and are qualified under the rules. Other persons may be admitted to expeditions as associates when vacancies permit. The affairs of the club are managed by a committee elected by the club, but with the proviso that the various educational institutions of Manchester shall be thereon represented. Thus at present the committee includes two professors of Owen's College, one mistress of the High School, one master of the Grammar School, and two ladies and two men representing the University Extension students. A regular course of lectures is organized every winter in reference to the places which it is proposed to visit in the spring—two hundred attended the recent course on Rome—and, other things being equal, preference is given in making up the party to those who have attended the lectures. The expeditions hitherto undertaken have been as follows: 1890, Florence; 1891, Venice; 1892, Rome. The cost is, generally speaking, the railway fare *plus* about £5 for hotels, and the annual subscription to the club is 2s. 6d. The president of the club is the principal of Owen's College, and there are three vice-presidents, two head masters, and one head mistress.

The Manchester Touring Club began with being, as regards expeditions, somewhat less definitely organized internally than the co-operative educational clubs, and in this resembles more the expedition

arrangements of the Polytechnic. The co-operative part of the expedition consisted mainly in combining on railway journeys and at hotels; otherwise members "chum" as and if they please, individually rather than as a complete whole. Hence, in the accounts contributed by various members to various Manchester journals, after their return from the first Florentine expedition, there is more freedom of criticism of fellow-travelers than would perhaps be the case where each member feels strongly the bond connecting not only personal friends who have found in each other kindred spirits *en route*, but each and all of the party on the general ground that they were "members of the party," whether kindred spirits or not.

That here, no less than elsewhere, Italy, the Alps and the marvelous beauty of Florence gave birth to a *vita nuova*, is clear from a pleasant account of the first expedition printed in the *Manchester Quarterly* for January, 1891. References are made there to, among several others, a certain number of the party, a "good solid English lass" who had never been away from home before. She was known as the "young one," and to her the passage of the Alps and Milan Cathedral were a sublime revelation. Wandering over the roof of the Duomo with a silent companion in the early morning, "struck by a statue of singular grace, and overwhelmed by the profusion of artistic work, the 'young one,' with a new look in her face, turned and said: 'It makes me feel very humble when I think I am chosen to see these things, and so many left at home who never can come here.' What had taken place? This was not our girl of yesterday—Lucerne and the snow-clad Alps, the landslip at Arth, the rushing Reuss, and the marvels of the scenery of the St. Gotthard with the eternal snow, the little shrines in the valley of the Ticino; the memory of Bellinzona and the glimpse of Maggiore, Lugano seen in evening light, and Como, too; Easter Sunday in the Cathedral, on whose roof we were, and the gorgeous procession, and the incense, and the music, and the triumph of the risen Christ—all were gathered in her eyes and face, and the awakened soul made her humble. The other had no words to speak. Leaning over a balustrade, still surrounded by the pinnacles and statues, with the city below, and the rich Lombard plain around, she continued: 'I do not so much wonder now that the Italians have done so much. The children's eyes are opened on things of beauty, and I am only just beginning to see.' Up they went to the topmost height. The morning mists were lifted, and gradually peak after peak shone white in the far distance, and no words were said—the scene and the occasion were too solemn. As they turned to descend from the roof one lingering look was cast around, and the 'young one' said: 'I don't think they were *paid* to do this work; they did it because they loved God, for His honor and the glory of their city.'"

The pilgrims from the grimy, prosaic Cottonopolis of looms and factories were struck one day by the sight of two Tuscan girls weaving on primitive straw-plaiting looms at Fiesole at the corner of the open street,

“one singing; the other, younger, had her hand on the loom and her lips were pressed to a little picture of our Lord, which hung on the loom post. Happy labor in the free heaven which had pause for a brief prayer, and time for a tender thought to fill the breast, and an act of devotion!” Happy labor indeed! for were not those Tuscan *contadine* of the number of those whom Ruskin has so beautifully called “Christ’s folk in the Appenine?”

The second Manchester Touring Club is at present but in the tentative stage of existence through which the other clubs have passed. Its aim is, like that of the Polytechnic, at present recreational rather than educational, except in the sense that all foreign travel must necessarily be in some sort or other an educational process.

THE ART WORKERS’ GUILD EXPEDITIONS.

This recently-formed but successful co-operative traveling club is another of the indirect children of the Toynbee Travelers, inasmuch as it was organized and established largely through the instrumentality of two actual members of the T. T. C. All or nearly all those who took part in the expedition to Venice in September, 1891, were members of the Art Workers’ Guild, of whom the president is Mr. W. B. Richmond, A. R. A. Among the twenty-seven travelers were painters, sculptors, etchers, brass and iron workers, wood carvers and architects, while a few outsiders, friends of members of the A. W. G. and of artistic sympathies, were also admitted. The party was composed entirely of men, and, while most successful from the artistic point of view, some lack was felt on the social side by those who had traveled with mixed parties, owing to the absence of ladies. The travelers were arranged in groups of eight each under captains, and the Toynbee organization generally was followed throughout. The route was *via* Dover, Ostend, *Brussels, *Bâle, *Milan, *Verona, *Venice, *Padua, *Mantua, *Pavia, *Milan, Bâle, Brussels, Ostend and Dover [a halt was made at the places here marked with an asterisk], and the time from start to finish occupied nineteen days. The cost—second class on railway and first on steamer, hotel accommodation, and three meals a day (including wine and lemonade) at Venice, and incidental necessary expenses—was well under £13.

The interest and pleasure of the expedition was considerably enhanced by the introductions obtained for the Guild by Mr. Richmond from Signor Villari, the Italian Minister of Public Instruction, to the artistic and civil authorities in each Italian city visited; and at Venice the party greatly benefited from the assistance of the architect, Prof. D. Rupolo, during the whole of their stay. The general results were so satisfactory that another expedition will be arranged in the ensuing September, probably to Florence. Many sketches and rubbings and other valuable artistic results were obtained. This is the first co-operative educational traveling club that has chosen the autumn rather than the spring for its expedition to Italy, and the wisdom of the Art Workers’ Guild’s

choice was fully justified by results. Italy was in the midst of her grape harvest and wine-pressing when the travelers passed through Lombardy and Venetia. Fruit was plentiful; pomegranates, figs, melons, grapes, etc., could be procured in abundance for a few *soldi*. The landscape presented one glorious wealth of color.

THE REGENT STREET POLYTECHNIC’S TRIPS.

Polytechnic, as our readers know, contains technical schools, classes in science, art and literature, and innumerable societies for promoting the physical, moral and intellectual welfare of some eleven thousand students and members. The members of the Institute are young men and women between the ages of sixteen and twenty-five.

There are 200 classes for instruction in almost every branch of learning, and recently-published statistics in regard to the male students of the technical classes show their ordinary occupations to be as follows:

Occupation.	Numbers on the books.
Clerks, etc.....	2,618
Building trades, etc.....	1,720
Engineers.....	320
Tailors.....	247
Metal-plate workers, etc.....	242
Printing trades.....	205
Furniture trades.....	165
Teachers.....	160
Electricians.....	135
Watchmakers and jewelers.....	125

The Polytechnic excursions now so widely known originated in Mr. Hogg’s custom, several years ago, of inviting London lads and youths down to his country-house in the summer as his guests. From this germ has grown the system which extends its operations from Norway and Madeira to the forthcoming World’s Fair at Chicago in 1893.

The first regular Polytechnic excursions were to Paris in 1889, when 2,500 persons through its agency visited the exhibition; and to Switzerland, a pedestrian excursion for lads, in the same year. From 1889 to 1891 inclusive the Polytechnic had enabled no less than some 9,000 persons to enjoy a pleasant holiday whether in foreign countries or in the British Isles. It should be remembered that the Polytechnic and most of the co-operative traveling clubs are *not* meant for persons whose means are quite adequate to allow them to avail themselves of arrangements made by Messrs. Cook and Gaze and other commercial agencies. But the Polytechnic excursions in so far resemble the “personally conducted,” that they deal with very large numbers, that they take all comers without inquiry of any kind, provided they accept conditions; and whereas in *e. g.*, the Toynbee Travelers’ Club, an expedition is *à terminus a quo*, and the club exists to be a bond of union at home among those limited numbers who have been fellow-travelers, and to arrange for the study at home of foreign art, history, science and politics, in the Polytechnic the excursion is the *terminus ad quem*, it being obviously impossible to keep touch with two or three thousand fresh people every year.

Among the "Poly" excursions which have either already taken place, or are in course of formation, are :

(1) The excursion to the World's Fair at Chicago in 1893. Parties will travel by the Inman and the Hamburg American Packet Co. The charges will be 25 gs. from Liverpool and 26 gs. from Southampton per head for the tour and back, including two days at New York, one at Washington, and five at Chicago. The route out will be by Philadelphia, returning by Niagara, Albany and the Hudson river. Special parties will be formed for engineers.

(2) The Norway trips have already been mentioned in these columns, and hence no more need be said of the "Poly" excursions in their chartered steamer than that the holiday was of a fortnight's duration, and the vessel carried at a time from 100 to 115 persons, about 35 per cent. of whom were ladies. It may be here observed that the Polytechnic excursions afford considerably greater facilities to men than to women ; the latter in some cases not being admitted to an excursion at all. The fare for the fortnight's travel and board and lodging on the vessel was £8. 5s. ; but all expenses incurred by the land excursions were extras. For a three weeks' tour the charge is £12. 15s. To the general public, not previously connected with the Polytechnic, there is an extra booking fee of 10s. 6d.

(3) MADEIRA.—These excursions are open to both sexes. Parties travel by the Castle Line and the Union Steamship Co., and are set down at Madeira on the out or return voyage of vessels running to the Cape.

The general advantages of an excursion to a place so much off the beaten track as Madeira include a long sea voyage on a large ship, an insight into ship-life, and the meeting with persons returning from the Cape ; the very characteristically foreign scene on the arrival at Madeira, the swarming confusion when the ship was boarded by yelling natives, whose voices were not those of St. Chrysostom ; the landing in pitch darkness in the middle of the night, the ghostly appearance of the customs-boats, and the subsequent gliding over the smooth stones of narrow lanes in

carros, through a darkness broken only by the unintelligible shouting of the *carro*-driver ; and the opportunities afforded by the excursions on the island, of getting a glimpse of the life of the native Portuguese negroid away from large towns, content to work hard and live plainly under his own vine and his own fig tree.

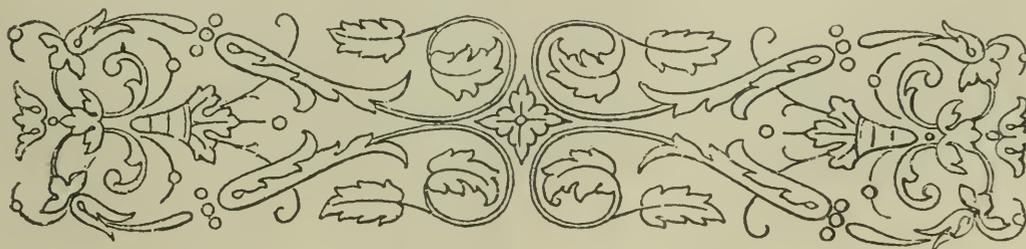

(4) MOROCCO.—An excursion open to both sexes will be made to Morocco in September, going by steamer to Gibraltar, and then across the Strait to Tangier, with a round trip on mules to Tetuan. The excursion will take from eighteen days to three weeks, and will afford an insight into Oriental life, manners and customs.

(5) SWITZERLAND.—For youths only, a pedestrian personally-conducted excursion of sixteen days inclusive. Members must expect to rough it somewhat. Food is plentiful but plain, and the cost, including railway fare and hotel accommodation, with two meals a day, is £7. 5s. ; non-members of the Polytechnic paying 10s. 6d. extra.

(6) THE ARDENNESS.—For youths only, starting weekly during August ; a week's pedestrian excursion costing, to members, £3.

(7) DUBLIN AND KILLARNEY.—Two fortnightly parties, staying at Dunloe Castle, costing, to Polytechnic members, £4. 5s., and 7s. 6d. extra to non-members. Two meals a day.

It is perhaps worthy of remark that both the Toynbee Travelers' Club, and the Polytechnic trips were founded by Etonians. Eton, to the average democratic mind, suggests all that is exclusive and Tory, and yet she has been the indirect parent of a far-reaching and thoroughly democratic educational movement, furnishing the means on the one hand of academic education in art and European history to working men and women, comparatively limited in numbers, who need but to be furnished with the opportunity to claim it gladly ; and, on the other, of recreational education to several thousands of the workers in the artisan and so-called lower middle class dwelling in those great towns which are commonly regarded as hide-bound in Philistinism.

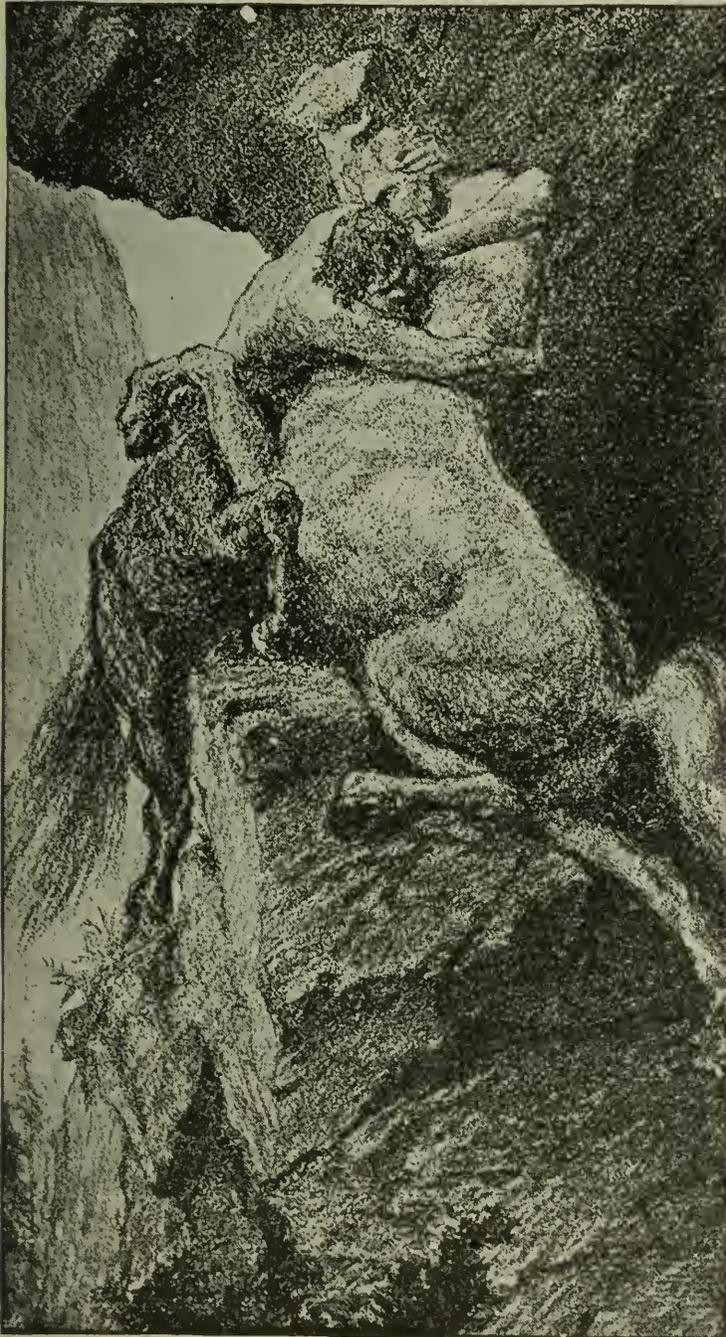

H. R. H. THE INFANTA OF SPAIN.
(From a photograph by Marx, Munich.)

A ROYAL CHARITY ALBUM.

IT is likely that so remarkable a volume has never been issued in the cause of charity as that which Her Royal Highness the Infanta of Spain has issued in order to secure support for an orphan asylum in which she is interested. The album is entitled "Caritas," and is published for the benefit of the St. Mary Asylum, for the education of poor children and orphans. It is a large folio, sumptuously bound, and admirably gotten up. As a book for the drawing-

"FIGHT BETWEEN CENTAURS" BY PRINCE ERNST OF MEINIGNE.

"STUDY OF A HEAD," BY THE EMPRESS FREDERICK.

room it is ridiculously cheap at 25 marks, the price at which it is published by the Verlagsanstalt für Kunst und Wissenschaft, of Munich, a firm which carries on the business formerly conducted under the name of Friedrich Bruckmann.

But it is not merely the getting up of the work and the excellence of the object to which the profits of its sale are to be devoted that will secure attention to this remarkable publication. Probably no publication of recent times has had so many distinguished contributors, as may be seen by the fact that it contains contributions from one Pope, two Emperors, one Empress, two Kings, three Queens, and one Queen Regent, six Imperial and Royal Highnesses (who are either Archdukes or Archduchesses), eight Royal Highnesses (who are Princes, Duchesses, or Countesses), with a filling in of Dukes, Counts, and Princesses. The success of Her Royal Highness, the Princess Ludwig Ferdinand of Bavaria, Marie de la Paz, Infanta of Spain, in securing such a remarkable collection, would seem to indicate that the editorial gift is occasionally to be found in those circles which do not often afford any opportunity for their display. The Pope's contribution, which has the place of

“THE JUGGLER,” BY THE EMPEROR FRANZ JOSEF.

(Reproduced by permission from “Caritas.”)

honor, is an autograph poem on the photographic art. It is as follows :

ARS PHOTOGRAPHICA.

Expressa solis spiculo
Nitens imago, quam bene
Frontis decus, vim luminum
Refers, et oris gratiam.

O mira virtus ingeni,
Novumque monstrum ! Imaginem
Naturæ Apelles æmulus
Non pulchriorem pingeret.

LEO F. F. XIII.

Which may be roughly Englished in the following verses :

O shining image clear,
Expressed in sunrays bright,
How wondrously before us here,
Thou bring'st the power of light.

O marvel of man's thought !
New portent ! With so fair a grace
Even Apelles' brush could not
Present us Nature's face.

The art contributions are reproduced by photogravure from original pictures, which show that some at least have considerable artistic genius. We give the first place to the study of the head of a youth, a crayon drawing which was executed by the Empress Frederick in 1890. After the empress we turn naturally to the sea piece of her son, which was drawn four years ago when he was only Prince of Prussia. It represents artillery practice off the coast. The contribution of the Emperor Franz Josef dates back to the time before he was emperor, and is a juvenile sketch of a country juggler, which the emperor-king sketched as far back as 1846. The Queen of Portugal sends a water-color sketch of a donkey's head, gayly decorated, Portuguese fashion, with brightly-colored tassels. Another Portuguese contribution is by her Royal Highness Antonie of Hohenzollern, the Infanta of Portugal. It is a sea piece representing fishing-boats ; it is not, however, among the best contributions. The King of Portugal has a pleasant landscape, with a girl carrying a water jug as the central object. This is the prettiest Portuguese contribution.

There is a very pretty reproduction of a water color by the Queen Regent of Spain. The other Spanish contributions do not call for special remark. The King of Sweden contributes two aphorisms, which are not even in autograph. The Queen of Italy sends an

Antoine of Orleans and the Archduchess Margaret of Austria and the Prince of Anhalt, contribute musical compositions of their own. There are several other literary contributions of greater length. The Archduchess Stephanie describes her journey from Ragusa

“MEADOW FLOWERS,” BY THE QUEEN REGENT OF SPAIN.

(Reproduced by permission from “Caritas.”)

autograph contribution; the Duchess Wera, of Wurtemberg, two little poems; and the Queen of Roumania an autograph poem of much greater length. One of the most spirited of the pictures is that of the Prince of Meiningen, representing the fight of two centaurs. It is full of power and savage force. Duke

to Cyprus, and the Princess Therese of Bavaria tells the story of the accession to the throne of Nicholas the First. Altogether the volume is an extremely creditable production, and one which on the drawing-room table would attract universal attention and interest.

LEADING ARTICLES OF THE MONTH.

THE DEMOCRATIC AND REPUBLICAN CANDIDATES.

IN point of timeliness, at least, the leading political articles of the month are the two on "The Candidates for the Presidency," which appear in the *July Forum*:

"What Mr. Cleveland Stands For."

The first article is by Mr. Charles Francis Adams, who explains at some length why it is that he and many other original members of the Republican party will in the present campaign support the candidate of the Democratic party. It is, he says, simply because that candidate is Mr. Cleveland. They will vote for Mr. Cleveland because they believe that upon the leading political issues of the pending canvass—civil service reform, the tariff, silver coinage and pensions—his position, as evidenced by his acts while President and his utterances afterwards, is sound. "He has been called upon to confront all of these issues and on no occasion, so far as I know, has he failed to make his position understood or to give the party of which he was the head a distinct, recognized, and creditable lead. He has not shuffled or vacillated; his voice at least has, upon these issues, emitted no uncertain sound. In this respect the line of responsible public action he has pursued has been in most agreeable contrast with that unusually pursued by politicians, not only of the present, but of all time.

"Take his course on the question of civil service reform, that one of the issues enumerated in regard to which his record may seem to be most open to attack. Under the lead of Grover Cleveland the Democratic party came back into power in 1885, after twenty-eight years of exclusion from it. No more severe pressure for a general turning out of officials and a new distribution of places was probably ever brought to bear upon the head of a government than was brought to bear upon President Cleveland after his inauguration. I have not the figures before me, nor do I care to look them up, but I think it will be found that the removals during President Cleveland's administration were fewer in number and less dictated by partisan or political considerations than those of President Harrison, who succeeded him. Yet President Harrison represented a party which when Cleveland was inaugurated had been in power for over a quarter of a century, filling every office in the gift of the government, and many of these officials had held over notwithstanding the change which took place in 1885.

"On the next issue, that of protection, whether the critic be a protectionist or otherwise, he must still admit that President Cleveland's course was most creditable to him. Indeed, it may well be questioned whether any President, in dealing with

an important question of public policy, ever acted from higher or more disinterested motives than did Cleveland when he took the course he did in his annual message of 1887. Before that message was sent in it was generally conceded that all the President had to do to secure a re-election was silently to bide the time. The course of events and the drift of public opinion were in his favor. The terrible results his opponents had so confidently predicted from a return of the Democratic party to power had not come about. The country was at peace and very prosperous; the South was pacified and loyal; the Treasury was overflowing. All things indicated popular confidence in the administration and unwillingness to disturb it. Nevertheless, when President Cleveland, after the most thorough and careful investigation he could make, had convinced himself that the tariff system needed modification, he did not hesitate to cast all further ulterior considerations aside and boldly to indicate his opinion.

"It was the same with the question of silver coinage. That issue was and is unmistakably before the country and has got to be fought out. It was unnecessary for ex-President Cleveland, as he then was, to express in February last any opinion upon it. It was perfectly within his power, by preserving a discreet silence, to hold himself in position where those in favor of a free coinage of silver and those who were opposed to it, could equally lend him their support. He might have dodged the issue. Nevertheless, here again the courage and character of the man asserted themselves. His letter of February 10, 1891, to the Cooper Union meeting was, as I look upon it, under all the circumstances of the case, one of the most creditable utterances that ever came from an American public character. He did not want to have his position misunderstood. He did not propose to stand before the country in any false or uncertain attitude. So, again, his voice, when heard, emitted no uncertain sound."

Mr. Adams, himself a soldier during the civil war, regards President Cleveland's action in vetoing the Dependent Pension bill of 1887 as not only commendable, but also courageous. "Those who feel as I feel," concludes Mr. Adams, "caring far more for country than for faction—for things than for names—see in Mr. Cleveland a man both true and tried, a political leader far in advance of his party, a public character with the courage of his convictions, a statesman whose views on every political issue are definite and well known, a possible President who, if elected, can have no ulterior political ends in view, for he cannot be a candidate to succeed himself. Finally, if the published utterances of ex-President Cleveland upon all the leading issues of the day constitute what is now Democracy, then I and those who feel as I do must for the time being submit, for

the reasons I have given, to be accounted Democrats. So far as the nominee for the presidency is concerned, we certainly propose next November to vote as such.'

"Mr. Harrison's Sound Administration."

The second paper is by Senator Hawley, of Connecticut, who reviews, from the point of view of a staunch Republican, the most important achievements of the Harrison administration. He commends President Harrison's policy in dealing with the various foreign questions which have presented themselves during the last three years, as frank, manly and vigorous. The Samoan dispute was settled in such a manner as to secure for the United States great prestige among European nations, and respect for American rights throughout the Pacific; the honor of the country was vindicated in the settlement of the New Orleans affair, and Italy in nowise humiliated, and, Senator Hawley continues, "It was not until President Harrison took the Behring Sea matters in charge with a firm hand, in dispatches of great vigor and frankness, that Great Britain assented to an agreement to settle the questions by arbitration, and in the meanwhile to put a stop to the slaughter of the great herds of seals."

The conduct of the national finances under the present administration is, likewise, characterized as vigorous and successful; \$55,000,000, it is computed, has been saved to the government during the last three years by the manner in which the public debt has been handled by the Treasury Department. The foreign trade of the country is shown to have greatly increased during the three years of the Harrison administration. The exports during this period exceeded the exports during the corresponding three years of the Cleveland administration by \$561,907,906, an annual average excess of \$187,000,000. The excess of exports over imports during the three years of the present administration amounted to \$281,197,367, as against an excess of \$28,984,379 during the Cleveland three years.

Regarding the reciprocity feature of the administration's commercial policy Senator Hawley says:

"The Harrison administration has labored earnestly and successfully to enlarge our foreign markets for our surplus productions. Restrictions placed upon the importation of our agricultural products have been reduced by treaties negotiated with Germany and Austria. Similar negotiations have resulted in commercial arrangements with Guatemala, Honduras, Salvador, Nicaragua, Costa Rica, Brazil, Santo Domingo, Cuba, Puerto Rico, British Guiana, Jamaica, Trinidad, Barbadoes, and the British colonies of the Leeward and Windward Islands, representing a population of nearly 30,000,000 and an annual commerce of \$600,000,000. These negotiations are in progress of sure extension. Under the generous concessions thus secured, nearly all the agricultural products of this country and a large number of manufactured articles are admitted free into half of the ports of America south of the Rio Grande, and a much larger list of merchandise is admitted at rates

twenty-five and fifty per cent. lower than those imposed upon similar articles imported from Europe, giving a marked advantage to our people. Nearly every article we can produce for export can be bought in the countries named at prices much below those asked by European competitors, who formerly enjoyed almost a monopoly of them. It remains for our people to improve their opportunities. The disturbed condition of some of the countries has retarded a growth that might reasonably have been expected. Under more favorable conditions, our exports to Cuba since the treaty went into effect, September 1, 1891, have been \$13,104,879, as against \$8,907,937 for the corresponding period of the previous year."

The conduct of the Interior Department, the Post Office Department and the Pension Office is, similarly, praised and commended.

The attitude of the administration toward civil service reform is thus presented:

"President Harrison has steadily and heartily supported the Civil Service Commission in endeavoring to secure a faithful enforcement of the law. He has extended its provisions to the superintendents, teachers, matrons, and physicians in the Indian service and to employees of the Fish Commission. He has provided a rule for voluntary competitive examination for promotion in the departments at Washington. Likewise he has directed the heads of departments to keep an 'efficiency' record of all the classified employees. The last two changes have made a very marked improvement in various places. No person has done more for the improvement of the public service."

In Senator Hawley's estimation the Harrison administration has been sound through and through.

WHY MY PARTY'S CANDIDATE SHOULD BE ELECTED.

IN the *Arena* for July a prominent representative of each of the three political organizations, Democratic, Republican and People's, gives reasons why his party's candidate should be elected in the pending campaign.

Why Mr. Cleveland Should Be Elected.

Representative William M. Springer speaks for the Democratic party. Assuming that the next Congress will be Democratic in both branches, he argues that the next President should be a Democrat. First, in order that the will of the people, as expressed through the majority of their representatives, might not suffer defeat from the interposition of the executive veto. This unity of opinion and purpose is held to be especially necessary in view of the strong demand for a revision of the tariff laws. Second, the Democratic party should elect its candidate in order that the reforms in government expenditure undertaken by the Cleveland administration might be carried out. Third, because the Democratic party is at this time the better representative of true Americanism, the Republican being sectional in its interests. Fourth,

a Democratic president would appoint Democratic judges to the Supreme Bench, which is now largely composed of Republicans.

Why General Weaver Should be Elected.

The People's Party's cause is presented by Representative Thomas E. Watson. His reasons are first negative. Under a Republican administration there would be perpetrated the McKinley tariff, the national banking system, the contraction of currency, corporation rule, and the exemption of millionaires from taxation on their incomes. Under Democratic supremacy the national banks would remain, incomes would not be taxed, tariff burdens if molested at all would only be scaled slightly, corporations would retain their special privilege, currency would remain contracted and only be filtered out to the people through the banks. Again, says Mr. Watson, "both parties are responsible for the vicious legislation which now oppresses the country," and each lives on sectional prejudice.

His positive reasons are as follows: The People's Party, if successful, will pass the income tax, will sweep away national banks, will restore the free coinage of silver, will have money issued directly to the people in sufficient volume to meet the needs of legitimate business; in short, will make "real, vital, imperative reforms, whose purpose is to destroy class rule and to restore to the people the government."

Why President Harrison Should be Re-elected.

Representative J. C. Burrows presents reasons why Mr. Harrison should be continued in office. He says: First, only the Republican party can be depended upon to sustain the American principle of protection. Second, the Republican party has placed the country on a sound monetary basis which should be sustained. Third, only the Republican party can be relied upon to devise a method whereby fair and honest elections can be secured. Fourth, the Democratic party refuses to aid in the promotion of the scheme of reciprocity in trade with South American republics.

ORGANIZED LABOR IN THE CAMPAIGN.

MR. SAMUEL GOMPERS, president of the American Federation of Labor, writes, in the *North American Review* for July, on "Organized Labor in the Campaign." He says in substance: The American Federation of Labor as an organization will take no official part in the approaching presidential contest, but the members will, in large measure, vote for the candidate of the party of their own political choice. So far as the wage workers are concerned, it will matter little whether the Republican or Democratic candidate is elected. There is no principle involved in the party issues which affects in any great degree the workingman.

Mr. Gompers is led to believe that the wage workers will co-operate more generally with the People's party than with either of the two large political organizations, but holds that "to support the People's party under the belief that it is a labor party is to act under

misapprehension. It is not and cannot, in the nature of its make up, be a labor party, or even one in which the wage workers will find their haven. Composed, as the People's party is, mainly of *employing* farmers without any regard to the interests of the *employed* farmers of the country districts or the mechanics and laborers of the industrial centers, there must of necessity be a divergence of purposes, methods and interests."

MR. SAMUEL GOMPERS.

He says in conclusion: "The American Federation of Labor is not in harmony either with the existing or projected political parties. So deep-seated is the conviction in this matter that long ago it was decided to hold the conventions of the Federation *after* the elections. Thus freed from party bias and campaign crimination, these gatherings have been in a position to declare for general principles and to judge impartially upon the merits or demerits of each party, holding each to an accountability for its perfidy to the promises made to the working people, and at the same time keeping clear and distinct the economic character of the organization. By our non-political partisan character as an organization, we tacitly declare that political liberty with economic independence is illusory and deceptive, and that only in so far as we gain economic independence can our political liberty become tangible and important. This may sound like political heresy, but it is economic truth.

As time goes on we discern that the organized workmen place less reliance upon the help offered by others, and it is a spark upon the altar of progress that they have learned to more firmly depend upon their own efforts to secure those changes and improvements which are theirs by right."

REFORM OF POLITICAL ASSESSMENTS.

IN the July *Atlantic* Theodore Roosevelt writes on the "Political Assessments in the Coming Campaign," and shows what the law will probably do to regulate them. The present provisions of the law are, in Mr. Roosevelt's general terms, as follows: "First, that no office holder shall in any way solicit or receive assessments or contributions for political purposes from any other office holder; second, that no person, office holder or otherwise, shall solicit such contribution in any Federal building; third, that no office holder shall be in any way jeopardized in his position for contributing or refusing to contribute, as he may see fit; and, fourth, that no office holder shall give any money to another office holder for the promotion of any political object whatever."

This legislation, with the many other efforts which have been made in the same direction, has succeeded in lessening to a marked degree the universal and heartless "milking" of government employees which was the rule ten years ago. The national office holder finds himself fairly well protected by the above regulations. But in the punishment of the offender against them, Mr. Roosevelt points out that there is yet much to be desired.

"It is difficult to get evidence against these wrongdoers; and, having gotten the evidence, it is somewhat difficult to get convictions. During the past three years the [Civil Service] Commission has recommended the indictment of some thirty different individuals for violations of the law against making political assessments. Indictments have been procured in ten or twelve cases. It is simply a question of time when we shall get some conspicuous offender convicted and either heavily fined or imprisoned."

But that this is easier said than done, Mr. Roosevelt himself recognizes; for the offenders against the law prepare themselves by elaborate study of its bearings and arrange their loopholes for escape. The need of reform is made more urgent by the average character of the assessments; they generally fall on the classes least fit to pay them, especially on women, and most of the money collected goes to further individual or factional ends, even if they get into the political treasury at all. And, strangely enough, it is the government employees of *opposite* political creeds who answer most generously to the call for assessments, as these are especially desirous of conciliating their superiors in office, being most fearful of removal.

MISS GORDON CUMMING, in the *Newbery House Magazine* for July, has one of her interesting travel papers entitled "How Mother Earth Rocked Her Cradle in 1891," which is rather a fantastic description of the great volcanic earthquakes in Japan.

THE GROWTH OF THE FEDERAL POWER.

MR. HENRY LOOMIS NELSON has a strong paper in *Harper's* in which he reviews the wonderful growth of the Federal power in the United States. With his text De Tocqueville's words, famous for the truth that was not in them, which confidently predicted the defeat of the sovereignty of the Union at the hands of the States, Mr. Nelson shows that in the very infancy of the Constitution, a third of a century before the French philosopher's remark, the steady extension of the Federal power had begun, and has continued with more or less constancy until to-day.

The factor in our history, which above all others has constantly reinforced the strength of the central government, has been the admission of new States. It required no strain of generosity for a body of people who, being under the territorial jurisdiction regulated by the Federal power, had received the sovereign dignity of Statehood from that Federal power, to look on it as the supreme source of delegated authority, and to be loyal to it first and foremost. Then the central and Western communities were not possessed of the very perfect system of local self-government which the New Englanders had in the town meeting, which further caused the latter to be more self-containing. So that the growth of the Federal power increased with the rapid predominance of the new States, created by it, over the old Atlantic States, which created it.

The extension of the powers of the central government have a sympathetic index in the history of "internal improvements" under national auspices. In the constitutional battles that used to take place over the old Cumberland Road, which the United States Government built to connect Maryland and Ohio, a great opposition grew up to internal improvements, and it is to be noted that Jefferson himself considered it necessary to obtain the consent of the States through which the road was to run. But, notwithstanding this there has been a steady increase of appropriations for internal improvements up to the present day, with the one stoppage during the war, and it is along these lines that there has been the most enormous increase of Federal power.

That Mr. Nelson believes this extension to have gone too far, he leaves no doubt.

"Congress has overshadowed the State Legislatures to that extent that they have become inapt in dealing with those intimate and scientific subjects of social and domestic concern, the possession of the jurisdiction over which ought to make the State Legislatures bodies of the first importance.

"At the same time Congress has assumed many powers that were not within the contemplation of the founders of the government, and has undertaken tasks which have enormously increased its labors, in consequence of our wonderful growth of population. These tasks are of local and sectional, rather than of general importance, and it is to their assumption more than to any other cause that the existing Congressional paralysis may be attributed."

This writer enlarges on the loss of efficiency, which he believes Congress to have suffered by reason of its numerous extensions of work and responsibility. Of the yearly expenditures by the national government, Mr. Nelson affirms openly that a large part cannot be authorized by the Constitution.

"The function of the constitutional lawyer has departed, so far as the application of our written instrument to economic measures is concerned. The practical statesmanship of the future must concern itself not with the legality, but with the advisability of measures."

WHAT SHALL THE INTERNATIONAL RATIO BE?

ASSUMING that the international agreement with reference to free coinage is secured through the proposed monetary conference, at what ratio shall gold and silver be issued? This is the question discussed in the July *North American Review* by five well-known members of Congress; Senator Stewart, of Nevada, Representative Springer, of Illinois, Representative Bland, of Missouri, Representative Dalzell of Pennsylvania, and Senator Hansbrough, of North Dakota. All the writers agree that the ratio should not be over 16 to 1, and either imply or expressly state that 15½ to 1 would be more nearly the correct proportion.

Senator Stewart holds resolutely for a ratio of 15½ to 1. He believes, however, that little toward fixing a ratio can be accomplished by an international conference until the countries participating therein have decided to open their mints to the coinage of silver for depositors of bullion, and entertains the suspicion that the present conference has been called for the purpose of side-tracking the silver question. "It would be interesting to know by what authority of law the conference will be held. Has any government to be represented signified by proper authority that its mints will be opened to the free coinage of silver upon any conditions whatever? What questions are to be discussed? Is the United States further to be humiliated by submitting its right to coin money according to the constitution to a European conference of money-lenders?"

Representative Springer argues that a uniform ratio of 15½ to 1 could be established by the principal commercial nations with very little inconvenience. It is the ratio of the Latin Union, and also of the governments of Spain, Holland, Russia and the Central and South American States. "An international agreement fixing this proportion, if adopted by the United States, England, Germany and Mexico, in addition to the nations which have already adopted it, would secure in a very short time a universal acquiescence in this ratio. In that event the United States could recoin all its silver pieces and make a profit by the operation. On every 15½ ounces of silver in the new coins the government would receive a bonus of one-half ounce. A limited agreement of this kind would greatly facilitate commercial transactions and simplify and unify the coinage of all

nations entering into the agreement. If a limited agreement of this kind could be made and put into practical operation, there is every reason to believe that more liberal provisions looking to a larger use of silver could be secured in the future. In the course of time free and unlimited coinage would, in all probability, be adopted by the leading commercial nations."

Representative Bland gives in a paragraph the substance of his answer to the question:

"In adopting the ratio for ourselves, or by concurrent action of other nations, the ratio of 15½, or our own ratio of 16, should be selected. First, Because it is the ratio, or it approaches the ratio, that has existed in the commercial world for centuries, and at which the coined gold and coined silver of the nations circulate at par in the countries where coined. Secondly, This is about the average ratio at which the nations of the world coin gold and silver into legal-tender money. Thirdly, It is near the relative amount in weight of the existing coined stock of the two metals."

Representative Dalzell thinks that, as an international ratio, 15½ to 1 would be preferable to our own. The margin between the ratios would suffice to pay the cost of recoinage. Senator Hansbrough places the ideal ratio at about 16 to 1.

LEGISLATIVE HELPS FOR THE FARMER.

MR. A. W. HARRIS has a social article in the *July Century*, and he takes as his subject "What the Government is Doing for the Farmer." He does not attempt to go into the great questions of railway legislation, of the tariff, or of State legislation, but there remain many important departments of agricultural industry which have been furthered or protected by Federal interference.

Not the least important, in this writer's opinion, is the law, passed in 1886, regulating the traffic in oleomargarine—that well-known substitute for butter produced by separating the oils from the fat of animals. It is curious that this Oleomargarine act, originally passed with the manifest intention of prohibiting the manufacture of the article, has come to be a protection to its manufacture, but yet attains pretty nearly the good results which might be hoped for from the consumer's point of view. It lays a special tax of \$600 upon manufacturers, of \$480 upon wholesale dealers and of \$48 upon retail dealers.

"Those who wished to prohibit the manufacture and sale have been disappointed, for the oleomargarine industry has actually increased since the passage of the act. It has not, however, failed in noteworthy results. It has helped to raise the price of butter, especially that of good butter. Further, by confining the oleomargarine competition to the poorer grades of butter it has doubtless caused improvement in these grades. Again, by preventing oleomargarine from masquerading as a more expensive article it has kept the price down, greatly to the advantage of con-

sumers. And, lastly, by compelling oleomargarine to be sold under its own name it has relieved that product from the reproach of being a fraudulent article and has given it an honorable position in commerce as a legitimate means of utilizing waste products, and as a cheap, wholesome substitute for an expensive necessity."

Another direction in which the central government may hope to become of use to the farmer is in the extension of the weather service, which has lately been transferred from the War Department to the Department of Agriculture. At present the predictions are given for large areas, and the office in Washington has about two minutes to work out the meteorological destiny of each State. And then the small mountains and hills in particular localities may utterly change the calculations made by the Weather Bureau. Local subdivision, which will be rendered possible by increased telephone and telegraph facilities, will take many of these obstacles out of the way, and we may look forward to the time when the farmer will only have to apply to the local officer at the village, two miles away, to find with reasonable surety whether he may safely plant his corn or cut his hay.

Another fine opening for the government weather prophets is in the study of particular climatic conditions in their relation to agriculture, the particular atmospheric phenomenon, for instance, which render New Jersey and Delaware fine peach regions, which will allow a splendid fruit crop on one side of the Alleghanies and two hundred yards away will suffer no fruit growing.

It is not unlikely that a new and extensive sugar industry has been created by the act of July 1, 1891, which takes the internal revenue tax off the alcohol used in obtaining sugar from sorghum. The 200 pounds of sugar in each ton of sorghum cane cannot be separated from the gums in which it is held except by the application of alcohol, the great cost of which, arising from the tax, has precluded the manufacture of sorghum sugar on any extensive scale. The alcohol can now be obtained more cheaply, owing to the above-mentioned act, and can be redistilled and used again after the process of crystallizing the sugar, in which it loses only from one to five per cent.

Our foreign and interstate cattle and meat trade has gained in a most wholesome manner by the acts of August, 1890, and of March, 1891, which authorize the Secretary of Agriculture to inspect animals and meats intended for export or for interstate trade. Mr. Harris' detailed description of the careful and elaborate inspection of the live cattle and of the slaughter-house products is quite interesting, especially in the case of the microscopic examination of the carcasses of hogs to determine the presence or absence of the animal parasite *Trichina spiralis*.

A hasty paragraph or two are given to the more noticeable features of the McKinley tariff, especially in those provisions which affect farm products, and a statement of the reciprocity achievements of Mr. Blaine ends the article.

GIVE US FORESTRY LAWS.

THE July *Cosmopolitan* gives its pages to a sensible article by Mr. J. B. Harrison, on "The State and the Forest." The writer is secretary of the New Hampshire Forestry Commission, and is well equipped by his wide experience in the subject to help in the fight, still feeble, that a few of our more far-seeing statesmen and scholars are making against the terribly willful waste of our forest lands. Our greater wooded districts are doomed; the lumberman knows how many feet of saw logs there are in each square mile, and can calculate for one just how long it will be before he has completely killed the goose that lays the golden egg. But it is still possible for the States, in specific instances, to preserve the trees on certain tracts over which they hold sway; and surely it is a worthy object.

After speaking of the need and opportunity of State Forestry laws in particular localities of New England, where they are especially needed or feasible, Mr. Harrison has the following to say on the economic value of our wooded mountains: "The first and most important function of mountain forests is the preservation of the mountains themselves by clothing them with soil." At first the mountains were "only ridges, slopes and summits of bare rock. Then, when conditions permitted, nature began a new order of things with low forms of vegetable life." At last a thin film of soil was formed, and this through ages grew with each successive deposit of leaves and vegetable matter into the respectable deposit which now covers the rocks. "If our mountain forests were rightly managed they would forever increase in fertility, and the quality of their timber would be thereby gradually improved. Proper management means and includes the cutting of every tree when it reaches its best estate.

"With the forests destroyed, the soil washes away with the spring freshets, the fibrous texture of roots and earth no longer furnishes a storehouse for water to insure the equable flow of the streams, 'the rain and snow fall on the naked rocks, and the water plunges down the smooth slopes and swells the streams to floods, which carry devastation and ruin along their course through the country below. Great rivers which have hitherto borne a mighty commerce to the sea, sustaining prosperous cities and enriching broad regions of country, are choked with sand and gravel, the debris brought down from the dissolving hills. In times of flood they are a menace to the dwellers in their valleys, and in seasons of drought their flow is so diminished as to make them nearly useless for navigation and as sources of water supply for manufacturing purposes.'"

Mr. Harrison advises that the State of New York should at once begin forestry experiments on its 700,000 acres of Adirondack land, that the hotels shall be located by and under the control of the State, and that a school of forestry be established to equip trained men for the task of protecting this magnificent domain for the people. In Pennsylvania, New Hamp-

shire and Massachusetts, too, he points out the great good that would result from such efforts.

"All of the mountain forest lands owned by the nation should be at once withdrawn from sale, and should be put under the guardianship of the national army until a comprehensive and efficient system of forestry has been established over them. But it is probable that all remaining portions of the national domain will soon pass into the possession of the States within whose boundaries they are situated. If this expectation is realized the mountain forest lands everywhere should be held and administered by the States, as such, and should not be allowed to become private holdings by sale to individuals." A further argument, if any be needed, for the preservation of forest conditions in the mountains is the dependence on those conditions of any system of irrigation which will reclaim the arid Western lands.

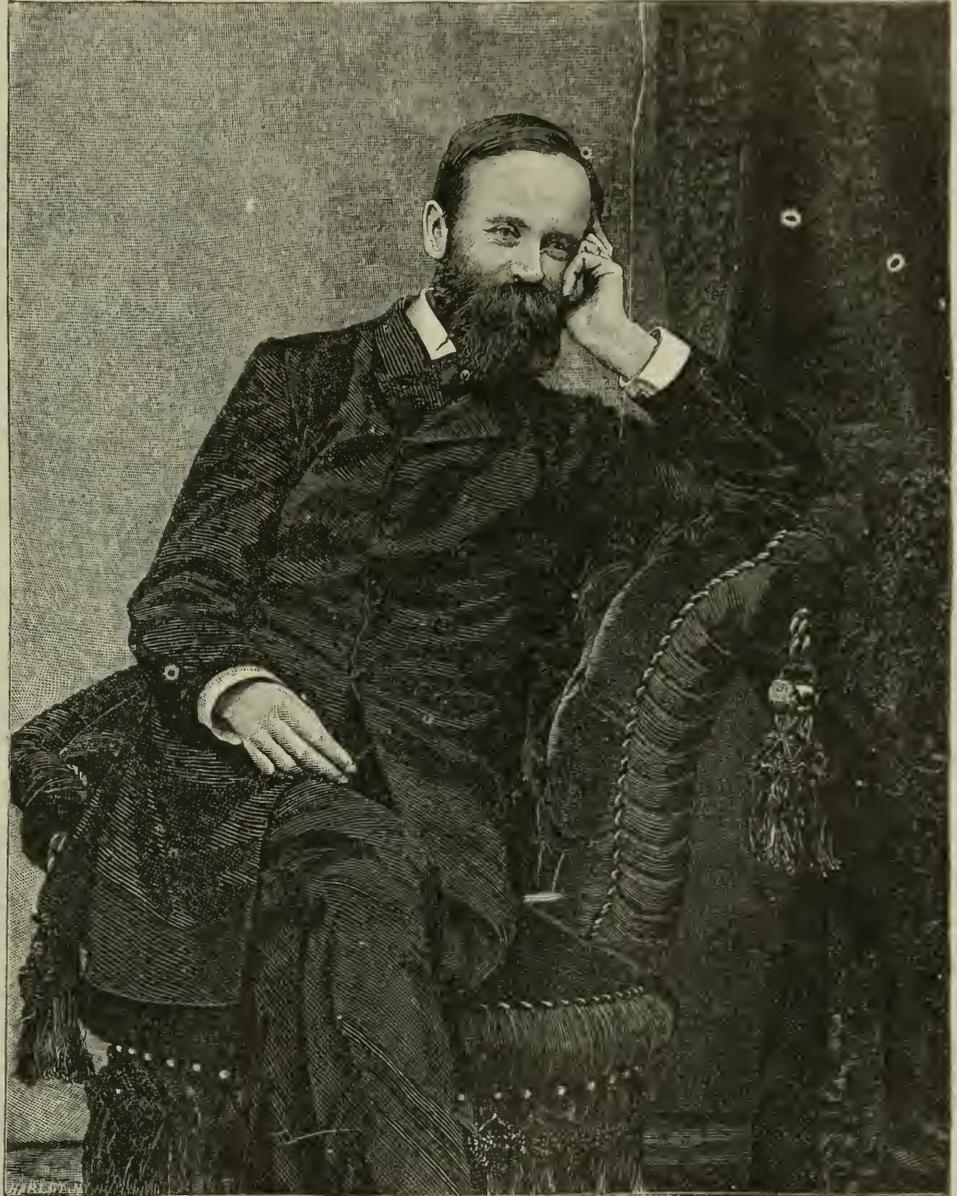

DOES THE NEGRO PAY FOR HIS EDUCATION.

MR. GEORGE W. CABLE, in the *Forum* for July, considers the question "Does the Negro Pay for His Education?" His answer is that the negro pays a larger proportion of his whole school fund than any poor man, outside of the South, in America. This conclusion he derives from the fact that in the Southern States the school fund is, to a much greater extent than in the North, drawn from the poll tax, which, of course, is legally due from every negro as well as every white citizen. In Alabama, for instance, the poll tax collected in 1889-90, was nearly half as much as the State school tax on property.

Mr. Cable shows from statistics compiled from the official reports of Georgia that in 1889-90 the colored schools of that State did not really cost the white citizens a single cent, and asserts that in the other ten southernmost States as well it will be found that the negro contributes his full share toward the maintenance of schools.

The cause of the present melancholy condition of public education in the far Southern States is attributed by Mr. Cable not so much to the sparseness of population, scarcity of taxable property, the weight of public debts, and the large ratio of children to adults, as to the laws and the methods under which the school funds in these States are gathered and disbursed. In his exact words this larger cause is, "the

policy of throwing the support of public schools mainly upon local taxation, and then besetting the local taxation with obstructions and interdictions. "In States where every county and township looks upon the public schools as the corner stone of public order and wealth, it makes far less matter whether the public school lives mainly by State or by local taxation. But in the South there is, first, a wide oversight of the great advantage to the rich in the free education of the poor, and, secondly, a wide dif-

MR. GEORGE W. CABLE.

ference of wealth between the laboring and property-holding classes, a difference due, not to any great wealth of the rich, but to the abject poverty of the poor. Thus the every-county-for-itself policy becomes a policy of every township, every district, and at last of every *coterie* and even family for itself, and in countless vast rural districts of the South the public and the private schools are barely strong enough to throttle each other. The policy becomes a devil-take-the-hindmost policy, and he takes the children of the poll-taxed negro and white "cracker" and mountaineer by hundreds of thousands.

FREDERICK DOUGLASS ON LYNCH LAW.

IN the *North American Review* for July, Mr. Frederick Douglass writes vigorously yet dispassionately on "Lynch Law in the South." He finds no justification whatever for this method of punishment. "For," he says, "if the charges against the negro are true, with the evidence of his guilt overwhelming, as is usually asserted, there could be no rational doubt of his certain punishment by the ordinary processes of law. If in any case there could be shown an element of doubt of the certain lawful conviction and punishment of the accused, there might be admitted some excuse for this lawless method of administering justice. But for no such doubt is there any contention. No decent white man in the South will pretend that in that region there could be impaneled a jury, black, white or mixed, which would in case of proof of the deed allow a guilty negro to escape condign punishment.

"Whatever may be said of their weakness when required to hold a white man or a rich man, the meshes of the law are certainly always strong enough to hold and punish a poor man or a negro. In this case there is neither color to blind, money to corrupt, nor powerful friends to influence court or jury against the claims of justice. All the presumptions of law and society are against the negro."

To Bishop Fitzgerald's contention that the crime alleged against the negro makes him an outlaw, Mr. Douglass replies that no man is an outlaw unless declared to be such by some competent authority. "It is not left to a lawless mob to determine whether a man is inside or outside the protection of the law. It is not for a dozen men or for a hundred men, constituting themselves a mob, to say whether or not Bishop Fitzgerald is an outlaw. We have courts, juries and governors to determine that question."

Mr. Douglass asserts that it is not so much the immorality or the enormity of the crime itself as race prejudice which arouses the popular wrath. And this prejudice, he further declares, has increased in bitterness since the close of the civil war. He explains this phase of the negro problem on "the same principle by which resistance to the course of a ship is created and increased in proportion to her speed. The resistance met by the negro is to me evidence that he is making progress. The Jew is hated in Russia because he is thrifty. The Chinaman is hated in California because he is industrious and successful. The negro meets no resistance when on a downward course. It is only when he rises in wealth, intelligence and manly character that he brings upon himself the heavy hand of persecution. The men lynched at Memphis were murdered because they were prosperous. They were doing a business which a white firm desired to do—hence the mob and hence the murder. When the negro is degraded and ignorant he conforms to a popular standard of what a negro should be. When he shakes off his rags and wretchedness and presumes to be a man, and a man among men, he contradicts this popular standard and be-

comes an offense to his surroundings. He can, in the South, ride in a first-class car as a servant, as an appendage to a white man, but is not allowed to ride in his quality of manhood alone. So extreme is the bitterness of this prejudice that several States have passed laws making it a crime for a conductor to allow a colored man, however respectable, to ride in the same car with white men, unless in the manner above stated."

"PROTESTANT ULSTER."

The Last Resort of the Unionists.

TWO very different articles on the Ulster Question appear in the *Contemporary Review* for July. The first is by Professor Dicey, who makes the most of the protest of the Ulster convention. After lecturing in his highest professorial manner Lord Salisbury, Sir William Harcourt, Mr. Morley and Mr. Labouchere as to the way in which they should treat the Ulstermen, he then goes on to explain what the Unionist leaders ought to do. They are to announce beforehand that they will strain every opportunity afforded by the constitution in order to obtain a distinct appeal to the country on Home Rule. The present election may decide that Home Rule should be tried, but that does not satisfy Mr. Dicey. The House of Lords must announce and carry out its intention of rejecting every Home Rule bill unless it is submitted to the country at a general election. The last resort of the Unionists is to demand that no bill giving Ireland a statutory Parliament should be passed unless it be made one of its provisions that the bill shall not become law until it has been referred to a plebiscite of the whole of the electors of the United Kingdom.

How Protestant Power is Abused To-day.

The other article is written by an Irish Presbyterian minister, who contributes it on the distinct understanding that the name of the writer shall never be divulged. It is a very powerful presentation of the case in favor of Home Rule from the Presbyterian point of view. It affords a remarkable confirmation of Professor Dicey's remarks as to the possibilities of oppression that can be exercised within the limits of the constitution. Professor Dicey's remarks are directed against the possible abuse of power by the Catholic majority; the Irish Presbyterian minister shows how the power is actually abused by the Protestant minority: "The grossest oppression may be worked without the passing of a single law which would hurt the susceptibilities of English electors. Unjust administration is a far more potent instrument of injustice than unjust legislation; you can despoil a landlord by refusing him the means of enforcing the payment of rent; you can exclude an opponent from power by tampering with the ballot box; you can cut short the public career of every Protestant by, in fact, reserving every prize and every lucrative office for Roman Catholics."

The immense majority of all the offices in the gift of the Crown in Ireland are given to the Episcopalians,

the Presbyterians are severely left out in the cold, while the Roman Catholics, who have an immense majority, do not enjoy one-fourth of the positions of emolument and of influence. The magistracy is almost exclusively Protestant. As for Protestant Ulster, it sends seventeen Home Rulers to Parliament and only sixteen Anti-Home Rulers. In five out of the nine counties in Ulster the Catholics outnumber the Protestants by more than two to one. The Protestant majority of the population of Ulster is only 129,000 on a total population of 1,617,000. That is to say, there is not a majority of ten per cent. of Protestants, including Belfast. If Belfast be excluded, there is a majority of 200,000 Catholics. The writer says that there are about forty Presbyterian ministers who will vote for Home Rule candidates at the general election, and there are a hundred who are more or less in favor of Home Rule. The population of Ulster has declined even more rapidly than that of Leinster. The only thing that the Ulster convention proved was that Ulster Protestants were abundantly able to look after themselves. Altogether it is an able article and one which leaves very little substance in the inflated bogey with which the Unionists have been trying to terrify the English electorate.

THE LABOR MOVEMENT IN ENGLAND.

From a French Point of View.

M. GILBERT-BOUCHER, in the *Nouvelle Revue* for June 15, gives a very readable account of Mr. Thomas Burt M. P., and his relation to the labor movement in England. He introduces his paper by a general survey of the condition of labor in England as compared with that in France. He says: "In England the social question assumes a much more serious form than with us, because the workers are an immense majority of the nation. There is, strictly speaking, no intermediate class between the rich and poor; and, as small proprietorship is unknown, the conservative interest does not, as in France, find defenders in twenty millions of peasants, all more or less owners of the soil, and resolute opponents of communism and revolutions. Far from that, the country districts, ruined by free trade, are deserted for the manufacturing towns, where work is to be had and wages are comparatively high, and it is here, on the quays of sea ports, and round the great factories and workshops that population accumulates.

"Thus gathered into large masses it was easy for the workers to organize themselves. They have not failed to do so, and have founded the trades unions, those gigantic associations which had already given them a considerable importance in the State, even before the laws of '67 and '84 had given them political power by granting them the vote. United among themselves, and able to control the elections, what use have they made of such power? One need only pass through England to find out and be filled with astonishment.

"The foreigner, who feels himself vaguely agitated by old revolutionary instincts in presence of

social inequalities which surprise him as much as the incredible inequality of fortunes, seeks in vain among the people for the signs of discontent and envy. He is soon forced to acknowledge that class-hatred does not really exist. Luxury is ostentatiously displayed, whether in the most populous parts of the towns or in the most wretched villages, with impunity and without, apparently, provoking any jealousy. When called upon to vote, peasants and workmen choose, by preference, a candidate distinguished by his noble birth or his great wealth. The four-in-hand which he drives when out canvassing, the titles which precede his name, far from injuring him, are excellent electoral recommendations.

"As trades unions have developed, the relations between masters and men have become easier and marked by greater cordiality. It had been feared, at first, that these syndicates would be elements of disorder and fetter industry; and they had been opposed with equal ardor and futility. It has been found, on the contrary, that their tendencies have become pacific, and that, under all circumstances, they do their best to bring about a good understanding and avoid a strike.

"Violent newspapers are little read, which is a sufficient proof of the extreme moderation of opinions on the part of the masses and also of their good sense. It also proves that the greater number of workmen are timidly "Left-Center" in their opinions, even when they call themselves Radicals. Many, moreover, profess themselves Tories; and it was this circumstance which brought about the Conservative victory at the last general election."

As to Socialists and Anarchists, M. Gilbert-Boucher contends that the British workman will have none of them. There is only one Socialist in Parliament—Mr. Cuninghame Graham—and he got in by mistake. He is not in any way in touch with the working classes, and his constituents were not aware of his opinions when they elected him. Now that they know them they won't do it again.

As for John Burns: "After having vainly endeavored to play a great part in his own union (one of the largest and also one of those most opposed to the collectivist doctrines), he frankly took up the position of a professional agitator. Mr. Hyndman is another Socialist who has acquired a certain notoriety. A sort of theorist, he is an enthusiastic preacher of the Socialistic gospel, which does not prevent his being mixed up in city business, and trying to make his fortune by it, like a vulgar *bourgeois*. Both these men are candidates for the House of Commons. But their ideas are too much in opposition to public opinion, and neither will be elected. Yet Burns has already considerably moderated his views, and he has—which is almost a pledge of success in England—all the qualities of a popular orator. In the immense open-air meetings, of which the English are so fond, he has gained real triumphs through his extraordinarily powerful voice and his burning waver. But his triumphs are those of a successful actor of a tribune in whom the people trust."

There may be truth in this, but any one who has heard tough, hard-headed workmen speak of "Jack," and noticed the tone of their voices and the look that comes into their eyes, will not be disposed to accept M. Gilbert-Boucher's judgment quite without reserve. But his main contention—of the quiet and continuous development of the labor movement in England, *as compared with other countries*—is no doubt correct.

After sketching Mr. Burt's early life, and dwelling on his connection with the temperance cause—a cause which he treats with an air of perplexed contempt—M. Gilbert-Boucher gives an account of the coal miners' strike in 1862 and the formation of the Miners' Union, and brings its history and that of Mr. Burt down to the year 1871. The continuation is promised in a future number.

ANARCHISTS AND SOCIALISTS.

THE other day Dr. Fleischer, editor of the *Deutsche Revue*, invited Earl Grey to put down his views of the present-day struggle between humanity and Christianity, and in the July number of the *Revue* the Earl's letter in reply is published.

Earl Grey agrees with Dr. Fleischer in believing that in nearly all the countries of Europe there are masses of people who desire the abolition of all law and order, and the overthrow of the present constitution of society. The same danger, he says, exists in England too, and the cause of the widespread discontent he believes to be owing to the hard conditions of life, which press so hard on the great majority of the laboring classes. The prices of the most indispensable necessities of life are so high that the wages will not allow the workers to indulge in such comforts as they might reasonably expect, and these deprivations naturally make the working classes discontented with their lot. They begin to hate their masters, and then get wrong ideas of the mistakes of the government. It is seldom the case that those who call most loudly for help recommend a complete revolution of the commercial policy of the State. In a word, Earl Grey is firmly convinced that the first and most important step to be taken for the improvement of the working classes is to break with that unhappy commercial policy, known to-day under the erroneous watchword of protection of the home manufactures.

After recapitulating the main points of his article on "Protection—Free Trade—Fair Trade," which appeared in the January number of the *Nineteenth Century*, Earl Grey concludes by saying that his short and slight sketch of the economic history of England must prove to the Continental countries of Europe that before all things they must follow the example of England, and give up their mistaken protectionist policy, if they would arrest the universal tendency to lawlessness. It is quite wonderful that those States where there is financial distress at this moment should prefer to increase their revenue by new taxation and by such slippery means as loans, instead of copying Robert Peel's plan and doing away with injudicious duties—a plan which would contribute greatly to re-

move the dangers of discontent. Though Earl Grey admits that his knowledge of social conditions outside England is only meagre, he is also of opinion that other reforms are needed on the Continent to change the attitude of the people toward the government. Nothing could have a better effect, for instance, than a considerable reduction of the immense standing armies, the maintenance of which weighs so heavily on the people.

POLITICS AND THE PULPIT.

THE *North American Review* contains a composite article on the subject "Politics and the Pulpit." The first part is by Bishop Doane, of the Episcopal Church, the second by Bishop Mallilieu, of the Methodist Church.

Both writers confine the term "politics" to those great and vital questions of statecraft which involve some fundamental principle of ethics.

The Duty of Fighting Civil Corruption.

Bishop Doane says: "We are smarting to-day because of an utter confusion in the minds of men between questions which involve eternal principles of right, truth, morality, righteousness, manhood, citizenship, statesmanship and the law of God; and the passing, changing, petty local questions about which men may honestly disagree. I believe the first duty of the clergy to their parishioners in political matters is to teach men to draw these distinctions." Whenever morality is threatened the preacher's voice should be heard. Bishop Doane considers as concrete cases when ministerial silence is neglect of duty such questions as that of the Louisiana State Lottery, the New York Excise Law and the Freedom of Worship bill.

Religion and Politics in History.

Bishop Mallilieu reminds us that much of the teaching and preaching of Elijah, Elisha, Isaiah, Jeremiah, Ezekiel, Paul, Peter, John and Jesus Himself was against the political abuses of their day. The great reformation movements were not merely religious, but likewise political, as witness the work of Huss, Savonarola, Martin Luther, and John Knox. The preachers of New England made the Revolution possible. John Colton established the Thursday lectureship in Boston, and for one hundred and fifty years this was a "nursery of liberal, progressive, revolutionary ideas." Here were trained such men as Tucker, Parsons, Hitchcock, Langdon, Mayhew, Stillman, Cooper, Payson, Gordon and Howard.

THE PREACHER A MAN AND CITIZEN.

"The preacher is always a man before he enters upon the discharge of the functions of high and holy office. No inherent right of manhood is necessarily given up by the preacher. This is equally true of his citizenship."

THE DUTIES OF THE PREACHER.

"There are four principal requisites which especially go to make up a genuine preacher." He must be a teacher, an example, a leader, and a reformer. In each capacity he is brought into close contact with great political questions.

THE TRUTH ABOUT THE SALVATION ARMY.

THE Salvation Army is well to the front in the monthly reviews. The *Fortnightly* and the *Contemporary* have devoted several pages to the report of the Salvation Army, and in particular to the Social Scheme. Mr. Arnold White writes in the *Fortnightly* an excellent article—clearly expressed, full of facts ascertained at first hand and corroborated by the independent evidence of competent observers.

Mr Arnold White's Conclusions.

Mr. White thus summarizes the conclusions at which he has arrived :

1. That General Booth and his family are honest to the core.
2. That they barely take enough food to keep body and soul together.
3. That one and all, for the good of others, are working themselves almost to death.
4. That so far from making a good thing out of the army, they either work for nothing or for a bare pittance.
5. That General Booth himself is of independent means, and has given thousands of pounds to the army; that two of his sons-in-law have abandoned good positions to work in the army, and that his son is working for one-twentieth of his cash value.
6. That the funds laid out by General Booth on the Hadleigh Colony have, on the whole, been well and wisely spent, with the exception of four houses, costing in all £1,400, which should be let or sold if the army is to maintain its high standard of ascetic self-denial.
7. That the capital laid out on the colony is intact, if it has not increased in value.
8. That money is urgently needed in order to fulfill the original programme, and that, if supplied by the public, will be well spent.

A STRAIGHT WORD TO SOME CRITICS.

“In concluding this brief report there is much that must be left unsaid. If by wild and reckless speculation the credit of the country is shaken to the roots, and tens of thousands of ruined homes and mutilated lives are the result, pity is felt for the speculators. But if a man like General Booth, mainly from the pence of the poor of all nations, collects a revenue of £750,000 a year, the whole of which is subject to rigid audit and is laid out in good work; if he so electrifies with compassion eleven thousand men and women that they and he live the life of self-renunciation, and lead hundreds of thousands in the same path; if he and his eleven thousand officers are on the side of law and order, adverse to a godless and predatory socialism; if they are animated with love for their country, loyalty to the British flag and affection for the British crown, such a man is vituperated in English clubs and the English press in language appropriate to a sensual, dishonest, sanctimonious, avicious and hypocritical scoundrel.

“In these days people dislike humbug so emphatically that they suspect all goodness to be humbug, and denounce it accordingly. If by their fruits men

should be judged, then the Booth family, men and women, have conferred honor upon their country, although some of their methods may be repugnant to good taste and even to good feeling. But it is open to question if great revolutions in the world are wrought by good taste.”

IS THE LABORER WORTHY OF HIS HIRE?

Mr. White mentions incidentally that the profit on “Darkest England” was \$30,000, every cent of which was paid into the coffers of the Army. General Booth draws no salary from the Army, being provided for by a person who secures him a small income on the express understanding that he is not to be dependent upon its funds. Mr. Bramwell Booth is the highest paid officer in the Army, and he receives \$1000 a year and house rent. Mr. White says :

“If a commercial valuation were made of his services, as tested by the intellectual grip and general capacity for vast administrative work, I am advised by competent judges that Mr. Bramwell Booth would not be overpaid if he received remuneration at the rate of \$20,000 a year. Nothing is so cheap as good management, nothing is so costly as bad.”

The article, however, must be read as a whole to form any conception of the actual amount of work that has been done under the Social Scheme. Mr. White is a very competent observer, he is free from all suspicion of theological prejudice, and it is impossible to read his report without feeling that whatever happens the Social Scheme must neither be abandoned nor curtailed.

Balaam Once More.

In the *Contemporary Review*, July, Mr. Francis Peek deals with the same subject. His paper is chiefly important because it embodies the report drawn up by Mr. G. Penn Gaskell, a barrister, a member of the London Charity Organization Society, and late secretary to the Special Committee of that Society on the homeless poor. He was nominated by Mr. Loch, a bitter enemy of the scheme, and he frankly acknowledges that he had formed an adverse opinion before he began his investigations. He reports on each head of the various departments of the social wing, and, on the whole, his report is favorable. He points out certain faults which he considers to exist in the scheme, due either to the want of experience on the part of those called upon suddenly to carry out so large a work, or to the fact that the scheme is at present incomplete in some of its important parts. Speaking of the officers engaged in the social work, he says that they are in many respects a remarkable set of men. Their self-denying, cheerful devotion to the work is beyond all praise. They are extremely sympathetic in their treatment of the men, and many of them possess a great deal of tact. Their chief difficulty is their lack of previous study of social problems, but this difficulty, he thinks, could be remedied.

A SATISFACTORY FINDING.

Mr. Peek says, speaking of Mr. Gaskell's report, that, notwithstanding the faults noted, it is, on the whole, satisfactory. “Mr. Gaskell believes that the

real conversions are barely 5 per cent. Of these, however, he writes, and the words are most important as coming from so severe a critic: "This conversion shows a complete triumph, which could never be obtained by any form of material charity; habitual drunkards changed to sober men, wife deserters into devoted husbands and fathers, and men who had attempted suicide now living happy and contented lives; all these and other equally strange transformations I have seen in those who have been through the shelters."

"When the training farm is in full work, as it will be soon, and the officers of the shelters and workshops have obtained more experience, and especially when the colony over the sea is ready, much greater results may be expected, but even the work above recorded fully justifies those who have contributed to this scheme."

THE POOR OF CHICAGO.

SCRIBNER'S successful series of articles on the poor of great cities is continued this month in Joseph Kirkland's paper entitled "Among the Poor of Chicago." Mr. Kirkland seems to have had some difficulty in finding the poor, or at least any typical class of the inevitably poverty stricken. His researches go to show that in Chicago, the center of the "Paradise of the poor," general conditions of wretchedness and squalor are pretty well confined to the isolated communities of foreigners. It is noteworthy that Mr. Riis and others, too, found that the separation of race communities in New York and elsewhere was the particular obstacle to thorough reform.

There are in Chicago "The Bad Lands" district and "The Dive," "Niggertown," "Chinatown" and other unwholesome localities; but their existence, according to Mr. Kirkland, may be traced by a short route to—drink. In general, he finds vice rather than poverty in Chicago. He thinks that if a man wants his house and lot of ground he has but to avoid the temptation of liquor, and he points to the thousands and thousands of prosperous, home-owning workingmen who have proved this. Indeed, Mr. Kirkland's paper often relapses into a homily on the drink evil, and he takes occasion to admire at length the magnificent structure of the Woman's Christian Temperance Union, which has 16,000 active members in Illinois.

"No one doubts but that the drink bill of Chicago—estimated at \$1,000,000 a week, of which three-fourths comes from the pockets of the poor—would change into prosperity, practically, all the adversity of the unfortunate classes, just as the drink bill of Russia—\$1,000,000 a day—would supplant famine by abundance. Much poverty comes from drink that does not come from drunkenness. A man may spend in drink the total profit on his earnings, the total surplus above necessary outgoes, and it may—usually does—amount to an insurance fund which, well invested, would form a respectable fortune during his prosperous years. Then, when old age, sickness or accident befalls, he is penniless. His poverty springs from drink; no matter if he never was drunk in his

life." The writer calculates that a minimum of \$240,000 is spent by the poor of two particular squares in Chicago. "Verily the savings of the rich are as nothing compared with the wastings of the poor. Beer is the alleviation and perpetuation of poverty."

Of the particular Chicago institutions which assist that fluid in the "alleviation" of poverty without having the further effect, Mr. Kirkland pays most attention to Hull House, which he compares to Toynbee Hall. An initial difference is that the former is under the almost exclusive management of women. It has accomplished great good by its college extension department. "If people in the humble classes of its visitors learn there to live good, clean, temperate lives, it is through the demonstration of the enduring beauty and gayety of such a life as contrasted with the lurid and fleeting joys of the other. Hull House parlors, classrooms, gymnasium, library, etc., are the rivals of the swarming grog-shops."

THE CAUSE OF THE RUSSIAN FAMINE.

MR. W. C. EDGAR, editor of the *North Western Miller*, who had in charge the distribution of the Missouri's relief cargo among the Russian sufferers, contributes to the *July Forum* a most convincing article on the "Cause of the Famine." The unfavorable weather of 1891, to which the famine is usually ascribed, is regarded by Mr. Edgar as only incident to the real cause, which he finds in Russia's land system. Mr. Edgar says: "The longer the investigation into the causes of the famine is continued, the firmer grows the impression that fundamentally the system of communal ownership of land is responsible for the situation. The *mir* (a community of Russian peasants in which the land is divided into lots and held in common) has simply exhausted itself, and the thirty years which have elapsed since the emancipation of the serfs have been more than sufficient to demonstrate that the entire foundation upon which Russian agriculture is based is radically weak, and that the practical result of holding land in common, at least in Russia, is a complete and utter failure. The present famine, wide-spread and terrible in its effects, is an ominous object-lesson, proving beyond doubt that the theory of communal land-ownership will not bear the test of practical experience. It has taken thirty years to solve this problem in Russia, and hunger is its answer. The peasant will not intelligently and adequately cultivate land which may pass from his possession into the hands of others after one, two, or at the best a few seasons. On the contrary, he works it for what it will immediately yield, caring little for its future condition, for he does not know how soon the *mir* may allot it to another.

"It is common in Russia to refer to the present condition of the peasant as temporary, the result of a bad harvest, and to express the belief that with favorable weather this year he may recover himself. To one who sees the peasants as they now are, it is difficult to discover anything in their state upon which to base any hope of its speedy amelioration. The present famine is the climax of several predecessors, gradu-

ally increasing in intensity and extent until the worst has been reached. There must be partial famines in Russia every year, and this one would have passed as usual had it not been that it marked the very limit of human endurance beyond which was death. The export of grain from Russia does not mean the export of a surplus, but the parting with food needed to sustain life. The gradual impoverishment of the peasant has been going on for thirty years, and the end has been reached. Poverty can go no farther, for death must ensue unless relief is afforded. As to the next crop, what with lack of seed wheat, dearth and weakness of horses and the prevalence of typhus, scurvy and small-pox among the workers themselves, enfeebled as they are by a year of hunger, the prospect for a large crop is extremely doubtful, at least in the eighteen districts affected by the famine. If the peasants in these sections can grow enough grain to keep them from starving, they will do well indeed. The limit of exportation from the actual means of existence instead of an exportable surplus has been reached and passed. The authorities certainly will not allow a repetition of last year's blunders, and unless all signs fail Russia must, temporarily, at least, retire from her artificial position as an exporter of grain, and turn the products of her fields into her depleted storehouses. She must give her peasants another start and allow them to accumulate a village reserve. As far as one can judge, this policy seems in line with that of the government."

RELIGIOUS PERSECUTIONS IN RUSSIA.

POULTNEY BIGELOW presents a very wretched state of affairs in his description of "The Czar's Western Frontier," in the July *Harper's*. In the western strip, some 300 miles wide, of the Russian Empire—a territory which contains pretty much all of the civilization Alexander's country can boast—Mr. Bigelow avers that a series of religious persecutions is alienating from the Czar's government the most intelligent and powerful of his subjects, and those whose geographical position would give them additional importance in the event of a European cataclysm.

Beginning at the southern extremity of Western Russia, Mr. Bigelow gives his personal experience with the sect of the Skoptzi, who are afraid to venture across the Roumanian frontier into their native Russia, because of the active persecution they receive at the hands of the police and the priests of the Orthodox Church. This somewhat curious sect is described as follows by a "well-informed" friend of the writer's:

"Their private life is, so far as we know, exemplary. They do not smoke nor drink. They avoid stimulants of every kind. Their life is guided wholly by Bible teaching, and they reject all the forms and mummeries of the Orthodox Russian Church. They avoid temptation of every kind. They are charged with seeking fanatically the destruction of the human race; but that is absurd. So far as I know, they

marry, live respectably, and carry out their ascetic views after the birth of one or two children. They resemble 'Quakers' in being ascetic and opposed to war. Both of these doctrines make them odious to the Russian police, who harass them in every manner that cupidity and brutality can suggest."

North of the territory of this sect are the Stundists, who are, generally speaking, the "Puritans" of Russia. Mr. Bigelow accounts for the rise of this religious and social movement by the influence of the thrifty, sober German Bauer on the wretched Russian peasant, who has emulated the Teutonic industry and steadiness, much to the disgust of the priests. "It is a crime in Russia for a Protestant to read the Bible to an Orthodox; it is a crime for a Russian to give up being Orthodox. It is even a crime for a Protestant congregation to allow an Orthodox Russian to be present. When I left Russia in the fall of 1891 eighty Protestant clergymen were under sentence of Siberia, having been declared parties to the crime of preaching the Gospel.

"Twenty years ago there were known to be about 1,000 Stundists in all Russia. To-day there are probably 250,000. They are a vital Christian force, and are doing vastly more to revolutionize Russia than the Nihilists. They are spreading popular education among the class that needs it most, and are starting inquiry in the minds of people whose fathers never questioned the divinity of the Czar." For a long time the industry and tax-paying abilities of the Stundists gave them immunity, but the Orthodox Church has come down upon them, and, according to Mr. Bigelow, nothing is open to them but the pestilential mines of Siberia.

North of the Stundist center is Poland, still groaning under the persecutions and indignities of an inferior race, and next come the Baltic Provinces, half Slav and half Teutonic, containing the greater part of the commercial ability and resources of Russia. These people are Lutherans, but the Czar is trying, by boycotting their language, to Russianize them into Orthodoxy. "They are next door to Germany; they have been loyal subjects in the past, but the time is coming when we may find them uniting in prayer with the Poles for deliverance, and not very particular as to the quarter from which they expect this deliverance to come."

Protestant Finland, which ends on the north the western frontier of Russia, is, like her more southern neighbors, in fear and trembling of the Czar and his fanatical Russifying. But when one says the Czar does this and that, it must be considered an impersonal statement. Mr. Bigelow begins his severe paper with the assurances he had from a near relative of the Czar that Alexander is, as our candidates say, "in the hands of his friends." This prince describes the autocrat as a man full of mildness and charity, who is only happy when surrounded by his family, who is too fat to work, and who knows nothing of the sufferings of Russia except what his ministers choose to report.

SIGNOR CRISPI ON ITALY'S FINANCIAL CONDITION.

IN the July *North American Review*, ex-Prime Minister Crispi declares most emphatically that the excessive increase in taxation and general financial disorder in Italy is not caused by the adherence of that government to the Triple Alliance. Not a single new tax, he asserts, has been decreed by the Italian Parliament since 1882, when the alliance with Germany and Austria was first arranged. Signor Crispi seeks to show, furthermore, that the Triple Alliance is in no way responsible for Italy's armament, which he regards as hardly sufficient for the defense of the nation. He shows that Italy is even less armed in proportion to population than Switzerland, and can mobilize scarcely one-fifth of the number of soldiers that the three powers on her frontier can place in the field. He says: "Even if Italy freed herself from the ties uniting her with the two neighboring empires, she would still be obliged to maintain an army and navy. I may add that this army and navy ought to be more powerful, if Italy intended to exist independently of all international arrangements. I cannot advise isolation for my country under the existing conditions of Europe. Some position must be taken in the Old World. Even if Italy wanted to be left alone, she would have to be prepared for eventualities; she must needs be strong enough to send two armies to the Alpine frontiers to oppose, if necessary, any probable enemy, and two fleets on her seas to protect her shores. Neutrality would be impossible in case of war—which seems inevitable—and it would, even if it were possible, have to be guarded. Belgium and Switzerland, being cognizant of this necessity, have not only reorganized their military strength, but have also voted many millions of francs for necessary fortifications."

The method of distributing taxation which obtains in Italy is the cause to which Signor Crispi ascribes the government's present difficulty in raising sufficient revenue to cover expenditures. "The deficits originate more from the diminution of receipts than from the increase of expenses. The idea of popular financing obtained prevalence in 1878, and the Ministers undertook to change some of the taxes. This change was badly conceived, and badly carried out, so that its effects were greatly injurious to the treasury of the State. The tax on flour was abolished by the law of 1879, that on the other cereals in 1880. This was followed, in 1885 and 1886, by the reduction of the price of salt and the suppression of the war-tithes or land-tax. These laws withdrew from the treasury an income of 148,000,000, which would, by natural increase, now amount to more than 160,000,000. It is true that, as an offset to the reduced or abolished taxes, others were decreed (especially on luxuries), but they did not answer the purpose. The income derived from them does not equal the former receipts, nor is it as constant." But the present financial disorder is regarded by the ex-Prime Minister as only temporary. He shows that Italy is continually improving both morally and economically, and that its

wealth is by no means exhausted. She has now nearly 10,000 miles of railways, and the number of her ocean steamers has increased from 80 in 1861 to 290 at the present time. Her production of cereals reached 275,000,000 bushels in 1890. Wages are advancing and permanent emigration decreasing.

THE DRINK PROBLEM IN SWEDEN.

MR. G. F. EGIDIUS contributed to a recent number of *De Gids* (Amsterdam) an interesting article on the "Gothenburg system," by means of which Sweden and Norway have, since 1865, been endeavoring to grapple with the drink traffic.

WHAT IS THE GOTHENBURG SYSTEM?

The Gothenburg system has nothing to do with total abstinence, as we in the United States understand it; beer and ale being only indirectly touched upon in the regulations regarding the sale of liquor. In fact, it was not beer that gave rise to the deplorable state of things which called forth the beginning of the temperance movement about 1830. The old Scandinavians were famous for their horns of mead and ale, but drink did not become the national curse it has since been until the introduction of corn-brandy during the fifteenth century.

BREAD OR BRANDY?

The art of distilling spirits from rye appears to have been introduced from Russia, where (as a Swedish chronicle of 1500 puts it) "they understand how to drink brandy as a cow does cold water." It spread till every farmhouse had its still, and the consumption of rye for distilling frequently made itself felt in scarcity of bread. Laws and proclamations were directed against the evil—but most of them were merely temporary, issued in a year of scanty harvest, and withdrawn the next—and in no case did much good. Various systems of State control were tried, with little or no result; and at the end of the last century the manufacturer was freed from all restrictions. In 1830 the annual consumption of alcohol of the Swedish population was fifty-four litres per head and in Norway sixteen.

Total abstinence societies were formed in or about 1830, after the model of one started in 1826 at Boston, and sounded a note of alarm which started public opinion into activity. Agents were sent into the remotest districts—lectures were delivered, meetings held, and literature distributed all over the country. The societies received the hearty support of scientific men, and especially the principal physicians of the day.

VIRTUE BY ACT OF PARLIAMENT.

Norway went strongly for prohibitive legislation. Bills which made drunkenness a criminal offense, punishable, on a second conviction, with three years' imprisonment, were thrown out by the Storting in 1833 and 1836. A proposal to render all manufacture and sale of alcoholic drink illegal passed both Chambers in 1842, but was vetoed by King Oscar I. The Swedes, however, thought a more cautious procedure advisable. They first introduced a licensing law in

1855, which allowed brandy to be made only in State-controlled factories, and during seven months of the year, from October to April. No quantity under 15 kannor (equal about 40 litres) might be sold without a special license, and all existing taverns and spirit shops, except those whose owners could show a patent, or prove an expressly granted privilege, were to be closed. No more such patents or privileges were to be granted, but if the municipality saw fit to issue more licenses they should be disposed of at public auction for a period not exceeding three years. This last procedure might be dispensed with, however, if a company could be formed in any town to take over the whole of the licenses in that town. A later law added the condition that this may only be done by companies which make no gain out of the transaction, and pledge themselves to hand over the net profits for purposes of public usefulness.

WHAT WAS THE RESULT?

In the country districts the effect was unmistakable. All the small stills, and a large number of the smaller drink shops, speedily disappeared. Nothing gives a clearer idea of the progress of moral reform in the rural parts of Sweden than the fact that, whereas, previous to 1855 every town, and even every hut, was virtually a tavern, in 1856 only 625 licenses were issued for the whole number of country parishes. Four hundred and forty-one of these rested on old privileges—continued during the lifetime of the present owner—and 132 were granted for one year only. Matters were, for various reasons, less satisfactory in the towns. The town dwellers, 12 per cent. of the whole population of Sweden, had 1,912 public houses, or more than three times as many as the rest of the kingdom put together! Gothenburg, the second city in Sweden, with a population of 35,000, had sixty-five public houses and seventy-two shops licensed to retail spirits in small quantities. Various causes combined to render the law of 1855 more or less a dead letter, but in 1863 a commission was appointed to inquire into the causes and extent of pauperism in the city. This commission in 1865 issued a report in which—while enlarging on drink as a great cause of poverty—it was proposed to transfer all retail trade in spirits to a society constituted on a philanthropic basis. This society, which came into being October 1, 1865, under the name of the “Gothenburg Liquor Sale Company” (*Goteborgs Utskanknings Aktiebolag*), is the mother of the so-called Gothenburg system. The society had, by 1880, acquired sixty-one licenses in Gothenburg and the suburb of Majorna; and of these (though the population had nearly doubled since 1865) only thirty-nine were in use, of which twenty-three were public houses properly so-called, the rest clubs, restaurants, etc. Moreover, since 1874 the society has also acquired the rights of the small retail shopkeepers, and so does away with the principal cause of their first apparent failure.

HOW DOES THE SOCIETY MANAGE ITS HOUSES?

Mr. Egidius gives at full length the agreement which every publican employed by the society is

obliged to sign. We give a few of its principal provisions:

The seller can make no profit on wine or spirits, which are obtained from the society and sold at cost price.

Tea, coffee, chocolate, “*brewed and carbonic acid beverages*” (N. B.—beer is regarded as a temperance drink), as well as cooked food, both hot and cold, to be on sale in every such house. The lessee sells these on his own account and can make his profit on them.

No strong drink to be sold to persons under eighteen or already intoxicated.

All wines and spirits to be paid for in ready money.

All goods sold on behalf of the society to be delivered to customers in exactly the same state as they are received—*i. e.*, pure and unadulterated.

No musical entertainments to take place in the house without special arrangement with the directors, and no strangers admitted to lodge.

A tariff of prices to be hung up in a conspicuous place. The landlord has power to eject any customer who makes a disturbance or is guilty of a breach of the peace.

The profits have been handed over by the society for “purposes of public utility,” of which an interesting table is given. Educational institutions, school buildings, libraries, technical schools, etc., have received by far the greater part.

THE FUTURE OF NEW GUINEA.

MR. H. O. FORBES has an interesting article in *Blackwood's* for July in reply to the paper Mr. Musgrave recently published concerning the possibility of utilizing New Guinea as a field for white colonization. Mr. Forbes, who has had excellent opportunities for studying the question on the spot, is quite certain that New Guinea can never be colonized by white people.

He says: “As a land chiefly of swamp and precipices, and notoriously unhealthy, New Guinea presents no attractions to the vigorous and energetic laborer who can hold his own with success in the battle elsewhere.”

It offers few remunerative natural resources which do not require the settler's close personal supervision. The Papuans, also, are very reluctant to work more than two days a week. Still Mr. Forbes thinks that a good deal can be done to make the colony a flourishing and progressive native state. He would import a certain number of cross-bred Malay Papuans, and introduce rice and the plantation of india rubber trees. He sounds a note of alarm as to the approaching disappearance of gutta percha from the markets of the world.

“In Borneo alone some five and a quarter millions of trees are yearly destroyed by the natives in procuring this product. In little over the period necessary for a *Palaquium* tree to reach maturity, their destruction has approached the verge of extinction. It requires no extraordinary foresight to predict the early total failure of this product which is indispensable in many manufactures, industries and arts,

and for which there is no known substitute. The Netherlands government has already begun to propagate and preserve for science and civilization those precious denizens of her eastern forests to which they are mostly confined. If the rate of destruction continues to proceed as fast as in the last quarter of a century, gutta-percha will have disappeared from her bazaars before the trees now being cultivated are fit to be tapped. Since these trees, as I have said, take thirty years to attain maturity, it is evident that few private capitalists or planters can afford to let their money lie dormant so long. It is clearly an industry for governments to undertake, and in which they would have all the advantages of monopolists. Thirty years is a very short space in the life of a country, and especially of a colony whose development to be successful must proceed slowly."

It is impossible to make the Papuans work by forced labor. They would only disappear into the interior: "This would be the first knell of their extermination—the most fatal calamity that could befall the possession, for their loss could never be fitly supplied by any exotic race. To the prosperity of British New Guinea is absolutely essential a friendly *increasing* Papuan population."

As a substitute for forced labor he would introduce the cultivation of rice and other cereals: "When once these cereals have become permanently added to their yearly harvests, one of the greatest strides toward the civilization of New Guinea will have been accomplished. And if a fair exchange were given in tobacco, salt, matches (their current coin), and in those needs and necessities that civilization must by degrees create, for all their surplus stock brought to the coast, the instinct of commerce would speedily become developed."

He thinks that New Guinea presents an opportunity for "the commencement of a noble possession, in which our dusky fellow-subjects may not become extinct when brought into contact with their pale brethren (as is so often declared to be a necessary consequence), but may advance to some high degree of their civilization; a possession worthy of the experience accumulated in the long centuries of colonizing efforts of the many countries that have essayed the task, and worthy of the philanthropy, magnanimity, and justice of the century, and of the reign which has witnessed its birth, and of the ancient Crown of which it is the latest dependency."

In the *Newbery House Magazine* for July there is a good account of the growth of casual wards in Paris. The article is chiefly devoted to a description of the charitable casual wards, although incidentally it mentions that the municipality has founded a municipal refuge on a much more lavish scale than anything that is provided for by the charitable wards. The municipal refuges have elaborate kitchens attached, and every casual has a really good meal provided for him of rich stew, quite as palatable and nourishing as the most vigorous could require.

THE SCHOOLS OF SAN FRANCISCO.

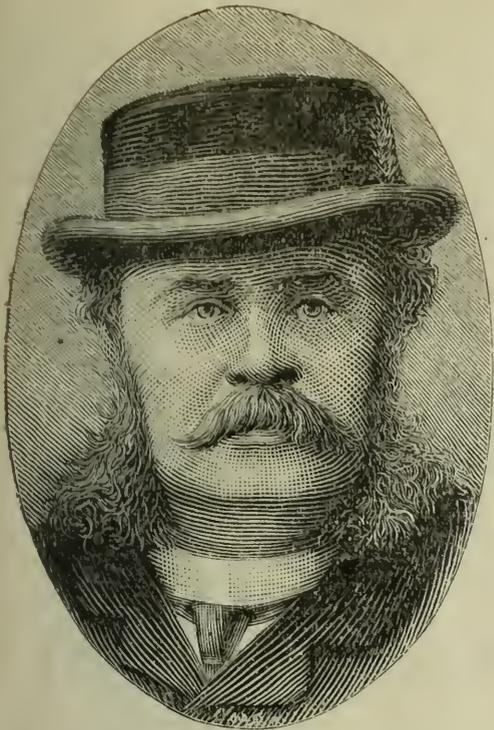

"THERE is no other city in the Union," says Mr. Frederick H. Hackett in the *Californian Magazine* for July, "that contributes more liberally to the support of the Free Public School System, in which all true American citizens feel a pardonable pride, than San Francisco. The standard of scholarship is higher here than it is in the East, and teachers receive better salaries. The highest average salary is paid to teachers, at the greatest cost to her pupil. The maximum, annual salary of primary school teachers in San Francisco is nine hundred and sixty dollars; in New York, nine hundred dollars, and in Boston, eight hundred and sixteen dollars. The total expenditure per pupil, in average daily attendance, is twenty-nine dollars and thirty-two cents, in San Francisco; twenty-eight dollars and seventy cents, in Chicago; twenty-eight dollars and twenty-three cents, in Boston, and thirteen dollars and seventy-four cents—the lowest—in Philadelphia.

"In scholarship and general professional ability, the San Francisco teachers are fully equal to their associates in the East, but the political system, under which they are appointed by partisan and oftentimes unscrupulous Boards of Education, is detrimental to the Department of Education.

"For the fiscal year ending June 30, 1891, the total receipts of the San Francisco School Department were one million and fifty-three thousand six hundred and nine dollars and seventy-nine cents, of which sum five hundred and seventy-six thousand seven hundred and sixty-six dollars and forty-seven cents came from the State, and four hundred and seventy thousand three hundred and forty-nine dollars and thirty-nine cents from the city.

"The sum expended in payment of teachers' salaries was seven hundred and seventy thousand five hundred and forty-eight dollars and eighty-nine cents; of janitors' salaries, forty-seven thousand three hundred and fifty-two dollars and eighty-five cents; of shop salaries, seven thousand nine hundred and two dollars and sixty-five cents; and of office salaries six thousand six hundred and ninety-seven dollars. There were in the employ of the Public School Department, last August, seventy-four principals, twenty-four vice-principals and seven hundred and eighty-one assistants, making a total of eight hundred and seventy-nine teachers. The schools have an average daily attendance of thirty-one thousand eight hundred and nine, and a total enrollment of forty-three thousand six hundred and twenty-six pupils. The school census, children, between the ages of five and seventeen years, numbered last year, sixty-two thousand four hundred and fifty-six. There were seventy-three schools and the property of the department was valued at four million seven hundred and ninety-eight thousand, four hundred and twenty-seven dollars.

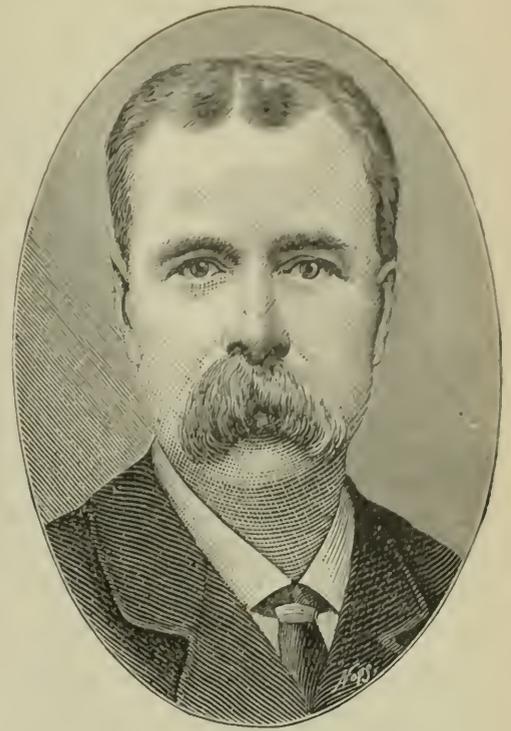

"Seventy-seven buildings were occupied as schools, of which number ten were rented and the remaining sixty-seven (six brick and sixty-one wooden) owned by the department."

M. DE BLOWITZ.

MRS. COMYNS.

MR. J. M. LESAGE.

JOURNALISTS OF TO-DAY.

THE series of "Journalists of To-day," in *Search Light* this month, is very varied, including M. de Blowitz, the prince of interviewers and the interviewer of princes, Mr. Lucy ("Toby, M. P."), Mr. James Gordon Bennett, of the *New York Herald*, Mr. Lesage, of the *London Daily Telegraph*, Paul de Cassagnac, the dueling journalist, and Mrs. Comyns, the editor of the *Feathered World*. Mrs. Comyns is a widow whose husband started the *Feathered World* eighteen months before he died. She conducted the editorship of the paper, and raised its circulation from 12,000 to 20,000 weekly. She is the daughter of an Anglo-Indian officer, and the niece of Mrs. Fawcett. She began life as a typewriter in Chancery Lane. She is now thirty-one years old, and is the only woman in the United Kingdom who is proprietor, editor and manager of a newspaper. Of Paul de Cassagnac it is said that he spends an hour or two every day fencing in order to keep up his skill with the weapon with which he has fought no fewer than forty duels. He spends all night at the office of his paper, and although he only writes the leader, every proof, including that of the advertisements, is read over and corrected by him before it goes to press. Mr. Lesage, of the *Daily Telegraph*, began his journalistic career on the *Western Morning News*. He has been over thirty years on the *Daily Telegraph*. It is said that Mr. James Gordon Bennett, of the *New York Herald*, has an income of £100,000 a year. His chief pleasure is yachting, and his hobby is coaching. Every day he receives copies of the different editions of his paper, with every item marked with the name of the writer in blue and the name of the editor in red. M. de Blowitz is said to glance through every

French journal, and every Italian, German and Russian newspaper each day. The only English newspaper he ever looks at is the *Times*. Of "Toby, M. P.," we are told that he looks an ideal journalist.

THE AMERICAN NEWSPAPER PRESS.

An Unfriendly Criticism.

MR. EDWARD DELILLE, in the *Nineteenth Century* for July, devotes an article to an estimate of the American newspaper press, which he does not love. He has little to say of it except that which is evil. He begins with the *New York Herald*, and describes it in detail, and then passes on to deal with the *World*, the *Sun* and other papers. Of the *World* he says: "It has solved the problem, which appeared insoluble before, of being more tawdry, more coarse, more vulgar, more provincial and foolish than all its New York compeers."

And his opinion of American journals as a class is not much higher. "Out of the thousands and thousands of journals published daily and weekly in the States, the great majority present no essentially characteristic feature. The *Herald-World-Sun-Times* type described above is what might be called the type of the American newspaper proper; dealing mainly in news, universal, national and local, with a superabundance of mere reporting, whilst editorial statement or comment is reduced to the utmost briefness of 'pars' or 'personalities.'"

Of the American dailies he has only praise for the *Tribune*. The only two papers which he recognizes as at all literary are the *Nation* and the *Critic*. The *Nation*, he says, is "rather heavy, perhaps, in tone and colorless as to contents; but dignified, sound and

packed closely with the expression of varied thought and culture."

For the Sunday papers he has nothing but scorn and contempt. He goes on: "The original tendency of these weeklies was toward something fondly imagined in the States to be literature. The ultimate result is simply a sort of medley or miscellany, a hodge-podge of rubbish raked up from every heap. A fondness for crude pictorial presentments is understood to be one of the marks of an undeveloped civilization. Are the Americans of this *fin de siècle* sinking to the level of Bosjesmen or Maoris? One might suppose so on glancing at the columns of the *Morning Journal* or those of the *Recorder*, that most enterprising New York daily of recent foundation. Really, cuts such as those of the *World*, *Recorder* and *Morning Journal* must be seen to be believed in. Description could but faintly suggest their horrors.

"A word of particular praise must be uttered regarding some of the illustrated weeklies. *Harper's Weekly*, though rather insipid, is decent, almost dignified. *Frank Leslie's Weekly* is vulgar, and consequently pre-eminently successful. The colored comics, *Puck* and *Judge*, are of more recent foundation. There is about these newcomers a touch of German humor not unwelcome; for the experience and reflection of a lifetime tend to convince one that of all national humors the American variety is most to be dreaded.

"Distinctly the States are not as yet a literary nation. One of the most noticeable features in the wilderness of printed matter which crops up daily throughout the country is the absence of anything like literary thought or writing. To the best of my belief there has never been in America any greatly influential and representative literary organ.

"In the matter of editorial authority and tone the American press might with all benefit sit long and humbly at the feet of the English or even the French. Barring a very few exceptions, in the whole American press there is no editorial writing at all.

"The American press is not artistic, not literary, not didactic, not even political, save in the sense of partisanship according to personal interest. If it may justly be qualified as national, then nothing remains but to present one's compliments of condolence to the nation. As for its more particular tendencies and characteristics, it is restless, feverish, mutable, unsettled, unbalanced, and unformed."

MR. MONTAGUE WILLIAMS, Q.C., is contributing a series of sketches, entitled "Round London," to *Household Words*. Some of the sketches are imaginative, but the seventh, which appears in the June number, gives an account of the charitable relief which he organized at Worship street. He describes it under the title of "My Dépôt." With the aid of this fund he was able to help over 400 families. He gives some extracts from the diary which he kept for the purpose of showing that a terrible amount of poverty exists, and that a great deal can be done toward meeting it by private enterprise.

OUR LITERARY INDEPENDENCE.

MR. BRANDER MATHEWS occupies his department in the July *Cosmopolitan* with an essay under the title "The Literary Independence of the United States." His review of our national literary career shows that when we had long cast off all political dependence on England, when our commerce and business and professions were solely our own, it was undeniable that from a literary point of view we were still a British colony. While not prepared to agree with Sir Henry Maine that our neglect to give copyright to foreign authors had condemned us to a "literary servitude unparalleled in the history of thought," Mr. Mathews is inclined to give some weight to the cause Sir Henry adduced.

Cooper is generally thought of as the first American novelist, but his first story, "Precaution," was entirely English and even professed to be by an English author. But when Hawthorne and Poe followed him, when "Uncle Tom's Cabin" was written, a change had come, and now we have "Huckleberry Finn," "The Rise of Silas Lapham," "The Hoosier Schoolmaster" and other unmistakable evidences of our literary autonomy.

"That this is an enormous gain is obvious enough. American authors are now writing for their fellow-countrymen and about their fellow-countrymen. If, as Matthew Arnold declared, 'the end and aim of all literature is, if one considers it attentively, nothing but that—a criticism of life,' then the literature likely to be the most useful, most invigorating and most satisfactory to Americans should be a criticism of life in America. Whether or not the spirit of colonialism still survives in these United States sufficiently to make the majority of readers here prefer books of British authorship is a question hardly worth asking, it seems to me, although there are some, both in London and in New York who would answer it in the affirmative."

As to the working of the recent Copyright act, Mr. Mathews says: "As soon as all books had to be paid for by the publisher, the book of native authorship had its natural preference; and now the inferior and doubtful books of foreign authorship are ceasing to be reprinted here. This is a tendency which will increase with time, since every nation ought to be able to supply its own second-rate books, and to borrow from abroad only the best that the foreigner has to offer it."

Mr. Mathews attempts to show the remarkable decrease in the reprinting of English books here, and the even more than corresponding increase in the publishing of American books, by examining the publishing lists of two great houses, Messrs. Harper & Bros. and Houghton, Mifflin & Co. Throwing out, for obvious reasons, all text books and new editions, he finds that Messrs. Harper & Bros. issued in 1861 twenty-four books, of which but seven were of American authorship. Out of fifty-seven books on the list of 1871, twenty were by American writers; in 1881, only twenty-six out of ninety-eight bore the name of an American author. But, in 1891, the seventy-six

books published by this house contained forty-one of American authorship, and but twenty-seven of British, while eight were translations. Without going over the figures in the case of Messrs. Houghton, Mifflin & Co., the results of Mr. Mathews' researches are that in 1861 they published about as many books of British authorship as of American; while, in 1891, the firm sent forth ten times as many American books as it did British.

THOMAS HARDY AND HIS NOVELS.

MR. WILLIAM SHARP, in the July *Forum*, speaks a word of praise for a writer who is at present attracting wide attention—Thomas Hardy.

Mr. Hardy, the writer tells us, was born in Dorset in 1840, and began life as an architect. He did little in the line of literature until he was thirty years old, when he decided to try his hand at novel writing. The result of this determination was the novel "Desperate Remedies," a book which, Mr. Sharp thinks, has never received its due meed of praise. This was followed by "Under the Greenwood Tree," and that immensely popular story with the catchy title, "Far from the Madding Crowd." Following this appeared a series of novels, among which were "The Return of the Natives" and "The Woodlanders." These Mr. Sharp accounts two of the author's three masterpieces.

The third is, of course, "Tess of the D'Urbervilles," a romance which "has the power, the intensity, the inevitableness and, above all, the warm humanity of the great dramas, ancient and modern," which contains scenes "which one cannot but believe will represent the high-water mark of our later Victorian fiction, episodes which must surely touch the hearts and influence the minds of those who come after us almost as profoundly as they do our own."

In comparison with Hardy's realism the writer finds Howells "thin" and Henry James "superficial." This robust realism has stood in the way of Hardy's popularity. People "dislike him as crudely natural, even as they dislike the strong smell of the earth." He is the most masculine of modern writers; he "is masculine almost to a fault."

The prevailing note in Mr. Hardy's work is sadness. "Yet to speak of him as a pessimistic writer would be misleading, because inadequate. He does not preach pessimism, for he has the saving grace of having no *ism* to support or exemplify. He is tolerant and patient, seeing at once the good and the weakness in all. Characteristically enough, it is seldom that he directly writes in a strain of sadness. It is only now and then that he reveals his intimate sense of the insoluble mystery of existence."

Mr. Sharp's praise of his author is high; time must decide if it be altogether just; but does he add to the fame of Hardy or to his own reputation as a discerning critic when he makes the statement that "Gabriel Oak and Bathsheba Eondene are now as familiar names in our ears as those of almost any personages in Scott, Thackeray or Dickens?"

MR. CARLYLE'S ADVICE TO A YOUNG AUTHORESS.

THERE is a very pleasant paper by Blanche Atkinson in *Good Words* for July entitled, "My Four Letters from Mr. Carlyle." Miss Atkinson as a school girl worshipped Carlyle. She wrote to him first for his autograph, then when she was a little older she wrote him again to ask where to find the original of a poem which he quoted in his Rectorial address, and, presuming on his kindness in replying to her second inquiry, she wrote six months after his wife's death to ask what she should do as to continuing the writing of a novel upon which she was engaged. He wrote back as follows: "In my great darkness as to the fair young Blanche's affairs, how can I advise? I will say only: A young lady's chief duty and outlook is not to write novels (especially not while she is 'ignorant of the world,' and not even perhaps when she knows it too well!)—but, by-and-by, to be queen of a household and to manage it queenlike and womanlike. Let her turn her whole faculty and industry in that direction; shove her own novel well aside for a good while, or for ever; and be shy even of reading novels. If she do read, let it be good and wise books (more and more *exclusively* those) which not one in ten thousand of the kind called 'novels' now is."

She cried, and then replied in a warm and earnest protest against the idea that a girl's only outlet was to be toward marriage, and that to be "queen of a household" was not, and never could be, her chief desire in life. Carlyle was pleased with her letter, and replied in kindly wise as follows:

"CHELESA, November 1, 1866.

"I like this second letter better than the former, better news for me that you are faithfully teaching your good aunt's school than writing novels. And, furthermore, I see in you a spurt of proper maidenly pride, which is much to my mind. 'Quit the noble pride of thy heart never!' (says Richter to one who had grown nobly old *un-married*). Not necessary to be married; but it *is* necessary to live wisely and with dignity, to be true and useful, and to work well while it is called to-day!

"In sum, therefore: Be a good, diligent, and prudent girl; summon up your own best judgment; vigilantly exercise it, 'eyes well open, lips oftenest well *shut*;' it is your own judgment alone, and no other person's, that can wisely guide your steps, wisely select your objects, and your methods toward them. I say, exercise *it*, with pious fidelity; and loyally *do*, in a courageous yet modest manner, without *loitering*, what it audibly bids you: it will, on such terms (not on others) really and daily improve upon you, and become more luminous and trustworthy.

"Married or not married, surely it is always fit and comely that a woman do know *domesticities* to the bottom? One expects to find it of her, when need comes; as of a man, that he can resist when insulted.

“Nor do I forbid you literature, if there absolutely be no better aim. But in that case, first *prepare* for it: read, study, reflect; inquire far and near (perhaps in various ages, in various countries or *languages*); become acquainted with the great souls that have been—see if *you* have anything to add which is distinctly in their spirit; and if yes, do so.

“And now let us be silent, dear Blanche—for that is best, on both sides—and never doubt but I do wish you well, and feel obliged by your regard of me. In token of which fact, here is the shadow of my old face, come as if to assure you of it. Farewell; and may a good genius guide you.”

Afterward Blanche made a pilgrimage to Chelsea to see him, and was permitted to visit his house and spend an hour with his niece.

“Presently we heard footsteps on the stairs. ‘Mr. Carlyle is going out,’ said Miss Welch. ‘He knows you are here, and that you wanted to see him; but he is too ill and nervous to see strangers, and you must not speak to him. But run down stairs and get a good look at him when he has gone out.’ As soon as the front door closed I flew down, ran into the street and stood still. The old man was walking slowly a few yards away, toward the river. He turned, looked at me, let me look at him for a moment, and then went on.”

HOW STORIES ARE MADE.

A FEW years ago the *Pall Mall Gazette* published an interesting series of articles entitled, “How Plays are Written,” the contributions having been supplied for the most part by the leading dramatists of the day. In the *Monthly Packet* (London) for July there is an article of a similar nature, entitled “How the Stories Come.” The writer has compiled his article by sending a considerable number of well-known authors a set of questions drawn up in order to arrive at the idea as to the genuineness of works of fiction.

“The first question set was: What is the ‘bacillus’ or germ of a story? Does it come to you in the form of a picture, situation, problem, or in any other way?”

“Five of the fourteen authors state that their first conscious thought is of a character or characters in situations of difficulty, suggesting a problem to be worked out—four or five others begin with the problem which suggests the characters, some add that this character or problem is itself suggested by a face or a chance remark, a scrap of poetry or proverb. Three state definitely that their stories are always suggested by a real place or scene, familiar or otherwise. They see the place and the story comes into their minds. In one case the germ is said to be a spontaneous vision, detached and definite, of an imaginary place or scene which rises in the mind unexplained, until, perhaps years afterward, the explanation is discovered. One or two specimen answers, or parts of answers, are given.”

The second question was whether the first start came spontaneously or whether it could be produced

by effort? Nearly all the fourteen answered this in the affirmative, from which we imply it is sometimes one way and sometimes the other. The third question was, “Do you work the story out all through before you begin, or does it appear to develop itself as it goes on?” Four plan the stories out fully, but with some of the others it is different. One writer, for instance, says the characters solve the problem. Sometimes the story is revealed by a series of visions, “sometimes simply thought out.” Another writer says that the story works itself out like a rule of three sum. Given characters, conditions and conclusions, the intermediate figures develop themselves.

The fourth question was whether the writers could perceive a great difference in merit between work ground out and work done without effort, and the answers given go to show that disinclination is not favorable to story writing. One writer says: “I could quite believe that sometimes some influence outside one’s-self helps one to write the story, using one’s brain and imagination, and that at other times one wrote it unaided.”

The answers received to the fifth question were the only ones which were thoroughly characteristic of the individual writers. The question was whether the story appeared as a distinct work of art, or whether the writers selected what to say of a set of people well known to them outside the boards of the book, and of the nine answers given, five say that they see the story separate and distinct, or in a mental vision. To the query whether it is true that in every novel the character is a peep-hole for the novelist, the answers are not satisfactory, though one reply runs as follows: “I believe it is true that a character written from the heart and sympathy is a possibility of the writer’s own character.”

The replies to the inquiry as to whether they draw their characters direct from life are all qualified. One of the fourteen replies emphatically in the negative, saying that a character taken out of real circumstances and put into fictitious ones can never be natural. The compiler of this article sums up as follows:

“The sense of inspiration appears to bear no relation to the success of the writer, and would appear to be rather a question of personal temperament than of degree of power. Nevertheless it is plain that there are two apparent factors in the production of fiction—involuntary suggestions, and the talent, critical and executive, which makes artistic use of them. And also that the sense of *livingness* as apart from *likeness* in the impression made by characters on the reader, has some relation to the same sense in the author.

“It also appears incidentally that the amount of re-copying and altering of the MSS. varies immensely, also in no distinct ratio to the final finish.

“Every one is evidently a law to him or herself. There are no general rules to be derived from the fifteen sets of answers before us, not even the need of *conscious* painstaking.”

A DUTCH REVIEW OF THE "LIGHT OF THE WORLD."

DR. H. U. MEIJBOOM contributes to *De Gids* (Amsterdam) for May a sympathetic, critical study of Sir Edwin Arnold's latest poem, with a specimen translation of the third part of Book II, describing the first interview of the Wise Man from the East with Mary Magdalene.

"On every hand it is evident that these two works (the 'Light of Asia' and the 'Light of the World') are most closely connected—that the one is intended to be a pendant to the other, or rather, its completion. It is clear that the writer, who, after all, was a Christian and belonged to a Christian nation, could not reconcile it with his conscience that his poetic activity was so greatly to the advantage of Buddhism, and tended, above all, to awaken interest in this religion. He probably thought that it was part of his task to draw the portrait of the Holy One of Christendom and place it next to the life picture of Buddha, so that the superiority of the former to the latter should be placed beyond all doubt. Why did he wait so long? Did the inspiration come no sooner? Or did he, in building this tower, fail to count the cost? I mean that the difficulties, on close examination, turned out to be greater than he had imagined. Or was it that his various occupations did not allow him the time? The latter, as we gather from various indications, would seem to be the case. . . . But the reason, perhaps, was also, partly, that he looked upon his subject with such deep reverence, and felt that, in order to be successful, he required something wholly different from what was needed in treating the legend of Buddha. And, moreover, when one work of art has just been finished, there is left—it seems to me—a void in the soul which it is not so easy to fill. There are explanations enough and to spare of the eleven years' interval between the production of the two books. However that may be, the book appeared, was unfavorably criticised by the *Athenæum* and—it cannot be denied—received with comparative indifference by the reading public."

He was handicapped partly by his own former success, partly by the difficulties of a subject known to every one. But, Dr. Meijboom thinks, nothing can well be more unjust than the reproaches of the *Athenæum* critic. That a poem cannot be read through at a sitting is not necessarily to its disadvantage; and the simplicity of the framework can hardly be imputed as a fault to the poet. It is due, as it were, to the overpowering beauty and majesty of the story itself, which needs no adornment. There is something very dignified in the descriptions. Sir Edwin Arnold represents a certain tendency—has definite theological prepossessions. Here and there he even gives us a glimpse of his personal feelings. But no one can blame him on that account. The unorthodox reader will place what does not satisfy him to the account of the *dramatis personæ*, as Goethe did in the case of the "Beautiful Soul." The more conservative will take no offense, because the

poet only, as it were, hesitatingly and tentatively suggests his deviations from tradition. In both, the thought of anything that might offend them is neutralized by the satisfying impressions left on their minds by the whole. This is, in itself, a certain achievement.

IS MODERN SOCIETY SO VERY BAD?

No, Says Mr. Osborne Morgan.

MR. OSBORNE MORGAN, late Judge Advocate-General of England, ventures a word in the *Contemporary* for July in opposition to Lady Jenne's somewhat extravagant denunciation, in the *North American Review* for May, of the rottenness of modern society. Mr. Osborne Morgan maintains that the English girl of the former period was both mentally and physically inferior to her much-maligned modern descendant. He says: "The girl of the period is more given to pleasure; she is not only more 'attractive and original,' but infinitely better educated in the best sense of the word. Nor ought we to forget that the change which Lady Jeune deplors is in itself only part of a social revolution which is making itself felt far beyond the narrow circle of what is called 'London Society.' The country-house girl of thirty or forty years ago seldom left the paternal roof. Her horizon was the parish, her center of interest was the village clothing club or the National School. The modern maiden is to be met with on the fiords of Norway, on the steps of the Capitol or the Parthenon, on the top of the Great Pyramid and even on the summit of Mount Blanc. Her studies and pursuits are as varied as her peregrinations. She goes up to Girton or Somerville, takes the part of Antigone or Electra in a Greek play, pits herself against her brothers or her cousins in the Tripos or the Class List, and comes out 'above the Senior Wrangler.' And it must be confessed that, if she works hard, she works to some purpose. The days when Disraeli could with some truth make Sidonia say that marriage was a woman's only career are long since past. The number of ladies who make an income by art, literature or journalism is daily increasing, and their exclusion from the learned professions, and even from political life, is by many persons regarded only as a question of time."

As for Lady Jeune's declaration that Home Rule has practically excluded Liberals from society, Mr. Morgan says: "The assertion may or may not be true. If it is, all that can be said on the subject is that, among the many services rendered by Mr. Gladstone to his party, not the least valuable is their exclusion from the dressy, showy, noisy and unspeakably vulgar clique of men and women who presume to call themselves 'London Society.'"

Court Life a Hundred Years Ago.

There is a very interesting article in the July *Temple Bar* entitled "English Court Life in the Eighteenth Century," based upon the private journal of Lady Mary Coke, printed for private circulation by the Earl of Home. The writer says: "We hear much in the present day of the decadence of manners,

and of the striking superiority in that respect of the great ladies and the fine gentlemen of four or five generations back. There can be no doubt that they were more ceremonious, but there are no traces in Lady Mary Coke's social records of that refined tone and high breeding which we are apt to ascribe to our ancestors. On the contrary, their stilted language, their bows and courtesies seem to have been only the veneer employed to cover a mass of much coarseness and no little vice. It is never very safe to compare the morals of one age with that of another; but modern society, if not 'better,' may certainly claim to be more 'decent' than that of a century ago."

SOME SPANISH STATESMEN.

IN the *Leisure Hour* for July we have the second installment of "Spanish Statesmen," which is devoted chiefly to the Republicans. The first place is naturally given to Signor Castelar, who is now sixty years of age, and whose powers of eloquence are said to be unequalled by any other Parliamentary speaker in the world. He has nine of the eighteen Republican deputies as his followers in the Cortez. Of late years he has practically exchanged politics for letters. Signor Salmeron has also retired from active political life, for he was so doctrinaire a leader that he failed to find any followers. Signor Salmeron was banished on the accession of Alfonso for protesting against the attempt to force all the teachers of the university to sign an illiberal regulation respecting religious belief. Amnestied in 1881, he returned to Spain, where he is still considered as an austere Republican and an able statesman. Zorilla has been expelled not only from Spain, but twice from France, where he sought refuge. He is now in France, where he is carrying on an active propaganda with the view of establishing Republican government in Spain.

The writer thinks that the next general election will result in the return of a majority of Liberals, with Sagasta at their head. There are many splits in the Conservative party, but as long as Canovas lives and keeps his power there can be no other leader in Spain of the legitimate Conservative party: "Interviewed quite recently as to what he thought concerning the politics of the Peninsula, the present Prime Minister, Senor Canovas, said 'With an army now very loyal, with a country weary of adventures, with oppositions that have grown wiser and more patient, we can devote our time to economical and financial problems of great importance for Spain. Seldom has the outlook been more promising, under a regent who has won the respect and regard of all parties, and even of the adversaries of monarchy.'"

THE illustrated interview in the July *Strand* is devoted to Madame Patti. There are a good many illustrations and a very little interview. It is in melancholy contrast to Lord Wolseley's interview last month. The two best papers in the *Strand* are Mr. Alfred Storey's account of how a sculptor works, and Mr. Morrison's paper on instantaneous photography. There is nothing new in it, but the illustrations are well selected.

HOW GORDON DIED.

The Arab Story of the End.

MAJOR WINGATE, in the *United Service Magazine* for July, gives us the sixth installment of his papers on the "Siege and Fall of Khartoum, from Egyptian Sources." It contains the account of the final act of that long tragedy. The narrative begins on the 25th of November, when the Bordein arrived with letters. On receiving the letters Gordon erected a high flagstaff near the palace, and flew a red flag from it so as to guide the British on their arrival. He also ordered rockets to be sent up at night in order to show that the town was still holding out. He distributed biscuits to the poor inhabitants, but then discovered that he had none left for the troops, thereupon he had to requisition the grain stores of the natives. Afterwards more letters came in, but the troops did not arrive. Gordon is said to have written out a telegram, and given it to a messenger who was to send it from Dongola. The telegram was addressed to "all the confederate powers." The story seems rather apochryphal.

NEARING THE END.

"The General used now to walk through the streets and lanes and see numbers of people lying dead from famine. He ordered the dead to be buried at once, and insisted on the Governor carrying out these orders.

"When the famine increased and prevailed throughout the town Gordon Pasha was obliged to send 5,000 people out of Khartoum to the east bank to seek their own food. He wrote a letter about them to the Mahdi to the following effect:

"Human beings are by nature merciful to each other; these people are the same as yourselves; government has supported them for one year, and now it is necessary to send them to you to look after them. Treat them as you think fit."

"But the dervishes, on seeing these people, used to strip them of their clothing and send them away naked and barefooted."

DESPAIR.

January began with fighting with the object of saving Om-Durman. "If Gordon had been able to send reinforcements he would no doubt have been successful; but he now felt that he could not relieve Om-Durman, which must soon fall into the hands of the enemy, as also must Khartoum, if the English troops did not come soon. He then wrung his hands and went away, leaving the principal medical officer to attend to the wounded."

STARVATION—GORDON WEEPS.

Then came the news of the battle of Abu-Klea. Meanwhile the sufferings in Khartoum were intense. "The troops now fell into terrible distress through hunger. They used to hunt down the dogs and eat them; also donkeys, horses, and mules were killed for food. The one twenty-fourth of an ardeb of dhurra was sold for one hundred dollars; but it was difficult even to get that quantity. Women used to

wander through the streets with their gold and silver ornaments in their hands, offering four or five okes of gold for a rubbeh of dhurra. If a fish were caught during the night, it would be sold the next morning for fifty dollars.

"Then the inhabitants of Khartoum fell into deep distress. The soldiers lost all their strength and energy, and laid down their arms because they could not carry them, and some of the regulars, Shaggihs, and Sudanese, deserted, and joined the dervishes. The General, seeing this state of affairs, became full of distress, and he also despaired. He summoned the notables and principal officers, and obtained a loan of money in order to give the troops half a month's pay, as he thought this might check the desertion. But in such a crisis money was of no avail; and both natives and soldiers used to come to him, with pale faces and sunken eyes, complaining of their miserable state, and he would lift up his hands to God, meaning by this that God only was able to alleviate their sufferings; and then they left him weeping."

THE FINAL ATTACK.

The Mahdi's people were almost going to raise the siege when a traitor of the name of Omar Ibrahim deserted from Khartoum and told them how helpless the city was from the starvation of its garrison; thereupon they decided to attack the city: "When the dervishes had understood from Omar Ibrahim the real state of Khartoum, how numbers of the people had died, how weak the troops were, and that the open space near the White Nile was not fortified, they collected in enormous numbers in Wad En Nejumi's camp, and at midnight the Mahdi came over from Om-Durman, and stood up in the midst of them, saying: 'Do you intend to attack Khartoum to-morrow morning?' They replied: 'Yes, Lord of All.' He then said: 'Will you advance with pure hearts and full determination to fight for God's cause?' They replied, 'Yes.' He then said, 'Even if two-thirds of you should perish?' And they replied, 'Yes.' He then said, 'Let us repeat the Fatha,' and he lifted up his hands to heaven, and all of them lifted up their hands, and they repeated the Fatha. He then muttered some words which no one could understand, and, half drawing out his sword in the direction of Khartoum, he shouted three times, 'God is most Great,' and then pointed in that direction, saying, 'Advance, Advance! with God's blessing.' He then returned to his camp at Om-Durman."

The dervishes attacked in two bodies. They attacked one hour before dawn. There is no story of treachery in this Egyptian account; the dervishes simply overwhelmed the garrison, which they could have done long before if they had only known how weak it was. They were so numerous that the Egyptian troops were like a black spot in the midst of a white skin. The Egyptians fought well, but all was in vain.

THE END.

"The whole town was now filled with the screams of the people and the shouts of the Arabs. They

killed every one they met, attacked the inhabitants in their houses, and massacred and ransacked every one. Mussa Pasha Shawki's house was also sacked, his harem seized and himself killed.

"Meanwhile the General, who was on the top of the palace, seeing the Arabs advancing toward the palace, shouting and yelling like wolves, and crying, 'Gordon! Gordon!' collected his men and opened fire on them from the roof and windows; but the Arabs gathered in great numbers, broke in the gate and killed the kavasses and guards. When Gordon saw this he went to his room, put on his uniform and sword and stayed by his room awaiting their arrival, for he knew he was to be killed, although he might have escaped death by getting on board the steamer *Ismailieh*, which was waiting and ready for him from early dawn; but his noble spirit chose rather to share the fate of those whom he had governed. The dervishes rushed up in crowds, full of wrath, and stabbed him with their spears until he was cut to pieces, and his head was cut off and taken to the Mahdi at Om-Durman. This was early on Monday morning, January 26; they carried Gordon's head on a spear, where it remained standing for three days. When the Mahdi received Gordon's head he gave orders for the fighting to stop."

ANITA GARIBALDI.

An Amazon of the Nineteenth Century.

UNDER the heading, "An Amazon of the Nineteenth Century," Cecilia Baath-Holmberg contributes to this month's *Dagby* (Stockholm) a sympathetically-written article on Garibaldi's courageous first wife, from which we extract some few details.

A SOUTH AMERICAN HEROINE.

Anita Riveiro was born in 1821, in the small village of Barra, in Santa Catharina, South America. Here, in the tropic luxuriance of nature, she grew up comparatively unbred and totally ignorant of the customs and habits of the outer world. The people around seemed to have in them some of the generosity of the nature that bloomed about them in such rich and varied beauty; for they were, according to Garibaldi's own account of his sojourn in these parts, singularly cordial, free, and open-handed.

"The traveler," he tells us in his memoirs, "has no need to speak his desires. He simply goes into the house and turns to the right into the guest-room. Servants come to him unbidden, take off his boots, and wash his feet; he stays as long as he pleases, departs wither he will, without a word of farewell or thanks. Yet, notwithstanding this, the next guest will be received as cordially."

HOW THEY MET.

Magnificent forests divided, at that time, Santa Catharina from the neighboring provinces, and this accounts for that lack of civilization which Garibaldi so enthusiastically calls "Nature's youth and Humanity's dawn." It was here, while his ship, the *Itaparika*, lay anchored by the shores of St. Catharina,

that the blue-eyed, fair-haired young Italian hero first met his intrepid Anita—a tall, slenderly-built young creature with small, lithe limbs and a wealth of raven hair. Theirs was a short, strange courtship. She was the betrothed of another, but of that he knew nothing at the time and cared as little. Through his telescope, he watched her daily come down to the well near the strand to draw water—one of a bevy of village maidens—and, following her every footstep with his glance, took note of the house that seemed to be her home. Twelve years later, in bitter grief at her death, he speaks of his courtship thus :

A CURIOUS COURTSHIP.

“At last I decided. I got into a boat, rowed ashore, and went to the cottage from which I had for days been unable to take my eyes. My heart beat, but my decision was not shaken. A man invited me to enter. I should have done so even if forbidden. I had seen this man once before. I saw the young girl, and I said to her, ‘You shall be mine.’ With these words I had knotted a tie between us that death alone had power to sever. I had found a hidden treasure—and a treasure of such worth! If a wrong was done, that wrong is solely and wholly mine. Yes, it was a deep wrong to cause by the union of two hearts the breaking of another. But she is dead and—he is avenged. Where did I first learn to see the depth of my error? There, by Erida’s shores, the day I hoped to see her once again, the day I sought in agony to count her heart throbs, the day I heard her last sigh—when her lips were cold, and I wept tears of despair.”

From which we see that it is not only as an undaunted Amazon that this southern girl’s name has been inscribed on the scroll of Death’s rival, Fame. She was, through and through, a whole-souled, true-hearted woman, a faithful and unselfish wife, a gentle and conscientious mother.

THE AMAZON.

But it is to Anita Garibaldi, the Amazon, that Cecilia Baath-Holmberg in particular dedicates her article—the Anita who stood by her husband’s side in many a fight on land and sea, and, calm and unflinching, beneath the shower of shot, fired off her gun at the enemy. Before the commencement of the first fight in which she took part, Garibaldi implored her to seek shelter on shore, but she firmly refused to part from him in his hours of peril, and, silently proud of her courage, he no longer opposed her will. Suddenly she was thrown to the deck with two sailors by a cannon ball. Garibaldi, terrified, rushed forward, expecting to find her torn to pieces, but she rose completely unhurt. Both men were killed. Then he bade her shelter herself, and implored her to go below, and she answered, “I will, but only to hunt out the cowardly wretches who are hiding there.” A moment later she returned, saber in hand, driving before her several sailors who had fled from the strife.

A SEA CAPTAIN.

At another time Garibaldi, having occasion to go ashore to send a message to General Canabarro, gave Anita command of his ship for the time being. But

with full sail the enemy was meanwhile approaching, and when he returned he found that Anita had already commenced the cannonade. In high, clear tones she gave her orders and encouraged her men. A terrible bloodbath followed. Of all the officers of the three ships Garibaldi was the sole survivor.

This was not the only time he placed his men under her command, and even on land she took part with her husband in battle, following him on horseback in the deadliest peril. At Garibaldi’s victory at St. Vittoria she tenderly bandaged and nursed the wounded.

HER FIRST BORN.

Her first-born son, the now celebrated Menotti, came into the world with a scar on his head, caused by his mother’s fall from the horse shot dead beneath her at the Taquari encounter. He was born on September 16, 1840, in a miserable little ranche on the peninsula that separates Los Patossjön from the Atlantic ocean. Garibaldi had not so much as a handkerchief to wrap round the child, nor the smallest means of aiding or tending the mother. He, therefore, betook himself to distant Settembrina, to bring help for “his poor darlings.” In his absence, the ranche was besieged by a troop sent by the enemy to capture the celebrated Italian leader, and with her twelve-days-old child in her arms, Anita swung herself up on horseback, and fled with fierce gallop into the woods. Hungry, half naked, and shivering in the cold and rain, she lay hidden there till Garibaldi returned with comfort and succor. After the last fight of Rio Grande, when the little army was braving the dangers of the heavy rain season which had flooded the rivers and softened the ground into a spongy mire into which horse and rider sank, Anita bore her sufferings and discomforts without one plaint, anxious only for their three-months’-old child, whom Garibaldi carried in a handkerchief slung round his neck that he might warm its tender little limbs with his breath.

DEATH.

But Death smote the dauntless Anita at last. Hunted from place to place by the enemy, consumed with fever and torn by all the terrible pangs of a premature birth, she breathed her last in her husband’s arms and was buried in the sand of the pine forest. Her body was, however, later on taken out, put in a coffin and carried to a neighboring chapel, where it lay till Garibaldi himself, many years later, fêted then and worshipped by all the land, knelt down by the coffin with his son Menotti and his daughter Teresita and wept. Then they brought all that was left of the tender wife and mother and the intrepid Amazon to Nice, and mournfully left her there in the cold bosom of Mother Earth.

THERE are two excellent articles in the *English Illustrated*, one concerning “Henley Regatta,” and the other “Reminiscences of the Civil Wars.” Alex. P. Parker describes the railway works of the Great Eastern line, which forms the subject of the Railway Series this month.

AMERICAN ADVERTISING.

Through German Spectacles.

TO the July number of *Nord und Süd* the editor, Dr. Paul Lindau, contributes a series of sketches, entitled "Pictures from the Northwest of the United States," the current number being devoted to the State of Washington, which he seems to have recently visited. He describes appreciatively the rise and growth of Tacoma, Seattle, Fairhaven and Spokane; but he has a quarrel with the American system of advertising, of which he has some interesting things to say:

At Seattle, especially, the most striking instances force themselves on the foreigner's notice. Every article for sale, every place of business, everything to which public attention is to be attracted, in fact, never falls short of being "absolutely good." The idea that there could be such a thing as bad taste in the matter of advertising never crosses the American mind. A certain chocolate manufacturer, for instance, guaranteed a good income to the family of a notorious criminal who was under sentence of death because he (the criminal), immediately before his execution, uttered as his last words into the phonograph: "The best chocolate is that of Mr. —. It has been my last solace on earth."

The first thing is to find the most conspicuous name for the new article, a name that shows at once that it would be impossible to surpass the article's good qualities. The word "standard" plays an extraordinary part. There are "standard tooth brushes," "standard writing machines," "standard" everything. Another variety is "élite shoe blacking," "palace insect powder," etc. Many shops have as part of their device the letters "I.X.L.," to be interpreted as "I excel." The newspapers publish most frightful woodcuts of butchers, piano tuners, etc., while posters, which are often the work of skilled artists, and are not badly printed in colors, assume such dimensions that it is impossible in Europe to form any idea of them. Whole scenes of sensational dramas are frequently represented, with figures of twelve persons and more in life size.

In every conceivable and inconceivable place announcements are posted up—on the bridges, railings, walls, buildings in course of erection, heaps of building-stone which may have to lie undisturbed for a few days, etc. Even in the midst of the forest advertisements are to be found. On the road between Vancouver and New Westminster the trunks of trees are made to announce the excellent qualities of certain tooth washes, digestion pastilles, etc., while in the new towns advertisements are chalked in large type on tall black posts.

In one place Dr. Lindau noticed roaming about the streets a number of white dogs, with the name and address in black of a hat manufacturer marked on their backs. Everywhere carriages bearing gigantic placards may be seen. In some of them there will be a band of music, and in the middle one holds a flag with the announcement in huge type. The manu-

facturer of a special toilet article had another idea, which was imitated a little while ago in Edinburgh, when Sarasate was the object of an amusing *contre-temps*. In the case of the toilet specific, the name of which consisted of seven letters, seven black fellows in grotesque costumes paraded the streets as sandwichmen, each bearing a single letter of the name in large black type on the front of a tall and narrow snow-white hat. Another letter appeared on the back in white on the black ground of the coat, and the two were so arranged that the name could be read from the front or from behind. But before the day was over it was evident that the men had paid frequent visits to the bars, for in the evening they could be seen reeling through the streets with no idea of the orthography of the word they were to form, or of the position each was to take in the procession.

It is in superlatives, however, that the American excels. One tooth-soap is described as "surpassing all superlatives." Girls are employed to display their long hair to advertise a hair specific. Dr. Lindau describes the hair of some he saw in America as "stupendously luxuriant," and in one case it reached to the ground.

A NATION OF PRESIDENTS.

THERE is a very short article in the *July Century*, by Walter B. Hill, which presents a rather striking thought. He calls it "The Great American Safety Valve," and his argument goes to show that our society, in which every boy is taught that he may be President, is saved by an ocean of non-political office holding.

"Take a city directory," says Mr. Hill, "and examine the list of organizations usually printed in such a publication, you will see ample provision for the local ambitions of all the inhabitants. Take one of the books issued by a 'live' church; examine the list of societies, devotional, missionary, temperance, young people's, Sunday-school, charitable, etc. The matter will be made clearer still if you study the subject in a small village where universal acquaintance is possible.

"I made a test of one small town and found that every man, woman and child (above ten years of age) held an office—with the exception of a few scores of flabby, jelly-fish characters, whose lack of ambition or enterprise removes them from consideration as elements of the problem."

Mr. Hill tells of a friend of his, a denizen of a small village, who passed through successive stages of dignity in a benevolent insurance order to the consummate one of Most Supreme Grand Chancellor of the World.

"Not only are there offices enough to 'go round,' but the really capable and pushing American is generally honored with a score. I have heard a busy and overworked man decline to be at the head of an organization because he was at the head of twenty-five already.

"Here, then, we have the great American safety-valve—we are a nation of presidents."

THE RAIN-MAKING EXPERIMENTS A FAILURE.

MR. GEORGE E. CURTIS' version, in the *Engineering Magazine* for July, of the rain-making experiments recently conducted by the government in Texas is, to say the least, very different from any other account that has appeared in the monthly periodicals. Mr. Curtis was the meteorologist of the rain-making expedition and writes from his notes. He says plainly that the experiments have utterly failed to demonstrate that explosions can develop a storm or can produce more than a slight precipitation of moisture, and, from the report which he gives, this assertion would appear to be correct. He summarizes his account of the operations as follows :

"1. A smart shower on the afternoon of August 10 was preceded on the evening of August 9 by two shots of rackarock to test the powder.

"2. Shots were fired on August 12, 14 and 15 without effect.

"3. Cumulus clouds and slight showers on August 16, 17, 18 and 20 were accompanied by explosions of rackarock and dynamite, executed when the storm-clouds were in sight, sometimes before and sometimes after sprinkling had begun. Only on the 18th was the rainfall measurable, when it was 0.02 inch. In several cases a shot fired when a dense cloud was in the zenith seemed to produce a spatter of rain. On three of these days *sprinkling occurred before any firing had been done.*

"4. On August 22 a fine mist due to a severe norther was preceded on the 21st by the explosion of 156 pounds of rackarock. During the mist 276 pounds were fired without effect.

"5. Early on the 26th, when local showers had been predicted for this region by the Weather Bureau, and when the continuous barometric records show the passage of an area of very low pressure, the border of a thunder storm touched the C ranch and gave a sprinkling of rain. Final explosions had been made on the preceding evening, and in the report of the expedition published by the Department of Agriculture they are denominated the Midland test. This case, therefore, is presented as the principal, if not the only, operation at Midland from which the efficacy of explosions in producing rain may be judged. But it fails to afford the primary condition of a crucial test, for at the same time that the experiments were made, the natural conditions antecedent to and productive of a thunder-storm prevailed." The showers which came after the explosions were, Mr. Curtis adds, very like those preceding and were actually in sight before the firing began.

At least no close relation between the explosions and the showers seems to have been shown by the experiments.

"ON THE EVE" is the subject of an article in *Die Neue Zeit*, No. 39. Writing from London, the author explains how Parliament is dissolved, how writs for a new election are issued, what are the chief parties and programmes, etc.

WHAT WE SHOULD EAT IN SUMMER.

AN article which has attracted some attention is Dr. N. E. Yorke Davies' treatise on the "Proper Diet for Hot Weather," reprinted from the *Gentleman's Magazine* in the July number of the *Popular Science Monthly*. Dr. Davies is a dietetic specialist who has written considerably in his special branch.

He upsets the notion that meat (lean) is heating and harmful in hot weather; he advises a large absorption of fluid, going so far as to say that too much can scarcely be taken if it be an innocent drink, and for the average man doing average work he prescribes the following diet :

"Breakfast, 8.30 to 9 a.m.—Two cups of tea or coffee, sweetened with saccharine, one or two teaspoonfuls of cream in each; 1 oz. of dry toast, thinly buttered; 4 ozs. of grilled or boiled fish, such as plaice, sole, whiting, haddock, cod, or trout, or 4 ozs. of cold chicken, cold tongue, or of grilled steak or chop.

"Lunch, 1.30 p.m.—Two or three ozs. of cold mutton, beef, or lamb; 3 or 4 ozs. of green vegetables, plainly boiled, plenty of green salad, made with vinegar, but without oil; 4 or 5 ozs. of stewed fruit; water, or two or three glasses of pure dry Moselles or other Rhine wines.

"Afternoon Tea, if desired.—Two cups of tea, as at breakfast; nothing to eat.

"Dinner, 7 to 8.—Julienne, or clear vegetable soup; 3 or 4 ounces of fish; 3 or 4 ozs of any *red meat*, or of chicken, rabbit, game, or venison; 6 ozs. of any green vegetable, with gravy from the meat only; 4 ozs. of stewed fruit or of raw fruit; a little stale or pulled bread, and a small piece of cheese."

Dr. Davies thinks that the schools should teach the physiology of food, and that any scientific instruction in his specialty would avert numberless ills and discomforts.

THE LONDON IVORY SALES.

THERE is an interesting article in the *Leisure Hour* for July on "A London Ivory Sale," which is crammed full of facts which it must have taken a great deal of trouble to collect. In order to replenish the ivory market of England 15,000 elephants have to be killed every year. The annual slaughter of elephants amounts to 75,000. As the elephant does not begin to breed until it is thirty years old, and the average is one youngster every ten years until he is ninety, the extinction of the elephant is within measurable distance. The total cash value of the 200,000 elephants in the Congo Basin is \$2,500,000, each elephant being supposed to have 50 pound weight of ivory in his jaws. Some tusks weigh as much as 200 pounds, but that is very rare. The tusks for billiard balls fetch the highest prices—as much as \$550 a hundredweight have been paid for them. Ivory dust and ivory shavings are used by confectioners as stiffeners for jellies. Out of every hundredweight of ivory 15 pounds remain as scrapings, which are burned into ivory black, worth from

\$80 to \$100 per ton. Hippopotamus ivory is harder than that of the elephant. The outer coat is so hard that it resists steel and strikes fire.

THE PRIVILEGES OF ENGLISH RAILWAY EMPLOYEES.

A WRITER in the *English Illustrated* for July, describing the privileges of the workmen on the Great Eastern Railway, says :

“There is an accident fund, to which each of the 5,260 workmen subscribes, a pension fund and a savings bank, optional, and a contagious diseases fund. The institution of the three former is due to the present well-beloved chairman ; the latter is a workmen’s movement entirely, and an excellent one, not only preventing the deprivation of the members’ means of support when most needed, but by removing the risk involved in coming to work when disease is in their homes preventing the spread of infection among their shopmates. The company covers every subscription to the accident fund and pension fund with an equal amount, gives four per cent. interest on savings-bank investments, and supports a science and art institute and technical school situate near the works, which has a library of nearly 7,000 volumes. Last, but by no means least, every person in the company’s employ has the right to travel once a week, with any members of his family residing with and dependent upon him, to any point on the system at a fare of a farthing a mile.”

SOLDIER CYCLISTS.

THERE is an article by Major Holmes on “Military Cycling” in the *United Service Magazine* for July. He says that the cyclists do not claim to be calvary ; they are only a moving infantry. “The cycle is only a means of conveying infantry with greater rapidity, without noise, and without throwing up large columns of dust, a farther distance than by any other means available.

“The Safety enables the soldier to carry his arms, ammunition and kit. These are all fastened on to the machine, and for the convenience of mounting, dismounting and stowing for transport the Safety bicycle has no equal.

“The marching rate of an armed and equipped body of soldier-cyclists is from seven to ten miles an hour. This pace can be kept up for many hours without fatigue, and the men when they have reached their destination will be in a perfectly efficient condition.

“Another advantage is that the cycle requires neither forage nor water ; a body of troops far from their base have often suffered the greatest inconvenience from the want of both of these. It has often been noticed that mounted infantry form a good target for artillery fire, it being very difficult always to find cover for the horses. Such is not the case with cycles. The machines of dismounted men when laid on the ground offer no target for fire, as they are

quite invisible at short distances. Cycles are specially useful for night work, as they are absolutely noiseless, and, therefore, do not offer the objection that patrols, scouts and messengers do who are mounted on horses, as these can be heard at great distances at night. The cost of a military cycle should be under £12, and at this price it would form as cheap a mode of conveyance as it is possible to get.”

FRENCH CRITICISM OF NAVAL ORDNANCE.

REAR-ADMIRAL RÉVEILLÈRE contributes an article to *Marine Française*, “Shells with Large Capacity,” in which he points out how entirely unsuited the guns of modern ships are for the purpose of bombardments. The extreme length now given to ships’ guns makes them well suited for naval actions, but quite prevents the employment of shells charged with a large quantity of explosives. One of the ideas particularly affected by the young school of French naval officers is the possibility afforded to vessels of high speed of making sudden raids on an enemy’s coast, but in order that they may be able to do sufficient damage in the limited time that would probably be allowed to them it is essential that they should be able to throw shells carrying much larger bursting charges than is permitted from the long guns with which ships are now provided. Admiral Réveillère therefore advocates the introduction of a special type of short naval guns, built exclusively for bombarding purposes. These guns he would mount in swift mortar vessels of 900 and 1000 tons, which should be constructed principally for raiding purposes, although their speed would well qualify them to act as scouts when with the fleet. All the fastest cruisers should also carry a couple of these guns, so as to prevent the possibility of a recurrence of such a fiasco as occurred in the bombardment of Alexandria in 1882, and, more recently, of Foo-Chow by the French fleet.

HOW TO MARCH UNDER FIRE.

A SUPERIOR officer of infantry contributes to the *Journal des Sciences Militaires* a very exhaustive study on “The Formations to be Taken when Marching under the Fire of Artillery or Infantry.” The article is of much too technical a character for us to do more than allude to it ; but from the way in which every contingency is worked out it merits very considerable attention on the part of army officers, as going to prove that at fairly long ranges formations by files are far less vulnerable than in single rank. To cite one case out of many : the loss occasioned by a single round from a field gun fired against thirty-two men in single rank might kill twelve men, whereas the same number of men advancing in four single files would only suffer a loss of four and a half men. This is, of course, an extreme case, nevertheless in nearly every instance narrow-fronted columns with intervals are shown to have the advantage over formations in extended order.

WHY NOT RE-COLONIZE ENGLAND?

A Suggestion for the Idle Rich.

MR. FREDERICK GREENWOOD, in the *National Review* for July, has a characteristic article, entitled "Suggested by Cobbett's Ghost." Mr. Greenwood's idea is that if Cobbett's ghost were to return, he would suggest as a remedy for the progressing development of the great wens and the lesser wens, scattered throughout England, that the idle rich should migrate from Mayfair into the country, and revivify the deserted shires.

Mr. Greenwood says: "As to the Great Wen, I fancy he would argue that if it is not to be worsened and its dangers multiplied, there must be a dispersal of rich townsmen over the whole face of the country. The poor flock where the rich gather. When the rich are business men, closely engaged, they must, of course, abide near their factories and counting houses. But even of these many could spend more time and cash in a country life (to the wise economy of whatever vitalities they possess) than they do spend; and, besides these, there are thousands of families with completed money-piles who would be a veritable blessing to their native land if they would take a taste for living where it is loveliest. That the taste for art is increasingly widespread and rapturous is indeed delightful; but how much better it would be should a taste for nature break out among the wealthy of all sorts and conditions! They are very much alike, these tastes; the one is not more costly than the other, nor is it less wholesome and elevating; and, as I hear the ghost of Cobbett say, there is no visible cure for the depopulation of rural England and its dangerous running into city wens if the idle rich do not go out from them and re-establish the villages.

"Orchard produce, garden produce, poultry produce, the growth of small fields tilled with Chinese care—this is what we should baffle the importer with, and keep rural England populous and prosperous. If that is really the best counsel that can be given, how shall it be carried out more advantageously than by the fulfilment of this dream? A taste for the country springs up; it is strengthened by a sense of duty—a patriotic desire to do what can be done by the exchange of futile pleasures for simple joys to clear England of the dangers of 'the wen.' Vexed by the mere vulgarity and commonness of society splendors, many of the old gentry take more exclusively than ever to the taste; which inspires a yet greater number of new rich men, who depart from the crowds where a 'plum' is accounted nothing and ten thousand a year is no title to distinction. Estates of squirely magnitude are sought in all parts of the land, with little more regard to percentage returns than there is in buying a yacht or a Meissonier or two; till there are a dozen good houses on a dozen little domains where now there are three, and none of their owners are simply dependent upon rent. These estates being small, and being in such hands, what we have called garden tillage is the rule with them; which means the employment of a good many husbandmen. The

land is beautified, labor has its old place upon it on better terms, it yields more richly what is wanted most (according to the economists), the classes associate in a wholesomer way than 'slumming' affords, the physical degeneracy of the people is arrested by the salvation of thousands of families from wens-absorption, and there is less competition for work among town laborers of various kinds; for where the rich man's home is, there direct or indirect service of all sorts is required."

THE IMPORTANCE OF CORSICA TO FRANCE.

Its Strategic Value Ignored.

L. A MARINE FRANCAISE of May 29 and June 12 gives a capital summary of the important question raised by "Commandant Z," in the *Nouvelle Revue* of May 1, as to the vast strategic importance to France of Corsica. "Commandant Z" thus defines the value of Corsica from the military and naval point of view: "Corsica, which is the only resting ground for our fleet between Algiers and Marseilles, and between Bizerta and Toulon, forms the strategic link by which the shores of Languedoc and Provence are united to those of that French Africa which Prè-vost-Paradol, now more than a quarter of a century ago, pointed out as being the last resource of our grandeur in the world. In case of a war with the Triple Alliance the island, from its position within fifty miles of Civita Vecchia, forms the natural base of operations for our squadrons against Italy's left flank. "If, again, we consider the case of

A STRUGGLE—ALWAYS POSSIBLE—WITH ENGLAND, its defensive value becomes beyond compare, and is indeed so apparent that it forces itself upon the attention of even those who are utter strangers to the requirements of naval warfare. For these reasons, since our reverses, and especially since the House of Savoy has entered into alliance with the two Central European powers, Corsica should have been for us an object of grave concern. Alas! far from making it an object of solicitude, the French Admiralty, as we know too well, seems to have ignored the very existence of this admirable strategic position. In 1886, sixteen years after the lesson of Sedan, Corsica was still for the Admiralty as if it were non-existent!" "Commandant Z" is convinced that the next war which breaks out will begin in the Mediterranean by a sudden descent being made on Corsica—the two places most menaced, in his opinion, being Bastia and Bonifacio. The vicinity of Elba gives good warrant for an attempt against Bastia. The enemy could land either to the north of the town, or preferably on the west coast, at the bottom of the gulf of St. Florent, whence he could menace not only Bastia, but also the positions of the Ile Rousse, Calvi, Corte and the whole of the peninsula of Cape Corso. Under the present condition of the defenses a landing in the bay of Santa Manza, with Bonifacio for its objective, could be carried out with success. Once master of Bonifacio, the enemy, without committing himself to conquering the island, would restrict himself to hold-

ing the straits, when the vicinity of La Maddelena would render any naval operations to dislodge him extremely perilous. The defensive elements at Bonifacio are ridiculously inadequate, especially if account be taken of the offensive elements present at La Maddelena and on the plateau of Ozéri.

WHAT OUGHT TO BE DONE.

After having pointed out all the points where Corsica is exposed to a sudden descent, "Commandant Z" discusses in what way it could be made to afford valuable support to the French fleet, and especially advocates the construction of a port of refuge at Porto Vecchio. He further points out the necessity for completing the mobile defenses of the island as speedily as possible. Independently, however, from the mobile defenses, which have recently been reinforced by the despatch of torpedo boats from Toulon, he strongly protests against the excessive concentration given to the French naval forces in the Mediterranean, and advocates that the Toulon fleet should be divided into three independent squadrons: the first, the squadron of France, with Toulon as its base; the second, or Corsican squadron, with its headquarters at Ajaccio; and the third, or African and Levant squadron, to be stationed (pending the completion of Bizerta) at Algiers.

Construct a Tunnel.

Another correspondent to the *Nouvelle Revue* emphasizes the points laid down by "Commandant Z," and recommends the construction of a tunnel four kilometers long between Bastia and St. Florent, which would thus form one fortress facing east and west, and allow the French fleet to operate on either side of the island. The strong position which could be taken up by the Italian fleet at La Maddelena not only covers the whole of the Italian coasts from Civita Vecchia to Sicily, but by closing the Straits of Bonifacio menaces the French line of communication between Marseilles, Algiers and Tunis. The creation of a port of refuge at Porto Vecchio would not restore the balance of power to the French fleet, as in case of a check it would be simply kept prisoner there without the possibility of passing the straits. The only way, therefore, in which the menace presented by La Maddelena can be paralyzed would be to cut a canal parallel to the straits, and so enable the French ships to escape from the *cul de sac* at Porto Vecchio. Fortunately such a canal, twenty-five kilometers long, can be easily and inexpensively constructed from Porto Vecchio to Figari, the ground between these points being quite flat and offering no engineering difficulties whatever. If these works as proposed were carried out, France, with Toulon in the north, Bizerta in the south and communication between Bastia, St. Florent and Porto Vecchio-Figari in the center, would occupy an impregnable position in the Mediterranean.

In *World Literature* for July Mr. David Dick, concluding his paper on George Meredith, sums up his judgment on the great novelist as a painter of women.

HORSE BREEDING IN FRANCE.

M. F. MUSANY, in the *Revue des Deux Mondes* for May 15, discusses the breeding and training of horses—especially race horses—in France, and finds much to complain of. The race horses of France, he says, are chiefly imported from England, while the French cavalry has the greatest difficulty in getting a sufficient supply of decent mounts. Yet, our author goes on, these things are not so to be. There is no reason why good breeds of horses, both useful and ornamental, should not be reared in France. Norman and Percheron, Auvergnat and Limousin horses are famous in history and tradition; and though these races, as such, no longer exist, the conditions which produced them are unimpaired. The owners of racing stables are greatly to blame for the deterioration in French horse-flesh. They have persisted in sacrificing all other qualities for the sake of speed—and, moreover, speed which has to be kept up for a very short time only, so that it may go with the minimum of strength. Besides this, the colts are run far too young, and their training is faulty. It seems strange to hear that most French horse breeders are bad riders, or cannot ride at all. Thus, however well up they may be in theory, they are entirely at the mercy of their grooms and stable helpers in judging of a horse's pace and action. "The superiority of English breeders," says M. Musany, "lies in the fact that they can all ride, and know by actual use the wares they deal in. It would be desirable that riding should be as general with us as it is in England. In towns, it is true, it is a costly luxury; but for horse dealers it is a necessity and an economy."

There is great room for improvement in the treatment of colts. Tradition has established a belief that young animals left to run about in all weathers, exposed to all the changes of temperature, never groomed, and picking up their food as they can, become stronger, hardier and better tempered. It may be so in the case of wild animals, where this regimen kills off the weaker individuals in early infancy; but even then it is possible that those who survive escape with a constitution more or less impaired, and that this may account for the complete disappearance of some species. In any case it is not the way to bring up domestic animals. And even were it true that colts thus treated were less likely to catch one class of ailments, the fact remains that if any of them *do* happen to be taken ill the chances are that it will not be found out in time; and moreover, experience has demonstrated that instead of being hardened they are, on leaving the paddock, usually more delicate than stable-trained colts, catch cold more instead of less easily, and have to be gradually acclimatized before entering on full work. This is probably for want of the daily grooming necessary to keep a horse in health.

The paddocks, as a rule, are too large. It is commonly said that a horse needs a wide extent of ground to gallop over; but this is a mistake. If the same ground were divided into several smaller enclosures the horses could be more easily kept in view, and

caught if necessary, while the ground would be more evenly cropped and less trodden into holes. They could also be exercised with care by the stud groom, whereas they rarely gallop—as they are commonly supposed to do—if left to themselves.

It is often said that the justification of horse-racing is that it improves the breed of horses. M. Musany denies that it does so beyond a certain point. As already mentioned, it has injured it through breeding for speed only; moreover, horses for breeding are chosen for their racing records (which are no criterion at all) rather than their build and temper. The latter cannot be fairly judged at the age at which colts are run; and, besides, high speed over a short distance, with a light weight, proves nothing beyond that one point.

“If new racing regulations were introduced into France,” says M. Musany, “if no horse were to begin training under four years, our production would soon be superior to that of other countries. The example once given, our small farmers would soon follow it, especially when they found that no very great extent of ground was needed to rear a considerable number of animals. And, as the greater includes the less, it is evident that, if we succeed in rearing at home a sufficient number of racers, there will be no difficulty in finding the supply for the army. France can and ought to produce the best horses in the world, as she produces the best wine; and not only supply her own needs, but export to other countries, and find in this industry a source of wealth which would make her doubly formidable from a military point of view.

“To this end, all that is wanted is a few resolute and persevering men, having faith in sound doctrine, and disposed to superintend affairs for themselves, and to employ, as stablemen and grooms—instead of Englishmen attached to their traditional routine—unsophisticated French peasants, who will learn their business from them. The task is a noble and attractive one.

“But the taste for riding ought also to be revived among us. We therefore add our voice to the more illustrious ones who have preceded us in requesting the government to do its best to encourage horsemanship, and to raise the status in the general opinion of the meritorious men who teach it.”

Carlyle on Indian Meal.—The *Bookman* for July notices an interesting literary memorial of Carlyle's intimacy with Emerson. This is an article on “Indian Meal,” which appeared in *Fraser's Magazine* in May, 1849, over the signature “C.,” and, says the writer, Carlyle's authorship of it is undoubted, though it has not been included in any edition of his complete works. Carlyle, who wished to see Indian meal an article of general consumption, corresponded with Emerson on the subject, with the result that Emerson sent over from Concord a barrel of Indian corn in its natural state, and the corn, having been ground and prepared for the table by Lord Ashburton's French cook, was metamorphosed into meal “sweet among the sweetest, and on which a grown man

could be supported wholesomely, and even agreeably, at the rate of little more than a penny a day.”

THE DOOM OF LANCASHIRE.

MR. W. ABRAHAMS, in *Blackwood's* for July, has an excellent article concerning the impending decline of Lancashire, England. He thinks that the Lancashire cotton trade is doomed, and says: “The causes of the unfortunate change may be summed up as loss of profit on the trade in a class of goods cheapened down by excess of supply of markets still open; and, more damaging, the insidious encroachments of foreign competitors, either protected in the markets they rely upon by duties on imported British goods raised to the point of absolute prohibition, or greatly favored upon their own ground by the employment of native labor infinitely cheaper than that of British factory operatives, and additionally premiated by laws regulating labor in cotton mills much less exacting and stringent than the Factory Acts in force in this country.”

After describing the loss of market after market, and especially the way in which the Bombay mills are cutting into the Eastern trade, Mr. Abrahams says:

“When and where is it to stop? We are told that the whole of the trade with India, China and Japan in the coarser counts of cotton yarn up to 24's twist is regarded as already gone; and it is anticipated that in counts of yarn up to 30's that trade can and will be taken entirely by Bombay before half a dozen years have passed. Lancashire is not able to bespeak much sympathy in its continuous losses of foreign, colonial and Indian trade from the country outside its own borders; perhaps because other interests, in other provinces of the kingdom, are also suffering more or less severely, and are quite absorbed in their own peculiar difficulties and troubles. Yet surely the issue is momentous for the whole British nation, and not for Lancashire alone. England *minus* Lancashire, as a gigantic manufactory, would no longer be the rich, mighty, advancing England of other days.

“Lancashire will die hard and slowly, though it may be with recurrent social convulsion and commercial cataclysm. The time is not quite at hand when it shall be numbered with those ancient seats of empire and marts of ocean-ranging commerce ‘whose decay hath dried up realms to deserts.’ But that this county—filled with cities vying in vastness with the capitals of the greatest nations, and towns which are so many human hives, with factories, foundries, forges and workshops innumerable; served by magnificent ports and merchant fleets; teeming with a keen, striving population of nigh four millions—has passed the meridian of its prosperity, and has entered upon the first stage of its declension, is the gloomy conviction to which a constant and close observation of its course has forced the reluctant minds of some of its inhabitants who are not least jealous of its fame, or proud of its record of peaceful conquests and its former pre-eminence as the school of inventors and the home of the mechanical arts.”

OUR MONSTER POLITICAL CONVENTIONS.

A LETTER BY DR. ANDREW D. WHITE.

THE REVIEW OF REVIEWS has received from Hon. Andrew D. White a copy of the following open letter addressed by him to the Hon. Patrick A. Collins of Boston. The remarkable scenes of the four great political conventions recently held at Minneapolis, Chicago, Cincinnati and Omaha certainly give great force to the views entertained by Mr. White and Mr. Collins :

Permit me as your fellow-citizen to address you on a subject of great concern not only to our respective political parties, but to the whole country.

I observe by the morning papers that at the recent Chicago convention you moved a resolution that the National Committee of your party should, at the next National Convention, provide accommodations only for the delegates, alternates, the press and the National Committee, with, as I suppose, a fair allowance for an audience of moderate size.

I regard this as one of the most wise and far-sighted resolutions which has been introduced into any national convention of late years. Three times in my life I have been a delegate to a National Republican Convention. The first two of these were held in halls of moderate size, and were deliberative bodies ; the third, a few years since, was held in a vast hall, in which the spectators outnumbered the delegates more than ten to one. The convention proper numbered less than a thousand ; the spectators were understood to number from twelve to fourteen thousand, and that assemblage was not, and could not be, in any true sense, a deliberative body.

Anything like real deliberation was simply impossible. In order to transform that National Convention into a local menagerie, the local managers had made the hall in which it met so large that president and members could rarely, if ever, be fully heard, and so flimsy that wind against its sides or rain upon its roof made even the "fog horns" of the party inaudible.

Nor was this the worst. The convention was at all times practically at the mercy of the mob of spectators, and at some times in its actual control. In some cases this control was merely farcical. For instance, at the very moment when the most thoughtful judgment was required this audience of sight-seers amused itself by what was called "enthusiasm," but what was really, on the part of large numbers, hysterics. I saw very many men and women in the galleries utterly beside themselves, jumping up and down and shrieking the name of the first candidate who happened to be named, and shortly afterward I saw many of the same people again in hysterics, jumping as before and shrieking the name of an opposing candidate.

But at other times this mob rule by the galleries was not merely farcical ; it was vicious. Motions and speeches of real importance which eminent members of the convention attempted to make were more than once drowned by the murmurs of the spectators, and, what was worst of all, sometimes purposely interrupted by them.

As a Republican, I submit to you, a Democrat, that this sort of thing is neither Republican nor Democratic. At its best, it is simply a farce, which tends to bring disgrace upon the deliberations of the two parties, and at its worst it is the over-riding of the whole people, acting through their chosen representatives, by a mob, always thoughtless and sometimes venal, drawn mainly from the city in which the convention happens to be held, and therefore a menace to free discussion and a disgrace to the whole country.

I do not, and I feel sure that you do not, in spite of the form given to your resolution in the telegraphic

reports, object to a reasonable attendance of spectators. It is eminently proper that there should be a body of spectators equal in size, possibly, to the entire body of delegates, alternates, officials and representatives of the press, and it should be made a rule that the tickets for the spectators' seats be distributed to the various delegations in fair proportion, thus preventing any local or individual interest from packing the galleries. It should be a body of spectators not so large as to tyrannize over the convention, and it should be not local but national.

Down to a recent period this was the system adopted by both parties, and it allowed a convention to deliberate. But under the present system it not unfrequently happens that a delegate who does not please the galleries, no matter how important his statement or argument may be to his constituency or to the country, is howled down by the local mob. Under the present system such statesmen as Thomas Jefferson, John Quincy Adams, Salmon P. Chase and William H. Seward would have been virtually excluded from the deliberations. Formerly it was always the convention itself which decided every question ; now it is not unfrequently the galleries.

It may be said that the recent nominations on both sides were excellent in spite of this vile system into which both parties have drifted. I am not at all disposed to deny this ; no wrong system bears its whole fruitage of evil at once ; it must be judged by its logical consequences and evident possibilities.

It may also be said that our national conventions should be thrown open to the people. That is my contention, and my objection to the present system is that it enables a single State, or even a single city, virtually to exclude the people—nay, enables it to pack the galleries so as to absolutely thwart the free expression of the popular will, and may yet enable individuals or corporations, by the use of money on a large scale, to pack the galleries with men hired to applaud their agents or to overpower with clamor delegates obnoxious to their ambitions or interests.

I would have the convention, then, thrown open to the whole people, not misrepresented by a mob overshadowing the convention with local or personal aspirations, prejudices, or whims, but represented by a suitable number of citizens from the whole country, admitted under proper regulations ; and, in addition to this, I would have the convention, even more than at present, thrown open to the people by the fullest provision for the press, which, by its telegraphic communications, virtually brings every citizen of the United States into the convention.

The result of this present system, under which the convention has ceased to be a deliberative body, and has become mainly a menagerie to amuse a local mob of men, women and children, who are frequently admitted for money, and in which, having paid their money, they feel themselves supreme, can be only evil to both the great parties and to the free institutions of our country.

Allow me, then, as an American citizen, to thank you for your resolution, and to express the earnest hope that you will persevere in acting upon the line it lays down, with the certainty that the great majority of thinking men in both parties must finally join you in the advocacy of it.

THE PERIODICALS REVIEWED.

THE FORUM.

THESE are reviewed in another department the five articles, "Causes of the Famine," by Mr. W. C. Edgar; "Thomas Hardy and His Novels," by Mr. William Sharp; "Does the Negro Pay for His Education," by Mr. George W. Cable, and the two on the Republican and Democratic candidates, by Senator Hawley and Mr. Charles Francis Adams.

RELATIVE STRENGTH OF EUROPEAN ARMIES.

Col. Theodore A. Dodge gives an estimate of the relative strength and weakness of the European armies in substance as follows: England is still great on the sea, but her land forces are inferior. Such military experience as she has had of late years has been altogether in fighting savages, and this is the worst of all preparation for civilized warfare. "Except as an ally who could make herself useful by landing a body of men on the enemy's coast as an opportune diversion, England is of positively no weight so far as her army is concerned."

Russia is rich in material and her men are brave but the grade of intelligence is low, "for 73 per cent. of the army in Europe can neither read nor write, of that in Asia 82 per cent."

The present condition of the French army is excellent. Napoleon's army "was at no time so sound throughout." But the French army is lacking in one serious point; it has no preëminent leader, and "what has always made the French army is leadership."

The German army is more unified and suffers less from the jealousies of officers, but Germany is "under a serious financial and political handicap. She has a low treasury in proportion to her armament," and her faith in the Hohenzollerns has been shaken by the conduct of the young autocrat, William.

The Austrian cavalry and field artillery are good, but "her infantry force is on the whole inferior to that of any of the greater powers. Her officers are poorly paid and the non-commissioned officers are of low grade. Little is done to make the soldier's life attractive or honorable."

Italy is "financially bankrupt." "Her army is very big on paper—a war strength of 2,700,000 men. But she cannot mobilize more than a portion of this force."

THE READING SYSTEM AND THE "ANTHRACITE TRUST."

President McLeod, of the Reading railroad, makes a stout defense of the recent "deal." He asserts that there has been no trust, but that "the Reading leases mean simply that corporations, each with elements of strength and usefulness to the public which the others did not possess, came into closer relations, the one taking what the others gave, and each giving what it could with advantage bestow." The system proposes to itself a two-fold duty, to bring the products of its territory to the consumer on "surer and better terms," and to "assure to the thousands of investors in the Reading securities their undoubted right to some return for the money invested." The writer quotes statistics to prove that in the price of coal there has been no advance over that which ruled five years ago. He also declares that the Reading system will tend to methodize and economize the mining of coal, which he reminds us is very necessary, since the supply is not inexhaustible.

AN ARGUMENT FOR WOMAN'S EDUCATION.

Mrs. Van Rensselaer makes a strong and sensible appeal for a higher non-technical education of woman, that sort of education the object of which is, quoting President Dwight's phrase, "the developing and cultivating the thinking-power." She considers education of this kind of the utmost necessity to make a woman a sympathetic wife, a wise mother and a clear-headed, useful member of society. The writer does not wish to see woman usurp man's place, but she does wish to see her fitted by every means possible to be what she was intended for, his complement.

WOMAN'S WAGES.

Mr. Carroll D. Wright enumerates the causes which tend to make the wages paid to women less than those paid to men. First, he says, the mere fact that woman has come into the industrial system as a new factor is of itself sufficient to keep her wages low. Secondly, her lack of physical endurance and the assistance which she receives lowers her economic standard. Thirdly, she lacks technical training, and often is unwilling to spend time in acquiring this training, because she regards her work as only temporary, to be terminated upon marriage. Finally, the great influx of women into the industrial field has made the supply greater than the demand.

THE NORTH AMERICAN REVIEW.

"LYNCH Law in the South," by Mr. Frederick Douglass; "Politics and the Pulpit," by Bishops Doane and Mallilieu; "Organized Labor in the Campaign," by Mr. Samuel Gompers, and "The Situation in Italy," by ex-Prime Minister Crispi, are reviewed in another department.

MR. MALLOCK ON LONDON SOCIETY.

Lady Jeune's article on "London Society" which appeared in the May number of the *North American Review* is discussed by Mr. W. H. Mallock. His chief criticism is that Lady Jeune's method of dealing with her facts is superficial. She writes of "society" alone; but the condition of society "is due to causes which influence the entire community; and the effects of these, as seen in the aristocratic and fashionable world, must be studied in connection with their effects on other ranks and classes." London society is composed of not more than five thousand people and they are for the most part aristocrats. These do not constitute a homogeneous body any more than do the students of Oxford. The "smart" set in society is composed of a comparatively small number of the constituent members of society. "Whatever may be the peculiar sins of contemporary 'smartness,' be they great or little, they are by no means confined to the smart set or its imitators, but are due to causes which influence every rank, and which should be sought for in history rather than in fashionable memoirs."

Mr. Mallock declares that the idleness to which Lady Jeune refers is even more prevalent among the rich women who are not in society than among those who are, and the decline of religious belief is not characteristic of the smart set, but is widely prevalent, and is due to scientific and historical discovery.

THE USE OF CATHEDRALS.

The Dean of St. Paul's undertakes to answer the question, What is the use of cathedrals? A cathedral which is a master-work of architecture "adds dignity and external importance to the religious body to which it belongs." It is, he says, a means of education. It affords space for the gathering of great religious bodies. It is diocesan, not parochial, and hence is the neutral ground on which waning clerical factions can meet. Its services present a standard of excellence to the diocese. It gives unity of interests to the churches of the diocese. The cathedral staff is useful in supplying church pulpits. In this staff there should be some members who can dedicate to theological study, and others who can be the bishop's lieutenants in the work of organization.

PROTECTION FOR RAILWAY EMPLOYEES.

President H. S. Haines, of the American Railway Association, contributes a paper on "Railway Safety Appliances." He asserts that all possible progress has been made in the invention of a car-coupler which will be safe and at the same time will not make it necessary for the brakeman to go between the cars. In 1890 the Railway Association adopted the Master Car Builders' type of couplers, which is the most perfect safety appliance that inventive ingenuity has thus far been able to devise. It is absurd, he says, to suppose that Congress can improve on this invention, which is the result of the best developed technical skill. About one-fifth of the freight cars in service are supplied with this device.

Governor Merriam, of Minnesota, in considering the needs of the new Northwest, argues for regulated immigration, general education, and a greater intelligent interest in public affairs. Archibald Forbes shows President Lincoln to have been a great military strategist.

THE ARENA.

REVIEWS of the three papers on the pending presidential campaign will be found in the department "Leading Articles of the Month."

Mr. Edwin Reed reopens the Bacon-Shakespeare controversy. His paper is an argument against the possibility of Shakespeare having written the plays which bear his name, and is presented in two parts. In the first part of the paper it is shown that the author of the Shakespeare plays was a linguist, a jurist, a philosopher, and was well acquainted with ancient and modern literature. In the second part the man Shakespeare is considered. Mr. Reed finds that he was the son of parents grossly illiterate and that he signed his name as one who could scarcely write. Shakespeare went to London in 1585 or 1587 and "Hamlet" was produced not later than 1589. It is impossible to suppose, says Mr. Reed, that he acquired in this interim sufficient knowledge to write such a tragedy. He seems to have caused no sensation in London; the references made to him by contemporary writers are brief, and the writers themselves are for the most part obscure; his death attracted little attention, and his resting place is marked by a stone bearing as his only epitaph a homely inscription written by himself.

Mr. B. O. Flower has an extended article on the Sunday closing of the World's Fair. Sunday legislation, he says, is opposed to the genius of the early Church. The Church's strongest ally in the agitation for Sunday closing is the saloon. People deprived of the privilege of going to the Fair, where they will be instructed and innocently amused, will inevitably find their way to the saloon, the brothel and the gambling hell.

THE FORTNIGHTLY.

WE notice elsewhere the article, "Truth about the Salvation Army," and Mr. Swinburne's "Elegy" on Sir Richard Burton.

FOUR STYLES OF MEMORY.

Mr. Alfred Binet writes on "Mental Imagery" in an article in which he thus sums up the four different styles of memory:

1. The visual, characterized by the use of visual images in all the operations of the mind and memory. This probably exists in the case of painters who can execute a person's portrait after having seen that person only once.
2. The auditive, which implies a special memory for sounds, as in the case of most musicians.
3. The motive, marked by the special use made of images derived from motion.
4. The indeterminate, which exists when the different varieties of imagery are employed alternately, according to occasion.

THE SERVANT GIRL QUESTION.

Lady Jeune discusses the servant girl question in an article which does not contain much that is new. She points out that the growth of flats has diminished the number of servants, and touches incidentally upon the possibility of the Servants' Union being able to benefit the class in England by eradicating the present system of registration and improving the unsatisfactory character system. The Servants' Union gives the following figures as to the number of domestics: "The gross numbers are 1,803,997, out of which 130,865 represent coachmen, grooms, butlers, and footmen; 1,230,406 female servants, 92,747 charwomen, and 62,646 male and female hotel servants; the remainder is composed of the smaller classes who are comparatively unimportant. It is calculated that there are over twelve thousand servants seeking employment in vain in London alone, and the majority are by no means composed of women."

THE PROPOSED PAN-ANGLICAN FESTIVAL.

Mr. Rowe, president of the Oxford University Boating Club, discusses Mr. Astley Cooper's proposal to set on foot a Pan-Anglican Athletic Festival. From the point of view of the rowing man he sets forth the difficulties connected with the boating contests, and makes the following suggestions as a means of overcoming the obstacles:

1. Let the winning Grand Challenge eight of the year represent England.
2. Let the Henley regatta course be the one chosen for the race.
3. Let the contest, at least in rowing, take place about the middle of July, instead of in June.
4. Let the sculling be absolutely open to professional and amateur alike.

Mr. Rowe is in favor of the Americans coming in. He says: "It would be most unsatisfactory were we not to take this opportunity of measuring our strength with theirs, as well as with that of our Colonial oarsmen."

THE IRISH "HOTTENTOT" IDEA.

The Hon. Lionel Tollemache has a pleasant, gossipy paper on Lord Tollemache and his anecdotes, in the course of which we come upon the following, which may be regarded as the original germ of the idea which Lord Salisbury afterward developed when he inferentially suggested that the Irish were on the same pale of political development as the Hottentots: "Shortly after my father entered Parliament there was a great disturbance in Ireland. The Duke of Wellington was reported to

have said significantly that the army was ready. One or more Irish members answered the appeal by saying in the House of Commons that the people of Ireland were ready, too. Amid the general excitement a young member of timorous aspect rose to make his maiden speech. In a meek voice the novice began: 'Mr. Speaker, I have listened attentively to this debate, and have come to the conclusion that Irishmen are no more fit to govern themselves than blacks!' The bashful orator was the first Mr. Walter, of the *Times*."

OTHER ARTICLES.

Mr. Bompas, Q. C., endeavors to show why the majority of Nonconformists accept Home Rule, and why the minority reject it. "An Irishman" discusses the strength and prospects of Unionism in Ireland. He declares that Unionism is much stronger than Unionists themselves suppose. There is a growing conviction on the part of the Irish peasant that in his own interests the Union should be maintained. Edward Delille writes on "Guy de Maupassant," and Mr. H. W. Lucy has a short paper on the Early Parliamentary History of the Borough of Hythe.

THE CONTEMPORARY REVIEW.

THE articles on Ulster, General Booth's Social Work, and Mr. Osborne Morgan's reply to Lady Jeune's denunciation of Modern Society are noticed in another department.

THE RUSSIAN CRISIS.

A former Siberian exile has a paper on the Russian Crisis. It is a sombre presentation of the melancholy condition of things in the famine districts of Russia. The writer seems to be almost as hostile to Count Tolstoï as he is to the government. Russian agriculture is perishing for want of intelligent direction, but a stupid, suspicious officialism is fatal to all improvement. Possibly the pinch of hunger and the possibility of absolute bankruptcy will compel the adoption of measures where all milder arguments have failed. He thinks that provincial society has distinctly degenerated in Russia in the last few years. It reads nothing, ignores science, and interests itself in nothing. The zemstvos have been checked in their work, and have degenerated accordingly. The moral of the whole thing is that—"Russia will never return to its old social régime; it will never see prosperity again, unless the *intelligentia* once more turns its attention to its own internal affairs, its daily requirements; unless it is once more independent, and throws off the false, heartless, and indifferent guardianship of the bureaucracy."

A PROTEST AGAINST SACERDOTALISM.

Archdeacon Farrar has an article on Sacerdotalism, in which he warns the Sacerdotalists of the establishment that their teaching will carry them to Rome, and that there are myriads of both laity and clergy who will never accept the utterly disproved assertions which they so constantly repeat. In declaiming these assertions, says the Archdeacon: "We claim to be churchmen in the very best and fullest sense of the word, because we can superabundantly prove to every unbiased mind that we follow the guidance of the only authorities which we regard as final or supremely important—the New Testament, the Prayer Book and formularies of the Church of England, the decrees of the Four Great Councils, the clear doctrinal teaching of the best writers of the primitive church in the earliest days of Christianity, and the carefully-weighed and accurately expressed opinions of every one of the

great divines whom hitherto the Church of England has most delighted to honor."

OTHER ARTICLES.

The remaining articles in the *Contemporary Review* are Prof. Marcus Hartog's "Problems of Reproduction," Miss Price's "Popular Songs of France," and Mr. Bryce's address delivered at the first meeting of the London branch of the Scottish Geographical Society on the "Migration of Races of Men."

THE NATIONAL REVIEW.

MR. FREDERICK GREENWOOD'S article is noticed elsewhere. The Countess Cesaresco writes on "Historical Rimini;" Mr. Walter Besant and a "London Editor" fight backward and forward over the question of "Authors, Individual and Corporate;" Mr. Andrew Lang protests against the censure pronounced on novels with a purpose, incidentally defending "Sandford and Merton;" and the editor rolls the drum and appeals to the country on behalf of the Unionist Administration.

THE ANNEXATION OF THE SOUTH SEA ISLANDS.

Sir Richard Temple discusses the "Polynesian Labor Traffic," and favors Lord Charles Scott's suggestion as to the establishment of recruiting stations, but he goes a step further, and proposes to place all the islands where laborers are recruited under the Imperial protectorate. "Then, and not till then, would the recruits have all the advantage which the Indian labor recruits (*coolies*) possess, and the recurrence of the evils formerly complained of and deplored would be rendered impossible. A protectorate would, of course, be Imperial and not colonial.

"It remains to indicate the islands that would fall under this proposal. The islands appear to belong chiefly, if not entirely, to the series known to geographers as the Louisiade Archipelago. This range extends from the southern extremity of New Guinea across the ocean south-eastward till the Fiji group, already British, is reached. The fact that British protection is established in Southern New Guinea would facilitate a similar protection over adjacent islands—especially in Moresby Island. Outside the Louisiade group, and lying to the north, would be two or three islands which have heretofore been recruiting-grounds—especially Normamby Island, and perhaps the islands of Goodenough and Fergusson. And to the west lie the Solomon Islands. The New Hebrides are quite extraneous to these groups."

A NEWSPAPER COPYRIGHT ACT.

Mr. Sidney Low, the editor of the *St. James Gazette*, gives us his meditations upon the present state of the Copyright Act in newspapers, which has just been promoted by the recent action taken against him by the *London Times*. He makes the following suggestions as to the framing of a satisfactory Newspaper Act: "The registered proprietors or publishers, not the 'authors,' to be regarded as the owners of all the copyrights; the fact that the paper is properly registered to give the proprietors a right to sue for infringement of copyright, irrespective of any arrangements made with contributors; no proprietor to be able to take proceedings for infringement of copyright, unless it can be shown that he has warned off trespassers by hoisting the red flag over the whole journal or over any particular literary article in it; subject to such warning any literary article to be capable of being protected in the same way as if it had been contributed to a monthly magazine or similar periodical; and finally, news not to be the subject of copyright at all."

HOW I WOULD TAX LUXURIES.

Colonel Howard Vincent, in an article entitled "Common Sense at Last," enthusiastically applauds Lord Salisbury's suggestion of retaliatory duties. He thinks that in negotiating treaties with France and Spain Lord Salisbury's suggestion would give England a weapon by which she could bring them to their knees.

He says: "With each country we absolutely hold the master hand, not only as their best customer, but as having it in our power to cripple a large proportion of the population, and thus gain any electoral result we choose, and simultaneously to confer a great benefit upon our own people by diminishing the consumption of foreign alcohol. An extra tax upon the £4,000,000 worth of French wine and brandy, or the £858,000 worth of Spanish wine; a duty on the £7,000,000 worth of French silk manufactures, or the £1,000,000 worth of French boots, shoes and gloves; or on the £5,000,000 worth of French woolen manufactures brought into this country would soon bring our neighbors to a reasonable frame of mind."

SOME VITAL STATISTICS.

In an article on "Sedatives and Modern Life," Dr. Tom Robinson gives the following figures in order to prove that it is nervous diseases which drive people into dram-drinking and drug-taking. Deaths from old age have fallen off, while deaths from diseases of the nervous system and from cancer have greatly increased.

ANNUAL DEATH RATE FROM VARIOUS CAUSES IN A MILLION PERSONS.

Disease.	1861-65.	1866-70.	1871-75.	1876-80.	1881-85.	1886-90.
Intemperance.....	41.6	35.4	37.6	42.2	48.0	50.0
Cancer.....	367.8	403.8	445.6	495.2	544.6	599.7
Phthisis.....	2,526.6	2,447.8	2,218.0	2,040.0	1,820.6	1,616.7
Old Age.....	1,352.8	1,275.8	1,206.8	1,072.2	1,008.6	974.0
Nervous System..	1,546.0	1,605.2	1,716.0	1,803.6	1,797.6	1,785.3

THE NINETEENTH CENTURY.

IN the present number Editor Knowles does his best to convert the *Nineteenth Century* into a Unionist pamphlet. It begins with Mr. Edward Dicey's paper on "The Choice of England," and closes with the opinions of no fewer than ten persons, who explain why they are going to vote for the Unionists. There is not much, nor anything that is new, in any of their articles. The only thing that is worth mentioning is Mr. Dicey's cock-sure confidence that the Unionists hold the winning cards. "If we fail to win I, for one, shall attribute the failure to no other cause than our want of ability to make the best of our position." He cannot, however, bring himself to believe, even for a moment, that the people of England will be so stupid as not to agree with him on this occasion. Therefore, the polls are to result in the crushing defeat of the Gladstonians. "Success lies within the grasp of the Unionist party. If they fail to obtain success it is with them will rest the fault."

JAMAICA AS A HEALTH RESORT.

The Duke of St. Albans has been visiting Jamaica, and he wants his wife and all the world to follow his example, especially if they are in need of a milder climate.

He sums up his paper as follows: "I have been asked the following questions about the merits of Jamaica, which I think may be answered as follows: For a sportsman? No, though a good bag of wild pigeons can be made. The marshes in the West Indies are dangerous for any one not

acclimatized to the tropics. For the yachtsman? No, the Caribbean Sea is too rough for pleasure cruising, and the currents perplexing. For the invalid? Yes, he will find a climate which extends to him a sure and safe recovery; but let him be warned against returning to a cold climate before the summer is well advanced, and he must be careful to wear light but woolen underclothing. For the botanist? Yes, a perfect Paradise will open to him; 450 different species of ferns will reward his search, besides an abundant tropical vegetation. For the naturalist? Yes, there are many valuable kinds of butterflies and other insects to be secured, but the collection of humming-birds and other small birds is forbidden without a special permit. To sum up, the voyage out is easy and pleasant, if it were not for the waste of time, and the return journey can be made by New York."

THE HAREM VIEW OF TURKISH MARRIAGES.

"Adalet" describes how marriages are arranged in Turkey. It is a very curious story. The girls are not allowed to see their husbands until they are married to them. The girl must seem to be entirely ignorant of the meaning of a betrothal, she must cry when the ring is put on her finger, but must not admit that she understands what it means until the contract is settled, when for the first time she is allowed to recognize the fate that has been prepared for her, and then it is her duty to fall back in a dead faint. Even after that she must not ask any questions about the name, family or character of her betrothed, nor must she ever try to see him from afar. Notwithstanding this arrangement, which seems to have been malevolently contrived in order to make marriage a failure, "Adalet" does not think that Turkish marriages turn out so badly on the whole.

"I have seen girls brought up in every kind of indulgence, and who have never been thwarted in their whole lives, bow down before the authority of their husbands, and obey without a murmur the orders of a man who a few months before was entirely unknown to them, and I cannot help admiring a system which, whilst asking for so much devotion and sacrifice on one side, so rarely degenerates into tyranny on the other."

ARMINIUS VEMBERY ONCE MORE.

Arminius Vembery, that industrious and pertinacious Hungarian, who now adds to his other enormities that of spelling Colossus with a K, once more takes up his parable about the situation in Central Asia. This time he is not quite so gloomy as usual. He says: "In order to secure a position which corresponds to the standing of Russia in and near Khorasan, England will be sooner or later compelled to round off the present frontier between Beluchistan and Eastern Persia in order to get such a footing in Sistan as will enable her to counteract and to threaten any Russian movement either from Ashkabad or from Dushakh toward Meshed."

If that is done he almost promises to be happy forever afterward, for he says: "The grandiloquent sentence of Skobelev to arrange a march *à la Timur* to the Indus and to expel the English from the peninsula by means of a hard blow struck in front, is to-day obsolete. With the aid of the scientific frontier, completed through the position in Sistan, England will have made perfect her means of defense against the attack of Russia. As to the prospect of fomenting a mutiny in the rear of the English army of defense in India, I am glad to say that here too a great change for the better has taken place."

GENERAL ELECTIONS IN AMERICA AND ENGLAND.

Mr. Andrew Carnegie writes an instructive paper on the subject, "General Elections in America and England."

which he contrasts the English with the American methods of conducting an appeal to the country, very much to the advantage of the Americans. The chief difference is that the English system is much less conservative than the American. In comparing the legislators of the two countries, Mr. Carnegie says :

"I think the average American Congressman much less vain and much more modest, and infinitely more mindful of the wishes of his colleagues, than the average British M. P., for he scarcely ever bores the House or consumes its valuable time by inflicting upon it the "great effort" he has prepared not to inform the House, but to electrify the rustics at home."

He gives the English hope, however, that before long they may approximate to the American ideal of excellence. "The contrast between the Monarchy and the Republic, great as it is at present, is one which I believe is to become less and less year after year, until the two great branches of the English-speaking race, possessed of the same language, literature, law, and religion, shall also possess the advantages of similar conservative constitutions."

MUSIC FOR THE MASSES.

Mrs. Julian Marshall, who is a great admirer of the Tonic Sol-Fa system, thinks that England is making great progress in the musical education of her people. "In the Board Schools the great mass of British children are receiving such a thorough grounding in the elements of music as must remain with them through life. A good Tonic Sol-Fa is a good theoretical and practical musician."

No advantage, however, is to be obtained without a sacrifice, and she pathetically deplores the misery which is inflicted upon long-suffering humanity by the endless practicing which goes on all around. Still she thinks this hardship must be endured as best it can, with this reflection for consolation: "Fifty people who never could be fifty effective solo-performers (and of whom there would be too many if they could) may, by combination under capable direction, produce an effect beyond the reach of any solo-performer in the world. This is the triumphant and only answer to those who, weary of sound, ask ever and anon, 'To what purpose all this music?' Music in masses is the modern art."

ASTRONOMY AND WORSHIP IN ANCIENT EGYPT.

Mr. J. Norman Lockyer publishes under this title an elaborate study, in which he seeks to prove that "there is, in all probability, a close connection between the mythology of the ancient Egyptians and the observations of bodies rising and setting, which they, like all the other early nations, had to make for the uses of their daily life."

In working out this thesis, he says: "I assume the personification or the deification of stars; I indicate special orientations of buildings devoted to the worship of some star or another; and I suggest an instance—a very remarkable instance—of a change of cult in a temple."

OTHER ARTICLES.

Professor Mahaffy takes occasion of the tercentenary of Trinity College, Dublin, to write the history of that institution, and Sir Henry Elliott gives us a popularly written sketch of Sir John Franklin.

THE *Westminster Review* for July is exceedingly dull. The articles on "The Old Irish Parliament," "Irish Lawyers," "The Tyranny of Canvassers," "The Equality of the Rural Wage Rate," and the "Emigration Problem in America" may be very good solid reading in their way, but the *Review* sadly needs livening up.

HARPER'S.

WE review among the "Leading Articles of the Month" Mr. Henry Loomis Nelson's article on "The Growth of the Federal Power," and Mr. Poultney Bigelow's, "The Czar's Western Frontier."

The magazine patriotically makes a feature of a considerable paper by Mr. Charles D. Deshler, entitled "How the Declaration was Received in the Old Thirteen," and Mr. Howard Pyle's well-known illustrations of Continental costumes and scenes add to the attractions of this tribute to the original Glorious Fourth. Some of the Fourth of July oratory that Mr. Deshler unearths compares favorably with the later survivals.

People who have the Sir Samuel Baker temperament will delight in the novel description of elephant-hunting in Mysore, which Mr. R. Caton Woodville contributes, accompanied by very striking pictures from his drawings. It is not the killing of elephants which he describes, but the capture of wild ones to be domesticated. The wiles of the forest-roaming old trumpeters and the cunning of the tame elephants which assist in their capture make interesting reading. Mr. Woodville accompanied a famous hunter, a Mr. Sanderson, to the Kheddah, or huge trap, over a mile in circumference, into which the native beaters drove the great animals. "How mysterious these huge brutes looked as they silently strode through the dark forest, breaking the bamboos in their way and tossing them over their heads! These wild elephants in their native jungle appear colossal, and have not that dark, almost black appearance that they acquire when tamed and frequently washed. In their natural state they are gray in color and covered with red clay and mud, with bits of grass and leaves sticking to them."

In purely literary features this July *Harper's* is exceedingly rich, with Mr. Lowell's essay on Marlowe and Mr. Lang and Mr. Abbey's treatment of "All's Well that Ends Well," to say nothing of Mr. Howells' and Miss Wilkins' serials. Mr. Lowell's essay in particular is the finest of his posthumous works which have been brought before us, if not of all his literary criticisms.

THE CENTURY.

MR. A. W. HARRIS' paper on "The Government and the Farmer," and Mr. Walter B. Hill's exposition of the "Great American Safety Valve," are noticed at greater length elsewhere.

One of the best articles in this number is Mr. Charles Waldstein's account of the recent finding of the tomb of Aristotle, in the course of excavation under his direction. The site of this "find," dear to the heart of the scholar and archaeologist, is in Eutria, a district of Eubœa. It was not without some trouble with the Philistine natives that Mr. Waldstein's party—from the American School of Athens—completed their important discovery, nor has he been able to prove beyond a peradventure to the doubters that it was *the* Aristotle whose last resting place he has unearthed, but the circumstantial evidence is very strong in his favor.

A very good descriptive article is "Negus Negusti and the Abyssinians," by Frederic Villiers who has very graphically illustrated his own text. Mr. Villiers found himself despised by the Abyssinian maidens on account of his "pink skin." But the white man has good reasons to reciprocate this disdain to judge from the description of the universal and accepted state of uncleanness and disease which characterizes the native. Indeed, the Church seems to have accomplished little if anything in the practical regeneration of this so-called Christian people.

A strong editorial in the "Topics of the Times" department seeks to lay the responsibility of political corruption in its proper place. "There has never been any corruption in politics," says this writer, "in any nation that the world has ever seen, in which the responsibility did not rest upon the man who offered the bribe rather than upon the men who took it. It does not lessen this responsibility if there be one or a dozen middlemen between the bribe-giver and the bribe-taker. What is wanted is a moral sense which will be as keen in political matters as it is in private and commercial matters. No reputable man ought to give a dollar for political purposes, unless he can have in return an accounting for its use. Every man who contributes to a large campaign fund, to be expended by a professional corruptionist without any public or private accounting of the uses to which it is put, is an accomplice in a gigantic scheme of bribery which he has helped to make possible."

This July number brings to a close Dr. S. Weir Mitchell's charming serial, "Characteristics," which has proved a very successful departure in psychological fiction; and the no less remarkable production of Mr. Kipling and Wolcott Balestier, "The Naulahka," also concludes with an ever-new chapter of the old, old story.

SCRIBNER'S.

THE July *Scribner's* is rather a pleasing number. Its *piece de résistance* is Mr. Joseph Kirkland's paper, "Among the Poor of Chicago," which we review on another page.

The "Historic Moment" described this month is that first of January thirteen years ago which saw the resumption of specie payments, accomplished by Secretary Sherman in the face of such discouraging surroundings and predictions. Mr. J. K. Upton recounts the financial events which led up to the consummation of the measure. It will be remembered that Secretary Sherman's theory was that a 40 per cent. reserve would be ample to establish gold payments, on the principle that as soon as people could get gold for their notes they would not want it. By the sale of bonds and other strenuous efforts, the Secretary finally succeeded in amassing \$135,000,000 of gold in the Treasury; but still the financiers of New York steadily predicted failure, one banker offering \$50,000 for a place "at the head of the line." People were so skeptical of the reserve fund that even the friends of resumption insisted on going into the vaults and handling the bags of gold before they would acknowledge its existence. But, notwithstanding these croakings, the first of January, 1879, came and went, as all the world knows, and instead of the anticipated run, three times as much gold was offered as was taken out. Mr. Upton's short paper is lucid and graphic.

Dr. Leroy M. Yale, noted physician, artist, *litterateur*, and last, but not least, enthusiastic disciple of the gentle Izaak, will stir the hearts of his brother fishermen by his paper entitled "Getting Out the Fly Books," evidently a labor of love with him. "The true angler," says Dr. Yale, "is not he whose pole is but the weapon of his predatory instinct. The love of the art must be above the greed of prey. With the boisterous fisherman and the picnicker with a fishing rod we have no concern. But among actual sportsman-like anglers the manifestations of the enjoyment of the recreation are as various as temperaments. Each exaggerates some of its pleasures, but he best realizes them whose rod is a divining wand, who has the widest sympathy with the outer world, whether it touch him through his scientific insight, his artistic sensibility, or

that nameless poetic feeling which longs for the sunshine, the wind and the rain."

It is a far different kind of fishing that Prof. N. S. Shaler tells of in his paper on "The Depths of the Sea," but it is not less fascinating, in a different way. He describes methods of dredging at great depths, and illustrations show some of the wonderful monsters adapted by nature to live beneath hundreds of fathoms of water. One queer fellow in particular has both eyes on one side of his body.

As to the more æsthetic features of the magazine, Mr. Stevenson and his collaborator bring "The Wrecker" to a close with some *éclat*, and Mr. Aldrich contributes a charming poem in "White Edith"—an elaboration of a bit of verse published by him in *Scribner's* four years ago.

THE COSMOPOLITAN.

IN another department we review at greater length Mr. Brander Matthew's paper, "The Literary Independence of the United States," and Mr. J. B. Harrison's, "The State and the Forest."

There are several other papers of serious worth in the number, and one of them, especially interesting to New Yorkers, is the description Jacob A. Riis gives of the Riverside Hospital and the good work which is going on there. After telling of the excessive sanitary precautions against the spread of contagion, the difficulty of "catching" the plague-stricken, ignorant foreigners, the heroism of Miss Kate Holden, the fearless Southern lady who acts as matron, Mr. Riis concludes: "As an institution North Brother Island is unique. There is nothing like it anywhere in the world. In the great cities of Europe they have floating hospitals for smallpox, and more or less isolated 'contagious wards' in their ordinary hospitals. The isolation secured in New York is absolute. It must ever be the chief defense of our city against this enemy that is forever knocking. Disinfecting the tenement houses is good as far as it goes; quarantine better, but in such localities next to impossible. Summary removal of the patient removes at once also the danger of further infection. The power to effect it is vested in the health officers. Of how great importance this is in a city constantly exposed, as New York is, to the importation of pestilence by sea and land, and where the packing of the population in the poor quarters is wholly unprecedented, with consequent conditions most favorable to the spread of a plague, was shown in the last outbreak of typhus fever among Russian immigrants who had passed through quarantine unchallenged. But for the Riverside Hospital, as the strongest link in the splendidly organized sanitary service, a disastrous epidemic could not have been averted. The cost of such a preventive is not to be considered for a moment were it three times the \$50,000 Riverside costs a year."

Mr. T. S. Perry is rather ironical and not very hopeful in his paper on "The Latest Literary Fashions of France,"—a title in which "fads" might easily have been substituted for the fourth word. Mr. Perry talks most of the Symbolists, so-called, about whom the most interesting and intelligible thing seems to be their study of word-harmony or color, and the orchestral effect of the vowels in poetry. This goes on at great expense of intelligibility, as is evident from the critic's quotations. Mr. Perry is pessimistic concerning the bright promises of such men as M. Rod, and the Vicomte de Voguë, who have been prophesying that we were in the dawn of a "new and fairer day" in literature, lit by a more lofty enthusiasm and nobler ideals. "If they are right, there is one thing certain: we shall not be idealists of the old-fashioned sort.

Schools and aims change, but they never go back to what they have been before." —

THE CHAUTAUQUAN.

IN the *Chautauquan* for July, Mrs. L. E. Chittenden explains "Why American Children are Nervous." Dietetic causes are perhaps most to blame, so this writer thinks. Tea and coffee, late hours, clothes too tightly cinched, small shoes and insufficient exercise do the fell deed which leads to sallow faces in youth and nervous prostration later.

Dr. J. M. Buckley has some timely words of physiological wisdom on "Summer Vacations and Physical Culture." To the young man turned out of the office for a few weeks to "kick up his heels" at tennis or base ball, this advice will be of value: "Begin unusual exercise gradually, and do not reach the maximum of exertion until one full week, at the least, of regularly increasing exertion has been accomplished. Disregard of this has often made a vacation worse than useless. . . . Another safe rule is to eat nothing after exercise until there has been at least half an hour of rest. . . . Never to take any long-continued exercise which requires breathing with the mouth open, and not to take any unusually severe exercise in a high temperature are essential to safety."

There is a purely literary article of some length by John Vance Cheney, entitled "A Study of Cowper," and Noble Canby writes on "The Great Exposition at Chicago."

THE ATLANTIC MONTHLY.

WE review as a leading article the paper by Theodore Roosevelt on "Political Assessments in the Coming Campaign."

The place of honor is this month given to a critical discussion of General McClellan, from the point of view of his military career. Eben Greenough Scott is the essayist, and he comes to the conclusion, after a seemingly fair treatment of the subject, that McClellan was not a great captain. McClellan, thinks this writer, "had an unerring eye for favorable positions whereon to fight, and he took things coolly. His great fault was . . . allowing the single strategical idea which filled his mind to prevail over present tactical conditions." He was "not quick to comprehend the situation, lacked fertility of resources—shrank from taking the initiative, and had not the art of drawing victory from defeat, nor even of profiting by victory."

The magazines of the Atlantic coast can certainly not be reproached at present for any snobbish scorn of the Great West; still another article on "Chicago" appears here in Mr. Scudder's magazine, from the pen of Edward G. Mason, and it is one of the best that has appeared, in a modest way. He finds the leading trait of the citizens of Chicago "their desire and intention to do in many ways the best for their city as a whole." He calls particular attention to the magnificent library growth in the city, and the magnificent university to bear its name, to which fifteen hundred students have applied for admission before the opening of its doors. When the time comes to criticise, Mr. Mason finds the chief defect of Chicago "in the matter of its local government, which is in especial disrepute just now. Its valuable franchises, which should have paid its municipal expenses, have been parted with for a song, and a number of its aldermen are under indictment for corruption. It is true that this evil is more or less general in our land, and a high authority has pronounced the government of cities the one conspicuous failure of this country." But Chicago is too young and

vigorous and self-sustaining for that sort of thing, Mr. Mason thinks.

There is a somewhat readable essay, entitled "The American Idealist," by Gamaliel Bradford, Jr., who wrote in the same magazine not long ago on the cognate subject of the American pessimist. "When the American," says Mr. Bradford, "is possessed by the idea, he is possessed by it thoroughly; not with a Celtic unreason, but with an enthusiasm that seems quite out of harmony with his ordinary half-skeptical self, and that goes great lengths. The most interesting point in the history of American thought is the transcendental movement of the first half of this century, which was idealism incarnate. Practically it showed itself in that curious experiment, Brook Farm, which was an attempt to realize what has been, in one form or another, the social Utopia of all idealists; an attempt to overcome the biting stress of individualism, to 'pool,' as the railroad men say, the interests of all humanity—an attempt which failed. What was far more serious, and what did not fail, was the great anti-slavery movement, as truly a result of idealism here as was the French Revolution in Europe, and managed in a far purer spirit."

THE NEW ENGLAND MAGAZINE.

PROF. ELIHU THOMSON contributes an article on "Future Electrical Development." Of the possible advances in electrical mechanics, none is more striking than the attempt to telegraph through the medium of the air alone, without any metallic medium. "Had we," said Mr. Thomson, "the means of obtaining electrical oscillations of several millions per second, or waves similar to light waves, but of vastly lower rate of vibration, it might be possible by suitable reflectors to cause them to be carried a mile or so through a fog, and to recognize their presence by instruments constructed for the purpose. Many of the difficulties and dangers which now beset the navigator would, at least, be lessened, if not removed." Another point of great importance in electrical progress is the application of water-power to manufacture the fluid, and, of course, in such attempts the utilization of the great Niagara power has the first place in interest. Mr. Thomson tells of the transmission of water-power over a hundred miles to the Frankfort Electrical Exhibition.

There is a capital article on "The Republic of Mexico," by Don Cayetano Romero, First Secretary of the Mexican Legation. Of the relations between the United States and the more Southern republic, the writer says: "There is no reason in the world why the trade between our two countries, which are only separated by a narrow river and an imaginary line, should not attain much larger figures than at present. We need in Mexico your machinery to work our mines, on the most important sources of wealth, your agricultural implements for the development and cultivation on a large scale of our rich and fertile lands, your manufactured goods; while in exchange you need our mineral ores, our textile fibers, our coffee, hides and skins, tobacco, precious woods and other raw material, to feed your manufactories."

Another exceedingly good paper is Franklin B. Heads' "The Heart of Chicago," which really gives a much more lucid and attractive idea of the important parts of that great city than could any general article. "The most noticeable feature of the heart of Chicago is its size. The business of this city, covering an area of one hundred and eighty-one square miles, is substantially all done and managed in an area something less than thirty-five hundred feet square. The city has some thirty large banking

establishments, nearly all of which would be embraced in a circle with a radius of nine hundred feet."

Edward Angus Freeman is the subject of a critical essay by William Clarke, who says: "It cannot justly be said that Freeman was a profound thinker. He was a thorough Englishman, with some of the characteristic limitations of the English mind. He was not a philosopher nor an idealist, but a plain, blunt man, on whose original nature was grafted a splendid classical and historical culture."

LIPPINCOTT'S.

THE novelette of *Lippincott's* for July is "White Heron," by M. G. McClelland, whose portrait is the frontispiece of the magazine. A paper on which W. E. Hughes and Benjamin Sharp collaborate tells of "Peary's North Greenland Expedition," apropos of the relief party which is just starting North to bring that fearless explorer home. Miss Agnes Repplier, in reviewing the "Memoirs and Correspondence" of John Murray, is exceedingly clever in her tale of the "Trials of a Publisher," and truly her tribute to the patience and generosity of the great English publisher will weaken the traditional sympathy with the poor author, much abused as he is supposed to be at the hands of his business man. In the Journalist Series Max de Lipman writes on the "Newspaper Illustrator's Story."

CALIFORNIAN ILLUSTRATED MAGAZINE.

ELSEWHERE we review at greater length Mr. Fred. H. Hackett's paper on "The Schools of San Francisco."

A very picturesque article, in illustration and text, is Mr. Olaf Ellison's description of "A Southern California Mountain Railroad," the road in question being the Pasadena, which runs through the magnificent Sierra Madre mountains to a well-appointed hotel three thousand five hundred feet above sea level. Mr. Ellison is enthusiastic over the possibilities of this beautiful country. He says: "Los Angeles and Pasadena are the geographical and social centers of a tourist region that is rapidly becoming, to the North American Continent, all and far more than Switzerland ever has been to Europe at large. The Swiss summer season is confined within the limits of three months. . . . Southern California, on the other hand, enjoys five months of an ideal spring season, lasting from January to the close of May." In another paragraph Mr. Ellison says that the visitor can enjoy a sleigh ride at

Christmas, pick strawberries and oranges, and bask in the Pacific, all in one forenoon—suggestive of the possibilities of the Golden State."

Mr. C. T. Hopkins, writing on the question, "Shall we Educate Our Politicians?" answers strongly in the affirmative, recommending that colleges for that purpose be established by existing universities, by wealthy philanthropists, and in connection with the proposed National University. Mr. Hopkins' conclusion, which he thinks strong enough to put in italics, is that the only mode of checking the present infection of corruption in American politics is by elevating politics into a learned profession."

DOMINION ILLUSTRATED MAGAZINE.

FRANK YEIGH contributes his concluding paper on "A Century of Legislation in Canada," which possesses a certain timeliness because of the fact that this is the 100th anniversary of the Convocation of the first Parliament of Upper Canada. There are several articles giving pleasant outing descriptions of camping and fishing parties in the region of the beautiful Canadian lakes, and Ernest M. Taylor writes on the Dominion Educational Association Convention which in July met in the city of Montreal, and in which Roman Catholic teachers and Protestant instructors came together on a common platform, and in the school exhibition vie with each other in a friendly rivalry.

GOLDTHWAITE'S GEOGRAPHICAL MAGAZINE.

IN *Goldthwaite's* for July, the editor of the *Panama Star and Herald* writes on the Pan-American Railway, to say that the three commissions of engineers engaged on the preliminary surveys seem to be doing their work well and intelligently. After tracing out the proposed course, he says: "It is an undertaking attended with enormous difficulties, and, although the ultimate full development of the great Southern Continent and Central America largely depends on the construction of such an overland connecting link with the Northern Continent, we may well be forgiven for entertaining a doubt as to whether some further degree of local development all along the line of the Latin Republics may not be found to be a necessary antecedent to the actual construction of the gigantic highway of commerce now projected." In another paper the editorial hand is applied to the description of the "World's Peanut Center," which is Norfolk, Va.; and Captain William H. Parker continues his papers on "Columbus and His Times."

THE FRENCH REVIEWS.

THE REVUE DES DEUX MONDES.

IN the *Revue des Deux Mondes* for June, M. Taine continues his excellent articles on the "The Reconstruction of France in 1800." The present installments deal with the work done by Napoleon in the cause of secondary education—"the most personal, finished and complete of all his works." Elementary education he did not encourage. The primary schools received no State subsidy (unless we may count 25,000 francs allotted to the Christian Brothers in 1812—of which only 4500 were ever paid to them). It was not his object to develop the intelligence of the peasant and the artisan. They were to have as much instruction as would suffice to enable them to

obey orders—not a whit more; while training afforded by the secondary schools and the universities was intended to fashion a race of officers who were to be his levers for moving the military machine he wished to make of the nation.

M. Etienne Lamy writes on the "Duty of Conservatives," who, he contends, ought to throw in their lot with the French Republic in order to give it that element of order and stability it lacks at present, instead of remaining inactive because they cannot restore a dead *régime*.

M. Jusserand contributes a readable paper (which, however, contains nothing particularly new to English readers) on the building up of the English character through

successive invasions and mixtures of blood. He particularly dwells on the effect of French influence in developing the lighter side in character, art and literature. "Europe," he says, "has seen two renaissances—one in the eleventh century, the other in the sixteenth; the one was, in the first place, French, the other primarily Italian. In the eleventh century, the French were what the Italians were four or five hundred years later—great initiators. Original architecture, with its cathedrals and its castles, the universities, the scholastic philosophy, the Crusades, the epics of chivalry, the *fabliaux*, were, at this point of time, born in our country, and spread thence to others. This art, this intellect, this literature, these ideas crossed the channel with the Norman, or followed him shortly afterwards into his new country. The literature introduced by the conquerors is very different from that which they find in the country. They were not built to feel the Saxon despair and the Saxon melancholy; they were happy, they succeeded in all they undertook. They wanted a literature of happy people. They have their epic poems, but graceful love stories take the place of *Beowulf* and the *Volsungs*. They have *fabliaux*, merry tales—the comic stories of Reynard the Fox; they have love lyrics, caressing and happy, of a kind unknown to the somber mysticism of the North. In short, to sum up in a word the difference between this epoch and the previous one: On the lips of the victors of Hastings the ode became a song."

M. G. Valbert reviews a German pamphlet ("Berlin Wein-Rom") in defence of the Triple Alliance, supposed to have been written by Herr von Eckardt, Consul-General at Stockholm, and containing a passionate plea for the recent policy of the German Empire. M. Valbert concludes his survey thus: "Whatever the anonymous writer may say, the Triple Alliance is to a great extent the cause of the incurable *malaise* weighing upon Europe, which has been forced to arm to the teeth. Is it not feared that, after groaning under the ever-increasing burdens of an armed peace, the nations may not come to wish for a crisis which horrifies them? Unhappily there is nothing left for us but to accommodate ourselves to the consequences of our destiny. Unless there should be a sudden lighting up—which, so far, there is nothing to announce—our skies will remain gray for a long time to come. Europe will long continue to suffer from a strange disease which is aggravated by her physicians while they are pretending to relieve it; and there will still be found anonymous writers to declare that coalitions are the best guarantees of peace, that all governments who do not admit that their fate depends on a small piece of paper (which is not shown them) give proof of bad faith and corruption; and that if they concert measures among themselves for the defence of their interests, they must be pointed out to the world as disturbers of the public peace and incorrigibly given to picking quarrels."

The Vicomte d'Avenel continues his "History of Personal Property" in the number for June 15. The present installment deals with the coinage and the rate of interest, a subject bristling with difficulties and complications. When (as in the thirteenth century) there were no less than eighty prelates and barons who had the right of coining money, the varieties of coin in circulation were infinite; and the standard unit, the "livre tournois," was at any rate, after 1200, not a coin, but a purely imaginary value. Whether there ever were "livres tournois" coined under Charlemagne is a disputed point among historians. Even at the present day, with the decimal system in full

swing, the peasants in some parts of France continue to calculate by nominal values—the pistole in Lower Normandy, the real in Brittany—though these Spanish coins were never at any period struck in France. In the same way the designations *écu* and *louis* are still used, though no such coins exist.

It is curious to remember how very recent is the growth of what we call political economy; how short a time ago, comparatively, people had not even a suspicion that the laws of supply and demand, or the rate of exchange, could depend on anything but the wills of individuals or governments. Montesquieu, writing in the eighteenth century, says: "Silver has, as money, a value which the prince may fix; he establishes a proportion between a quantity of uncoined silver and the same quantity, as money; he fixes the proportion between the different metals employed in coinage, . . . lastly, he gives to each piece an ideal value." The practice of governments in interfering with the coinage was, as is well known, quite in accordance with this theory. Either the coinage was debased by admixture of other metals than gold or silver—which was looked on as robbery, and, if possible, resisted to the utmost by the nation—or a fictitious value was given by official proclamation to the existing coinage, which, though odious, was considered quite legal and within the rights of government.

THE NOUVELLE REVUE.

THE most interesting article in the *Nouvelle* for June is M. Maurice Gilbert-Bondin's, on Mr. Thomas Burt, noticed elsewhere. M. Hector de la Ferrière contributes a study of "Anne Boleyn, from new documents," which, though he does not expressly say so, seems to be based on Mr. Froude's book. Dr. Lombroso has a scrappy but very interesting and suggestive paper on the "Exhaustion of Genius." A curious case is quoted, of color-blindness induced by mental overwork, which disappeared after a few hours. Some find arithmetical or algebraic operations a relief to the tired brain; others, on the contrary, are rendered by fatigue absolutely incapable of doing them correctly. The difficulty of translating when tired has often been noticed—it is partly due to the local and temporary loss of memory caused by fatigue, partly to the general depression of mental organs. Some of the symptoms of mental fatigue are: 1. Incapacity for seizing the sense of even the simplest things. 2. Want of "fixative memory." In reading one finds it quite impossible to assimilate the matter one reads. 3. Reading a sentence without being able to say what one has read. 4. Confusion alternating with excessive clearness of thought. 5. Wandering attention. Incapacity on the part of pupils of seizing rapidly and completely what has been told them. "No proofs are needed to confirm the well-known fact that energy fails as fatigue increases. New subjects weary us, to teach slow pupils becomes, so to speak, impossible. A sustained effort, a prompt decision, are alike impossible."

Mr. B. Jeannine writes on Nietzsche—the "Apostle of Force"—who has recently obtained so large a following in Germany, and who has ended, like Guy de Maupassant, in a lunatic asylum. M. L. Sevin-Despluis comments on the Uganda massacres. M. Henri Chantavoine continues his criticisms on the salons. M. L. A. Levert writes on the Cran (the shingly desert at the mouth of the Rhone) and the possibilities of its reclamation, and M. J. Lefebvre opens a series of philological articles on the Neo-Latin languages.

POETRY AND ART.

POETRY IN THE MAGAZINES.

THOMAS BAILEY ALDRICH appears in the *Atlantic*, in *Scribner's* and in *Harper's* for July. The beautiful *Scribner's* poem, "White Edith," is too long to quote. Of the "Two Moods" in *Harper's*, the second is pictured as follows :

Though I be shut in darkness, and become
Insentient dust blown idly here and there,
I hold oblivion a scanty price to pay
For having once had held against my lip
Life's brimming cup of hydromel and rue—
For having once known woman's holy love,
And a child's kiss, and for a little space
Been boon companion to the Day and Night,
Fed on the odors of the summer dawn,
And folded in the beauty of the stars.
Dear Lord, though I be changed to senseless clay,
And serve the potter as he turns the wheel,
I thank Thee for the gracious gift of tears !

In the *Scots Magazine* for July there are some verses entitled "Do Doggies Gang to Heaven? Will Donald Gang?" suggested by a picture by MacTaggart, R. A. The little boy asks his father :

"Do doggies get to Heaven, dad?
Will oor auld Donald gang?
For no to tak' him, faither, wi' us,
Wad be maist awfu' wrang!"

He then recounts the number of kindly services which had been rendered to the family by the old dog, Donald, and says :

"Without are dogs! Eh, faither, man,
'Twad be an awfu' sin,
To leave oor faithfu' doggie there—
He's *certain* to win in.

"Oor Donald's no like ither dogs,
He'll *no* be lockit oot:
If Donald's no let into Heaven,
I'll no gang there one foot.

Mr. E. H. Hickey, in the *Leisure Hour*, has a good story which is rather touching. He and his friends had been bathing from a boat in a Russian river, when they saw a gray wolf kill a deer. The wolf left the body and went off over the hill. Hickey and his companion rowed the boat over the river, lifted the carcass, and returned again to the other side. After a time they returned :

Hungry and cold we watched and watched to see him return on his track;
At last we spied him atop of the hill, the same gray wolf come back.
No more alone, but a leader of wolves, the head of a gruesome pack.
He came right up to the very place where the dead deer's body had lain,
And he sniffed and looked for the prey of his claws, the beast that himself
had slain;
The beast at our feet, and the river between, and the searching all in vain!

He threw up his muzzle and slunk his tail, and whined so pitifully,
And the whole pack howled and fell on him—we hardly could bear to see.
Breaker of civic law or pact, or however they deemed of him,
He knew his fate, and he met his fate, for they tore him limb from limb.
I tell you, we felt as we ne'er had felt since ever our days began;
Less like men that had cozened a brute than men that had murdered a
man.

In the *Fortnightly*, Mr. Swinburne spreads over five pages his elegy on Sir Richard Burton, but as he does not name him until the last verse, there are many who will read it without knowing who he is writing about.

POETRY.

- Albemarle.—July.
Poppies. E. K. Chambers.
Atalanta.—July.
A Song of Summer. (Illus.) Elinor M. Sweetman.
To a Child. Eila Fuller Maitland.
Atlantic Monthly.—July.
Unguarded Gates. T. B. Aldrich.
The Calumniator.
Belford's Monthly.—July.

New England Magazine.—July.

Impressionism in Painting. William Howe Downes.

Scribner's Magazine.—July.

The Art of Ravenna. (Illus.) E. H. and E. W. Blashfield.

Strand Magazine.—June.

How a Sculptor Works. (Illus.) A. T. Story.

Here are four verses, the first three characteristically Swinburnian, and the last is the only one in which the subject of the poem is named:

Priests and the soulless serfs of priests may swarm
With vulturous acclamation, loud in lies,
About his dust while yet his dust is warm
Who mocked as sunlight mocks their base blind eyes,

Their godless ghost of godhead, false and foul
As fear his dam or hell his throne: but we,
Scarce hearing, heed no carrion church-kite's howl
The corpse be theirs to mock; the soul is free.

Free as ere yet its earthly day was done
It lived above the coil about us curled
A soul whose eyes were keener than the sun,
A soul whose wings were wider than the world.

But not the soul whose labor knew not end—
But not the swordsman's hand, the crested head—
The royal heart we mourn, the faultless friend,
Burton—a name that lives till fame be dead.

In *Scribner's Magazine*, Julia C. R. Dorr, writing on marble statues, "with pale hands folded in imploring prayer in Canterbury Cathedral," says:

Yet evermore they pray!
We creatures of a day
Live, love and vanish from the gaze of men;
Nations arise and fall;
Oblivion's heavy pall
Hides kings and princes from all human ken,
While these in marble state,
From age to age await
The rolling thunder of the last amen!

ART IN THE MAGAZINES.

C. STUART JOHNSON, in an article on Jean Leon Gerome, published in *Munsey's Magazine* for July, has this to say of his attitude toward the rival schools of art: "In his views of art Gerome himself, originally an innovator, is a conservative, a classicist, but by no means an indiscriminating opponent of latter-day ideas. Of the *fin de siècle* experiments of his younger contemporaries, he has said: 'I observe with interest all these different manifestations, because, on the whole, movement is life.' But he adds, 'nevertheless, I avow, it seems to me we are a little too near the earth. In an exhibition of two thousand pictures you may see many canvases well painted and of a truthful and striking appearance, but you may deem yourself fortunate if you run across two or three works that appeal to your heart and soul. Too many painters have abandoned themselves to realism, to common-place and unintelligent realism; this has killed the spirit, and poetry has fled to the heavens. . . . It is so much easier to paint three fried eggs than to execute the ceiling of the Sistine Chapel! But all this will pass like a shadowy phantom, and it need not make us uneasy.'"

The Blashfields have in *Scribner's* for July a pleasant article, delightfully illustrated, on the "Art of Ravenna." Among other notable objects of æsthetic interest, these tourists saw more lovely women in Ravenna than anywhere else in Italy—not occasional beauties, as in other towns. They seemed to go about in threes and fours, all handsome, of a noble, round-chinned, straight-nosed type. As to the Ravennese art outside of the flesh and blood features: "It is hard to say enough of their unique color, which is not silvery and gray, like that of modern schools of painting, not tender like the Umbrian, or warm and golden like that of the great Venetians, but deep-glowing and solemn, like the tone of a bell or the thunder of an organ. There are the gold of Byzantium, the purple of Cæsar, the blues and greens of the chariot factions. The walls glisten with a sheen like that on a peacock's neck, or the wings of a moth butterfly—with tawny red like the rind of a pomgranate, the blue of a Persian turquoise melting imperceptibly into green, and orange glowing into red or darkening into purple. Even the delicate coiffed with strange capitals are more like Indian ivory than marble."

Herr Poetzelberger, the painter of "The Old Spinet," reproduced in the *Magazine of Art* for July, is "An Austrian who is taking high rank and rising into well-merited popularity. He has done much more important work than 'The Old Spinet,' but nothing which more clearly exemplifies his frankness, his artistic fibre and his agreeable power of pleasing."

THE NEW BOOKS.

THE WRITINGS AND SPEECHES OF GROVER CLEVELAND.*

MR. GEORGE F. PARKER, who is responsible for this volume of Mr. Cleveland's utterances, is the gentleman to whom the readers of the *REVIEW OF REVIEWS* are indebted for the admirable and thorough character sketch of the distinguished head of the Democratic party which appears in this number. Mr. Parker was authorized to compile the volume before us for precisely the same reason he was selected to prepare the sketch for *THE REVIEW*—namely, because no one else was so well qualified to do the work. It was no easy or perfunctory task to which Mr. Parker set himself when he undertook to bring together in a volume, with proper arrangement, all the speeches, messages and miscellaneous public addresses of Mr. Grover Cleveland. The result is one upon which the ex-President should certainly be congratulated; for he possesses in Mr. Parker an editor of rare thoroughness, discrimination and ability. Mr. Cleveland's most casual speeches and addresses come to have a permanent value now that they are assorted and placed in connection with all his other utterances upon similar topics. The documents are arranged under twenty-five chapter heads. Thus we have his speeches and letters accepting nominations brought together; in one group we find his utterances on civil service reform; in another his messages, vetoes and speeches upon the pension question. A large proportion of the material contained in this volume would have been absolutely inaccessible even to the most diligent inquirer but for Mr. Parker's labors as a rescuer of fugitive newspaper reports, and as a skillful compiler. The volume will have a permanent and historical place. Its careful introductory chapter is exceedingly creditable to Mr. Parker as an interpreter of the nature, method and value of Mr. Cleveland's public utterances. The book is one which will repay careful study. It can but deepen and strengthen the good opinion which Mr. Cleveland has won as a writer and speaker. Republicans as well as Democrats will find the volume indispensable for campaign purposes. Thus if it is desired to know what Mr. Cleveland has said upon the question of silver coinage, chapter fifteen contains precisely the documents which embody his views

GEORGE F. PARKER

and utterances upon that subject; similarly his views upon civil service reform, the tariff, and a variety of other leading questions are here brought into orderly juxtaposition.

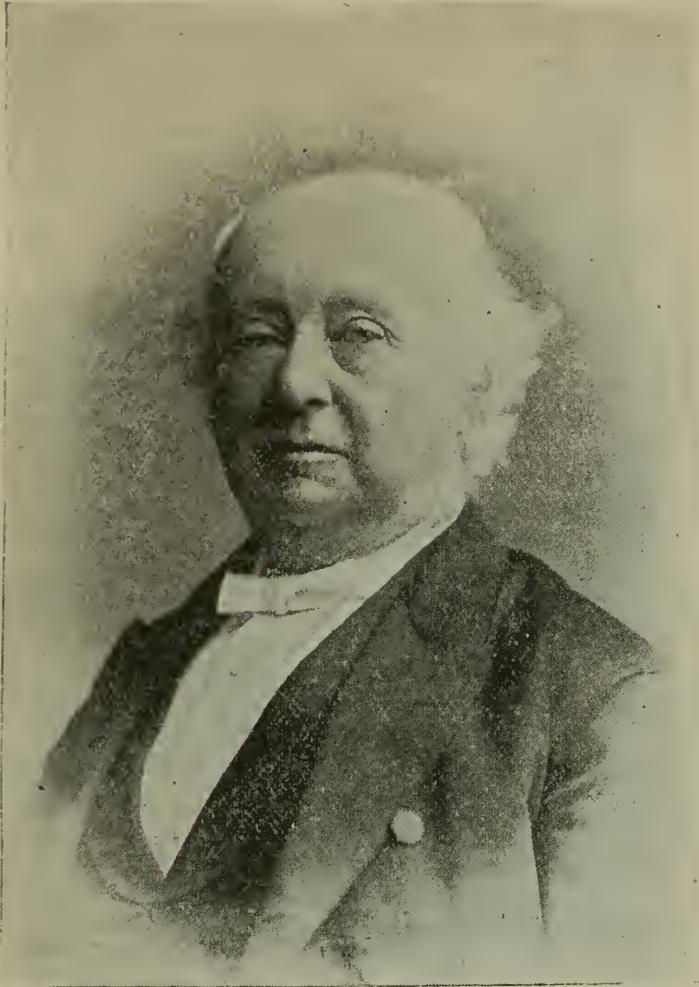

PROFESSOR JOWETT'S REVISED "PLATO."*

WHATEVER may be the fate of old men in other walks of life, the hoary head is certainly a crown of honor in the fields of scholarly research. The United Kingdom especially may boast its distinguished group of grand old men of letters and learning. Elsewhere, Prof. John Stuart Blackie, of Edinburgh, contributes to the

*The Writings and Speeches of Grover Cleveland. Compiled by George F. Parker. 12mo, pp. 598. New York: Cassell Publishing Company. \$2.50.

*The Dialogues of Plato. Translated into English with Analyses and Introductions by B. Jowett, M.A., LL.D. Third edition, revised. Five vols., 8vo. New York: Macmillan & Co. \$20.

pages of this number of *THE REVIEW OF REVIEWS* a bright and vivacious article in indorsement of Mr. Stead's disquisition last month, entitled "How to Learn a Language in Six Months." This venerable Scotch professor of Greek was born in 1809, and is therefore in his 84th year. The freshness and activity of his mind may well be inferred from his contribution. Professor Blackie is one of the men who by the breadth of his views and the versatility of his powers has made himself one of the members at large of the English-speaking race. But, perhaps even more marked in his influence upon the minds of the student class wherever the English language prevails, is the

PROFESSOR B. JOWETT.

now venerable professor of Greek in the University of Oxford, who is also master of Balliol College, Professor B. Jowett. Wherever English students concern themselves

with Greek philosophy and classical literature, there Professor Jowett's "Dialogues of Plato" hold a leading place. Professor Jowett is now in his 76th year, and, if one may judge by results, his powers were never in more vigorous condition than now. To those familiar with Jowett's translation of the dialogues of Plato, it is unnecessary to remark that these stately volumes are incomparably more than a mere Englishing of Greek originals. When Professor Jowett's analyses and introductions are considered, this work is seen to contain the best fruitage of long years given to the contemplation of Greek philosophy and to every phase of the thought, life and general condition of society in the best classical periods. We have now before us a materially enlarged and thoroughly revised and rewritten edition of Professor Jowett's masterpiece. It would scarcely be in keeping with the methods of THE REVIEW OF REVIEWS to attempt any critical treatment of those questions, technical and minute in their character, which Professor Jowett's work must, as a matter of course, bring into the foreground of discussion in circles of philosophical, philological and historical scholarship. It is enough for us to pay tribute to this great work of scholarship which, better than any other accessible work, opens the door to the best thinking of the ancients for the edification of English students and readers. The present edition is in five beautiful volumes, which have been printed for the publishers, Messrs. Macmillan & Co., by the De Vinne Press in New York. They constitute, as a work of American manufacture, protected under our laws, one of the most noteworthy first-fruits of our new international copyright arrangements. The dialogues of Plato as presented in Professor Jowett's lucid language, are never-failing in charm and fascination, and this new edition should by all means be made immediately accessible to all readers who patronize public and college libraries; while the home collection which can afford it should not fail to give it an early and honored place. There is high educational value in these witty, searching dialogues and disputations of the most gifted of the philosophers of antiquity.

RECENT AMERICAN AND ENGLISH PUBLICATIONS.

HISTORY.

The Story of the Byzantine Empire. By C. W. C. Oman, M.A. 12mo, pp. 382. New York: G. P. Putnam's Sons. \$1.50.

Of all the numerous publications undertakings which have assumed the form of a "series" of popular handbooks, the best conceived and the best executed is "The Story of the Nations" series, which has contrived somehow to give us just what we want in quality and quantity. The latest addition is "The Story of the Byzantine Empire," by Mr. Oman, of All Souls' College, Oxford. The course of history through which modern Europe was evolved is totally incomprehensible without a distinct understanding of the place and meaning of the Eastern Empire which had Constantinople as its capital. This volume gives us in true perspective a picture of the great pivotal part that Constantinople played from the third century to the fifteenth. The Eastern question as it stands to-day, with all the strange political complications that cluster in one way or another about the great capital on the Bosphorus, will be much better understood after a reading of this scholarly but lucid and interesting story of the old Empire of Byzantium.

Merrill's English History. By George Curry. Edited by William J. Rolfe. 12mo, pp. 320. New York: Charles E. Merrill & Co. \$1.00.

Every well-instructed American child must know something of the history of the mother country. The principal names and the principal events in the story of English history

ought to be easily familiar. Many people have undertaken to write a history of England for the use of young people, and several accessible books are worthy of commendation. But perhaps none is so free from objections, and really felicitous in so many respects, as a little volume by Mr. George Curry, a well-known English educator, which has had an immense sale in the British Islands. This book has been taken in hand by Mr. Charles E. Merrill, the New York publisher, for whom Dr. William J. Rolfe, of Cambridge, Mass., has carefully re-edited and revised it to adapt it in every respect for readers in this country. The book is in excellent form for use in schools, and is also quite the ideal thing for the family circle. Any average group of children would take to it with as much avidity as to the ordinary story book, and it is none too childish for intelligent grown-up people.

The Religious Development in the Province of North Carolina. By Stephen Beauregard Weeks, Ph.D. Paper, 8vo, pp. 68. Baltimore: The Johns Hopkins Press. 50 cents.

The latest issue in the "Johns Hopkins University Studies in Historical and Political Science" is a monograph by Professor Stephen B. Weeks, of Trinity College, North Carolina, which is somewhat iconoclastic in its objects. Professor Weeks attempts to disprove two accepted historical traditions, namely—first, the idea that North Carolina was settled chiefly by religious refugees, and, second, the idea that it had always maintained full religious liberty. He says that the first settlers were not religious refugees, but that their motives were economic, and he further shows that there was for three-quarters of a century an establishment of the Epis-

copal Church, that there was positive persecution, and that there was no such thing during a considerable period as perfect religious freedom in North Carolina.

Slavery in the District of Columbia. By Mary Treman, M.A. Paper, 8vo, pp. 100. New York: G. P. Putnam's Sons. \$1.

This careful and exhaustive monograph comes to us as one of the series of seminary papers from the departments of History and Economics of the University of Nebraska. The author, Mary Treman, M.A., is an instructor in history in that university. It is an excellent piece of historical work, and creditable to the university from which it comes, which, by the way, has long held a reputation for the high quality of its work in political and historical science.

History of Chicago from 1833 to 1892. By Charles Cleaver. Paper, 12mo, pp. 157. Chicago: Published by the author.

Mr. Charles Cleaver is one of the pioneer settlers of Chicago, and his history, while not the work of an experienced writer, is full of interesting reminiscences and information, and serves to impress one with the marvelous rapidity of the growth of the World's Fair city.

ESSAYS, CRITICISM AND BELLES-LETTRES.

Studies and Notes in Philology and Literature. Octavo, pp. 128. Boston: Ginn & Co. \$1.

The successive volumes of Studies and Notes in Philology and Literature, published for the modern language departments of Harvard University, are truly representative of the best American scholarship. The present volume includes a critical examination by Mr. George Lyman Kittredge of the authorship of "The Romaunt of the Rose." Professor Lounsbury, in his great work on Chaucer, has held that "The Romaunt of the Rose" is entirely from Chaucer's hand. Mr. Kittredge controverts this opinion. Mr. E. S. Sheldon contributes a paper on the origin of the English names of the letters of the alphabet; and the volume includes various other scholarly papers.

Browning's Criticism of Life. By William F. Revell. 16mo, pp. 124. New York: Macmillan & Co. 90 cents.

The writer of these essays declares that in the poetry of Browning, the production of which extended over a period of more than fifty years, we may watch the crystallization of a fairly definite system of thought at a comparatively early date. The attempt is made to point out the principal features of this system in four essays, of which the following are the titles: Human Nature and Conduct, Religious Thought, Knowledge and Love, and "Sordello's Story Told."

The Columbus of Literature; or, Bacon's New World of Science. By W. F. C. Wigston. Octavo, pp. 217. Chicago: F. J. Schulte & Co. \$2.

Mr. Wigston is pleased to give to Lord Bacon the designation of the Columbus of Literature. The book is erratic, but ingenious and learned, and is another noteworthy contribution to the literature of the Bacon-Shakespeare controversy, Mr. Wigston being one of the apostles of the Baconian cult.

Essays Upon Some Controverted Subjects. By Thomas R. Huxley, F.R.S. Octavo, pp. 625. London: Macmillan. 14s.

This volume is made up of essays contributed to the *Nineteenth Century* and the *Fortnightly Review* during the last seven years. It contains the important articles upon Agnosticism and upon the New Testament, and articles of purely scientific interest. The first essay, upon the "Rise and Progress of Palæontology," is a reprint of an address delivered to the York meeting of the British Association in 1881.

Last Words of Thomas Carlyle. Octavo, pp. 304. London: Longmans.

There is little room for doubting that it was Carlyle's express wish that the novel, "Wotton Reinfred," which he wrote in his earlier days, should be destroyed unpublished. It is by no means, judged by any criterion, so good as his later work, and we can see no reason for his wishes having been disregarded. The volume is made up with the hitherto unpublished "Excursion (Futile Enough) to Paris" and a number of letters.

POLITICS, ECONOMICS, AND SOCIOLOGY.

Who Pays Your Taxes? A Consideration of the Question of Taxation. Edited by Bolton Hall. 12mo, pp. 239. New York: G. P. Putnam's Sons. \$1.25.

Mr. Bolton Hall, who has devoted so much persistent energy to the work of the Tax Reform Association, now compiles, largely from materials which have been gathered through the instrumentality of the association's work, a very useful and timely little volume upon local taxation. The principal object of the book is to discourage the imposition of taxes upon personal property and productive capital, and to throw a heavier burden upon real estate.

The Social Centers of London. Compiled by C. J. Peer. 12mo, pp. 174. London: The Polytechnic Reception Bureau. 6d.

Mr. Charles J. Peer, for some time a member of the staff of THE REVIEW OF REVIEWS in London, but more recently connected with the work of the Regent Street Polytechnic, has performed a service of great value in his compilation of what he well entitles, "The Social Centres of London." This is a guide to the social, educational, recreative and religious institutions and clubs of the metropolis. Mr. Peer is at the head of a bureau of the Polytechnic, which has for its purpose the better adjustment of the thousands of young people who come up from the country every year to find situations in London. It is the business of the bureau to see that these young people, as far as possible, are put in communication with churches, and with proper facilities for education and social enjoyment. While this little book is intended particularly for the use of such people, it will facilitate the inquiries and labors of all who are concerned in philanthropy, or who desire to know what men and women are doing for their fellows in the world's great metropolis.

Property: Its Origin and Development. By Charles Letourneau. Octavo, pp. 401. London: Walter Scott. 3s. 6d.

This is a volume of the Contemporary Science Series, to which Professor Letourneau has already contributed a monograph of the "Evolution of Marriage and of the Family." Here he treats his subject by the ethnographic method, examining the institutions and customs of existing inferior races, and from their habits gathering conclusions from which he can approximately build up those of our primitive ancestors. He examines also the instincts of property found among animals, and inquires into the laws and rules as to property in ancient Greece and Rome, in Palestine and in barbarous and mediæval Europe.

Speeches of Mr. Gladstone. Vol. X., 1890-1891. Edited by A. W. Hutton. Octavo, pp. 412. London: Methuen. 10s. 6d.

These speeches begin with the Parliamentary oration on the Criminal Law in Ireland, June, 1888, and close with the speech on the Condition of the Rural Population, delivered in London, December, 1891. The range of these speeches is very remarkable. They include, among others, the Channel Tunnel, Eisteddfod, the French Republic, the Parnell Commission, the McKinley Tariff, the Homeric Artemis and the Colonial Episcopate—to say nothing of the more regular party speeches. The collection is carefully compiled and corrected, but the volume would be much improved by a good index.

Industrial Freedom. By B. R. Wise. Octavo, pp. 372. London: Cassell.

This volume, issued under the auspices of the Cobden Club, is the outcome of a pamphlet upon Free Trade, which was published in Sydney in 1855, and which was largely founded upon the opinions of the late Arnold Toynbee. The author disclaims the intention of rivaling or supplanting other well-known text-books of Free Trade, but says that he intends his work rather as a companion to the works of Professor Fawcett and Mr. Henry George. It is dedicated to Sir Henry Parkes, C.C.M.G.

The Lone Star of Liberia. By F. A. Durham. With Introduction by Countess Hugo. Octavo, pp. 361. London: Elliot Stock.

This book is one of the most remarkable and original that has been published for some time. Mr. Durham is a man of color, who is studying law in London, and whose blood has been set boiling by the *Times*' articles on "Black America." So it occurred to Mr. Durham that he could not do better than turn the tables on the indolent whites by setting forth in a vol-

ume of some 300 pages the shortcomings of British civilization. Those who wish to see how black the white man can appear in the eyes of an African need only to turn over the pages and read the various passages in which we have set forth the manifold moral failings of the white race. Mr. Durham asks, Is the Ethiopian inferior to the Caucasian? and answers the question in the negative. He then sets forth the case of the African under various chapters. It is a curious book, which, notwithstanding its exaggeration and its occasional ludicrous mistakes, may be handed to the complacent white as a corrective of his overweening conceit.

BIOGRAPHY.

Dorothy Wallis: An Autobiography. Edited by Walter Besant. Octavo, pp. 317. London: Longmans. 6s.

"In the following pages," says Mr. Besant in his introduction, "an attempt has been made to delineate faithfully the experiences of a girl who resolved to win for herself, by her own exertions, without the help of any one, with no money and with very few friends, an honorable position in the profession for which she felt an irresistible call—the stage." The volume is of great interest, but the reader is sometimes conscious that Miss Wallis was writing, not for her own private perusal, but for future publication.

A. Thiers. By P. de Rémusat. Octavo, pp. 243. London: T. Fisher Unwin. 3s. 6d.

The second volume of the Great French Writers Series in every way fulfills the promise of the first. It was as a journalist and an author that M. Thiers first pushed his way into the public arena, and that his first great work—that on the French Revolution, in ten volumes—was published prior to 1830. However, it is not as the historian of the Revolution that M. Thiers is recognized as one of France's greatest literary men, but as the historian, in twenty volumes, of the Consulate and the Empire—a grand work, which the Academy deservedly crowned with its approval. M. de Rémusat acknowledges that M. Thiers' style is often open to criticism, but he admires its breadth and strength and likens it to "the noble Loire, which rolls so broad a stream," in its torrent-like sweep. As frontispiece is printed Bonnat's excellent portrait.

Conversations with Carlyle. By Sir Charles Gavan Duffy. With portrait of Carlyle as he was in 1849. Pp. 263. London: Sampson Low & Co. 6s.

A reprint in a handy volume of the admirable papers which have been published recently in the *Contemporary*, and which were noticed at length on their appearance in THE REVIEW. As Sir Charles says, they furnish striking portraits and a unique body of criticism on the century by one of the most impressive painters of men that ever existed. This little volume will do a great deal to rehabilitate Mr. Carlyle and to remove the cloud that gathered over his memory after Mr. Froude's biography.

SCIENCE AND MEDICINE.

Essays upon Hereditary and Kindred Biological Problems. By Dr. August Weismann. Vol. II. Authorized translation. 12mo, pp. 226. New York: Macmillan & Co. \$1.30.

No thoughtful student of Darwinism, or of the modern discussion as to the nature of the development of different orders of living organisms, can afford to be ignorant of the work of Professor August Weismann, of the University of Freiburg. Professor Weismann has investigated deeply and written much upon the law and nature of heredity, and his position is at considerable variance with that of Mr. Darwin, Professor Wallace, and the other biologists and naturalists who have taught the doctrine of the transmissibility of acquired individual traits. The present volume of essays is composed of discussions, all of which bear in some manner upon the main question as to the nature of heredity.

Animal Coloration. An Account of the Principal Facts and Theories Relating to the Colors and Markings of Animals. By Frank E. Beddard. Octavo, pp. 296. New York: Macmillan & Co. \$3.50.

This interesting scientific work is the result of materials gathered by the author for a course of lectures delivered two years ago in the Zoölogical Society's gardens at London. While embodying the views of the most recent zoölogical scholarship, the book is not especially addressed to scientific experts, but is written in such a way as to be intelligible to general readers. Its information is very curious and novel, and the book is one which can be particularly commended to

students of nature and lovers of out-of-door life who would like to understand more about the origin, nature and meaning of the coloration of insects and other orders of animal life.

Hydrotherapy at Saratoga. A Treatise on Natural Mineral Waters. By J. A. Irwin. Paper, 12mo, pp. 285. New York: Cassell Publishing Company. 50 cents.

FICTION.

The Naulahka. A Story of the West and East. By Rudyard Kipling and Wolcott Balestier. 12mo, pp. 379. New York: Macmillan & Co. \$1.50.

The untimely and lamented death of Mr. Wolcott Balestier, while this novel was in course of publication as a serial, gives an added touch of interest to a tale that would in any case deserve attention as one of the most notable of the season. The experience of the Colorado boomer in one of the native governments of India is even more rich, in incidents and situations that are humorous by virtue of strong contrast, than Mark Twain's "Connecticut Yankee in the Court of King Arthur." Mr. Balestier has managed his American characters with a firm and unerring hand, while Mr. Kipling is of course perfectly at home with oriental scenes and personages. Just why the critics should declare that this book furnishes an argument against literary collaboration, we are unable to perceive.

Mansfield Park. By Jane Austen. Two vols. 12mo, pp. 310-308. Boston: Roberts Brothers. \$2.50.

In their beautifully printed and elegantly bound reproduction of Jane Austen's novels, the Messrs. Roberts Brothers now give us "Mansfield Park," one of the best of the distinguished novelist's works. The demand for this charming edition of so worthy and so standard a writer as Jane Austen is altogether a good sign.

The Wide, Wide World. By Elizabeth Wetherall. New Edition. 12mo, pp. 569. Philadelphia: J. B. Lippincott Co. \$1.

This is one of the books for girls that is an indispensable staple and always in demand. The present edition is beautifully printed, artistically illustrated by Dielman, and very attractively bound.

Far From To-day. By Gertrude Hall. 16mo, pp. 291. Boston: Roberts Brothers. \$1.25.

Gertrude Hall has achieved much reputation of late as a writer of short stories. The present volume contains six, as follows: "Tristiane," "Sylvanus," "The Sons of Philemon," "Theodolind," "Servinol," and "Shepherds." These stories deal with classical names and with personages, scenes and times of earlier periods in a curiously free and easy style. They are well fitted for idle holiday hours.

EDUCATION AND TEXT-BOOKS.

The Art of Teaching and Studying Languages. By François Gouin. Translated by Howard Swan and Victor Betis. 12mo, pp. 430. New York: Charles Scribner's Sons. \$2.25.

Professor Gouin's book will find a large welcome awaiting it as a consequence of the advance notice given it in THE REVIEW OF REVIEWS by Mr. Stead's extended and readable article last month, entitled "How to Learn a Language in Six Months." In response to many letters of inquiry which have come and are still coming to this office, we are glad to be able to state that Messrs. Charles Scribner's Sons are the American publishers, and that the work is now readily accessible to all who may desire it.

The Complete Music Reader. By Charles E. Whiting. Quarto, pp. 224. Boston: D. C. Heath & Co. 90 cents.

This volume is well planned and arranged for its purposes by an experienced teacher of music in the Boston public schools.

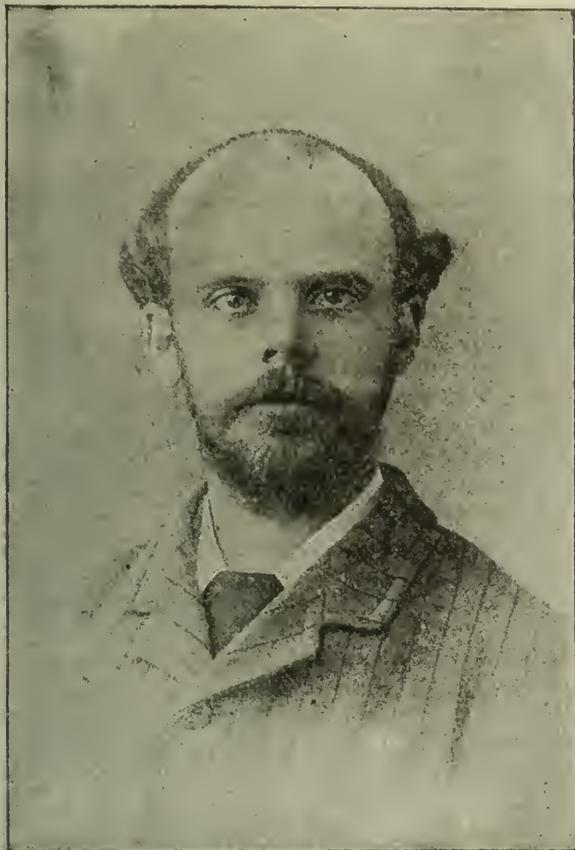

German and English Sounds. By C. H. Grandgent. 12mo, pp. 42. Boston: Ginn & Co.

This is an admirable illustration of the close scientific method now used by philological investigators. It is a study of German and English sounds, based upon the English spoken by the author and the German spoken by a German professor with whom he has been intimately associated. It is one of the most thorough studies of current pronunciation that has ever been made.

MUSIC, POETRY AND THE DRAMA.

Phaon and Sappho, and Nimrod. By James Dryden Hosken. 16mo, pp. 338. New York: Macmillan & Co. \$1.50.

To Mr. Andrew Lang belongs the credit, we believe, of having discovered in the huge pile of mediocre verse annually published by provincial booksellers, the true genius of Mr. Hosken's dramas. Frankly, we were led to expect, by Mr. Lang and others, something rather better, more individual, than we

MR. JAMES DRYDEN HOSKEN.

here get. Mr. Hosken's work is so entirely Shakespearean, so little the outcome of his own particular individuality, that, beyond admiring the skill of the artist who can so wonderfully reproduce the style and spirit of our greatest poet, the reviewer finds it somewhat difficult to accurately gauge his capabilities as a dramatist, his genius as a poet. It seems to us, too, that even treated in the Shakespearean manner, the story of "Phaon and Sappho" could have been made stronger and more powerful than Mr. Hosken has made it. In the original story Sappho is said to have fallen madly in love with Phaon, and, her love being slighted, to have thrown herself over the rocks into the sea. How does Mr. Hosken mutilate this legend, which, under skillful hands, might well have made a powerful play? He makes Phaon return Sappho's love, and, although the play ends in a tragic fashion with the suicide of Sappho over her lover's dead body, yet the whole legend becomes, by this radical alteration, weaker, more conventional. "Nimrod" is an equally skillful, equally surprising copy of the Shakespearean method, but of the two we prefer it. The greatest credit is due, of course, to Mr. Hosken for the book. It is a great thing for any poet to approach a likeness to Shakespeare; and this Mr. Hosken has done, although but a rural postman on a few shillings a week. Born in Helston, in Cornwall—the town in which Charles Kingsley was educated—in 1861, he went to an elementary school, where he picked up a little Latin, but, with this exception, acquired a knowledge of no language but his own. As a young man he came to London, and was employed at the Royal Albert Docks, and later as sorter at the General Post Office. Here his health broke down from the irregular strain, and he had to return to Helston, where he has now obtained partial employment as an auxiliary postman.

Told in the Gate. By Arlo Bates. 12mo, pp. 215. Boston: Roberts Brothers. \$1.25.

"Told in the Gate" is a collection of poems by Arlo Bates, all of which purport to be versions of oriental tales.

Songs of the White Mountains, and Other Poems. By Alvin L. Snow. Octavo, pp. 119. Creston, Iowa: The Gazette Publishing House. \$1.25.

TRAVEL, GEOGRAPHY, GUIDES, ETC.

The Barren Grounds of Northern Canada. By Warburton Pike. Octavo, pp. 309. New York: Macmillan & Co. \$2.

Mr. Warburton Pike was actuated by an ambition to find the land where the musk ox still roams in its pristine wildness, and his fondness for adventure and sport led him to make a journey into the far Northwest of the Canadian territories. He left the Northern Pacific Railroad at Calgary, east of the Rocky Mountains, and penetrated far northward with the help of Indians and half-breeds. He writes an unpretentious but interesting narrative of his journey.

Hudson's Dictionary of Minneapolis, 1892. Paper, 16mo, pp. 109. Minneapolis: The Beard-Hudson Printing Company. 25 cents.

Minneapolis is one of the most interesting cities in America, and Mr. Horace B. Hudson, at one time city editor of the *Minneapolis Tribune*, has in this little volume compacted a greater variety of information in a more accurate way than has ever been published in any other form regarding the attractive and buoyant City of Mills at the Falls of St. Anthony.

Manhattan, Historic and Artistic. A Six-Day Tour of New York City. By Corolyn Faville Ober and Cynthia M. Westover. 12mo, pp. 242. New York: Lovell, Coryell & Co. 50 cents.

This handbook of New York is a model of intelligence and good taste. It does not try to tell everything, but it points out clearly the historical localities, and it presents concisely and attractively the institutions and objects which ought to be listed for the benefit of visitors and sight-seers who desire to know how to get at the best and worthiest features of the principal city of America.

RELIGION AND THEOLOGY.

Biblical Commentary on the Prophecies of Isaiah. By Franz Delitzsch, D.D. Two vols. Vol. II. Octavo, pp. 496. New York: Funk & Wagnalls Company. \$2.50.

The great interest that recent criticism and discussion has attracted to the book of Isaiah, from almost every point of view, gives particular timeliness to this authorized translation of the Commentary of Professor Franz Delitzsch.

Lights and Shadows of the Soul. By Sylvan Drey. 16mo, pp. 97. Baltimore: Cushing & Co. 60 cents.

A small collection of short sketches and stories, having an imaginative and literary quality of unusual merit.

BOOKS OF REFERENCE.

An Illustrated Dictionary to Xenophon's Anabasis. By John Williams White and Morris H. Morgan. 12mo, pp. 296. Boston: Ginn & Co. \$1.35.

This new dictionary to Xenophon's Anabasis is illustrated with numerous outline drawings, and contains several original and commendable features. One of the best of these is a series of groups of related words, which will give the student a firm hold upon important Greek roots.

MISCELLANEOUS.

The Overland Monthly. Vol. XIX. January-June, 1892. San Francisco: The Overland Monthly Publishing Company.

The bound volume of the *Overland Monthly* for the half year ending with June, 1892, contains much of permanent interest and value, particularly in the realm of Pacific coast topics. Marked improvement is shown in the *Overland's* illustrations.

CONTENTS OF REVIEWS AND MAGAZINES.

AMERICAN AND ENGLISH.

Albemarle.—London.

A Liberty Election Address. Hon. Auberon Herbert.
The Extension of Colonial Trade. Col. Howard Vincent.

NOW READY.

Annual Index and Guide to the Periodicals of 1891.

This Index covers the periodical literature of the year 1891, and contains many improvements on the issue for 1890. Its main features are:

(1) A carefully prepared "biographical" notice of the leading magazines and reviews of the world, describing their character, aim and scope; and giving in each case the name of the editor and publisher, the address of the office and the price of the periodical.

(2) A complete classified index of all the articles that appeared in the chief English and American quarterlies and monthlies—120 in number—each entry showing (in addition to the title of the article) the name of the magazine, the number of the volume, the month and the page. The author's name, where possible, is included; and where maps and illustrations accompanied the article, these are also indicated.

It is incomparably more elaborate than any other in the same field and contains many portraits of Editors and Writers. Bound in stiff Cloth Covers and Gold. PRICE, \$2 — SENT BY MAIL, POST PAID.

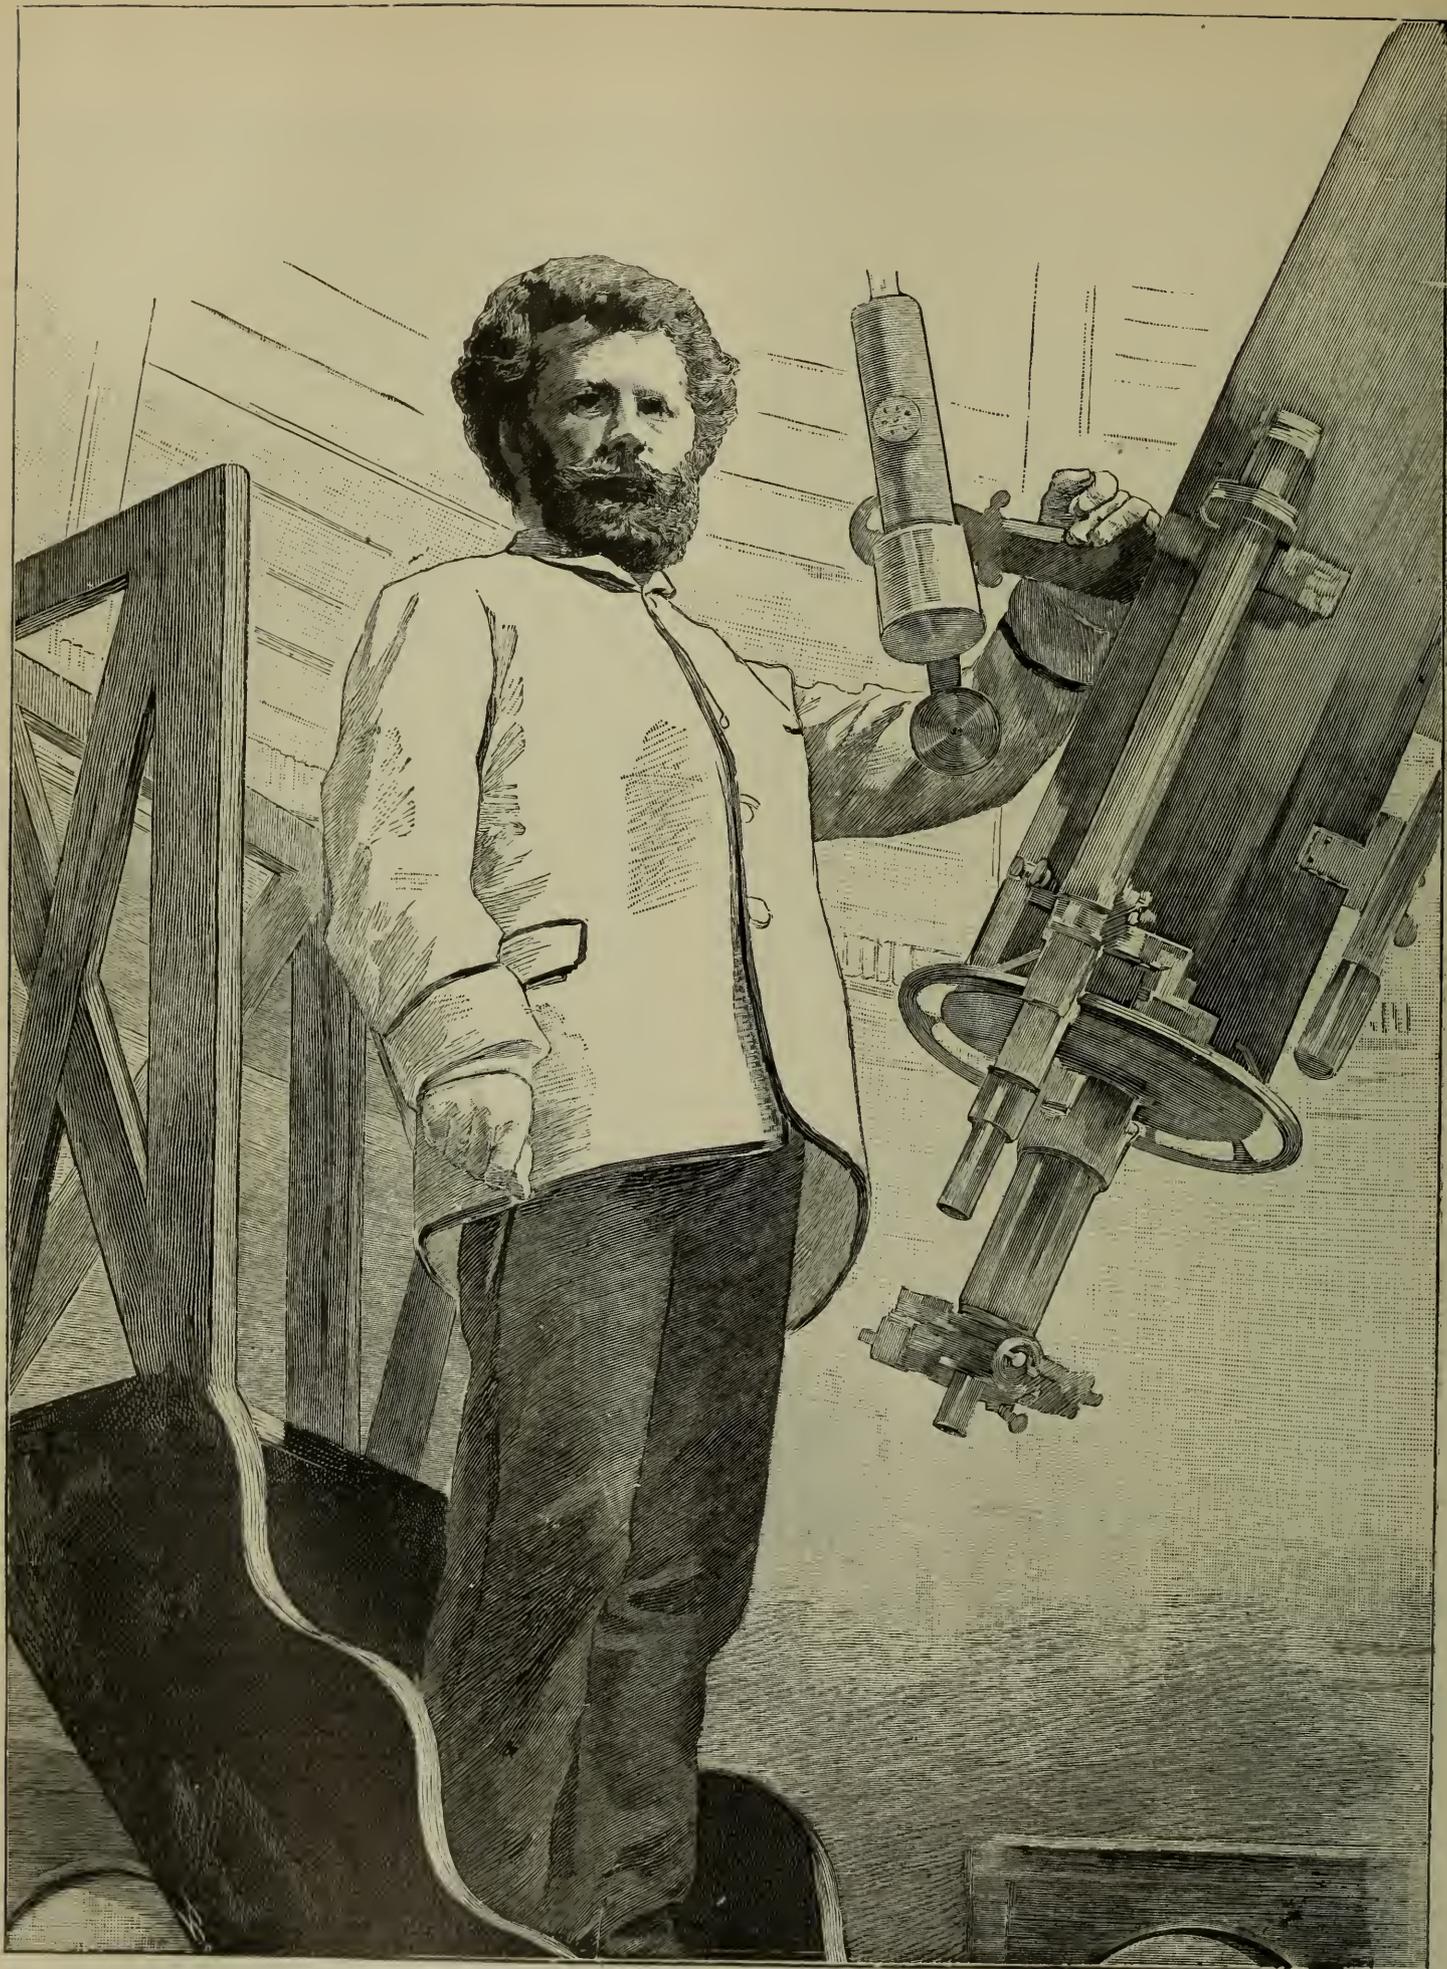

THE REVIEW OF REVIEWS, 13 Astor Place, New York.

THE REVIEW OF REVIEWS, AMERICAN EDITION, EDITED BY ALBERT SHAW

The Review of Reviews is published each month in New York and London, the two editions differing in many features, but publishing numerous articles in common. The English Edition is edited by W. T. Stead, Mowbray House, Norfolk St., Strand, London.

CONTENTS FOR SEPTEMBER, 1892.

M. Camille Flammarion.....	Frontispiece.	How We Feel When We Die.....	191

M. CAMILLE FLAMMARION.

"The psychical world, like the world of astronomy, opens infinite avenues before us. Study, study without ceasing! Let no system stand in the way! Let us speak truth freely!"—M. CAMILLE FLAMMARION TO THE EDITOR OF "THE REVIEW OF REVIEWS."

THE REVIEW OF REVIEWS.

VOL. VI.

NEW YORK, SEPTEMBER, 1892.

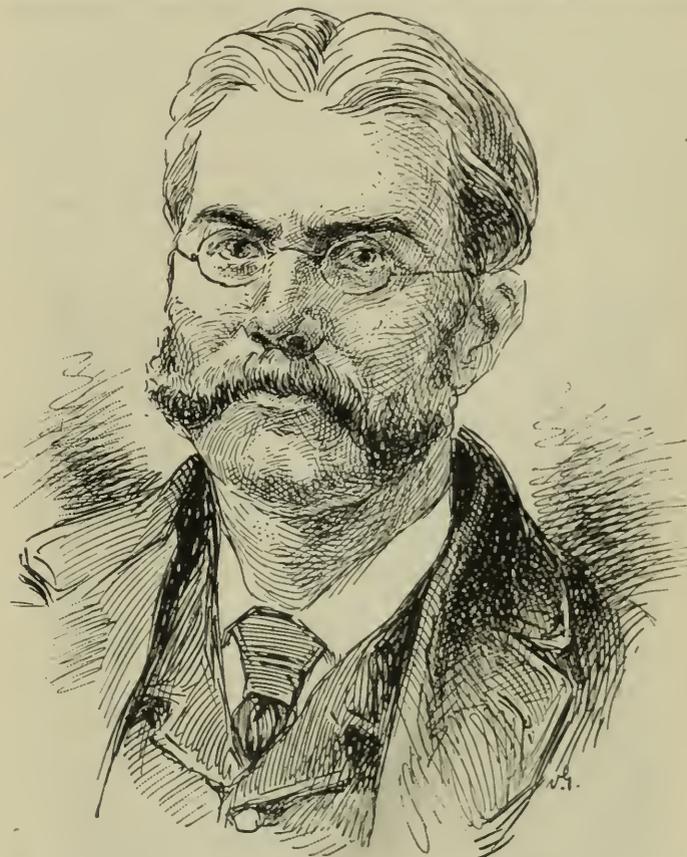

No. 32.

THE PROGRESS OF THE WORLD.

*Other Worlds
than Ours.*

It is with an almost compelling sense of the fitness of the selection that we have made M. Camille Flammarion, standing by his great telescope at Juvisy, France, our frontispiece for this month. His observatory—as are Schiaparelli's at Milan, the Lick under Professor Holden's direction on Mt. Washington, California, that of Harvard University in Peru, and various others elsewhere—is at this time engaged with unflagging diligence night after night in studying our brilliant neighbor Mars, which is now at its point of nearest approach to our earth. Flammarion's daring imagination has bade us hope that we may at some early day communicate with the inhabitants of Mars. Of all the planets in our system, Mars is the one whose conditions most nearly resemble our own. The scientists now write familiarly of the Mars geography, discuss the characteristics of the climate, and even go so far as to tell us that the Marsians are having a particularly hot, dry summer this year, resulting in the melting of the polar snows to a degree hardly ever noticed before. M. Flammarion has written several letters, notably those that have appeared in the *New York Herald*, defending very ardently the claims of the astronomers who have been most successful in finding out about Mars. Thus far, Schiaparelli is the special authority. His map of the surface of the planet, made fifteen years ago, is deemed one of the triumphs of modern astronomy. The feature of it that excites the most wonder and controversy is the system of so-called "double canals." M. Flammarion suggests that it may be as erroneous for us to explain the origin of what seem to be great rectilinear water-courses upon any theory of nature's unaided workings, as it would be for the men of Mars, viewing our world, to attempt to account for railway lines as natural phenomena. The spectroscope has taught enough as to the materials that Mars is made of, and the atmosphere that surrounds it, to add plausibility to the notion that sentient beings, comparable with those of our own planet, may inhabit it. The men who come forward to scoff most loudly at the idea of our ever knowing anything about Mars and its people are not the bright and wise men, but

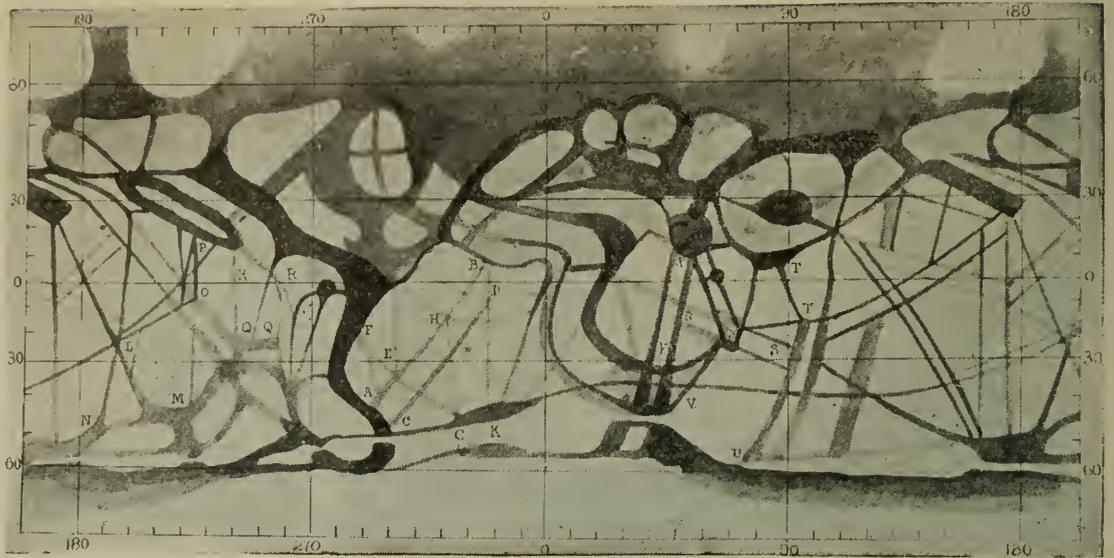

rather the stupid and foolish ones. The wise men are not all so buoyant and talkative as Flammarion, but they feel, with mingled sensations of hope and awe, that they may perchance be standing upon the threshold of discoveries that will be tantamount to the invasion of new worlds of knowledge and truth.

PROFESSOR EDWARD S. HOLDEN,
Director of the Lick Observatory, California.

As to the Mars question, Sir Francis Galton, F.R.S., and F.G.S., who is no enthusiastic Frenchman or Italian, but a sober English astronomer, charged with the chairmanship of Her Majesty's Royal Observatory at Kew, has written to the *London Times* proposing a plan by which with a set of huge mirrors we may flash signal beams of sunlight that would be visible to the inhabitants of the other planet if they were in

possession of as good telescopes as the one on Mount Washington. Meanwhile, the scientific world is waiting to know what Professor Holden and his associates may add to our knowledge of the planet. The Lick telescope, far more powerful than any that existed fifteen years ago, is expected to make many important additions to the stock of Schiaparelli's information. It is not supposed that we are upon the immediate

SCHIAPARELLI'S MAP OF MARS.

eve of any discovery that will actually prove the inhabitancy of Mars; but even Professor Holden, who discourages scientific sensationalism, is of opinion that we may within a generation have at least learned absolutely whether or not Mars is fit for inhabitancy.

But it is not in the realms of material space alone that our modern scientists are seeking new worlds. The exploration of the so-called "occult" realms of psychic phenomena was never before so earnestly and hopefully pursued. And it is because M. Flammarion is as ardent in psychical research as in astronomical studies that he seems so peculiarly to

typify the current feeling in all circles of thought and inquiry that we are soon to conquer and definitely annex some regions of "the unknown" that men are now beginning to explore with system and determination. Those who are interested in this old-new study of mind and spirit will find the opening pages of our "Leading Articles of the Month" most strikingly illustrative of a certain trend of thought now observable in our own country as well as in England and France. The entertaining account also given in this number of Miss Bentley's recent exploits at a seance with the Czar and other royalties touches one phase of that vaguely apprehended psychic force which begins to manifest itself in so many suggestive ways to the aroused spirit of inquiry. Summing up the steps by which modern knowledge has made inroads upon the realms of the hitherto unknown, and quoting Herbert Spencer's dictum that "any kind of molecules are affected in a special manner by molecules of the same kind, though situated in the most distant regions of space," M. Flammarion concludes that "it requires but one step more for the admission that psychical communications may be established between an inhabitant of Mars and an inhabitant of the earth."

FRANCIS GALTON, F.R.S., F.G.S.

The Social Unrest.

But while the philosophers and scientists are wondering why the Marsians "geminate" their canals, and are trying to analyze the stuff that dreams are made of, the practical reformers are struggling, some desperately and blindly, others cheerfully and with strong hopes, to remedy social wrongs and inequalities. This number of THE REVIEW presents some striking pictures and contrasts, in its delineation of different trends in what we may, without exaggeration, call the existing social revolution. Mr. Stead's vivid sketch of the French anarchist and extremist Louise Michel, written in appreciation of her honesty and unworldly devotion to her social ideals, is the more impressive when read in conjunction with the thrilling story of Kate Marsden's heroic mission to the outcast lepers of Siberia. The "King's Daughter" and the "Priestess

of Pity and Despair" are both moved by a self-abnegating love of humanity, and a zeal for the cause of the suffering and the poor that counts no cost. The Homestead strike brings to the front in its most thrilling incident the anarchist assassin Berkman, who would show by his deeds how great he deems the wrongs inflicted upon the laboring classes and what a veritable reign of terror he would choose to inaugurate for the social improvement. On the other hand, the great New South Wales strikes have given the world a type of a wholly different kind of reformer in the person of the Hon. Andrew Curran, LL.D., who, as chairman of a public commission to investigate industrial conflicts and to recommend a practical remedy for them, has drawn a report so wise and just in its terms that every one of the eight capitalists and eight workmen who were his colleagues on the commission have fully concurred in every paragraph and clause of the document. We earnestly recommend our article on Dr. Curran's report to the careful attention of American reformers, legislators and seekers after social justice and peace. Dr. Curran and Kate Marsden represent practical Christianity striving to remedy wrongs and to improve social conditions through faith in the essential principles of love and human brotherhood. Louise Michel and Alexander Berkman represent the spirit of social regeneration and progress in a perverted and maddened phase, wherein vengeance and despair have taken the place of every wholesome and uplifting principle.

The Duty of the State. But let it not be thought that all the worst enemies of a peaceful social evolution and progress are in the tents of the anarchists. The high-handed outrages that have been perpetrated by some of the men who find shelter in the entrenched camp of corporate monopoly are more detrimental to the public peace and welfare than all the threats of the extreme socialists and all the crazy performances in the name of anarchy. It is the business of the State to assert its dignity and to bring both sets of disturbers into subordination. Everybody can see that strikers are wrong, not only when they resort to arson and murder, but when they resort to any form of trespass or violence or compulsion, whether physical or moral. But preaching to strikers against a resort to extreme measures is about as silly as it is futile. A strike is essentially a war; and war, as General Sherman was wont to say, is hell. Wars and strikes will never be brought under rules and regulations that will transform them into Sunday-school picnics. President McLeod, of the Lehigh Valley Railroad, announced complacently during the progress of the switchmen's strike at Buffalo that the railway companies were not giving much concern to the question how great would be the losses arising from the burning of loaded freight cars and the destruction of property; for, having called upon the public authorities to protect them and their property, all losses would have to be paid by the State. Moreover, the State must pay the heavy bills for extra

forces of policemen and sheriffs, and for the large bodies of troops called to the scene of disturbance and kept there. But surely if the State must be at so much trouble and expense to abate the destructive riots which have somehow arisen as a result of the manner in which certain railways deal with their employees, the State might well insist upon going somewhat into the merits of the controversy. There ought to have been no strikes in the Buffalo railway yards. The public ought to have been protected from such a calamity. As a secondary—not a primary—consideration, the railway corporations ought also to have had protection against the property losses inevitably resulting from a strike. What is not less important, the switchmen ought to have had such an opportunity for a hearing and a judgment upon their alleged grievances as would have removed all excuse for striking, and would, therefore, have made such an occurrence practically impossible.

Fresh Arguments for Arbitration. The new labor troubles have simply given a stronger emphasis to the doctrines of conciliation and arbitration under State auspices that were laid down by THE REVIEW OF REVIEWS last month. Those doctrines are eminently applicable to great transportation corporations. An official arbitration, whose award shall be made obligatory under certain carefully defined conditions, would be perfectly feasible and justifiable in view of the new conditions prevailing in the commercial and industrial world. But if our law-makers are afraid to venture upon that precise piece of ground, they might at least be brought to the point of establishing State boards of arbitration which would be set in motion at the request of one party in a dispute and whose findings would simply have effect through the moral force of public opinion. The great point to be gained is the existence of a well-constituted, permanent State board of conciliation, which can be promptly called into action. If the corporations are more afraid than the labor unions of so just and fair a remedy as arbitration, we have only to remark that the discerning public may draw its own inferences and act accordingly. The rights of private business corporations are in no great danger at present. The rights and the supreme dignity of the State itself are what chiefly need attention and reinforcement. When the corporations concerned in the anthracite coal conspiracy—one of the most gigantic crimes of this century—so treat their employees that the men feel it necessary to take all the painful risks of a strike, the great body of plain citizens who pay taxes and support the State may well ask if something is not radically wrong that they should be required to pay millions for the maintenance of an army to protect from their exasperated employees these very corporations that are abusing their corporate powers to rob the public. It is a grave charge that the switchmen make when they assert that the railway authorities themselves burned the cars at Buffalo to make an excuse for having thousands of State troops called out, and to divert sympathy from the strikers. But

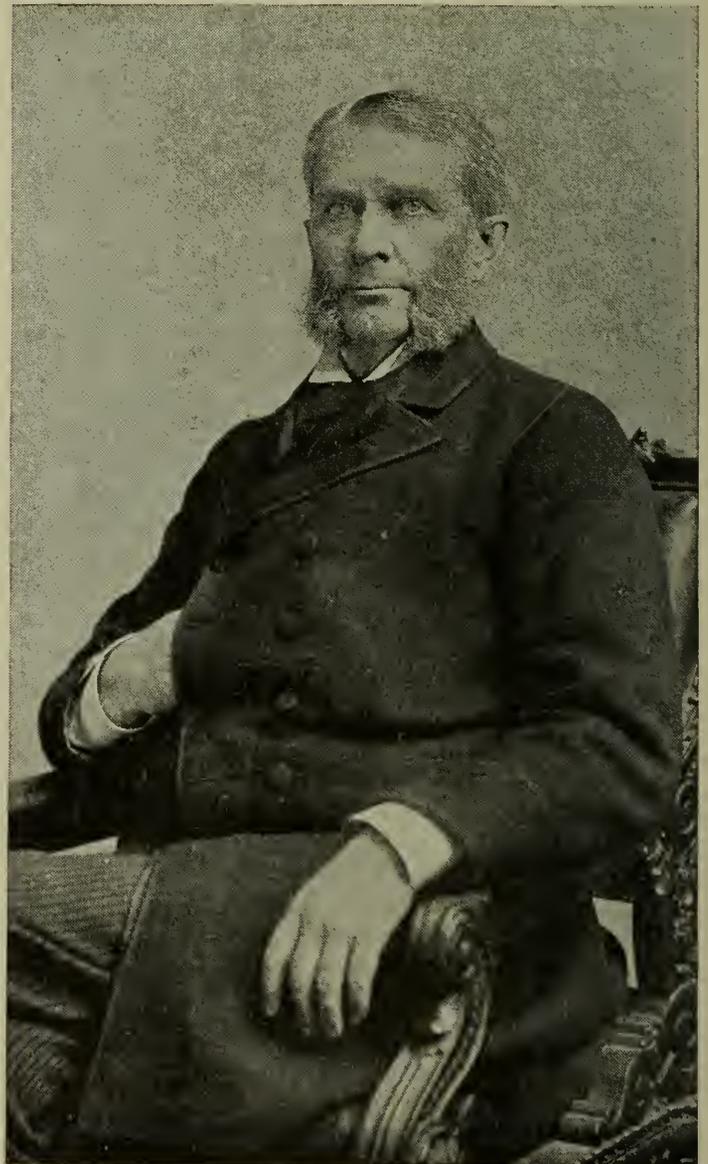

the American people have had their chance to study corporation methods and strike methods in these past years; and the impartial moralist, staking the safety of his soul upon his speaking the truth without fear or favor, would probably be compelled to declare that strikers' methods were preferable. Do we then make one jot of concession in favor of dynamite, assassination, or any form of violence whatsoever in the interest of organized labor? Certainly not. We would merely give the strongest possible emphasis to the necessity that the State should dominate both forms of association with a firm hand. The presence of the New York State Board of Arbitration at Buffalo in the middle of August was a sorry spectacle. At that time those gentlemen should have been in authoritative possession of the situation, with the whole commonwealth back of them. But nobody was mean enough to do them reverence, although they were trying their best to effect a conciliation. The railroad officials were men of swelling importance, the labor leaders were magnified in the public eye, and the strutting militia officers cast shadows of heroic size. But the State Board of Arbitration was practically ignored. That board should have had such powers conferred upon it by law that it could have brought order out of confusion in an hour. If it had been constituted with an adequate authority, there would have been no strike. When the commonwealth awakes to an appreciation of the fact that it is greater than the railway corporations it creates and greater than the labor associations it permits, it will suppress these disturbances in their very inception by providing a tribunal clothed with authority.

*Fundamental
Remedies
Needed.*

The dastardly attack upon the life of Mr. Frick, though nobody of sense was for a moment disposed to think it an affair in which the Homestead strikers were implicated, could but have occasioned a reaction that hurt their cause, already so hopelessly injured by their own riotous excesses. The long occupation of Homestead by large bodies of troops will have cost the State of Pennsylvania an immense sum. In four States the grave disorders produced by labor troubles have lately necessitated the employment of large bodies of troops—more than 20,000 in the aggregate. To conclude, however, that iron-workers in Pennsylvania, railway employees in New York and miners in Idaho and Tennessee are so many great groups of revolutionary socialists and enemies of public order would be to assume altogether too much. The State must consider causes as well as effects. In Tennessee the remarkable uprising of the miners to stamp out, once and for all, the odious system of the leasing of convicts to private contractors, who use them in competition with free labor, was morally chargeable against the State itself for its culpability in maintaining so objectionable a penal system. One wrong does not justify another; but one wrong frequently affords a lucid explanation for another. The Tennessee miners had a grievance, and the State has now to pay the cost of a huge row of its own provoking. The calling

out of troops against citizens is an appalling misfortune and calamity. But we must continue to witness these local wars until the State faces existing industrial conditions with courage and intelligence, and provides peaceful remedies for the grievances that now lead to violence. Riots must be suppressed at any cost, and the supremacy of the State must be maintained. But eventually the State must turn from the outward symptoms to a treatment of the deeper causes.

It is all very well to talk of individual ^{The} "Anti-Option" rights, of the freedom of contract, of the _{Bill.} value of competition, and of other elementary principles. But it is not so well to ignore the revolutionized conditions under which such principles have to work. New problems may require new solutions. As we reasoned last month, federated capital and federated labor make possible a sort of conflict that can only be averted by some such new remedy as official arbitration. In like manner, may it not be possible that the huge excrescence on legitimate trade, known as "short-selling" or dealing in

HON. WILLIAM D. WASHBURN,
United States Senator from Minnesota.

"futures" and "options," may justly and wisely be subject to official remedy? Selling limitless quantities of wheat or cotton that the seller does not possess and that the buyer does not expect to receive, is a comparatively new thing under the sun. It subjects the market for staples to the most capricious fluctuations, and envelops that most fundamental and conservative of avocations, agriculture, in a new and injurious atmosphere of chance. The farmer has come to regard the moves of the plungers on the Board of Trade as of more concern to him than either careful husbandry or favoring skies. Knowing when the "corner" is going to break, and therefore knowing when to sell, has come to be the chief thing in the art of agriculture in many a farmer's mind. We were told some months ago, and credibly, how pervasive and ruinous was that form of gambling that the Louisiana lottery had propagated broadcast throughout the country. But, after all, what a small affair has the Louisiana lottery been, considered as a gambling institution, when compared with the "bucket shop" and Board of Trade "operations," that have consisted of nothing more legitimate in a business sense than is roulette or any other game of chance! When the widespread harm that results from this new form of gambling is viewed in all its bearings, one must conclude that public morals demand its discouragement to the utmost possible extent. There are phases of its economic bearings that are more difficult to understand. That it is, in its general results, financially detrimental to agriculture, may be declared without hesitation. But whether, as has been strongly asserted, it results in an average depression of prices is a distinct question. Senator Washburn boldly insists that it does have such an effect; and in his great speech of July 11, he presented an impressive array of statistics and illustrative materials to enforce his argument. At least he has shown beyond all hope of successful contradiction that dealing in options has come to be a gigantic evil, and that it is distinguishable, as such, from legitimate sales for future delivery, made by persons who are, essentially or potentially, the specific owners of that which they assume to dispose of. The "Anti-Option bill" which has borne Mr. Washburn's name in the Senate and Mr. Hatch's in the House, is a measure which intends to exterminate "option" and "future" trading by subjecting it to a heavy United States tax. It applies to cotton, wheat, hops, corn, oats, rye, barley, pork, lard and bacon. It has been subjected to a strong fire of criticism in Congress and outside of it; and, of course, so important and so novel a proposition cannot be too thoroughly debated. As matters stand, it failed at the last moment to reach a final vote in the Senate, the House having passed it June 6; but Senator Washburn succeeded in having its consideration fixed for the opening day of the session next December, and there is a strong probability that it will become a law. The most formidable arguments against it are the technical ones, touching the constitutionality of the taxing power that it evokes. But there are precedents to meet those argu-

Photographed by Bell, Washington.

HON. W. H. HATCH, M.C., OF MISSOURI.

ments; and the attempt to defeat the bill on the ground that fictitious dealing in staples is somehow advantageous to producers and to legitimate commerce, has not shown good staying qualities. The agricultural press and the various representatives of the producing interests, it should be added, support the bill with practical unanimity. It was to be expected that the "operators" on produce exchanges would condemn the measure.

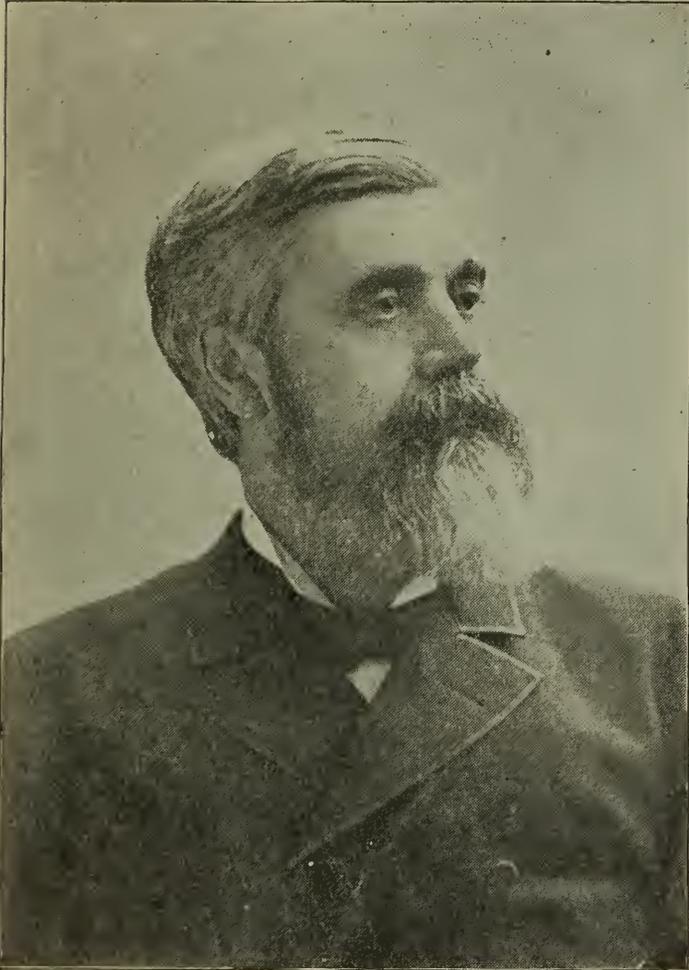

*What Does the
People's Party
Want?*

As yet the People's party, vigorously as it has thrown itself into the campaign, has not quite succeeded in making the general mass of citizens—those at least who are remote from its "storm centers"—understand what are its more essential and practical tenets. Its arraignment of these degenerate times are veritable jeremiads; but its programme of reconstruction is apprehended only vaguely. It is a pity that the People's party could not import a John Burns or a Sidney Webb to formulate for it a clean-cut, working programme. It is vain to point to the party's Omaha platform, for that document lays out work enough to keep any one party busy for twenty or thirty years. What does the party propose to do at once, if successful? That is the question. It needs a great, practical statesman, awake to the new possibilities of the day and age, able to set reforms in the right order of succession and to rescue things essential

from things trivial. It is possible that Judge Gresham could have supplied the new party with a taking plan of campaign. But all the various rumors that have gained currency to the effect that Judge Gresham would come out in public speeches as a supporter of Mr. Weaver have been met with subsequent denials. The People's party has fought its great initial battle of the season in the Alabama State election, and the returns have been in favor of the regular Democratic ticket. But the Alliance men make charges of whole-

the sole purpose of asking one another if Mr. Platt had been placated; and the practical politicians on the Democratic side in like manner were concerning themselves with the inquiry, What is Mr. Hill going to do? Meanwhile, Mr. Cleveland was calmly fishing in his chosen retirement at Buzzard's Bay, and Mr. Harrison was fishing with equal ardor in vacation retirement at Loon Lake, in the Adirondacks. Chairman Carter, of the Republican National Committee, was ready thrice daily to oblige the reporters with general predictions of the most buoyant and hopeful kind, while Chairman Harrity, of the Democratic National Committee, was no less obliging in the expression of his entire confidence in the certainty of an overwhelming Democratic victory. The amenities of life had thus far been singularly well observed on both sides, and, in short, it was hard to believe that there could be much hard and bitter campaigning before October 1. Both parties have been more fearful of the inroads of the Farmers' Alliance and Peoples' party than they have cared to admit. The Republicans have been somewhat embarrassed by differences of opinion upon the question of a federal election law (the so-called Force bill issue), and the Democrats have undoubtedly suffered embarrassment through a disagreement between their moderate protectionist wing and their radical free-trade wing.

Silver and the Conference. The Monetary Conference, which is expected to meet in October in one of the continental cities, will be regarded with the liveliest interest by a great number of people in this country, and its results will also be awaited with more concern by the world at large than has ever been bestowed upon any previous gathering of a similar nature. The great depression in the price of silver has wrought the severest inconvenience to trade and finance in India, which is a silver-using country, and has also exercised a most depressing and disturbing influence in the business affairs of Mexico and the South American states. If silver could be restored to a full and free place as a money metal of equal standing with gold, through an international agreement, there would probably result almost immediately a very decided quickening of the world's trade. Whatever may be the result of the Conference, our government has done an expedient and creditable thing in proposing and securing such an international discussion. The five gentlemen whom President Harrison has named as the American representatives at the Conference are regarded in all quarters as constituting a very able and acceptable delegation. They are Senator Allison, of Iowa, Senator Jones, of Nevada, Ex-Governor McCreery, of Kentucky, now a member of the House of Representatives, Mr. H. W. Cannon, president of the Chase National Bank of New York and formerly Controller of the Currency, and President Francis A. Walker, of the Massachusetts Institute of Technology, who has been the foremost of our American writers upon monetary science and one of the leading exponents of the doctrine of international bimetallicism. The silver question is having no place

Photographed by Bell, Washington.

JUDGE WALTER Q. GRESHAM.

sale fraud, and claim that the victory was fairly theirs. It is not possible to pass any intelligent judgment upon the merits of the case from the distance of New York. It is, however, plain enough that the new party has become a very serious factor in Southern politics.

The Languid Old Parties. As regards the Republican and Democratic parties, the campaign up to the latter days of August had taken on no very inspiring aspects. The decisions of Wisconsin, Michigan and New York courts, in condemnation of gerrymandering reapportionments, had furnished a text for the political moralists on the one side, and the great industrial and transportation strikes had been seized upon as furnishing good campaign material by the apostles of the other side. The practical politicians of Republicanism seemed to arise every morning for

whatever in the pending political campaign as between the Republican and Democratic parties. Senator Carlisle of Kentucky, who had been accounted a sympathizer with the Western and Southern leniency toward the demand for the free coinage of cheap silver dollars, has written a letter in which he pronounces himself in the most unambiguous way as opposed to all such proposals. His letter is highly significant of the sober second thought that has begun to prevail; and it may be safely asserted that the free silver epidemic has already spent its force. The best statesmen and most influential politicians of both parties are upon exactly the same ground. They are in favor of international bi-metallism, and want no coinage of silver in the United States that shall not be so safeguarded as to keep our gold, silver, and paper money freely interchangeable, one dollar being "as good as another dollar."

*Congress and
Its Doings.* The exceptional heat which all parts of the country have been compelled to endure this summer subjected Congress to a very severe ordeal during the closing weeks of the long session, which had continued through eight months. A review of the deeds of the Fifty-second Congress must be deferred until next March, when the second and final session will have had opportunity to complete the business left unfinished by the first.

Judged by the measures which have become enacted into law, the recent session has been one of comparative inactivity. The Democratic majority in the House was too large to be effectively managed, and the Republican control of the Senate and the White House naturally affected the Democratic sense of responsibility for legislation. It should be remembered that in the preceding Congress the Republicans had clear sailing and were enabled to place upon the statute books an extraordinary number of measures of importance. The principal achievement of the new House has been its successful resistance of the temptation to concur in the Senate's Free-Silver bill. Its principal embarrassment and humiliation will have grown out of its inability to keep its promises of sweeping reduction in the volume of appropriations. In the face of very widely advertised promises to hold the year's expenditures down to the sum of about \$400,000,000, the amount has considerably exceeded \$500,000,000, and is materially greater than the corresponding total appropriated by the Republican majority two years ago, at that time so lavishly denounced by the Democrats. It must not be forgotten, however, that much of the increased volume of national expenditure voted by the Democrats of the Fifty-second Congress has been made necessary by the pension laws, and other measures

From photographs by C. M. Bell, Washington.

SENATOR W. B. ALLISON, OF IOWA.

SENATOR J. P. JONES, OF NEVADA.

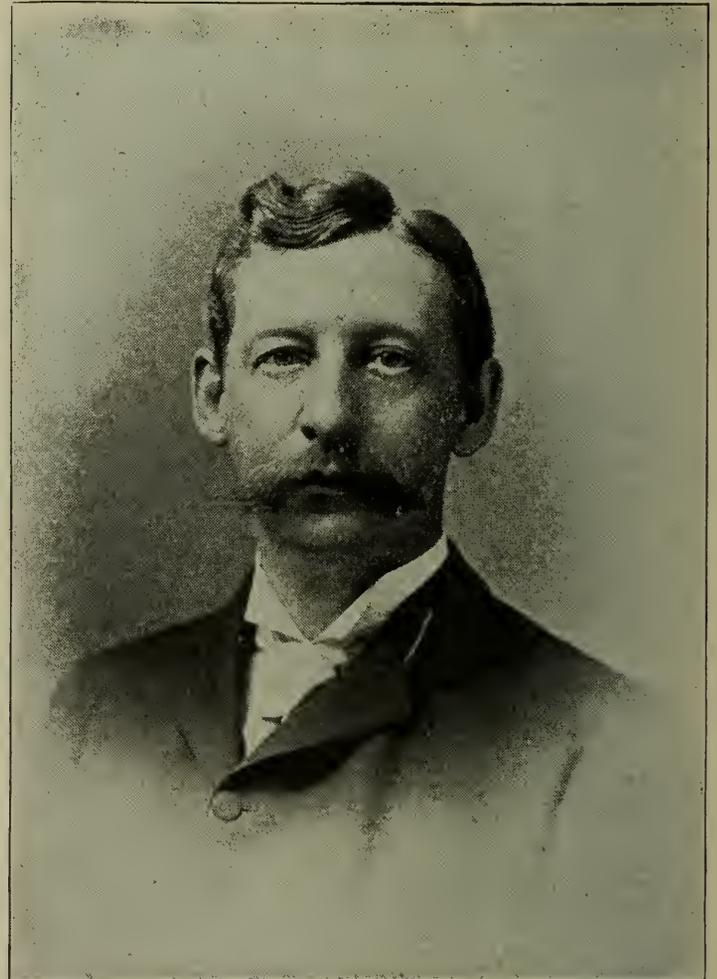

HON. J. B. MCCREARY, M. C., OF KENTUCKY,
Member of International Silver Conference.

calling for large sums of money, which were adopted by the preceding Republican Congress. The people of the United States, if we are able to judge at all of the prevailing public sentiment, would have preferred that the Democratic economists should not have emphasized their retrenchment ideas so severely against the shipbuilding policy of the friends of our new navy. Nevertheless, the unsparing scrutiny to which every proposal for the granting of public money was subjected by Mr. Holman and his followers in their policy of economical expenditure, has had wholesome effects.

Money for the World's Fair. The last days of the session were rendered notably exciting by a great contest over the proposition to lend \$5,000,000 to the Columbian World's Fair. The majority of the

members were liberally disposed toward a project whose success so intimately concerns every interest of the entire country; but the idea of a government loan to the World's Fair corporation was repugnant to the minds of a strong minority, and filibustering tactics were used with a success which finally led to a compromise. Instead of a loan of \$5,000,000, Congress finally voted a downright gift of \$2,500,000. The money is to be paid over in the form of special World's Fair souvenir half-dollars, of which the Exposition Board will have at its disposal 5,000,000 pieces. It is now an assured fact that the board will be able to dispose of the souvenirs for more than their currency value; and thus, whereas they only asked that the government should lend them its credit to the extent of \$5,000,000, it is quite possible that they may be able to exploit the smaller sum, which comes as a free and final gift, in such a way as to make it realize very nearly the large sum originally asked as a loan. In spite of rumors of friction and disagreement touching the organization and working of the Boards and Commissions having the World's Fair in charge, it should be understood that all indications point to an Exposition of unprecedented completeness and magnificence. Every loyal American should feel a hearty interest in making it the crowning success of the nineteenth century.

PRES. H. W. CANNON, CHASE NATIONAL BANK, N. Y.,
Member of International Silver Conference.

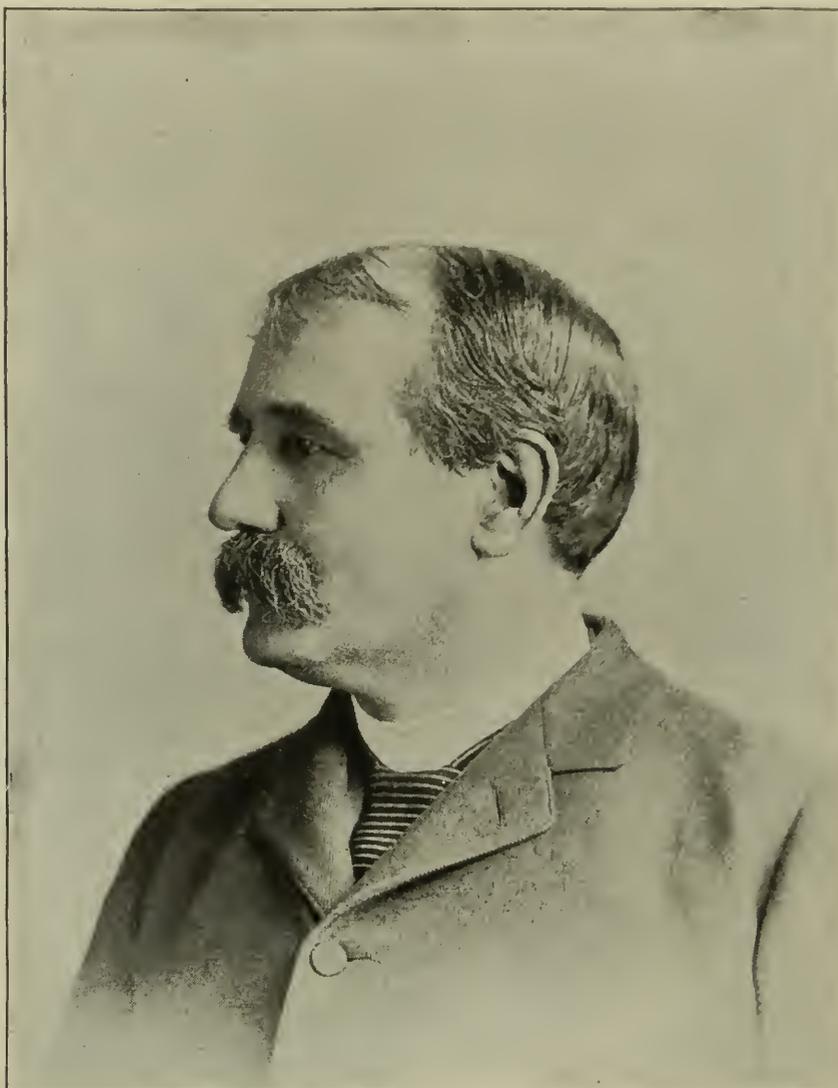

*Photographing
the
Chinamen.*

One of the most notable measures of the recent session was the renewal of the Chinese exclusion act with novel and in some respects very drastic provisions, intended to make the measure effective. One of the steps requisite under the new law is the photographing of every Chinese person in the United States, and the collection of copies of the photographs in official hands for purposes of identification. Each Chinaman must have three photographs taken, of which he is to retain one himself, while the other two are to be deposited with the public authorities. The making of the huge collection of Mongolian photographs has already begun. It is believed that this, taken in conjunction with the various other precautions of the Geary bill, will make it absolutely impossible to increase, from outside, the existing body of perhaps 110,000 Chinamen now entitled to live and labor in the United States. It is hardly strange that the provisions of a law which seems to place a debasing stigma upon Chinamen should be bitterly resented by the Chinese government, both as needlessly harsh and unneighborly, and also as in contravention of the spirit if not of the exact letter of existing treaties.

*Disfranchisement
in
Mississippi.*

To the discerning observer who tries to note the things of real significance in our political life, by far the most important political event of the season has been the recent registration in Mississippi—the first registration of voters under the State's new constitution. The important part of the Mississippi constitution is that which regulates the franchise. It disqualifies those who are unable to read and write, and further excludes from the registration books all who have failed to pay a poll tax. In practice the limit of time for payment of this tax is so fixed as to make necessary a good deal of forethought on the part of the citizen who does not wish to lose his vote. In order that the educational requirement might not work too harshly in the case of a class of citizens who, though unlettered, were not wholly ignorant, it was provided that until 1896 an illiterate citizen might retain his franchise if he were found able to explain a portion of the constitution of the State when read to him. Such in general are the terms of the new franchise system. Now, for the results. There are by the new census 147,205 colored men in Mississippi who are above the age of 21, and there are 110,100 white men. All of these men under the old arrangements would be entitled to vote. But the new registration, containing the names of all the men who will be allowed to vote this year, includes only 76,742 men of both races, of whom only 8,615 are of African descent while 68,127

are white men. It has been asserted that the device for admitting illiterates who could explain the constitution was intended to be used unfairly against colored men; but of the three or four thousand voters who were admitted in this way, about one-half were actually negroes. The census shows that about 100,000 white men and 37,000 colored men can read and write, and could therefore have been enrolled if they had paid the somewhat heavy poll tax at the pre-

GEN. FRANCIS A. WALKER,
Member of International Silver Conference.

scribed time and taken the necessary steps to secure registration. As the matter stands, the result has been the practical elimination of the majority race from the politics of the State, and this object has been achieved with marvelously little disturbance or opposition. We are inclined to think that the State of Mississippi and both races are to be congratulated. The colored race, though numerically possessed of a considerable majority, is not morally entitled to rule in Mississippi, because as yet it possesses a very small minority of the men who have the intelligence and capacity to rule properly. Under the circumstances, the test of literacy becomes a fair working rule. No young Mississippi negro who deserves the ballot need despair of obtaining it. If he is not willing to learn

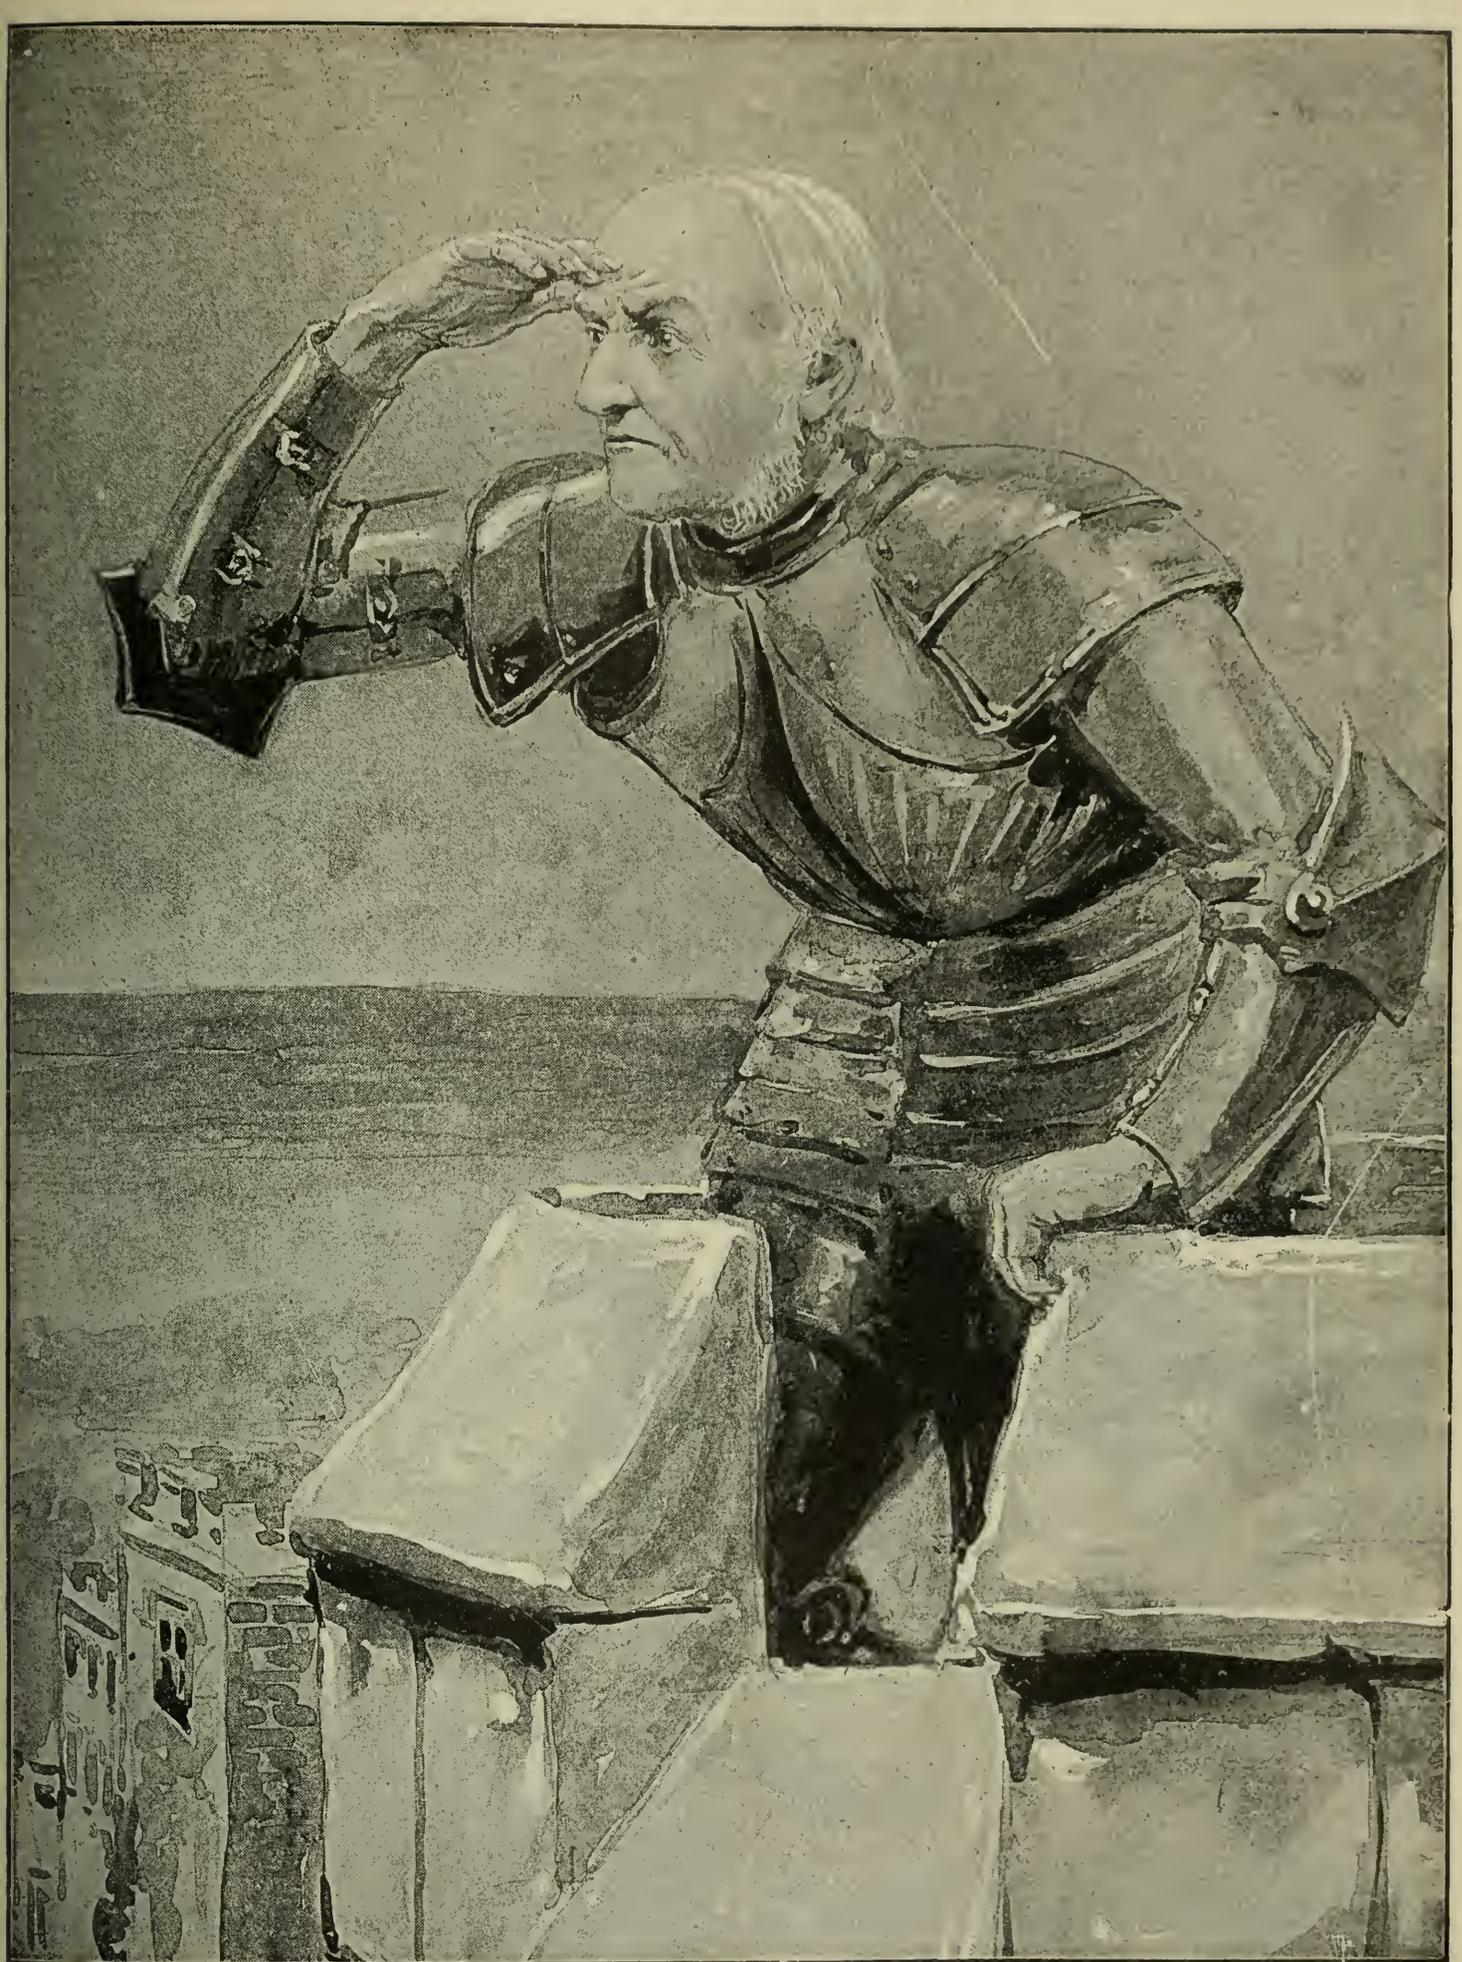

to read and write, and lacks the forethought to step up and pay his poll tax, he may well be permanently disfranchised. The system will encourage manly effort at self-improvement, and will reward those who are deserving. As for the white race, this plan will have relieved them from the fear of ignorant negro domination that they have felt, so that they can now afford themselves the unwonted luxury of disagreeing, and entering into different party organizations. It is to be hoped that Mississippi will be encouraged on all sides to give this new system a fair and faithful trial, avoiding everything that could be pronounced unjust discrimination against colored men, and holding both races rigidly to the terms of the law. Any neglect henceforth of the duty to provide elementary education for all the children of the State, black as well as white, would subject Mississippi to the criticism of designedly proposing to keep the negroes illiterate in order to keep them from attaining the franchise. The North will do well to believe that Mississippi is intending to act for the best interests of the whole population of the State, and that under the circumstances the Mississippians were the best possible judges of what should be done. To say that the measure was adopted in the interest of the Democratic party is to view it superficially. On the contrary, it is just the kind of measure that can give an opposition party a permanent foothold; for it removes the principal ground upon which the southern Democratic solidarity has rested.

Canada's Canal Tolls. Our Canadian neighbors have for some time maintained the practice of making sharp discrimination in canal tolls in favor of traffic destined for Canadian ports. They are under treaty obligation to give to Americans the same privileges in the canals as are given to Canadians. In the payment of rebates they have treated all comers exactly alike, the discrimination being made not against American vessels or American citizens, but simply in favor of cargoes, whether Canadian or American, unloaded at Montreal or at other Canadian ports. Our government has contended that this is not the correct interpretation of the treaty, and that inasmuch as the American use of the canal is chiefly by vessels destined for ports on our side of the international line, the construction of the Canadian government practically nullifies the advantage that was supposedly gained by the United States in the treaty guaranteeing equality. Congress in July authorized the President, in case of Canada's continued refusal to accept our view, to retaliate by counter discriminations. After waiting several weeks, the President has announced a toll upon Canadian traffic passing through our Sault Ste. Marie canal, which connects Lake Superior with Lake Huron. But the Canadians are themselves building a canal upon their own side of the Sault Ste. Marie, which they expect to complete next summer, and which they have been pushing in anticipation of their exclusion from our canal at that point. It would, of course, be

possible for the President to embarrass Canada very seriously, by placing an embargo upon the Canadian railway traffic which now passes freely through certain portions of the United States. But any form of interference with the traffic of the Grand Trunk and Canadian Pacific systems would inconvenience portions of our own country almost as seriously as it would disturb the business conditions of the Dominion. It is certainly to be hoped that this difference of opinion upon a matter of comparatively trifling importance may be satisfactorily adjusted without any resort to measures as extreme as the United States might easily aim at Canadian commerce.

The New Gladstone Ministry.

The new British Parliament has met; it has driven Lord Salisbury, Mr. Balfour and their colleagues out of office by passing a motion of "no confidence;" it has witnessed the creation of a Liberal ministry under Mr. Gladstone's premiership; it has adjourned to meet next winter when it will hear Mr. Gladstone's Home Rule bill read and enter upon the great legislative battle that everybody anticipates. The new ministry is perhaps as satisfactory to the people most concerned as was fairly to have been expected. As the initiated were fully aware would be the case, Mr. John Morley becomes Irish Secretary, Lord Rosebery takes the portfolio of foreign affairs that Lord Salisbury himself held throughout the six years of his administration, and Sir William Vernon Harcourt becomes Chancellor of the Exchequer—Secretary of the Treasury as we should say, or Finance Minister, as the French would term the office. The Radical wing of Mr. Gladstone's supporters had hoped to see Mr. Henry Labouchere made Postmaster-General or given some other office; but they are disappointed. The Queen's unwillingness to accept Mr. Labouchere as a minister is alleged as the reason his name was erased from the list originally proposed; but no verification of such a rumor can be expected. Mr. Arnold Morley, who becomes Postmaster-General, is a young and rising Liberal politician, and a son of the late Samuel Morley, the distinguished Liverpool reformer and philanthropist. The Irish contingent could, of course, have had representation in the cabinet if they had chosen to accept it. But Mr. Parnell taught them to occupy the position of independent allies, and to avoid anything like coalition. The English Liberals, true to their constitutional principles, would prefer to see the government of Ireland intrusted to an Irish Chief Secretary supported by the majority of representatives of Ireland. It is an anomaly and an anachronism that Ireland should be governed by an English Chief Secretary, and that even while the Government is preparing a Home Rule bill for Ireland, no Irish Home Ruler should be admitted to the Cabinet. But the Irish Home Rulers will not hear of it. They refuse to listen to any suggestion of a temporary alliance which would bind them to furnish even so much as an Irish law officer, much less a Secretary of State, to the Home Rule administration.

MR. GLADSTONE ON THE WATCH-TOWER.

(From the *Pall Mall Budget*.)

Mutual Distrust Between England and Ireland. Unfortunately, neither the election returns nor the subsequent political conditions indicate as complete a *rapprochement* between England and Ireland as could be desired for Mr. Gladstone's purposes. The union of hearts is not strong enough to stand the strain of furnishing an Irish Chief Secretary, and that not because of any objection on the part of England, but entirely owing to the jealousy and distrust with which the Irish regard their English allies, and the dread with which the Nationalists regard the Parnellites. John Bull, it is to be feared, will not be much attracted toward the experiment of Home Rule, unless he can see a somewhat different disposition on the part of the Home Rulers. To refuse to advise or help their English allies in governing Ireland, practically on their own terms, pending the passing of a Home Rule bill, is to advertise the existence of a feeling in Ireland not conducive to the success of Home Rule. The rejection of all suggestions for placing the Irish Nationalists in control of the Irish Administration until the Home Rule bill is passed, is not of hopeful augury. Moreover, this distrust of the English by the Irish is somewhat justified by an analysis of the election returns in England showing that a considerable majority of English constituencies are still against Home Rule. According to the Moslem doctors, when the Day of Judgment draws near, the Angel Israfil will blow three blasts upon his trumpet. The first is the Blast of Consternation, the second the Blast of Examination; after forty years comes the third—the Blast of the Resurrection. Home Rule in this resembles the Resurrection. At the election of 1886 one heard the Blast of Consternation. The election which is just over represents the Blast of Examination. It is to be hoped that we shall not have to wait forty years for the third and decisive appeal which will settle Home Rule. The actual majority is forty. As the Unionist majority in 1886 was 118, this represents a great shifting of the balance of political force. It is, however, insufficient to carry Home Rule. Not until England is converted will Home Rule be conceded to Ireland, and at present the Englishman, although under conviction, is far from being converted. Not a single integer of the English vote is in favor of Home Rule; but, with the exception of the university vote, there is a remarkable progress toward that solution. The following figures are very significant:

	Majority against Home Rule in England.		Home Rule gain in Six Years.
	1886.	1892.	
London.....	38	11	27
Boroughs.....	67	27	40
Counties.....	106	28	78
Universities....	5	5	0
	—	—	—
	216	71	145

The Appeal to the Nations. With an English majority of seventy-one hostile to Home Rule, the House of Lords will claim with much force that it has ample justification, both moral and constitutional, for insisting upon a third appeal to the constituencies

before consenting to so great a change. England remains at present in the valley of indecision. The other nations are for Home Rule by overwhelming majorities.

Majority in favor of Home Rule :

	1886.	1892.	Gain and loss.
Scotland.....	14	28	+ 14
Ireland.....	68	57	— 11
Wales.....	16	26	+ 10
	—	—	—
	98	111	+ 13

The Appeal to the Federal States. The United Kingdom is not yet federalized. But as Home Rule for Ireland is certain either to be accompanied or followed by something like the Americanization of the British Constitution, it may be well to see how the result would have come out if there had been a vote by States or cantons. The boundaries of the States are necessarily somewhat vague at present, but the following is a rough approximation of the way in which the voting went for and against Home Rule :

State.	For.	Against.
London.....	—	1
Home Counties.....	—	1
Lancashire.....	—	1
Yorkshire.....	1	—
Northern Counties.....	1	—
Eastern Counties.....	1	—
West Midlands ..	—	1
Wessex and Cornwall.....	—	1
Scotland.....	1	—
Ireland.....	1	—
Wales.....	1	—

If the United Kingdom were cut up into eleven federal States, the voting even now would be for Home Rule by a majority of one.

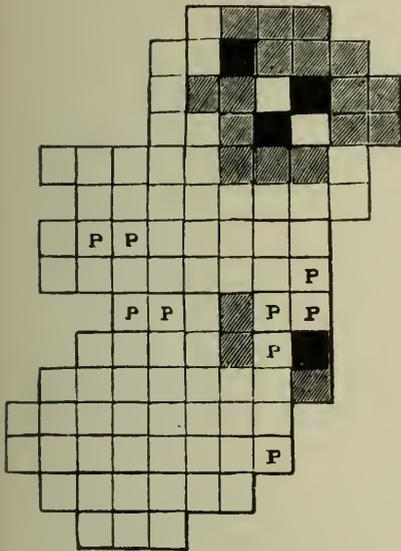

The Appeal to the Mass Vote. It is obvious what scope for gerrymandering would be afforded by any attempts to Americanize the Constitution of the United Kingdom. The Conservative vote is so heavily concentrated in the "Home Counties"—which would only count as one State in the Union—that the Liberal preponderance elsewhere would have a disproportionate weight in the political balance. When we come to the total vote cast we have some difficulty, owing to the fact that allowance must be made for the uncontested seats. The electoral statisticians are by no means agreed among themselves as to what that allowance should be, but there is a general agreement that four million odd votes were polled, and that the Home Rule majority is from 200,000 to 250,000 votes on the total poll. Of this majority Scotland contributes 40,000, Ireland 230,000 and Wales 50,000. The English vote against Home Rule is 120,000. The net result, therefore, of all these calculations is that, whether we take the voting by the actual constituencies, or by nations, or by federal cantons, or by a plebiscite, there is a majority for Home Rule. Nevertheless, Home Rule will not be carried until the Englishman makes up his mind to try the experiment, and as any attempt to coerce him by Welsh and Irish votes would make him more indisposed than ever to

sanction the change, the task to which the Liberal leaders have now to direct all their energies is the conversion of England.

Lord Rosebery's acceptance of the portfolio of foreign affairs in Mr. Gladstone's cabinet has made it necessary for him to abridge his activity in the municipal government of London, and he has therefore retired from the chairmanship of the London County Council. He has been succeeded by the former vice-chairman Mr. John Hutton, and Mr. Charles Harrison, one of

the most active and efficient members of the council, becomes vice-chairman. Messrs. Hutton and Harrison will, in fact, be holding positions far more important than those occupied by several of the cabinet ministers. Many of the most serious problems of modern civilization have to be worked out in the world's chief metropolis; and it is gratifying to know how broad-minded, statesmanlike and above personal reproach are the men who now rule the affairs of London. It is sadly otherwise in New York. The Street-Cleaning Department has been reorganized in New York and has attained to something like effi-

ciency ; but the once respectable and respected Department of Public Health has now succumbed to political influences, *i. e.* has been reorganized by the Tammany bosses in their own interest, with results that have alarmed sober citizens who know that the difference between a scientific and a political administration of the sanitary service of New York means

in ways and communications. The new "Council Broadway," planted with trees and stately with new buildings, which it is proposed to make from St. Mary's in the Strand to Holborn, will be the first of a much-needed series of thoroughfares from Waterloo Bridge to the northern railway stations. It will cost \$10,000,000, and there will be endless trouble about rehousing the poor who will be left homeless, but the work will have to be done. Its execution is, however, to be made contingent upon the principle of betterment being enforced, and it is to follow a measure making the ground landlords share with the occupiers in the cost of its construction. Note, in passing, two things—(1) that the Conservative attack on the council is already abandoned ; and (2) that the council has decided to supply its own music, finding that it can do it cheaper and better than by trusting to middlemen.

LONDON'S PROPOSED NEW THOROUGHFARE.

Home Rule in Queensland. Sir Samuel Griffith, making a virtue of necessity, has introduced a Home Rule bill for Queensland. By this arrangement Queensland will be split up into three provinces or States, each with an executive and legislature of its own; while over all—as Congress is over the States in the American Union—there will be the federal government of the united provinces, which will have the exclusive right to levy customs duties. Thus proceeds the Americanizing of Australia. It is another straw showing the way the wind is blowing. Year by year it becomes increasingly evident that the normal type of government to which the English-speaking man everywhere gravitates is that of the American federal system, not that of the British Empire. Indeed, the only question nowadays is how long it will be before the mother country herself bows to inevitable destiny and remodels her domestic institutions on American lines.

many thousands of lives every year, especially of little children. The progressive elements in the London Council are beginning to make some interesting reforms. Last month the council decided to push forward a bill for making a much-needed improvement

The Bismarck Demonstrations. It is difficult for outsiders to know exactly the meaning of the South German demonstrations in favor of the ex-Chancellor. There can be no doubt as to their heartiness, nor as to the misgiving with which they are regarded at Berlin. According to a writer in the *Contemporary Review*, the Germans are beginning to

turn anxiously to the old veteran, being more and more dismayed at the spectacle of Prince Flibberty-Gibbet on the throne. Bismarck is evidently incensed against the government, and in order to make his wrath felt is attempting to rally what may be described as a Protestant German party. It is not without a smile that we read of Prince Bismarck's enthusiastic parliamentaryism. "He urged his countrymen to strive to produce a strong parliamentary majority, so as to prevent absolutism or government by bureaucracy." It probably needs an ex-absolute dictator and supreme bureaucrat to organize a parliamentary opposition in Germany. It would be odd if the Prince in opposition may crown his career by making Germany as free as he has already made her great.

The African Troubles of France. The news from Uganda continues to be perplexing. Captain Lugard appears to have succeeded in establishing a strong position among the wreck of the population, but whether or not it is worth holding remains to be seen. Uganda is but the shadow of its former self, and is no more the Uganda Mr. Stanley discovered than Rome to-day is the Rome of Augustus. The Catholics outnumber the Protestants, and what with Mohammedans and heathens, and the puppet king who stipulates for ivory down before consenting to receive absolution, Captain Lugard's position is unenviable indeed. The French explorer, Captain Mizon, on the east coast, has returned full of complaints of the Royal Niger Company, whose worst offense appears to be that they supplied his wants and saved his life. Further south the French have got at loggerheads with the Congo State over an outpost on the Kotto River in Yakoma. A Frenchman has been killed, and the French are demanding satisfaction from the Congo government. The blockade of the Dahomey ports continues. Thus the expansion of France in Africa is bringing the outposts into more or less hostile collision with her neighbors in Morocco, in Uganda, in Dahomey, in Yakoma, and on the Niger. France hopes to find a new India in Africa. She is more likely to find a magnified Algeria and a new Cayenne.

The Habitable End of Africa. Africa is only worth having at the ends; the middle is too hot for white colonization. At the southern end things seem to be going fairly well. Mr. Rhodes has good reports concerning the yield of gold in Mashonaland. The attack upon his railway schemes has failed, and his Franchise bill, for the comparative disfranchisement of the natives, has been approved by the Cape Parliament. To Natal the delegates are now on their way carrying with them Lord Knutsford's modified assent to the establishment of responsible government, provided that it is approved by the colonists at a general election, and that the right of the Crown to deal with the natives remains intact. Under the revised constitution on which the colonists are to vote the governor of the colony, while bound to act as a

constitutional monarch on the advice of his ministers in all matters relating to the whites, is to have a free hand to deal with the natives according to instructions from home. The Transvaal is raising a railway loan to enable it to construct railways to Delagoa Bay and to Port Elizabeth. The natural outlet for the greater part of the Transvaal is through Natal, nor will trade in the long run take the longer way to the sea owing to the jealousy of politicians.

General Booth and the "Times." General Booth, speaking at the twenty-seventh anniversary of the Salvation Army, said that he had now 11,000 officers under his command, with 86 training garrisons, 25 homes of rest, and 205 social agencies at work. They occupy 38 countries and colonies, and preach salvation in 24 languages. The annual circulation of their newspapers and magazines is 47,000,000 copies, or nearly a million a week. Aunt Martha, the negress from Liberia, who was recently received by the Queen, appeared on the platform and danced before the general as David danced before the ark, after which the general accepted the challenge of the *Times* as to the social scheme. He said he was willing to submit to any committee of men of standing and capacity, whose verdict should be final, the following questions:

1. Has General Booth personally benefited in any shape or form by the "Darkest England" scheme; or is he the disinterested servant of the public that he represents himself to be?
2. Are the accounts and the balance sheets managed in a fair, business-like and honorable manner?
3. Are the moneys expended on the lines laid down in "Darkest England," and in such an economic and business-like manner as promises a reasonable measure of success?

It is to be hoped that this controversy may be tried out to the end without delay. It would be unpardonable if a scheme which would be of incalculable benefit were to be stranded on prejudice and ignorance.

Volcanic Eruptions.

This has been a troubled summer, full of great disasters fraught with terrible loss of human life. Etna has been in eruption and has destroyed many villages. A river of molten lava has been streaming from one of the five mouths of its crater, and earthquakes have shaken the Sicilian coast. Etna, however, is as nothing compared with the devastating fury of the volcano Gunona Awa, which on June 7, without any preliminary warning, suddenly destroyed the whole of the northwestern part of the island of Sangir, a Dutch possession lying between the Celebes and the Philippines. Rivers of molten lava swept down the mountain side, carrying villages and plantations with their fiery torrent, while a downpour of rocks and ashes covered the island. Two thousand persons are said to have perished beneath the ash fall and the lava flow. All the crops have been destroyed, the hills have been stripped of their foliage, and the population left destitute. Although not possessing the scenic splendor of the Krakatoa eruption, the outburst of Gunona Awa seems to have been one of the deadliest on record.

The Disasters in Switzerland.

Sangir Island is far away, and the fate of its suffocated and roasted thousands affects the imagination less than the minor but serious disasters which occurred in the playground of Europe. On July 9 the boiler of the *Mont Blanc*, the largest paddle steamer on Lake Geneva, exploded at Ouchy. The piece blown off the cupola raked the saloon from stem to stern. The saloon was full of ladies and children taking lunch when this boiler plate swept them in mangled heaps to the stern. It was deadlier than a broadside, for it was followed by a rush of suffocating steam, and in four hours twenty-four of the thirty occupants of the saloon were dead. To this holocaust England contributed three victims, France ten, Holland four,

village of Le Fayet. The stream of mud and ice was 15 feet deep when it left the gorge, which is 2,000 feet above the sea level. At least 160 persons are believed to have perished, and their corpses were found floating on the Arve far below in the valley. The fire at Grindelwald August 18 was another destructive accident, that has attracted the more attention on account of the great number of English and American visitors present at the time.

The Fire in St. John's.

Mauritius, earlier in the year stricken by a cyclone, presented a miserable spectacle indeed. But the conflagration which has destroyed St. John's, Newfoundland, was even more terrible. The great fire of Chicago originated in a

and Italy two. Two days later even this horrible accident was thrown into the shade by another, which occurred almost within site of the scene of the explosion. The lower end of the glacier of Bionnay dropped from Mont Blanc, carrying with it the village of Bionnay into the mountain stream below. This it dammed up for some time until the water accumulated in sufficient quantity to burst the dam and hurl the obstruction down the gorge to the Arve. A mighty rushing wind preceded the downward rush of this projectile of ice and mud. Then it struck the bathing establishment of St. Gervais, which stood near the sulphur spring, a little off the road leading from Geneva to Chamounix. In three minutes the torrent passed, carrying off bodily three of the five hotel buildings, with all their inmates, and adding them to its own tremendous weight, destroyed the

shed, where a cow kicked over a kerosene lamp. In St. John's, on July 7, a fire broke out in a stable, which did not burn itself out until two-thirds of the city was in ashes. The weather had been very dry, most of the houses were of wood; there was a high wind—nothing could be done. Before that roaring furnace everything went down, and when at last, after sixteen hours, the flames died out, 11,000 persons were homeless, property valued at many millions had gone up in smoke and flame, and the heart was burnt out of the oldest colony in the British Empire. The great Protestant Cathedral, erected at a cost of \$500,000, was reduced to ashes, together with the principal buildings and wharves of the city. Help was promptly sent to the hungry and homeless, but it is to be feared that the city will be a long time recovering from this cruel blow. Note as a sign of the

times that before the ashes had time to cool a fierce dispute had arisen between the burnt-out occupiers and the ground landlords. The latter are mostly absentees, and the terms demanded for sites are seen to be so exorbitant that a Tenants' League has been formed to see justice done—if need be, by the creation of a Land Commission.

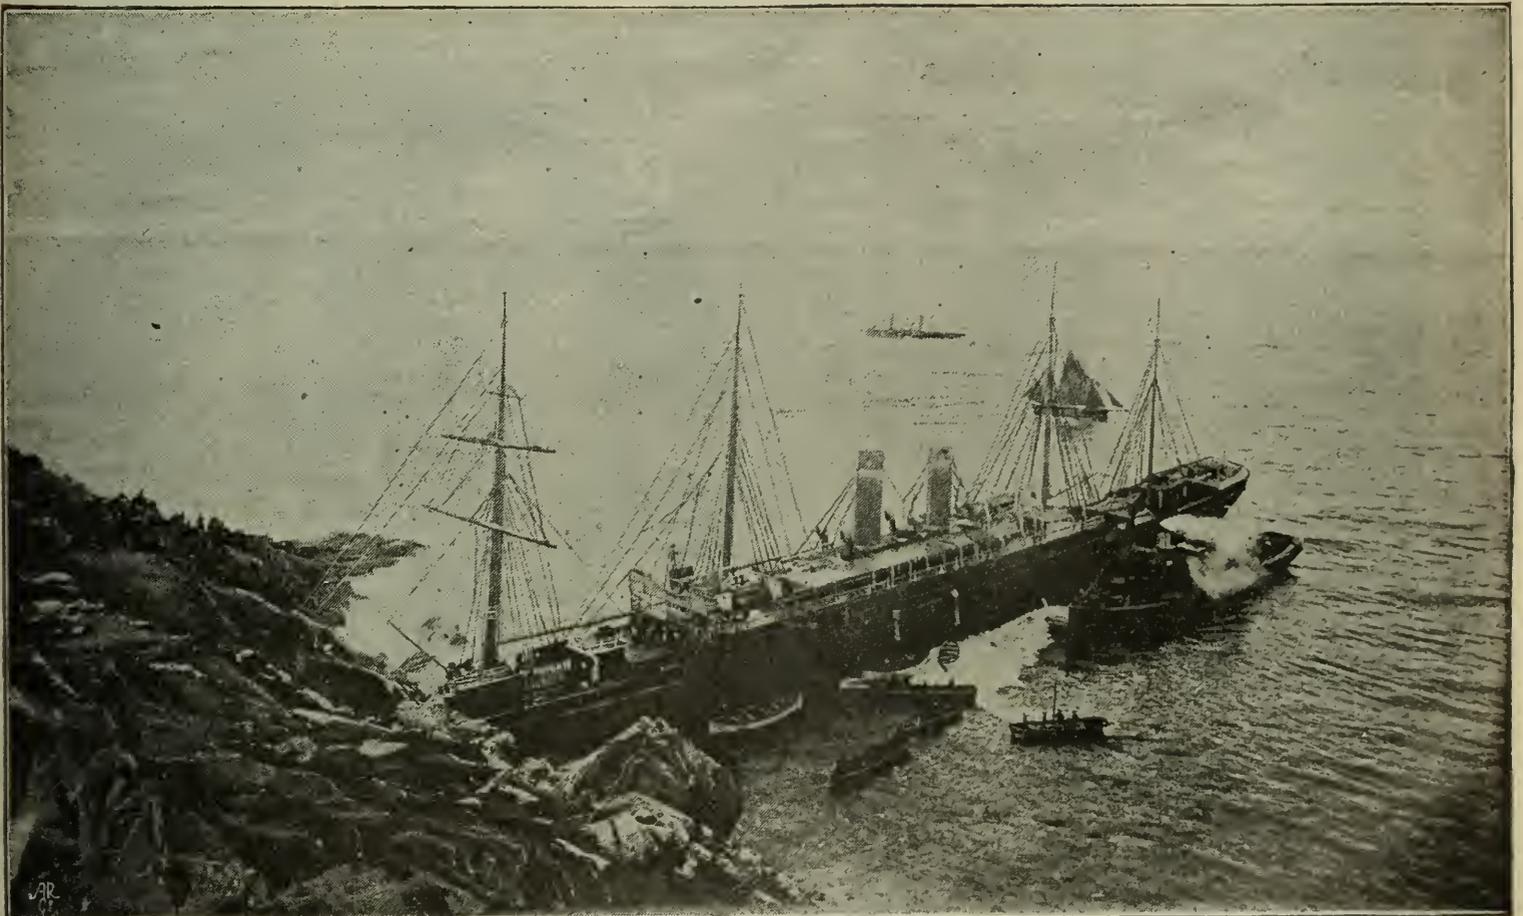

None of these disasters by flood and fire equal the appalling horrors which are reported from the East of Russia, into which the cholera from Bokhara is beginning to eat with livid mouth; 120,000 of its inhabitants have fled from Baku, the great petroleum center, and panic prevails along the Volga. The recorded deaths in the infected district are about 500 per day, and in Astrakhan the populace, maddened by fear and excited by stories of patients being buried alive, attacked and gutted the hospital, killed the doctor, burned one of the assistants alive and removed the patients into the streets, where they promptly died. So severe was the riot that the troops were ordered out and a volley of bullets was fired into the mob. It is a curious illustration of the blind folly of the popular masses in a frenzy that in order to check the cholera they kill the doctors, and throw disinfectants into the river by way of protests against the plague. General Baranoff, at Nijni, who is a man of energy, threatens to hang on the spot every agitator found stirring up the people, for as usual the spectre of Nihilist intrigue

*Cholera in
Russia.*

haunts the imagination of the authorities. The cholera has now begun to spread beyond the Volga basin. It is certain so sweep the famine-stricken region, and from thence make its way to Europe. In England they expect a comparative immunity from its ravages, but with 2,000 cases of scarlet fever in a single week in London they cannot plume themselves too much upon their sanitary position.

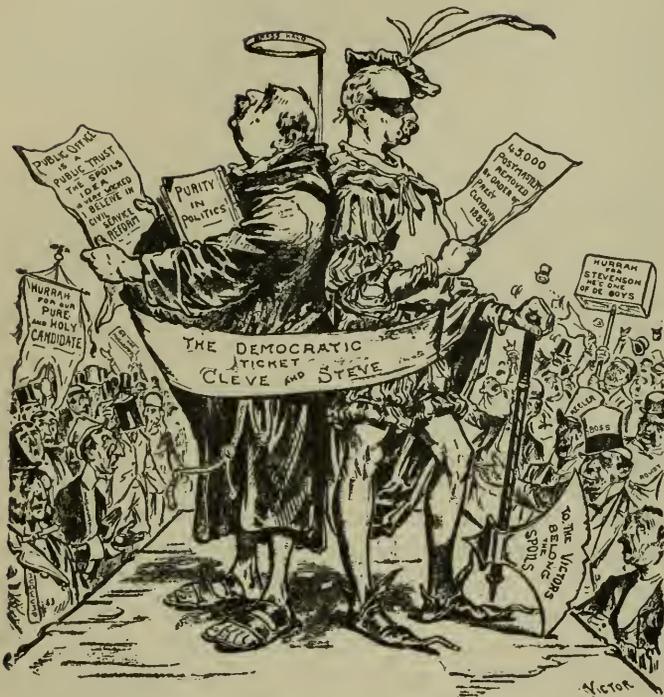

*Accidents
by Land
and Sea.*

Of minor accidents of man's inviting there have been more than the usual average. Railway accidents in England, Canada and the United States, and quarry accidents in Wales have demanded their quota of human sacrifices, but none of them imperiled so many lives as the wreck of the *City of Chicago*. This great Atlantic liner ran in a dense fog upon the Irish coast near Kinsale. The shock was tremendous, and all efforts to save the ship were in vain. The passengers landed by the lifeboat had to climb by ladders up the face of a perpendicular cliff two hundred feet high. It was an exciting adventure, and has added point to Sir E. Watkins' demand for a ship canal across Ireland. But, considering the fact that another million and a half is wanted to complete the Manchester Canal, Sir Edward Watkins' appeal will fall on deaf ears. The Inman Company are now reported to have decided to avoid the dangers of the Irish coast in future by making Southampton their English port rather than Liverpool.

days of the British elections, is elected in the North Division of Longford....Sir Charles Dilke elected to the British Parliament from the Forest of Dean Division....The Transvaal joins the Universal Postal Union.

July 17.—Senator Baron de Courcelles appointed by the French government as a member of the Behring Sea Arbitration Commission.

July 18.—Warrants issued for the arrest of seven leaders of the Homestead strike charged with the murder of two Pinkerton guards....The Pope directs that on October 12 the mass of Trinity be celebrated in honor of Columbus in Spain, Italy and America....British negotiations with the Sultan of Morocco broken off.

July 19.—The Chilian troubles settled by that government agreeing to pay twenty-thousand dollars to the families of the American sailors murdered by the mob in

Valparaiso in October, 1891....The nomination of Hon. George Shiras, of Pennsylvania, to be Associate Justice of the Supreme Court in place of Justice Bradley, deceased, received by the Senate.

July 20.—At a mass meeting in Madison Square Garden, New York, Mr. Grover Cleveland and Mr. Adlai Stevenson were officially informed of their nomination by the Democratic party for President and Vice-President....Great anxiety in England at the absence of news from Sir Charles Ewan Smith, British Minister to Morocco.

July 21.—President Harrison issues a proclamation making October 12, the 400th anniversary of the discovery of America, a public holiday....The nominations of Mr. Andrew D. White to be Minister to Russia, Mr. A. Loudon Snowden to be Minister to Spain, and Mr. Truxton Beale to be Minister to Greece, Servia and Roumania sent to the Senate for confirmation....Hon. William F. Harrity chosen chairman of the Democratic National Committee....The House of Representatives passes a bill authorizing retaliation against Canada in canal tolls....Resignation of M. Vishnegradsky, Russian Minister of Finance.

July 22.—The Senate passes the Canada Retaliation bill....The House Committee hears the testimony of the Pinkertons regarding the Homestead conflict....Three hundred skilled workmen in the Duquesne steel mills of the Carnegie Company, at Pittsburgh, go on strike....The Chicago, Burlington and Quincy Railroad Company gives notice of retirement from the Western Traffic Association.

July 23.—Mr. H. C. Frick, chairman of the Carnegie Steel Company, shot by an anarchist named Berkman....The Czar personally receives Dr. Talmage, and through him extends thanks to the American people for their aid to the famine-stricken citizens of Russia.

July 24.—W. K. Vanderbilt's yacht Alva sunk by a steamship.

July 25.—Intense heat and severe thunderstorms in the Eastern States....A fire in Bay City, Mich., destroys a million dollars' worth of property.

July 26.—Sixteen anarchists on trial at Liege are convicted....Mr. George Shiras confirmed by the Senate as Associate Justice of the United States Supreme Court....A committee appointed to revise the Belgian Constitution....The United States cruiser Columbia launched in Philadelphia.

July 27.—Conspirators against the life of Prince Ferdinand, of Bulgaria, executed....The Inman steamer, City of Paris, breaks the Transatlantic record; time—five days, fifteen hours, fifty-eight minutes.

July 28.—Four anarchists in Versailles convicted of procuring dynamite for the May Day explosion.

July 29.—The prolonged hot spell, which for several days had caused much suffering and death throughout the United States, is broken by a cool wave....A public benefactor in England purchases the famous Althorp Library and will throw it open to the people....Representative Watson, of Georgia, causes great excitement by his charges of drunkenness among members of the House of Representatives....Announcement made that the Canadian Government will take such action on the canal tolls question as will lead to international arbitration....By the declaration of the figures for Orkney and Shetland, the British election was brought to a close. The new House of Commons is thus constituted: Liberals, 274; Nationalists, 72; Parnellites, 9—total, 355. Conservatives, 269; Dissident Liberals, 46—total, 315; thus giving a majority for Home Rule of 40.

July 30.—Troops summoned to quell labor riots in Duquesne, Pa....Ex-President C. K. Adams, of Cornell, accepts the presidency of the University of Wisconsin.

July 31.—The Columbian celebration is formally begun at Cadiz....The Central Labor Union rejects anarchistic resolutions.

August 1.—Reports received from Tashkend, Russia, relate that there have been serious riots among the peasants, who believed that the doctors were poisoning the cholera patients. Sixty rioters were killed and hundreds wounded....French triennial elections to the Council General result in a Republican gain of 150 seats....The strike in the building trades in New York City so extends itself that practically all building is suspended....Emperor William, of Germany, arrives at Cowes.

August 2.—The anniversary of the sailing of Columbus from the port of Palos, Spain, celebrated....Count Ito appointed to form a new Japanese cabinet.

August 3.—Several officers of the Carnegie Company arrested, charged with murder.

August 4.—The new British Parliament opens and re-elects Mr. Peel speaker....Andrew J Borden and his wife murdered under sensational circumstances in their home at Fall River....Soldiers restore order at Duquesne, Pa., when the workmen in the Carnegie mills were attacked by strikers....The Northfield Conference opens its tenth annual session....Many striking workmen in the building trades in New York City defy the walking delegates and return to work.

August 5.—Both houses of Congress pass the bill appropriating \$2,500,000 to the World's Fair....Congress adjourns....Mr. Charles de Struve, Russian Minister to the United States, is transferred to The Hague and his place supplied by Prince Cantacuzene....Thirteen of the Duquesne rioters arrested....A train carrying \$20,000,000 in gold leaves San Francisco for New York....Chinese sailors forbidden employment on American ships by Secretary Foster on the ground that American ships are American territory.

August 6.—The new Bolivian Government assumes office....The Itasca Iron Company, with a capital of \$5,000,000, is organized in Chicago for the purpose of developing mines in Wisconsin, Michigan and Minnesota....Cholera pronounced epidemic at Teheran.

August 7.—The Dominion Cabinet removes the canal tolls discriminating in favor of Montreal....Insurrection breaks out in Bolivia....A fight takes place in Rome between Clericals and Liberals and is quelled by the police....The Bishop of Foligno is assassinated on a railroad

August 8.—Address from the throne read in Parliament....Many of the strikers in the Carnegie mills at Duquesne go back to work....The Board of Walking Delegates abandons the building trades strikes in New York.

August 9.—The Knights Templar conclave is opened in Denver.

August 10.—Rebellious Moors defeat the Sultan's troops in Morocco.

MR. DADABHAI NAOROJI, M. P.,
First Indian Elected to the British Parliament.

August 11.—“No Confidence” vote in Parliament results in the defeat of the Government by a vote of 350 to 310....Miss Lizzie Borden is arrested in Fall River, charged with the murder of her father and stepmother....The U. S. cruiser Marblehead launched at Boston.

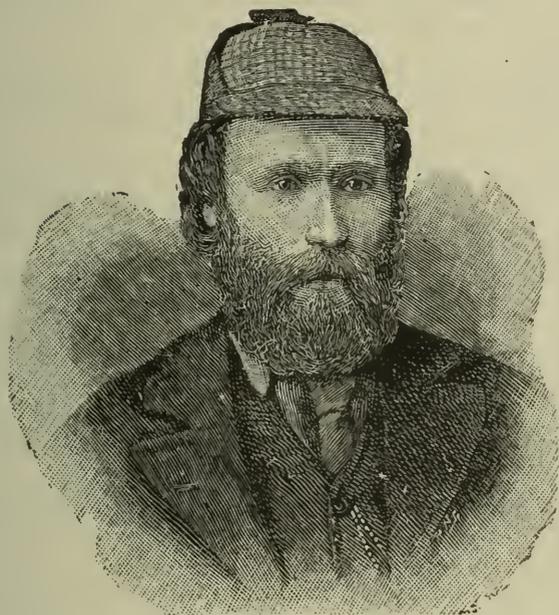

August 12.—Lord Salisbury presents to the Queen the resignation of his Ministry....Two British warships collide with serious results....News received of bloody uprisings among the Arabs of the Congo Free States.

August 13.—The East Tennessee miners again capture the convict laborers and ship them away from the mines....Emperor William withdraws his support from the proposed Berlin International Exposition....Cholera officially admitted to be epidemic in St. Petersburg.

August 14.—Striking switchmen of the Lehigh and Erie Valley railroads destroy and wreck a million dollars' worth of railroad property.

August 15.—Mr. Gladstone goes to the Isle of Wight and submits to the Queen the list of members of his cabinet....Two regiments of the National Guard are ordered out to suppress the riotous switchmen at Buffalo, N. Y....The new British ship Thracian founders off the Isle of Man and twenty-three people are drowned.

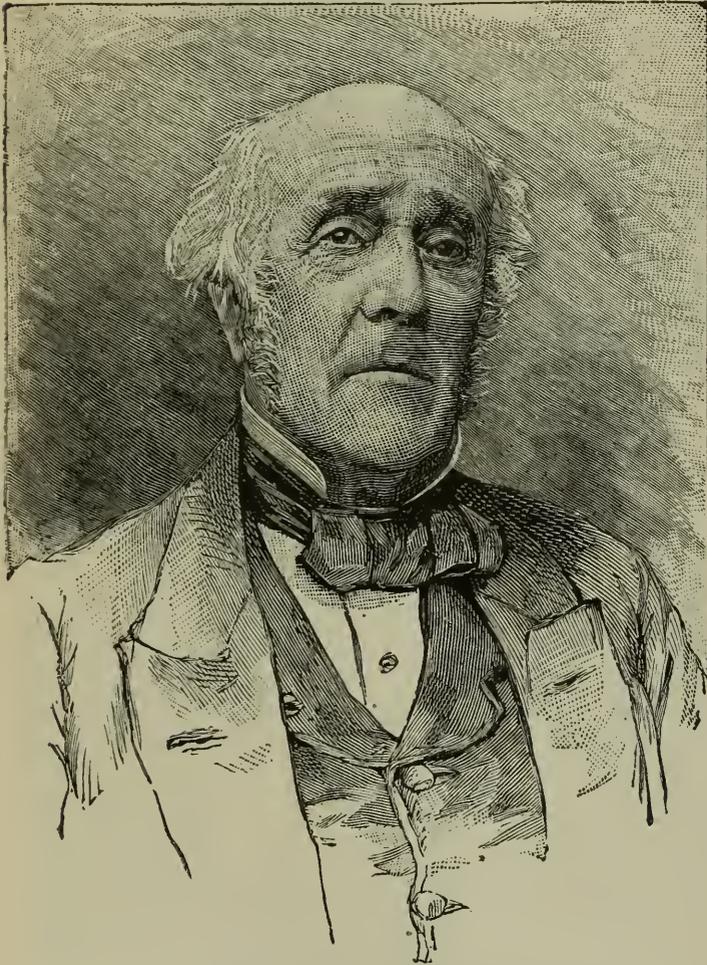

August 16.—Mr. Gladstone announces his cabinet as follows: Mr. Gladstone, Lord Privy Seal and First Lord of the Treasury; Early Rosebery, Foreign Secretary; Baron Herschel, Lord Chancellor; Sir William Vernon Harcourt, Chancellor of the Exchequer; Herbert H. Asquith, Home Secretary; The Right Honorable Henry H. Fowler, President of the Local Governments; The Right Honorable Henry H. Campbell-Bannerman, Secretary of State for War; Earl Spencer, First Lord of the Admiralty; The Right Honorable John Morley, Chief Secretary for Ireland; The Right Honorable A. J. Mundalla, President of the Board of Trade; Sir Charles Russell, Attorney-General; John Rigby, Solicitor-General; The Right Honorable Samuel Walker, Lord Chancellor of Ireland; Mr. MacDermott, Attorney-General for Ireland; The Right Honorable Edward P. C. Marjoribanks, Patronage Secretary to the Treasury; Alexander Asher, Solicitor-General for Scotland; The Right Honorable J. B. Balfour, Lord Advocate of Scotland; The Earl of Kimberley, Secretary

MR. KEIR HARDIE,
Labor Member of the British Parliament for West Ham.

train in Italy....Lord Tennyson's birthday is celebrated at Aldworth....The President appoints as representatives to the International Monetary Conference Senators William B. Allison, of Iowa and John P. Jones, of Nevada; Representative James B. McCreary, of Kentucky; General Francis A. Walker, of Massachusetts, and Henry W. Cannon, of New York.

of State for India and Vice-President of the Council; The Marquis of Ripon, Secretary of State for the Colonies; Sir George O. Trevelyan, Secretary for Scotland; Mr. Arnold Morley, Postmaster-General; Mr. Arthur Herbert Dyke Acland, Vice-President of the Council on Education; Baron Houghton, Viceroy of Ireland, without a seat in the cabinet; James Bryce, Chancellor of the Duchy of Lancaster, with a seat in the cabinet....Troops sent to Buffalo to prevent the striking switchmen from wrecking railroad property....East

THE LATE THOMAS COOK,
Founder and Manager of "Cook's Excursions."

Tennessee miners make a furious but unsuccessful attack upon the convict stockade at Oliver Springs....The Duke of Devonshire marries the Duchess of Manchester....The Most Reverend William Vaughan, who succeeded Cardinal Manning, is invested with the pallium.

August 17.—The first meeting of Mr. Gladstone's cabinet is held....The Buffalo strike extends to the switchmen of the West Shore and New York Central Railroads....Miners succeed in capturing the stockade at Oliver Springs and send the guards and convicts to Knoxville....Nancy Hanks lowers the trotting record to 2:07¼.

August 18.—Members of the old and new British ministries go to Osborn House to change the seals of office....Parliament is prorogued until November 4....Earthquake shocks in Wales....Additional troops are moved to Buffalo.

August 19.—Tennessee miners are defeated and routed by the militia under General Carnes.

August 20.—President Harrison issues a proclamation of retaliation against Canada, suspending the privilege of free shipment through the St. Mary's Falls canal....A body of 1000 miners attack a company of the Tennessee soldiers near Coal Creek, two miners killed....The Honduras revolution is ended....Emperor William announces that the German Government will not reduce the term of army service.

OBITUARY.

July 16.—Col. George W. Manypenny, Commissioner of Indian Affairs under President Pierce.

July 17.—Mrs. Rose Terry Cooke, the well-known writer and author....Thomas Cook, founder and manager of the Cook Excursions.... Francis Aquila Stout, of New York, prominent in scientific work and one of the principal promoters of the Nicaragua Canal Construction Company.

July 19.—Signor Ellena, formerly Italian Minister of Finance.

July 20.—Prof. Peter Wendover Bedford, of New York, founder and editor of the *Pharmaceutical Record*.... Cardinal Giuseppe d'Annibale, Prefect of the Congregation of Indulgences and Sacred Relics....Canon King, of England.

July 21.—Ex-Governor Henry G. Gardner, of Massachusetts....Ex-Congressman John Lynch, of Portland, Me.

July 22.—Dr. Aaron L. Chapin, ex-president of Beloit College....Lord Teynham, of England.

July 23.—George Henry Pinckard, of England....Col. Samuel John Stoops, of New York.

July 25.—The Right Rev. Thomas Legh Claughton, formerly Bishop of St. Albans....Prof. Lewellyn Evans, recently of Lane Seminary, Cincinnati, Ohio.

July 26.—M. Tonning, President of the Norwegian-Second Chamber of Congress.

July 27.—Major Henry B. Judd, of Wilmington, Del., a veteran of the Mexican war....Viscount Sherbrooke, of England....Edward Pecher, formerly leader of the Belgian Liberal party.

July 28.—Vicar-General Maréchal, of Montreal.

July 29.—Professor Charles Riddemeyer, Ph.D., of Ottawa, Ill., a prominent educator....Henry Faithful Garey, ex-Associate of the Supreme Bench, of Baltimore....Congressman Alexander K. Craig, of Claysville, Pa.

July 30.—Professor Edward T. Fristoe, of the Columbian University, Washington, D. C....Pierre Edward Teisserenc de Bort, the French statesman....Baron Joseph Alexander Hafner, the Austrian diplomat.

July 31.—Ex-United States Senator Anthony Kennedy, of Maryland....Gabriel Renville, the venerable chief of the Sisseton tribe of Indians.

August 1.—Lieutenant-Colonel Michael P. Small, of the United States Army....The Rev. Dr. W. E. Merriman, of Boston, ex-President of Ripon College....John P. Bigelow, formerly American Government Fiscal Agent in London.

August 2.—Lieutenant-Colonel Daniel P. Whitney, of the United States Army, a veteran of the Mexican and Seminole wars....Samuel Wright, Superintendent of the United States Mint at Carson, Nev.

August 4.—Leopold Mueller, the celebrated painter.

August 5.—The Rev. Dr. F. T. Ingalls, of Springfield, Mo., president of Drury College and a brother of ex-Senator John J. Ingalls.

August 6.—Gen. John Tillson, of Quincy, Ill., editor of the Quincy *Whig*...Gen. Lewis Warner Thayer, Warsaw, N. Y.

August 7.—Sir Daniel Wilson, president of the Toronto University, Toronto, Ont....Adrien Decourcelle, the noted French dramatic author.

August 9.—Gen. James W. Denver, of Wilmington, Ohio, who suggested the name of Colorado, and in whose honor the capital of that State was given its name.

August 11.—George A. Leach, a well-known journalist, of New York....Rev. David Crow a distinguished linguist, of Falls City, Neb.

August 12.—Hugh Riddle, ex-president of Chicago, Rock Island and Pacific Railway Company....George Du Hamel, of the late Mercier Canadian Government.

August 13.—Professor William Pettit Trowbridge, of Columbia College.

August 15.—John G. Warick, representative to Congress from the XVIIth District of Ohio.

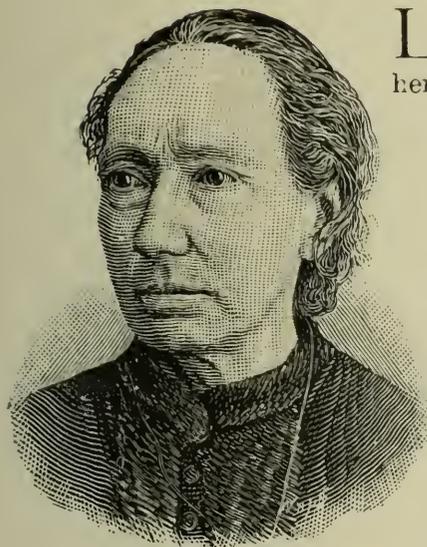

August 17.—Trebella Bettina, the famous contralto singer.

August 18.—The Duke of Manchester.

August 20.—Dr. Hiram Buck, of Decatur, Ill., one of the best-known divines of the West.

LOUISE MICHEL: PRIESTESS OF PITY AND OF VENGEANCE.

A CHARACTER SKETCH, BY W. T. STEAD.

LOUISE MICHEL.

Sybil of Wrath, the Judith of the Revolution. "Ah, poor Louise!" say her friends, "too much suffering has made her mad." It may be, but there is a method in her madness which we shall do well to note. For she is of the type of those "madmen who have made men mad," and, unlike "Macedonia's madman or the Swede," of whom Pope sings, Louise's lunacy at least has been singularly free from the least trace or sully-ing shadow of selfishness. Self-sacrifice has been the law of her being, and sympathy for others the inspiration of her life. Such a figure is surely better worth study than those of the familiar puppets who, when they are jerked to and fro by the wires of the election agent and the editor, imagine that they are disposing of the destinies of the nations.

JOAN OF ARC AND CHARLOTTE CORDAY.

France, which produces so many striking figures, has no daughter living to-day whose story in romantic interest and intensity of human passion can vie with that of Louise Michel. She is a Joan of Arc without her victories, a Charlotte Corday without her knife, with all the enthusiasm of the one and all the ruthlessness of the other. Joan, Charlotte, and Louise form a trio of female worthies characteristic of France. Each in her own way was, in her own generation, the incarnation of the spirit of revolt against dominant oppression. The Maid of Orleans against the English, Charlotte Corday against Marat, of the Terror, Louise Michel against the Empire and against all tyranny, whether of dynasties or of capital—each in her own way is a supreme type of the female militant. But to Louise Michel has been denied the boon which her predecessors enjoyed. "Whom the gods love die young"—Jeanne d'Arc

perished at the stake as a witch when only twenty years old; Charlotte Corday bowed her fair young head beneath the stroke of the guillotine when only twenty-five; Louise Michel lives still. She is over fifty, and care and toil and many trials have made her look still older than her years. But when she shouldered the rifle in the defense of the Commune she was under thirty, and it was a mere accident that she failed in her fixed design of slaying Napoleon on the eve of his departure to meet his doom at Sedan.

France under the Empire was prose incarnate. Under the Republic it is little better. The French, once the most brilliant of peoples, have all become drab. Only here and there do we find a patch of color. In politics a dull monotone of uniform mediocrity is almost universal. The Third Republic has not been prolific in heroes or in martyrs. Its temple is still the Bourse, and its sordid ideals lend scant inspiration to the soul of man. In such a dreary desert of neutral tints Louise Michel glows like the welcome patch of red on a painter's canvas. Here at least there still glows the martyr fire. Here is a hero soul—mad no doubt, mad with the passion of pity and the sympathy for pain, but of the same enthusiastic stuff which filled the catacombs with the bones of the sainted dead, and to whose dauntless intrepidity, attested in many a bloody amphitheatre, the Galilean owed the triumph which Julian acknowledged in the bitter moment of defeat and death.

I. CHILDHOOD AND YOUTH.

It is difficult to analyze the ingredients that make up Louise Michel. Heredity, even if we exclude the favorite Theosophical doctrine of re-incarnation, holds a key that would unlock many mysteries, for the poet is born, not made, and Louise Michel is a poet in politics. "When each comes forth from his mother's womb," says Emerson, "the gate of gifts closes behind him." What pre-natal influences molded this strange and pathetic character, who can say? Louise herself, in her "Memoires," does not go back beyond her infancy. All that we can know, therefore, is the kind of surroundings in which the seed germinated; we know nothing of the seed itself. But that, of course, is the essential thing. Thousands of young girls wore short frocks in the romantic borderland of old Lorraine in the days when Louise Michel was romping under the cherry trees, were played upon by the same influences, enjoyed the same sun, and were encompassed by the same atmosphere of legend and romance; but of all the thousands there came forth but one Louise. Her environment influenced her no doubt, as the hammer of the smith influences the

iron which, glowing from the forge, is laid on his anvil. But the primary question is not environment, but character, as with the smith the first essential is that he should have iron to deal with, and not wood or lead. Louise, an illegitimate child, was born in

LOUISE MICHEL'S MOTHER.

the ruins of an old feudal castle with four castellated towers, known to the country folk as the Stronghold or the Tomb. In this old ruin, surrounded by a multitude of animal pets, the imaginative child was brought up by her grandparents, feeding her mind from earliest years upon everything that could minister to a romantic fancy. In the long winter nights, while the snow lay white on the hills, and the wind whistled shrill through the ruins, the wolves, driven by hunger, would surround the castle, and their howls, mingled with the answering baying of the hounds, made strange music. Of the scenery from the windows she was reminded by the blue mountains which looked down on Sydney Harbor, and to her romantic surroundings—one lone child interned in the old ruin—she attributes the poetic temperament which is one of her most striking characteristics. Poetry, she says, decidedly was not in her family. The gift was not inherited. But as to that who can say?

THE SCHOOL OF COMPASSION.

Little Louise lived with her mother, her aunt, her two grandmothers and her grandfather. The latter was the only man in the house. But her real companions were the four-footed beasts with which the castle swarmed. It was, as she says, a veritable menagerie. The house was full of animals, and she was one of the family. There were great gray wolf hounds, and pet dogs of all kinds, a legion of cats, who seem to have entered on a league of peace and friendship with the mice which swarmed everywhere, and who extended the same kindly consideration to the birds. The temple-haunting martin and the ubiquitous sparrow nested in the walls, and the place was alive with larks. Among her earliest companions and playmates were a tortoise, a pet deer, a tame wolf, several hares left orphans when tiny leverets, an owl, a partridge, several quails and a few bats. Outside there were the old mares, one of which used to come into the drawing-room for sugar, and their foals; the dreamy-eyed cows, the pigs and a few wild boars.

All the birds and beasts seemed to form a happy family. The indoor pets gathered together round the fire on a winter evening in the great hall, while little Louise sat at her grandfather's feet and listened to the reading that went on, varied only by the click of the knitting needles and the occasional crackling of the branches in the fire. It was there where Louise Michel learned that sympathy and compassion which dominated her whole subsequent life. For the girl, who learned to love as if they were human the furred and feathered friends who surrounded her grandfather's hearth, grew up with a tender sympathy for the dumb and the helpless, a sympathy which fretted her almost into frenzy when she saw the dull brutality of torture to which the voiceless ones were subjected by the peasants who lived in the neighborhood. She was ten years old before her mother could induce her to taste meat of any kind. It seemed a species of cannibalism. The frog cut in two by the spade, the worn-out horse driven into the leech ponds, the goose nailed by its feet before the fire, the kitten dragged by a string through the street as if it were a go-cart, the little bird given as a plaything to a child of two or three, who pulled it to pieces—all these things roused in the child a loathing and a horror which even at the earliest age found vent in longings for vengeance. She longed to see the horse trample down its pitiless tormentor; but, as she reflects with a sigh, tamed brutes and coerced races patiently bear their doom. As they could not avenge themselves Louise set herself to rescue what she could. She ransomed imprisoned larks and linnets by parting with her toys, and sometimes made forays upon her neighbors and rescued the little victims with a high hand. "I took advantage," she said, "of my strength over younger children, an excusable action on my part, seeing that by so acting I was placing my strength at the service of right." So she grew up, loving the oppressed, hating the oppressor, and making her own home the nest and shelter-house of all the unfortunates of the country-side.

AMONG BEASTS, AND BIRDS, AND BOOKS.

Louise Michel was brought up in a library, among people much older than herself. Although she declares her poetic gift was not hereditary, she tells us that "each event of importance which occurred in our family was carefully recorded in verse by my grandmother in two big books of unusually thick paper, which at her death I wrapped up in crape." She soon seems to have learnt to read, and to have been allowed to read everything. Bossuet bored her, and she promptly set to work to write a universal history of her own, being prompted thereto by the perusal of a school history brought home by her cousin Jules. She abandoned that impossible task for a poem upon Cona, one of the hills in the neighborhood, and then again set that on one side for the study of natural history. She had a sanctum in one of the towers of the castle, where she practiced the black art, and collected skeletons of birds and beasts, studied chemistry, manufactured a lute out of a deal board

and some guitar strings, and generally did as she pleased. She read Molière, Voltaire, Corneille, Victor Hugo, the illustrated magazines, and every book she could get hold of. It was her grandfather who taught her to be a Republican. He told her at the fireside the long epic of the first Republic, and then, ceasing to be the enthusiast and becoming the cynic, he explained how easily nations and men allowed themselves to be deceived. From him Louise acquired a passionate devotion for the Republic and for the Revolution which has never left her. The book which first left a notable mark on her life was Lamennais's "Words of a Believer" (*Les paroles d'un Croyant*). She read it with two girls of the village, and "its pages were soaked with our tears." From that day she felt herself one with the masses of the race. From that moment began that weary pilgrimage which, starting from Lamennais, has brought her to her present demented faith in Anarchy. Thus reading, writing and thinking: an ugly, mischievous, precocious girl, with sunburnt face, dishevelled hair and ragged dress, she grew up with a passionate love of liberty in her soul, and a fierce hatred of all oppressors glowing in her heart.

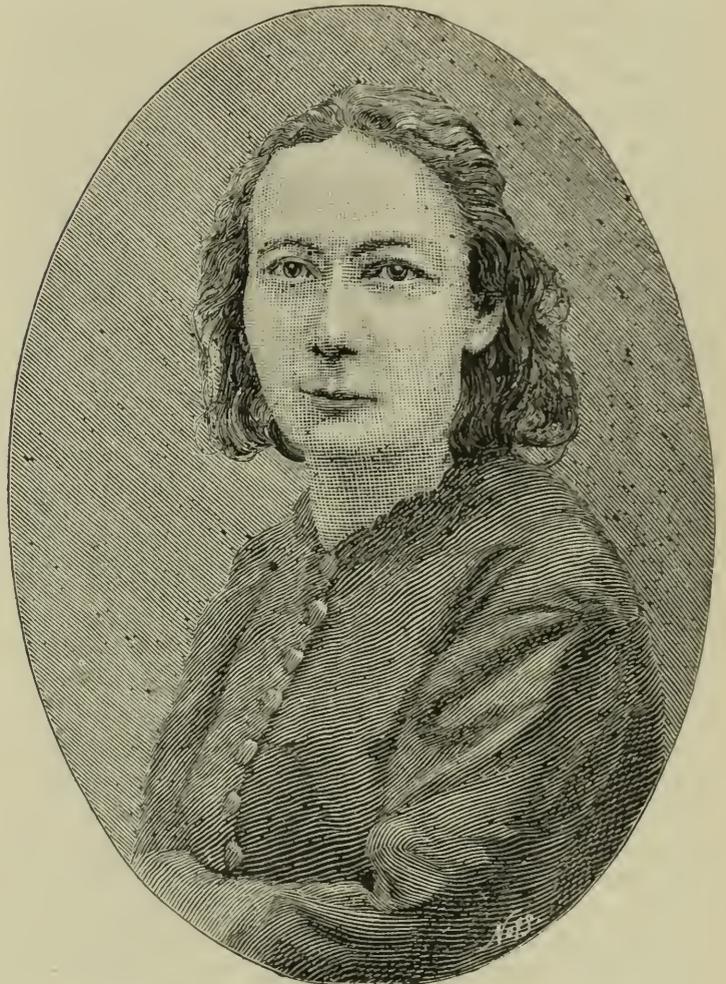

THE LEGENDS OF THE LAND.

The country-side was rich in legendary lore. Louise Michel is somewhat of a psychic herself, having from time to time strange glimpses into futurity, of which she but seldom speaks. But when she invoked the devil to appear in the haunted castle, using the customary invocations, and protesting her love for him, she saw nothing, and thereupon incontinently concluded there was no devil—which was, to say the least, a somewhat precipitate judgment. Near her home was the Lady's Well, where an old beldame declared she saw three spectral washerwomen, but whether they existed or not Louise could not say. She had watched for them many a time, but they remained invisible. The Will-o'-the-wisp fire that danced among the willows was the theme of many a weird tale. There was the aforesaid haunted castle, and there was the legend of the holy hermit of the Cara, who prayed all day that the villagers might be preserved from a wicked bandit who preyed upon them all night; but it was at last found that the hermit was the bandit, both rôles being played by the same man. Louise made this the subject of one of her innumerable poems, the humor of it suiting her sardonic fancy. Reared in the midst of folk-lore, Louise acquired that taste for legendary tales which led her in after life to collect so patiently and enthusiastically the scattered relics of the folk-tales of the Kanakas of New Caledonia.

HER FIRST COMPANION.

Jules, her cousin, was a male counterpart of herself. When he came from school Louise and he reveled in all the delight of a companionship in which there was just sufficient contrariety to give spice to a union cemented by innumerable sympathies. The two young things, as wild as unbroken colts, romped through the woods, discussing the oddest of questions, playing

the rudest of pranks, and abandoning themselves without restraint to the impulse of the moment. Together they re-arranged Victor Hugo's dramas, so as to render it possible for the whole piece to be performed by their two selves. All artistic questions were discussed as they sat perched in the cherry trees, ever and anon interrupting grave disquisitions on the unities by pelting each other with fruit or descending to the ground for a battle royal. On one occasion they fought over the question of woman's rights. Young Jules maintained, after the fashion of the dominant male, that if Louise, by studying her books, kept her intelligence abreast of his, she could only be regarded as an abnormal specimen of her sex. She could not stand this imputation on womanhood, and replied hotly. From words they came to blows, and the youthful poets literally broke their lutes over each other's heads. They soon made it up, however, and resumed their search for toads, which they used to collect in order to put into the pockets or throw at the heads of wicked people. Ultimately they gave this up, realizing that however just it might be to the wicked ones, it was abominably cruel to the toads. In the yard behind the wall they improvised a stage

LOUISE MICHEL IN HER TEENS.

on the woodpile, on which they represented all the bloodiest episodes of the Reign of Terror. Before their imaginative eyes the woodpile became a scaffold. They ascended it in turn as if they were going to the guillotine, and, crying *Vive la République*, lay down

and placed their heads under the (imaginary) fatal knife. They seemed to have a strange craving for the horrible. Children, like savages, delight in blood, and Louise and Jules ransacked their histories for tales of terror. Sometimes they would mount the woodpile as if it were a funeral pyre, and throw into dramatic form the burning of Huss, or other terrible scenes in the history of religious persecution. They sang as they mounted the scaffold, until one day the grandfather told them that this was too theatrical. They should ascend it quietly, and then proclaim aloud on the platform the principles for which they were supposed to die. When they tired of the historical drama they hunted the pigs through the orchard, pretending they were hunting wild boars. So passed the happy days of childhood, beneath the shadows of the dark poplars, breathing air thick with the scent of rose, and mignonette, and honeysuckle, and full of the melodies of old time and the music of ancient ballads. Louise grew up in all the freedom and glory of untrammelled youth.

OFFERS OF MARRIAGE.

Louise ought to have fallen in love with her cousin Jules. Had she done so this history would probably never have been written. But they were probably too good comrades to be lovers. It must be admitted that she was a Tartar to be wooed, as her first two suitors found to their cost. When she was between twelve and thirteen two suitors came to ask for her hand. They were like ganders or ghosts, she says, somewhat cruelly; but it must be admitted that they were not lacking in courage to tackle this young hoyden in short frocks. "My skirts were always too short, my aprons always torn, and the net in which I stowed my toads was often dangling from my pocket," when suitor number one came along with his offer of marriage. He wished to share his fortune, he said, with a wife brought up according to his own principles, and so he pitched upon Louise. She had been reading Molière that morning, and she replied to her wooer with a quotation from the scene between Agnes and Orgon; but he not understanding it, she dismissed him with a rude personal remark. Still worse was the way in which she dispatched her second suitor. She said: "I do not love you. I shall never do so; and were I to be married to you I should treat you as Madame Angelique treated Georges Daudin." A terrible young miss, indeed. No wonder she said: "I never saw any one so perfectly dumfounded. He left us there and then, and never again set his foot in our house." She rejoiced in her good luck in ridding herself of his attentions; but she shuddered at the thought that there were parents who would have compelled their daughters to marry "one of these old baboons."

TEACHING.

Louise Michel was born in 1839. When she was fourteen her grandparents died. She left the dear old ruin in which she had spent her happy childhood amid her animals and birds, and applied herself to study in order to qualify for teaching. She had al-

ways enjoyed teaching. She taught when a mere girl; she taught in New Caledonia; she is teaching in London to-day. Before starting school, she had been for a time subjected to contending currents of thought. Her aunt Victoire, pious, devout, enthusiastic, labored for the soul of Louise, for a time with some apparent success. All her nieces, and Louise more than most, were carried away by mysticism; nor has she to this hour entirely rid herself of the impressions of the aunt's devotion. But she listened with equal attention to the Voltairean irony of her grandparents, and from the two influences she manufactured her working creed. She brought her aunt's religious enthusiasm to her grandfather's Republicanism. The pole star was the Revolution, and her life marched to the tune of the "Marseillaise," sung as a hymn of vengeance during the decline of the Empire. She was, *une dévote de la Revolution*. The Revolution, the revolt first against the Empire, and then against all the institutions of society, became for her the object of a religious enthusiasm, which has never ceased to inspire her life and direct her actions. In another world than this she believes but little; in the existing order of things she believes not at all, regarding it as but fuel for the burning. • But that "dear and future vision which eager hearts expect" glows ever like a mirage of the desert before her hungry eyes. Already she sees the dawning in the eastern horizon that heralds the coming day. It glows to-day as resplendent as ever. Nor has hope deferred made her heart sick. It was a perilous faith to begin life with when the Imperial eclipse was darkening the fair fields of France, especially for a young teacher who had her living to get by keeping school. Pupils came in numbers, for the eccentric, kindly girl knew how to make herself beloved; but she soon got herself into trouble with the authorities. And no wonder. She taught her scholars to sing the "Marseillaise" first thing when school opened and last thing before it closed. Often they sang it, with tears, upon their knees. For those were days when, as the exile says bitterly, the "Marseillaise" was not yet dead in France. Here is a passage from her "Mémoires" characteristic of the writer:

A noise of wooden shoes heard from the prison cell from which I pen these lines, reminds me of other wooden shoes at Andeloncourt Church on Sundays, the black, small, and neat sabots of the children rushing to the door as soon as the organ began to peal forth the opening notes of the "Domine Salvum Fac Napoleonem." I had told my pupils that it was wicked and sacrilegious for any one to attend the prayers offered up for the Man of December. That is why the black, small, and neat sabots ran away in such haste, making on the flagstones of the church a pretty little noise somewhat similar to a shower of hailstones—similar to it, though louder, was the sharp noise of the bullets fired from the windows of the Hôtel de Ville on the defenseless mob (January 22, 1871). Later I also heard the whizzing of other bullets and the sound of other sabots—the bullets of Versailles against the Prussians and the heavy sabots of the convicts in the centrales sounding drearily on the frozen ground, whilst the silent long rows of female prisoners moved on slowly under the snow-clad firs of Auberine or the dark trees of Clermont.

Such teaching, with occasional newspaper essays in which Domitian was described in terms that applied to Napoleon, brought her once or twice before the authorities, but her school was never closed—which seems to show that there was more liberty under the Empire than is generally believed.

IN PARIS.

In 1855, at the close of the Crimean war, Louise came to Paris as an assistant teacher in the school of Madame Volliers. She was eighteen—young, enthusiastic, passionately Republican—the material of which the saints are made. But the church had sold itself to the Man of December, and all chance of its guiding this fierce, impulsive human heart perished with the *Te Deum* in Notre Dame in honor of the author of the *coup d'état*. Here is one great tragedy of our times. The raw material of the saint and the martyr, self-sacrifice, zeal, courage, devotion, all the qualities with which the early Church regenerated the Roman world, and yet in the shaping and directing of this inestimable element, which is the first great duty of the Church, what is the Church doing? If Jesus of Nazareth had but come across the path of the wild young teacher from the Haut Marne, how different things might have been! But she only found Him in the cause of martyred liberty and of the oppressed people. She did not find guidance and sympathy and the repose that comes from the conscious strength of a great communion. When the Church goes a-woolgathering for the devil, the children of God are left to wander like lost sheep in the desert. Louise Michel had not at this time hardened into the *Revoltée*. She hated the Empire, and she did well to hate it. She believed that the Republic was to cure all the miseries of mankind. And to bring about the Republic she was even then ready to do anything and dare everything, to fling away her life as a very little thing.

THE LOGIC OF THE POLITICAL ASSASSIN.

She wrote once when discussing this subject :

I do not know what task Fate has sent me, but now, as in the days of my youth, I am fully prepared to perform it. During the latter years of the Empire the terrible strophes of Victor Hugo were ever crossing my mind :

“Harmodius, c'est la heure

Tu peux frapper cet homme avec tranquillité.”

I should have done it, for the death of that man would have saved the lives of millions of other men. When I was assistant schoolmistress somebody had promised to secure for me an interview with the tyrant. For in those days I did not like the idea of soliciting an audience even from Bonaparte in order to kill him. I should not now, however, be so scrupulous. It was not till a long time after that my friends succeeded in obtaining me the promised letter of introduction, but it came too late. The Emperor had gone to the seat of war.

Louise Michel was a countrywoman of Charlotte Corday's. She has reasoned herself into a belief in the usefulness of assassination. She says :

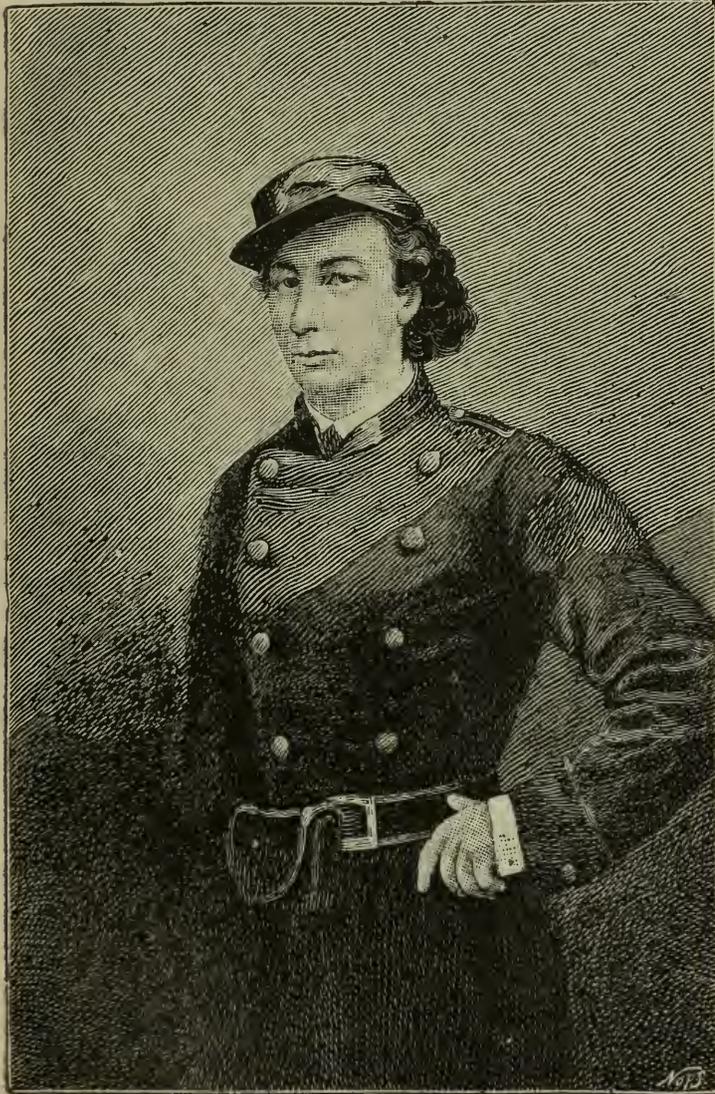

Have you ever seen a viper whose neck has been severed? The head and the trunk writhe and move about as if trying to come together again. You feel grieved and

sorry for the suffering thus inflicted on the reptile, but your reason furnishes an implacable argument against pity. Had not the viper been destroyed it might have bitten some person. Once on the hill on which our vineyard was situated some huntsmen drove a she wolf at bay. The unfortunate beast, holding its young ones between its paws, was howling pitifully. Notwithstanding all my entreaties I could not induce them to spare its life. The mercy that as a child I sought for the she wolf I should not seek for some men who are more cruel than wolves for their fellow creatures. To strike down men personally responsible for the slavery and oppression of a whole nation there can be no more hesitation than to destroy a viper or to knock down the poor she wolf with her young ones. Tyrants are doomed to die ; no pity can be shown them. Such has always been my opinion, and should the occasion offer I should not hesitate to enforce it.

THE WOMAN IN REVOLT.

Such is her pitiless logic. It is not original. Nor is it exceptional, even in a woman. Judith slew Holofernes ; and blessed among women was Jael, the wife of Heber the Kenite, for smiting Sisera through the temples as he lay asleep in her tent. Charlotte Corday said when she slew Marat : “I killed him to put an end to the troubles of France. I killed a man to save a hundred thousand men—a wretch to save the innocent, a wild beast to give peace to my country. Never have I wanted the energy of my convictions.” Louise Michel, however, although ready to die in order to kill, has fortunately never put her creed in practice. During the Commune she offered to go to Versailles to give her life for that of M. Thiers ; that is to say, she was to go to kill the little old President who was at the head of the Versaillese, knowing that in doing so she would herself be killed. When she returned from Caledonia a false story ran that when she alighted on the platform she whispered to M. Rochefort, “The pig is fat ; it is time he was killed!”—the pig in question being M. Gambetta, whose corpulence gave point to the allusion. Gambetta was killed by a woman, but not by a political assassin, and it is to be hoped Louise Michel will never have occasion to wield the dagger of Harmodius. It is not surprising that women in all ages should have distinguished themselves by assassination. Like deceit, it is the natural weapon of despairing weakness, and women in every age have had more reason to despair than men. Against the subjection of women Louise Michel is ever, and justly, in passionate revolt. Knowledge and liberty are the boons which woman demands, and so far, except in a few exceptional cases, she has demanded them in vain. To this hour not a single university in Germany has authorized women to study in these seats of learning, jealously monopolized by the men who, after dooming their sisters to ignorance, refuse them civic justice and human rights because they suffer from the consequences of their exclusion. As a consequence, while everywhere in society man suffers, woman suffers still more, and his sufferings are not to be compared to hers. Woman is trained either to be a housewife or a courtesan. She is excluded from citizenship, deprived of education, and defrauded of the

wages of her labor, and in too many cases bidden to make up the deficiency by the sale of her person. Hence the iron enters into the soul of some women, and they become rebels. Sometimes, if they are Christians like Mrs. Butler, they are rebels for the Lord's sake. Sometimes if, like Louise Michel, they have been alienated from the Church, they are rebels for the sake of their sex. "In rebellion alone," exclaims Louise, "woman is at ease, trampling upon both prejudice and sufferings. All intelligent women

LOUISE MICHEL IN MILITARY UNIFORM, 1870-1.

will sooner or later rise in rebellion." This, no doubt, is overstrained and exaggerated. Except one or two like Louise Michel—to whom the smell of powder is as sweet incense, and to whom there is no music like the thunder of artillery and the bursting of shells—women are profoundly ill at ease in revolutions. But a woman who does not realize the injustice of the denial of justice and equal rights to her sex in Church and in State is becoming the exception rather than the rule, and this change will work itself out in a profound social, moral and economic revolution before long. And the slower comfortable women are in appreciating the wrongs of their sex, the more Louise Michel will be driven mad by the contemplation of the hopeless sum of human misery that is in-

volved in the radical injustice in which the subjection of woman is based.

II. THE COMMUNE.

When Louise Michel was crossing the Thol forest when quite a girl on her way to Clermont, she was followed all the way across the wood by a wolf. She heard his regular trotting and saw his glaring eye the whole of the journey. Fortunately, she was not alone, and the wolf did not attack the party. The incident was grimly characteristic of her career. Since she left the happy ruined castle in the woods, a wolf, gaunt and hungry, and savage, has seldom left her side.

"It has always struck me," she wrote once, "that we feel our destiny as dogs smell the wolf. Our forebodings sometimes become reality with extraordinary accuracy." Louise, at least, always felt her destiny. During the fifteen years she was teaching in Paris, before the war, life was a long struggle; not by any means without its joys and its consolations, but all in preparation for the inevitable struggle. The way in which the Republicans kept alive the sacred fire during the Empire is unfamiliar to most of us who have grown up under the Third Republic. In those days there was inspiration in the very word "Republic." It was but another name for the Millennium. In clubs and lecture-rooms, and in their own homes, they cherished the mighty hope that ere long the Emperor would be overthrown, and that on that day righteousness and peace would prevail, the Golden Age would return, and liberated France would establish the reign of universal justice throughout the world.

THE WAR.

Far different indeed was the reality from the fond dreams of the Republican enthusiasts. The Empire fell in a night. But before it fell it had brought the German into the land, and the infamy of the *coup d'etat* was avenged in the catastrophe of Sedan. Louise Michel, who had done what she could to protest against the war, took her first conspicuous part in French politics by collecting signatures for the petition praying for the release of Endes and Brideau, who had proclaimed the Republic before Sedan. Some of the memorialists wished to erase their signatures. "We are risking our heads." "Yes," said Louise, "you are risking your heads. So much the better. I'll risk mine with yours." An assurance more characteristic than consoling. She, with others, carried the petition to General Trochu, Governor of Paris. They were refused admission. "We have come in the name of the people of Paris," was their statement, and they bluntly refused to go unless their petition was received. It was the first occasion, but not the last, when Louise ventured to speak for the people of Paris. The German armies, crushing the French on a dozen battle-fields, advanced on Paris. Soon Louise Michel discovered that the government of the Men of September differed only in name from the government of the Man of December.

Here is her story of the first collision between the people of Paris and the government of France. It is interesting as a kind of preparatory rehearsal of the subsequent outbreak :

THE FUSILLADE FROM THE HÔTEL DE VILLE.

On January 22 the revolutionists assembled in front of the Hôtel de Ville, where Chaudey was in command.

In spite of the protests that no surrender was contemplated, the people were suspecting some treason.

Being anxious not to disturb the peace—which feeling always leads to the crushing of those who give way to it—those revolutionists who were in arms withdrew ; as for me, though I had my rifle, I confess that I stayed.

When there only remained in the open space in front of the Town Hall a defenseless crowd, a noise like that of hail was suddenly heard—it was produced by the bullets fired from the windows of the Hôtel de Ville by the Breton troops, whose pale faces could be plainly seen from the square opposite. The firing thus going on soon made large gaps in the ranks of the bystanders.

You it was, fair-haired children of Armorica, who thus murdered our defenseless friends. But you are fanatics, not traitors. You shoot us down. But you think it is your duty to do so, and, some day, you will join us in the conquest of liberty. You will then display in support of justice and freedom the same fierce energy as now in defense of tyranny, and with us you will storm the rotten institutions of the world.

Razona was in command of the battalions of the Montmartre National Guards. On the people's side no shot had been fired previous to the volleys of the Breton troops. But then, and then only, those of us who were armed and had withdrawn to the square round the Tour Saint Jacques, indignant at the treachery, hurried back to the Hôtel de Ville, and opened fire on the assailing troops ; as to the men who were unarmed, they set about raising a barricade.

An old champion of the insurrection of June, 1848 (Malezieux), whose coat bore numerous traces of bullets, though he did not seem to pay any heed to them, remembered the days of his youth, and, brave fellow, rose above the circumstances, wrapping himself up, as it were, in his flags of June.

Standing up in the centre of the Hôtel de Ville, buried in my thoughts, I was looking at the cursed windows, thinking that some day the men who were shooting us down would join us. In May following, those very windows, destroyed by the fire that burned down the municipal palace, seemed to be staring, like the eyeless sockets of a skull, at the blazing city.

The hail-like noise of the bullets falling on the pavement went on uninterrupted, and the crowd was rapidly disappearing.

The shots fired at random from the Town Hall were killing harmless people strolling about in the neighboring streets.

Close to me, a woman of my size, dressed in black, and whose features were very much like mine, fell, struck by a bullet ; a young man who was with her was killed likewise. We could never ascertain who they were ; the young man had the bold features of Southern people.

We were all indignant and many of us urged the necessity of reprisals ; after much discussion it was, however, decided not to resort to violence on that day.

Sapia was killed on January 22, and many others besides ; Henri Slace, who belonged to the Blanqui group, had his arm broken. Harmless passers-by, as usual, killed

like our own people, and on the graves we swore vengeance and liberty.

By way of challenge, I threw my red scarf on a grave ; a comrade picked it up and tied it to the branches of a willow.

Six days after January 22, the Government having shot down the people, and proclaimed aloud that they had no intention of surrendering, the capitulation of Paris was signed. The wrath aroused in the people by that fresh act of treason was not allowed to subside.

IN ARMS.

Louise busied herself in the committees that were formed to assist the Government of National Defense, and was indefatigable in her exertions, even going so far as to wear the uniform of a national guard and to shoulder a rifle. When the long agony was drawing to a close she protested against surrender, and demanded to be led once more against the besiegers.

Of the work of the Amazons, otherwise than as petroleuses, but little has been written. The experiment was an interesting one. How far are women capable of bearing the strain and the burden of military service? It is a question upon which we have by no means heard the last word. The tradition of the ancient wars with the Amazons indicates that even in the field woman at one time held her own with man, and for a time on more than equal terms. His sable majesty the King of Dahomey is the only potentate who has preserved to the present day the soldier-woman, but in the Commune, when frenzied Paris stood at bay behind her barricades, women pressed eagerly into the fighting rank. Poets have idealized the fighting woman in Britomarte, one of the fairest of the knights of the "Faerie Queen," history has glorified her in Joan of Arc, and the Maid of Saragossa extorted a tribute of praise even from the muse of Byron. The Parisian Commune, however, has found no eulogist save Louise Michel. Her history is written in the records of courts martial, and for the most part she is remembered with a shudder. She deserved a better fate, and when the history of the revolt of women comes to be written, its historian will spend many a careful hour investigating how far these women of the Commune maintained the honor of their sex. According to Louise Michel, they bore the strain of that fierce ordeal at least as well as the men. There was a good deal of hysterics in the Commune, but the men had it worse than the women.

THE WOMEN-WARRIORS OF PARIS.

Here I may quote two vivid little pen-pictures by an unsympathetic observer. Mr. John Leighton thus describes what he saw in the last days of the siege :

As I approached the Chaussée d'Antin I perceived a multitude of men, women and children running backwards and forwards carrying paving stones. A barricade is being thrown up ; it is already more than 3 feet high. Suddenly I hear the rolling of heavy wheels. I turn, and a strange sight is before me—a mass of women in rags, livid, horrible, and yet grand, with the Phrygian cap on their heads, and the skirts of their robes tied around their waists, were harnessed to a mitrailleuse, which they dragged along at full speed, other women pushing vigor-

ously behind. The whole procession in its somber colors, with dashes of red here and there, thunders past me; I follow it as fast as I can. The mitrailleuse draws up a little in front of the barricade, and is hailed with wild clamors by the insurgents. The Amazons are being unharnessed as I come up. . . . The scene that surrounds me interests me in spite of myself. Those grim hags, with their red head dresses, passing the stones I give them rapidly from hand to hand, the men who are building them up only leaving off for a moment now and then to swallow a cup of coffee, which a young girl prepares over a small tin stove; the rifles symmetrically piled; the barricade which rises higher and higher; the solitude in which we are working—only here and there a head appears at a window, and is quickly withdrawn; the ever-increasing noise of the battle; and over all, the brightness of a dazzling morning sun—all this has something sinister and yet horribly captivating about it.

* * * * *

I now see a number of women walk out of the hotel; the crowd makes room for them to pass. They come our way. They are dressed in black, and have black crape tied round their arms, and a red cockade in their bonnets. My friend the officer tells us they are the governesses who have taken the place of the nuns. Then he walks up to them and says, "Have you succeeded?" "Yes," answers one of them, "Here is our commission. The school children are to be employed in making sacks and filling them with earth, the eldest ones to load the rifles behind the barricades. They will receive rations like the National Guards, and a pension will be given to the mothers of those who die for the Republic. They are mad to fight, I assure you. We have made them work hard during the last month; this will be their holiday." The woman who says this is young and pretty, and speaks with a sweet smile on her lips. I shudder.

IN COMMITTEE DURING THE SIEGE.

Of the action of the women we get but stray glimpses in the "Memoires" of Louise. They served on committees and in ambulances—for which many were shot and transported—they worked in the trenches. They actually shouldered rifles and fought on the barricades. Of this vast and varied panorama of female activity, we see but here and there an odd corner in Louise's writings. She says repeatedly that the women showed more determination than the men, and from first to last the fighting women seem to have fought more desperately and to have flinched at nothing. They reconciled themselves much more speedily to the inevitable. When they saw it was necessary, they submitted to any sacrifice with the same patient, uncomplaining spirit that they face the suffering of child-bearing—a service entailing much more positive pain and entailing much greater risk of life than the off-chance of having to bear arms entails upon the other sex. Louise could form a comparison, for she served equally with men and women. Here is her account of the operations of the revolutionary committees of Montmartre during the siege, when the Commune was only an egg in process of hatching:

I will relate here at full length the history of the Watch Committee of Montmartre. Few of its members are now surviving; under the siege it caused the reaction to tremble. Every evening we took our flight on Edris,

from the house situated number 41, Chaussée Cligrancourt, sometimes breaking up a club where cowardly speakers advocated a surrender, or spreading our revolutionary theories and exciting the masses to open rebellion, for the time of deception was now over. We knew what little faith to place in the promises of our rulers, and of what little import are the lives of citizens in the eyes of a government on the eve of their overthrow.

There were two Watch Committees at Montmartre, one of men, and one of women.

I always attended the former. Why, I cannot tell; perhaps because I felt there the breath of the Russian revolutionists. I still possess an old plan of Paris which was hung up on the wall of the second room of that Watch Committee. I took it away and brought it back with me in my voyage across the ocean. We had besmeared with ink the Imperial arms engraved on it; they would have tainted our haunts.

I had never before met with such intellectual men, whose minds were so simple and yet so lofty. Plainer and purer I never knew. I do not know how that committee was recruited. A comforting feeling of kindness and strength was reigning among its members, who were all united in unfeigned brotherhood. Similar spirit dominated the members of the women's committee. There, also, I met with some remarkably intelligent persons. Having joined at first the men's committee, I thereafter frequented both, their object being the same.

We all met every evening, the women in the hall of the justice of the peace, and the men at the Perot Hall, which were situated in the Rue de la Chapelle. They both bore the name of "Club de la Revolution" of the Grandes-Carrières District. It was easy for me to attend both—women's committee closing at nine o'clock, when the men's meeting opened.

I still remember the call of the members' names, and could mention every one of them. To-day most of them are dead.

The Montmartre Watch Committee did not allow any of their members to go without food or shelter. As for us, the organizers, we often dined out of a herring for four or six persons; but for those who were in need of it, we did not spare municipal funds, neither the revolutionary means known as requisitions. Those who had plenty supplied the wants of those who were starving. When people said: "Montmartre is coming down!" the reactionaries hid themselves, like beaten-in game, giving up granaries where food was rotting whilst Paris was starving.

We laughed heartily when one of us brought to the committee some informer, whom he had taken for a co-religionary and introduced as such.

Like those of all other revolutionary groups, the members of the Watch Committee were mowed down; the few survivors, Hippolyte Ferrie, Lucien Barrors, Avron-sart, Barlot, Vivier, Louis Moreau, well know how proud we were, and how high we carried the flags of the Revolution.

It little mattered to those men to be crushed obscurely in the fight, or to fall in broad daylight; each of them accepted fully all the consequences of the struggle.

What does it matter how the corn is ground, so long as we can turn it into bread?

THE OUTBREAK OF THE COMMUNE.

Louise Michel thus describes the events of March 18, which began the struggle between Paris and the rest of France:

On the morning of March 18, 1871, thousands of men

and women were rushing up Montmartre Hill, still surrounded by that indistinct light of dawn which seems to cast on everything a kind of watery veil. The hill had just been attacked unawares, and those who ascended it expected death at the top.

The hill was being attacked by the reaction, and this is why:

The guns bought with the voluntary contributions of the National Guards had been left in some vacant ground situated in the portion of Paris the Prussians were about to occupy.

The population of Paris decided to regain possession of its own guns. A battalion of the sixth arrondissement was the first to take up their suggestion, which was already being mooted, and all the other National Guards followed lead, regained possession of their guns, which they triumphantly brought back, dragged by men, women and children, preceded by flags.

The sailors garrisoned in Paris proposed to storm the forts given up to the Prussians, and to carry them as they would board ships. We were intoxicated by that suggestion.

Although the guns were loaded, no accident happened, fortunately.

Montmartre, Belleville, Batignolles, were in possession of their own artillery; the guns which had been brought from the Place des Vosges were transferred to the Faubourg St. Antoine.

Since January 22, the clubs were closed and the newspapers suppressed. Had not the people been on the alert on March 18, it is probable that instead of the triumph of the Revolution that day would have witnessed the advent of some king or emperor.

The Prince Imperial was not yet dead, and had not the Montmartre been armed, or had our rulers succeeded in disarming them, the army deceived or accomplice, and the Prussians, occupying the forts, would have protected the entrance into Paris of Napoleon IV, or of some king in the person of a prince of the Orleans family.

On March 18, however, the French army, which three months later was to crush Paris, declined to help the men who wished to betray the nation and the Republic.

The troops understood that the people of Paris were really protecting the Republic by protecting his guns, which a Royalist or Imperial government would, with

the assent of the Emperor William or Bismarck, have turned against the heroic city.

March 18 was to witness the victory of the foreigners, allies of the future king or emperor, or that of the people. It witnessed the latter. The army fraternized with the people instead of shooting them down. That triumph of the popular cause is perhaps chiefly due to the intervention of the women, who covered the artillery with their

LOUISE MICHEL IN NEW CALEDONIA.

own bodies, and even placed themselves at the muzzles of the guns, to prevent the latter being fired.

When victory had thus been decided in our favor, I looked around and noticed my poor mother, who, thinking we were going to be shot down, had followed me; as she always kept behind me, doubtless in order not to cause me any anxiety. I had not noticed her before.

It is not for me to try in these few pages to tell the

story of the Commune. To sober Englishmen it was from first to last a mere lunacy, the product of nervous excitement; the most convincing proof afforded by this generation that communities, like individuals, occasionally go mad. It is easier to condemn it from the point of view of calm reason than it is to understand it from the point of view of a sympathetic heart. Have we not dreamed for years of the arrival of the Republic as the harbinger of the millennium, only to wake up and discover amid the horrors of war the still worse horror of a Republic which, after failing to prevent the dismemberment of the territory, did not shrink from preparing to throttle the liberties of Paris? It would have been bad to bear at any time, but coming as it did after the prolonged privations and agonies of the siege, it explained everything, even the Commune. It was a convulsive paroxysm as of a great city in the grasp of a deadly nightmare, and it was worse than the nightmare. For a time all went on very much as in the Prussian siege. But when at last, in the merry month of May, Paris was stifled in her gore, and the skies flamed lurid red with the burning of her palaces, Europe received a shock unparalleled since the days of the Terror. To this day the full details of that gigantic duel to the death between the City of Revolution and the rest of France has never been understood—outside Paris. Scores of thousands were shot down, nearly forty thousand were made prisoners before Paris was crushed. The frantic energy of the Revolutionary nervousness seemed incarnate in Louise. No one has laid any specific atrocity to her charge, but she was more or less responsible for everything, as much responsible as any one save those who actually gave the orders for the shooting of the hostages, the massacre of the Archbishop and the burning of Paris.

LOUISE IN THE FIELD.

The struggle was hopeless from the first. Louise has described its beginning. Here is her account of the end:

The last time I saw Mademoiselle Poulin's grave, it was in May, 1871, in the night of the 22nd to the 23rd, I believe. We were, a few comrades and myself, in Montmartre cemetery, which with a handful of men we endeavored to defend.

We had made battlements in the walls by pulling down the stones with our hands the best way we could, so that, but for the battery established by our people on the crest of Montmartre, and whose range being too short reached us, and for the shells which the Versaillesists at regular intervals plied us from the spot where tall houses are seen, our position would not have been tenable.

Those shells kept time like a clock. It was a grand sight in the clear starry night; the graves themselves seemed to speak.

The men on duty on that night belonged to the very company with which I had made previous sorties.

Several times some one of us had gone reconnoitering in the cemetery; as for me, I was fond of wandering about in that lonely retreat, only disturbed by the frequent bursting of shells. In spite of my comrades' wish, I insisted on going there several times, and on every occasion the shells missed me.

Several of our people being already wounded, it was with the greatest difficulty that I obtained leave to be allowed to go reconnoitering there once more; my object was to ascertain how far would my luck go. That time, again, a shell came crashing through the trees, and exploded close to me, with the only result that I was covered with *débris* of branches in bloom, which I laid partly on Mademoiselle Poulin's grave and partly on that of Murger, on the very spot where a genius is represented, covering the poet with white marble flowers.

"Zounds!" one of my companions exclaimed, "you shall not budge from here."

They all then insisted on my sitting on a bench close to Cavaignac's statue.

But women are obstinate; besides, the opportunity of verifying the estimate of probabilities does not occur every day. No better occasion could ever be had. I therefore still wandered about; but, as before, bursting shells missed me.

It is a curious sight, that of the woman reconnoitering in the cemetery where the Commune was making its last stand, expiring in flame of fire and smoke as of Tophet, and noise—well, as to the noise which all these last days beat on the ear drum clamorous and insistent, maddening the brain and shattering the nerves, take the following description, penned by Mr. John Leighton at the time:

The deafening clamor on all sides redoubles; all the separate noises seem to confound themselves in one ceaseless roar, like the working of a million hammers on a million of anvils. I can scarcely bear it; my hands clutch the doorposts convulsively.

Oh! Those that hear it not, how happy they must be; they will never understand how fearful this continuous, this dreadful noise is, and to feel that each ball is aimed at some breast, and each shell brings ruin in its train. Fear and horror wring one's heart and madden one's brain. Visions pass before one's eyes of corpses, of houses crushing sleeping inmates, of men falling and crying out for mercy, and one feels quite strange to go on living among the crowds that die!

Not to be able to obtain information is terrible; not to know what is going on, while all around seems on fire; the day is beginning to break, the musketry and the cannonading begins afresh, it is a hell with death for its girdle!

If that were so to one who had no friend or brother there, how awful must it be to one like Louise, whose comrades were perishing with every fusillade, and whose hopes of the millenium seemed to be vanishing in the smoke of blazing Paris?

HER ARREST.

Her ultimate arrest was due to her anxiety for her mother's safety. Her mother was arrested, and Louise, on going to seek her, found herself in presence of an officer who in the old days had once drawn lots with her as to who should kill the Emperor. "What!" she cried, "You here?" "Yes," he said, "and what can I do for you?" "Only let me take my mother to a place of safety, and then I will return and surrender." He let her go, hoping not to see her again. No sooner was her mother safely housed than Louise made her way back. "What?" exclaimed her former comrade, "you have come back, then?" "Of course," said she. "What do you take

me for?" So she became a prisoner, and was marched with thousands of others to Versailles amid the mocking crowd. Of that Via Dolorosa she says little. It is not her habit to dwell on her own sufferings.

Then came the trial, if it may be called such, in which there was no defense, and where the accused only demanded death—death which was denied. She saw, by her strange clairvoyant faculty, three of her comrades shot at Satory, while she was lying in prison; but it was denied her to share their fate.

IN EXILE.

The end of it was that Louise was banished to New Caledonia.

When she went on board the ship that was to take her into exile she almost felt at home. For four or five years before, in clairvoyant vision, she had seen the ship lying at anchor exactly as she found it, color, rigging, build, everything exactly the same. It was the ship of her vision. Of the New Caledonia experiences I do not purpose to speak. They formed part of her novitiate. She had been prisoner of war, she was now an exiled convict, but she never lost heart. She was a ministering angel of mercy and of pity to her unfortunate companions. She nursed the sick and cheered the sad. When she reached her destination she was employed as a schoolmistress, and became so devoted to her Kanaka scholars that she was more than once tempted to return after the amnesty. It was a strange experience, that of life among the convicts of New Caledonia. Louise has ever been thrown among the best and the worst of men. Heroes and saints, criminals and assassins, to her it seems all one. For she holds the doctrine of the moral irresponsibility of the individual, a terrible doctrine no doubt, but one that conduces to charity and tolerance. Among the cyclones of nature Louise was as calm as when wandering among the shells that burst in the cemetery of Montmartre. She returned as she went, the same Louise, full of compassion for the suffering, full of sacred wrath against those who did them wrong.

AMNESTIED.

After her return Louise begun anew the life of propagandism, which indeed she had never interrupted. Idolized by a section of the Parisians, she transferred to Anarchy the devotion she had formerly felt for the Republic, and soon found herself in gaol. Her history after the amnesty is little more than a record of imprisonments. She has now had all manner of experiences—save that of an English workhouse. She has been imprisoned as a lunatic, convicted a criminal, locked up in St. Lazare with the poor girls of the town. She has been through every phase of prison experience. A poor, crazy drunkard tried to assassinate her by firing his revolver at her head. The bullet struck her, but she appeared in court to give testimony in favor of the would-be assassin. She declared that he was in a more or less somnambulist condition, and he was acquitted. When Mrs. Butler began her crusade against the Police des Mœurs, she received from Louise Michel a

letter of hearty sympathy and sisterly greeting. They are strangely different, these two women; but they have many things in common, and in the holy war against State legalized vice, they found themselves heartily at one. When I came out of prison in 1886 I received a hearty greeting from Louise, who had been liberated about the same time. She had been allowed to read when in prison, and she had followed with great interest "Les Scandales de Londres."

I did not see Louise till some years later—on the eve of the Exhibition. In gaol she seems to have been

LOUISE MICHEL, FROM A PORTRAIT TAKEN IN MAY, 1892.

treated almost as a first-class misdemeanor. She wrote the first volume of her "Memoires" in gaol, and probably she will need to go to gaol again before she will be able to get the second volume into shape for publication.

She was not alone in gaol, for even there her passionate love of the animal creation stood her in good stead.

LOUISE IN GAOL.

Mrs. Crawford, the Paris correspondent of the *Daily News*, who interviewed her in June, 1886, just after her release, says:

She was very interesting when talking about animals, a subject to which she was led by her cats. Louise Michel brought four cats with her from Noumea to France. They were given her when she arrived in New Caledonia by a convict who had served her time and was returning to Europe. The youngest, "Moustache," is now sixteen, and the eldest, "Ninette," is nineteen. They were with her at St. Lazare. The fourth killed himself under circumstances honorable to himself and his mistress. The day

she was returning from London he was on the top of a house. When he saw her getting out of the cab he, in trying to jump from balcony to balcony, fell into the street from the third story, and was so injured that he died in a few hours. These cats are descended from others left by English sailors in New Caledonia in the eighteenth century. They have much longer hind legs and shorter fore legs than European cats, and a finer cerebral development. At St. Lazare they were taught to live on good terms with the rats that came every morning in crowds to Louise's cell to be fed. I asked the "Citoyenne" what she thought of the rat. She said that it was intelligent, incapable of attaching itself, she thought, to a human being, and more on the lookout for benefits to come than for past services, but family affection was strong in its heart. Young rats were not only kind but respectful to their aged relations, and, indeed, to old rats in general. Mothers, directly they had weaned their little ones, not only brought them to Louise's cell, but placed them at her feet, and seemed to ask her protection for them. There were rats toothless from age. When a crust was thrown to them younger rats chewed it, so as to enable them to eat it comfortably. If a young rat was so ill bred as to help itself before an elderly one, the others were down upon it. Before the cats had been taught to live in amity with the denizens of the sewers, "Moustache" bit the paw off one of the latter. According to Louise Michel, there was quite an explosion of sympathy among her four-footed visitors on behalf of the wounded one, and she gained their confidence by letting it down with a string from her window into the court, after she had nursed it for about a fortnight. When she had been some time in gaol the rats grew so dainty that they would not eat plain bread unless she got it toasted for them. The governor of the prison, who was most kind to her, and who is a naturalist and *un homme d'esprit*, enjoyed her successful attempts to bring cats and rats to live in amity and to tame the latter. She could never domesticate them. No sooner had she fed them than they all climbed up the wall to the window, and passed out thereby to return to their sewers.

IN LONDON.

Louise Michel established an "international school" in London, which at one time had fully forty scholars, but which was afterwards closed. She addresses meetings in Hyde Park in her own tongue, which is not understood by the most of her hearers. Her exhortations are not practical, and she is not, in English politics, regarded as a serious personality. She is a pathetic figure with a tragic past, the incarnate protest of disinherited despair, of trampled womanhood. No doubt a good deal of what she says can hardly be regarded as a serious contribution even to the evangel of Anarchy. It is rather like the writhing of a worm which has been severed by the spade.

But Louise is not a mere Bacchante of the Revolution, a Mænad of Anarchy. She has shown herself many a time and oft full of practical good sense and shrewd mother wit. London suits her. She likes London with its dim gray tints, which harmonize better with her sombre moods than the lighter blue and clear lights of Paris. She shudders a little sometimes at "the black London winter, when everything is wrapped in a winding sheet of foggy mist, falling first in a ceaseless drip and then suddenly in heavy

showers;" but even here beneath our fogs she found a kindly welcome and a sympathetic although somewhat reserved welcome. When she met her first respectable audience she was amazed to feel that despite their frigid silence she was really as if at home. "I had the impression," she says, "of a genuine humanity, which flourished in spite of the cursed fetters which had trammelled them from the first."

ON ENGLISH WORKHOUSES.

That Louise Michel is not the mere mad creature whom it pleases her enemies to describe her is proved by the justice which she does to our workhouses. The workhouse is the natural butt for every reckless assailant of the established order of society. But to Louise Michel our workhouses supply food for admiration rather than for scorn. Speaking of her first English visit and her reception, she says:

The papers, especially the *Pall Mall Gazette*, invariably showed me the greatest kindness and consideration. What seemed especially to surprise them was that I (being an Anarchist) did not share the general opinion as to workhouses. People seemed to think—very wrongly, by the way—that this was inconsistent on my part. However, I shall give my ideas on this subject further on. People made a mistake in speaking of my "enthusiasm" for that institution. A workhouse cannot possibly inspire any such sentiment. All that I said was that the English regarded it as a duty to look after those who had neither food nor shelter.

One thing that struck me particularly in England is the care which is taken in some workhouses (Lambeth, for instance) to line the huge nest in which old England heaps up her misery, so that she can keep it, and fairly comfortably, considering, until the European revolution is over. Then, avoiding the foolish mistakes that she has seen others make, she will strike one blow. Albion will rise suddenly, shaking the dust from her white robe, and light the sacred fire which the winds of heaven, instead of extinguishing, will kindle into a glorious dawn.

To give a new lease of life to their worn-out institutions the English enlist woman's enthusiasm. Women manage workhouses, and women will soon become members of Parliament. But the green branches of an old tree cannot give new life to the decaying trunk; they will bear leaves and flowers as long as they can draw nourishment, not from the dried-up sap, but from the vivifying influence of the soft air which keeps them alive.

Louise is a voluminous but somewhat desultory worker of very unequal power. Her poems contain many elevated thoughts, expressed with considerable vigor and poetic feeling. Her novel, "The Microbes of Society," is a shocking "shocker" of the most horrible description, relieved here and there—say some who have read it—by chapters of great sublimity. Her "Memoires" are an undigested mass, thrown upon the world higgledy-piggledy just as they were written in jail or for the newspaper.

ST. SIMEON STYLITES IN PETTICOATS.

The more you contemplate this woman, the more you admire, wonder and pity. She is a living, breathing, palpitating plummet plunged into the abysses of human misery. A plummet, not of lead, but a human heart. With it she sounds the deepest

depths, and far down in the sombre stillness of dumb agony you hear her cry of sympathy and of pain. But never for herself, always for others. Magnificent type of the altruist, she exists but for the poor, the disinherited, the famishing of the world. She is their sister, their comrade, fighting ever by their side, and ringing in their eyes the glad evangel of better times to come, when there will be a new heaven and a new earth in which dwelleth righteousness. She is the representative, living and suffering amongst us, of the anchorites of the far-away days when holy men were half deified for their neglect of the conveniences and even of the decencies of life. St. Simeon Stylites on his pillar was not more severed from the world than Louise Michel. She has even ceased to be interested in her own career. The marvelous story of hair-breadth escapes, of romantic adventure, the manifold opportunities of service at home and abroad—all these successive strata of dramatic incident have lost their charm. She is as a corpse in other than the old Jesuit sense. Yet her spirit is not broken. She hopes and aspires and proclaims aloud her message to her times. But she is dead to herself. The past is a cemetery of martyred comrades or a history of imprisonments. The heart, torn by innumerable miseries, ceases to feel for itself. It only quivers in sympathy for others. And so she flits among us under the brumous skies of this city of fog and night, a being hardly of this world prophesying of that which is to come.

THE SYBIL AND HER INTERPRETERS.

But I think I hear the practical, matter-of-fact reader exclaim, "What is her message? What has she to say to me for my guidance?" Alas! to all such her message is but foolishness, and poor Louise is but a crazy creature. "You are not in the same plane as Louise," said one of her *devotees*, "how can you understand her? At the best, you are but as the young man to whom it was said, 'One thing thou lackest,' while she is of the Order of the Initiates, who, forsaking all things, have entered into the secret of the universe, forever hidden from the eyes of the well-to-do. Louise is a sublime mystic. She does not believe; she knows. She has seen, therefore she speaks. But you don't understand; neither did the high priests and wealthy men understand the Nazarene. Outcast, vagabond, homeless, hunted, pro-

scribed, disreputable, the filth of the world, and the offscouring of all things—how can the Respectable appreciate the Seer? It is now as in the olden time, and ever will be. Louise is before her time. She is, as it were, a monster born out of due season. To you she is mad. Oh, fools and blind! A century hence regenerated humanity will do homage at the tomb of her whom you deride as a crazy, dirty old woman." It may be so. But even if we admit she is a Sybil, and that we are fools and blind, it might still be a task worth undertaking to explain what is written on these Sibylline leaves of her voluminous works, and what is the helpful word which she has to speak to us benighted mortals who pay rates and taxes, and keep the machine going.

WHAT IS THE MEANING OF THIS PORTENT?

It is presumption, no doubt, for one who lives in a villa, and has only, as yet, been once in jail, to endeavor to interpret the meaning of this tragic and pathetic portent. Let us recognize that what we see in her is but a partial, superficial view, and one which we will gladly revise when we have more light; but still meantime this is what she seems to us at present. Louise Michel's life strikes a chord, harsh, dissonant, even terrible. It is the note that bursts from the heart of the refined and educated woman when it is hurled against the iron bars of adverse fate. In London streets, some time ago, the wheel of a passing omnibus caught the leg of a sheep in its spokes, and, swiftly revolving, shattered the limb of the poor animal, which in its agony emitted a piteous cry, as horrible as the injury was irremediable. Louise Michel's life reminds me of that hideous little incident. It is the incarnate wail of helpless agony. And yet there is more in it than that. Prophetesses of Despair are not wanting in our day, although there are more of the other sex. Louise Michel is no pessimist. She is no cynic. She dwells, as it were, in hell, but she never ceases to dream of heaven. She lies in sleepless horror at nights, thinking of all the black horrors of pain and cruelty and brutality that are the nightmare of the world. She takes her pen to describe them, and lo! even when she is portraying the gloom of the earthquake and the eclipse, she proclaims the glories of the coming day, and proves herself a veritable and inveterate herald of the dawn.

STRIKES AND THEIR REMEDIES.

A REPORT FROM THE ANTIPODES ON CONCILIATION AND ARBITRATION.

THERE has come to us from Australia a public document which at any time would command attention by reason of its very great intrinsic interest and merit, but which possesses an extraordinary interest at the present moment in view of certain acute phases of the labor question that are agitating the public mind in the United States. The "Report of the Royal Commission on Strikes," published by the government of New South Wales, is issued in the form of a huge volume of a thousand pages of about the same dimensions as the "Century Dictionary." So compendious is this canvas-bound tome that it seems to us a veritable library of information upon the world's experience in industrial disputes and attempts to remedy them.

THE GREAT STRIKE IN NEW SOUTH WALES.

The great strike of 1890 in New South Wales compelled the notice of the entire world. Sheep raising being a principal industry in that portion of Australia, the strike of the Shearers' Union, on account of the introduction of non-union men, led to strikes of union men engaged in transportation industries, who refused to handle the wool shorn by non-union workers. The proportions of the strike grew until the coal miners of the colony were involved, and until almost every kind of productive pursuit was brought into the controversy. Trade unions were highly organized, and were represented by a Trades and Labor Council having headquarters at Sydney, and holding together the associations of different trades in a strong and effective federation. Employers, on the other hand, were bound together in an association which included the representatives of almost the entire mass of capital engaged in productive industries in the great colony of New South Wales. The struggle between these two powerful and determined bodies—the one representing almost the totality of the capital engaged in production and concerned with the employment of labor, and the other representing almost the entire body of men both skilled and unskilled who worked for wages in other than merely domestic relations—was well-nigh as disastrous and paralyzing as a state of civil war. A better instance of the complete deadlock, which is liable to result from a difference of opinion between modern federated trades unions and modern associations of capitalists and *entrepreneurs*, has never been witnessed anywhere. While not analogous in all details to the Homestead situation, the great strike in New South Wales was similar to the Pennsylvania struggle in most of its essential principles.

A COMMISSION ON STRIKES AND THEIR REMEDIES.

The injury wrought against the peace and prosperity of the colony was so serious that the govern-

ment found it expedient to appoint a Commission to investigate the entire subject of strikes and their remedies, for the purpose of making a report with recommendation of measures to be pursued by the Parliament of New South Wales. The commissioners were instructed "to investigate and report upon the causes of conflicts between capital and labor known as 'strikes,' and the best means of preventing or mitigating the disastrous consequences of such occurrences; to consider from an economic point of examination the measures that have been devised in other countries by the constitution of boards of conciliation or other similar bodies to obviate extreme steps in trade disputes, and to consider and report upon the whole subject." The Commission was composed of the Hon. Andrew Garran, LL.D., as president, and of sixteen other gentlemen, half of whom were representatives of the employing interest and half were representatives of the labor unions. Mr. Percy R. Meggy, an experienced journalist, was made secretary of the Commission. The commissioners held some fifty meetings and made free use of their authority to summon witnesses. They also sought and obtained from the principal countries of the world such documents, reports and miscellaneous writings upon labor questions as would give them the benefit of a knowledge of the experience of Europe and America.

A LIBRARY OF ECONOMICS IN ONE VOLUME.

The huge volume that has been given to the public as the result of their labors is a monument to the earnestness and ability of the Commission and to the industry and skill of the secretary, Mr. Meggy. It contains, first, the summarized minutes of the fifty or more sessions of the Commission, then in about twelve pages the final report adopted and signed by the members. Next follows more than forty pages of small type containing what is entitled the "Conciliation Appendix." This conciliation appendix is a remarkable piece of work, including a summary of the principal schemes and public acts in different countries, dealing with conciliation or arbitration, which is followed by accounts of the French courts of conciliation, the English arbitration acts, the experience of the United States in arbitration between capital and labor, the new industrial code of Germany, and the systems now in vogue in Denmark and Norway, Italy, Belgium and Austria. A large amount of space is also given to various bills and proposals pertaining to the different Australian colonies. More than four hundred pages are devoted to a verbatim report of the evidence taken by the Commission at its various sittings, accompanying which is a well-digested *précis* of the great mass of information

John Atkinson. William M. Grey. John Edward West. John Hephher. John Riddell.

 (Vice-President.) (President.) (Secretary.)

THE EXECUTIVE OF THE TRADES AND LABOR COUNCIL OF NEW SOUTH WALES.

and opinion contained in the preceding minutes of evidence.

Next follows an appendix giving various acts and documents referred to in the testimony, and summarizing many important books upon labor and social questions. And this appendix is, taken as a whole, a most extraordinary compendium of practical information upon the progress of the labor movement in all lands. Finally, Mr. Meggy has given us more than a hundred large pages of what he entitles a "Literary Appendix." In this portion of his volume he has made abstracts of a great number of works upon labor questions; and has included a vast quantity of bibliographical references and documentary materials. Notwithstanding the comparatively short time allowed the Commission in which to arrive at its conclusions, and permitted the secretary, Mr. Meggy, for the compilation of his bibliographical materials, this volume must be pronounced one of the most remarkable and valuable contributions that has ever been made to the literature of social economics.

A UNANIMOUS CONCLUSION REACHED.

The Report itself, which, as we have explained, occupies some twelve pages, is divided into thirty-three paragraphs. When one remembers the extreme agitation out of which grew the appointment of this Commission, and that in its membership both sides of the controversy were fully represented, the conclusions of the Report are entitled to the highest consideration in view of the significant fact that each one of the thirty-three paragraphs was, after full and careful debate, adopted with absolute unanimity by the seventeen members. The Report was drawn up in no merely local and temporizing spirit. It deals with the great struggle between capital and labor in a spirit broad enough to make its conclusions as applicable in the United States as in Australia. Some quotations from it are therefore evidently in order at this moment:

NATURE OF THE SOCIAL CONFLICT.

"As to the importance of the question submitted to the Commission," says the Report, "there can be no two opinions. It is undeniably the great social problem of the

age. Even those who are least disposed to interfere between the contending forces, and who would prefer to leave the strike to settle itself, admit that the industries of the colony, and therefore its prosperity, are seriously hampered by the disagreements between employers and employed. . . . The social conflict, as it exists, is generally spoken of as a conflict between labor and capital. To some extent, however, the capitalist stands outside the arena, though intensely interested in the issue. The exact antagonism is between the direct employer and the employed. Some employers work entirely on their own capital, and some joint stock companies do the same, and in those cases the employer and the capitalist are one. Some employers, especially those who are struggling upward, have very little capital of their own, but work largely on credit; and we may mention incidentally that quarrels over little points arise most frequently with small employers, to whom small gains are of proportionately greater importance than they are with large employers. The majority of employers in this colony lie between the two extremes. They have some capital of their own, and they borrow the rest from banks, finance companies or individual capitalists. . . . From the evidence it appears that until recent times the most frequent causes of strikes have been an effort to raise wages or to resist the reduction of wages, an effort to secure shorter working hours or to resist any covert or open increase of the hours of work, or claims for the intermission of labor for rest, or a demand to employ more hands for a given work, or to resist the discharge of men supposed to be punished for their positions in a trades union, or their prominent labors in connection with it. The last is especially in defense of the principles and practice of unionism. And this leads to the remark that at the present time more important than all the causes mentioned is that which is rapidly becoming the chief ground of contention between employers and employed—namely, the employment of non-unionists. . . . It is clear that a very broad and important distinction is to be drawn between all those demands of the wage-getting class which directly affect their comfort and those which are put forth in defense of their labor organizations, and in assertion of their right to extend the operation of those unions and their confederation. This difference will be further emphasized when we come to consider the cure of strikes. . . .”

HOW FEDERATION WIDENS THE AREA OF STRIFE.

“The federation of labor and the counter-federation of employers,” continues the Report, “is the characteristic feature of the labor question in the present epoch. A few years ago each union was an independent organization, though the sympathy between different trades was strong, and showed itself repeatedly in the form of subscriptions to assist other trades when their members were on strike or were locked out. But now the union of men in a trade has developed into a union of different trades together, and practical sympathy has taken the form of aiding a strike by striking also. This, of course, has the effect of increasing the area of contest and of dragging into it persons not originally involved. It is obvious that there is no limit to this extension of any strife except the limit of the labor organizations themselves; and what the colony has already experienced in the way of suspension of industry is only a fraction of what it might possibly experience if a more general strike took place. The effect of this organization of labor has already been to draw all employers together. . . . The industrial community is thus being organized into two vast camps, jealous and suspicious of each other, and preparing for a possible con-

flict which, in a few months, may destroy the savings of many years. The extent to which this organization of employers and employed has now attained gives the whole question its present public and even its national importance.”

CONCILIATION THE GREAT REMEDY.

The Report proceeds to explain that the distinctions to be observed in examining the cause of strikes are also to be observed in treating of their cure. Those disputes which grow out of the amount of wages and questions of similar import usually turn upon differences of opinion which chiefly require that the real truth as to certain matters of fact should be reached. Says the Report:

“No better method of dispersing the mists that surround a controversy of the sort under our consideration can be found than a friendly conference. A very large experience has shown that the difficulty is often cleared up in this way, and reduced to such dimensions as admit of a fairly satisfactory settlement. It is this experience which leads to the conclusion that the very first thing to be done in order to permit of the settlement of a labor dispute is to try the effect of conciliation.

“And in using this term ‘conciliation’ for the first time in this report, it is convenient to remark here that the terms conciliation and arbitration are often employed somewhat vaguely as if they were interchangeable, and yet they really represent two distinct things. The function of any conciliation agency is to get the parties to a dispute to come to a common agreement voluntarily, without any opinion being pronounced on the merits or any instructions given. The function of arbitration is distinctly to determine the merits and to give a positive decision to be abided by. If the declaration of such a decision can be avoided it is well that it should be, because decisions are generally more or less adverse to both parties, for even splitting the difference is an equal censure upon both. But conciliation, if it is a success, allows of a friendly settlement on a mutual agreement, and leaves no opening for discrediting the understanding or the impartiality of the arbitrators.”

THERE SHOULD BE A STATE BOARD.

Whereupon the Report proceeds to consider the practical question how this primary remedy of conciliation is to be applied. It points out the fact that as respects different trades, particularly in England, boards of conciliation have been voluntarily established, have lasted for several years, have done good work, and often very difficult work. But while admitting that conciliation may work very effectively through purely voluntary and non-official arrangements, the Commission finds that the work of conciliation would be greatly assisted if there were an established organization instituted by the State and always ready to be called into action by either of the parties to a dispute:

“The great weight of the testimony is distinctively to the effect that the existence of a State Board of Conciliation would have a wholesome and moderating effect. Such an institution, clothed with the authority of the State, would stand before the public as a mediatory influence always and immediately available, and public opinion would be adverse to those who, except for very good cause shown, refused to avail themselves of its good offices.”

ARBITRATION, WHEN CONCILIATION FAILS.

But though in the majority of cases, continues the Report, disputes will be settled by the preliminary process of having them thoroughly sifted before a board of conciliation, there will remain some cases in which, despite all explanation and mediation, there will survive an irreducible residuum. It does not follow, holds the Commission, that the task of settling the dispute must be abandoned at that point. The experience hitherto gained goes to show that this need not be :

“Either under the term conciliation or under the term arbitration, boards have to a very large extent been empowered to give decisions—that is to say, have practically exercised a judicial function. When conciliation has failed, then is the time for arbitration to begin. . . . In the immense majority of cases, both in France and England, the decisions given have been reasonably equitable, and have served to settle the dispute until circumstances altered and raised the same or a similar question again. It is impossible to resist the moral effect of the vast body of evidence which exists on this point. It is a demonstrated fact that decisions can be given as to industrial disputes which practically solve the immediate difficulty.”

A SINGLE BOARD FOR BOTH FUNCTIONS.

The Report next proceeds to consider the question whether, in the event of a failure on the part of the Board of Conciliation to effect a settlement of the dispute, the next step—that of arbitration—shall be undertaken by a separate board or body, or whether the arbitrators shall themselves be the persons who have been engaged in the attempt to effect a conciliation. The commissioners discussed this question broadly, and came to the conclusion that there should be only one board, “but that this one board should be empowered in some form to discharge, as occasion may require, the double duty of conciliation and arbitration. That is to say, that its first effort should be toward bringing about a voluntary agreement between the parties, and failing that, that the board, or the permanent part of it, should discharge the duty of adjudication and pronounce a decision.” And this view leads at once to the question how the board shall be constituted.

CONSTITUTION AND WORKING OF THE BOARD.

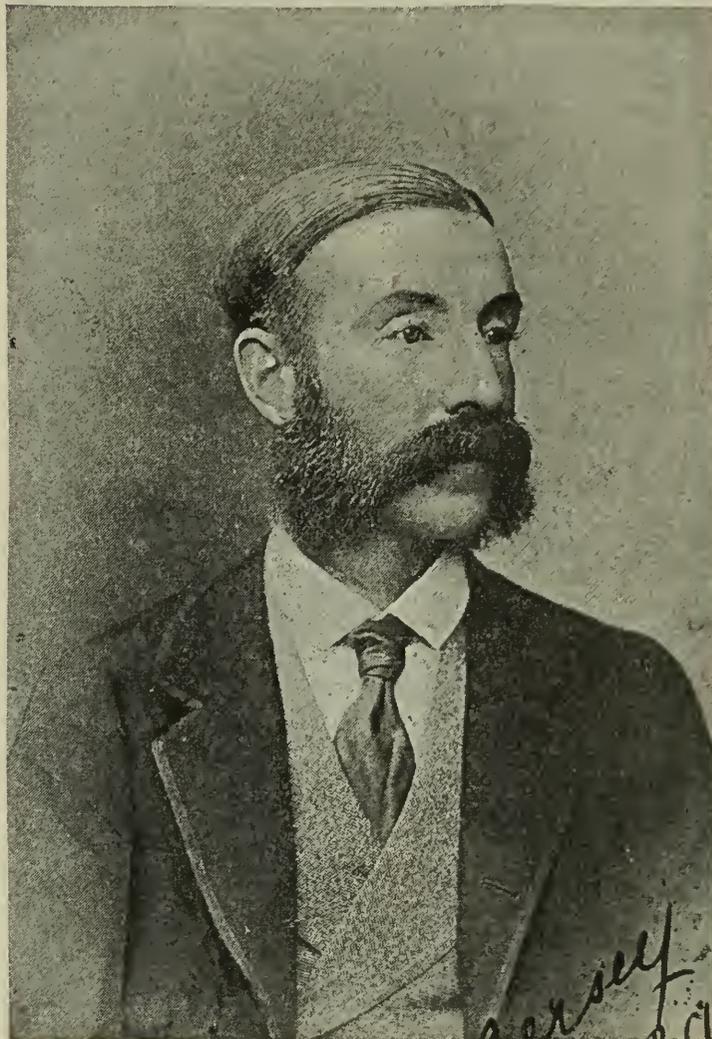

The Report demonstrates the necessity that the board should be a representative one. That is to say, that it should contain persons sympathizing respectively with the two interests involved.

The result of a consideration given to arbitration and conciliation schemes in various countries leads the commissioners to the unanimous conclusion that there should be a standing board of conciliation, to which, in the case of every dispute, there should be added members selected by the two parties in the particular controversy, who should sit with the permanent part of the board during the period of the attempt to accomplish a solution by the process of voluntary conciliation. But if a complete agreement should not be reached by conciliation, then such points as remained unadjusted should be referred to

the permanent part of the tribunal, which should then resolve itself into a court of arbitration. This permanent part should consist of a chairman appointed by the Governor, and of an equal number of members—two or more—to be selected by their own class as representing employers on the one hand and employees on the other.

THE STATE'S INTEREST IN THE MAINTENANCE OF INDUSTRIAL PEACE.

It is not regarded by the Commission as in any wise desirable to force such a State Board of Conciliation and Arbitration into every trade or labor dispute that

LORD JERSEY, GOVERNOR OF NEW SOUTH WALES.

arises, and it emphasizes the desirability of private agreements and arrangements in particular trades, which should lead to a better understanding of the mutual relations of employers and employed :

“Private conferences—private efforts at conciliation—may fittingly take place in any or every trade, but the advantage of a State board is that it is there, always in existence, to deal with any case that has proved too obstinate for private settlement. All disputes should, if possible, be settled within the trade itself, and there would be the greater probability of this being done if it were known that, failing a settlement, either party could force the case before the State Board of Conciliation.”

Upon the question of the expense of maintaining

State boards of conciliation, the commissioners make some very pertinent remarks:

"We have said that we have not neglected the question of economy, but at the same time we do not think that a rigid economy should be a ruling consideration in dealing with the constitution of a trade's tribunal; for the loss to the community at large from a great and prolonged strike is immeasurably greater than the cost of any conciliation tribunal. What the loss to the colony from the late strike was it is difficult to estimate. To the Government alone in its various departments it was very great, while in the loss of trade, in the depreciation of investments,

MR. DIBBS, PRIME MINISTER OF NEW SOUTH WALES.

and in the discouragement of industry it was very much greater still. Any reasonable expense should be cheerfully encountered if by so doing these disastrous social conflicts could be prevented."

Such a view ought to find widespread concurrence among the taxpayers and business men of the State of Pennsylvania, in view of the heavy drain upon the public treasury and the various other direct and indirect losses entailed by the controversy at Homestead.

ARBITRATION COMPULSORY UPON THE DEMAND OF ONE PARTY.

The twenty-seventh paragraph of the Report deals so temperately and wisely with the question of com-

pulsion in the initiation of an attempt to settle industrial difficulties by arbitration that we shall quote it in its entirety; and we must again remind our readers that its great significance lies in its unanimous adoption by a mixed commission composed equally of employers and employed.

"We have given careful attention to the question as to whether the tribunal we propose shall have any compulsory powers. This question has to be considered on two sides: First, whether there should be compulsion in initiating the action of the Board, and, second, whether there should be compulsion in enforcing the decrees of the Court. As to the first point, *we do not reject the doctrine that the State may legitimately interfere to prevent such colossal disputes as have already distracted our society, and are threatening to distract it still more. Looking at the laws as they exist now for the prevention of disturbances, and for forbidding incitement to disorder, it can hardly be contended that disputes which almost assume the character of civil war ought to lie outside the cognizance of the guardians of the public peace.* But we do not propose at present any such extension of principles already recognized as to give to the State Board of Conciliation a right to insist on both parties to a trade dispute bringing their case before it. It may, under conceivable circumstances, become expedient hereafter to give such powers; but the expediency should first be clearly proved. In establishing a tribunal for settling disputes that are not in themselves criminal, we think it best that the State agency should be called into action rather than act of itself. But, admitting this, the question still arises whether, if one party to the dispute calls for the action of the Board, it should proceed to take such action even if the other party stands aloof. And here we are of opinion that it should not be necessary for both parties to call upon the Board to interfere, as to adopt this course would be very greatly to limit the usefulness of the Board. *It is true, that to allow one party to set the Board in motion would be, to a certain extent, to put compulsion on the other party, because it must either appear, or run the risk of having an award given in its absence. But this degree of compulsion is in the public interest clearly expedient. No quarrel should be allowed to fester if either party were willing to accept a settlement by the State Tribunal. Industrial quarrels cannot continue without the risk of their growing to dangerous dimensions, and the State has a right in the public interest to call upon all who are protected by the laws to conform to any provision the law may establish for settling quarrels dangerous to the public peace.* We may mention, in support of this view, that we have already some pertinent and valuable experience. The Newcastle (New South Wales) agreement, which represents the matured experience of the colliery proprietors and of a compact body of about 5,000 coal-miners, provides that differences that cannot be settled out of the court may be submitted to a referee, and that either party may set the court in action. Five cases have hitherto been submitted, the miners having in each case taken the initiative, the masters coming into court to defend their position."

SHOULD THERE BE COMPULSION AS TO THE AWARD?

Furthermore, section twenty-eight, which discusses the propriety of compulsion in the enforcement of the award or decision of an arbitration court, is so valuable a contribution to the discussion of the general subject that we are also constrained to quote the entire paragraph. It is as follows:

“The second point is, how far compulsion should be applied at the close of the arbitration process. Should there be any power to enforce awards, or to inflict fines and penalties for non-compliance? Most of the legal witnesses are in favor of such compulsion, on the ground that a court that cannot enforce its award is not worthy of existence. But it should be remembered that a court of arbitration is not like an ordinary court of law. There is no fixed code of law which it interprets, and its decision is only a declaratory statement as to what it thinks just and expedient. Neither party to the suit has been breaking the law, and the decision asked for is not, as in a court of law, what is the law of the case, but what is the justice, or the wisdom, or the expediency of the case. In England it was for many years the law that justices of the peace should assess wages, and under such a state of things it was appropriate that there should be fines and penalties for disobedience to the constituted authorities. It has been said that if an arbitration court cannot compel obedience to its decisions it will be useless. The answer to this is that experience is, though not wholly, almost wholly the other way. In England all the trade arbitrations have been outside the law, because the three laws passed for the purpose have been inoperative. And yet, though arbitrations have been very numerous, the cases are very few in which the decisions have not been loyally accepted. The reason of this is that the decisions have been reasonably fair, and both parties to the suit have felt that it was better to acquiesce in a decision with which they were not wholly contented than to prolong the strife. Public opinion, too, which counts for a great deal in matters of this kind, is always in favor of acquiescing in a decision given after a fair hearing. There is every reason to expect that in the very great majority of cases the decisions of arbitrators will settle the dispute, and it is not worth while, therefore, for the sake of making compliance universal to introduce the repugnant element of compulsion. Moreover, as has been pointed out by witnesses on both sides, although a court of arbitration might inflict fines and penalties, it could not compel men to work for less wages than they were contented with, because they could all give their legal notice and quit their occupation; nor could an employer be compelled to keep on his business for a lower rate of profit than would, in his judgment, compensate him for his risk and trouble. The law cannot prevent him from refusing to take any new business and closing his establishment. It may be added that the absence of external compulsion does not prevent the parties from putting compulsion on themselves. All who want compulsion can have it. They can agree to a bond before going to arbitration that would give the right to sue a defaulter.”

HOW THE COMMISSION'S PLAN WOULD HAVE WORKED AT HOMESTEAD.

Obviously the question did not come before this New South Wales Commission whether or not certain great employing transportation and industrial companies, which enjoy public franchises and charters and whose operations assume a quasi-public character, ought not to be compelled, as a condition of their corporate existence, to accept, so far as they themselves are concerned, the results found by a State court of arbitration in case of a dispute duly brought up for settlement. But it should be clearly perceived that in insisting upon the right of one party in controversy to set the State Board of Arbitration into action the Commission has in reality taken a

long and valuable step in the direction of wise progress.

Let us suppose, for example, that the “Wallace Act” adopted by Pennsylvania in 1883 had empowered one party to secure the intervention of an arbitration court instead of making it necessary for both parties to consent. Public opinion would have insisted that the Homestead men, in objecting to Mr. Frick's new scale after final failure to effect a reconciliation through private conferences, should have made the demand authorized by law for the intervention of a court of arbitration to adjudicate the points in dispute. The award of such an arbitration, if rejected by the men who had asked for it and had set the court in motion, would certainly have insured the public condemnation of any subsequent attempt to conquer Mr. Frick by strike methods. And so clear and powerful would this public opinion against the strikers have been that their attempt would have been doomed to a quick and disastrous failure.

But, upon the other hand, if Mr. Frick had shown so little regard for the good order and peace of the community as to refuse to accept in good faith the decision rendered by a State court of conciliation and arbitration, it would still remain open to the men to attempt victory by a powerful strike that should extend from the men of Homestead to the railway men, who would decline to handle the output of Mr. Frick's mills, and to the unions of various classes of workingmen, who would refuse in any wise to deal with contractors and builders purchasing supplies of iron and steel from the tabooed works. Under such circumstances public opinion would be so strongly inclined toward a support of the strikers that their success would be almost inevitable.

Thus, if the State should provide an arrangement by which, in the last resort, either one of the two parties in an industrial dispute could demand the intervention of an official board of arbitration so constituted as to command and deserve respect, the decisions of such a tribunal, without being made formally compulsory upon either party, would, by virtue of the force of an orderly public opinion, become practically so. It might, therefore, be entirely sufficient for present purposes that our States should establish tribunals of conciliation and arbitration, whose intervention either party to an industrial dispute could demand, regardless of the disposition of the other party, the decision of the arbitrators to be binding only through the moral compulsion of a public opinion which demands the peaceful and orderly settlement of disputes.

EXISTING AMERICAN ARBITRATION ACTS.

The “Wallace Act” of Pennsylvania is a valuable recognition of the principle of arbitration, and was the first American law of its kind. But the court can only be called into existence upon the application of both parties in dispute. The “Wallace Act” authorizes the creation of a voluntary trade tribunal for any judicial district of the State, in the iron, steel, glass, textile fabrics and coal trades. It pro-

vides a method for the appointment of an equal number of representatives of the employers and the organized employees who must, before proceeding to deal with any case in dispute, agree unanimously upon an umpire. In case of the failure of the members of the tribunal to reach a decision, the umpire is to be called in and his verdict is to be conclusive. The law does not, however, make compulsory the conclusions of the tribunal. In several serious situations, particularly in the coal trade, the "Wallace Act" has rendered valuable service.

In 1885, Mr. D. J. Ryan carried through the Legislature of Ohio without a dissenting vote a bill providing for tribunals of voluntary arbitration. The Ohio law provides a method by which county tribunals may be established in any given industry or business, the tribunal to be composed of an equal number of employers and workmen. As under the "Wallace Act" of Pennsylvania, each of these Ohio tribunals is to have an umpire, chosen immediately upon the organization of the tribunal.

More recently Massachusetts, New York and several other States have recognized in one form or another the principle of arbitration by providing an official method for the formation of voluntary tribunals. Thus some real progress has been made in this country in the direction of the true solution of industrial disputes, and it only remains to give to official arbitration a more permanent and authoritative position. It would seem reasonable that the Governor of a State, who has power at his discretion to set the whole military force of the commonwealth into motion at great expense for the sake of preserv-

ing the peace at some scene of industrial conflict, might with equal propriety be authorized to institute an arbitration court with instructions to make prompt inquiry and render a decision which both parties would be invited to accept.

EUROPEAN ARRANGEMENTS.

New legislation in Germany has given very considerable extension to previous arrangements for conciliation and arbitration, and would seem to put the local courts in a position which practically requires their intervention, while disputants would moreover seem to be brought under a considerable measure of compulsion, both as to the initiation of arbitration and as to the acceptance of the results. In England there has been legislation from time to time in recognition and encouragement of voluntary arbitration, but the most important results have been accomplished by standing tribunals privately established by agreement between employers and their organized employees in given lines of industry at important trade centres. The most recent development of conciliation and arbitration in England has been the scheme drawn up under the auspices of the London Chamber of Commerce and now in a sort of semi-official operation, with a view to the abrogation of strikes and serious industrial difficulties throughout the metropolitan district.

The best experience of all industrial countries points to a combined arrangement, for conciliation in the first instance and arbitration as a final resort, as the best available means for the removal of disputes which otherwise endanger the peace and order as well as the general prosperity of great communities.

A GREEK PLAY ON THE PRAIRIES.

WITH SOME REMARKS UPON THE WORK OF AMERICAN COLLEGES.

A STUDY of the inner life and working of a hundred American colleges, which make no pretensions to being universities, although some of them may have become saddled with the word "university" as an accidental misnomer, could but strengthen the respect and esteem

in which these institutions are held. Amherst, Bowdoin, Dartmouth, Williams and several other New England colleges would have every reason to welcome such investigation, as would a large number of colleges scattered through New York, Pennsylvania, and the other Middle States. Even the score or more of

Ohio colleges, respecting which disparaging remarks have sometimes been made, could show most abundant justification for their existence by pointing to the great numbers of strong and earnest men who have gone forth from their halls to fill honored places in life. Attention has recently been directed to the remarkable number of men distinguished in public affairs who have been graduated from the old "Miami" at Oxford, Ohio, among them being the present Republican candidates for the presidency and vice-presidency, and two or three members of Mr. Harrison's cabinet. The other Ohio colleges, each in its own way, could point with pride to the evidences of their usefulness to their communities and to the nation.

In like fashion, one would find in Kentucky and Indiana a group of institutions which, before the war and since, have rendered most efficient service. Thus the number of distinguished public men who have been trained at the Centre College, Kentucky, has

been recently recalled in a most interesting list of names. One may survey Michigan and Wisconsin on the north, and Virginia, Georgia, and Tennessee on the south, with the long sweep of Illinois as a connecting link, and find at least fifty colleges, some of them very meagerly endowed, yet all of which have stood and are to-day standing as beacon lights in their own localities, drawing into their student body thousands of promising youths, who, but for the encouragement offered by the college of the vicinity, could never have hoped for an education above that given by the common schools.

Passing beyond the Mississippi into the area of the great "Louisiana purchase," one may find another series of still younger colleges, growing with the growth of the region, and ministering to the cause of civilization more potently than almost any other agent that could be named. These institutions, though chartered by the State, are under private endowment and control, and are for the most part under the patronage of some particular religious denomination. But one finds that their religious and moral tone is almost invariably broad, catholic, and wholesome, and that they are in no sense a superfluous agency, or a duplication of the facilities provided by the State at the direct expense of the taxpayers. They fill a distinct place, yet one that harmonizes completely with the other parts of our educational system.

In this day of rapid university making, that has given us in short order some of the greatest institutions we possess—among them Cornell, the Johns Hopkins and Clark universities—one may be excused for surprise at learning how venerable in comparison are some of the institutions even as far West as the prairie States beyond the Mississippi. Perhaps the oldest of these is Iowa College, at Grinnell, which will celebrate the fiftieth anniversary of its establishment some four or five years hence. Of its best known prototypes and colleagues on the hither side of the Mississippi, Illinois College, at Jacksonville, which has lately called to its presidency Dr. John E. Bradley, of Minneapolis, celebrated its sixtieth anniversary two years ago; and Knox College, at Galesburg, Ill., as president of which Mr. John H. Finley was inaugurated several weeks ago, began its second half century in 1887. Beloit College, in Wisconsin, so many of whose sons have attained success in political and professional life, and in the business affairs of the neighboring city of Chicago, is of precisely the same age as Iowa College, having been founded in 1847.

There are other colleges not a few whose work in the great prairie belt is worthy of the highest commendation, not only for loyal service rendered to the moral and intellectual life of the surrounding communities, but also for careful and faithful work of a high scholastic standard that would deserve recognition for excellence in any older community. Iowa has several such meritorious colleges; and it is with no thought of ignoring or depreciating the others that Iowa College at Grinnell is in this particular connection singled out for more special mention. Two or three circumstances of significance have deserved to bring to it a somewhat more than passing notice at

this time. One of those circumstances is the refusal of its president, George A. Gates, to leave his successful work on the prairies, after an experience of five years, in order to accept the presidency, at a much better salary than he was receiving in the West, of his own alma mater, a prominent Eastern college of noble and historic fame. It would scarcely

PRESIDENT GEORGE A. GATES, OF IOWA COLLEGE.

be within bounds to attribute Mr. Gates' decision to missionary zeal or to any whimsical or quixotic principle of self-sacrifice. Doubtless his sense of loyalty to a work which needed him, and which was prospering hopefully under his eye and hand, was a leading motive in his conclusion to remain west of the Mississippi, even though as a man of Eastern birth and education the proffered opportunity would have been in so many respects congenial. But beyond all this, his decision indicated an appreciation of the westward shifting of the preponderance of influence in this country, and of the larger scope presented by a Western State like Iowa to a young educational leader whose life work is still mostly before him, than could be found in an old New England State.

Another interesting circumstance which would deserve to bring Iowa College into particular mention has been the successful production of the first Greek play ever produced in the West. Iowa College is a co-educational institution, with some five hundred or more students in all its departments, of whom about two hundred and fifty are in the four regular college classes, while the remainder are to be found in a two-years' preparatory department, in the conservatory of

music, which is one of the departments of the institution, and in special studies not so arranged as to give class rank. The graduating class at the recent commencement in June numbered forty. The number of young women attending the college is almost as large as that of the young men, although it is considerably smaller in the regular college classes; whereas it is much larger in the musical and special departments.

The play given by the Iowa College students on June 10 last was the "Electra" of Sophocles. It was produced by members of two literary societies, one composed of young men, the other of young women. This college has been distinguished for the brilliant character of its work in classical studies, and several of its graduates have subsequently taken high rank as philologists. The play was prepared with the assistance of the instructors in Greek, elocution and physical culture, while the music for the choral odes was a local product, being composed by Professor Jacobsen of the college conservatory—a competent German musician and choral leader. The young ladies who personated Electra, Chrysothemis and Clytemnestra, are described as having entered with great strength and spirit into their leading parts, while we are assured by the college paper that "Mr. S. S. Hiller, as Orestes, was at ease and put power and pathos into his lines." As a bit of condensed dramatic reporting the account of the play in this local college paper tempts quotation. The following passage is fairly typical of Western college journalism :

"Of Estelle Patterson, as the heroine in whom nearly all

the interest of the play centered, few words of praise need be spoken. She was most emphatically the star of the company, impersonating the strong but pathetic character of Electra perfectly. Chrysothemis, as represented by H. Teresa Peirce, was a charming creature, weak and timid, but loving and true. Helen G. Burling as Clytemnestra was majestic and scornful, conscience-stricken and terrible. The Ægisthus of Fred L. Blackinton was well presented. Elston F. King surprised his best friends by the power and richness of his voice and his fine appearance as an old man. His description of the chariot race was the most vivid and stirring portion of the whole play. Hale Douglass made a nice-looking murderer, and Darby and Patterson bowed and stood still gracefully. Kate Miracle and Bessie Walker added to the effectiveness of the grouping on the stage. Rose Haskell, as the priestess, and her attendants, Fannie Spencer and Anna Adams, were very graceful. The chorus girls looked charming, and their pantomime was thoroughly pleasant to watch. The leader, Mary Mack, spoke her lines sympathetically."

Our illustrations, somewhat casually selected from a series of photographs representing different actions and tableaux in the play as actually given in the village opera house by these Iowa College students, will suffice to convey some impression of the appearance of an amateur theatrical company composed of Western co-educational students engaged in the somewhat unusual and difficult task of reproducing a classical drama.

The teaching force of Iowa College is composed of professors who are specialists of recognized standing in their respective departments, but who, more than that, are men working, in harmony and in sympathy, for the general welfare of the student body committed to their charge. They take the broad view of their work, and seek the all-round improvement and development of their five hundred young men and women. Thus the president and professors are ardent supporters of collegiate and intercollegiate athletics; and by their direct promotion and incitement, the college has been brought to a position hardly equaled in the West in football, baseball, tennis and general field-day sports. And this very intimacy of relationship between the faculty and the students' ath-

letic association in the common task of promoting the reputation of the college through its success in athletic sports, has made it possible for the authorities to draw the line between moderation and excess, without serious friction and with the general approbation of the students themselves. The same spirit of sympathy and helpfulness has made it almost superfluous to maintain any severe show of college government, the best results of order and sober attention to work having been secured through the creation of a fine public sentiment in the student body itself. Again, this spirit of harmony and general interest in the promotion of all that makes for the best things has been apparent in the development of college oratory, in the work of the literary societies, and in the college journalism, no less than in the more formal tasks and pursuits of the class room and the laboratory. The scientific students of Iowa College learn, in close contact and sympathy with their professors, the botany, the natural history, the geology, the mineralogy, of their own region. The students of history and economics are brought by their professors into touch with the institutional development and the social and economic life that their own Western environment so richly affords as material for observation and analysis. On the moral and religious side of the institution, the disposition to take life seriously and reverently yet joyously and hopefully, is so pervasive as to influence the character of almost every student, no matter how short or casual his connection with the college may be.

Who, then, can measure the dynamic force, the real power for good in our American society, of such an institution as Iowa College? And yet this one is only

a type; for there are scores of American colleges on the same general plan and model, devoted through these same processes of direct contact and influence to the work of giving lofty aims, of shaping and rounding out immature and plastic characters, and of replenishing in general the country's stock of high

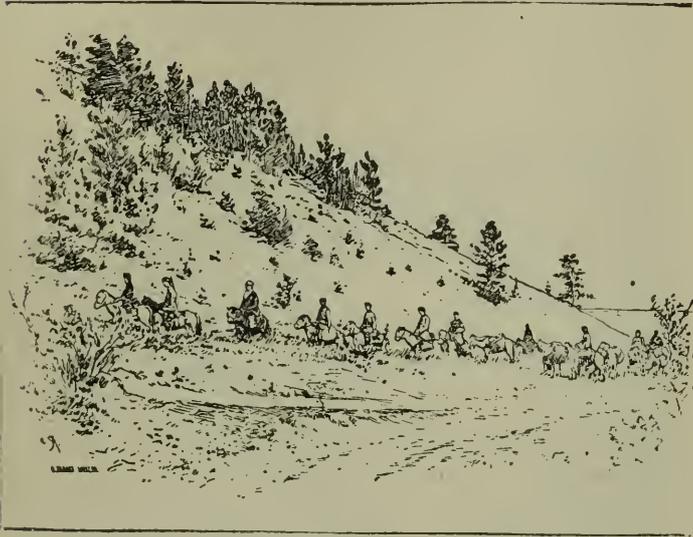

and distinctively American manhood and womanhood.

It is time that allusions to our noble series of endowed colleges should cease to be apologetic. And it is high time that the pretensions of the large colleges to superiority in average undergraduate work should be sharply repudiated. The principal task of our American colleges is to make men. Breadth of

view, discipline of mind, elevation of moral tone, devotion to the social and public well-being, fitness for an honorable and useful career in life—these are the chief objects of a college training. Vast endowments, vast libraries, vast scientific collections, and a great number of professors may be very essential parts of the university in the large sense; but they are not by any means so essential to the success of the college. The little university city of Aberdeen, with comparatively meagre resources, can afford a Scotch youth just as good a college training as can the great university city of Oxford, with its wealth of appliances. In like manner, there are small colleges, and a very considerable number of them, scattered throughout this country, from Maine to California, that can give the young American student as good, and possibly a better, college training than he could obtain at one of the group of numerically large institutions which have been permitted to assume a tone of superiority. In the small college there is a personal contact between students and instructors, from the freshman to the senior year, that is quite impossible in the large colleges. If the small college cannot expect to command the services of the most distinguished specialists for its professorships, on the other hand it will readily secure a teaching body of studious and thoughtful men, of much higher fitness in every sense for their work of instruction than the group of perfunctory tutors and assistants under whom young students must often be obliged to sit in the overgrown college camps that boast of the great number of their undergraduates.

A "KING'S DAUGHTER" AMONG THE LEPERS OF SIBERIA.

A YEAR or two ago all England rang with the praises of Sister Rose Gertrude, who went out to the Sandwich Islands to devote herself to the care of the lepers there. Sister Rose was a good woman, who accepted a fate of self-immolation with a cheerful, natural simplicity which every one admired; but, after all, she only did what many good women do year after year without making any fuss at all. There is a certain horrible charm about leprosy which interests the public. They can understand a person deliberately going to a living death among these miserable objects, and this no doubt accounts for the admiration which was expressed both for Father Damien and Sister Rose Gertrude.

This horrible attraction about leprosy seems to prevail in ranks outside of those who dedicate themselves to the sick and suffering. Miss Kate Marsden, whose exploits in Siberia are to be told in the following pages, is not, like Rose, a professed sister of any religious order, but is one of the "King's Daughters," an American association which has had rapid growth in recent years. Miss Rose Gertrude looked at the lepers from the point of view of a nurse; Kate Marsden looks at the same pitiable objects from the point of view of an adventurous philanthropist. Since Howard took his famous journey through the Russian prisons nearly a hundred years ago, there are few achievements so characteristic of the chivalry of human nature as the journey which Miss Kate Marsden made last year in Siberia. Siberia is a great world—an unknown world for the most part. It covers half the continent of Asia, and while its northern coasts are blocked up with eternal snow and ice, its southern districts are among the most fertile in the world. In this enormous expanse of territory stretching from the Ural Mountains to the Behring Sea there is every conceivable variety of climate and of soil; but one thing that never varies, and that is

the enormous extent of the land and the extreme paucity of the population. George Kennan has written a great deal about the hardships of the ordinary convict prisons of Siberia. The worst of the facts there are comparatively insignificant compared with the ghastly horrors which extorted the sympathy of Miss Marsden. Scattered through the great forest with which a large part of Siberia is covered, there wander human outcasts, lepers who eke out an appalling and a miserable existence without any care, supervision, or medical attendance; they are indeed the lost souls in the human inferno. Elsewhere lepers, as in the Sandwich Islands and Robin Island, are cared for and looked after by their more fortunate brethren; but in the wilderness of Siberia these poor wretches are left as much alone as the wild beasts, to whom from time to time they fall a prey. A severe scientist, without any superstitions about the sanctity of human life, would probably argue that the most beneficent thing for the lepers would be to treat them as wild beasts, and organize shooting parties to exterminate these poor people. Miss Kate Marsden, as a philanthropist of the Christian variety, takes a different view; and as the lepers were not to be killed off, she decided to try and rouse attention in Russia and elsewhere to the condition of these outcasts of the human race.

It must be admitted that a madder scheme never entered into the mind of a human being than that which entered into Miss Marsden's brain. Miss Marsden is a young lady without means, and without powerful friends or protectors. She is not only a lone woman, but a somewhat sickly one; for her health, never very robust, has been injured by the hardships of her recent adventures. The Russians, like other people, do not particularly care for inquisitive and philanthropic foreigners poking their noses into the human dust bins of the empire. It might therefore be regarded as in the last degree improbable that Miss Marsden could receive permission to go leper hunting, and even if she had received permission it seemed more improbable that she could have stood the hardships of such an expedition. As Mrs. French Sheldon showed in Central Africa, a woman can go where a man would completely fail, and it must be admitted that Miss Marsden's success in her extraordinary tour may be regarded as another leaf in the laurels which her sex are winning in the last quarter of this century.

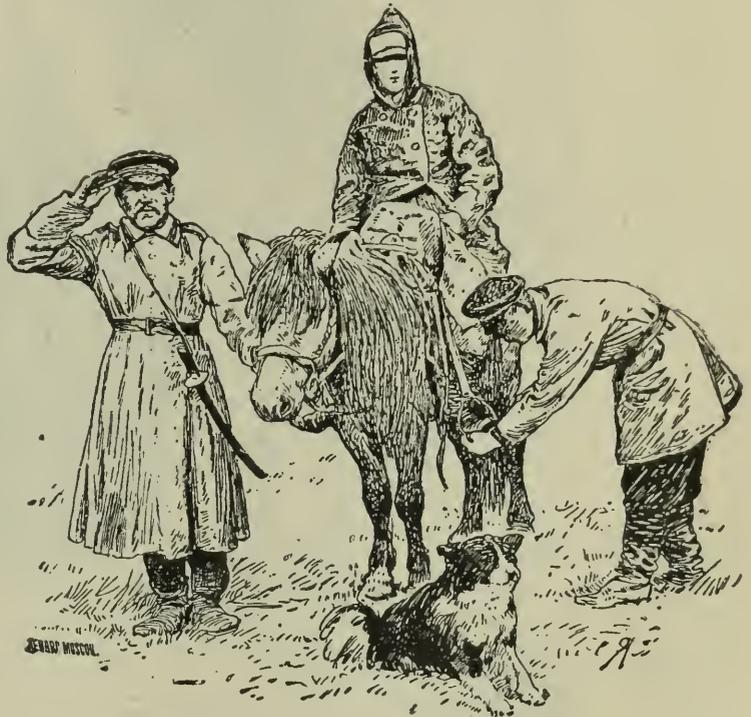

The difficulties seemed almost insurmountable. Apart from her sex, the infirmity of her health, and the absence of powerful friends and protectors, there was yet another impediment in the fact that she knew scarcely a word of Russian. Yet this lone woman, possessed with this idea, surmounted all obstacles, laughed at all difficulties, and is now in England with

the most gratifying account of the success which has been achieved under her auspices. Miss Marsden, in the prosecution of her extraordinary mission, had the good fortune to get the enthusiastic support of one of the best of the good souls among the ladies of the Court. The Countess Alexandrian Tolstoi was the lady who was intrusted with the education of the Grand Duchess Marian, better known to the English as the Duchess of Edinburgh. The Countess Alexandrian, who, by the way, is a cousin of the novelist Count Tolstoi, is a practical, sensible person, who, perceiving what kind of a woman Miss Marsden was, did what she could to help her attain the success of her mission. Miss Marsden was introduced at Court, and the Empress of Russia took up her cause with enthusiasm. The moment the Empress' sympathies were enlisted all was plain sailing, so far as permission and official sanctions were concerned. She received a letter from the Empress, which was a passport to every part of the empire wherever a leper might be suspected to be lurking, and another imperial missive secured for her the best attention and assistance of all officials into whose district she might penetrate.

After considerable delay in making inquiries and accumulating all the information that could be given on the subject at St. Petersburg and Moscow, Miss Marsden set off on her quest. So far as Yakoutsck everything was smooth sailing; that is to say, she had no more than the ordinary difficulties which every traveler who crosses Russia and enters Siberia meets with. It was not until she left Yakoutsck that the difficulties began. The region which was selected as the first field of her philanthropic endeavor was the great forest which extends from Yakoutsck to Villewisk. She rode for over two thousand miles through the woods, one of the longest rides that a lady knight-errant ever made even in the olden times. She was accompanied by an interpreter, one Petroff, and a body guard of twenty-nine Cossacks and guides. The inhabitants of the province of Villewisk are for the most part Yakouts, who could not even speak Russian. They live in little communes, scattered republics, as it were, which are a law unto themselves. One of their laws insists upon the isolation of the leper. This little community compel all who are leprous or have come into contact with lepers to live in the forest in small huts far apart from human habitation. Sometimes they live for years, at other times they die speedily of privation, or are eaten by the bears with which the forest abounds. It was Miss Marsden's object to ferret out these isolated leper outcasts and to make arrangements for gathering them into a colony where they could receive some medical treatment and be cared for as human beings.

It must have been a picturesque sight to see Miss Marsden and her cavalcade as they left the town and plunged into the forest. Lady Florence Dixey would be delighted to know that Miss Marsden rode "straddle" like a man. She had never ridden a horse before, and the horses in those parts had never been accustomed to carry ladies' side saddles; and besides

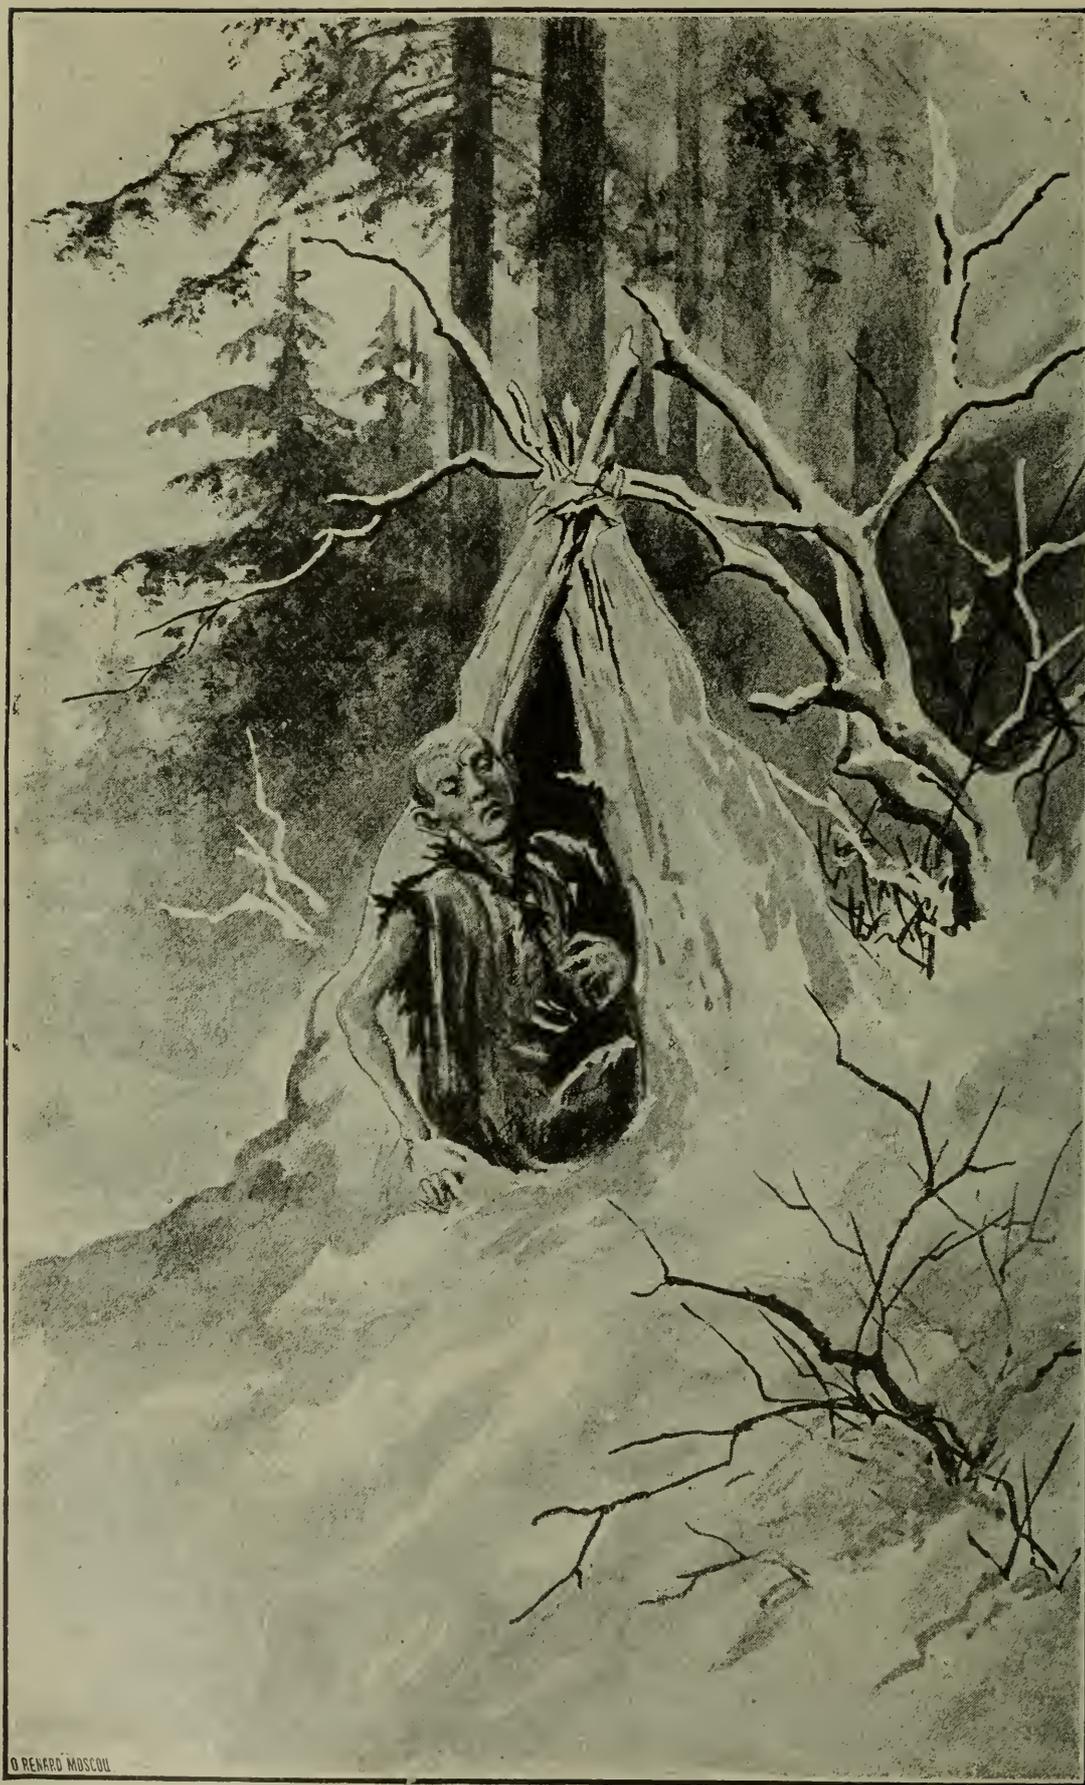

it would have been impossible for her to get through the woods in any other way than man's fashion. She wore a huge hat to protect her from the sun, a mosquito net, a long jacket with wide sleeves, and large trousers which came down to the knee, where they were tucked into high boots. The rest of her accoutrements were a revolver and a whip, also a bag—without which women seem to be unable to travel. In civilized countries this is excused on the plea of a paucity of pockets. Miss Marsden, however, was well provided with pockets; but the force of habit seems to have been too strong for her. The horses were small and restive, and some of them would have been a desirable addition to Buffalo Bill's bronchos. In the forest there are no roads. The Yakouts cleared a kind of a way for her for a hundred miles, but this track was a mere apology for a road. The horses had to wend their way across roots and trees, over which they were continually stumbling, and to wade through endless marshes, in some of which they sank up to their bellies; and the utmost care was necessary

MISS KATE MARSDEN.

not to fall into the bog, from which it would have been very difficult to extricate any one alive.

Before starting from Yakoutsck, the bishop of the town came out in full canonicals and gave the expedition his solemn benediction. They started about midsummer's day in 1891, carrying with them about three months' provisions—that is to say, they had dry black bread, tea and sugar. They had tents for camping out, but at first they used the official resting-places. Miss Marsden's account of the kind of accommodation provided for weary travelers in the forest of Villewisk will probably induce all weary travelers to give that province a wide berth. The walls were carpeted with bugs, the floors were alive with lice, while fleas skipped gayly about. The air was thick with mosquitoes.

A LEPER IN THE SIBERIAN SNOWS.

In some cases they were only able to escape the torments of the mosquitoes by building a fire of cows' dung in the center of the room, shutting the windows and chimney in order that the smoke might not escape. By this means the plague of mosquitoes was abated for the night, although the stench was almost intolerable. The insects were not the only creatures which occupied the tenement; cows and oxen were stabled with the men and women who occupied the room. Such nights were so terrible that it was almost a relief to plunge into the deepest parts of the forest where at present the lepers live. The night horrors at least made welcome the daylight, although it brought another sixty or seventy miles' ride through the sun and bog and forest, where the plague of mosquitoes was unabated, and where from time to time the cavalcade had to draw in and feel for its firearms in order to prepare for an attack from the bears. Miss Marsden had almost as thrilling a time with her bears as Mr. Rhodes had with his lions. But beyond eating one of the cows which she had secured for food for her own party, they do not seem to have done much harm. When she reached the leper region proper, she found that the reports which had reached her had not exaggerated the horrors of these unfortunates. Whenever a man, woman or child was discovered to have leprosy, he was banished from the village. A small hut was built in the depth of the forest, and there the unfortunates were established under the strictest orders never again to revisit friend or relative, or to appear in the presence of man. There are three or four months of summer, and eight or nine of winter. Until their fingers rot off the lepers are able to make some kind of a fire, and the miserable wretches herd together for company and self-defense. As Miss Marsden frequently found, when a child was camped out in the forest it does not live long. Food fails it or the bears eat it up. In other cases the relatives provide food, leaving it at an appointed place to which the lepers come after a due interval, to carry it back to their miserable huts.

Miss Marsden visited no fewer than thirteen small leper settlements in the forest, and was able to form a very clear and definite idea as to what should be done. As she and her attendants got further into the forest, they had to camp out every night and sleep with revolvers and guns ready at hand, while the Yakouts watched by the large fires all night for fear of the bears. The bears were an all-pervading nuisance. Even when they did not show themselves the horses smelt them, would go almost mad with fright, and would bolt with their riders through the dense woods, which was only one degree less dangerous than the bears themselves. On one occasion Miss Marsden seems to have ridden through a veritable fiery furnace. She writes:

"We were one night in an immense forest. I noticed that our horses made a peculiar noise with their feet, as if they were trotting on hollow ground. I was told that the

turf was burning not far away. Half an hour later I saw large and small flames in the distance. On getting nearer we saw a picture which looked almost infernal in its terribleness, and we had to go right into the midst of it. All round, as far as we could see, there were flames and smoke from the burning ground; the Yakout in front of me was picking his way in front of it. I followed on horseback, step by step, but often our horses got into a hole with fire at the bottom of it. They would then throw themselves right and left from fright. It was difficult to manage them, while your eyes grew weary and painful from the smoke and the strain of looking for the road. All went well for a time, when all at once we heard a great noise from behind us. I turned round, but could see nothing but flames and smoke. The noise, however, kept coming nearer and nearer. Our horses got restless and almost unmanageable, when all at once, before we could realize what it was, one of the luggage horses galloped into the midst of us, the two boxes still attached to his side, but one of them had got loose and fell on the top of the other, making a great noise, which frightened the poor horse and set him off at this mad rate. Thanks to Mr. Petroff, who was just behind me, and had time to give the horse a lash with his whip, otherwise the horse was galloping straight at me, and would have killed me; as it is, the boxes only just touched my horse's legs. The poor little horse, more frightened still, plunged straight into the flames and smoke. We had no possibility of stopping it. All we could do was to keep our horses in order the best way we could and continue our road. Having at last passed this road, we entered an immense forest, dark and dense, and after all those versts of flames and smoke I could see nothing. My eyes kept watering, and my horse had got to such a pitch of nervousness that he was constantly stumbling against the roots of trees. I believe this was the hardest time of any, and it is only thanks to our Lord that we escaped without being killed."

The lepers were extremely grateful, and offered up prayers with great heartiness for the Empress and her emissary. It was pitiful to see some trying to make the sign of the cross with their hands from which the fingers had rotted off. To see their faces, frightfully disfigured and entirely without hope or consolation, was tragic indeed. Inside the places in which the lepers lived the smell was simply fearful, and in one of them, in addition to leprosy, they had been smitten with small-pox. They had no doctor or any attendants, and the only wonder is that any of them kept alive. Miss Marsden had the pleasure of being able to rescue one girl who was in perfect health, but who had been compelled to live among the lepers because her mother had been a leper. Occasionally she came upon solitary lepers who were living by themselves without any other companion than a dog, which was indispensable in order to keep the bears away. Their food was mostly rotten fish and the bark of trees, excepting in those cases in which they were fortunate enough to own cows. In one case an old woman used to creep back to the village for the purpose of picking up the refuse. When the head man heard this, he ordered that all her clothes should be taken off, in order to prevent her return to the village. It is not surprising to learn that shortly afterward she was found frozen to

death, quite naked. After going through all these horrors Miss Marsden conceived the idea of founding a leper settlement, and she at once set to work to collect money. She has raised in Russia for this purpose some thirty-five thousand roubles, and she hopes to make more in America by the publication of her book, which Sampson Low & Marston are about to issue, and by her lectures. On her return to Moscow she had a public reception, and the leading medical society passed a resolution cordially thanking her for the great services which she had rendered to the cause of suffering humanity. She also brought back with her an herb which is declared to be very beneficial in cases of leprosy, even if, as some assert, it does not effect a cure. The heroic nature of her adventure excited attention throughout Russia to the condition of the lepers. M. Pobedonostzeff circulated thirty thousand copies of a small pamphlet describing the need, and undertook to provide a priest for the leper community, the first of which is now in process of formation. As a result of Miss Marsden's narrative, five nuns from Moscow undertook to go and nurse the unfortunates. After all the fuss that was made about Sister Rose Gertrude it would be unpardonable if we refused to recognize the self-sacrifice

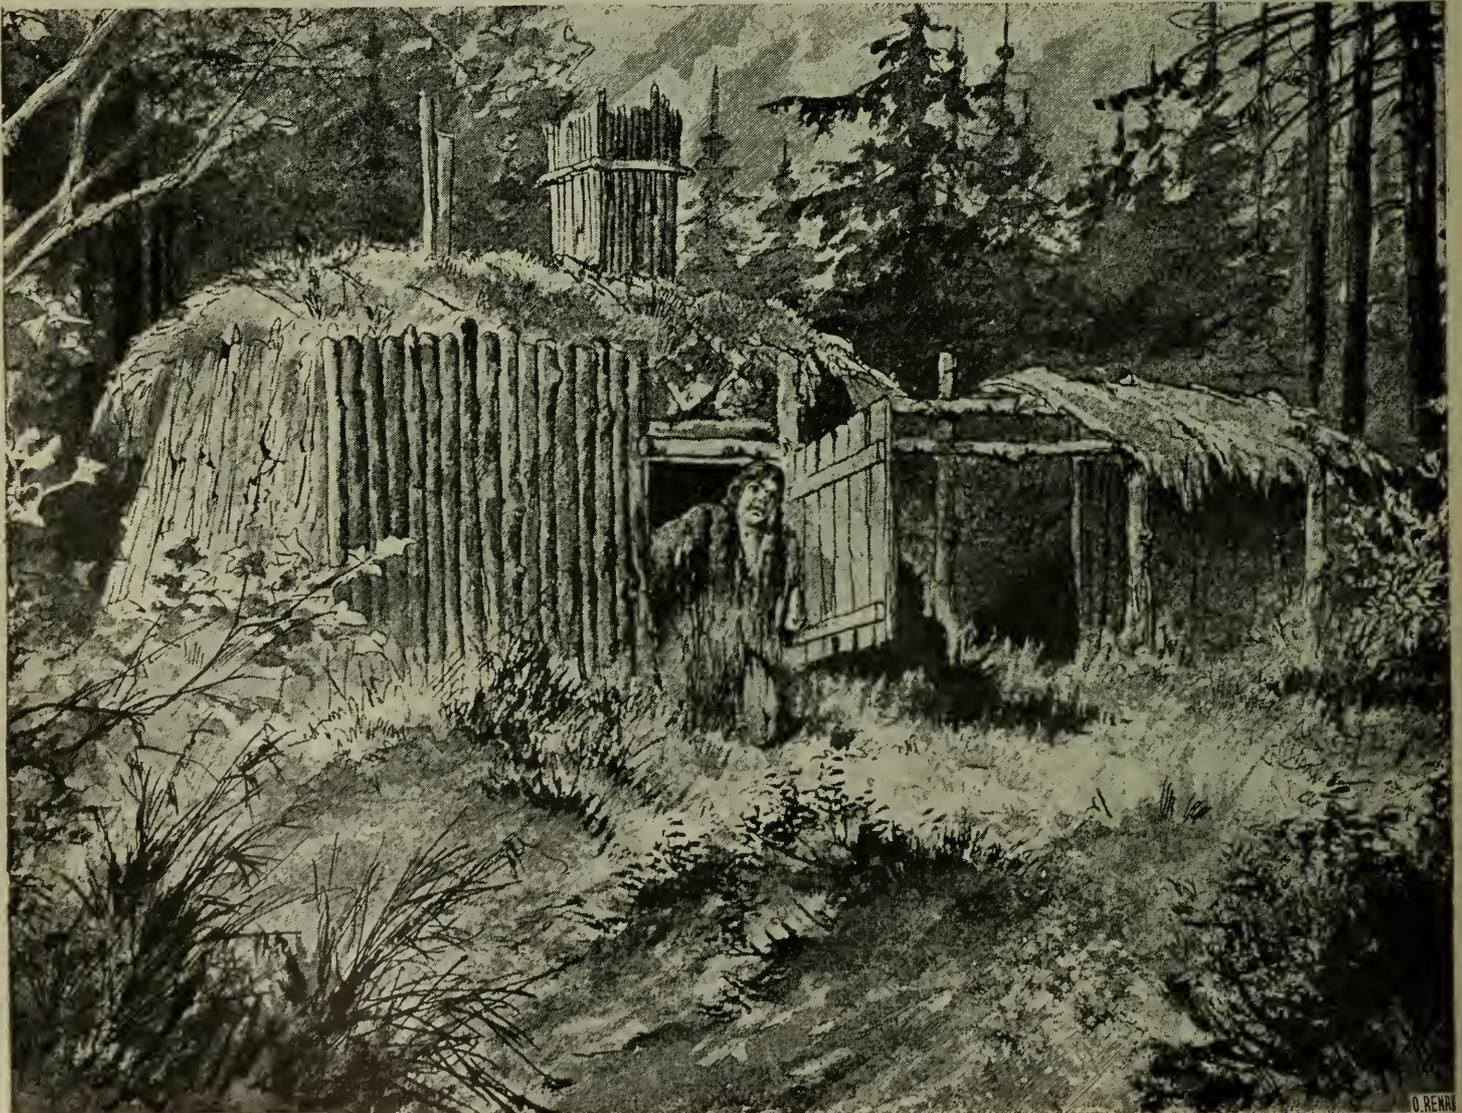

of the good nuns who voluntarily offer their services to the lepers in the Siberian wilds.

Miss Marsden is now in England preparing her book for the press. She will shortly afterward go to St. Petersburg. We cannot better conclude this brief narrative of one of the most remarkable exploits undertaken by a woman in our time than by quoting the following letter from the Countess Alexandrian Tolstoi:

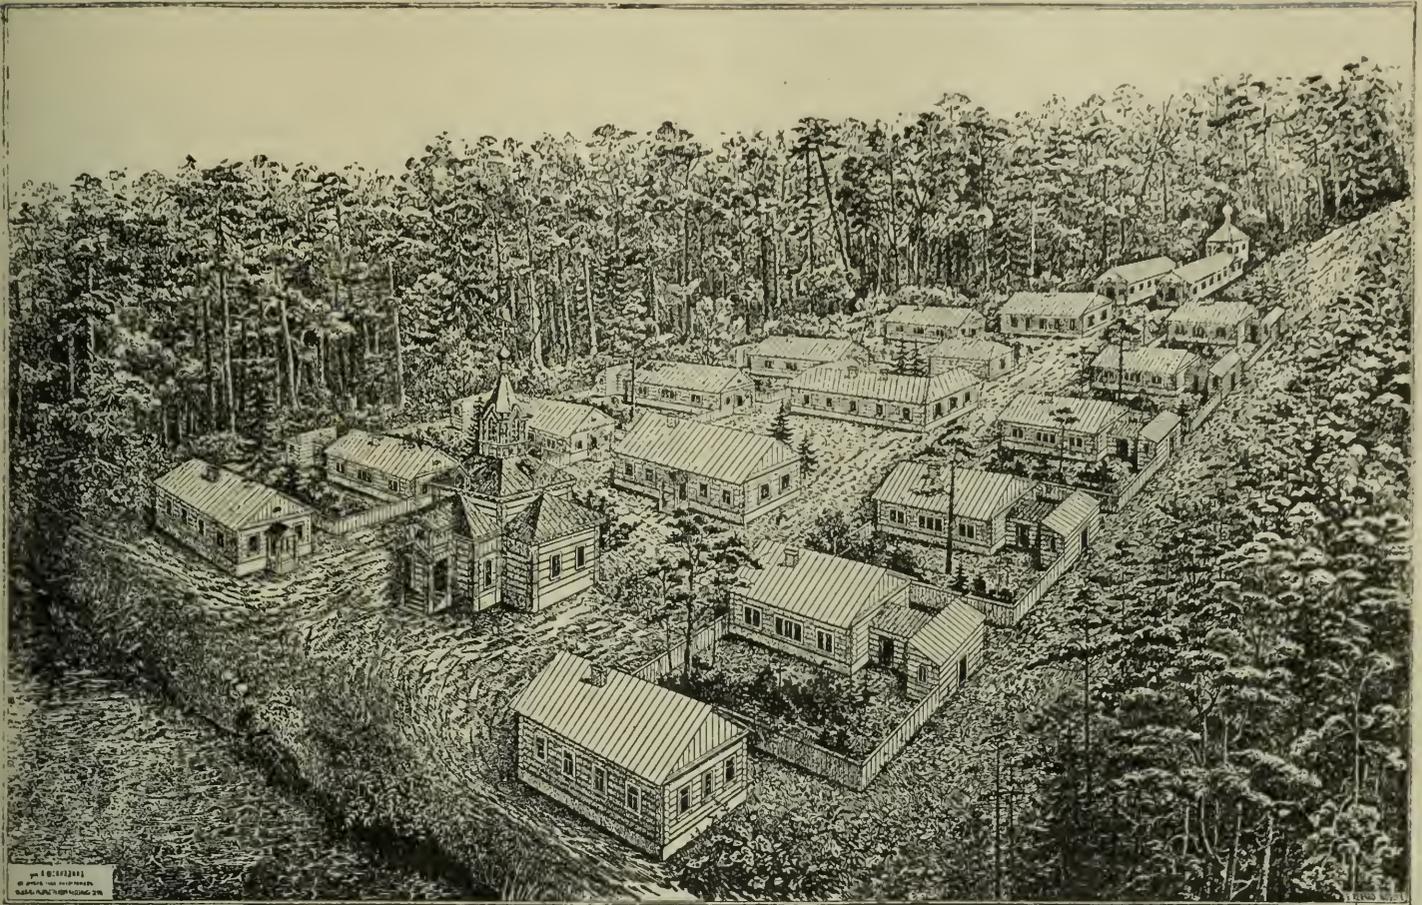

"It is by my own initiative and with the desire of testifying to a touching truth that I give this writing to Miss Kate Marsden, feeling sure that every Russian would be ready to do the same.

"The work Miss Marsden has undertaken in our country is so important, so full of humanitarian charity, that we cannot fail to see in Miss Marsden an instrument chosen by the Lord Himself to alleviate the miserable condition, moral as well as physical, of the poor lepers. Upheld by God and her great faith in Him, Miss Marsden has in a very short time laid the first foundation of a colony destined to create a new existence for these miserable outcasts. Her love for them never wavered before any obstacle, and this same love has kindled many hearts which have been united by her generous idea.

"Our august Sovereign herself has deigned to give Miss Marsden proofs of her sympathy, receiving her several times, and, being deeply touched by her Christian devotion, she had the kindness to grant her her protection and

A LEPER HUT IN THE SIBERIAN FOREST.

VIEW OF THE PROPOSED LEPER SETTLEMENT.

to help her accomplish her journey in Siberia. We will have the possibility of reading the stirring details of this journey some day.

"The immense difficulties Miss Marsden has overcome have only deepened her zeal for her cause, for which she

would willingly give her life, as she has already given her health.

"May all generous souls who know how to appreciate such sacrifices unite with us in asking God to bless this work and the one who has concentrated herself to it."

HOW MISS BENTLEY LIFTED THE CZAR.

A SEANCE WITH ROYALTY AT COPENHAGEN.

SINCE Napoleon's audience of kings there has seldom been such a collection of royalties at a single show as Mr. Stuart Cumberland gathered together recently at Copenhagen. Napoleon's kings were simply spectators of the show provided; in the case of Mr. Cumberland his gathering took an active part in the performance. They, in fact, were as much a part of the show as Mr. Cumberland himself. It is one thing to perform before crowned heads and quite another thing to perform with them. And it is just this other thing that Mr. Stuart Cumberland and Miss Bentley, whose combined experiments will be dealt with in this article, succeeded in accomplishing.

It was at the Castle Bernstorff, the King and Queen of Denmark's summer residence, that the performance which has put the great Napoleon's unique event into the shade took place.

Mr. Cumberland, accompanied by his wife and a

near relative of his, Miss Bentley, arrived at Copenhagen just before the golden wedding party had broken up. Mr. Cumberland had not only his thought-reading to show, but there was quite a novelty, in the shape of Miss Bentley's experiments dealing with so-called magnetic phenomena, to serve up.

In due course Mr. and Mrs. Cumberland and Miss Bentley were invited to Bernstorff. The largest room in the castle had been put aside for the *seance*—a room, by-the-bye, not much larger than an ordinary Mayfair drawing-room. There were present the King and Queen of Denmark, the Czar and Czarina, the Princess of Wales, the Crown Prince and Princess of Denmark, the Duke and Duchess of Cumberland, the Crown Prince of Greece, the Prince Nicholas of Greece, the Prince Waldemar of Denmark, the Princess Victoria and Maud of Wales, and the Czar's youngest son, the Grand Duke Michael.

Before beginning his experiments Mr. Cumberland was asked by the King in which language he would speak. He replied that he was more at home in his mother tongue than in any other language. "Then," said His Majesty, "we will all speak English." And during the whole evening, save when the Czar from time to time made an exclamation of surprise or admiration in French, nothing but English was heard.

MISS BENTLEY.

Mr. Cumberland experimented in every case successfully with each member of the audience, many of whom had been his "subjects" on previous occasions; but the Czar came, as it were, new to the business.

His Majesty was apparently no great believer in thought-reading; but he willingly assented to the request that he should have his thoughts read, or rather that a trial should be made with him.

"I will think of a word in Russian," said the Czar; "do you know Russian, Mr. Cumberland?"

"Not a word, sir," replied the thought-reader.

A piece of paper was pinned to the door, and taking His Majesty by the hand, Mr. Cumberland, with a pencil in his own hand, wrote the word in Russian characters thought of by the Czar.

This experiment staggered the Russian not a little; but it was reserved for an experiment with the Crown Prince of Greece to cause the excitement—so far as thought-reading was concerned—of the evening.

His Royal Highness said he would think of some

object in a part of the castle, of which object and of the place where it was Mr. Cumberland could possibly know nothing.

Mr. Cumberland took His Royal Highness by the hand and made a dash out of the room, followed by the Imperial and Royal personages at a pace faster perhaps than they had ever gone before. Up one flight of stairs they went; the landing was reached, but no pause; then up the second flight; still no pause. At length the top of the house was reached; a slight turn and the thought-reader was outside the Crown Prince's bedroom. He turned the handle of the door, entered the room and pounced upon a portrait of the Duke of York (Prince George of Wales). This was the object thought of. The experiment was not yet, however, finished. Downstairs ran the thought-reader and his subject, almost upsetting more than one future king or queen in their hurried course. The seance room was gained and the portrait presented to the Princess of Wales; such was the Crown Prince's wish.

This was the end of Mr. Cumberland's programme, and then came Miss Bentley's turn.

No one present took a deeper interest in Mr. Cumberland's prefatory remarks concerning the experiments Miss Bentley was about to exhibit than the Czar, and he seemed quite delighted to find that no mystery was to be made about them, but that the experiments would be exhibited in order to show how force could be diverted without the apparent employment of a counter force.

Now, unlike his father, who was a mystic of the mystics, the Czar has no hankering after the supernatural. He knows nothing about so-called "human magnetism," but he knows a great deal about human strength. Physically speaking, he is undoubtedly the strongest monarch in Europe. He can easily bend together the points of a horseshoe held in one hand, and at Gatchina there is an immense gun which he alone of all the Court can shoulder, and that with ease.

Miss Bentley's experiments, therefore, had an exceptional interest for His Majesty.

He keenly watched the efforts of the Prince Royal of Greece to push to the ground a billiard cue lightly held by Miss Bentley in her hands, and with considerable alacrity he took his nephew's place after he had failed. The Czar grasped the cue with both hands and put his enormous strength into the effort to get the point of the cue to the ground. It bent and quivered; but all His Majesty's efforts, like those of his predecessor, were in vain. That the Czar was astonished goes without saying; but a still greater surprise was in store for him in the "lifting test."

He placed his hands under Miss Bentley's elbows and lifted; up went the young English girl until her fair hair almost touched the ceiling. His Majesty smiled; it was, so that smile said, like asking him to lift a feather.

Then Mr. Cumberland explained that on that occasion Miss Bentley had allowed herself to be lifted, but when His Majesty next tried he would find it

impossible to move her. Again the Czar smiled. How could it be possible that a delicate young girl weighing less than 125 pounds could be immovable in his powerful grasp? But the smile quickly gave way to a look of perplexity when all his efforts to raise her the hundredth part of an inch from the ground were unavailing.

She was the same girl he had lifted sky-high a few seconds before. She stood in the same position, and yet up she wouldn't go, lift and struggle how he might. It was not magnetism that chained her to the carpet; what, then, was it? This His Majesty wanted naturally to know, and when it was all explained to him he still seemed surprised at the way in which his strength could be so completely nullified.

Still more surprised was he when Miss Bentley, lightly resting her fingers against the wall, resisted the efforts of various members of the gathering to push her against the wall.

To the Czar it seemed easy enough. So when the Czar put his hands on her shoulders he did not at first put forth all his strength; but finding that in such manner she was not to be moved, he began to exert himself. It was undoubtedly the hardest task in the matter of pushing that His Majesty had ever set himself, and it was a fruitless one—greatly to the surprise of all present.

When His Majesty was shown (in private) how the feat could be successfully accomplished he got one of the most stalwart of the audience to place his hands against the wall, then, taking the subject by his royal shoulders, he, with a merry chuckle, pushed him with a loud thud against the wall.

The experiment with a heavy flat-bottomed chair, in which Miss Bentley, by merely placing a hand on each side of the back of the chair, with the thumbs slightly curved, lifted a person seated thereon, excited the Czar's profound attention.

He wished to personally experience the lifting sensation. He sat on the chair and was lifted. Then the Prince Royal of Greece sat upon His Majesty's knees and up went the chair. To them were added the Crown Prince of Denmark and the Duke of Cumberland—one emperor, two future kings, and one king *in posse*. Never was there so much royalty on one single chair before. Their collective weight was certainly not less than 840 pounds. The chair was grasped by Miss Bentley as before, and up it went, Emperor, princes, and all, three or four inches from the ground.

The Czar's first look was one of surprise, his second one of warm congratulation.

But there was one more test in which he was to again fruitlessly put forth all his strength. It was perhaps no great surprise to him that the King of Denmark, hale and active though he is for his age, could not, while pushing at a cue held by Miss Bentley, push her backward, although she stood at the time but on one foot. But it would not be difficult for him, towering as he did a head and shoulders above the fair young English girl, to push her backward any distance he wanted.

He therefore took his place at the cue, and pushed

and pushed, but Miss Bentley maintained her ground, although, in his great strength, the Czar drove the cue level with her throat.

At the conclusion of Miss Bentley's experiments, which were brought to a close with the raising up several feet from the ground of the Grand Duke Michael, while seated upon the butt of a billiard cue held down by four pairs of royal hands, the Czar entered into an animated discussion as to the explanation of the various tests he had witnessed and taken part in. Nothing in the shape of a performance had ever interested him so much. He had never thought it possible that strength could be so easily diverted, and he was not satisfied until he had tried a few informal experiments upon the various royal ladies present, who one and all wished to see if they were "magnets."

The Czar is remarkably clear-headed upon matters of this kind. He hates all pretence and sham. In addition to his sound common sense and clear-headedness, the Czar is essentially "fair-minded." Not once did he in his experiments with Miss Bentley try to take an advantage; he most closely followed the conditions, although he knew that by overstepping them he could readily have discomfited the young experimenter.

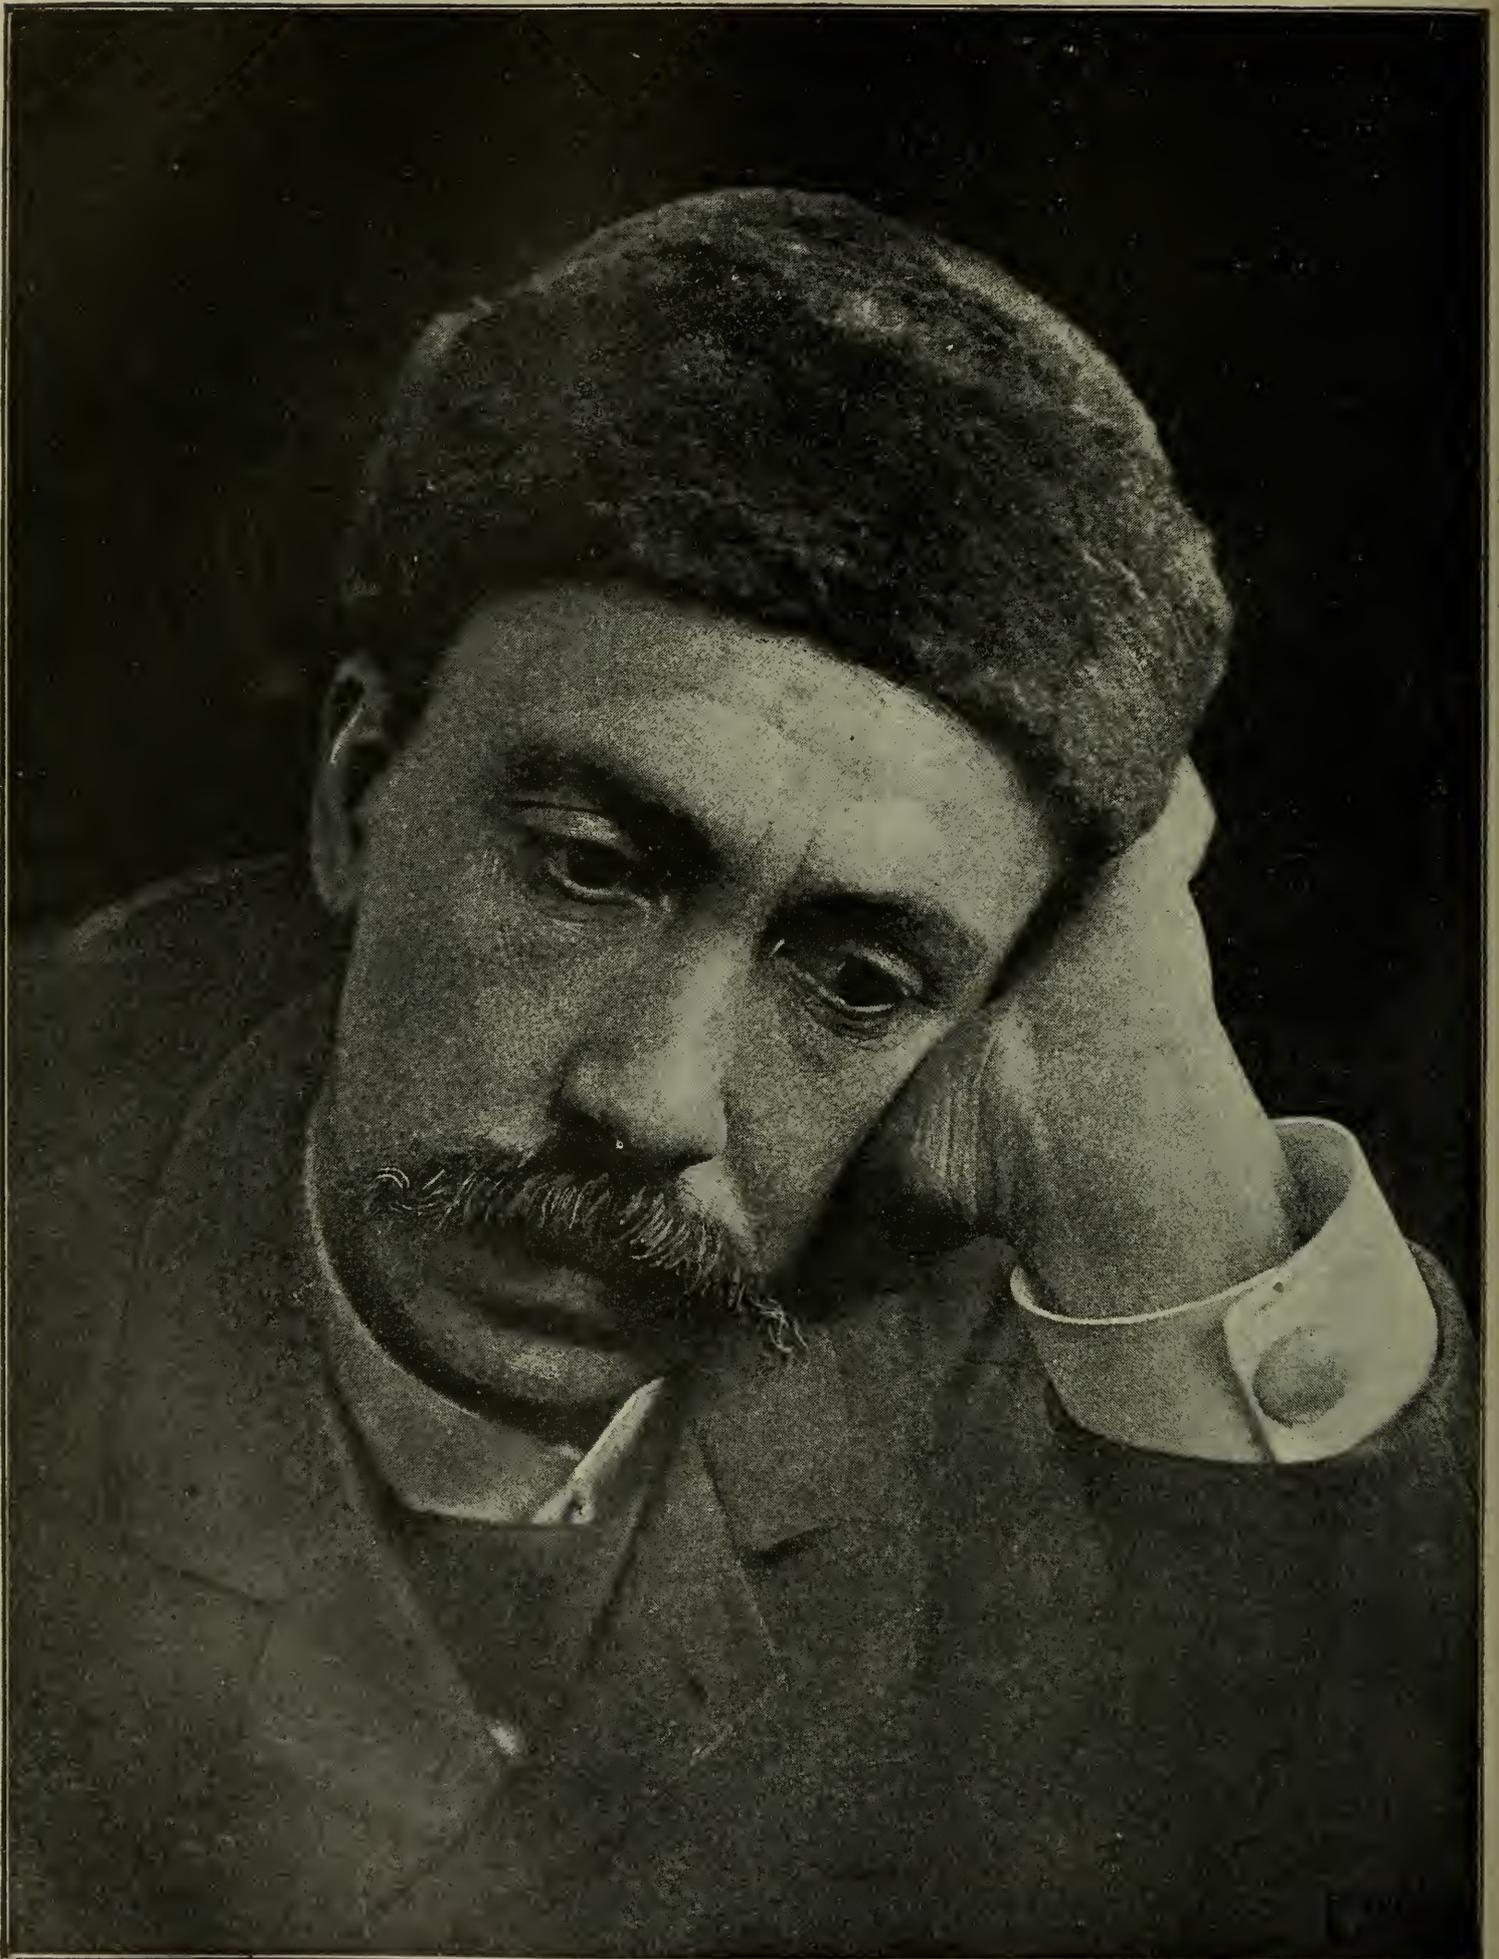

Another very striking instance of his "fair-mindedness" was when a certain exalted lady, who is noted for her physical strength, lifted the chair (at the conclusion of Miss Bentley's experiments) on which a gentleman sat.

"That is not the way to do it," at once said the Czar to the lady, who seemed delighted over her achievement. "You must hold the chair as Miss Bentley holds it, not lift it so; that is a question of strength, not of knack and balance. It isn't at all the same thing."

The one thing that seemed to exercise the Czar's mind was the fear that Miss Bentley might be hurt when strong men were trying to lift her or push her to the wall.

It was while the magnetic craze was at its height in London that Mr. Cumberland one night after dinner quite casually suggested that Miss Bentley should try and see if she were a "magnet." Some experiments were tried, and to her as well as Mr. Cumberland's astonishment she succeeded in a truly remarkable manner. Her first actual test experiments were given a few weeks later at Mr. and Mrs. Labouchere's house in Old Palace Yard, Mr. and Mrs. Labouchere having invited a number of distinguished folk to witness her demonstrations, by natural means, of the phenomena for which supernatural claims were then being made. Miss Bentley completely knocked the bottom out of the supernatural theory, and, in doing so, was of great service to the cause of common sense.

Miss Bentley is young; she is in her twenty-second year, and at her age very few, if any, succeed in getting themselves so widely known as she is. But then it is not every one who can lift the Czar; neither is it every one who can have the opportunity of making the attempt. As it is, she stands quite alone in what she has accomplished.

PROFESSOR CHARLES RICHEL.

LEADING ARTICLES OF THE MONTH.

PSYCHICAL RESEARCH.

DURING the last month a number of articles dealing with psychological and occult phenomena have appeared in the magazines:

What Psychical Research has Accomplished.

An extended account of the organization, purpose and character of the "Society for Psychical Research" is given by Professor William James, of Harvard University, in the *Forum*.

This Society was founded in February, 1882, and the purpose of its organization was, "first, to carry on systematic experimentations with hypnotic subjects, mediums, clairvoyants and others; and secondly, to collect evidence concerning apparitions, haunted houses, and similar phenomena which are incidentally reported, but which from their fugitive character admit of no deliberate control."

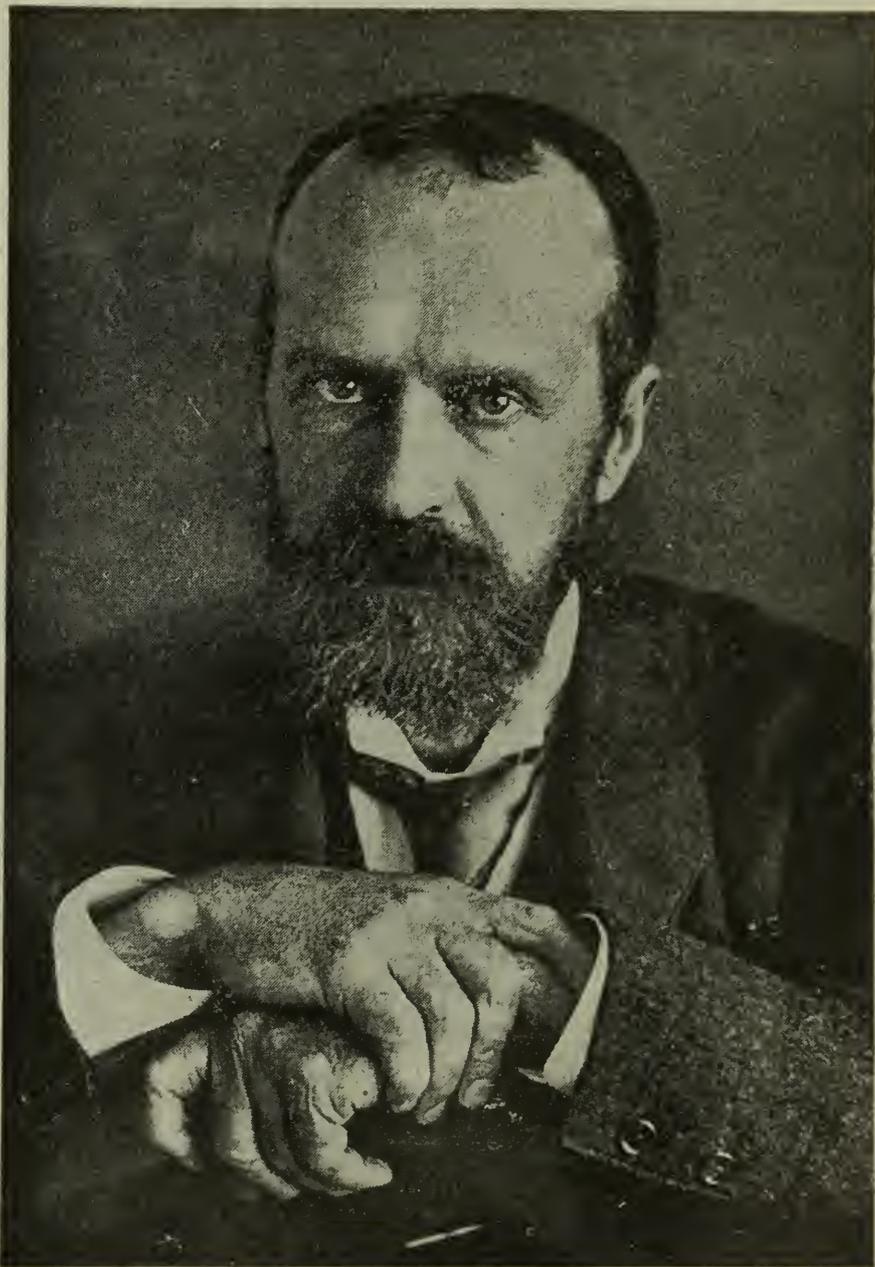

Upon the roll of membership appear the names of many prominent scientists and scholars. The president is Professor Henry Sidgwick, the Rt. Hon. Arthur Balfour is one vice-president, and Professor J. P. Langley, secretary of the Smithsonian Institute, is another. Such men as Professor Lodge, the eminent English physicist, and Professor Richet, the renowned French physiologist, are among the most active contributors to the Society's "Proceedings." Other prominent members are Professor W. F. Barrett, Mr. F. W. H. Myers, Mr. Alfred Russel Wallace, and Mr. Richard Hodgson, secretary of the "American Branch," and Professor William James himself.

The Society's "Proceedings" have been compiled with great care. Every case reported has been critically examined where this was possible, and each case "appears with its precise coefficient of evidential worth stamped on it, so that all may know just what its weight as proof may be."

The first two years of the Society's publications are taken up with the study of thought transference; the chief subjects of the study being some girls named Creery, who had an inexplicable power of guessing names and objects thought of by other persons. After diligent examination these girls were once detected making signs to each other. It is thought to be quite possible that this deception was an after growth

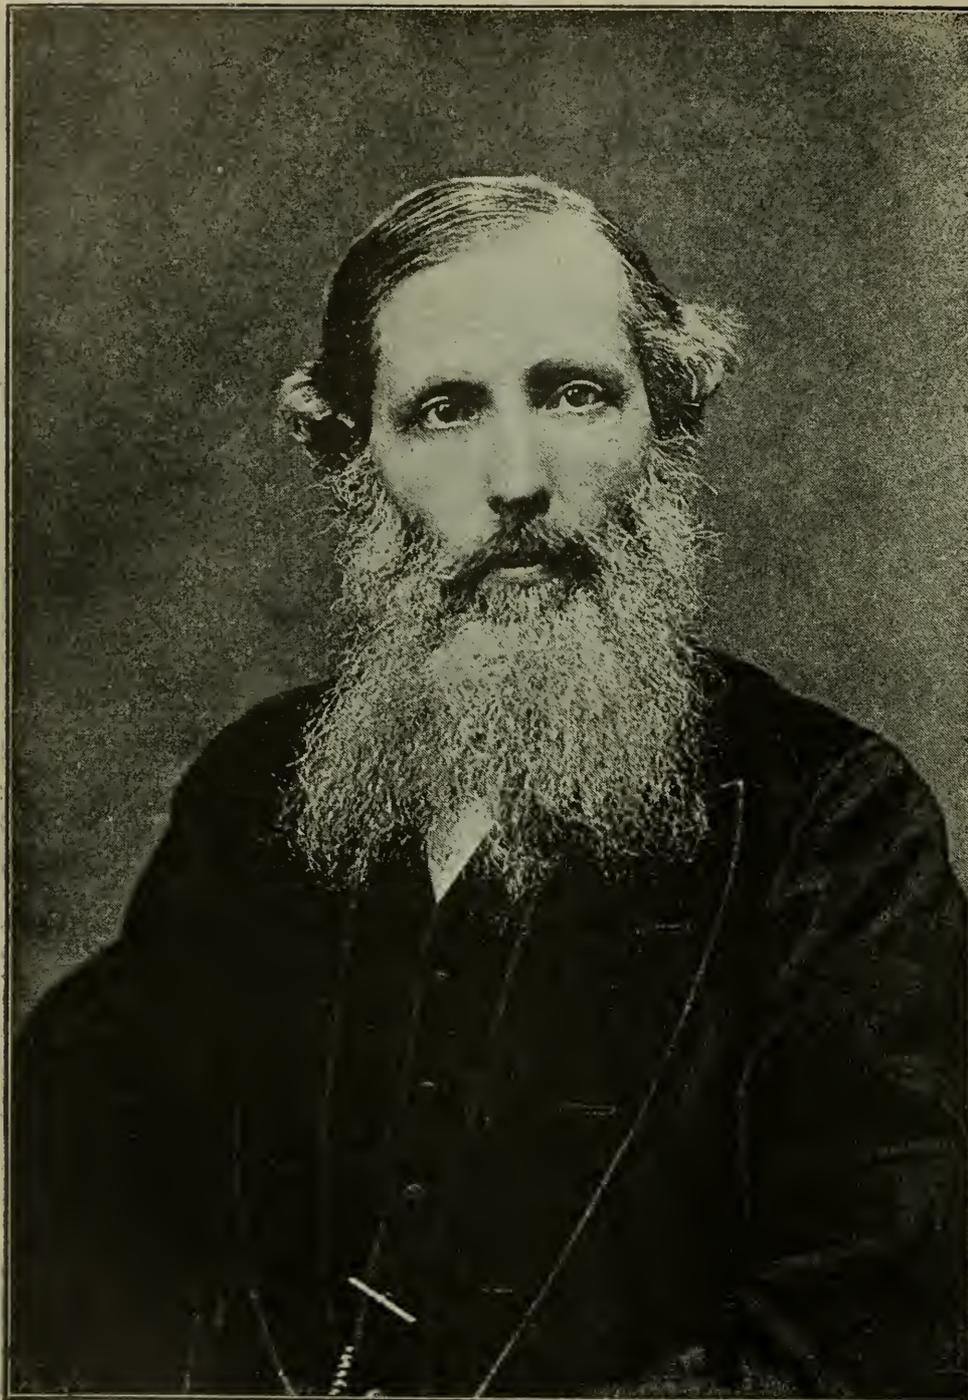

which grafted itself on a genuine phenomenon, but the Society decided that all tests had been invalidated. Other cases of thought transference were experimented with, in which all were positive there could be no possible fraud.

Hypnotism and mediumship have been studied by the Psychical Society with the same conscientious and scientific care. Professor James considers the most

PROFESSOR WILLIAM JAMES.

important part of the Society's "Proceedings" the series of papers by Mr. F. W. H. Myers on the "subliminal self," or "extra consciousness," the great value of which is that it is "the first thoroughly inductive attempt to consider the phenomenon of hallucination, hypnotism, automatism, double personality and

PROFESSOR HENRY SIDGWICK,
President of the Psychical Research Society.

mediumship as connected parts of one whole subject.

“The result of Myers’ learned and ingenious studies in hypnotism, hallucinations, automatic writing, mediumship and the whole series of allied phenomena is a conviction which he expresses in the following terms: ‘Each of us is in reality an abiding psychical entity far more extensive than he knows—an individuality which can never express itself completely through any corporeal manifestation. The self manifests itself through the organism; but there is always some part of the self unmanifested, and always, as it seems, some power of organic expression in abeyance or reserve.’

“The ordinary consciousness Mr. Myers likens to the visible part of the solar spectrum; the total consciousness is like that spectrum prolonged by the inclusion of the ultra-red and the ultra-violet rays. In the psychic spectrum the ‘ultra’ parts may embrace a far wider range, both of physiological and of psychical activity, than is open to our ordinary consciousness and memory. At the lower end, beyond the red, as it were, we have the *physiological* extension, mind cures, “stigmatization” of ecstasies, etc.; in the upper or ultra-violet region, we have the hyper-normal cognitions of the medium trance.”

A noteworthy contribution to the “Proceedings” is “the discussion of the physical phenomenon of mediumship (slate-writing, furniture-moving, and so forth) by Mrs. Sidgwick, Mr. Hodgson and ‘Mr. Davey.’ This, so far as it goes, is destructive of the claims of all the mediums examined. In the way of ‘control,’ Mr. Davey’ himself produced fraudulent slate-writing of the highest order, while Mr. Hodgson, a ‘sitter’ in his confidence, reviewed the written reports of the series of his other sitters—all intelligent persons—and shows that in every case they failed to see the essential features of what was done before their eyes. This Davey-Hodgson contribution is probably the most damaging document concerning eye-witnesses’ evidence which has ever been produced.

“Another substantial bit of work based on personal observation is Mr. Hodgson’s report of Madame Blavatsky’s claims to physical mediumship. This is ‘adverse to the lady’s pretensions; and although some of Madame Blavatsky’s friends make light of it, it is a stroke from which her reputation will hardly recover. Although the ‘S. P. R.’ has thus found that the evidence for matter moving without contact is as yet insufficient, its observations on an American medium, Mrs. Piper, tend to substantiate the claim that hyper-normal intelligence may be displayed in the trance state. A tediously long report of sittings with Mrs. Piper in England, followed by a still longer ditto in America, gives proof (entirely conclusive to the present writer’s mind) that this lady has shown in her trances a knowledge of the personal

affairs of living and dead people which it is impossible to suppose that she can have gained in any 'natural' way. A satisfactory explanation of the phenomenon is yet to seek. It offers itself as spirit-control; but it is as hard to accept this theory without protest as it is to be satisfied with such explanations as clairvoyance or reading the sitter's mind."

The Psychic.

In the first number of the new quarterly, the *Psychical Review*, the Rev. M. J. Savage, who is well known as one of the most industrious psychical researchers, begins the organ of his society with a paper entitled "Some Assured Results in Psychical Science and the Present Outlook." He points with exultation to two chief evidences that the investigation of psychical science has at last come to be "respectable," and one of these evidences on which he lays the most stress is the fact that THE REVIEW OF REVIEWS has recognized the seriousness of the attempts of his society, and has shown it by issuing the famous "Ghost Stories" supplement.

As for his own beliefs and the limits of them, Dr. Savage affirms a very broad creed, which includes clairvoyance, telepathy, the truth of which he regards as being proved as indisputably "as the Copernican theory of the heavens."

"I will go a little farther," he says. "I will say that in the presence of the psychic—I like that word better than medium, because as long as we are investigators we should not use a word that implies a belief not yet ours, and the word psychic carries our meaning

MR. ALFRED R. WALLACE.

until we can reach the point where we can say we are convinced—in the presence of psychics I have been told things which I know the psychic did not know and never had known. There is no longer the least shadow of a doubt of that in my mind. But I have always said this does not go far enough; possibly this may mean telepathy only. Although the psychic is not a clairvoyant, is not conscious of possessing any means of getting at the contents of my mind, yet the psychics may be a mirror in which my thoughts and knowledge are reflected, and I may be getting back only what I have given." But "there have been several cases not only in my own experience, but more still in the experience of persons whose judgment and power of investigation I trust as I trust my own, in which there has been the communication of intelligence that neither the psychic nor the sitter possessed nor ever did possess. I have had it in such circumstances as this. I have had communication, while sitting in my study concerning things that were taking place two hundred miles away," which, all will agree with the reverend narrator, surely smacks of the spirit world.

Psychography.

Another noted exponent of the new science, Mr. B. O. Flower, editor of the *Arena*, tells of some marvelous examples of "slate writing" in his article headed "Psychography: Some Remarkable Cases." Like many of the most ardent disciples of psychical research, he has been won over from complete skepticism.

MR. RICHARD HODGSON,
Secretary of the "American Branch."

“The first experience I will describe occurred some years ago. The psychic was a stranger to me, and I have only met him once since the sitting I am about to describe. The time set was two o'clock in the afternoon. There were two large windows in the room. On this occasion I did not take my own slates, but on entering examined carefully the slates and cleansed them. I frankly told the psychic that I was in search of the truth, that I had met with very indifferent success in investigating other classes of phenomena, and that I wished to make a thorough examination of the room; to this he readily assented. The chairs and table were almost the only furniture in the apartment, and they were very carefully examined. I sat on one side of the table, the medium on the other, after carefully examining the slates. The psychic said, ‘I think we will have good results.’ By his direction I placed the two slates so they rested on my left breast and shoulder and were supported by my left hand; the psychic held my right hand. ‘Now,’ said he, ‘ask a mental question and see if it will be answered.’ I mentally addressed a question to a cousin who had passed from life in Southern Illinois some few months before. Almost instantly I heard a scratching sound between the slates. At length it ceased. ‘Ask another question,’ said the psychic. I did so; again the writing was heard. This was repeated three times. I then opened the slates. To my first question the answer came: ‘Dear cousin: Yes, I am present and am more happy here than before I passed over.’ Now followed the name in full to whom I had mentally addressed my question. The address was even more remarkable than the signature in that I had not even mentally mentioned the relationship, which was here given. The next question, however, was not satisfactorily answered. It was as follows: ‘Where did you pass from life?’ The answer came: ‘I cannot answer this question at present; will try to do so later.’ The other answers were correct, and in each instance save one the name of the person addressed mentally was written out on the slate.

“Here certainly was no legerdemain. 1. The slates were not touched by the medium. 2. The message in the first instance was addressed to a friend to whom I had addressed no message in the course of any previous seances with psychics. 3. No audible word was spoken. 4. The writing apparently commenced immediately after the question was mentally put.”

On another occasion even more remarkable as to the *fac-simile* incident, a psychic visited Mr. Flower at his home. “Taking from a desk drawer two slates which the psychic had not seen or touched, I went into the room where he was in conversation with my wife and her mother. ‘I want you to see if we can succeed in getting anything on these slates without your touching them,’ I said. ‘Let your wife hold one end and you hold the other,’ he replied, ‘and we will try, though I do not expect you will get anything.’ ‘I have asked Prof. H. a question on this pellet,’ I observed, as I dropped the crumpled paper on the table. [Prof. H. was a friend of Mr. Flower’s

who had died recently.] In a few minutes my wife and I distinctly heard a scratching sound upon the slate and felt a slight vibration. We lifted the slate to the ear of my wife’s mother, who also heard it quite distinctly. All this time it should be remembered the psychic was seated a few feet from us, and had at no time even touched the slates. Finally the writing ceased. On opening the slates we found the inside of one of them covered with writing, the message purporting to come from the gentleman to whom it was addressed, and the most interesting feature was the signature, which, on comparison with several autographs of the gentleman, was found to be a *fac-simile*. This, however, is the only instance in my personal experience where the signature has been anything like a *fac-simile* of the signature of the person who claimed to write the message.”

A Striking Test in Thought-Reading.

The *Theosophist* for July gives space to the following striking test in thought-reading, contributed as the personal experience of one who signs himself “R. M.”

“In the year 1878, a family of my acquaintance, residing in the Nilgiri district, devoted many months to an investigation of the phenomena of mediumship, and two of the young ladies became powerful mediums. The phenomena embraced the phases most commonly known.

“Communication was established by means of a tripod table, which rapped out replies in accordance with a code previously arranged.

“I had witnessed several curious and interesting facts previously in connection with spiritualistic manifestations, and had mentioned them to a friend, whom I will call F., who lived some 80 miles away. He asked me whether I could not manage to obtain some test that would be absolutely convincing.

“The next time I paid the Hills a visit, I asked one of the young ladies in question to find out whether the spirits, who were then said to be present, would consent to give me a proof of their existence. I then explained the test I proposed—which was this. I was to affix numerals, arbitrarily and at random, to each letter of the alphabet—and the spirits were to rap out a message for my friend in accordance with the arrangements made.

“I then went into the next room and wrote out on a piece of paper the letters of the alphabet in a column, and opposite each letter its corresponding numeral. Thus A represented 72,—B—15, C—3, D—54, and so on. This paper I folded up and put into my pocket. I then sat down near the young lady, who again asked the spirits if they understood what was required of them, and they replied in the affirmative. The message was then quickly rapped out, and the numerals written down by me. I then again went alone into the next room, took out the paper from my pocket, and translated the message. I expected to get a string of meaningless letters; but to my utter astonishment found the following:

“‘For F——. Read this, and believe.’

“Now, I was absolutely assured that I could not

have given the numeral which corresponded to any letter of the alphabet in the paper in my pocket, two minutes after I wrote it, had my very life depended on it—so it was clear to me that this was no ordinary case of thought-reading; but established the existence of invisible spirits, or elementals, capable of penetrating through matter, and of reading the letters and corresponding numerals on the paper inside my pocket. They had previously asserted that they possessed such power, and then proved that assertion to be correct.”

Commenting upon this narrative, the editor of the *Theosophist* says: “Our correspondent’s deduction is not quite sound. If he will refer to the reports of several quite recent hypnotic observations in the French hospitals he will find apparently conclusive proof of the existence in man of what may be called multiple personality, *i. e.*, several states of consciousness in the same individual, each so distinct from the others as to amount to a separate personality, having special temperaments, mental faculties and moral peculiarities. Thus, in the present case it is possible that while the normal waking consciousness of R. M. had instantly forgotten what numerals he had written opposite the letters of the alphabet, they were all vividly remembered by his other personality, and could thus be imparted to the medium by thought-transference and no spirit be concerned.”

Wanted, A Phonograph for Thought.

In *Lucifer* for July 15 is to be found an article entitled, “Shall We Have a Thought Machine?” by Prof. Edwin J. Houston, an American electrician, Mr. Houston argues that as we have a phonograph for recording speech, we should have an instrument which would record thought without the intervention of speech. “Thought,” says the Professor, “is accompanied by molecular vibrations in the gray matter of the brain, and these brain-molecules, like everything else, are immersed in and interpenetrated by ether; this being so, their vibrations must set up wave-motions in the ether, and these must spread out from the brain in all directions. Further, these brain-waves or thought-waves, being thus sent out into space, will produce some phenomena, and reasoning by analogy we may expect that—as in the case of sound-waves sympathetic vibrations will be set up in bodies similar to that which generates the waves, if those bodies are attuned to respond. Again, reasoning by analogy we may expect—as in electric resonance—that such oscillations would be set up as are found when electric waves are sent out, and, meeting a circuit in consonance with them, set up in that circuit oscillations like their own.

“In view of these facts, which are well ascertained, Professor Houston considers that it does not seem improbable that a brain engaged in intense thought should act as a center for thought-radiation, nor that this radiation, proceeding outward in all directions, should affect other brains on which they fall, provided that these other brains are tuned to vibrate in

unison with them, and thus produce in them sympathetic vibrations resulting in various or similar thought phenomena.

“Light-waves are etheric vibrations, and it would seem that these brain-waves should ‘partake of the nature of light.’ If so, why should it not be possible to obtain, say, by means of a lens, a photographic impression of them?

“Such a thought-record suitably employed might be able to awaken at any subsequent time in the brain of a person submitting himself to its influence thoughts identical to those recorded.”

In commenting on this article, the editor of *Lucifer* says: “All these discussions about etheric waves would start from a firmer basis if it were generally remembered that such names as light, sound, electrical disturbance, etc., are all descriptive, not of the phenomena, but of their effect upon us. In Nature they are all etheric vibrations; translated through our sense-organs they appear as many differing sensations. Alter your sense-organs, and what is now light might become sound, fragrance might become visible. And with different ears we might listen to the morning stars singing together, and see in many-colored radiance the harmonious concert of the birds.”

HOW WE FEEL WHEN WE DIE.

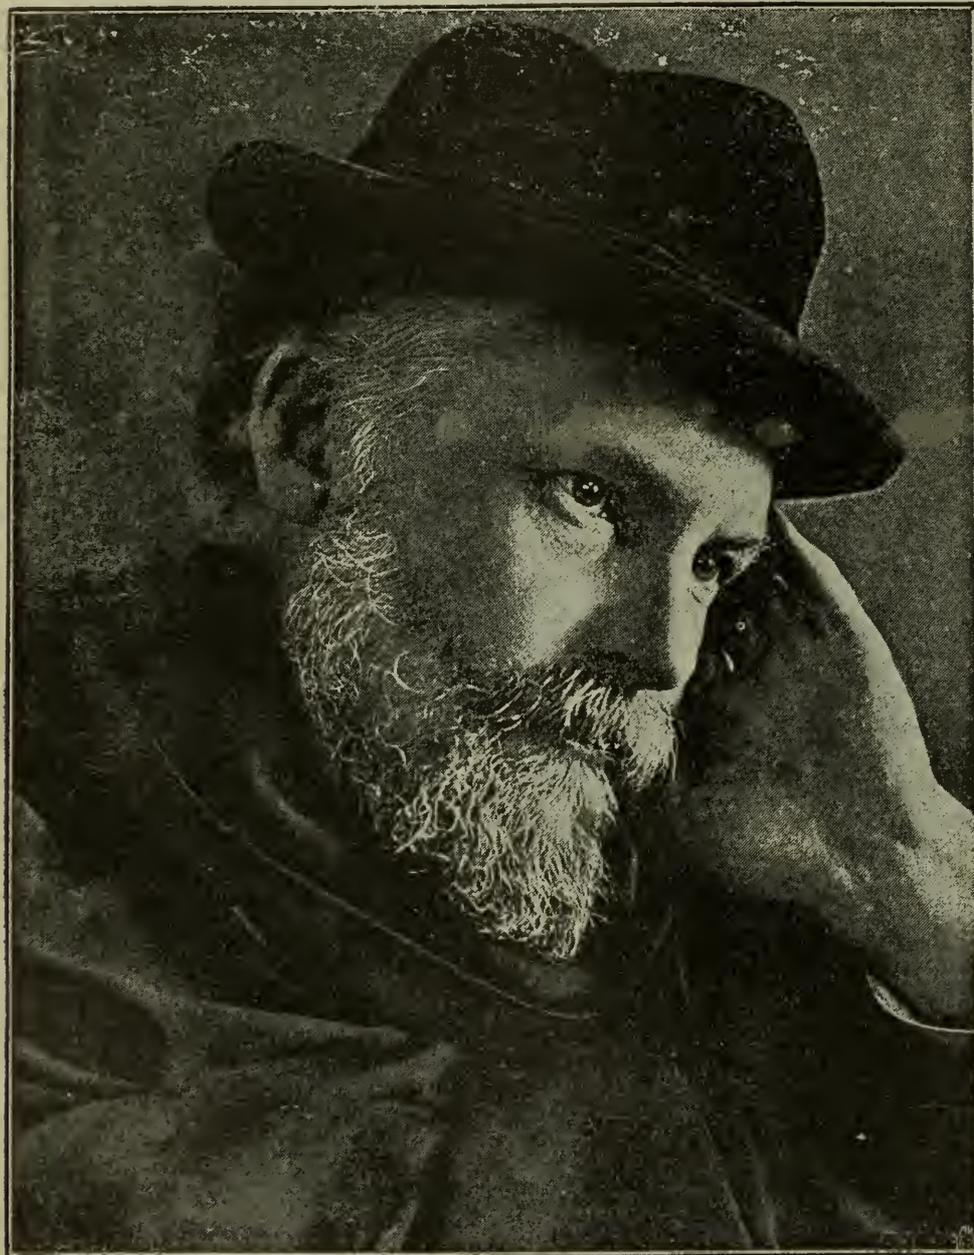

Two Remarkable Experiences.

THE July number of the “Proceedings of the Society of Psychical Research” contains a paper of surpassing interest by Mr. F. W. H. Myers. Its title is adopted apparently with the purpose of concealing its interest from the public, “On Indications of Continued Terrene Knowledge on the Part of the Phantasms of the Dead.” Under this phraseology Mr. Myers conceals some extraordinary experiences of how we feel when we die, and throws some light upon the question as to whether we shall continue to learn and understand all that goes on in the earth when we have quitted this mortal sphere. As it is appointed to all men to die, and as in the whole range of human literature there are hardly any authentic narratives as to how a man feels at the moment of death, the evidence in this paper of Mr. Myers is extremely interesting. Of the two narratives Mr. Myers gives us, the first is the most remarkable, although they are both exceedingly wonderful. The first was contributed by Dr. Wiltse, of the *St. Louis Medical and Surgical Journal*. Dr. Wiltse is the authority for the statements which follow. When in full possession of all his faculties he appeared to come to the moment of death in the last stage of typhus fever. He was in complete possession of his faculties, and he discussed with his family the arguments in favor of immortality. His voice failed and his strength weakened, and, as a last effort, he stiffened his legs and lay for four hours as dead, the church bell being rung for his death. A needle was thrust into various portions of his body from the feet to the hips without having any effect. He was pulseless for a long time, and for

nearly half an hour he appeared absolutely dead. While his body was lying in this death-like trance his soul was disengaging itself from its earthly tabernacle.

THE SEPARATION OF SOUL AND BODY.

Dr. Wiltse, describing his own experience, says that he woke up out of unconsciousness into a state

MR. F. W. H. MYERS.

of conscious existence and discovered that the soul was in the body, but not of it. He says: "With all the interest of a physician, I beheld the wonders of my bodily anatomy, intimately interwoven with which, even tissue for tissue, was I, the living soul of that dead body. I learned that the epidermis was the outside boundary of the ultimate tissues, so to speak, of the soul. I realized my condition and reasoned calmly thus: I have died, as men term death, and yet I am as much a man as ever. I am about to get out of the body. I watched the interesting process of the separation of soul and body. By some

power, apparently not my own, the Ego was rocked to and fro, laterally, as a cradle is rocked, by which process its connection with the tissues of the body was broken up. After a little time the lateral motion ceased, and along the soles of the feet beginning at the toes, passing rapidly to the heels; I felt and heard, as it seemed, the snapping of innumerable small cords.

When this was accomplished, I began slowly to retreat from the feet toward the head, as a rubber cord shortens. I remember reaching the hips and saying to myself, 'Now, there is no life below the hips.' I can recall no memory of passing through the abdomen and chest, but recollect distinctly when my whole self was collected into the head, when I reflected thus: I am all in the head now, and I shall soon be free. I passed around the brain as if I were hollow, compressing it and its membranes slightly on all sides toward the center, and peeped out between the sutures of the skull, emerging like the flattened edges of a bag of membranes. I recollect distinctly how I appeared to myself something like a jelly-fish as regards color and form. As I emerged from the head I floated up and down and laterally like a soap bubble attached to the bowl of a pipe, until I at last broke loose from the body and fell lightly to the floor, where I slowly rose and expanded into the full stature of man. I seemed to be translucent, of a bluish cast, and perfectly naked. With a painful sense of embarrassment I fled toward the partially opened door to escape the eyes of the two ladies whom I was facing as well as others whom I knew were about me, but upon reaching the door I

found myself clothed, and satisfied upon that point I turned and faced the company.

THE NEW BODY OF THE SOUL.

"As I turned, my left elbow came in contact with the arm of one of two gentlemen who were standing in the door. To my surprise his arm passed through mine without apparent resistance, the severed parts closing again without pain, as air reunites. I looked quickly up at his face to see if he had noticed the contact, but he gave me no sign—only stood and gazed toward the couch I had just left. I directed

my gaze in the direction of his and saw my own dead body.

"I saw a number of persons sitting and standing about the body, and particularly noticed two women apparently kneeling by my left side, and I knew that they were weeping. I have since learned that they were my wife and my sister, but I had no conception of individuality. Wife, sister, or friend were as one to me. I did not remember any conditions of relationship; at least I did not think of any. I could distinguish sex, but nothing further. Not one lifted their eyes from my body.

"I turned and passed out at the open door, inclining my head and watching where I set my feet as I stepped down on to the porch.

"I crossed the porch, descended the steps, walked down the path and into the street. There I stopped and looked about me. I never saw that street more distinctly than I saw it then. I took note of the redness of the soil and of the washes the rain had made. I took a rather pathetic look about me, like one who is about to leave his home for a long time. Then I discovered that I had become larger than I was in earth life and congratulated myself thereupon. I was somewhat smaller in the body than I just liked to be, but in the next life, I thought, I am to be as I desired.

"My clothes, I noticed, had accommodated themselves to my increased stature, and I fell to wondering where they came from and how they got on to me so quickly and without my knowledge. I examined the fabric and judged it to be of some kind of Scotch material—a good suit, I thought, but not handsome; still, neat and good enough. The coat fits loosely, too, and that is well for summer. 'How well I feel,' I thought. 'Only a few minutes ago I was horribly sick and distressed. Then came that change, called death, which I have so much dreaded. It is past now, and here am I still a man, alive and thinking—yes, thinking as clearly as ever, and how well I feel!'

THE CONNECTION BETWEEN BODY AND SOUL.

Dr. Wiltse, in the exuberance of his joy at the thought that he would never be sick again, danced in his glee. He then noticed that he could see the back of his coat with the eyes of his old body, while the spiritual eyes were looking forward. He discovered that a small cord like the thread of a spider's web ran from his shoulders back to his body, and was attached to it at the base of the neck in front. Then he went through the air upheld by a pair of hands, which he could feel pressing lightly on his sides. He traveled at a swift but pleasant rate of speed until he arrived on a narrow but well-built roadway inclined upward at an angle of 25 degrees. It was about as far above the tree-tops as it was below the clouds. The roadway seemed to have no support, but was built of milky quartz and white sand. Feeling very lonely, he looked for a companion, and, as a man dies every twenty minutes, he thought he ought not to have to wait long. But he could see no one. At last, when he was beginning to feel very miser-

able, a face full of ineffable love and tenderness appeared to him. Right in front of him he saw three prodigious rocks blocking the road. A voice spoke to him from a thunder-cloud, saying: "This is the road to the Eternal World; once you pass them, you can no more return to the body." There were four entrances, one very dark; the other three led into a cool, quiet and beautiful country. He desired to go in, but when he reached the exact center of the rock he was suddenly stopped. He became unconscious again; and when he awoke, he was lying in his bed. He awoke to consciousness and soon recovered. He wrote out this narrative eight weeks after his strange experience, but he told the story to those at the bedside as soon as he revived. The doctor who was at the bedside said that the breath was absolutely extinct so far as could be observed, and every symptom marking the patient as dead was present. "I supposed at one time that he was actually dead, as fully as I ever supposed any one to be dead."

The Huguenot Pastor's Story.

That is the first story. The second one is of a Huguenot minister by the name of Bertrand. It is not so recent, but it is quite as remarkable in its way. Mr. Bertrand was traveling with some pupils in the Alps. While ascending the Titlis Mountain he found himself wearied, and sent the party of students up the hill while he rested on the mountain side. After the party had left him he smoked and contemplated the scenery. Suddenly he felt himself as if struck by apoplexy. His head was perfectly clear, but his body was powerless; it was the sleep of the snow. He then gives the following account of his experience:

THE SENSATION OF DYING.

"A kind of prayer was sent to God, and then I resolved to study quietly the progress of death. My feet and hands were first frozen, and little by little death reached my knees and elbows. The sensation was not painful, and my mind felt quite easy. But when death had been all over my body my head became unbearably cold, and it seemed to me that concave pincers squeezed my heart, so as to extract my life. I never felt such an acute pain, but it lasted only a second or a minute, and my life went out. 'Well,' thought I, 'at last I am what they call a dead man, and here I am, a ball of air in the air, a captive balloon attached to the earth by a kind of elastic string, and going up and always up. How strange! I see better than ever, and I am dead—only a small space in the space without a body! . . . Where is my last body?' Looking down, I was astounded to recognize my own envelope. 'Strange!' said I to myself. 'There is the corpse in which I lived and which I called *me*, as if the coat were the body, as if the body were the soul! What a horrid thing is that body—deadly pale, with a yellowish-blue color, holding a cigar in its mouth and a match in its two burned fingers! Well, I hope that you shall never smoke again, dirty rag! Ah! if only I had a hand and scissors to cut the thread which ties me still to it!

“THE PROFESSOR IS DEAD!”

“When my companions return they will look at that and exclaim, ‘The Professor is dead!’ Poor young friends! They do not know that I never was as alive as I am, and the proof is that I see the guide going up rather by the right, when he promised me to go by the left; W. was to be the last, and he is neither the first nor the last, but alone, away from the rope. Now the guide thinks that I do not see him, because he hides himself behind the young men while drinking at my bottle of Madeira. Well, go on, poor man; I hope that my body will never drink of it again. Ah! there he is, stealing a leg of my chicken! Go on, old fellow; eat the whole of the chicken if you choose, for I hope that my miserable corpse will never eat or drink again.” I felt neither surprise nor vexation; I simply stated facts with indifference. ‘Hello!’ said I, ‘there is my wife going to Lucerne, and she told me that she would not leave before to-morrow, or after to-morrow. They are five before the hotel of Lungern. Well, wife, I am a dead man. Good-by.’

“NEITHER REGRET NOR JOY.”

“I must confess that I did not call *dear* the one who has always been *very dear* to me, and that I felt neither regret nor joy at leaving her. My only regret was that I could not cut the string. In vain I traveled through so beautiful worlds that earth became insignificant. I had only two wishes: the certitude of not returning to earth and the discovery of my next glorious body, without which I felt powerless. I could not be happy because the thread, though thinner than ever, was not cut, and the wished-for body was still invisible to my searching looks.

“Suddenly a shock stopped my ascension, and I felt that somebody was pulling and pulling the balloon down. My grief was measureless. The fact was that while my young friends threw snowballs at each other our guide had discovered and administered to my body the well-known remedy, rubbing with snow; but as I was cold and stiff as ice, he dared not roll me for fear of breaking my hands still near the cigar. I could neither see nor hear any more, but I could measure my way down, and when I reached my body again I had a last hope—the balloon seemed much too big for the mouth.

THE CORPSE SWALLOWED THE BALLOON.

“Suddenly I uttered the awful roar of a wild beast—the corpse swallowed the balloon, and Bertrand was Bertrand again, though for a time worse than before.

“I never felt a more violent irritation. At last I could say to my poor guide: ‘Because you are a fool you take me for a fool, while my body alone is sick. Ah! if you had simply cut the string.’

“‘The string? What string? You were nearly dead.’

“‘Dead! I was less dead than you are now, and the proof is that I saw you going up the Titlis by the right, while you promised me to go by the left.’

“The man staggered before replying, ‘Because the snow was soft and there was no danger of slipping.’

“‘You say that because you thought me far away. You went up by the right and allowed two young men to put aside the rope. Who is a fool? You—not I. Now show me my bottle of Madeira, and we will see if it is full.’

“The blow was such that his hands left my body and he fell down.

“‘Oh,’ said I, brutally, ‘you may fall down and stare at me as much as you please, and give your poor explanations, but you cannot prove that my chicken has two legs, because you stole one.’

“This was too much for the good man. He got up, emptied his knapsack while muttering a kind of confession, and then flew away.

“When I arrived in Lucerne I asked my wife why she had left Interlaken sooner than she had told me.

“‘Because I was afraid of another accident and wanted to be nearer!’

“‘Were you five in the carriage and did you stop at the Lungern Hotel?’

“‘Yes.’ And I went away laughing.”

Both of these stories, it will be seen, agree in the consciousness of the apparently dead person that he existed apart from the body with which he was connected by a very fine line, the severance of which would complete the process of dying. The moral of both of these stories seems to be that what we call dying is no more death than the changing of a suit of clothes is dying. The earthly house of this tabernacle is dissolved, but the soul goes on living just the same as before, only under different circumstances. The ugly part of both these stories is the comparative indifference with which the liberated soul regarded those whom it loved on earth. This, however, is so contrary both to experience and to reason that it may be regarded as exceptional, and due solely to the extreme novelty of the situation, which in these cases had not time to pass before the process of dying was rudely interrupted.

AS TO DREAMS.

MR. FREDERICK GREENWOOD'S paper in the *Contemporary Review* will be read with delight by all those who take an interest in the study of occult phenomena connected with dreams and sub-consciousness. Mr. Greenwood's paper is on “Imagination in Dreams.” He tells us that he has been a great dreamer, apparently from his youth up, and, like all persons who have psychical gifts, he is somewhat impatient of the unsatisfactory explanations of the materialists. He tells us his own experience and the experiences of some of his friends. He says: “But it is necessary, or at any rate it will be found convenient, to suspend the conclusion that dreams are always occasioned by senses and sensibilities in a condition of disorder. Some are, no doubt, and by far the most. But others, and those which alone seem worth noting, may be explained by a condition of mind so different as to be the opposite of disorder.”

Mr. Greenwood's dreams are very vivid—more vivid, indeed, than pleasant. He is in the habit of seeing dream-faces. He says: "I have been familiar with such apparitions for years, and it may not be a waste of paper to repeat a description of them written some time ago. These faces are never seen (in my case, as in M. Maury's) except when the eyelids are closed, and they have an apparent distance of five or six feet. Though they seem living enough, they look through the darkness as if traced in chalks on a black ground. Color sometimes they have, but the color is very faint. Indeed, their general aspect is as if their substance were of pale smoke; and their outlines waver, fade and revive, so that, except for the half of a moment, the whole face is never completely or clearly visible at one time. Always of a strikingly distinctive character, these visionary faces are like one that can be remembered as seen in life or in pictures."

Sometimes they are very disagreeable dreams; for instance: "Many years ago I dreamed of having killed a man by throwing him from the verge of a quay. The murder itself did not come into the dream, which began (according to my waking remembrance) just after I had turned from the scene. The dream was of guilt alone, and whenever I recall that vision of myself walking away through the narrow old streets that bordered the quay (it was early morning), the whole mind of me an abyss of listening silence, my very footsteps seeming to have become noiseless, and a wide environment of distance standing between me and every passer by, I believe I really do know the awful solitude a murderer feels, or know it far beyond mere imagining."

THE DEAD IN DREAMS.

His best dream stories, however, are not his own—at least, not avowedly so. Here is one very extraordinary dream story: "Hardly less remarkable is the story of a dream which was repeated three times at an interval of a year on the anniversary of the death of a child. The boy had died when he was seven or eight years of age, and the father was plunged in inconsolable misery. He had hoped and prayed that he might dream of his son, but his prayers did not seem to be answered.

"That is to say, he never had any such dream for a whole year, by which time, I dare say, the praying had been given up and the hope exhausted. But then, on the morning of the child's death, and at the very hour on which he died, the father woke from a wonderful dream, so intimately and touchingly responsive to the whole year's grief that it cannot be thrown into the glare of print. It is only mentioned—together with the fact that after another twelve months of blank and empty nights another dream of the same character occurred at the same hour—in order to give its own setting to the third dream.

"The morning had again come round. A. dreamed that he had awakened about dawn, and, thinking of nothing but the hour to rise, had drawn his watch from under his pillow. In doing so he saw that it

had been completely shattered. He was about to drop to sleep again, to get rid of ill-humor at the accident (this is all in the dream, be it understood), when the door opened, and in came a foreman of works, to whom A. gave instructions every day, and between whom and himself there was a great liking. It seemed as if the man had come for the usual draft of work to be done, and it did not strike A. as anything out of the way that he should be visited in his bedroom for it. But he *was* struck by the look of mysterious inquiry on the man's face. The next moment he connected this look with the broken watch, and drew it out again; the glass gone, the hands swept away from the dial, but seeming less like his own watch now. What was the meaning of it? While A. was asking himself this question in a sort of expectant trepidation, the foreman of works said, 'Put it to your ear, sir.' This A. did; and as he listened to the even beat within, the other said, 'Sir, we know how much you are troubled, and this is our way of showing you that, though every sign of life is destroyed, life may still be going on.' Whereupon A. awoke 'all of a tremble,' heard the tranquil tick-ticking of his watch under his pillow, and, when he could compose himself to take it forth, saw that the hands stood at within five or eight minutes of the time when his boy died on the same day in the calendar.

"When such dreams as these occur (and this one is told quite faithfully, without a word of omission, importation, transposition, or embellishment) they make an impression on the mind which no reasoning can efface. Anxious as we may be to assert our emancipation from superstitious ideas, confident as we may be that the dream is and must be explicable by some morbid condition of organic function, no sooner is attention drawn from that conclusion than belief in the supernatural creeps in to replace it. As often as it is expelled it will return—shadowy but inexpungable, or expungable only for a while. It comes back again and again like an exile to its home, where the reasonings that chase it away are as foreigners and conquerors."

The Physiology of Dreams.

In *The Asclepiad*, Dr. Richardson publishes a reprint of one of his lectures, entitled "The Physiology of Dreams," which he delivered before the Royal Institution of Great Britain, April 28, 1892. It is a very suggestive paper, and deals with all kinds of dreams, discussing their causes and significance:

"Dreams are all explainable on physical grounds; there is no mystery about them save that which springs from blindness to natural facts and laws. We make our dreams as we do our lives. They are reflexes of that which we take into our organization.

"Absence of dream in sleep is a sign, all other things being natural, of sound health—physically, mentally and morally.

"Dreams occurring in childhood are invariably signs of disturbed health, and should be regarded

with anxiety. If they are purely subjective they indicate some derangement of body; if they are objective they tell that some injurious food is being supplied to the developing mind.

"A night of dream relating to the events of the day is a sure sign of mental overstrain; and the dream of continuation of mental work is a sign of danger which should never be disregarded. It becomes very quickly automatic in its course and injurious in its effect.

"Dreams are a cause of mental weariness extending into waking hours, and when that fact is experienced the grand remedy is exercise of body."

THE PLANET MARS.

DURING the last few weeks the attention of the astronomical world, and the scientific world in general, has been fixed upon the brilliant red star in our southeastern heavens, Mars, which on August 5 passed the point in its orbit nearest the earth. This event, occurring only once in fifteen years, has given rise anew to theories and speculations concerning the habitability of this planet, the boldest of which are those sent out from the Juvisy Observatory by M. Camille Flammarion, the distinguished French astronomer. In a letter to the *New York Herald*, August 14, 1892, M. Flammarion gives a summary of the discoveries and suppositions regarding our nearest neighbor.

M. Flammarion's Speculations.

"For more than two centuries and a half," he says, "scientific observation has been directed to an analysis of this neighboring world. We gradually learned that this globe only shines in the reflected light of the sun; that it is composed, like the globe on which we dwell, of continents and seas; that it is surrounded by an atmosphere in which a spectral analysis reveals the presence of a watery vapor; that its years are twice as long as ours; that its seasons are about the same intensity as ours, but twice as long; that its poles are covered with snow during the winter and almost entirely free from it during the summer, and that its climate closely resembles that of the earth—in a word, that this world appears to be habitable just as our is."

POLAR SNOWS.

"It is no longer possible to doubt that the white spots at the poles are due to snow, which accumulates during winter and melts under the rays of the summer sun. Doubtless this snow and this water may differ in some chemical properties from terrestrial water, but it is analogous in aspects and transformations. The atmosphere is more rarefied than ours and higher. The barometer is always at a low point and evaporation is easier. The snows are less dense and the ice softer and melts more easily. But there remains a great analogy between them."

SCHIAPARELLI'S "CANALS."

As to the famous "canals" discovered by Professor Schiaparelli in 1877, M. Flammarion says: "Their

existence has since been confirmed by observation, but astronomers are not agreed as to the nature of these strange formations. That the continents of Mars are crossed by a net-work of lines often perfectly straight and of geometrical aspect is undoubted by all who have studied the question, but it is difficult to decide what is the origin of these tracings. Many of the principal ones seem to be those of former rivers. Nevertheless, they are not real rivers, because they do not have their origin in land, but run direct from one sea to another, and further, because they cross each other." The fact that these formations are of the same color as the seas of Mars gives support to the theory that they are water-courses. A possible explanation of the crossing of these "canals" is that they are operated by the inhabitants of Mars as a part of a gigantic irrigation and transportation system. M. Flammarion computes, from measurement which he has recently made, that the diameter of Mars is 9m. 39s. instead of 11m. 10s., the measurement adopted by Le Verrier.

Mars Through the Telescope.

Directly in the line of M. Flammarion's presentation is Miss Mary Proctor's fanciful description of things and conditions on the planet Mars, which appeared in *Frank Leslie's Weekly*, August 4. Miss Proctor is the daughter of the late Prof. Richard A. Proctor, and writes from her father's point of view: "The astronomer who watches, during the approach of Mars to our earth, the slowly rotating lands and seas of the planet can scarcely, however unimaginative he may be, avoid the thought that contests such as have raged upon our earth for the possession of various regions of our planet's surface may be in progress out yonder in space. In imagination we can observe the slow progress of the Marsian day—the mists of morning gradually clearing away as the sun rises; the gathering of clouds toward eventide, though probably to pass from the skies at night, leaving the same constellations we see, shining with greater splendor through a rarer atmosphere. In the telescope we can clearly see the changes of the Marsian day, for it reveals the long white shore lines, the clearing mists of the morning, the gathering mists of the night; and we know that there must be air currents in an atmosphere undergoing such changes; there must be rain and snow, thunder and lightning, tornadoes and hurricanes blowing more fiercely than those on the earth."

MARS AND THE EARTH COMPARED.

Miss Proctor points out the close resemblance between Mars and the earth. "The planet Mars in our telescopes presents the same aspect as the earth must do to the inhabitants of Venus: a circular disk rather flattened, turning on itself in about twenty-four hours, furrowed from time to time by fleeting clouds, diversified here and there with dark and light plains, revolving obliquely on an axis enveloped with an atmosphere. We have unmistakable evidence of volcanic energy on this planet from the fact that lands and

seas exist, for a continent implies the operation of volcanic forces. Mountain ranges also exist of considerable elevation, which can be inferred from the outlines of seas and lands. The land and sea surfaces on Mars are nearly equal in extent, and the seas are very singularly shaped, running into long inlets and straits, having a bottle-shaped appearance. The seas are of a greenish-blue tinge, resembling our own oceans in their general tint. A mass weighing a pound on our earth would weigh but six and a quarter ounces on Mars. Then, again, the soil weighs less, mass for mass, than that of our earth."

Both M. Flammarion and Miss Proctor are inclined to believe that the double streaks, or "canals," seen in the Schiaparelli chart are due to atmospheric refraction, and can be explained away by known laws of optics; and both attribute the ruddiness of Mars' appearance to the existence of organic life on the planet.

Professor Holden's More Conservative View.

One's faith in the speculations of your Flammarions and Proctors is suddenly shaken on turning to Professor E. S. Holden's article in the San Francisco *Examiner*, August 3. With the biggest lens of them all, that of the Lick Observatory, Professor Holden is not even sure that the red regions of Mars are land, the dark regions water or the white regions at the pole snow-caps. "In fact," he says, "I know of no phenomenon of observation which cannot perfectly well be explained on the supposition that the general surface of Mars is red hot, and that the white regions are clouds."

THE EULOGY OF RAVACHOL.

AMONG the French realistic magazines, the most original, perhaps, is that entitled *Entretiens Politiques et Littéraires*, founded in 1890. In the July number, M. Elisée Reclus has written an extraordinary address to his "dear comrades," the contributors, telling them that their magazine may be destined to play a serious part in the future revolution, if they only know how to bring great devotion to the work. Meanwhile they must do all in their power to help in the creation of anarchist schools for their children, the birth of the *théâtre libre* especially, and the transformation of masters and slaves into a society of spontaneous groups of workers. With such ideas as the prevailing tone of the magazine, it is not surprising to find a contributor, M. Paul Adam, pronouncing on another page the eulogy of Ravachol.

In these days, M. Adam writes, miracles and saints would almost seem to have disappeared. We have the parades of the two chambers, with their daily scandals, their syndicates of sugar manufacturers, beer sellers, etc., and we have had Mary-Reynaud and Wilson, Méline and Morelli and Le Guay, so that politics might have been put outside our minds if the sacrifice of life for the good of humanity had not suddenly reappeared in the shape of the martyrdom of Ravachol, the propagator of the great idea of the ancient religions in seeking death for the good of mankind, and for the elevation of the poor and hum-

ble. Having affirmed the right of existence at the risk of the ignominy of the scaffold, is it not sufficient for him to merit the title of Redeemer? Society kills more than do the assassins. So long as there exist in the world men who die slowly of hunger, the thief and the assassin will naturally remain. Ravachol was the champion of a new force. He exposed the theory of his actions and the logic of his crimes. His deeds were the consequence of his ideas, and his ideas had their birth in that state of barbarity where lamentable humanity vegetates.

Ravachol has seen sorrow, this writer continues, and he has exalted the sorrow of others by offering his as a sacrifice. His undisputed charity and disinterestedness, the vigor of his actions, his courage in face of death, raise him to the splendors of a legend. In these days of cynicism and irony a saint has been born. His blood will be the example for new courage and new martyrs. An event in human history is about to be chronicled in the annals of the nations. The legal murder of Ravachol will open a new era. And for you artists, who represent your mystic dreams on canvas, here is a great subject. If you have understood your epoch, if you have recognized the future, it is your duty to trace the life of this Saint.

THE CARNEGIE CONFLICT.

THE Homestead trouble is discussed in *Social Economist*, by a writer who has evidently given the subject of labor much thought and study. He regards the Homestead strike as something more than a mere quarrel between Mr. Carnegie and his workmen—an industrial crisis, and, in reply to those who see nothing in the affair but a violation of the law, says that "to treat the struggle between employer and employed strictly by existing law would be to cast the present back into the dim rules of the past. Apart from the fatal fact that it cannot be done on account of the magnitude of the forces and interests involved, it is not for the interest of society that it should be done. The new movement of employees is an evolution, and as such society is interested in its success, and cannot afford to have it fail. To insist upon the extreme enforcement of law regarding the rights of property, or upon anything else contrary to this, is to obstruct the advance of civilization itself, and force the use of violence to accomplish what otherwise would come by the silent forces of social evolution."

Attention is called by the writer to the fact that, during the four hundred years preceding 1825, English law made it conspiracy for workmen to associate for the purpose of raising their wages, and he adds that "if English laborers had continued strictly to obey the letter of this law, they would probably still be working twelve hours a day, and be liable to imprisonment for demanding a change or daring to ask for higher wages."

The writer concludes from a review of the economic and history of the Homestead trouble that "the issue was an economic one that might have been ad-

justed by strictly economic methods; and that the real cause of the riot was the ignorant failure of the company to recognize that an economic solution was possible and would be the best for all parties; and a determination to insist upon an antiquated resort to force to establish legal rights outgrown by the advance of society."

LESSONS OF THE STRIKE.

"The Carnegie conflict has shown that in order to secure these several measures are necessary. First of all must, of course, be an unqualified enforcement of the rights of property. This is a fundamental necessity to social freedom and progress, and should therefore be made absolute and complete. No industrial conditions whatsoever should be set up as a defense for the destruction of property. In fact, property rights and personal safety must be held absolutely sacred, and this laborers must religiously recognize no less than capitalists. But to secure these the fullest opportunities for economic competition must be guaranteed. This involves, first, the recognition of trade unions as a necessary part of the industrial organization of society, entitled to the same legal status and support afforded to organized capital. Second, that the refusal of capital to treat with labor organizations, and especially to institute lockouts for the purpose of forcing workmen to abandon their unions, shall be regarded as against public policy, to be discouraged by the courts and disfavored by legislation as against the interests of the State. Third, the entire responsibility of protection to life and property shall be in the hands of the community, and no capitalist shall be permitted to employ private troops under any circumstances, except when called upon to do so by the authorities for the purpose of strengthening the ordinary police machinery of the community. Fourth, that in all cases of industrial disputes, laborers shall have the same right peacefully to dissuade laborers from taking their places that employers have to induce them to do so. This, indeed, is necessary to the efficiency of the strike, and the strike must be recognized as being a part of the competing machinery of modern industry, as it is. There is no other method as yet devised by which the competition of laborers for a higher, because better paid, status can be secured, and as such the strike is of incalculable value to the community. Those who see in it only a disturbance and disorder look at the surface alone. But those who look below the surface will discern the method of the gradual rise of the ancient serf to the modern laborer and of the modern laborer to the condition of a comfortable, reasonable and intelligent citizen—one corner stone of public prosperity."

In *Natural Science* Mr. Clement Reid discusses the climate of Europe during the glacial period. He thinks that Great Britain was probably like Greenland of to-day. All the country north of the Thames and of a line drawn through Saxony was buried under a perennial sheet of ice and snow.

THE BRITISH ELECTIONS.

IN the *Contemporary Review*, Mr. Sydney Webb explains the moral of the British election from the point of view of the author of "The London Programme."

The Moral of the Elections.

Mr. Webb can see only one moral from the election, namely, that Liberals have won when they were Socialists and have lost when they were Individualists; that the lesson which the Liberals have to learn is to accept Mr. Webb as their leader-prophet and walk in the path in which he points out for their feet. Mr. Webb would have an autumn session in order to pass a bill conveying further powers upon the London County Council and the amendment of the Registration Laws. He also would have a Budget for the payment of members, amend the death duties, tax ground rents and impose a graduated income tax.

Mr. Webb sums up his paper as follows:

"The task of the Liberal statesmen is at the present time not merely to frame a Home Rule Bill, but to occupy themselves in forming out of the vague and frequently inconsistent Socialism of their constituents a systematic collectivist programme to be put before the country in 1893. It is, however, obvious that any such programme would be worse than useless unless it were the outcome of a genuine conversation of the collectivist faith. To ask Mr. Gladstone, for instance, to out-trump Mr. Chamberlain's National Insurance by Universal Pensions would indeed be a degradation of politics, unless we could first convert Mr. Gladstone to the doctrine of the moral responsibility of the community for the well-being of its aged workers. There is no hope of true leadership of the working class from politicians who are still under the dominion of the old individualist ideal. But with the abandonment of a worn-out creed, the ugly precepts of self-advancement and 'rising out of your class' would give place to the speeches of our statesmen to a more generous advocacy of the religion of public service. Social honors would be reserved, not for the successful employer of sweated labor, or to the wealthy appropriator of other men's inventions, but for the faithful official of the community, whether his service had been rendered to a trade union or to a co-operative society, to the municipality, or to the State. Our whole educational system, from the elementary school to the university, would teach the energetic and ambitious young man to seek advancement, not in becoming the proprietor of a successful business, but in rising to high office as the faithful servant of his parish or County Council.

"And the political moral of the elections is that no complaisant acceptance of new shibboleths will serve our end. If the Liberal party is once more to become a great 'instrument of progress,' of the collectivist programme must be the expression of an earnest desire for social equality and a genuine belief in industrial democracy."

Two Conservative Views.

In the *National Review* Mr. Bauman and Mr. Whitmore disconsolately discuss the catastrophe which has overwhelmed the Tories. Mr. Bauman, who, by the by, was one of the Conservatives who did as much as anything to lose London for the Conservative party by his insane antagonism to the County Council, makes his moan over the result :

"Despite of a prepollance of fact and argument, unprecedented, unanswerable, and, one would have thought, irresistible, notwithstanding a record of legislative achievement which could not be challenged or concealed, the people have slowly and deliberately declared, after having heard the case argued by both sides : 'We have had enough of this Government; we will turn it off and take a new one.' Is not this enough to make the friends of popular representation wring their hands? What is the use of going to the jury with a strong case if the verdict is to be direct against the weight of evidence? It is not Home Rule for Ireland, but Home Rule for London, not provincial parliaments, but ground rents, no theory of a Federal constitution, but a plain plan of plunder that has given Mr. Gladstone twenty-four votes on a division. Mr. Gladstone may fancy he has won them himself; but we need be under no such illusion. Mr. John Burns and the County Council have joined forces and have seized those twelve seats, not for Mr. Gladstone, but for themselves, as Mr. Gladstone will very soon find out."

London has gone badly, and he thinks that London may go worse. This is due, he says, to the County Council largely, for constituting which he thinks that Mr. Ritchie well deserved being defeated. "We are only just beginning to pay the penalty of that reckless, that mad experiment, without a precedent, I should think, in our legislation, and, fitly enough, the first person to pay was the author of the bill. A fellow-feeling is said to make us kind, but I cannot honestly feel sorry for my friend Mr. Ritchie."

Mr. Whitmore is not so desponding. He tries to cheer up his forlorn brethren in the following fashion: "My contention, then, is that Unionists, while frankly admitting the difficulties they have to face in these constituencies, and the reverses they have in some instances received, should be encouraged by the indubitable, if slow, growth of their views since the last Reform bill, and the concurrent mitigation in the asperity of Radical hostility to them."

"Wherever Radicalism has made advances, it has done so, not because of, or even in the name of, Home Rule, but because of the attractiveness to the poorer voters of new British Radical ideas. Wherever Unionism has grown in strength, it has done so avowedly in the name of Unionism, and on the force of Unionist arguments against Home Rule."

Cause of Salisbury's Overthrow.

In *Blackwood's* the situation is considered both at home and abroad. *Blackwood* thinks that "Lord Salisbury's Government was in a position which should have been rendered unassailable by the gratitude of

the people. Unhappily, however, the blind and fatuous influence of party feeling, freely backed by systematic misrepresentation, audacity of assertion, and persistency in promising the impossible to the ignorant portion of the electors, have been agents more powerful than gratitude, and have prevented the Government from obtaining that unanimity of approval which they had so well deserved, and which in the interests of the country should undoubtedly have been given."

Comfort is found, however, in the increase of the Unionists polls and the heavy majority against Home Rule in England. They have the House of Lords as an additional comfort, and although the result of the elections is regretted and deeply to be deplored, and only to be explained on the supposition of the efficacy of persistent lying, *Blackwood* consoles itself by thinking that the days of the new Ministry will be few. From the point of view of England's interest abroad, *Blackwood* is quite sure nothing but harm will come from Mr. Gladstone's return to power, but he thinks that the danger will be minimized if it is distinctly understood that Lord Rosebery will go to the Foreign Office, and that the existing foreign policy of Great Britain will be maintained.

A Victory for Mr. Gladstone, Not for Home Rule.

Mr. Edward Dicey, writing in the *Nineteenth Century* on the "Verdict of England," says that the general result is a vote in favor of Mr. Gladstone rather than Home Rule. The second feature of the election is: "That the choice of England—as I predicted would be the case in the article I wrote last month under the above heading—has gone dead against Mr. Gladstone's policy. In London the Unionists hold 37 seats against 25; in the English provincial boroughs, 95 against 68; in the English counties, 131 against 103; while in the English universities, the whole five seats were retained by the Unionists without even the pretense of a contest. Thus in England alone Lord Salisbury had a majority of 72."

Mr. Dicey believes that the Opposition will be one of the most powerful on record, an Opposition harmonious, united, proud of its cause, hopeful of its future, confident of success. But notwithstanding this, a majority is a majority however it is constituted, and the Nationalists are masters of the situation. He thinks that Mr. Gladstone will come to terms with Dr. Walsh and the Irish clergy, which will be easier than coming to an understanding with the Irish Nationalists. He sees no absolute impossibility in passing a bill through the House of Commons in the course of next year conferring Home Rule on Ireland, but he says the House of Lords will throw it out and then there will be a Dissolution in twelve months from the present time. Unionists, therefore, should set about preparing to win the next general election. They must begin by acknowledging that they have failed to convince the mass of their countrymen that the repeal of the Union is a matter of life and death

to England. Their second failure is that they have allowed themselves to be outbidden and out-manœuvred in respect to the questions which really interest the masses. The Liberal-Unionists must, therefore, abandon an untenable position, and call themselves Conservatives. Sir John Gorst, Baron de Worms, Mr. Plunkett and Lord Randolph Churchill must be recognized as inevitable members of the next Conservative Ministry, and having thus reconstructed the Opposition Cabinet Mr. Dicey would go for the Eight Hours bill. He does not like it, but he bids the Conservatives remember that if they wish to get the working-class vote they have got to pay for it either in meal or malt.

Views of Six Other Prominent Englishmen.

In the *Fortnightly Review* there are six short papers upon the outlook of affairs. The first is by Mr. Lecky, who thinks that Mr. Gladstone will not carry out Home Rule, but that he may inflict profound injury upon Ireland. The majority is not an English or even a British majority, and it is certainly not due to the conversion of the nation to Home Rule. He thinks the majority will split up into groups, and he says: "It will be curious to watch a government presided over by the author of 'Vaticanism'; called into being, in a great measure, by the votes of the English Nonconformists, and at the same time controlled, directed and sustained by the Catholic priesthood as no English government has been since the Reformation."

Mr. Arnold Foster says that a clear majority of the electors of Great Britain have returned the Unionist party to smash Home Rule. The Gladstonian majority depends upon rebels, illiterates, perjurers and Irish Roman Catholic priests. Every Gladstonian member for Ireland might be justly unseated on the ground of undue influence. In Dublin there is not a single person who, politically speaking, would trust Mr. Gladstone to carry sixpence across the street: "That the accession of a Gladstonian government to office even for a week will mean the recrudescence of the bloody work of what has now become the Gladstonian party in the south and west of Ireland is, I fear, from what I hear, beyond doubt. That will be the principal danger of the situation. The other danger will, of course, be the risk of war which always follows Mr. Gladstone's accession to office as regularly as typhus follows famine."

Mr. Frederick Greenwood is much more alarmed about what Mr. Chamberlain will succeed in doing the day after to-morrow than what Mr. Gladstone is doing to-day. He regards Mr. Chamberlain as the priest who hopes to be the pontiff of the new Radicalism. He hopes that the Conservatives will come to the conclusion that if there must be two parties in the State there is no need for them both being radical and revolutionary. He thinks that the Conservatives have sold their souls to Mr. Chamberlain, and he has not been able to pay the price in return for which they consented to pass Free Education and disestablish the Quarter Sessions.

Sir W. T. Marriott suggests that there should be no more Tories, but that they should all be called Unionists. Eleven seats were lost in London through the folly of many members of the Unionist party. They have also lost in the counties, owing to the lies told about them by their opponents, who had many chances given them in places where the landlords were absentees and the clergyman unpopular. So far from thinking that Mr. Chamberlain is an evil element against whom all Conservatives should stand on guard, Sir William Marriott thinks that they must follow his example in Lancashire and Yorkshire, and persist in carrying out a strong, consistent foreign policy, together with liberal measures in home legislation: "I may add that in no election has the Primrose League given more effective help than at the recent one, and, judging from my own experience, I should say that where it has taken root and is strong the Unionist party have won, and where it has been weak and neglected they have lost."

Mr. Fletcher Moulton thinks that to run Home Rule alone, and leave other matters out until it is settled, will be to repeat the error of 1886, and to court a similar disaster. The new Franchise bill must be sent up to the House of Lords before the Home Rule bill is passed through Committee. That Franchise bill must be limited to extending the period of qualification, and the abolition of plural voting. Mr. T. W. Russell consoles himself by thinking that the Opposition will be the most brilliant in Parliamentary history, and that one-fourth of the Irish members cannot give constant or regular attendance in Parliament.

WHY THEY VOTED FOR MR. GLADSTONE.

Eight Prominent Englishmen Give Their Reasons.

IN the *Nineteenth Century*, Mr. Knowles has collected papers from eight different persons who explain, in response to his request, why they voted for Mr. Gladstone at the last general election.

The most interesting paper is the one by the Dean of Winchester, who voted for Mr. Gladstone because, he says: "I have tried to make Christianity interpreted anew by the life of Christ as the foundation of my political faith. To me Christianity is intensely practical and social. The priests and Levites still pass by with averted heads, but there lies there the true duty of man. If churches have to live they have to face the difficulties of the time in the development of social life and labor. It is because of my hopes for the solution of some of these social questions that I am a warm Liberal. We want the wage-earner to have better provision for his old age; we want a reform in the Poor Law; we want better houses for the laborers to live in, not huts which defy the laws of health and morality; we believe that every man should be unmolested, whatever views he may hold, and be able to give weight to his views without hindrance at the polls; we hold that the vote ought to represent each person's conscience and opinion; that

no one should, when of full age and standing be without it, nor any one have more than one person's share of it. I hold, too, that this is as true of women as of men, and that the weight of the female vote will be thrown into the scale in favor of peace, temperance and morality, whatever may be the result of it on our party organizations. I repudiate the degrading doctrine that only those should vote who can fight for their vote; such a doctrine is a long step backward toward the barbarous 'might makes right' theory of human life.

"The peaceful solution of the quarrels of men or nations is the true solution; we desire to strengthen the bonds of both Imperial and International amity. We want education to be improved as well as universal; we desire the religious and moral side of it to be strengthened, and the family life to grow more real and more happy. We are determined to resist the horrible attacks of vice and cruelty on the purity and happiness of our women and children. Lastly—and perhaps this is the most pressing matter of all—we call for a stern and popular control over the deadly drink traffic."

Mr. Alfred Wallace's paper is also to the point. He voted for Mr. Gladstone because he was a Home Ruler in the first place, and in the second because he believed that the infallible and only test of good government is general contentment combined with physical well-being. "The people of Ireland," he says, "are now, and have always been, discontented with our government of their country, a government which has never, till recently, even pretended to be for the good of the Irish. I believe that the only way to satisfy their just and proper desire for self-government, and to blot out the memory of centuries of oppression and misrule, is to grant them that measure of Home Rule which the Liberal party, under Mr. Gladstone, is prepared to concede, and which the Irish people are prepared to accept. To give this is the logical outcome of two great liberal principles—that liberty is not only a good thing in itself, but that with fair play and in the long run it always produces good results; and, that government, to be just and beneficial, must be founded on the freely expressed consent of the governed."

"An objection may be made that these principles would compel us to give, not partial, but absolute, freedom to the Irish people if they desired it. I reply, that undoubtedly it would do so; but in the first place, that demand has not been yet made by the same large majority and with the same earnestness with which local self-government has been claimed; and in the second place, with nations as with individuals, self-preservation is the paramount consideration, and a completely independent Ireland might easily be conquered by a continental power and made the base for an attack upon us. As we can hardly suppose that a large majority of Irishmen would desire to become subjects of France or Germany, this demand for complete independence is not likely to be seriously made.

"A more practical objection is that, on what have been here laid down as Liberal principles, we would

give to Ulster the same freedom to choose its own form of government which we are prepared to give to Ireland. To this I reply, that I certainly *would* give this freedom, either to Ulster or to any clearly defined portion of Ulster, if demanded by at least a two-thirds majority of its population. The present attitude of a portion of Ulster is, however, almost wholly due to religious antagonism, and to what Liberals believe to be an altogether unfounded dread of some form of religious persecution."

Sir Thomas Farrer, the Master of University College, Oxford, and Sir William Markby, all explain their votes on the general ground of agreement with Mr. Gladstone's policy, but they all also state that they object to return a Conservative government on the ground that it passes Liberal measures.

On this subject the Master of University College says: "The address put into my hands here by the government candidate lays claim to the completion by the existing government of a number of excellent measures. I find in that long list nearly everything which the Liberal party has for years been demanding. Of course these measures have not been carried out with a completeness which a Liberal might desire. A Conservative government under heavy pressure appears to be so squeezable, that a man of a somewhat cynical mind might be well satisfied to see his objects gradually brought to completion without any responsibility on his part. But this is rather a degradation of politics; it is a little like the Liberal voter being carried to the poll in the wealthy Conservative's carriage."

Mr. Minto explains why he did not vote for the labor candidate in the following sentence: "The one-plank agitator has his times and seasons of beneficial activity, but the eve of a general election on long-matured issues is not one of them. To support him in such circumstances is merely to postpone or defeat the reforms to which the Liberal party is pledged."

Several of the writers deal with the question of Ulster, but the only one who makes any practical proposal is Mr. Wallace, who says: "It seems to me that it would be both just and politic to include in the Home Rule bill a proviso, that if at the end of five years any clearly defined portion of Ireland, such as a county or two or more contiguous counties, demanded by a two-thirds vote of its population to become an integral part of Scotland or of England, that demand should be granted. I am myself convinced that when the time came no such demand would be made; but, as a matter of justice and consistency, as well as of policy, the option should be granted."

In *Outing* for August, Mr. Frank G. Lenz begins an account of his tour around the world on a safety bicycle with a pneumatic tyre. He started from Pittsburgh on May 15, 1892, but when he is going to finish his tour is not yet stated. His first paper breaks off with New York. He spent fifteen days in coming 555 miles from Pittsburgh.

AFTER THE BRITISH ELECTION.

A Speculation as to What Might Be.

IN the *Contemporary Review*, after pointing out various features which have characterized the recent British election, Mr. Stead proceeds to discuss the probable course of events. He suggests that as the Liberals are not strong enough to defy the House of Lords, and as it would be suicidal for them to thrust forward a Home Rule bill only to have it flung back in their faces without daring to go to the country, they had better proceed one step at a time.

AN IRISH CHIEF SECRETARY.

By way of preparing for the Home Rule bill they should ask the Irish party to nominate one of their members, who should consent to be sacrificed on the altar of patriotism and accept the office of Chief Secretary, in order to prepare the way for Home Rule. In order to strengthen the Cabinet and to fortify Mr. Gladstone with the experience of men who are familiar with the working of the federal system, Mr. Stead suggests that Mr. Edward Blake, who has been elected for South Longford, should be taken into the cabinet as a representative Canadian, and that his presence there might be balanced by the appointment of Mr. Dibbs, Premier of New South Wales, to an Imperial portfolio.

THE RIGHT HON. THOMAS BURT.

If, in addition, Mr. Thomas Burt were placed at the head of a Department of Labor and made a Cabinet Minister, Mr. Stead seems to think that Mr. Gladstone could contemplate the future with some degree of complacency. Although the cabinet might then be as strong as it could be made, yet, considering the constitution of the majority which has placed it in power, Mr. Stead is not satisfied.

THE LIBERAL UNIONISTS.

He thinks that overtures should be made to the Liberal Unionists, and especially to Mr. Chamberlain, who in 1886 was distinctly in favor of making a compromise with Home Rule. He was then overruled by the more passionate and impulsive counsels of Sir George Trevelyan, who is now a Gladstonian of the first water. Dr. Dale, of Birmingham, is an advocate of American as against Colonial Home Rule, and if Mr. Chamberlain is of the same mind to-day that he was some time ago, there is no reason why he should not accept the olive branch if it were extended to him by Mr. Gladstone.

MR. CHAMBERLAIN.

Mr. Stead says: "It is sometimes asserted that Mr. Chamberlain, like Mr. Cowen, is animated by a personal feeling of pique or of jealousy of Mr. Gladstone. Those who know him best ridicule the accusation. There are no grounds of personal antagonism which would divide the Liberal leader and his natural successor. In the country there would be some considerable misgiving; but, after all, even the most re-

sentful Radical may reflect that Mr. Chamberlain is in every way preferable to Sir William Harcourt as the next leader of the Liberal party.

"Is there, then, any fatal antagonism of principle? No doubt, if all the possible contingencies were drawn out on paper, it would be impossible to find any two statesmen who would agree in advance upon the solution of all conceivable problems. But upon the practical next step it would not be difficult for practical statesmen to agree. Of course, if the Irish persist in crying for all or nothing, they will get nothing, and we can only wish them joy of their choice. But if they are willing to take what they can get to-day, on the principle that half a loaf is better than no bread, there ought to be no difficulty in arranging a *modus vivendi*. All that is wanted is a rearrangement of the political perspective. Mr. Gladstone has always said that he would propose nothing for Ireland that he would not be prepared to extend to other parts of the United Kingdom. Mr. Chamberlain would probably reverse the order, and give to the United Kingdom what he is willing to extend to Ireland.

THE SCHEME OF HOME RULE.

"Mr. Chamberlain, it will be said, wishes to restore the Heptarchy. Mr. Chamberlain, it may be replied, sees that the American State system supplies us with invaluable hints as to the necessary decentralization of our Constitution. The promotion of the *rapprochement* between the American Republic and the British Empire cannot better be pursued than by the attempt to pass the federal principle upon the English chaotic and paralytic centralized system.

"The London County Council, with four millions of subjects, is working out the problem of municipal Home Rule, without raising even an alarmed suggestion that the County Council will dismember the Empire. If similar bodies of a similar size were established with extended powers throughout the three kingdoms, much greater elasticity would be imparted to our system of government, at the same time that local parliaments would everywhere be created, upon whose shoulders the central government could unload many of its burdens. Ireland, Scotland and Wales would each form natural local nuclei of decentralized administration. London, Lancashire and Yorkshire would be cantons or states. The four Northern Counties, the Eastern Counties, the Home Counties, the West Midlands, with Mr. Chamberlain as their chief, the East Midlands under Lord Spencer, with Wessex and Cornwall, would be a rough but practicable division of the land into manageable administrative units not dissimilar to an American State.

"Of these cantons and states, Ireland, Scotland, Wales, Yorkshire, the four Northern Counties and the Eastern Counties, judging from the recent elections, would be Liberal; while Lancashire, London, the Home Counties, the West Midlands, would be as decidedly Conservative. Wessex and the Eastern Midlands would be the pivot States.

THE ONLY SOLUTION.

“There can be no doubt about the fact, that if we are not to break up the Empire, we must Americanize our Constitution. Mr. Gladstone dimly sees this. Mr. Morley is groping toward it. Why should not Mr. Chamberlain boldly face the situation, and abandoning his perilous sojournings among the tents of Kedar, return to the Liberal party in order to enable them to carry out this great ideal?”

THE DUKE OF ARGYLL ON HOME RULE.

THE Duke of Argyll, writing in the *North American Review* for August on Irish Home Rule, contends that the Gladstonian proposal to set up in Ireland a separate Parliament, would, if carried into effect, virtually nullify the existing union between that country and England; that “a united nationality cannot be maintained with one crown unsupported by one supreme Parliament.” He assumes that the Irish people are not capable of self-government, and does not find the powers left with the crown in Mr. Gladstone’s scheme sufficient to protect the individual Irish citizen against legislative attacks upon life, liberty and property, especially since “the majority in the new Irish Parliament are sure to be men who have avowed principles and desires which are fatal to industrial progress or to the secure enjoyment of any property.” Many of the Irish Nationalist leaders “are pure anarchists on all questions connected with property, and some of them have avowed their intention to treat as waste paper all titles to property coming from English sovereigns or parliaments.

“The assertion, therefore, that in their determined resistance to such a fearful revolution the people of Ulster are merely seeking to maintain an old religious ‘ascendency’ over their Catholic fellow citizens, is an assertion which can only be described as an infamous falsehood. I do not myself fear any direct form of religious persecution. The day for that is gone by, but in many parts of Ireland powers of plunder would undoubtedly be given to local bodies in which priests would reign supreme over an ignorant, superstitious and dependent population of peasants, and of anarchical fanatics who may be of any religion or of none.

“Let the American people clearly understand that Mr. Gladstone proposed to invest the Irish Parliament with power far more extensive than that which your Constitution gives to any State, although, as regards these States, there never has been, nor is there now, any serious danger of such powers being abused as they certainly would be in Ireland. Let me warn Americans of another thing to be kept in mind. They must not trust the accuracy of Mr. Gladstone’s assertions about the past history of Ireland. All his utterances have been, at the least, one-sided and partisan in character. Very often they have been in absolute defiance of the facts. For example, he has lately represented his scheme as one which merely proposed to restore to Ireland some limited share of the power of self-government which she had once enjoyed, and of which she was deprived

at the union. The fact is that Ireland never has had a Parliament with one-tenth of the enormous power he would have given under his scheme of 1886.

“What Ireland wants now is peace and the reign of law. All grievances have been removed. Such was the emphatic declaration of Mr. Gladstone himself in 1885. Nothing has happened to justify his retreat from this great confession. Parliamentary convenience, and nothing else, has led to his passionate retractions and his appeal to ignorance in support of his new scheme.”

From an American Point of View.

The question of Home Rule is discussed from an American point of view in the *Forum* for August. Mr. Richard H. Dana, the author of the article, takes the grounds that self-government for Ireland in local affairs would be a stronger bond of union between that country and England than any force applied by a British Parliament, and cites in support of this position our own experience with local self-government in our several States as a means of avoiding discord and giving strength to the Union. He says: “The form of government to which the Southern States came back, and which has worked so well ever since, is the very form of government which is now desired in Ireland.”

Mr. Dana finds the cause of our sympathy for Ireland in England’s refusal to admit that the Irish people are fit to govern themselves. The Irish Home Rulers do not seek separation: “They wish to keep up complete union with England, to have an Irish Parliament with defined powers limited to local affairs; and even in these, the Imperial Parliament will still have the power, if its exercise is needed, to abrogate any law passed by the Irish Parliament. Tariff and excise, questions of peace and war, and other matters wholly of common and national interest, it is admitted, should be in the hands of the joint British and Irish or the Imperial Parliament. The principle seems to be that matters of general application ought to be settled by a general parliament; matters of special and local application by a local parliament; admitting, of course, exceptions, some to be temporary and some permanent. The chief complaint of the Irish is that, though represented in the British Parliament, they are wholly out-voted on local matters, and the wishes of the great majority of their representatives are ignored, while quite as serious is the fact that the Parliament in London is so engrossed with English, Scotch and Imperial affairs that Irish matters have heretofore been woefully neglected.

“It is frequently remarked that if Home Rule is established it will be but the entering wedge for complete separation. Let me recall two of our experiences. Home Rule with union having been refused the American colonists, war ensued; and, the refusal continuing, the Declaration of Independence followed, but only after the war had lasted a year and a quarter. After our successful rebellion Home Rule was granted to the other British colonies, and they have remained loyal. In recent reconstruction after

the Civil War, the Southern States were in the end given Home Rule, and all has gone on harmoniously since; but for twelve years United States troops were kept in the South to maintain order; the presence of these troops as government police caused trouble. A pretty severe hit on the head made by a home policeman to enforce home-made law is a small matter, bringing but contempt on the wounded; but a hit so slight as to be healed by a bit of sticking plaster, if given by a policeman or soldier sent by a distant government to enforce special laws not consented to, leaves a stinging sense of indignation behind and makes the sufferer a hero and a martyr in the eyes of his neighbors. Taking, then, our own history and the continuing evidence before our eyes of the force for union there is in self-government on local affairs in all our States, it cannot but seem to us that some sort of effectual Home Rule for Ireland is what will alone reunite Ireland, in heart, as well as in name, with the British Empire, to the mutual advantage of both parts of the union."

PRESIDENTIAL YEARS AND BUSINESS DEPRESSION.

THE general impression that "a presidential year is a disastrous year for business," is combated by Mr. Francis B. Thurber in the August number of the *North American Review*. The statistics of the New York Clearing House during the last twenty years show that in certain presidential years exchanges have increased, while in others they have declined, and Mr. Thurber does not find that the presidential elections are directly responsible for either the prosperity or depression in business. He says: "In 1872, a presidential year, the exchanges were three billions of dollars more than in 1871, and only a billion less than the succeeding year. In 1876, however, there were three billions less than in 1875, and one billion less than in 1877, but in 1880 there were thirteen billions more than in 1879, but eleven billions less than in 1881, when we had a "boom" year, owing to the good crops in this country and poor ones abroad. The volume of exchanges steadily declined from 1881 until 1885, but in the presidential year of 1884 the exchanges were nine billions more than in 1885, from which point there was a substantial recovery again during 1886 and 1887, but in 1888 they declined again four billions."

Nor does Mr. Thurber find from the statistics of business failures for the last twenty years that any considerable number have been caused by presidential elections. In 1872 the number of failures was much greater than in the preceding year, but less than in the succeeding, and so in the presidential year 1888. The number of failures in 1876 exceeded both that of 1875 and of 1877, but there were fewer failures in 1880 than in either 1879 or 1881.

Mr. Thurber's point is that while presidential elections may have a depressing effect upon business, this conclusion is not clearly borne out by available

statistics. He is inclined to believe that the effects which are attributed to such elections have been brought about by other influences far more controlling in their nature.

PROTECTION AND THE FARMER.

SPEAKER CHARLES F. CRISP, writing on "Protection" in the *American Journal of Politics* for August, argues that the tariff upon every article imported into this country is a tax which the consumer of that article must pay, and for which he is to no considerable extent recompensed by the stimulation to home industry which may have been induced through the protection afforded by this tariff. That protection has been the chief factor in the development of our manufacturing industries and that it does protect, Judge Crisp freely concedes. He even goes so far as to say that about ninety per cent. of the manufactured articles used in this country are now produced by the domestic manufacturers; and more's the pity, he seems to think, for "the result is our people pay a higher price for such articles in the American market than is paid for corresponding articles in other countries where the tariff is much lower or where there is no tariff at all."

But it is not so much this "higher price for articles of domestic manufacture" to which Mr. Crisp objects as that our protective tariff laws "have not created a home market for the millions of farmers engaged in raising corn, and wheat, and cotton. Two-thirds of the raw cotton raised in this country finds its market in Liverpool. There it comes in competition with cotton made by the cheapest labor in the world—the cooly labor of India. The Liverpool market regulates not only the price of cotton there, but the price of cotton at home. The same is true of our surplus wheat and of our surplus corn, when we can export it all. The tariff furnishes to these no home market, and it affords to those engaged in their production no protection against the competition of the pauper labor of Europe or of India. Who, then, reaps advantage and wealth from our present enormously high protective tariff laws? The only truthful answer that can be made is that a few manufacturers who may be aptly termed a privileged class are the only ones who profit by a protective tariff.

"The school to which I belong believe that the essence of justice and fairness in the collection of taxes from the people is equality. If a system could be devised which would help everybody in the country, then it might be called just. If the system we have is so inherently weak or so peculiar in its character that the millions of producers of cotton, the millions of producers of wheat and corn, can have no benefit, but only injury from it, in the name of justice let us modify that system and adopt one under which they can have some sort of chance in the race of life. They offer a sop to the farmer by putting a duty on his products, when the truth is, and they know it, that no duty can do the raiser of corn and of cotton and of wheat any good whatever.

“ Any party that is in earnest in reference to helping the farmer or any other class of laboring men will reduce the tariff ; permit some reasonable competition in the market ; destroy trusts ; accord equal privileges to all and special privileges to none. Give the farmer free salt ; give him free bagging, in which the farmer of the West sacks his corn, and with which the farmer in the South wraps his cotton. Give him free iron ties, with which in the South he binds his cotton, and with which in the West he bales his hay. Give him some reduction on his woolen clothes, and on his cotton goods. We cannot increase the price of their product by protective tariff duties, but we can decrease to them the cost of production and the cost of living by reducing the tariff on those articles used to make their crops and on those articles of necessity which all families must use.”

From Mr. Gunton's Point of View.

As if in direct reply to Speaker Crisp's presentation of the shortcomings of our protective tariff policy, appears, in the *Social Economist* for August, an article in which it is emphatically declared that “ there is no class, except perhaps the domestic mechanics, who have been benefited so much by protection as our farmers.” The writer, presumably Mr. George Gunton, proceeds to say that the American farmers “ have received the full benefit of all the improved machinery which the manufacturing centres have created, in the lower prices of all their manufactured products, their transportation, and everything they purchase in the line of clothes, furniture, utensils, books and musical instruments has been cheapened ; in fact, the cost of everything which enters into their social life has been reduced. They have also had the benefit of improved farm implements, which have greatly reduced the cost of farming. And yet the prices of their products have remained almost unchanged. In short, they get nearly the same price for what they sell, while the price of almost everything they buy has been reduced from 20 to 70 per cent. through the development of trade and manufacture under protection. We repeat, if there is any class who have reaped an exceptional share of the benefits of protection, it is our farmers.”

This writer declares that the issue between Protection and Free Trade is distinctly drawn in the platforms of the two great political parties, and believes that “ to abolish the protective features from our public policy would be to strike a vital blow at the labor movement in this country. It would make every rise of wages or reduction of hours more difficult than ever, because every improvement in the laborer's condition would tend to handicap American employers in their competition with foreign producers using the same machinery. As the machinery in England, and to a considerable extent in other European countries, is substantially the same as our own, a rise of wages would necessarily be checked until those of Europe reached the same level, which simply means the arrest of our civilization.”

THE DISASTROUS EFFECTS OF A FORCE BILL.

IN the *Forum* for August Mr. Hoke Smith discusses the Force bill and points out the disastrous effects which he believes would be produced by the enactment of such a measure. Mr. Smith was the principal founder of the *Atlanta Journal*, with which paper he is still actively connected, and is president of the Atlanta Board of Education. He writes from a full acquaintance with the social and political conditions which obtain in the South. He is firmly of the opinion that no greater calamity could befall the negroes than the passage of a Force bill. Such legislation would, he asserts, disturb the present harmonious relations between the negroes and whites of the South, and would arouse anew the old race prejudices so bitter under the “ carpet-bag ” régime. “ The negro's hope of development rests upon the kind feeling which now exists between the two races in the South, which is constantly increasing to his benefit as outside interference decreases. An impartial student of the situation in the South must see that the negro's progress, intellectual, moral and financial, during the past few years has everywhere been dependent upon and proportioned to the lack of friction between himself and his white neighbor.” After showing what has been done in Georgia through the efforts of such men as Governor Gordon and Governor Northen toward educating the negro to intelligent citizenship, Mr. Smith says : “ The present condition of affairs, desirable as it certainly is, can be maintained only where friction is avoided between the two races, for with the indication of an aggressive struggle between them, the influence of those whites who might desire to continue legislation favorable to the development of the negro would cease. The mass of whites, their prejudices rekindled, would not follow the conservative men of their race. If the South be let alone conditions will continue to improve until every right will be conceded to the negro and all justice enforced in his behalf.

“ Everything is now favorable ; but suppose a Force bill were passed. What a change would be made ! There would be in Georgia about six thousand supervisors, besides deputy marshals and canvassing boards, whose business under the bill would be to stir up the ignorant negroes, to arouse in their breasts prejudices against their white neighbors, to fill their minds with political aspirations ; in a word, to put them in a state of discontent and feverish excitement and make them unwilling and unfit for labor. This conduct would not affect those negroes who have succeeded in accumulating property, it would not affect the best of the race, but it would destroy their influence over the rest. It would check their efforts to make them honest, economical and industrious. What condition would result ? Conscious of this change on the part of the negroes, the white people would resume their old plan of strict nominations in local affairs. The municipal, the county and the legislative officers would again be selected by party or color-line nominations, which would exclude all local influence on the part of the

negroes, except in a few counties where they would be able to select their own candidates. Office-holders representing the consolidated white vote, brought together by negro antagonism, would be a natural result. The influence of the most intelligent whites in favor of negro schools and legislation looking to the improvement of the negro would be lost in the bitterness which the differences would engender. The negro himself would be thrown back where he was in 1870. The prejudices inspired would seriously injure the labor of the South."

Mr. Smith calls attention to the fact, which is not generally known throughout the United States, that in local politics party nominations in the South are now seldom made. In the State of Georgia "the negro is given an equal voice in the choice of representatives. This is especially true in municipal affairs. In many Southern cities there have been no party nominations for years. At Atlanta I do not recall one for more than ten years. Mayors, aldermen and councilmen are voted for without regard to politics; and if a citizens' ticket is put out the best classes of negroes, especially the property holders, join those of the whites interested in good government to make up and to elect a ticket."

It is estimated by Mr. Smith that the Force bill, if put in operation throughout the entire country, would cost not less than \$10,000,000 for every election, and would bring upon the people an additional force of about 350,000 office holders.

OUR NATIONAL ATTITUDE TOWARD THE CHINESE.

IN the *Church at Home and Abroad* for August the Rev. F. F. Ellinwood, D.D., protests against the attitude of our government toward the Chinese. His complaint is not against restrictive laws, but against the manner and spirit in which the laws deal with the regulation of Chinese immigration. He objects, first, "To the cruel discrimination by which one nation with whom we have formed solemn treaties is subjected to a kind of treatment which we visit upon no other. Article VI of the so-called Burlingame Treaty of 1868 reads in part as follows—'And reciprocally Chinese subjects in the United States shall enjoy the same privileges, immunities and exemptions with respect to travel or residence as may be enjoyed by subjects of the most favored nation.'

"But not only are the Chinese denied rights accorded to worthy citizens of the most favored nations like England or France, but their treatment is in shameful contrast with that exercised toward the lowest and most degraded immigrants from Europe who soon wield the power of suffrage and even rule the cities that welcome them."

He complains, second, of the fact "that our laws place the Chinese almost wholly at the mercy of any white citizen of whatever nationality who happens to hold the office of commissioner or justice, and who, under constant temptation to win the votes of the lower multitudes by summary proceedings against

the proscribed race, may exercise the power of a ruthless dictator and tyrant. The average Chinaman, without a knowledge of our language, and with only a vague apprehension of the laws, always finds it difficult to defend himself; and yet any failure is visited with severe punishment. According to the present law 'any Chinese person, or person of Chinese descent, convicted and adjudged to be not lawfully entitled to be or remain in the United States shall be imprisoned at hard labor for a period of not exceeding one year and thereafter removed from the United States as hereinbefore provided.'

"To confine him at hard labor for a year or less before sending him back to China seems a spiteful and cowardly exaggeration of his hardship. Is this the even-handed justice that places China on the same level with 'the most favored nations?' Would our government attempt such a course of proceeding with citizens of the great Powers of Europe?"

"A further wrong is done in the provisions which virtually exclude the testimony of Chinamen on questions of previous residence: at least 'one credible white witness is required.'"

In the third place, "a wrong is done to the Chinese government by failing to make the proposed changes in our exclusion laws a matter of consultation. Our first treaty with China, made by Hon. Caleb Cushing in 1845, stipulated that the terms of the treaty should be changed by China (and inferentially by the United States) 'only in consultation with the representatives of the other contracting power.' But this is just what we in our recent action failed to do, and the Chinese Minister had reason to complain and feel indignant."

The Exclusion Act an Unjust Measure.

Upon this same subject Hon. Sidney Dean expresses himself forcibly, in the August number of the *American Journal of Politics*. "There is," he says, "something pitiful in China's appeal to the United States to keep its treaty stipulations as China has kept hers with us, and something shocking to one's sense of justice in refusing an official reply to her appeal, and supplementing that refusal by the passage of an act which not only increases the depth of the wrong against the Chinese, but which practically destroys the treaty itself. This act is unworthy of a great, powerful, enlightened country, in that it provides for holding the Chinese government to all its treaty stipulations, while it forcibly abolishes our own.

"The Chinese government has kept treaty faith. It did not want our missionaries or our religion, but it has tolerated and protected both, even against the anger and violence of its own citizens. It did not want our colonies established for commercial purposes, but it has protected them. In doing so China has felt the injustice of the requital we have made in forbidding her people to land upon our soil, or before our restrictive laws were passed, the treatment of Chinese by some of our citizens without rebuke, or even an examination by the officials of our govern-

ment. If the Chinese government should follow our example; repudiate treaty stipulations; exile all American missionaries and commercial colonies, and by law forbid the landing of an American upon her shores, what will be the result? The moral sense of the country would pronounce this action just and in accordance with China's rights as a nation."

Mr. Dean sees in China's appeal to the United States for the meaning of our refusal to answer her diplomatic correspondence, and for information as to what our policy of government concerning our treaty relations with her is to be, a suggestion of approaching trouble with that country.

PROTECTION FROM FLOODS.

IN the *North American Review*, Director Powell, of the United States Geological Survey considers the subject of floods, against which he suggests three methods of protection. The first method is to store the surplus waters in great artificial lakes; the second is to shorten the courses of rivers by straightening their channels and opening shorter outlets to the sea, and the third is the protection of flood-plains by embankments. But all of these methods are expensive and Major Powell thinks it is not probable that they will be undertaken by the State or the national government on any extensive scale for a long time to come.

He gives, however, some further suggestions as to relief from floods which might be advantageously applied at once. "In the first place, the signal-service system of the Weather Bureau of the government can be developed in this direction to great advantage, so that people will be more thoroughly warned of coming floods. In the second place, on the torrential streams the flood-plains should be avoided—no town, no house, no barn should ever be built upon a flood-plain. The valleys are narrow, the hills are near by, and the dangerous lands can be easily pointed out by geologists. It would be vain to say that these torrential plains should not be cultivated, for they have the best soils, but they are ever subject to inundation and can be cultivated by man only on the condition that he will pay a tax every five, ten or fifteen years in the form of a destroyed crop. Yet the lands are superior and this tax can be paid. But it is almost criminal to subject homes to the terrors of floods, and it is a wholly unnecessary risk to barns, granaries, flocks and herds. To build towns on torrential flood-plains in face of all the warnings which history has given is folly." There is need besides for accurate topographic maps, for geological surveys by which flood-plains are outlined, and for hydraulic surveys by which the rivers are gauged and the powers to be controlled are discovered.

In the *Strand*, the illustrated interview is devoted to Mr. George Augustus Sala. Mr. Sala is an Italian. When ten years old he could not speak a word of English. The other articles worth noting are "The Raising of the Utopia," "The Evolution of the Cycle," and portraits of some popular composers.

INDUSTRIAL POSSIBILITIES OF THE SOUTH.

THERE is perhaps no other person better qualified to write upon the new South than Mr. Richard H. Edmonds, founder and for many years editor of the Baltimore *Manufacturer's Record*. His article in the *Forum* for August sets forth most convincingly the unbounded industrial possibilities of the Southern States.

Mr. Edmonds declares "that there is no other region on this continent or in Europe of equal area that has one-half of the advantages for supporting a dense population and for the creation of wealth as the South. In this section is found a remarkable combination of the advantages of all other countries. It has every variety of climate, its soil yields abundantly of the widest range of agricultural products, it produces three-fourths of the entire cotton crop of the world; but its cotton crop is now exceeded in value by its grain crops, a fact which comparatively few seem to know. It is becoming the market garden of the North, over five million dollars' worth of vegetables and fruits being shipped annually from Norfolk alone to Northern cities. Florida furnishes the country from three million to four million boxes of oranges a year. Georgia ships over ten thousand carloads of watermelons every season. In the aggregate the shipment of early fruits and vegetables North and West probably amounts to nearly fifty million dollars a year, and this business is increasing very rapidly. Ten years ago it was of trifling importance.

"But the South's profitable crops do not end with cotton, grain, fruits and vegetables; they include about four hundred and fifty million pounds of sugar, one hundred and forty million pounds of rice, many million pounds of tobacco, and other smaller crops. Of all its crops, tobacco probably yields uniformly the largest profits to the grower. As compared with the net returns of tobacco per acre, the profit on grain in the West is extremely small. In no part of the country can agriculture be made more profitable than in the South. And a genial climate makes the cost of living and of caring for live-stock very much less than where the intense cold reduces the days of outdoor labor to the minimum and adds a heavy burden of cost for food, clothing and fuel for the family and for the shelter and feeding of all farm animals. The South is a well-watered country, with a regular and abundant rainfall. From the great mountain ranges that form its backbone, innumerable streams and rivers flow to the Atlantic and the Gulf of Mexico. Some furnish cheap transportation and will forever regulate railroad freight rates; others afford water-powers, used only to a comparatively small extent now, but capable of furnishing sufficient power to spin all the cotton which the South produces."

In the extent and variety of its standing timber the South surpasses all other sections of the country and its resources in coal and iron ores are well nigh inexhaustible. The great mineral and timber belt stretches from West Virginia to northern Alabama,

covering an area of about seven hundred miles in length and two hundred miles in width. The ore and coal are found here within a few miles of each other.

Mr. Edmonds continues: "On one side of this mineral belt is the cotton, fruit and truck growing and yellow-pine region of the South, needing the coal, iron and hard woods of the mountains, and furnishing in exchange its cotton, its fruits, vegetables, and its pine lumber, creating a mutually profitable exchange. On the other side are the rich and populous prairie States, which will afford an almost unlimited market for all the manufactured products of this central workshop region, while the development of these industrial interests will create a new and important market for the surplus grain and provisions of the West. The construction of the Nicaragua Canal, justly termed by Senator Morgan 'the final consummation of the glory of this wonderful nineteenth century,' will open to the cotton and the coal and the iron of the South new markets in which the demand will tax the productive capacity of this section. The world's commerce and shipping will centre in the Gulf of Mexico and at South Atlantic ports to a degree than can scarcely be comprehended now. Then wealth will be created, large cities will grow up, coal mines will be developed, iron and steel works built, and shipyards established on a scale little dreamed of now."

The aggregate production of wheat, corn and oats in the South in 1891 was 672,459,000 bushels, a gain of 66 per cent. over that of 1881, as against a gain of 72 per cent. during this period in the rest of the country. The cotton crop increased from 5,456,000 bales in 1881 to about 9,000,000 bales in 1891. The South's output of pig iron has been more than quadrupled in the last ten years, and its output of coal has been increased from six million tons in 1881 to twenty-three million tons in 1891. During these years the South has increased its railroad mileage 87 per cent. as against an increase of 56 per cent. throughout the Northern States. The present financial straits of several of the prominent Southern railroads are attributed by Mr. Edmonds to the manipulations of Wall street speculators and not to lack of business.

A CALIFORNIA FARM VILLAGE.

A VERY interesting article appears in the *Cosmopolitan* from the pen of W. C. Fitzsimmons, in which he describes "A California Farm Village." The farming is fruit farming, which has grown to such enormous proportions in that State within the last few years. Mr. Fitzsimmons tells us of the courageous little band of so-called cranks, men and women, who, a score of years ago, went to the Santa Ana River and deliberately founded a city in that arid region, brought water from the mountains to make fertile the almost worthless land, and converted the desert into beautiful Riverside, which, if this writer's description be founded on fact, must be

one of the nearest approaches to Paradise that is given us here below.

The first colonists deliberately went to work to build a beautiful and commodious village, with one magnificent avenue through the center ten miles long, bordered the whole distance by shade trees. "A town site was laid off, mostly in blocks of two and a half acres each, to the extent of one square mile. Beyond this came blocks of forty or eighty acres, with graded streets on all sides. The town-site as well as the outlying land, was planted with orange and other trees as the lots were sold and occupied by the incoming enthusiasts. Thus the place now presents the remarkable appearance of a considerable city in an immense orange grove.

"Another step of far-reaching importance was the early incorporation of all the territory susceptible of irrigation from the canals into a city of the sixth class, under the laws of the State. This placed the care of streets, shade trees, etc., in the hands of the municipality, and has proven of incalculable advantage in preserving and perpetuating the harmony of design conceived by the founders. Fifty-six square miles of country are now within the corporate limits, though but a small portion is as yet under cultivation."

The "farms" which make up the village are from five to eighty acres in extent, averaging ten acres each. The writer assures us that a "ranch" of the last-named area very commonly gives its proprietor \$5,000 per year income from its 800 orange trees.

"The growth of this fascinating industry at Riverside may be seen from the fact that in 1881 fifteen carloads of oranges were shipped to the markets, while in 1891 the number had risen to 1,500. The crop on the trees at this writing is estimated at 1,700 carloads. To this enormous product must be added 200 cars of raisins and at least 100 cars of dried fruits and honey. Altogether, therefore, not less than 2,000 carloads of valuable produce will go out to the world's market this year from this little tract of well-tilled land, not equal in area to one-third of a congressional township, while the value of this year's products will probably exceed \$1,500,000."

A half dozen schoolhouses, with exceptionally well-paid teachers, with 1,300 scholars, four banks, a public library, railroads, telegraphs, telephones, free delivery of mails and other modern conveniences not ordinarily incident to farms, go to enhance the attractiveness of this curious village.

THE *Journal of the Royal Colonial Institute* for July is chiefly notable for the account which it gives of Lord Brassey's paper on the "West Indies in 1892," and the discussion which follows. Lord Brassey thinks that the West Indies cannot be recommended as a field of colonization for Europeans, although upon the loftiest heights of the mountains in Jamaica a limited area may be found where a northern race may live and thrive. There is a great extent of land still available for cultivation in these islands—in Jamaica only 600,000 acres out of a total of 2,300,000.

THE KANGAROO IN AMERICA.

THE introduction of the kangaroo into the United States has been seriously proposed, and, in the light of Mr. Robert C. Auld's presentation of the subject in the *Overland Monthly*, there would seem to be many good reasons in favor of the Americanization of this marsupial. The kangaroo would in some measure take the place of our now defunct buffalo. It is of a hardy character and can be acclimated in this country, is easily domesticated, breeds readily in captivity, is easily maintained, has excellent and abundant flesh of a very edible kind, is extremely valuable as a fur and leather producer, and can be procured cheaply and without difficulty. These and other points favorable to the introduction of the kangaroo into this country are advanced by Mr. Auld.

But aside from its undoubted economic value in flesh, fur and "foot wear," another value which the kangaroo has is its adaptability for the utilization of tracts of country useless for other stock. "In our Western States have we not boundless areas of such land, the stocking of which by any remunerative process would benefit the country at large? There may come a time when it may be found more profitable to raise kangaroo than even cattle on the 'arid' ranches.

"Look, too, at the success of ostrich farming in California—such a tender, expensive subject as that bird is. The kangaroo is a hardy animal. Its products are all valuable and find a ready market. The introduction of the ostrich was a novelty and a success in this country. The introduction of the kangaroo would be no less novel, and I believe no less successful. Let this new industry therefore be recommended to those interested in the development of regions useless for other kinds of stock, but which could be made thus easily to earn a most welcome increment by this means, at the same time providing a species of sport of a most novel kind for the legitimate American sportsman."

THE WORKINGMAN'S SON.

THE *New England Magazine* prints an essay from the pen of Forrest Morgan, under the title "Professions or Trades for Workingmen's Sons," in which that writer handles without gloves what he is pleased to call the "cant" sentiment in favor of trades for the children of "the masses." He affirms that there is no such thing as the masses, and that each boy, whether his father be coal heaver, clergyman or railway magnate, must be examined as to his particular and individual instincts and abilities before it can be postulated that any particular profession or trade will be productive of the best results to himself and to the world.

"Suppose," says Mr. Morgan, "I have a boy just out of the grammar school. Why do I fit him for college, if I can, with a view to the law, or medicine, or a professorship; or, failing in this, get him into a store or an office, instead of apprenticing him to a plumber, or a boiler-maker, or a job printer? For

several of the strongest reasons that can move a rational man who loves his children. One is, that he would stand a good chance of going to ruin before his trade was learned. He would very likely be for years the daily companion of workmen often foul-mouthed and profane, and not seldom drunken; if he is a pliant and impressible lad, he might easily, I say, be ruined as a man by the time he was proficient as a workman, and he would never in his life shake off all the effects of the filth through which he had been dragged. . . . Does any one dare to say that society is bettered by increase of ignorance, narrowness, coarseness, and blunt senses, or of souls torn by hopeless ambition—that the very aim and end of progress is not to lessen the proportion of these in the world? Of course no one does say so in terms, but those who would shut away the children of hand-workers from higher fields mean that or mean nothing."

Mr. Morgan calls our attention to the fact that the artisan's career is limited by the years in which he enjoys physical strength, while the brain-worker grows more and more valuable with advancing age.

And this writer boldly and unhesitatingly asserts that the professions and business are not a whit more crowded than the trades, and that if the workingmen were heard in the proportion of their numbers there would be quite an equal cry against competition in the trades.

"You cannot make a first-rate man out of a third-rate boy by teaching him to use a plane or a soldering-iron instead of a pen or a tourniquet. No more ridiculous whimsy was ever invented than the very common one, that all the lawyers and doctors without business, and all the shabby clerks keeping books for retail traders at four hundred dollars a year, would have been first-rate coopers or gunsmiths, fat and happy. Most of them would have been struggling, anxious, worn-out third-rate laborers, looking wistfully for a little lightening up of the iron pressure always upon them."

The conclusion of Mr. Morgan's arguments is that "instead of berating the masses" for claiming their children's share of the good things of the world, the leaders and men of means should put their energies into multiplying, improving, and enriching the one great agency for raising trades to the level of professions and removing the worst objection to them—the technological schools—and the writer goes on to show how they solve the problem of making a craftsman of a boy and at the same time giving him the advantages of an intellectual life and desirable society.

In the *Quiver* the Rev. Dr. Blackie, Moderator of the Free Church, has a brief paper in which he discusses the question, "Are the Conditions of Life Improved?" from the point of view of one who thinks there has been an immense improvement. The sluns and the curse of drink are the great blots on our civilization. He thinks that nothing can be done to

remedy it until some new power of working machinery is invented which will make production as cheap on a small scale as on a large.

THE HARMEL CORPORATION IN VAL-DES-BOIS.

UNDER the title "An Example of Organized Thrift," Mr. John Graham Brooks describes in the *Forum* the Harmel corporation in Val-des-Bois, France.

This great company employs about a thousand laborers—men, women and children. Here exists, perhaps, the most perfect example of coöperation between employers and employed ever established.

THE ORGANIZED MACHINERY.

The machinery of organization is comprised in four institutions, as follows: 1. Fundamental associations, which carry "into the spheres of education and morals the idea of the corporation." This association is divided into seven societies, the membership of each being dependent upon age and sex. Each of these societies is a coöperative body, in which the members seek to aid each other materially and intellectually. Each society provides itself with means for amusement and recreation.

2. There is the corporative and economic institution, which is directed by a council, which council is composed of seven employers and eight workmen. This body has to do with discipline, fines, accidents and apprenticeship. A careful study is made of these subjects, and the results of the system have been happier than in the German mills, which are under the supervision of a State inspector.

Under the direction of this society the general store is run, at which practically all purchases are made, notwithstanding the fact that the employees are at liberty to buy where they please.

3. The society for moral preservation concerns itself with the moral and educational welfare of the community.

4. There are seven religious societies, to some of which practically all the workmen belong.

The effect of the entire system is very apparent in the faces of the employees. The writer says that among them he observed "not only an unexpected neatness of appearance, with every sign of health and contentment, but, as compared at least with European mills, an even more unexpected proof of moral dignity and self-respect, that showed themselves by incontestible marks in face and bearing."

SECRET OF THE SUCCESS OF THE UNDERTAKING.

"Such secret as there is in these rare successes is an open one. It is found first in the business ability of the Harmels and in their moral and religious consecration to that high aim of making not only a perfect business, but a perfect society."

M. Harmel himself says: "The blunder of so many business leaders is in having two moralities—one for the private life and family, another for commerce and affairs. A perfect business will have the morality of the perfect family."

POVERTY ON THE THAMES.

WALTER BESANT writes in *Scribner's* in the series on the poor in great cities. Mr. Besant, of course, talks of London, concerning which city he is such an encyclopedic authority, and he further localizes his subject by selecting a 'longshore district and describing the land life of reckless Jack Tar. Mr. Besant is led away by his unrivaled antiquarian erudition into picturesque historical and legendary notes; but these have a certain value even to the severely practical student of social science in showing how the present status of the "Riverside Parish" has come into being, and to other than practical students the historic touches are a pleasant diversion indeed.

Mr. Besant paints in striking colors what he calls the "English savagery" of not many years back. "There were no masters in Riverside, London, and there was no authority for the great mass of the people. The sailor ashore had no master; the men who worked on the lighters and on the ships had no master except for the day; the ignoble horde of those who supplied the coarse pleasures of the sailors had no masters; they were not made to do anything but what they pleased; the Church was not for them; their children were not sent to school; their only masters were the fear of the gallows, constantly dangled before their eyes at Execution Dock and on the shores of the Isle of Dogs, and their profound respect for the cat-o'-nine tails. They knew no morality; they had no other restraint; they altogether slid, ran, fell, leaped, danced and rolled swiftly and easily adown the Primrose Path; they fell into a savagery the like of which has never been known among English folk since the days of their conversion to the Christian faith. It is only by searching and poking among unknown pamphlets and forgotten books that one finds out the actual depths of the English savagery of the last century. And it is not too much to say that for drunkenness, brutality and ignorance the Englishman of the baser kind touched about the lowest depth ever reached by civilized man during the last century. What he was in Riverside, London, has been disclosed by Colquhoun, the police magistrate. Here he was not only a drunkard, a brawler, a torturer of dumb beasts, a wife beater, a profligate—he was also, with his fellows, engaged every day and all day long in a vast systematic organized depredation. The people of the Riverside were all, to a man, river pirates; by day and by night they stole from the ships."

This past very naturally brings a rough and squalid present and future. But the poverty of Riverside, London, has been hastened by artificial causes, notably the shipwrights' strike in 1868, which transferred the shipbuilding industry to the Clyde, and left thousands and thousands of London workmen without an employment.

In the particular parish that Mr. Besant describes, that of St. James', the seven thousand inhabitants live

in "a number of small, mean and squalid streets. The people live in tenement houses, very often one family for every room—in one street, for instance, of fifty houses there are one hundred and thirty families. The men are nearly all dock laborers—the descendants of the scuffle hunters, whose traditions still survive, perhaps, in an unconquerable hatred of government. The women and girls are shirt-makers, tailoresses, jam-makers, biscuit-makers, match-makers and rope-makers.

"In this parish the only gentle-folk are the clergy and the ladies working in the parish for the Church; there are no substantial shopkeepers, no private residents, no lawyer, no doctor, no professional people of any kind; there are thirty-six public houses, or one to every hundred adults, so that, if each spends on an average only two shillings a week, the weekly takings of each are ten pounds. Till lately there were forty-six, but ten have been suppressed; there are no places of public entertainment, there are no books, there are hardly any papers."

These people are not above help; they are not criminals, and they will actually work when they can. But they will get drunk and they will knock down their wives when the latter anger them. It is pleasant to read Mr. Besant's cheerful account of what is being done to push them forward in the scale of decency and usefulness, and the whole-hearted way in which it is being done. He finds words of praise for the good work done by the Church in this out-of-the-way parish, by the one hundred and twenty six active and practical helpers of the Church. Then there is the Mission Chapel, where other than Evangelical services are held, and where the practical aid is continued in the weekly sale of clothes to the poor at nominal prices. The Girls' Club is the resort of seventy-five healthy and boisterous Ratcliffe maidens, while to the men comparatively rational amusement and refreshments are furnished by the Tee-To-Tum Club. For the younger boys there is another club with gymnasium, library and manual-training classes. The Country Holiday is an institution which provides vacations in the country or at the seaside at the certainly moderate figure of five shillings per week.

All of these institutions and more are under the auspices of or connected with the Church. "The clergy," says Mr. Besant, "are at once servants of the altar, preachers, teachers, almoners, leaders in all kinds of societies and clubs, and providers of amusements and recreation. The people look on, hold out their hands, receive, at first indifferently—but presently, one by one, awaken to a new sense. As they receive, they cannot choose but discover that these ladies have given up their luxurious homes and the life of ease in order to work among them. They also discover that these young gentlemen who 'run' the clubs, teach the boys gymnastics, boxing, draw-carving and the rest, give up for this all their evenings—the flower of day in the flower of life."

WOMEN'S WORK IN THE UNITED STATES AND ENGLAND.

UNDER this title, the Comte d'Haussonville reviews, in the *Revue des deux Mondes* for July 1, the results of the English Labor Commission and the Reports of the American Labor Bureau. The chief interest of his article lies in his comparisons with the actual state of things in France.

He speaks very highly of the system of investigation adopted in the United States: "This method is absolutely different from that employed in France when the government undertook, some years ago, to draw up a statistical table of wages. The Labor Bureau did not send to the municipal authorities of every town or village a printed form to be filled up more or less conscientiously, or perhaps not at all. They did not then add up the total of the figures obtained (the greater number being inaccurate), nor divide them into three or four classes of industries and then strike averages which, in the majority of cases, by no means corresponded with the facts. Finally, they did not collect all these figures into one table, divided according to industries and departments, whose dry columns are very hard reading, and have not even the merit of their apparent exactitude. The Labor Commissioner of the United States, Mr. Carroll Wright—a man of first-rate qualifications—has proceeded quite otherwise. He has inspired himself, while extending and generalizing it, by the monograph method, inaugurated and made known by the illustrious Le Play, which, taking individuals instead of figures, obtains results at once more interesting and more accurate."

M. d'Haussonville then goes on to give in full the details and results of the inquiry. In summing up, he takes a very favorable view of the position of working women in the United States. The currency of the term "working girl," according to him, points to a very happy circumstance, viz., that married women are not, as a rule, obliged to go out to work, the normal salary of the husband being sufficient to support a family. "This is the privilege of young countries, where labor is dear, and the first necessities of life still cheaper. Thus the painful questions raised by the employment of women in industrial pursuits, are solved at once—or rather, they never arise." Happier than the French working-woman, the American is not forced to leave her husband in the morning, and not see him again till evening—to leave her home at daybreak with the fire unlighted, and return at night, with scarcely strength enough left to prepare the family meal. Above all, she does not find herself reduced to the painful necessity of intrusting her infant to charitable or mercenary hands—of leaving it ill, and seeing it again in a dying state. She escapes all these sufferings and anxieties, which are the common lot of the French *ouvrier*.

After dwelling in some detail on the homes and boarding houses in existence for the benefit of American working girls, M. d'Haussonville points out the

need of similar institutions in France. However, some effort has been made in that direction. The attention of certain religious associations has been attracted to the dangers which too often attend the position of working girls in Paris. They usually live in furnished lodgings till they have saved enough to buy a little furniture and pay three months' rent in advance, and have to get their meals out, in restaurants and *crémeries*, where they are charged high prices for unwholesome food. The associations referred to have opened a certain number of "patronages externes," where girls who work in shops and factories can find shelter for the night, breakfast and supper, and a place to spend their Sundays.

M. d'Haussonville finds two defects in the Labor Bureau's report, which, from a French point of view, are most important, viz., the absence of all information (first) as to the hours of labor, and (secondly) as to labor legislation in the United States.

The second part of the paper, dealing with England, is principally occupied with the provisions of the Factory Act of 1878, and the report of the House of Lords' Commission on the Sweating System. We need quote here only his concluding paragraph: "The economic position of France resembles that of England much more than that of the United States; and the condition of working women, without being as wretched as it is in England, is very difficult and painful. Well-meaning legislators are to-day proposing to protect them. The intention is most laudable, but I would fain point out the danger of making the position of those for whom they are interested more difficult still, by an excess of State interference. Protection is all very well, but one must beware of transforming, by ill-conceived measures, the protected into victims."

THE EMANCIPATED ENGLISHWOMAN.

As She Appears to a German.

IN Hefte 10 of *Alte und Neue Welt*, Dr. A. Heine writes on the Englishwoman, who, he thinks, does not stand in need of emancipation, for she has already quite emancipated herself.

To refer to women as the weaker sex, he begins, is surely a mistake, for they have always known how to preserve their dominion over the so-called stronger sex. Men are indeed women's most obedient slaves. Solomon says his wives were bitterer than death, and surely there never was a greater slave to woman. Statistics show that seven wives survive every ten famous men. Héloïse survived the loss of her beloved Abelard 22 years; and similarly, the wife of Washington, though she declared she could never get over the death of her husband, outlived him 30 years.

The daughters of Albion, Dr. Heine continues, display their strength in the most conspicuous ways. As if they were ashamed of their sex, they have their dresses made by tailors; on the plea that they are going to hunt or ride they put on men's clothes, and on the plea of comfort they cut their hair short like a man's, and at the seaside and when traveling wear men's caps instead of hats and veils. Roses they cer-

tainly are, but you soon come to know them by their thorns. The weaknesses of German housewives they certainly do not possess. You might enter thousands of English homes and not find a single woman in a kitchen apron, or occupied in sewing or mending.

Also, so far as numbers go, women have strength on their side. It is fortunate that in England every man gets married, but still the women are always trying to exchange places with the men.

Woe to the man who breaks his promise of marriage! A daughter of Albion never dies of a broken heart; she is much too practical. She lays all the promises, kisses and love letters of the unfaithful wretch at the foot of the judge and demands suitable compensation in money, so that it often happens that the guilty man is only too glad to lead his forsaken bride to the altar that he may come into his money again. Marriage is made uncommonly easy. There is no need for public announcement, and with girls over twenty-one the consent of the parents can be dispensed with. Should the latter, indeed, put any hindrances in their daughter's way, all she has to do is to say she is going out to post a letter, when she meets her bridegroom and in ten minutes the two are made one at the registrar's office. Only in the case of a rich orphan girl who is called a ward of the Lord Chancellor is the law really severe. The young man who proposes to marry her must first apply to the Lord Chancellor for her hand, and woe to the man who marries her without the Lord Chancellor's consent! He may be thrown into prison for six months and more. Another extraordinary monopoly in the marriage laws of the country which considers itself the most civilized in the world, is that a man cannot marry his deceased wife's sister.

No! exclaims Dr. Heine, one of England's latest manias is the question of the emancipation of women, yet women are already to be found in the post and telegraph offices, and on the school boards; the Married Women's Property Act has established their rights to their own property; and now they want to get into Parliament. Does any one still doubt the power of the fair sex in England?

WHAT SHALL SCHOOL GIRLS READ?

IN the *Educational Review* (London), which is a double number on account of the supplement describing books for school prizes, there is an article by Elizabeth Dawes on "What Shall School Girls Read?" At present, she says, girls read hardly anything but story books, a habit which fosters a life of excitement and gives a distaste for anything serious. She says: "Now it seems to me that what girls should read might be roughly divided into three large divisions: 1. Historical and biographical. 2. Classical. 3. General or scientific.

"In the first division I include the historical novel, as I certainly do not think that a girl is wasting time by reading the best of Walter Scott's novels, or Miss Aguilar's 'Days of Bruce'—from which, by the way, I gained a much more vivid idea of the Scotch history of that time than I ever did from the 'Student's

Hume,'—or Kingsley's 'Hereward the Wake,' 'Westward Ho!' and the like, since they have a good solid substratum of history. But apart from the historical tale or novel, there are charming versions for our little ones of English, French and other histories, very often attractively illustrated; and for the elder ones, Macaulay's Essays, the 'Cameos of English History,' 'Lives of the English Queens,' and similar books, which give us, so to say, 'a peep behind the scenes' and endow the characters with individuality, the scenes with reality, and the incidents with truth. Outside our own history, books such as 'Constantinople,' by Giberne, Mrs. Oliphant's 'Makers of Florence' and 'Makers of Venice,' give us a graphic picture of the great towns and personages of the middle ages; and what more fascinating reading is there than Prescott's Histories of the Conquest of Mexico and Peru, or Motley's Rise of the Dutch Republic.

"By classical reading I mean reading which will make them familiar with the mythology, modes of life, and history, both political and literary, of Greece and Rome. Some may object that this is more suited to boys than girls, but the chief reason I strongly recommend it for girls is because, without this knowledge, they cannot appreciate modern paintings and sculptures, or fully understand the best of our modern literature, be it poetry or prose; therefore, in their school days they should get an insight into Greek and Roman mythology and history, which will live forever in the world's art and literature.

"I need hardly stop to mention any of the many charming books written for children about classical mythology and history. We all know Kingsley's 'Heroes,' and Prof. Church's well-illustrated series of stories from Homer, Livy, etc., and, last but not least, Cox's 'Tales of Ancient Greece.' And for their private reading we might induce our girls to make an acquaintance with the epics and tragedies of antiquity, by means of the fine translations we possess. Why should a girl not enjoy reading Lord Derby's metrical version of the Iliad, or Pope's of the Odyssey, or Butcher and Lang's clever prose translation of it, or some good translation of the Æneid?

"'General or Scientific.' This is rather a comprehensive heading; under it I should like to include elementary books on astronomy, natural history, geography, geology.

"We believe that most boys delight in such books as White's 'Natural History of Selborne,' and we ask ourselves why should not girls do the same; perhaps girls in the country, accustomed to accompany their brothers on their rambles, do, but as a rule they seem to have little natural taste for these subjects. Some easy and interesting book, as 'The World at Home, or 'Father Alder,' might be read and explained to them; and as they grow older such books as 'Madam How and Lady Why,' 'Sun, Moon and Stars,' 'The Forty Shires,' or 'The Story of the Heavens,' might be studied with them. The chief thing we teachers have to do is to try and awaken a many-sided interest, so that when they leave school, they may feel inclined to read for themselves more

about these subjects, of which they have learned the outlines with us.

THE LEGEND OF THE AMARANTH.

Why the Amaranth? and why has the editor of *L'Amaranthe*, a new French monthly magazine for girls, borrowed the device on the cover of his magazine from the *Jeux Floraux*, of Provence? In reply to these questions, M. E. S. Lantz gives an outline of the history of Provençal literature from its rise to the institution of the *Jeux Floraux*, relating in conclusion the legend associated with the Amaranth and Clémence Isaure. He shows how rapid was the rise of literature in Provence, and how rapid, too, was its decline, practically disappearing as it did with the thirteenth century, in spite of all the efforts made to restore it.

Toward the end of the fifteenth century, however, a Toulouse lady of genius and munificence appeared in the person of Clémence Isaure, and she did much to restore the taste and love for the literature of her country. It is not known whether she was a poet herself, but it is said that she took her place among the judges at the poetic contests, and that the *Jeux Floraux* (Floral Games), if not founded by her, became, on her death (1513), at any rate, an institution in memory of the emulation which she had sought to awaken among the friends of song. It was only in 1694 that the college was converted into the Académie des Jeux Floraux by letters patent from Louis XIV. Nothing was spared to make the festival poetic and religious. A mass, a sermon and almsgiving opened the solemnity; before the distribution of the prizes roses were strewn on the tomb of Clémence Isaure; and from 1527 a eulogy of Clémence was pronounced every year at the opening of the festival on May 3.

The following is the legend associated with the name of this illustrious lady:

"At her birth Clémence Isaure was dedicated to the Virgin, and the beautiful child was placed in a convent. By the side of this convent was an old castle belonging to the Counts of Toulouse, and here lived Raymond, who had seen the recluse, and who sang airs of love to her from morning to evening. Now Clémence had an innate taste for poetry, for music and for flowers, and one day while she was meditating near a fountain against an ivy-covered wall, she heard her name mingled with the plaintive music of a harp. Very softly she advanced toward the spot whence the music came, removed some leaves to peep through a hole in the wall, and her eyes and those of Raymond met, while she heard quite distinctly the murmur of this last verse of a romance: 'A flower be my reward, you have inspired my verses.' She looked at her bouquet and hesitated, then took from it a violet, passed it through the hole in the wall and fled. The next day and many following days Clémence, with a wild rose in her hand, returned to the fountain to listen to the songs which Raymond did not fail to sing, but one evening she

heard a lament so sad that it brought the tears to her eyes. Raymond was telling her that he was to accompany his father to the wars. The young troubadour perished, and on his heart was found a marigold, the last flower that Clémence had passed to her friend through the hole in the wall."

These souvenirs were what Clémence sought to perpetuate in the poetic festivals, by presenting to the victorious poets a violet of gold, and a wild rose or a marigold, both of silver, and to these were added the amaranth or love-lies-bleeding—or, according to the device, "*La violette d'or, l'églantine et le souci d'argent, auxquels on ajoute, une amarante,*" the flower which the ancients regarded as the symbol of immortality, and which they consecrated to the dead. In all ages a writer may gather a violet, a wild rose, or a marigold, and they will all fade in his hand; and even when made of precious metal they are not rendered imperishable. That is why the amaranth of the Greeks, the immaculate, incorruptible flower, has been adopted as the most beautiful of literary emblems.

L'Amarante is a high-class literary magazine for girls, now in its second year. Dedicated to the girls of France it not only contains articles on subjects connected with literature, art and music, poems, stories, etc., but it has for its mission the spread of the French language by the institution of education by correspondence and by means of prize competitions in France and abroad. These competitions, which have been most successful in England, are open to all girls between the ages of fourteen and twenty-two, and comprise composition in prose and verse, essays on the literary works studied in the reading circles, translations, musical composition, drawing and painting and needlework.

THE POPE'S HOME LIFE.

SIGNOR GIOVANNI AMADI contributes to the *North American Review* for August a description of the home life of Pope Leo XIII, from which account we quote freely:

"In summer, as in winter, Leo XIII is awakened at six by his private servant, Francesco Centra, from Carpeneto. Centra knocks at the door, opens the blinds, addresses a customary salute to his master, and at once retires. The Pope gets up from bed unaided, and also performs his toilet unaided, except as regards shaving. This operation is performed by the faithful Centra. The bedroom is not the one used as such by his predecessors; it is a small and rather low cell in the *mezzanino* or *entre sol*, to which he repaired many years ago in the course of some restorations to the old room, and where he has remained ever since. At seven o'clock he says his mass, attended by two *cappellani segreti*, and hears a second mass celebrated by one of the same attendants, who act also as private secretaries. It happens sometimes that the Pope, having been troubled with sleeplessness, gets up with a piece of Latin or Italian poetry composed during the wakeful hours. The verses are generally dictated to one of

the secretaries before the mass. The breakfast of the Pope consists of coffee, milk, and bread without butter. Soon after, the official reception begins. The first one, as a rule, is given to the Cardinal Secretary of State, who submits to the Holy Father the documents received the day before, or those which are awaiting the pontifical signature. This audience lasts more than an hour, and takes place every day except Tuesdays and Fridays, which are set apart for the reception of the diplomatic body. Cardinals, heads of congregations, generals of monastic orders, strangers of distinction, are received later in the day. In winter, if the sun shines, the receptions are interrupted for a while for a walk or a drive of half an hour in the Vatican gardens. Leo XIII dines at one o'clock in the old Roman style.

"The Pope is very apt to glance over the journals at meal times. He dines alone generally, waited upon, in addition to the valet, by his *scalco segreto*, or carver, Commendatore Giulio Sterbini. Then follows a drive in the Belvedere gardens, through which an avenue more than a mile long has lately been opened, affording many lovely points of view over the city and its suburbs. The Holy Father, attended by a *camerière segreto* and an officer of the *Guardia Nobile*, stops very often in the enclosure of a vineyard planted six years ago under his supervision. This vineyard is cultivated by the pupils of an agricultural school formed by Pius IX, and accordingly named Vigna Pia. If he finds among the workers an intelligent lad he enters into a friendly talk with him. At six o'clock, after granting other audiences, he takes a cup of bouillon and a glass of Bordeaux.

"Evenings are generally devoted to study and writing. The literary or mental work of the Pope is really prodigious. He prefers to dictate to his secretaries from notes which are prepared on a number of small scraps of paper. Sometimes it happens that the work, either from its political importance or its difficulty, must be done by the Pope himself. In this case he shuts himself up, forbids even knocking at his door, and gets so absorbed that sometimes he wipes his pen on the white sleeve of his immaculate robe. Knowing of this habit the faithful Centra never fails to examine the sleeves on audience days, and always has ready a change of apparel, in case the spots are too apparent."

When the night work is over the Pope sends for Mgr. Martalino, to whom for years he has been greatly attached, and recites with him the rosary. The regular hour for retiring is eleven o'clock.

The Pope's leading qualities as discerned by Giovanni Amadi are clearness of ideas in every social and diplomatic question, moderation and tact in discharging his duties.

MRS. FYVIE MAYO has an article in the *Victorian Magazine* entitled, "Looking at Home: A Woman's Reflections Concerning Woman's Suffrage." Mrs. Mayo thinks it is her duty to play the part of a candid friend to her sex, and admonishes them as a first duty that they owe to truth to dismiss from their minds the idea that "woman" is a synonym for an angel.

KUENEN AND THE BIBLE.

The Life and Labors of a Great Scholar.

PERHAPS no man has done more toward placing our knowledge and estimate of the Old Testament books on a sound rational basis than did the learned Dutchman, Abraham Kuenen, who, after a long life of useful work, died in December last. The full effect of his critical research has hardly yet been felt, but it cannot fail to have an influence on the whole future course of theology, in so far as that science is connected with the Old Testament. Kuenen, who seems to have been a most lovable man, as well as a most able one, is the subject of a highly eulogistic memoir, by Mr. Philip H. Wicksteed, in the *Jewish Quarterly Review*. Born in 1828 at Haarlem, where his father was an apothecary, he entered the Leiden University in the Theological Faculty in 1846, took his doctor's degree in 1851, was appointed Extraordinary Professor of Theology in 1853, and Ordinary Professor in 1855.

PLEASANT MARRIED LIFE.

In the same year he married a lady with whom he had only a few days' preliminary acquaintance; but marrying in haste was followed, not by repentance at leisure, but by rare happiness. "Mrs. Kuenen was a lady of rare intellectual and social gifts, and during the early years of their married life was the constant companion of her husband's studies. Though never a student in the narrower sense, she learned enough Greek to be able to correct his proofs, a point in which he was of the most exacting scrupulosity. She was often his confidential adviser in questions of form, and kept close pace with the progress of his opinions. For example, when doubts as to the authenticity of the Fourth Gospel began to be in the air, and Kuenen announced his own growing conviction of their validity, Mrs. Kuenen felt at first as if the ground were sinking beneath her feet, but her husband went through the whole Gospel with her, chapter by chapter, and succeeded at last in securing her full sympathy. Their home was the centre of an intellectual and social life which may well be called brilliant."

HIS BOOKS.

Kuenen's first great book, his "Inquiry" into the origin and collection of the Books of the Old Testament, was published in 1861-5. "Kuenen's book did for Holland all and more than all that the first part of Colenso's Pentateuch did for England. It made it impossible for instructed persons henceforth to ignore or deny the fact that the Bible bears upon its face the evidence of growth and compilation, in accordance with the ordinary laws and subject to the ordinary errors of the human mind. In principle the Old Testament was won to the methods of the 'modern' theologians by Kuenen's first great book, and history has never gone back upon this step. His next great work, 'The Religion of Israel,' was published in two volumes in 1869 and 1870. His newly adopted critical position enabled him to conceive of the development of the religion of Israel as an

organic growth in a sense which had never been possible before. Instead of standing at the well-head of the Hexateuchal stream, the sublime monotheism of the first chapter of Genesis was the ocean into which it flowed. It now became possible to trace the course of religious thought in Israel from the early stages of animism and nature worship that characterize all infant religions, through the vigor and crudity of the early narratives of the Hexateuch, through the ethical passion and nascent monotheism of the prophets of the eighth century, on to the full development of the later prophets, psalmists, lawgivers and apocalypticists. The 'Religion of Israel' revolutionized the whole conception of the growth and development of Israelitish thought and belief, and performed a service for scholars of all countries which gives Kuenen a unique place in the history of Old Testament studies."

INTERRUPTED WORK.

Mr. Wicksteed gives some notes of the writings which were left incomplete when Kuenen died last Christmas. The most important was a new version of his early work, the Old Testament 'Inquiry.' Considerable portions are already printed in proof. 'With respect to both Proverbs and Job, Kuenen has moved with the stream, and they are regarded in the new edition as *post-exilian*. He was at work on the Psalms when overtaken by his last illness and death. It may be of interest to note that the general drift of his opinions seems to have been toward bringing down the Psalms to a comparatively late date, but that he still rejected the extremest views, and occupied a middle position. In this connection, it may be observed that his last notes on Psalm xvi admit that it contains at least a presentiment of the belief of Immortality. Of the 'Song of Songs' no notes for the 'Inquiry' exist; but a carefully prepared sketch of a college lecture shows that here, too, Kuenen had followed the stream, and that he now regarded the poem as belonging to the Greek Period. He rejected the theory of a loose collection of love songs, and defended the dramatic interpretation."

' LESSONS FROM MY EARLY LIFE.

IN *Young Man* the Rev. H. R. Haweis publishes a paper of some biographical interest. He says he hated Latin and Greek as a lad and used to revel in Tennyson. When he went to Cambridge he spent most of his time in playing the violin, for which he had a great gift. On leaving college, he spent nine months in Italy in Garibaldi's time, with excellent results. He says: "The one result to my life of these stirring experiences was the conviction that to suffer and to venture, and to work for the emancipation of the suffering and the oppressed against tyranny and wrong, was the noblest mission on earth. Garibaldi, as he was in those his best and brightest days, stood to me, and will ever stand, as the pure symbol in modern times of noble self-sacrifice and grand achievement in the cause of true philanthropy.

"This experience haunted me all through my curacy life in the East End of London, Bethnal

Green, and Stepney. Garibaldi gave me that keen relish, which I hope I shall never lose, for all schemes which aim at the amelioration of our own enslaved poor. I learned sympathy with their legitimate strikes. It was Garibaldi who enabled me to see in Lord Shaftesbury, whose religious opinions were far as the poles asunder from mine, the chivalrous champion of the downtrodden, and later on in General Booth a real captain of salvation to thousands groaning under the despotism of sin and the curse of crime and poverty. Booth is, after all, a sort of almost literal social Garibaldi of the masses."

Speaking of the lessons which he has learned as to the most helpful methods of work, he says: "First, I am sure that early rising and early reading and writing are good. It was for some time my practice to rise soon after six, all weathers, dress and read or write, wrapped up. All crouching over the fire is bad. Rise and read.

"Secondly, from a desultory reader (from the time I began studying for the Church) I became a systematic reader. I have always been a great Bible reader, and though my verbal memory is bad, I have, by dint of incessant Bible-reading from childhood, committed to memory, not always accurately, large portions of the sacred text. I am grieved to find that Bible-reading has greatly decreased. Young people are still given Bibles, but they do not read them, and they do not *know* their Bibles.

"The Bible, having ceased to be a fetish, is, in fact, ceasing to be read. I would say to all young men, make yourselves acquainted with Genesis, Exodus, Samuel, Kings, Psalms, Isaiah, the four Gospels, Acts, and St. Paul's Corinthian and Ephesian Epistles. Such books as F. W. Robertson's 'Sermons,' at least six volumes, may be very profitably studied in connection with the Bible. After all, the Bible must always remain in the world's great religious classic, whatever opinions may ultimately prevail as to the date of authorship of its different books. Generally speaking, I am in the habit of keeping some one solid book, like Herbert Spencer's 'Data of Ethics,' Carlyle's 'Frederick,' Gibbon's 'Rome,' or Milman's 'History of Latin Christianity,' always going, till I get through it. Anything which strikes me as useful for reference I make a note of in a line with page at end of each volume. I have annotated thus the whole of Milman, Gibbon, Greer's 'Short History,' Lecky and countless other volumes. It is the easiest and safest way of preserving the results of your reading, for as long as your book lasts your notes last, and if you can find your book you can find your notes. As you get on in life, you will, if you are wise, read less, but more to the purpose. The fritter of mind over newspapers and magazines is immense. Learn to cultivate a habit of selection.

"Thirdly, every one must sometimes—we all must—read to cram; but this is not the best kind of reading. Read rather to assimilate.

"Lastly, do not kick at compulsory work, unless of an essentially degrading or unsuitable character."

LITERARY PARIS AND M. RENAN.

THERE is an article of unusual excellence in *Harper's* by Theodore Child, on "Literary Paris." Mr. Child enumerates and comments on the great personalities in the French world of letters, having arranged them according to the literary phases or schools to which they belong. For Paris is the abode of "schools," and very militant ones. "The history of French literature," says Mr. Child, "is that of the perpetual storming of Paris by a handful of young adventurers whose object is to demolish the existing formulæ of an always incomplete art, and to enthrone themselves victoriously in a new edifice which they propose to build upon the ruins. But no sooner has one set of innovators achieved success than another band begins to attack the victors of yesterday, and so battle follows battle, and revolution follows revolution, with the accompaniment of violent polemics, and of envy, hatred and all uncharitableness. The documents, the exactitude, the experimentation, and the professed scientific method of the Naturalist evolution, which only a few years ago was proclaimed to be definitive, now sicken the *élite*. The cry at present is for golden-winged dreams, or, at any rate, for something new. Enough of the gross language of Naturalism, its ignoble ideas, its exclusive materialism."

Without being able to review Mr. Child's characterization of the various literary celebrities who make French thought, we must pause at his delightful description of M. Renan, who occupies the first place under the caption "Scepticism," and whose portrait forms the frontispiece of the magazine.

A PICTURE OF M. RENAN.

"Collège de France, staircase A, second floor, to the left, is a green baize door, which is opened by a neat maid servant. You pass through three or four rooms of bare, provincial and priestly aspect, scantily and austere furnished; along the walls are open shelves laden with books in the living and dead languages of the East and West, and here and there a drawing by Ary Scheffer, or an antiquated engraving in a clumsy, old-fashioned frame. The last room is M. Ernest Renan's study. It is furnished with bookcases and armchairs upholstered in red velvet; on the mantelpiece, between two candelabra of the time of the First Empire, is a bust of the erudite Victor le Clerc; on one wall a portrait of Madame Renan, when she was a girl. At a table facing the window with his fur cap, his magnifying glass, his cuneiform inscriptions, and his books and papers spread out before him, M. Renan sits, rotund and episcopal, his hands crossed over his shapeless body, from which the large head emerges rosy and silvery, the face broad, with big features, a great nose, enormous cheeks heavily modeled in abundant flesh, a delicate and mobile mouth, and gray, Celtic eyes, alternately full of dreams and of smiles. This is the habitual attitude during a few moments' pause for meditation, and, as if by a sort of physical reminiscence of his

priestly education, the crossing of the hand is accompanied by a muttering and sussuration of the lips."

Intellectually considered, M. Renan is a brilliant monument of concrete scepticism and a complete exposition and apology of that dilettanteism which is certainly ravaging the intellectual classes of modern France. "We say 'ravaging' intentionally," adds Mr. Child, "because great and exquisite as may be the joys procured by dilettanteism, they are of a non-creative and invirile kind." Mr. Child goes on to make a very brilliant analogy between Renan's huge intellect and his ponderous physical body, "like some huge polype or anemone, floating helplessly in the sea of probabilities, rising or sinking, inclining to the right or to the left, as instinct or a ray of sunlight or the hazards of a current may inspire; but in any case merely floating, and otherwise incapable of choosing a direction and following it."

SIR WALTER SCOTT.

Through French Spectacles.

SIR WALTER SCOTT'S Journal, of which all the English reviews were full, last year, has now reached France, and forms the subject of one of M. G. Valbert's delightful *causeries*, in the *Revue des Deux Mondes* for July 1. The greater part of M. Valbert's matter is familiar, but it acquires a fresh charm from its graceful handling; and his literary *aperçus* have all the neat acuteness of the best French criticism.

This estimate of the "Great Enchanter" is substantially that of Mr. Andrew Lang: "He possessed, to a rare degree, the sense of the picturesque, the gift of intuition, and, what is more precious still, the gift of life. . . . His learning had passed into his blood—he had no need to consult chronicles or legends—all he had to do was to try and remember. To his powerful imaginative memory, he joined a capacity for receiving impressions whose vividness remained unimpaired to the day of his death.

"Even the weaknesses and defects of a writer so admirably endowed as Sir W. Scott are aids to his success. If he had been more of an artist, if he had had a more refined taste or been a worshiper of style; if his feelings had been subtler, his thoughts higher and deeper, his contempt for metaphysics less, his glory would have suffered. He wrote for the average man; and, from the very first day, the average man understood all he had to tell him.

"He had, indeed, *l'esprit de son état*, and all the signs of an irresistible vocation. He was a born storyteller. Let his name be Ariosto or Le Sage, Mendoza or Alexandre Dumas, the true story-teller—he who tells stories as naturally as the bird flies or sings—is always of a cheerful and optimistic disposition. They are quite willing to admit that plenty of vexations, sad, absurd and deplorable things, but, so they find anything in the least worth narrating, they bless Providence for providing them with subjects. Follies, misfortunes and sins—the story-teller lives by

them all, and finds that this miserable world has a good side to it. Walter Scott used to boast that he had no muse but his own good spirits; he invoked no other. Though he was lame, and often tormented by rheumatism, no poet of this century has been more free from our melancholy—real or assumed—our dogmatic and pedantic pessimism, our morose philosophy, our literary hysteria. This is what sets him at such a distance from us; it is this that has caused him to fall in our estimation. We can get no enjoyment out of talents that do not resemble diseases."

MR. FREEMAN—HIS FORTES AND FOIBLES.

FROM Mr. Bryce's smoothly-written and able article on the late Professor Freeman in the current *English Historical Review*, much information not yet drawn upon by the obituary-writers may be gleaned. Not every reader is yet aware, for example, that humor was one of the qualities most natural to the deceased historian, or that his letters "sparkled with wit and fun." His letters to friends were so numerous and so spirited that many must have been preserved. Mr. Bryce says they form the fullest record of Freeman's life. Again, it is not every one who knows that Freeman, "whom many people thought fierce, was one of the most soft-hearted of men, and tolerant of everything but perfidy and cruelty."

SOME OF HIS MERITS.

The most conspicuous and characteristic merits of Freeman as an historian may be summed up in six points: love of truth, love of justice, industry, common sense, breadth of view, and power of vividly realizing the past. That conscientious industry which spares no pains to get as near as possible to the facts never failed him. Though he talked less about fact and verities than Carlyle did, Carlyle was not so assiduous and so minutely careful in sifting every statement before he admitted it into his pages.

The two chief practical interests the historian held in life were the discharge of his duties as a magistrate in the local government of his country, and his devotion to politics. From an early age he was a strong Liberal.

FREEMAN AND MACAULAY.

A friend of his, himself a distinguished historian, writes as follows to Mr. Bryce: "Freeman and Macaulay are alike in the high value they set upon parliamentary institutions. On the other hand, when Macaulay wants to make you understand a thing, he compares it with that which existed in his own day. The standard of the present is always with him. Freeman traces it to its origin and testifies to its growth. The strength of this mode of proceeding in an historian is obvious. Its weakness is that it does not help him to appreciate statesmanship looking forward and trying to find a solution of difficult problems. Freeman's attitude is that of the people who cried out for the good laws of King Edward, trying to revive the past."

QUANTITY, QUALITY AND JOURNALISM.

“Besides the seven thick volumes devoted to the Norman Conquest and William Rufus, the three thick volumes to Sicily, four large volumes of collected essays, and nine or ten smaller volumes on architectural subjects, on the English constitution, on the United States, on the Slavs and the Turks, he wrote an even greater quantity of matter which appeared in the *Saturday Review* for the twenty years from 1856 to 1876. This swift facility of production was due to his power of concentration. He always knew what he meant an article to contain before he sat down to his desk; and in his historical researches he made each step so certain that he seldom required to reinvestigate a point or to change, in revising for the press, the substance of what he had said. In his literary habits he was singularly methodical and precise, so much so that he could carry on three undertakings at the same time, keeping on different tables in his working rooms the books he needed for each, and passing at stated hours from one to the other. It is often observed that the extent to which all who write are drawn into journalism, and forced to write quickly, hastily, and profusely, must tend to injure literature both in matter and in manner. In point of matter, Freeman, though for the best part of his life a very prolific journalist, writing two long articles a week during twenty years, did not seem to suffer. He was as exact, clear, and thorough at the end as he had been at the beginning. On his style, however, the results were not wholly fortunate. It retained its force and its point, but it became diffuse.

A SACRIFICE FOR PRINCIPLE.

“When Lord Beaconsfield seemed on the point of carrying the country into a war with Russia in defense of the Turks, no voice rose louder or bolder than his in denouncing the policy then popular with the upper classes in England. On this occasion he gave substantial proof of his earnestness by breaking off his connection with the *Saturday Review* because it had espoused the Turkish cause. This cost him £600 a year—a sum which he could ill spare—and deprived him of opportunities he had greatly valued of expressing himself upon all sorts of current questions. But his sense of duty would not permit him to write for a journal which was supporting a misguided policy and a Prime Minister whom he thought unscrupulous.”

THE SOURCES OF THE OXUS.

THERE is in the *Scottish Geographical Magazine* for August an article by Mr. C. E. D. Black on M. Henri Dauvergne's explorations in the Pamirs, in the course of which we read: “As to the sources of the Oxus or Amu Darya,” remarks M. Dauvergne, “as far as I am concerned, it is a problem solved, and it is evident that the greatest volume of its waters springs from those great glaciers of the Hindu Kush and their numerous tributaries, close to which I have camped. Some geographers assert that it rises in the Gaz-Kul, and, turning Ak-tash, becomes

a considerable stream after receiving the Murghab, flowing from the Kara-Kul to the north. This is a grave error, because the Kara-Kul, which I have been round, has no outlet, and there is only the little Ak-Baital stream, which receives a small water-course coming from Uzbek and the Rang-Kul, which joins the Ak-su or Ak-tash, and then takes the name of Murghab, flowing westward and joining the Oxus at Kila Wamar in Shignan.”

THE FUTURE OF THE “GREAT DAILY.”

COL. JOHN A. COCKERILL, editor of the *New York Commercial Advertiser*, writes in *Lippincott's* on “The Newspaper of the Future.” He grows very enthusiastic over the present glorious work of the daily press in making it impossible, by complete publicity, that palpably dishonest and vicious men should get into high office, and over the check which the newspaper has on the public officer in acquainting him with what the people want or don't want.

Colonel Cockerill thinks that the future will scarcely be able to bring any greater audacity and dash in the reportorial staff, or any increase of loyalty in it to their paper. But he hopes that the lot of this class of workers will become a happier and a more certain one. “There is already an *esprit de corps*, a common fellowship, a concrete self-respect and a general striving after the good of all and the betterment of the profession, which have worked wonders in the last decade; and before the century closes may yet be expected to accomplish still more in raising the general average of the newspaper worker to that higher plane of excellence, of public and private usefulness which has already been attained by leaders here and there.” In connection with which the writer pays an enthusiastic tribute to the Press Club.

Another direction in which the evolution of the daily press will move is toward the greater effacing of personality. No man will be big enough to dominate the great machine, as in the days of Delane and the *Times*, and of Greeley and the *Tribune*. Men will come and men will go, but the “great daily” will go on forever, with merely its joints and levers subject to their will.

As to the question of mechanical perfection, Colonel Cockerill compares the magnificence and luxury of a *Chicago Herald* establishment of to-day with a newspaper office of a generation ago, and prophecies that further improvement may still be looked for. “There is no more inviting field for speculation in this direction than that which deals with the question of newspaper supply and distribution. Pneumatic tubes, and perhaps a parcel delivery service, will do much to speed the delivery of the newspaper to its city patrons. Special trains from great newspaper centers to distributing points a hundred or two hundred miles away are not only no longer novelties, but have already become necessities; but why should it require a stretch of the imagination to suppose a series of pneumatic tubes emanating from New York City to Boston, Buffalo, Rochester, Albany, Troy, Trenton, Philadelphia, Baltimore, Wilmington and Harrisburg,

by the use of which one great morning newspaper could be printed in the city of New York, complete in its news and news-editorial columns, to be supplied in the branch offices in each of these cities and from them distributed by a subordinate series of tubes, under a different name, to a semi-local constituency surrounding each of these subordinate centers?"

THE LAST SPIKE OF THE UNION PACIFIC.

ANOTHER capital article of the "Historic Moments" series appears in the August *Scribner's*. It is entitled "Driving the Last Spike of the Union Pacific," and the writer is no less than Sidney Dillon, one of the original promoters of the gigantic enterprise, and, as every one knows, the present president of the Union Pacific Railroad.

Mr. Dillon tells us that the original conception of the value of the transcontinental route was that it would increase enormously the international trade with the East; and but little thought was given, comparatively speaking, to the huge interior empire that the project would call into being. As a matter of fact, the present through traffic gives but five per cent. of the road's receipts, while the local patronage furnishes ninety-five.

The financial struggles of the plucky men who conceived and pushed through the Union Pacific make interesting reminiscences. We note that Mr. Dillon comes out fairly and squarely in support of the reputation of the Credit Mobilier methods, nor does he even deign to adopt extenuating language. "I have only to say," he assures us, "as its executive officer during the period of its activity, that in my judgment its methods were as legitimate and honorable as those of any corporation with which I have ever been connected; and without it the Pacific Railroad could not have been built. It was through this organization, having been in the business of a railroad contractor all my life, that I became interested in the Union Pacific; and I may say, as evidence of my faith in the property, that a large part of my original stock in the company is held by me to-day."

The chief engineer in charge of the work was Gen. G. M. Dodge, who was one of the first and most complete explorers of the West, and who showed wonderful ability in treating with hostile Indians and in managing the motley horde of roughs and gamblers that followed the party. "With him were Gen. Jack Casement and his brother Dan, in charge of the track laying, men of boundless energy and undoubted courage, upon whom he could rely to carry out any order with military promptness and unquestioning obedience. The working force was almost entirely composed of discharged soldiers, whose experience during the war admirably fitted them to encounter the dangers from hostile Indians and endure the privations and hardships of camp life on the Plains. At an alarm of Indians these men fell into line and prepared to meet the attack with the readiness and decision of veteran soldiers.

"During 1868, and to May 10, 1869, we laid five hundred and fifty-five miles of track, which took us

to Promontory Point, just north of the shores of Salt Lake, where we met the track of the Central Pacific and made the connection between the two roads. For various reasons the two companies had not always worked together in perfect harmony, and one result of mutual misunderstanding was that, instead of making the connection when the working parties came together, the graders on both sides kept right on until the two roadbeds lapped over two hundred miles. When the tracklayers met the law required a junction to be made, and this was done at Promontory."

Mr. Dillon relates in detail the simple but inspiring ceremonies of driving the last four spikes of gold and silver, and the excitement which attended the news ticked off in the great cities of the East.

TWO HUNDRED MILES AN HOUR.

ONLY the other day we recorded as one of the noteworthy events of the month that a train on one of the Eastern railroads had made the run between New York and Buffalo at the remarkable speed of nearly a mile a minute, and now comes forth Mr. Oberlin Smith, in the *Engineering Magazine* for August, with the astounding statement that there are "no inherent mechanical reasons why we should not, on long and absolutely clear stretches of track, obtain a velocity approaching two hundred miles an hour," and we are assured that this will be the rate of speed of the railways of the future. It is to be brought about by the substitution of electricity for steam. The steam locomotive, says Mr. Smith, has, in point of speed, practically reached its limit. "Great as have been the performances of this wonderful and beautiful monster, he not only refuses to climb very steep grades, but he has utterly failed to keep pace in speed with his improved behavior in other respects."

Mr. Smith goes on to say that, "in using electricity we have just the conditions that we cannot have with steam: a rotary motor which is as simple, as far as its motions are concerned, as a churn or a grindstone; which can be mounted on or geared to the car axles direct; which requires but little or no attention while running and which picks up the current of electricity that drives it by a simple wire connection, as it progresses along the line. Furthermore, this electricity can be generated in stations located at proper intervals along the route, where the water is boiled 'on shore' to run the great engines which produce by means of dynamos the required current. This water, moreover, is boiled with a far greater degree of economy than it possibly can be in the locomotive, with every advantage in saving of fuel and attendance which can be gained by large triple or quadruple expansion condensing engines. The great economy thus obtained in coal consumption will undoubtedly go far to offset, if it does not entirely overbalance, the loss of electricity by waste along the line, and by a certain inefficiency in the dynamos and motors.

"One of the most obvious advantages of this system being the absence of any real necessity for a

locomotive, it would certainly seem very foolish to nearly or quite double the total dead weight propelled by building such a machine, and ballasting it with enough iron or brickbats to get the necessary traction, when each car can itself carry the required simple motor mechanism; and when, with its own weight and that of its passengers, no matter how lightly it may be built, it will be sufficiently heavy for tractile purposes. A peculiar and valuable feature of electrical propulsion is the ability to frequently dispatch short trains, or single cars, with as great economy of power as long trains—each car being able to select, at each instant of time, the exact amount of electrical energy needed for moving itself and its load, and this at any inclination of grade that it happens to be upon.”

In regard to the location of the pioneer railroad of this type, Mr. Smith is of the opinion that it will be built either between London and Liverpool or between New York and Philadelphia, on account of the great volume of traffic upon these routes. “If it be asked how the actual work is to begin, the answer is: by the earnest co-operation of a body of engineers and scientists, backed by a syndicate of bankers. Such a great work cannot, if it is to prove successful, be left to a few individuals, or to an ordinary company whose sole object is to build as cheap a structure as possible upon which to run their trains.

“The matter should be taken up by a powerful syndicate of capitalists, who should employ a commission of the ablest engineers available. This commission should not be composed of railway engineers alone. Such men, although perhaps of great ability in practically constructing and managing our present systems, are educated too much in conventional grooves to take the broad view necessary in instituting so radical a change of methods. In their defense it should be said that it is their business to be conventional, and their employers, the railways, could not afford to have them otherwise. There should be, however, enough of them in the new commission to give ballast and conservatism. Then there should be thoroughbred mechanical engineers, with an eye to all possible constructions based on correct principles, no matter how novel the form. There should be a sprinkling of professional inventors to give originality, and last, but not least, a corps of electricians of the highest standing, especially in regard to practical experience in street-railway work. That it is possible for such a body of men to devise something better than our present system, at any rate for special locations, is a matter hardly to be doubted.”

The anonymous writer of the article in the *Contemporary Review* on “Bismarck and the Emperor” is a strong Bismarckian. He maintains that Germany is getting tired of the young Kaiser, and that it would be well for the country and for the dynasty if he made terms with Bismarck. He says: “The Emperor is more and more becoming a tool of those with whom the ideals of the best Germans have never found full acceptance. And this applies to others

besides the Ultramontane party! No wonder there is a sinister want of harmony, and, above all, a feeling of insecurity, in Germany, in spite of present cloudless appearances. Pessimists even aver that the air smells of Jena, though this may be dismissed as ridiculous. Still, things do not inspire confidence. Too many people are of opinion that the Emperor has not proved himself equal to the arduous part he has doubtless conscientiously set himself to play. Everything points to the imperative need of some strong guiding mind, no longer visible.”

That is all very well, but there will have to be a good many articles written before William II. can be got to see that there is any need for a guiding mind besides his own. A Hohenzollern will never admit that he cannot get on without a Bismarck.

HOW TO CROSS AFRICA IN A BALLOON.

THE last three numbers (May, June and July) of the *Revue Maritime et Coloniale* contain joint articles by Messrs. Leo Dex and Maurice Dibos on “Long-Distance Aerial Voyages,” written with the special object of demonstrating the feasibility of exploring the African and Australian continents by means of balloons. Voyages of discovery across the vast arid and unexplored tracts of those continents have always presented well-nigh insurmountable difficulties. The absence of civilization in the country to be explored, the primitive modes of locomotion available, exposure to oppressive heat and malaria, and the great natural obstacles to be overcome with totally inadequate means, have proved but too often to be insuperable bars to the progress of the most determined explorer. If science is to come to his aid it will have to be in the direction of freeing the explorer from the slow and painful method of progression on foot which has hitherto been the only possible way of traversing the unexplored portions of the earth. To realize this one way only is open; a way which, if it can only be followed, is both easy and rapid; a way in which there are no precipitous paths, no virgin forests, no deadly swamps, no impassable obstacles of any sort to be met with—the way through the air. If man had at his disposal machines as perfectly adapted for aerial navigation as a bird and could make it powerful enough to support himself and the objects which he requires for his subsistence, the surface of the globe would no longer possess any secrets hidden from his prying gaze. For the present, however, aviation is still a dream of the future, and he must content himself with a balloon which is at the mercy of every current of air, and which, therefore, can only be utilized for exploring purposes after carefully studying the atmospheric conditions and the meteorological influences of the countries to be traversed. The currents of the aerial ocean completely surround the balloon and carry it along at the same rate of travel as themselves; the aerial ship, in the absence of a motor capable of resisting this impulse, and not finding the resistance which a sailing ship obtains in the medium in which it floats,

is unable, like the latter, to make use of the wind in shaping its course; it must, therefore, only proceed when the wind blows in the general direction in which it wishes to go, and must stop (if possible) whenever the winds tend to drive it in the opposite direction. Hence it is only by a proper utilization of the prevalent and regular aerial currents of the globe that a balloon can be made capable of undertaking long-distance voyages—*i. e.* of traversing in a given direction a distance of several thousand kilometres.

The very interesting articles of Messrs. Dex and Dibos explain fully how the balloon must be constructed, and what method of navigation it must adopt in order to carry out such a voyage. More than fifty pages are devoted to a minute description of the balloon and its fittings, which, as may be presumed, possess numerous special features. Messrs. Dex and Dibos propose to solve the difficulties of the voyage by the aid of a heavy steel guide rope of twelve strands, 1,260 kilogrammes in weight, which will enable the balloon to contend without loss of gas or ballast against all the external causes of variation in ascensional power due to the expansion or contraction of the gas, or to saturation of the envelope of the balloon. The only effect of such variations in the lifting power will be to vary the length of the portions of the twelve guide rope strands trailing on the ground, and so to automatically maintain the balloon in equilibrium so long as the variations in the ascensional force do not exceed the weight of the rope. The guide rope, in fact, is the only means by which a long-distance voyage can become possible, hence it follows that the balloon must be kept at a low level, and only exceptionally be allowed to go free. How this is to be done, and how the drag rope is constructed so as not to wreck everything it comes across, must be explained by reference to the articles. The outer envelope of the balloon proposed is to have a capacity of 11,500 cubic metres; inside this there will be an inner balloon having a total capacity when filled with air of 7,630 cubic metres. This inner balloon not only prevents the outer envelope from losing its shape, but also helps to keep the balloon in equilibrium under variations of temperature. The lifting power of the balloon is equal to 12,300 kilogrammes; its weight and that of its accessories amount to 5,138 kilogrammes, thus leaving 7,160 kilogrammes to be shipped as ballast. A balloon of this capacity—which is just half that of Giffard's balloon which formed such an attractive feature at the Paris Exhibition of 1878—would cost complete about \$45,000, and would have sufficient buoyancy, if constructed on the lines given, to float for at least sixty-eight days without getting rid of all its ballast. During this time it would travel, with the guide ropes trailing, 11,500 kilometres, equal to a mean of 170 kilometres per day, in a given direction, allowing 375 hours for stoppages on account of the wind being dead against it. This is, of course, on the supposition that the direction of the journey is in accord with the prevalent direction of the winds at the season when the voyage is undertaken, and that the balloon only travels when the

wind is in a favorable direction and stops when there is a contrary wind traveling at a less speed than ten metres a second. If the adverse wind is stronger than this, then the balloon must perforce go on, as it would be dangerous to anchor. The friction due to the guide ropes trailing on the ground causes a uniform retardation in the pace of eight kilometres an hour.

In the June number the fictitious itineraries of the balloon are carefully worked out from statistics of the force and direction of the wind recorded day by day at the various stations in Europe. Starting from Paris in the months of July, 1888–89–90, the mean time required to travel 3,000 kilometres from west to east comes out with great uniformity at about twenty days. Assuming the distances to be traveled in Australia at 3,500 to 4,000 kilometres, in South America at 4,000 to 5,000 kilometres, in Northern Africa at 4,000 to 7,000 kilometres, and in Central Africa at 3,000 to 4,000 kilometres, the probable duration of the voyages would be for Australia twenty to twenty-four days, for South America twenty-four to thirty days, for Northern Africa twenty-four to forty-one days, and for Central Africa eighteen to twenty-four days. The chances of success across the tropical portions of one of these continents, moreover, would be greatly enhanced by the trade winds, which blow with considerable regularity across the surface of the continent at the period which would naturally be selected for making the attempt. In November and December, for instance, the prevalent direction of the wind in Central Africa is S.E., and in Northern Africa N.E. One of the great difficulties to contend against in African travel would be the Equatorial calms, but, as the particulars given in the July number go to show, the popular idea on the subject is hardly warranted, their mean duration throughout the year as compared with the days on which there is wind being only as one to eight. Captain Fullerton, R.E., in his recent interesting lecture on "Modern Aerial Navigation," remarked: "Hitherto, unfortunately, in this country aerial navigation has been looked upon, to put it mildly, with the deepest suspicion, and it is no exaggeration to say that the terms 'aeronaut' and 'lunatic' are at present considered as more or less synonymous." The science of aeronautics is, however, based on simple rules and common sense, not upon wild and vague theories opposed to all principles of nature; and if hitherto little progress appears to have been made, it is really only because the subject has but recently been scientifically studied. In France much more attention is paid to the subject, and now that balloons have been taken up for military purposes, it is probable that the solution of the difficult problem of aviation will be far more quickly arrived at than is generally supposed.

THE "Origin of Pleasure and Pain" is treated of by Dr. Herbert Nichols in the *Philosophical Review*. The writer has a new theory that pleasure and pain are not merely complementary expressions of the general welfare of the individual, but that they are separate phenomena, having nerves of their own.

These nerves are carried, he suggests, in the sheaths of the other nerves. As confirmatory testimony of the separate nature of pain he cites Goldscheider, the greatest living authority in this department, who reports having discovered and positively demonstrated isolated specific pain nerves. That the demonstration is correct, says Dr. Nichols, there seems no reason to doubt.

THE BRITISH OPIUM TRADE IN ASIA.

THE most complete and intelligible article that has recently appeared upon the opium question opens the last number of *Our Day*. Its author is the Rev. A. P. Happer, of Glenshaw, Pa. Mr. Happer was a resident of Canton, China, for forty-seven years, and in addition to the special familiarity which such an intimate experience of Asiatic life should give him, he possesses a keen power of observation and generalization. Mr. Happer's article is in five parts. First, he tells of the remarkable proportions the new movement for the suppression of the opium traffic has assumed; second, he sums up the facts as to the extent of the opium plague and its ravages which justify the movement for the suppression of the traffic; third, he draws upon his own experience in China for pictures of the domestic distress and social ruin that are wrought by the increased facilities for the smoking of opium; fourth, he shows how the opium vice has begun to make terrible inroads in other parts of Asia besides the Chinese empire; and, fifth, he shows how completely the British government, through its official system in India, is responsible for the whole diabolical business.

THE MOVEMENT FOR SUPPRESSION.

"Six hundred millions of human beings in Asia," declares Mr. Happer, "or more than one-third of the whole family of man, are exposed to the evils of the opium trade legalized by the British government." He attributes the recent awakening of British public opinion on this subject largely to the action of Mr. Alfred S. Dyer, editor of the *Bombay Guardian*, and the Rev. W. E. Roberts, a Methodist minister at Bombay, who in 1890 went from India to China to discuss the opium traffic with representatives of the Chinese government. They found the leading statesmen of China anxious to save their country from the curse of opium and to secure the prohibition of the traffic, but fearful that any steps that China might take would antagonize the British government and bring on a third opium war. Said the venerable Marquis Tsing on his death-bed regarding this matter of the opium traffic: "We are not free; we cannot take the first step." As a result of the visit of Messrs. Dyer and Roberts to China, extensive petitions were signed among the Chinese themselves asking for an ending of the opium trade. At the same time petitions to the British Parliament were circulated throughout India. The matter being brought to the attention of religious bodies in the United Kingdom, action was taken last year by nearly every ecclesiastical gathering representative of a Christian denomination.

Moreover, the World's Woman's Christian Temperance Union took the matter up, and has already secured a million signatures to a mammoth petition asking the rulers of all nations to prohibit the sale of opium for vicious indulgence. As a culmination of all this development of public opinion throughout the British empire, Parliament on April 10, by a majority of thirty, passed a resolution condemning the receiving of revenue from the growth and sale of opium as immoral. This action of the British Parliament has not, however, as yet led to any action by the British colonial authorities in India, and the battle will not be won until practical effect is given to the parliamentary vote.

GROWTH OF THE OPIUM HABIT.

Mr. Happer makes the following remarks upon the rapid extension of the opium plague: "Heretofore it has been regarded as chiefly limited to China. Facts have been presented showing that it is rapidly extending in India, in Burmah, and in all the Eastern Archipelago. At the lowest estimate the plague is now committing its ravages among six hundred millions of the human family, and according to other estimates among seven hundred millions, so that now it may be spoken of as the *opium plague in Asia*. In the absence of any reliable census in China, the estimates of its population range between three hundred and four hundred millions. There are no certain data on which to calculate the number of opium smokers in China. The writer of the article on opium in the ninth edition of the *Encyclopædia Britannica* estimates the number to be from one-fourth to three-tenths of the whole population of four hundred millions. The reputation of this work for trustworthiness is so great that few are willing to call in question its statements. But I venture to dispute its statement that from one hundred millions to one hundred and twenty millions of the inhabitants of China are opium smokers. I have been studying and observing this matter for forty years, while residing in the country. I judge that forty millions is a moderate estimate of the number of habitual smokers. The difficulty in arriving with certainty at the number is the fact that while we know the amount of opium imported into China from India, we do not know what is the amount grown in China. The writer in the *Encyclopædia Britannica* states that the amount grown in the country in 1881 was three times as much as the amount imported. The amount now grown may be more than it was in 1881. But however that may be, there would not be more than what is sufficient for forty millions of smokers. The number in 1858 was estimated to be two millions. *This number now stated causes nearly every family to have the experience of the evils of the vice in the wasting of the family property, the uselessness and misery and premature death of some relative.*"

HOW FAMILIES ARE WRECKED.

Writing of what he himself witnessed, Mr. Happer continues: "I can testify from my own observation, during forty-seven years' residence at Canton, of the

distressing accuracy of this picture. In 1844 the facilities for smoking opium were not seen in any Chinese house. Now the opium couch is seen in *nearly every well-furnished house*. There are scores of families from which formerly literary graduates and qualified men went forth to official appointments, where the sons are now all miserable wrecks from opium smoking. In 1842 there were ten wealthy and distinguished families in Canton who had been in the company of Chinese merchants, which previous to that time had the monopoly of the foreign trade. A number of their sons had been literary graduates, and some had held official appointments. Soon after the so-called opium war of 1840, the edicts and laws against the use of opium were in abeyance, opium smoking came in like a flood among nearly all the wealthy families in Canton. The sons of every one of these ten wealthy families became victims to this vice. Every family became impoverished except one."

THE LICENSED DENS OF INDIA.

Upon the extension of the opium vice to other parts of Asia, and especially upon the astounding system of licensing that prevails in India, Mr. Happer writes as follows: "Chinese emigrants have carried the evil into the islands of Java, Borneo, Sumatra and the other islands of the archipelago and into French Cambodia and Tonkin and Siam. Formerly the East India Company and the Indian government restricted the sale of opium in India. The native governments in Burmah and other native States forbid its sale for vicious indulgences, some of them inflicting death for the violation of this law. But this is all changed now. In order to derive a revenue from it, the Indian government issues licenses for the sale and consumption of this poisonous drug in vile places in all the large cities, as Calcutta, Bombay, Madras, Lucknow and Maulmain, and in the towns and villages of India and Burmah. These licenses are not issued for the purpose of limiting the sale of something that cannot be prohibited; but *they are issued with the requirement that the holder of the license must sell a stipulated quantity or pay a forfeit*. The more of the poison that is sold, the more revenue the government will receive. As the opium is purchased from the government agents, of course it is known how much the holder of the license sells.

In many places the natives have remonstrated against the license being granted. These remonstrances have been disregarded. In places where the habit has not been known, the holders of the license distribute the drug among any that will receive and use it till the craving appetite has been formed.

RAVAGES IN BRITISH INDIAN CITIES.

The opium dens of India are described as being of a worse character than those of China. Upon the recent very rapid extension of the opium habit in India, we have the following paragraph:

There are no statistics as to the number of opium smokers in India and Burmah; this policy of selling licenses has been introduced but recently; the num-

ber of smokers is not so great as it is in China. The statistics, however, show that the quantity sold is increasing each successive year with great rapidity. At Lucknow it increased from 36,240 tolas in 1883-84 to 64,320 in 1887-88, or nearly double in four years. When it is to the pecuniary interest of the holder of the license to extend the sale, when the terrible fascination of the indulgence and the weakness of the people are considered, the very rapid increase of the victims may be counted upon, if the iniquitous policy of licensing these opium dens for the sale and consumption of the poisonous drug, and the shops for the free retail of it in their homes, is continued. But the astounding fact is made known to the world that the Indian government, for the purpose of revenue, now licenses, throughout the cities, towns and villages of India, dens and shops for the free and unrestricted sale of a pernicious poison, which in Great Britain itself can only be purchased on a medical prescription for medicinal use. Here is thus given the facility and opportunity for the unrestricted purchase and use of this fascinating poison among the 250,000,000 of the population in India and Burmah. These multitudes, together with those in China and other parts of Asia, where the unrestricted sale of this destructive drug prevails, swells the number of the people among whom the opium plague is spreading to more than 600,000,000, which is more than two-fifths of the whole population of the earth.

THE GOVERNMENT WHOLLY RESPONSIBLE.

Opium growing is a government monopoly. The natives who cultivate the poppy for opium do so under the auspices of the government, are obliged to sell the opium exclusively to the government agent at a price which he fixes in advance, and are under the most stringent government regulation. It is in government laboratories, under the supervision of government officials, that the opium is prepared for market with the greatest care and the best science. As the government owns all the opium, it can fix the price at which it may be sold. These regulations enable the British Indian government to secure the opium at the lowest price and to sell it at the highest. There is no competitor. The government has the complete monopoly of all that is grown in its own territory. Some opium that is grown outside the jurisdiction of the British parts of India is nevertheless compelled to find its market by traversing the British provinces, and upon such opium the British government manages to fix its control through a system of transit duties. Mr. Happer concludes his interesting review of the subject with the following remarks:

"It is thus manifest that the Indian government has absolute control of the whole production of opium in India, and of its export to other countries. It can, in the exercise of its power, forbid its growth in any of the British territory; and, by its imperial jurisdiction over the protected States, it can enforce the prohibition of its production on them. It is simply a question of finance. It is narrowed down to this

point: Will the Indian government cease deriving revenue by growing opium to sell to its own subjects in India and Burmah and to supply the vitiated appetite of the victims of the opium vice in China?

“The moral sentiment of *the world* approves of the action of the British Parliament in condemning the opium traffic as immoral, and in recommending its cessation. The collection of revenue by the British government from the license of dens for the sale of opium to its own subjects is a yet greater outrage upon the moral sentiments of mankind. The moral convictions of the world sustain and encourage the anti-opium reformers in their continued efforts and labors for the arrest of the opium plague in Asia; and may God sustain them until their work is crowned with entire and complete success!”

WHAT IS GOLF?

GOLF, which has so rapidly progressed from its position as the shibboleth of the correct Englishman into the dignity and universal popularity of a national game, has not confined its propaganda to Albion; already the more fashionable summer resorts of our eastern coast are equipped with their golf courses, and it seems to possess certain inherent advantages as a game of skill, which, backed up by the even more important consideration that it is indubitably “fashionable,” will surely make it a great fad with Americans. The *Century* recognizes this fact in publishing a well-written article, by W. E. Norris, under the title, “The Apotheosis of Golf.” Mr. Norris is not too much of an expert to be able to tell what the game is. To the absolutely ignorant onlooker there is much method in the Oxford don’s definition: “Golf consists in putting little balls into little holes with instruments very ill adapted to the purpose.” The golfer finds eighteen holes distributed over three miles of territory, or nine holes and half the distance. The holes are not equidistant. A match may be played by two or by four persons; but only two balls are used, and in a ‘foursome’ the partners play alternate strokes.* When it has been added that the holes are $4\frac{1}{4}$ inches in diameter, and that the balls, which are made of very hard gutta-percha, have a circumference of about $5\frac{1}{2}$ inches, enough will perhaps have been said on the subject of measurements.

The player starts out from the first or “home” hole with the object of placing his ball in each of the succeeding seventeen with fewer strokes of the golf stick than his opponent finds necessary.

“Now it is obvious,” says Mr. Norris, “that, in order to propel the ball over such a course as has been described, and to accomplish the round on an average of five strokes to each hole (which, though creditable, would not be an extraordinary good score), more than one species of implement is requisite. The ball may be lying beautifully on close-cropped turf, where you can get a good sweeping stroke at it, or it may, by reason of your bad play or bad luck, have landed in sand or in a wilderness of gorse, out of which you must force it as best you can. Again

the surface of the turf is uneven, and a cuppy lie is apt to be a more troublesome thing than it looks to beginners.”

These and many more technical difficulties, which may arise from circumstances over which the player has no control, necessitate the presence of ten different instruments, which look in illustration like abnormal dentist’s tools. There are many other species of golf stick, but Mr. Norris advises us to restrict ourselves to these ten, which rejoice in the names of—1, driver; 2, long spoon; 3, short spoon; 4, brassy; 5, driving-iron; 6, lofting-iron; 7, mashy; 8, cleek; 9, niblick; 10, putter.

One of the attractive features of the game to the uninitiated are the tremendous and inspiring drives of two hundred yards and over that may be made by the skilled ones at certain stages of the game, the ball always being struck with the stick while the former lies on the ground. But the matter of “drives” introduces the only dangerous part of the game; a man may be knocked down or even killed by the hard gutta-percha ball, if his opponent carelessly attempts a long stroke.

THE RUSSIANS AT HOME.

AN anonymous writer in the *Cornhill Magazine* has a very sensible article on “The Russians as They are To-day.” He has been reading Mr. E. B. Lanin’s lampoons upon Russia, and he says: “It was a distinct relief to me after reading that article to reflect that I had just returned from a ten months’ residence in the country (during which time I had traveled nearly 7,000 miles by river, land, or sea, from one end of European Russia to the other, from Warsaw to the Crimea, the southern provinces round the Sea of Azov, through the Caucasus to Tiflis and Baku, and throughout the whole length of the Volga, from Astrakhan to Nijni-Novgorod, stopping *en route* at Tzaritzin, Saratov, Samara, Simbirsk and Kazan, to Moscow, Kharkov, and Kiev in Central Russia), and that I had met with nothing justifying so overwhelming and so bitter an attack.”

Of the Russian religion he thinks little: “I confess that I have never seen any religion which seemed to me so unreal, so artificial, and so little reverent as that of the Russian Church; but is it wonderful, with so poor a standard of clergy?”

With that exception he has very little to say of Russia excepting what is good. Even the police fill him with admiration. He says: “The ordinary police form a fine body of men, and of late years are for the most part fairly educated. Personally I have always found them as deserving of the name ‘the friendly policeman,’ when addressed or appealed to, as in our own country, and have often had pleasant talks with some of them.”

As for the army, it is in his judgment: “Nothing surprised me more than the physique and bearing of the Russian soldiers. They are devoted to their officers, and work cheerily and well, and may be heard singing—and very well, too—wherever they are in any numbers at work or on the march.”

THE PERIODICALS REVIEWED.

THE FORUM.

IN another department will be found extended reviews of the following articles: "Unparalleled Industrial Progress," by Mr. Richard H. Edmonds; "The Disastrous Effects of a Force Bill," by Mr. Hoke Smith; "An American View of the Irish Question," by Mr. Richard H. Dana, and "An Example of Organized Thrift," by Mr. John Graham Brooks.

A SOCIETY OF LETTERS.

Mr. Walter Besant, in his usual trenchant manner, writes of literature as a profession. The man of letters should, he thinks, be on the same basis with men in other professions. As it is now, the author is regarded as a sort of mendicant, subsisting on the bounty of the publisher. The remedy, as Mr. Besant sees it, is the establishment of a society corresponding to the French Academy. Such a society, it is held, will not only protect the author, but will tend to raise the standard of literature. Admission to membership therein should be granted only on the test of merit, and for an author not to belong to this society will be a disgrace.

THE MUNICIPAL PROBLEM.

The point of Mr. Frank Morison's paper is to prove that municipal government is a corporate and not a political problem. He takes Boston as a fair example. This city's Board of Aldermen consists of twelve members, its Common Council consists of seventy-five members. These eighty-seven men control the appropriations of the city, the assessed valuation of which is over \$850,000,000. Yet of these eighty-seven men, says Mr. Morison, there are sixty-two who possess no visible property and pay no taxes, and of the 73,000 registered voters of the city, less than two-fifths pay any property tax.

"Is it not just here, and not in any particular system of administration, that lies the explanation of our extravagant and unbusiness like city governments? Is it not an accepted political truth that men who have property will be more careful in voting for expenditures, a part of which they themselves have to pay, than those who have not?"

Mr. Morison has no remedy to offer, but would warn cities against intrusting further power such as the administration of street railways and gas works to the city government, and he would likewise encourage rather than discourage State "interference" in municipal matters.

CHURCHES AND LABOR UNIONS.

Rev. John P. Coyle states that a Congregational committee on church work in Massachusetts undertook recently to discover whether or not industrial discontent had affected the attitude of Massachusetts workingmen to the Church. Printed circulars were sent to labor organizations, but the results are not satisfactory. Many of the circulars were unanswered, and such answers as were received were not always conclusive. A similar inquiry among clergyman proved likewise unsatisfactory, the replies being often based on merely partial evidence. But, and this is the point of the article, "granting the possibly unrepresentative character of the reporters, and that they report opinions rather than facts, the minimum result of the investigation is two sets of opinions—from the leaders of the churches and from the leaders of

the unions—and these are contradictory. The leaders of the churches confess that they have no hold upon about 38 per cent. of the population, largely workingmen, but deny any relation of cause and effect between this and industrial discontent. The leaders of the unions assert that 48 per cent. of the workingmen disbelieve in the churches, and they attribute it to the present discontent and the place which the church occupies concerning the questions which underlie it."

Mr. R. L. Garner furnishes another interesting paper on the speech of monkeys, and Mr. Aldace F. Walker states in a concrete and practical way the economic reasons for the existence of the Western Traffic Association.

NORTH AMERICAN REVIEW.

WE review elsewhere, "English Elections and Home Rule," by the Duke of Argyle; "Our Recent Floods," by Major J. W. Powell; "The Pope at Home," by Giovanni Amadi, and "Business in Presidential Years," by Mr. Francis B. Thurber.

INGERSOLL ON THOMAS PAINE.

Col. Robert Ingersoll furnishes a paper on Thomas Paine. He prefaces his article by stating that erroneous views concerning Paine will no longer have an excuse for existence, as all can learn the true man in the new life of him by Moncure D. Conway.

Colonel Ingersoll says: "Paine has been hated because he was fearless enough to speak his honest beliefs. He was one of the first to broach many new reforms which have since been firmly established. His pen was almost the first to denounce slavery, dueling, cruelty to animals and the suppression of woman. "He was the first to suggest a union of the American Colonies, the first to write these words: 'The United States of America.'"

"Where Liberty is *not* there is my country," said Paine, and he lived up to his statement, for when the independence of the United States had been gained he hastened to France and there threw in his lot with the revolutionists.

The startling statement is made by Colonel Ingersoll that, "In England every step toward freedom has been a triumph over Burke and Pitt," a statement much easier to assert than to sustain.

In matters of religion Paine felt that he had a right to examine for himself: "He found that the creeds of all orthodox churches were absurd and cruel, and that the Bible was no better. No one argument that Paine urged against the inspiration of the Bible, against the truth of miracles, against the barbarities and infamies of the Old Testament, against the pretensions of priests and the claims of kings has ever been answered.

"His argument in favor of the existence of what he was pleased to call the God of Nature was as weak as those of all theists have been."

THE SHUDDER IN LITERATURE.

M. Jules Claretie writing of what he happily calls "The Shudder in Literature" says: "The physiological mysteries established by science have to-day taken the place of the fantastic inventions with which the old romancers pleased themselves and their readers. Both kinds of writing please, because there is deep down in all human

hearts, a love for whatsoever is wonderful. But the writer on physiological mysteries is exposed to a danger which does not threaten the romancers—a personal danger. Too often those writers who indulge in the delight of making their readers shudder become in time unbalanced in mind."

M. Claretie prefers the literature "of the broad day and the open air" to the literature "of night, of darkness, of phantoms."

THE PLACE OF THE FIFTY-FIRST CONGRESS IN HISTORY.

Ex-Speaker Thomas B. Reed contrasts the achievements of the last two Congresses—quite naturally very much to the advantage of the Fifty-first. He declares that the list of Legislative acts for 1890 and 1891 has no rival except that enacted by the first Congress of the war. "The reputation of the Fifty-first Congress for wisdom has been vindicated by the permanence of our laws. Its reputation for the economical appropriation of the public funds in the interest of the people has been more than vindicated by the appropriation made by the very boasters who reviled us so triumphantly while they were putting on the harness."

OTHER ARTICLES.

Lady Balfour takes up the rather wearying subject of the state of London society and criticises Lady Jeune for making rash statements based on insufficient evidence.

Gail Hamilton defends American society from the charges of immorality and frivolity made against it by English critics.

THE ARENA.

THE *Arena* for August is a "woman's number," two of the most interesting features of which are a letter from Mrs. Browning and an autobiographical sketch of Mrs. Livermore's 25 years' experience on the lecture platform.

A LETTER FROM MRS. BROWNING.

Mrs. Browning's letter, which is published by Louise Chandler Moulton, is to Dr. Marston, in reply to a letter containing some spiritualistic experiences. Mrs. Browning shows herself much interested in spiritualism, and not a little inclined to credit its possible truth, though she confesses that her husband is a stubborn skeptic. The letter contains this paragraph: "Do you not think that if an association of earnest thinkers were to meet regularly with unity of purpose and reverence of mood, they might attain to higher communications?"

MRS. LIVERMORE'S EXPERIENCE ON THE PLATFORM.

Mrs. Livermore tells how in the turbulent days which closed the war she took the platform under the management of the redoubtable James Redpath. "I cannot understand how one who makes lecturing a profession can fail of becoming optimistic." It is pleasant to read a sentence like this from the pen of one who has seen so much of life, and yet pleasanter when we read down the page and discover that the observation is based upon a study of the American home and its sterling virtues. Mrs. Livermore describes several amusing experiences which she has had. Once, in order to meet an audience, she asked for passage on a cattle train and received the reply that the company forbade the train to carry any freight but "live-stock." "If I am not 'live-stock,' will you please tell me *what* I am?" she asked. The logic was unanswerable, and that evening she met her audience.

WOMAN'S CLUBS.

Of course no "woman's number" would be complete without articles on dress-reform and woman's clubs.

The first topic is treated historically, with quotations from the leading reformers from Mrs. Amelia Bloomer down to those of the present time. The subject of woman's clubs is set forth in a symposium of twelve papers, in which the history of the club movement is given in all sections of the country and its usefulness considered in all its phases. By the club, women have had their views broadened and have been taught to coöperate. Henceforth the club is to be the strongest ally of education, philosophy and philanthropy.

THE FORTNIGHTLY REVIEW.

THE papers on the political outlook in England are dealt with elsewhere.

A PLEA FOR DIFFERENTIAL TARIFFS.

Sir Charles Tupper has the first place with an article in which he describes with much satisfaction the debate at the Associated Chambers of Commerce of the British Empire on the suggested differential tariff. He is delighted with what he records as the rapid progress which the idea of differential tariffs has already made. The Congress rejected his resolution in favor of differential duties, but passed, unanimously, resolutions in favor of closer commercial relations with the colonies. Sir Charles Tupper maintains that 5 per cent. on foreign goods coming into England would yield sufficient to support the navy, and he strongly maintains that such a duty would in no way raise the price of bread. The McKinley bill, with one stroke of the pen, reduced English exports to America by three millions a year. Unless something is done, Sir Charles thinks that the Americans will sop up all the British trade in the Western Hemisphere. "Like a great octopus they threw their tentacles over South America, the Antilles, and the West India Islands, with the intention of driving out British trade. And they are going to do it. Read the language of the British Consul in Brazil. What does he say? He tells the people of Great Britain, 'You must make up your mind to lose the British trade in Brazil, because the United States has absorbed it under the reciprocity clause of the McKinley bill.'"

THE DRAMA IN THE DOLDRUMS.

The London theatres have not been prospering, and Mr. Archer wants to know why. Some say that it is all Mr. Archer's fault and the half-dozen critics who follow his lead; but Mr. Archer refuses to believe that he is capable of wielding such an influence upon the public. He thinks that the production of Ibsen's play has opened the eyes of the play-goer to the fact that the old stock and trade was no longer worth looking at: "So soon as English playwrights can be found to treat of English manners, English conditions, English problems, with something of Scandinavian or Neo-French earnestness, insight, daring and talent, the breach will be healed, and the doldrums will be overpassed."

In his paper he estimates the probabilities for and against such a solution of the problem. The actor managers are the enemies of progress, he says, and the old critics are like unto them. They are at present a thoroughly negative and destructive influence. The conclusion of the whole matter is that, "what would tend more than anything else to promote the development of serious dramatic art in England would be a theater, a single theatre, which should be exempt from the necessity of paying interest

on capital invested—which should be in a position to subsist upon small profits and *slow returns*.”

A STORY OF THE BRITISH ELECTION.

Mr. H. D. Traill has a clever short story describing an imaginary scene which might have happened at the British election if the two candidates had suddenly decided to speak the truth, and nothing but the truth, concerning the questions which were before the electors. It is very well done, and sketched with a much lighter brush than Mr. Traill usually uses. The Liberal candidate is suddenly seized with a qualm of conscience, and publicly takes back all the promises he has made, and the clap-trap with which he had hoped to win the election. Fired by a noble emulation, the Conservative candidate issued a placard declaring his entire concurrence with his opponent, and taking back all the promises he had made and the misleading assurances which he had given. When the election comes off it is found that nearly every one comes to the poll as if nothing had happened. After the contests the two agents confide to each other that the Conservative had hired a staff of men to pull down every bill which his candidate had had posted up, and the Liberal had stopped the publication of the party newspaper with his candidate's address. The whole thing is very cleverly done, and is above the somewhat monotonous level of the other election papers.

ZOLA'S NEW STORY.

George Moore writes on "La Débâcle." He thinks that M. Zola's books are growing more and more diffuse, and that this last one is singularly deficient in most of the elements which made his first novels famous. With the exception of the great cavalry charge at Sedan, the book seems to him somewhat commonplace. That cavalry charge, however, is one of the finest passages of French prose, and the best battle-piece in literature. History falls upon this book like a blight. Mr. Moore takes exception to Zola's theory of war, and he even ventures to think that smokeless powder is going to extinguish military daring: "I think we should search history vainly for the substantial basis of fact on which M. Zola built his theory respecting war. It is the wine of enthusiasm and the aureole of glory that has enabled man to bear with the abominations and sufferings of war, which no man has depicted with such ghastly conviction, with such atrocious reality, as M. Zola. The bravest man that ever lived could not read M. Zola's book without feeling that he would sooner blow out his brains than engage in such horrible butchery; for bravery is not indifference to death, but the will to fight for life. So when science eliminates all chance of preserving life on the battlefield man's courage will give out."

OTHER ARTICLES.

There is a very fine essay by Arthur Symonds on Mr. Henley's poetry. Mr. Henley is the poet of "The beauty and joy of living, the beauty and the blessedness of death, the glory of battle and adventure, the nobility of devotion—to a cause, an ideal, a passion even—the dignity of resistance, the sacred quality of patriotism."

Miss M. Phillips has an interesting paper concerning the difficulties of ladies who work for their living in London, the practical aim of which is, to propose the establishment of associated households, in which one hundred and twenty-five ladies could live under the same roof, and have all their household work done by a trained staff of good servants. In managing such an institution, everything depends on the superintendent. This co-operative housekeeping scheme has been tried in some places and ought to succeed everywhere.

THE NINETEENTH CENTURY.

THE political articles in the August number of the *Nineteenth Century* are noticed elsewhere.

THE EMPRESS EUGENIE.

The most readable article in the review is Mr. Archibald Forbes' account of the Empress Eugénie, taken from "Notes and Recollections." Mr. Forbes is quite sure that this book, which is published anonymously, is by Sir Richard Wallace. Mr. Forbes constructs an extremely interesting article, which gives the reader a very bad impression of the Empress. It is wonderful that the empire lasted as long as it did with such a woman at the head of affairs. It was a kind of topsy-turveydom, in which ability went for nothing and flattery and subservience ruled everything. She was the evil genius of a weak and irresolute man, a parvenu who regarded herself as a Legitimist, who dominated her husband and thrust him forward to his doom. The readiness of the Empress both to sacrifice her husband and her son to her own ambition comes out very clearly.

THE SULTAN OF MOROCCO.

Mr. Charles F. Goss describes Muley Hassan, the Sultan of Morocco, whose adventure with Sir Charles Euan-Smith has been one of the most picturesque incidents of last month's history. The Sultan, says Mr. Goss, is a wholly ignorant and prejudiced barbarian, in the hands of corrupt advisors. Mr. Goss dreads the intrigues and aggressions of the French in Morocco, and insists that Tangier must never at any cost be allowed to pass out of British hands.

AUSTRALIAN INDEBTEDNESS.

Sir Robert Hamilton, Governor of Tasmania, has an article on "Lending Money to Australia," the chief point of which is that it would be an advantage both to Australia and the British investor if the construction of railways which do not pay was stopped, and if Colonial governments made their receipts balance their expenditure. Sir Robert Hamilton points out in reply to those who say that Australian civilization has been based upon borrowed capital, that the net total Australian debt is only 182,000,000 of pounds, while the private wealth of the country amounts to 1,175,000,000. Since 1850 Australia has exported gold to the value of 340,000,000, and wool to the value of 40,000,000. Of the 185,000,000 of public debt the largest part has been spent in railways and remunerative works. To put Australian finances on a sound basis it is absolutely necessary that the reckless construction of unremunerative railways should be stopped.

THE EGYPTIAN NEWSPAPER PRESS.

Mr. Fraser Rae has an interesting article on the Egyptian newspaper press. He describes the *Al Mokattam* as the typical Arabian newspaper. It is a daily paper published in Cairo at five cents, with an average circulation of 2,500. It has a regular staff of forty correspondents in Egypt, who use the telegraph as freely as those of American and English journals. It has special correspondents in New York, London, Paris, Constantinople, Bayreuth and Damascus. Baron de Malortie is the head of the Press Department of the Egyptian government, but he has no control over the papers which need control the most—namely, those published in French: "Of the forty-six journals published in Egypt twenty are in Arabic, twelve in French, eight in Greek, five in Italian and one in English. Not more than twenty-one appear with an authorization from the Press Bureau. Fifteen of the twenty-one are Arabic newspapers; three, which are

printed in French, are authorized by the government. The newspapers over which the Press Bureau exercises no control are chiefly printed in French, Italian and Greek. Their conductors may disseminate certain falsehoods with impunity."

LONDON MEDICAL CHARITIES.

Mr. Henry Loch discusses the report of the Select Committee of the House of Lords on the Metropolitan hospitals, and explains the new changes which it proposes to make in their administration. The central point is the creation of a new board which would undertake to report annually upon the condition of all the hospitals and medical charities, and see that their accounts were properly audited and the hospital periodically visited. Mr. Loch suggests that the Committee's report is faulty in not providing for connecting the proposed board with the Poor Law authorities.

OTHER ARTICLES.

There are two interesting American articles, one a description of Virginia and its horse-breeding districts. The writer mentions that on one occasion he was mounted on a horse no less than 18 hands high. The other is a description of lynch law in the far West. The writer's experience is that lynch law answers admirably when it is first introduced, but that it demoralizes the community when its inhabitants are a law unto themselves and an executor unto their neighbors. Prince Krapotkin writes on "Recent Science." Colonel Kenny-Herbert discusses with due solemnity the great art of dining, and Dr. Jean Paul Richter writes upon the Art Studentship of the Early Italian Painters.

THE NATIONAL REVIEW.

THE papers on the British election are reviewed at length in another department.

The most interesting article is the account of Voltaire's visit to England. The writer says there is more wit, freshness and originality in one page of Voltaire's account of his stay in England than in Max O'Rell's "John Bull and His Island," and M. Taine's letters, and there is hardly more exaggeration. Voltaire began to see England at Greenwich Fair. Although the east winds somewhat disillusionized him, he seems to have retained a very pleasant memory of his visit to England. "In extreme old age, his eye kindled and his countenance lighted up when he spoke of having once lived in a land where a professor of mathematics was buried in a temple with the ashes of kings, and where the highest esteemed it an honor to assist in bearing thither his body, and subscribing afterward to erect a marble statue to perpetuate his memory."

Lady Colin Campbell tells pleasantly the story of Rivalrol, the prodigal son of French genius. She quotes some of his aphorisms. Mr. Mackay, writing on the unpopularity of the Poor Law, protests against every form of pension. No step could be taken toward discriminating in favor of the imperfectly thrifty without making a serious attack upon the best friendly societies. No compromise is possible. It is no time to turn back and to accept a new dependency because it is disguised under some other name than the Poor Law. Mr. Edgecumbe gives an interesting account of the first ascent of Mont Blanc in 1786 by a Swiss guide of the name of Balmat, who perished in 1834 by falling over a precipice. Between 1787 and 1834 only eighteen persons ascended Mont Blanc, twelve of whom were Englishmen. Mr. Abell describes the remains of Hadrian's Roman wall, following it from

Newcastle to the Solway. "The Rowtilly Girl" is a short story by David S. Meldrum; it is not devoid of power. Mr. W. E. Beaumont emphasizes the need of attending to the recommendations of the Council of the British Medical Association on the efficient attendance upon railway servants' eyesight. There are two letters on newspaper copyright. Mr. Locksley Lucas writes from Vancouver's Island, British Columbia, to protest against the admission of the Chinese into Canada.

THE CONTEMPORARY REVIEW.

THE *Contemporary* this month is an excellent number. The best paper is Mr. Greenwood's "Imagination in Dreams," which is noticed elsewhere, as well as the two articles on the General Election and Professor Blackie's sonnets.

PROVINCIAL HOME RULE.

The Marquis of Lorne has a short paper in which he argues that the Irish might possibly be contented with provincial Home Rule, and if they are not contented with it they ought to be. What the Marquis of Lorne ought to do is to come forward boldly with a scheme of what may be called American Home Rule. The question will never be settled except upon that basis, and the sooner the Unionists make up their minds to face it the better. The Marquis of Lorne says that "the main point set forth was that liberty is safe if local powers be delegated to areas so limited that the authority of the central Parliament can, at all times, easily enforce respect for liberty."

CANADA AND THE UNITED STATES.

Mr. Erastus Wiman enlarges upon his favorite text that if Canada can only make her commercial relations with the United State free, the more than ever she will be likely to remain politically one with Great Britain.

He says: "In the policy of unrestricted reciprocity is found not only all the elements of the earliest and greatest prosperity to the three great parties concerned—viz., England, the United States, and Canada—but in its adoption will be found a more certain perpetuation of the presence of Great Britain on the continent of North America than under existing conditions appears to be promised; for a continental commercial unity has all the elements of material advantage of a political union, which is unnecessary, undesirable, and would be rendered thereby impossible."

MRS. WARD AS A NOVELIST.

Miss Julia Wedgwood passes judgment upon Mrs. Ward's novels in a paper entitled "Fiction and Faith." Her verdict is summed up in the following sentence: "It must be owned that Mrs. Ward's novels are not much more encouraging to the moralist than they are inspiring to the critic. But in choosing her work as an index to the convictions of the many, while we fail to draw from it any contribution to a high moral stimulus, or to discern in it any other kind of originality, we concede to it a high place on the large range of the second-hand. It is full of life, and it owns allegiance to an ideal of duty. If that tribute seem a poor thing, it must be remembered that it is made to one who has had thousands and thousands of readers. To have put before such a multitude anything that can be called thought—to have brought home to so many the power of unselfish aims and the dignity of steadfast labor—this is not a contemptible achievement; it is indeed one which has been reached by very few contributors to literature within their own lifetime."

THE COROLLARY OF SMOKELESS POWDER.

Lieut.-Colonel Elsdale, writing on the "Coming Revolution in Tactics and Strategy," maintains that smokeless powder, the machine guns, and the immense number of men brought into the field of battle, have effected a complete revolution in tactics. Hitherto it has been held that the advantage is always with the attacking party, but henceforth it must be admitted that the advantage rests with the defensive force. With the modern rifle and the impossibility of seeing where the soldiers are lying, owing to the absence of smoke, he says there will be a neutral space recognized as impassable, extending for about half a mile in front of the armies' position. This neutral space is so called because it can be so completely swept with bullets that no troops could venture into it and live. With a line of battle twenty miles long, and without even smoke puffs to convey to the commander any idea as to how the battle is going, the responsibility of command will rest more and more with the commanders of separate divisions. Armies, in fact, are getting too big to be utilized, and a smaller army which stays at home and waits for the enemy to come on will henceforth be able to hold its own against all comers.

HOW INFLUENZA IS SPREAD.

Dr. Althaus has a very interesting paper full of facts about influenza and how it is spread. He stoutly maintains that the origin of influenza is unknown, but that it is quite clear that it is a contagious disease, which spreads from one person to another, either by actual contact or by carrying the infected articles which have become imbued with bacilli. The last epidemic started in Buckhara and traveled to Moscow about as fast as a horse could ride. At Moscow it took the train and crossed Europe at express rate. It then took ship and spread all over the world, traveling in each case only a little slower than the ordinary means of conveyance of the population. It takes two days to incubate. It is comforting to know that as the result of his inquiries Dr. Althaus thinks that the present generation will not witness such outbreaks of influenza as those of Christmas, 1890 and 1891. He bases this predilection upon the belief that "a certain average degree of immunity has been established in this, a considerable number of aged, weakly and tubercular persons have been cut off; and I therefore consider further outbreaks of extensive epidemics of grip in the immediate or near future to be highly improbable."

BLACKWOOD'S MAGAZINE.

A NEW serial story, entitled "Singularly Deluded," is begun in the August number of *Blackwood*. The writer of the article on "Foreign Food" calculates that England spends 185,000,000 sterling per year in buying food from abroad, not including spirits and wines. Eight hundred articles of foreign food are sold in Brighton as against one hundred and thirty in Paris. The paper on Oliver Wendell Holmes is an appreciative criticism of the genial "Autocrat of the Breakfast Table." There is a good paper on "Mauritius Before the Cyclone." General MacDougal replies to Sir Charles Linton Simmons on the inefficiency of the British Army, and Mr. Fielden maintains that Lancashire is suffering from the monopoly of gold.

HEMAT is the title of a little four-months-old monthly, the organ of the Young Women's Christian Association in Sweden. It is published at Stockholm, and is fortunate in having for its editress the eminent authoress, Miss Mathilda Roos, whose recent work, "Through Shadows,"

has earned unstinted praise from the Swedish press. The June number contains a wittily-written reminiscence of a tour in Norway, undertaken by the writer (who uses as a *nom-de-plume* her nickname, "The Countess") and three girl-friends.

THE DUBLIN REVIEW.

THE opening article on Pastor's "History of the Popes" begins with a compliment to Leo XIII. In bygone days, and even not so long ago, it was the custom for historians to cry out against the zealous spirit with which the Vatican archives were guarded. The present Pope, however, "has thrown open to the world all his secret archives; he has invited learned men from all parts to ransack them at their will, insisting only that friends and foes alike shall nothing extenuate or ought set down in malice." Thus Pastor, with a brief for the Pope, has been enabled to produce a fine history, which has been translated by Father Antrobus.

Dr. Hayman, reviewing Gardiner's "Civil War," mentions that while he was at the Charterhouse, late in the middle decade of this century, an octagenarian guest at a certain dinner surprised the company by stating: "My grandfather, a long-lived man, has often told me that in early life he knew an aged friend of his family who had seen the axe fall upon the neck of Charles I."

The Council of Ephesus, Chinese Infanticide and "Recent Discoveries in the Cemetery of St. Priscilla at Rome," furnish the remaining topics discussed in the *Review*. Canon Brownlow's interesting article on the Roman discoveries—made within the last five years—states that De Rossi has been fortunate enough to hit upon the burial place of the family of Acilius Glabrio, and this has cleared up a problem of early Ecclesiastical history.

"It had long been a problem in ecclesiastical history whether the Acilius Galabrio—who was consul with Trajan, and in the very year of his consulship was compelled to fight with lions in the arena by Domitian, and afterward exiled and put to death by that tyrant—was a Christian or not. The charges against him were the contradictory ones of Atheism and being addicted to Jewish practices. Tillemont contended that he was a Pagan, while Gibbon maintained that these charges could only have been made against a Christian. Now that the Christian sepulchre of his family has come to light little doubt can remain, and we may claim Acilius Glabrio as a Christian martyr."

The basilica of St. Silvester is another of the "finds." A plan of the cemetery, copies of the inscriptions and a print of one of the paintings, illustrate the article.

LONDON QUARTERLY.

THREE articles on religious topics make up a good part of the bulk of the *London Quarterly*: "The Evidential Value of Christian Experience," "Hymnology," and "Recent Speculations as to Christ's Person." The first of these, which leads off the list of contents, deals with Professor Stearns' Ely Lectures, and Dr. R. W. Dale's sermons on "The Living Christ and the Four Gospels," both remanets of 1890. Although the venue of the battle of faith is always shifting, and the methods of the defenders are always changing, and while the hottest fight some twenty-five years ago was over the New Testament, the Old Testament has borne the brunt in our own time—although there is this rapid movement, the writer thinks it clear that "in our own day the defenders of the Christian faith must be prepared both to refurbish old weapons and to forge new ones. In this regard he

thinks Christian ministers may find their account in careful study of the "Ely Lectures," by Dr. Stearns, whose decease in the prime of life is a distinct loss to the Christian Church in the United States.

The article on Hymns recognizes the heavy responsibility that falls on the hymn-writer. The writer might have added with greater force the hymn-book compiler, who is to be blamed for much of the worst anthropomorphism of the present day. In the article on Christ's Person, the view taken as to Kenotism is that, "the attempt made in our days in several quarters to predicate fallibility of Christ and the Scriptures in literary and historical matters, and to assert infallibility in the higher region of spiritual and divine truth, seems to us a most critical operation. It may succeed among scholars, but it must break down among ordinary Christians."

The remaining articles are on "Ibsenism," "Dr. Dalinger on the Microscope," "Town and Country," "The Chateaux of the Loire," and "Baron de Marbot's Memoirs." The reviewer speaks of Ibsen's "Emperor and Galilean" as a ghastly caricature of religion. The article on country legislation urges the country gentry of England to live in the country, and to save country society by converting the new elements recently introduced into it "from a possible source of destruction into the means for its restoration on a broader and nobler basis."

THE QUARTERLY REVIEW.

THERE are few articles of note in this Quarterly. The writer of a criticism of "Mr. Rudyard Kipling's Tales" tells us that the much-advertised author is "not precisely Balzac." He reminds Mr. Kipling that: Dickens went on enlarging his horizon by an indomitable belief in the kindness and the justice which he discerned at the heart of things. If he is to have a successor, the way is open. That, however, remains to be seen; and it will depend on the subordination of other qualities, however brilliant, to a belief in the best things about God and man. The finest art is full of light and hope. But as Joubert says: With the fever of the senses, the delirium of the passions, the weakness of the spirit; with the storms of the passing time and with the scourges of humanity—hunger, thirst, dishonor, diseases and death—authors may go on as long as they will making novels which shall harrow up our hearts; but the soul says all the while, "You hurt me."

A half-and-half article on the late Cardinal Manning concludes with the following curious and touching incident: "This article may be not unfitly closed by a few words from that delightful man and exemplary priest, the late Father Lockhart, of St Etheldreda's, Holborn. Writing three months after Cardinal Manning's death, he said, 'I have had the invaluable blessing of his friendship and guidance for fifty years. Such bonds are not snapped without a sore wrench. May his spirit be with me still, and may we meet once more and for ever in the Eternal Blessedness!'

"These words derive a pathetic interest from the fact that their writer has already followed his friend and guide into the Unseen World. No difference of theological belief can forbid us to say Amen to so devout and touching a supplication."

The Historical Geography of Asia Minor, and Mr. Lilly's book "On Shibboleths," are the most noteworthy of the remaining articles. The reviewer rises from Mr. Lilly more than ever convinced, with Aristotle, that "The State is an association having for its end the Supreme Good."

ENGLISH HISTORICAL REVIEW.

MR. BRYCE'S article on the late Professor Freeman is one to which most readers will turn first in the *English Historical Review*.

The Rev. J. R. Macpherson discourses learnedly on the moot point, "The Church of the Resurrection, or of the Holy Sepulchre." It is not probable, he asserts, "that any person whose opinion is worth expressing would now positively assert that the buildings which are known all the world over as the Church of the Holy Sepulchre do actually cover the spot where Jesus of Nazareth was buried." The article is unfinished.

"Villainage in England" is discussed by Professor Seebohm *à propos* of the work published under that title by Professor Vinogradoff, "a Russian scholar whose mastery of English authorities and familiarity with English mediæval records, both published and in manuscript, is perhaps unsurpassed." The reviewer agrees with his author in the belief that the villains were freer before the Conquest than after it, but thinks that no great gulf existed between the Saxon and Norman manorial systems.

Mr. Alfred Bailey gives us "A Legal View of Cranmer's Execution," and sums up: "Upon the whole, I venture to think that Cranmer's execution by burning was illegal; that Mary and her Council had, to say the least, a shrewd suspicion that it was so, and, determined that the archbishop should perish as a heretic, concealed from the public the fact of the parliamentary attainder, and treated the Queen's abrogated pardon as effectual and leaving Cranmer obnoxious to the cruel death assigned by law to those who had been pronounced to be heretics."

The Rev. T. S. Holmes, investigating "The Conversion of Wessex," thinks that "to Aldhelm the later Wessex, the Wessex of the western bishoprics, looks as the founder of her churches, if not the first preacher of her new faith."

The only other article is one by M. Oppenheim on the Royal Navy under James I, from which we may gather that even in those times the critics were always picking holes in Majesty's ships. "Raleigh, in his 'Observations on the Navy,' addressed to Prince Henry, says that there are six principal things required in a man-of-war, viz., that she should be strongly built, swift, stout-sided, carry out her guns in all weathers, hull and try well, and that she should stay well. None of these things did the King's ships do satisfactorily, and 'it were also behoofeful that His Majesty's ships were not so overpestered and clogged with great ordnance . . . so that much of it serves to no better use, but only to labor and overcharge the ship's sides.'"

WESTMINSTER.

THE *Westminster Review* for August, with the exception of a brightly written paper on the "Ethics of Field Sports," is rather ponderous. An article on Mr. Froude and his critics goes over the old ground with some vigor. There is an account of Education in Germany, from the standpoint of a German teacher. There are essays on the Modern Protective System, and Ireland under Grattan's Parliament. The paper entitled "Some Aspects of Sentiment" draws a comparison between Richardson's "Clarissa Harlowe" and Hardie's "Tess of the d'Urbervilles."

THE editor of *Cassell's Family Magazine* offers three prizes of \$250, \$200 and \$150 respectively for the first, second, and third best stories of domestic interest, bright in style, original in plot, and adapted for family reading, and for serial use in this magazine. Each story must be divided into six parts of not less than 7,500, or more than

9,000 words each. Every manuscript must be accompanied by a short outline (about 500 words in length) of its plot, and also by a plan showing how that plot is developed in each of the six parts of the story. All manuscripts must comply with the general regulations, and be sent in not later than December, 1892.

THE CENTURY.

WE review elsewhere the explanatory paper on golf, by W. E. Norris.

An excellent mountain-climbing description appears over the names of Mabel Loomis Todd and David P. Todd, who surmounted the noble Japanese mountain of Fuji-San in the interest of a fund managed by the Harvard Observatory, which was bequeathed to form an astronomical observatory on some mountain peak which offered especial advantages for studying the heavens. Borne by coolies and ponies the travelers completed the climb to the tenth station, which exists at Fuji's highest altitude, over 12,000 feet above the sea. "While travelers," say these climbers, "sometimes speak of entire absence of disagreeable sensations on other mountains of over fifteen and even seventeen thousand feet of elevation, the usual testimony as to Fuji is of great discomfort. Of 'mountain sickness' proper, in its usual manifestations, we had none; neither any special lung-oppression, nor increase of respiration above the normal. But the heart beat tumultuously, and even slight muscular exertion sent the pulse well up to 120 or 130." Astronomically speaking, the visit was highly encouraging. The atmospheric imperfections were at a minimum. "A few double stars, suited to the capacity of the instrument, were tried, and the advantages were at once strikingly apparent. Companion stars, hard to see, and 'doubles' hard to divide, with the same glass at lower elevations, here were readily discerned. Even in looking at so ordinary an object as the moon, the edge or limb of which has been seen absolutely sharp by few astronomers, the effect was indescribable. So sharply defined were the details of the lunar surface that, if a suitable object glass had been at hand, a magnifying power of 2000 diameters would at first have been used."

C. A. Kenaston has a readable descriptive article on "The Great Plains of Canada," in which he tells of the great expanses of country about Hudson Bay, and of the declining tribes of Indians once kept prosperous and fat on the spoils of the fur-bearing animals now sadly lessening in numbers. Here, too, the buffalo is practically extinct. "It is not long since this noble animal was the monarch of these lonely regions. Not only are the hill slopes in many places terraced by their deep-worn paths, running parallel to one another at the distance of perhaps a yard, but in favorite localities, where they once fed in countless droves, their bones and horns lie scattered on every hand, bleaching and slowly decomposing in the drying wind. Sometimes every square rod of the surface presents the sad memorials of a noble animal gone to his death in a pile of shoulder blades, rib bones, leg bones, horns still covered with the black, shining corneous substance which made them so striking during life, and in a broad skull with empty eye sockets, still tufted with brown hair, and still maintaining a lordly port."

The bleached shoulder bones whitening the plains serve the purpose of paper to the engineers and visitors who wish to leave messages to friends on the plains.

Apropos of the centenary of Shelley's birth, recently observed in England and Italy, the *Century* does honor to the poet in a critical article by George E. Woodberry, and in an attractively quaint frontispiece reproduction of a chalk drawing, after the original portrait by Miss Curran.

HARPER'S.

HARPER'S furnishes us with material for a "leading article" this month in Theodore Child's first paper on "Literary Paris."

The series of articles descriptive of the great European armies brings under consideration in this number the Italian military organization, which is explained by G. Goiran, general staff colonel. His figures show the Italian permanent army to consist of 800,000 men and about 40,000 horses, to officer whom it requires 20,000 individuals. When increased by the "active" and "local" militia the total force rises to the enormous figure of 2,700,000 men and 35,500 officers. Italians are liable to military service from the ages of 20 to 39 years. But young men desirous of finishing their studies are exempt till they are 25 years old, and there are other relaxations of the rule. Col. Goiran says: "The national system of recruitment, discarding, as it does, the principle of localization, is altogether too expensive, complicated and cumbersome, both in respect to the requirements of the peace and of the war establishment. On the other hand, it has had the inestimable advantage of doing away with one of the saddest legacies of ancient municipal rivalries, and more recent suspicious policies of petty rulers—namely, provincial diffidences, prejudices and jealousies."

In a very thorough article on "Ice and Ice-Making," Mr. T. Mitchell Prudden takes occasion to warn dwellers in Manhattan against the use of the impure natural ice, harvested from the sewage-polluted waters of the Hudson and the like sources.

"One may even sometimes see citizens of this metropolis, keenly alive to the advantage of cleanliness and insisting upon the use of distilled water at their tables, yet calmly plump into their glasses of pure water the frozen sewage of the upper Hudson from the vicinage of Albany and Troy. We know that typhoid fever is nearly always present in Troy and Albany during the ice-harvesting season. We know that the waste from these victims of disease is cast into the Hudson River. We know that the typhoid germ resists freezing and long-continued cold, and yet between seven and eight hundred thousand tons of ice are cut from the Hudson in average years within twelve miles of Albany, largely for the refreshment of New Yorkers." The moral of this tale is that we should use the artificial ice, where the primary process of distillation has destroyed the harmful bacteria, if any be present.

The best papers in the magazine, from a literary point of view, are Mr. Lowell's critical essay on the dramatist Webster, and Thomas Janvier's clever short story, "The Passing of Thomas."

THE COSMOPOLITAN.

AMONG the leading articles will be found some extracts from W. C. Fitzsimmons' attractive account of "A California Farm Village."

Henry Arthur Herbert, of Musgrove, writes at considerable length to chronicle what he deems "A Revolution in English Society." He attributes the revolution primarily to two main causes: The Reform act, which "placed the distinction of M. P. within reach of many who in the old days would have found the halls of St. Stephen's absolutely barred," and the extension of the railway system, which made access to London from the counties and from the manufacturing towns so much easier. These factors, aided by the social leadership of the Prince of Wales, who has been characterized by a marked eclecticism as compared with his exclusive predecessors, have brought a fresh leaven of new blood into

English society. One of the results of the change was the revolt of the British maiden "against the staid primness of the British matron," which was effectually achieved, together with certain minor social conventions. The "young blood" which was introduced led, too, eventually to a tendency toward athletics among the aristocratic maidens of the land. They learned to follow the hounds in earnest, to shoot pigeons, drive coaches, to row on the Thames what would seem incredible distances to an American damsel, and even to indulge in deer stalking and salmon fishing. Mr. Herbert's article is embellished with Mr. Gribayédoff's copies of the famous English beauties and leaders of society of the transition period.

Writing of "Bridges and Bridge Builders," Peter Macqueen tells of the great projected piece of engineering over the North River, which will be 10,000 feet long and cost, without approaches, \$28,500,000; of the bridge proposed between England and France, to be twenty-four miles long, to cost about \$200,000,000, and to contain 1,000,000 tons of metal, and many other picturesque enormities in bridge building. "The future of the bridge," he says, "we do not know. The suspension and cantilever types will be used for large spans, and the continuous girder for smaller ones; the arch cannot be used except where there is a depression to accommodate the use of level which it requires." Alfred Veit contributes a novel article on "Curiosities of Musical Literature," and Henry James concludes his novelette, "Jersey Villas."

SCRIBNER'S.

ALTHOUGH the August *Scribner's* is the annual "fiction number" and is announced as such, the most attractive features of the magazine lie outside of its story-telling. We have reviewed elsewhere Mr. Walter Besant's description of "A Riverside Parish," and Mr. Sidney Dillon's article on the "Historic Moment" which saw the driving of the last spike of the Union Pacific Railroad.

Kate Douglas Wiggin has a charmingly bright essay on "Children's Rights." She calls to mind the reformation which Rousseau, and, later, Pestalozzi and Froebel, wrought, and points out how much is still to be done in educating people to be parents. She is wittily wrathful against the mothers who insist on dressing their boys like prigs, and against the aristocratic complex dolls of the age, which she contrasts with the old "rag" variety to the infinite advantage of the latter. She paints in glowing terms the charm and value of a country training for the child, away from tall rooms and bric-a-brac which must not be touched, and grass which must be kept off. "He has a right to a place of his own, to surroundings which have some relation to his size, his desires and his capabilities. . . . The mother who is most apt to infringe on the rights of her child (of course with the best intentions) is the firm person, afflicted with the "lust of dominion." There is no elasticity in her firmness to preventing it from degenerating into obstinacy. It is not the firmness of the tree that bends without breaking, but the firmness of a certain long-eared animal whose force of character has impressed itself on the common mind and become proverbial."

Prof. N. S. Shaler contributes an article on "Icebergs," in which, after considering his subject from the point of view of the geographer and geologist, he speaks of the dangers which the floating bergs make for transatlantic travel. He shows the hopelessness of rescue in a collision with an iceberg, owing to the hardness of the blow, the falling of masses of ice on the bow of the vessel, the

difficulty of getting off the sinking ship on the inhospitable cliffs of the berg, and the unsatisfactory condition one finds himself in even if this be achieved. "It has been suggested that the men-of-war of the great navies should be employed in the destruction of the icebergs of the North Atlantic. According to this plan the bergs are to be bombarded with great shells, which, penetrating deep into the ice and exploding there, will shatter them to pieces." But practical considerations of the tremendous expense, and the new danger from floating fragments, unless the bergs were watched for at the exit of Baffin's Bay and broken instanter into little bits, leads Professor Shaler to think this scheme unavailable.

The artistic excellence of the number depends largely on Delort's illustrations to Maurice Guérin's beautiful prose poem, "The Centaur," from which portions are quoted with Mrs. Field's commentaries. The effort is a great success.

NEW ENGLAND MAGAZINE.

WE review elsewhere Mr. Forrest Morgan's article on "Professions and Trades for Workingmen's Boys."

Another paper attacking a question of serious and immediate interest is by J. Whidden Graham on "Just Taxation." His idea of just taxation is identical with Mr. Henry George's, and he ascribes to the single tax on land all the healing social attributes which its more famous exponent predicts, but he arrives at the conclusion by a different process. Instead of a measure of land reform, with all the vexing and complicated issues which a study of that question would arouse, Mr. Graham would have it a question of tax reform, and he believes that the popular mind can better appreciate the value of the proposed innovation when led in this direction.

There are some excellent papers on Walt Whitman. George D. Black considers the Sage of Paumanok from the point of a literary critic, and finds him a great literary artist, and, tested by the imagination—the supreme criterion—a great poet. He deems his songs very spiritual in nature, and thinks him our greatest singer of death songs. Sylvester Baxter gives many personal reminiscences of the seer under the title "Walt Whitman in Boston," and W. Blackburn Harte devotes himself to "Walt Whitman's Democracy."

The descriptive articles are "Round About Gloucester," by Edwin Start, with illustrations, which do not nearly take advantage of the magnificent opportunities Gloucester offers, and "The Argentine Republic," by Don Juan S. Attwell, while Joseph Kirkland writes on "The Chicago Fire."

LIPPINCOTT'S.

COLONEL JOHN A. COCKERILL'S article on "The Newspaper of the Future" is reviewed among our leading articles. The remainder of the number is given over bodily to fiction, with the exception of Edgar Allen Poe's article on "Intercollegiate Football," and a bright page by J. K. Wetherill crying aloud for a new institution, a "Professional Plaindealer," who shall tell us how others see us, regardless of invidious consequences. "The authoritative opinions of the Professional Plaindealer, pronounced calmly and dispassionately, without any possibility that their source could be spite or anger, would have telling force. Twice a year, let us say, this much-needed official might make his rounds, of course supported by the majesty of the law, else he might die a violent death. Why should we not have a Board of Moral

Health, with inspectors authorized to see that each individual keeps his or her spiritual premises in a wholesome condition? The approach of such visitations would probably give the signal for a general house-cleaning; but it would be of little avail; the six-months' record would speak for itself."

POPULAR SCIENCE MONTHLY.

IN the *Popular Science Monthly* for August the opening article is by Prof. Edward S. Morse, on the fertile subject of "Natural Selection and Crime." Professor Morse is urgent in his advocacy of State intervention with criminals and incompetents. "Quarantine," says he, "the evil classes as you would the plague, and plant on good ground the deserving poor." Those who talk about the liberty of the individual before the law are not to include those who are endangering the liberty, perhaps the lives of others, and are transgressing the law at every step."

The writer considers that there can be no question as to the really vicious; as to the more vexing problem of the incompetent, he says: "The simplest manual labor is within their power, and for this they should be paid; their chances for quality of food, quantity of tobacco, etc., should depend upon their efforts to help themselves. If they will not work and insist upon being vagabonds, they come under cognizance of the law, and their liberty may be abridged and for an indefinite time if need be. By this curtailment of their freedom *their line of descent is arrested*, and this is the important object to accomplish."

Dr. Andrew D. White, continuing his "Chapters in the Warfare of Science," tells us this month of the early conceptions of the shape of the earth, and the absurd attempts of the mediæval map-makers. So hard was it to give up "the scriptural idea of direct personal interference by agents of Heaven," that even in the sixteenth century the earth was represented as a sphere with a crank at each pole, by means of which an angel industriously turned the mundane orb.

There is reprinted a most interesting chapter of Herbert Spencer's latest volume—the chapter dealing with "Veracity." After examining the evidence furnished by both primitive and civilized races, the philosopher concludes that, as a racial characteristic, lying is prevalent, and is unrebuked in those nations having a coercive social structure, a state often induced by a chronic condition of external enmity, while lying is at its minimum, and is most strongly reprobated in those States which, owing to internal amity, enjoy a non-coercive social structure.

THE ARCHITECTURAL RECORD.

THE quarterly *Architectural Record* appears for August with illustrations galore, and very good ones they are, too. One of the more practical and less æsthetic of the papers in this issue compares the New York flats with the French variety. The writer finds that the French apartment houses are distinctly inferior in economizing space, but are vastly ahead of our flat system in the matter of insuring privacy. "The fact is, that in our sense of the word, the French, except perhaps the very poorer classes, do not live in apartments, but in small private dwelling houses, built on one level on the top of one another and reached by a narrow ascending street." But an advantage which is final the Parisians possess in the cheaper rental rates, which make the entire annual cost of an average apartment house to its inmates less than

\$3,000 per annum. "Cannot some change," asks this writer, "in our system of taxation, which now seems to fall exclusively upon real estate, be devised, and help reduce our enormous rentals? A relative of ours lately paid for the rent of a pretty house in Kensington, London, precisely the same amount as we had to pay for taxes on a house on Twelfth street, near Second avenue. Would it not be better if vacant lots were taxed more heavily and improvements less so? This would discourage the persistent holding of land for speculation, and encourage the erection of good permanent buildings."

There is a long editorial in this number, arraigning Mr. Walter Crane for his opinion, lately expressed in the *Atlantic*, that the mercenary spirit of trade and gain which dominates the age is suffocation to the artist spirit. The *Record's* editor thinks that the "fairer day" of justice and democracy and beauty and love is to be earned rather through the emancipation of the race from the pressure of poverty and other restricting external circumstances, and that this is to be attained by the industrial sweat of our brows, through the working out of our present great commercial combinations.

THE METHODIST REVIEW.

"MOSES as a Political Economist" is the somewhat striking title of a paper by Mr. T. N. Carver. But the writer warns us that there is nothing strange or peculiar in the subject; that, next to the religious, the economical side of the Bible history is its most important feature. He reviews the Hebrew methods of taxation, more nearly like our own than any other the ancient peoples could show; the extraordinary system of land tenure, with its striking communal attributes and the laws of inheritance, those governing wages and those relating to the proletariat.

Bishop J. M. Thobum writes from Calcutta, India, on what he calls "the imposture known as Theosophy." The bishop "goes for" Mrs. Besant's cult right and left. Of the existence of the new religion in India, he says: "Philosophy still lingers in India, but in a moribund state. When poor Madam Blavatsky's death was announced a few months ago a leading Bengali paper published in Calcutta draped its pages in mourning, and in many parts of the country persons can be found who still affect to believe in her sincerity and in the truth of her doctrines. The heart, however, of the movement is dead."

THE PRESBYTERIAN AND REFORMED REVIEW.

THIS exceedingly substantial quarterly has a symposium of some length on the subject of "The School as a Factor in Missionary Work."

Practical workers in missionary fields write from Japan, Korea, China, Italy, Syria and Africa, and agree that education is an indispensable factor in evangelistic work, and that the school is a most powerful ally of the mission, if it be the right kind of school.

John D. Davis, in an essay on "The Semitic Tradition of Creation," comes to the conclusion that the Hebrew writer in the Old Testament "conceived of the creation period not as seventy times twenty-four hours, but as vastly, indefinitely long."

A. Gretillat writes on "Theological Thought Among French Protestants," and William Caven on "The Testimony of Christ to the Old Testament."

THE FRENCH REVIEWS.

THE REVUE DES DEUX MONDES.

IN the number for July 1, M. Taine concludes his deeply-interesting essays on the "Reconstruction of France in 1800." He emphasizes the tendency to "cram"—the examination routine, and mere theoretical acquisition of knowledge prevalent in modern French education, so called, and traces it back to its beginnings under the Napoleonic system. The Comte d'Haussonville's article on "Women's Work in England and America," is fully noticed elsewhere. M. Gustave Larroumet, under the title of "A Historian of the Précieuses in the Seventeenth Century," contributes a curious chapter to French literary history. The historian in question, an obscure scribbler, one Baudeau de Somaize, chiefly signalized himself by trying to fasten charges of plagiarism on Molière. He was utterly wanting in literary ability, but his "Dictionnaire des Précieuses" is valuable for the information it affords. The Précieuses of Baudeau's day had greatly degenerated from the witty society of the Hôtel de Rambouillet, where the name first originated; they contented themselves with weak imitations of the affectations of Mademoiselle de Scudéry, and finally laid themselves open to Molière's satire. Baudeau, who, for some reason or other, had been taken up by this cotérie, felt bound to defend it against the dramatist's attacks; and it is this circumstance alone which has kept his name alive. M. Georges Picot takes up the grand question of "Religious Pacification," and M. George Lafenestre continues and concludes his causerie on the Salons. We have quoted elsewhere from M. Valbert's pleasant essay on Sir Walter Scott's "Journal."

In the mid-July number, M. Camille Rousset, of the Académie Française, reviews, under the title of "L'Armée de Metz," the just published *Souvenirs* of General Jarras, which are anything but favorable to the memory of Marshal Bazaine, the man who, as M. Rousset puts it, "lost in the dreams of a raving infatuation, was able so basely to forget what—at the Trianon trial—the President of the Council of War had to recall to him in one grand, simple word—France!" The war of 1870 occupies no inconsiderable space in this number; the Vicomte de Vogüé's masterly review of Zola's "La Débâcle" is noticed more fully in another column.

M. Lagrange's paper on "The Reform of Physical Education" contains a great deal which, if new in France, is not so in America; but his account of the changes which French public opinion has undergone, in this respect, during the present century is not without interest. During the generation which preceded ours—say in the forties and fifties—when the public mind was eminently "practical," physical exercises were looked on as useless, because they would not directly assist a boy in earning his living, and were despised accordingly. The early promoters of gymnastics were faddists, and made the mistake of unduly exalting their fad. They boasted of such wonderful feats of strength and agility as the result of their methods that parents not unnaturally thought they did not wish their sons to become acrobats and contortionists, and could not see the good of such accomplishments in any other walk in life. Then came the period of military enthusiasm, when drill was introduced into all schools to turn the pupils into defenders of their country in case of need. This mania passed away in its turn; it was recognized that purely military exercises were not of much use in developing the muscles and strengthening the system; and it was only in times of

national danger or crisis that the sentiment of patriotism was sufficiently strong to insist on their necessity. At last doctors decreed that physical training was necessary for maintaining the general health; and then only the French nation was awakened to see the good of it.

THE NOUVELLE REVUE.

M. MICHEL REVON contributes, under the title of "The Problem of War," two articles forming part of his forthcoming work on "International Arbitration." M. J. Lefebvre concludes his study of "The Neo-Latin Languages." M. Funck-Brentano has a stiff paper on "The Social and Political Resources of France," and M. Emile Blanchard, of the Académie des Sciences a very readable one on "Bees," summing up the various steps made in the observation of their habits—especially the discoveries of the blind naturalist, François Huber, who seems, somewhat undeservedly, forgotten nowadays.

Gen. Cosserson de Villenoisy has a few pages on "The Alleged Depopulation of France." The population of France, he says, steadily increased from the beginning of the century up to the *année terrible* of 1870. Then, of course, there was a diminution; but from 1872 onward the increase has again been continuous. The census of 1886 gave a total of 38,220,000 inhabitants—that of 1891, in spite of the ravages of the influenza epidemic, 38,350,000. That the increase is less rapid than in other European countries is true; but this does not, in great part, proceed from causes injurious to the well-being of the nation, and it has its compensating advantages. Contrary to the Malthusian doctrine, the means of subsistence have increased along with the number of inhabitants. France enjoys the advantage of producing her own supplies, and thus is placed in a securer position than England, whose prosperity would be swept away at a blow should coal and iron be produced more cheaply elsewhere, or a nation take to manufacturing its own cotton goods. The downward movement of the laboring class, so frequently deplored by pessimists, has not allowed land to fall out of cultivation; on the contrary, waste lands have been brought under tillage, and the productiveness of others has been increased by the introduction of new crops and improved methods of farming.

Two very interesting papers, which we have not space to comment on in detail, are M. Ernest Tissot's on "The Philosophical Poems of Henrik Ibsen," which deals with "Brand," "Peer Gynt," and "Emperor and Galilean," and M. B. Jeannine's on "The Movement of Ideas in Scandinavian Countries," taking a more general view of the "modern movement" in Norwegian literature. The chief characteristics of this movement, according to M. Jeannine, are a deep-seated Puritan conscience and an uncompromising search for truth: "It has for its object the denunciation of falsehood, individual and social, no matter where it is hidden—in public institutions, in the church, the school, in philanthropic societies, in marriage, in mutual duties, in the obligations imposed on the privileged of fortune. We are struck by the unity of intention which exists in all the products of this literature; the people speak as if they were driven to it by an irresistible impulse of the soul, by the consciousness of a mission to fulfill. We always find the same starting point which lends itself to all developments—the discord between what ought to be and what is. It is a revolutionary and regenerative movement—a violent opposition to hypocrisy and convention—a passionate search for truth at all costs and at all risks."

POETRY AND ART.

POETRY IN THE MAGAZINES.

TWO poems have appeared during the month in commemoration of Shelley, who was born August 4, 1792—one by Mr. William Watson, in the *London Spectator*, of July 30, and the other by Mr. Edmund C. Stedman, in the *Atlantic Monthly*. We quote three stanzas from Mr. Watson's ode:

Impatient of the world's fixed way,
He ne'er could suffer God's delay,
But all the future in a day
 Would build divine,
And the whole past in ruins lay,
 An emptied shrine.

And in this world of worldings, where
Souls rust in apathy, and ne'er
A great emotion shakes the air,
 And life flags tame,
And rare is noble impulse, rare

The impassioned aim,
'Tis no mean fortune to have heard
A singer who, if errors blurred
His sight, had yet a spirit stirred
 By vast desire,
And ardor fledging the swift word
 With plumes of fire.

Mr. Stedman's poem is entitled "Ariel." After an address to the shadow of the poet, he says:

Be then the poet's poet still! for none
Of them whose minstrelsy the stars have blessed
Has from expression's wonderland so won
 The unexpressed—
So wrought the charm of its elusive note
On us, who yearn in vain
To mock the paean and the plain
Of tides that rise and fall with sweet mysterious rote.

Professor Blackie, always original and interesting, publishes in the *Contemporary Review* a series of sonnets to the memory of John Knox. There are some twelve of them. We have only space for one:

Bless thee, brave Knox; my soul feeds on great men,
Not on far-wandering spheres or curious dust,
But on a strong arm braced with truth, as when
Thy weighty stroke broke through the gilded crust
Of priestly creeds, and bared the lie within.
Be thou my guide. I take my stand on thee
As on a rock, and when the blastful din
Of billows smites the cliff, I stand on thee.
On Knox I stand, and glory in his name
Who made the Scot wise by pure Bible law,
And brought the popish jugglery to shame
With words that stirred the soul with holy awe.
Let mitred priests lord it o'er feeble flocks,
I stand a freeman when I stand on Knox.

The best poem in *Scribner's* is a little poem by Anne Reeve Aldrich, entitled "A Little Parable:"

I made the cross myself, whose weight
Was later laid on me.
This thought adds anguish as I toil
Up life's steep Calvary.

To think mine own hands drove the nails!
I sang a merry song,
And chose the heaviest wood I had
To build it firm and strong.

If I had guessed—if I had dreamed
Its weight was meant for me,
I should have built a lighter cross
To bear up Calvary!

About the Impressionists. Mr. Hoppin.

Bettie Garland's poem, "From My Window," in the *Chautauquan* is one of the best of the month:

Above the water, from my window shines
The crescent moon, soft holding in its sway
A fleecy cloud just left from parting day.
Round either horned side it intertwines,
And falling, forms in drooping lines
A bridal veil around the queen of night;
Within the folds, half hid, the quivering light
Of stars like jeweled pins in quaint designs
To catch and hold the veil in place.
As in the water dips the gauzy trail,
Wave follows wave in glittering crystals strewn
And silver rings go widening into space—
Then lo! 'tis gone, this crescent crown and veil,
And I am in the darkening world alone.

ART IN THE MAGAZINES.

MR. BERNINGER'S great cyclorama of the departure of the Jews from Memphis, which is on exhibition in London, reproduces in the circle of a cycloramic picture the leading features of the scene which was witnessed in ancient Egypt at the time when the children of Israel left for the Promised Land. It is an immense work, full of detail, and yet possessing a unity which grows upon the observer the longer the picture is looked at.

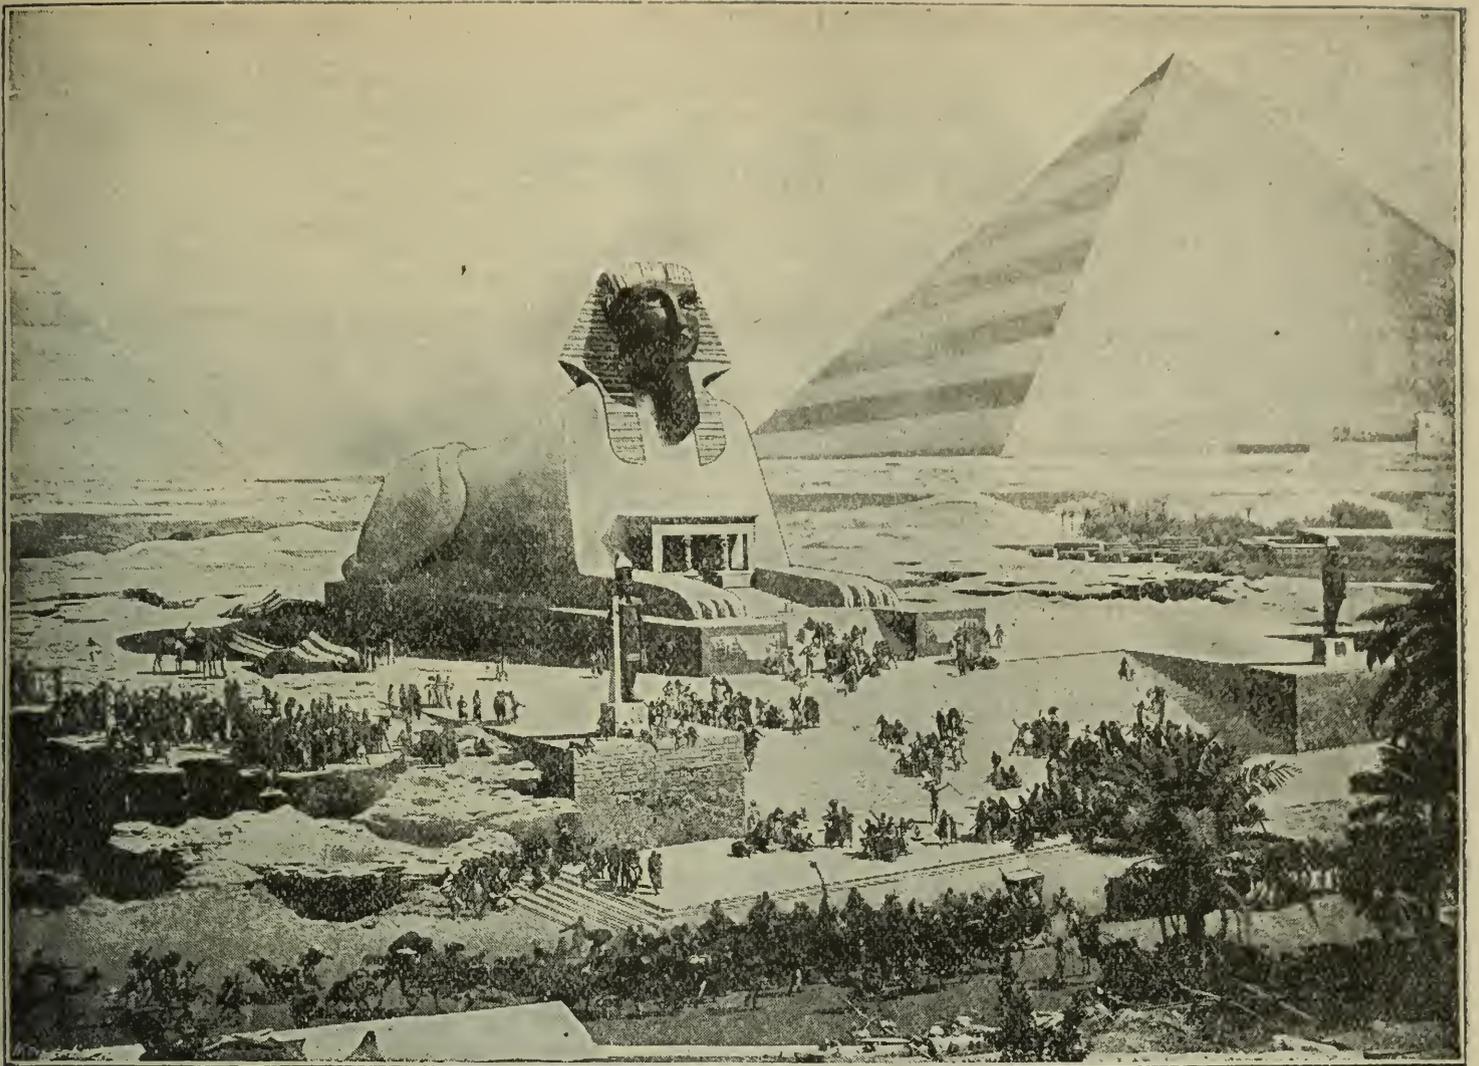

Mr. Berninger qualified for the task of depicting this Egyptian scene by a long sojourn in the Nile Valley. His eyes got the glare of the African sun, the shadows in the sand, and the cool blue of the winding Nile. For his archæology he has relied greatly upon Dr. Carl Ebers, the well-known Egyptologist. We are, therefore, justified in regarding the picture as embodying the latest results of the modern research into the realities of the life of ancient Egypt. But apart from the archæological interest the picture is full of light, and color, and movement, and even if less space had been taken in the restoration of the banished past, it would possess high interest as enabling us to form some idea of what the real Exodus was like.

The picture is an immense piece of work, being four hundred feet in circumference, and fifty-five feet high, and there is hardly a foot of all this immense superficies that does not contribute directly to the effect of the whole. Especially is this the case with the view of the Wilderness, which stretches far beyond the city to the horizon. At first it seems as if the hollows were filled with lakes, but it appears that this is but an illusion caused by the shadows. The only water in the picture is the Nile, which, flecked with many white-sailed boats, flows behind the king's palace. Down the marble steps leading from the palace the King and Queen of Egypt are being carried, and at the foot of the stairs Moses and Aaron and four other Hebrews are addressing Pharaoh for the last time before the departure of the children of Israel. This is a slight anachronism in order to bring out the story of the Exodus within the compass of a single picture.

Immediately behind the Sphinx stand the king's war chariots, over which rises an Egyptian sanctuary. Leaving the royal palace we come to some Egyptian villas, on the top of one of which there is a group of merry-makers, while in the next house there are lamentations for the first-born. Down below, in a garden rich with verdure, two Egyptian lovers are wandering amid the flowers, absorbed simply in their own happiness. Passing the palace, we come to the chief scene of the Israelites' flight, with one of the large gates of Memphis, through which the Israelites are departing in procession. A crowd of Egyptians in the market place are cursing them as they pass, a long procession, winding from the city gates behind the Sphinx, and past the base of the Pyramids toward the Desert. The procession is full of striking groups. In the background there are Bedouins mocking the Israelites and a group of mourners bewailing their dead. On the other side of the road, facing the Great Pyramid, stands an Egyptian villa, the family group on the roof of which shows us something of the life of the rich owner.

We do not require the Egyptologists from the British Museum to criticize this painting from the side of the expert. From the point of view of the ordinary sight-seer it is a very striking picture, which enables us to realize more than we have ever done before the fact that Pharaoh and his horsemen, and the Israelites and the Egyptians, were all once real living creatures of flesh and blood. On the opposite page we give views of two sections of Mr. Berninger's great painting.

Lewis F. Day writes in the *Architectural Record* on "Modern Mosaic in England," and has especial words of praise for Mr. John Clayton, the foremost representative of that art in Britain. While recognizing the difficulties under which the artist in mosaic must labor working in the nineteenth century, and in England instead of the mediæval East, with its Southern sun to light up, and the broad surfaces of unbroken gold, he has "designed much manly and masterly work in mosaic.

THE EXODUS: MEMPHIS AND THE SPHINX. (SEE OPPOSITE PAGE.)

THE NEW BOOKS.

ZOLA'S "LA DÉBÂCLE."*

THE most remarkable book which has been issued from the press during the summer is M. Emile Zola's last novel, which, fortunately, is free from most of the faults that disfigure those which have preceded it. "La Débâcle (Bibliothèque Charpentier, Paris) is a wonderful picture of the overthrow of the empire. It has now been well translated into English by E. P. Robins, so that the English-speaking people may have the advantage of reading this consummate delineation of the overthrow of the empire (Cassell Publishing Co., New York). The story is very slight. As a story it is but a thread on which to string together an account of the overturn of the second empire. M. Zola brings out, as no other writer on military subjects has done with equal power, the extent to which a great army goes to pieces if those in command have neither the brain nor the character to move and feed it. The series of pictures of the life of the French soldiers in camp and on the march impresses the reader deeply with the conviction that the war was lost from the first; and that, even if the Germans had never fired a shot, the mere marching about of the French armies would have shaken the empire to pieces. It is an old saying that armies, like serpents, move on their bellies; and the incapacity of the French administration to provide food from day to day for their

troops, in their ever-shifting movements hither and thither in obedience to the political exigencies of the Empress and her council of ministers in Paris, explains the terrible catastrophe which for a time obliterated France from the political map of Europe. M. Zola excels in painting pictures of gloom, and certainly no artist ever had a more lurid canvas than that which is devoted to "La Débâcle." No book that we have read for a long time conveys with equal vividness the sense of the frightful waste of war, or enables us to realize so distinctly the way in which a battle appears to those who take part in it. It is the very opposite of the method of the special correspondent. In M. Zola's pages one marches with the soldier along the dusty roads, sees him at the camp fire at night, when cold and hungry he tries to sleep, or crouches beside him as hour after hour he lies

* The Downfall (La Débâcle). By Emile Zola. Translated by E. P. Robins. Paper, 12mo, pp. 565. New York: Cassell Publishing Co. 50 cents.

M. EMILE ZOLA.

in the burning sun, while the shells drop round him, and he gnashes his teeth to fire a shot in reply to his invisible enemy. As a picture of society gone rotten at the head, it can hardly be excelled.

As better than any extended review of this book from a non-French standpoint, we prefer to translate some paragraphs from the Vicomte de Vogüé's eloquent discussion of it in the *Revue des Deux Mondes*. The fact that M. de Vogüé was himself an actor in the scenes described by the novelist lends additional force and interest to his criticisms. He says:

"I have just finished it—the Book of Sorrow. That its author has to a rare degree the power of giving pain is a statement no one will deny. A book of M. Zola's is usually an intellectual convict prison, where our mind, broken down by heavy labor, revolted by forced intimacy with shameful associates, oppressed in this moral night, and deprived of all hope, drags through the weary pages the cannon ball of fatality. But often, also, in awaking from

this nightmare, the mind is able to laugh at its past anguish—to recognize that the prison was but an illusion, created by the visionary's sombre fancy. This time the images called up by the writer are too real; they had been buried in our memories under the accumulated years, and it is like violating a sepulchre. We curse, but, in spite of ourselves, we follow the Ezekiel who leads us into those fields of the Ardennes covered with bones of men. 'He caused me to pass by them round about, and behold, there were very many in the open valley; and lo, they were very dry. . . . And there was a noise, and behold an earthquake, and the bones came together, bone to his bone. . . . And the breath came into them, and they lived and stood up upon their feet, an exceeding great army.'

"I would not have asked for this book. We only care to dwell on griefs that are rich with some source of pride. We speak of their loss to the widows of heroes; before the widows of shipwrecked mariners we are silent about the sad fate of those who have gone down uselessly, ingloriously. Our souls are like those widows. But M. Zola's daring pen cares not for our modesties. His book is written; it is being talked of up and down the world; the author has sent me a copy; it would be impossible for me to speak of anything else to-day—all the more so that the novelist has placed his characters and the center of his action in the corps, the division, and even the brigade, in which the writer of these lines was serving at the time. I felt that I ought to mention this coincidence, as it gives more certainty to my criticism. In every march described by him, clear recollections enable me to check the accuracy of his descriptions. This circumstance increases, in my case, the depression which every one must feel after having seen our disasters over again through M. Zola's eyes. It adds to the admiration which I feel as a French rhetorician; it justifies the reserves which I shall suggest, as a man, and a witness of those evil days. . . .

"The book ends—or should logically end—with the rout of Sedan and the captivity in the peninsula of Iges. The supplementary portion, in which the author traces in broad strokes the siege of Paris and the Commune, produces the impression of having been added afterward by another hand. From the point of view of literary appreciation, the only part of the book that should be retained is its living and organic part—the retreat on Sedan and the battle.

"There is not a fault to find with the first chapters. The painter is placing his masses—putting in his background, and that is what he can do best. . . . We wait in vain for the great individual portrait which he never gives us; but, in the opening chapters, when he summons up and drives before him that army, he can challenge comparison with the mightiest constructors of epics. The masses are here bathed in a twilight mist, vibrating with uneasy breaths; each detail contributes to the total effect of oppression; and already we see Fate hovering over this flock driven to the slaughter. The sudden oscillations from swagger to panic—the distant echoes of Fröschwiller—a victory for some hours, then a disaster; the gradual decline in the enthusiasm the troops had brought with them from Paris, giving place to an incurable depression—the rank growth of all the worst instincts, as discipline gradually relaxes—this dissolution of the multifold animal, a little while ago an army, now a beast for the slaughter house. M. Zola glories in painting all these. He gives us all the horror of that time in all its truth, and the sensation which he gives us is not due to easy analytic methods, but always to a true epic synthesis.

"The detail of place and circumstance is nearly always minutely accurate. I do not praise the novelist for this precision any more than I should blame him for any confusions, if such existed; such material exactness matters very little. What does matter is the right calling up of feelings. M. Zola does not translate all feelings into words—certainly not. But those which he does lend to his creations—to the brutes of the squadron, to the few officers in whom he personifies different military types—he sees and renders with marvelous fidelity. These are, in general, coarse and uncomfortable impulses; but one is forced to acknowledge that, as a matter of fact, they took up most space and showed themselves conspicuously in the foreground. It is absolutely true that eating and sleeping become, in such cases, the only preoccupations of man, fallen back to the plane of his primitive instincts; the most refined cannot escape from this. In the water—always in the water—one's fingers numb with cold and sore with buckling and unbuckling the straps of the knapsack—such was the dominant sensation of those days. M. Zola—with his heavy hammering of repetition—which here has the force of truth—almost revives their physical sufferings for us."

But M. Zola's history of the war passes over two points of the highest importance, and in so doing leaves two blanks, which M. de Vogüé feels keenly. He only shows us one of the two opposing forces. The German army, in his pages, is a mere cipher. He entirely fails to explain in what its superiority consisted. What was there in these men? Why did they conquer France? Only he who knows the answer, and dares to give it, will be able to write *the* book about the war. M. Zola is not lacking in courage, but he has not observed—perhaps wants the special sense that would enable him to observe—the fact of the matter:

"He who is so well up in all the points of the battlefield of Sedan must surely know what was to be seen and heard there on the evening of September 1, 1870. It was a picture to tempt his pen—those innumerable lines of fires starring all the valley of the Meuse, those grave and solemn chants sent out into the night by hundreds of thousands of voices. No orgy, no disorder, no relaxation of discipline; the men mounting guard under arms till the inexorable task was done; the hymns to the God of victory and the distant home—they seemed like an army of priests coming from the sacrifice. This one picture, painted as the novelist knows how to paint in his best days, would have shown us what virtues, wanting in our own camp, had kept fortune in the service of the other."

M. Zola has overlooked the fact that, in vilifying the *cochons de Prussiens*, as his characters constantly call them, he is likewise vilifying his own countrymen, who could be conquered by such a foe. And he does take too low a view of France—that is M. de Vogüé's second objection. Were *all* the French—except a few brave Vineuils, helpless to do any good—frivolous, ignorant, corrupt, boastful or brutal—all Rogue-Macquerts'? Surely not. M. Zola has not exaggerated the panic, despair, and consequent demoralization of the French army. But the demoralization was not universal or uninterrupted. Here and there, now and again, the brave French light-heartedness would gain the upper hand—M. de Vogüé has witnessed instances over and over again. And, moreover, granting that all Zola says is true for the unhappy Sedan army, his book pretends to embrace the whole long agony of France. Why—if the men were all such as he describes—why did it last so long? What of those multiplied, irrepressible efforts which for six months kept up a resist-

ance unique in the annals of recent warfare? Surely there was some life left in the nation. But no account is taken of all this in "La Débâcle."

Summing up, M. de Vogüé says:

"That there are in 'La Débâcle' and in M. Zola's former works pages of a rare and lofty beauty, I have joyfully testified, having felt their charm. That this last work is, in many respects, a *literary* masterpiece, I agree, and I have not been grudging of a mere literary praise. But the touchstone of the book is not *there*, young readers! Do not believe your rhetoric manuals on this point. Listen to your mother, and, later on, to your woman friend! They will tell you that the good and beautiful books—those have a chance of remaining alive after their

author is sleeping underground—are the books which help us to cross life's difficult places. This is so true that, after finishing 'La Débâcle,' tortured by the revival of my saddest memories, I instinctively took up a volume of 'War and Peace.'

"Thus the traveler, after bathing in the Dead Sea, goes to wash in the neighboring waters of Jordan. The Arab guides say it is the only way to get rid of the heavy, mephitic and corrosive liquid, which burns the skin. The Dead Sea is, none the less, a curious and magnificent phenomenon: people come to see it from all quarters of the world; they do not resist the temptation of a plunge in it. But how good it seems afterward—the sweet and clear water of the river!"

RECENT AMERICAN AND ENGLISH PUBLICATIONS.

HISTORY.

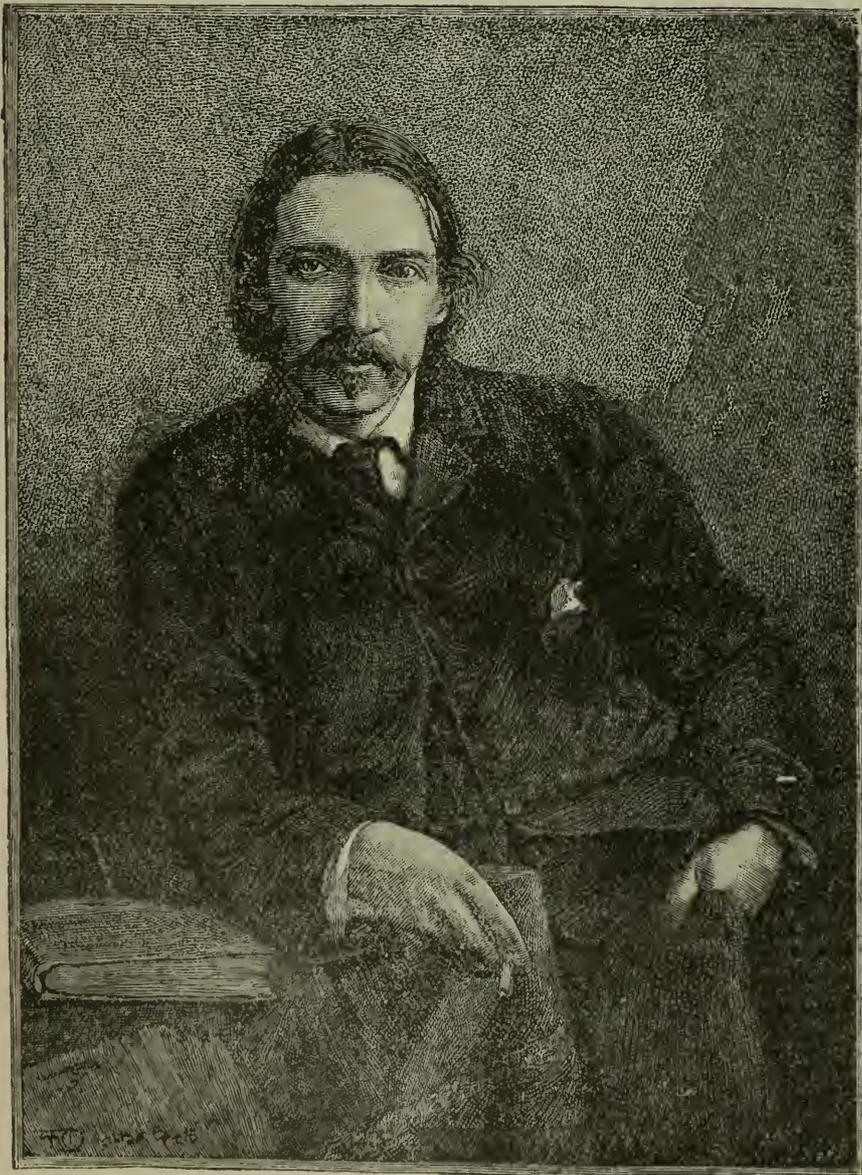

A Footnote of History. Eight Years of Trouble in Samoa. By Robert Louis Stevenson. 12mo, pp. 322. New York: Charles Scribner's Sons. \$1.

Mr. Stevenson remarks in his preface that "an affair which might be deemed worthy of a note of a few lines in any gen-

eral history has been here expanded to the size of a volume." He proceeds to explain that he has brought out this story of the political distractions and difficulties in Samoa with considerable haste, yet with care and painstaking, in order to do a practical service to the islands at a moment somewhat critical, both for the internal and also the foreign relationships of the Samoans. It happens that the volume falls upon the American market under circumstances which give it a special interest not anticipated by the author, although it has so recently come from his pen. Americans have been fumbling their atlases somewhat curiously, and asking one another questions about these same islands, because they have learned that there is supposed to be a disposition on the part of England to share with us the exclusive rights to establish a naval and coaling station in the Samoan harbor of Pago Pago, which we supposed we had secured some years ago. If Mr. Stevenson could have foreseen the particular phase of the Samoan question that would have interested American readers at the very moment when his book was to appear he would doubtless have added a chapter dealing with these questions as to the establishment of American, German and English naval stations in the ports of the island group. Although such a chapter is wanting, the story of the local difficulties which made trouble between America and Germany, which called to Samoa several of our warships, and which were so singularly affected by the terrible hurricane of March, 1889, has a very timely interest. The treaty of Berlin, which establishes the present régime in Samoa, under an international agreement in which the United States participates, will in the sequel appear plainly as a very important turning point in the diplomatic and foreign policy of the United States, and in the movement for the construction by our government of a modern navy. Mr. Stevenson, it should be remarked, writes history as he writes everything else, in a luminous and singularly attractive style.

A History of Peru. By Clements R. Markham. Octavo, pp. 556. Chicago: Charles H. Sergel & Co. \$2.50.

Messrs. Sergel & Co., of Chicago, have entered upon the publication of a series of books for which there ought to be a strong demand. They have entitled the series "Latin-American Republics." Each history is to be complete in one good-sized volume. Several are announced as in press, but the first actually to make its appearance is a history of Peru by Mr. Clements R. Markham, whose former books dealing with South American and particularly with Peruvian affairs have shown him to possess qualifications of a high order. His history of Peru begins with an account of the Inca empire and its civilization, and describes in compact chapters the Spanish conquest and settlement of the country, and the colonial history preceding the war of independence. That war, under San Martin, and the subsequent story of the republic, including the career of Bolivar, bring us to the middle of the book. The special value of the volume lies in the fact that its second half gives us in convenient and reliable form the story of Peru during the past fifty years. It is extremely convenient at this time to have a faithful presentation of the circumstances and facts of the Chilean invasion of Peru, and all the events of the stormy period between 1870 and 1890. If the successive volumes in this series of books upon the South American republics are as able and as full of valuable information as Mr. Markham's Peru they will be welcome indeed. A con-

ROBERT LOUIS STEVENSON.

eral history has been here expanded to the size of a volume." He proceeds to explain that he has brought out this story of the political distractions and difficulties in Samoa with considerable haste, yet with care and painstaking, in order to do

siderable number of illustrations add to the interest of the work.

Papers of the American Society of Church History. Vol. IV. Edited by Rev. Samuel Macauley Jackson, M. A. Paper, 8vo, pp. 283. New York : G. P. Putnam's Sons. \$3.

The American Society of Church History is an organization which has already produced literature of permanent value. Its publications are edited by Rev. S. M. Jackson, secretary of the society. The new annual volume contains a very important list of the works of interest to the student of church history which have appeared in the year 1891. The list is an astonishingly long one, and indicates great activity among the workers in this field. Among the original papers contained in this volume are one by Mr. William Kendall Gillett upon the Religious Motives of Christopher Columbus ; one by the Rev. John Gordon, D.D., upon the Papal Bulls Distributing America ; one by Rev. John Nicum on the Conventional History of the Lutheran Church in this Country ; one by the Rev. Dr. Philip Schaff on the Friendship of Calvin and Melancthon ; one by Dr. Albert Henry Newman, of Toronto, on Recent Researches concerning Mediæval Sects, and several other papers of interest to students in ecclesiastical fields.

Discovery of America by Christopher Columbus. By Harry Hakes, M.D. Paper, 16mo, pp. 132. Wilkesbarre, Pa. : Published by the Author.

To the making of Columbus books there seems to be no end. Harry Hakes, M.D., of Wilkesbarre, Pa., who does not pretend to original work in historical investigation, writes a clear, simple account of Columbus' discovery of America, with a view to a large popular sale.

Hungary and Its People. By Louis Felbermann. Octavo, pp. 390. London, Griffith & Farran. 10s. 6d.

As far as we are aware, there has heretofore been no popular work dealing with Hungary and its people. The present volume, if there be such a want, supplies it, and in a creditable fashion. It has good, large type, and a number of illustrations—historical, portrait and landscape.

England Under the Coalition. By P. W. Clayden, M.A. Octavo, pp. 575. London : T. Fisher Unwin. 10s. 6d.

Mr. Clayden, who is the real editor of the *Daily News*, for Mr. Robinson can hardly be taken seriously as an editor, has written an excellent handbook for the use of Liberal politicians. It is a history of the last administration from the point of view of Bouverie street. It has the advantage of being the only work that covers that period of contemporary history. It deals chiefly, although not exclusively, with the Irish policy of the Government, and is characterized by a limpid lucidity which is the note of everything which passes from Mr. Clayden's practiced pen.

Colonial Chronology: A Chronology of the Principal Events of the British Colonies and India from the Close of the Sixteenth Century to the Present Time. By H. J. Robinson. London : Lawrence & Bullen. 16s.

This book is the first attempt that has been made to give within a compass of a volume the history of our Colonial Empire. The history is set forth in parallel columns ; there are maps showing the growth of the British Empire since 1592 to 1892. At the end there is a concise account of every colony, with maps. The book is the printed record of one of the greatest achievements which any race ever accomplished in the history of the world.

POLITICS, ECONOMICS AND SOCIOLOGY.

On the Shifting and Incidence of Taxation. By Edwin R. A. Seligman. Paper, 8vo, pp. 191. Baltimore : American Economic Association. \$1.

The subject of taxation occupies a place of growing importance both in the more theoretical and abstract discussions of economics and also in the plans and schemes of practical statesmen. The last issue in the series of publications of the American Economic Association is a monograph on the Shifting and Incidence of Taxation, by Prof. E. R. A. Seligman, of Columbia College. This study will add to the high reputation which Professor Seligman has already gained. It does not attempt to reach any rigid and precise conclusions, nevertheless it is full of enlightenment, and it can be recommended most earnestly to the attention not only of economic students, but also of municipal administrators, members of legislatures and intelligent business men who are willing to take the trouble to make a real study of the science of taxation.

Equitable Taxation. Six Essays. With an Introduction by the Hon. Jonathan A. Lane. 12mo, pp. 94. New York : Thomas Y. Crowell & Co. 75 cents.

Another really timely volume on this subject of taxation is made up of the six essays selected as the best out of a number submitted to *Public Opinion*, our esteemed Washington contemporary, in response to the offer of prizes for essays on the question, "What, if any, changes in existing plans are necessary to secure an equitable disposition of national taxation for the support of national, State and municipal governments?" Perhaps the best essay of all, however, is the introduction, written by Mr. Jonathan A. Lane, president of the Boston Merchants' Association. The drift of the essays is in favor of a differentiation between the sources of national, State and municipal taxes. To municipal and local purposes would be given up the tax on real estate. The State governments would support themselves by taxes on railways and other corporations. The volume has comparatively little to do with the question of the support of the national government.

The Free-Trade Struggle in England. By M. M. Trumbull. Second edition, revised. 12mo, pp. 288. Chicago : The Open Court Publishing Co. 75 cents.

Mr. M. M. Trumbull, of Chicago, who published a history of the free-trade struggle in England some ten years ago, now brings out an enlarged edition of that work, intended to serve for reference at this time when the relative merits of protection and free trade are under American scrutiny. It will be found the most complete and convenient, and probably the most accurate accessible, account of the reform of the English customs system.

The Coming Climax in the Destinies of America. By Lester C. Hubbard. Paper, 12mo, pp. 480. Chicago : Charles H. Kerr & Co. 50 cents.

Mr. Lester C. Hubbard is a writer who has given much attention to strikes and labor troubles, and whose new book is in the interests of the People's party. It is a powerful arraignment of the growth of corporations and plutocracy in American life and politics, with an outline of the remedies which Mr. Hubbard would regard as conservative in the true sense of that word. He defends governmental banking, land taxation, State operation of coal and oil lands, State operation of transit systems, and other reforms, which are conceived and stated in a spirit of earnest concern for the public welfare.

Public Finance. By C. F. Barstable. Octavo, pp. 672. London : Macmillan. 12s. 6d.

The most important recent contribution to the science of taxation and the administration of national revenues that has come to us from across the water is Professor Barstable's new work entitled "Public Finance." The main headings of this book are: I. Public Expenditure. II. Public Revenue. III. The Principles of Taxation. IV. The Several Kinds of Taxes. V. The Relations of Expenditures to Receipts. VI. Financial Administration. This work is much more than a student's dissertation in theoretical finance. It is based upon a very considerable range of historical and statistical study. It is a solid and able addition to the literature of this department of economic research.

The New House of Commons, July, 1892. Paper, pp. 328. London : Macmillan. 1s.

The last Member of the House of Commons had not been elected when the *Times* brought out, through Messrs. Macmillan, this admirable handbook to the new House. The *Times* was almost the only paper that distinguished itself this General Election. The forecasts of its special commissioner were wonderfully correct, and it was one of the few papers which enabled its readers to compare the polls of the preceding day with the polls of the General Elections of 1885 and 1886, and the by-elections in the same constituencies.

Warships of the World. Lloyd's Register of British and Foreign Shipping. Particulars of the Warships of the World. In three parts. Tenth revised edition. London : 2 White Lane Court, Cornhill. 5s.

This is an invaluable book of reference. It contains not only the particulars concerning the warships of each country in the world, but also a table of all their guns, with principal particulars and summaries of all guns afloat in the world, together with statistics of the merchant shipping and particulars of all dry and wet docks, etc.

The Year Book of Australia. 1892. European edition, with Maps. Octavo, pp. 960. London : Petherick & Co. 10s. 6d.

This most useful handbook is invaluable to all who are in any way interested in the Australian colonies. It contains a

vast mass of information, which has been declared by those on the spot, who are best qualified to judge, to be reliable and comprehensive. Its steadily increasing success is illustrated by the fact that, commenced in 1882 as a book of 160 pages, it now forms a volume of nearly 1,000 pages, of closely printed matter, systematically arranged for ready reference under the following heads: Administrative and Legislative; Agricultural and Pastoral; Annual Reviews of Banking, Building Societies, Commercial, Insurance, Mining, Postage, Stocks and Shares, Wool; Art, Music, and Drama; Ecclesiastical, Educational; Gazetteer; Land and Land Laws; Legal; Literary, Scientific, and Kindred Subjects; Local General Information; Medical; Military; Mineral and Mining; Naval, Imperial and Colonial; Postal and Telegraphic; Public Finances; Railways and Tramways; Sporting; Statistics.

ESSAYS, CRITICISM AND BELLES-LETTRES.

Old Shrines and Ivy. By William Winter. 32mo, pp. 296. New York: Macmillan & Co. 75 cents.

"Old Shrines and Ivy" is the title of another volume in the charming series of little books by William Winter. Its first part Mr. Winter entitles "Shrines of History," and we have ten little essays, including "Storied Southampton," "The Shakespeare Church," "From London to Dover," "Ely and Its Cathedral," "The Field of Culloden," and others. The second half, "Shrines of Literature," includes, besides five Shakespearean essays, an equal number of other literary pieces, written at one time or another by Mr. Winter.

A Trip to England. By Goldwin Smith, D.C.L. 32mo, pp. 136. New York: Macmillan & Co. 75 cents.

The Messrs. Macmillan have reissued, in the same size and style as Mr. Winter's volume just mentioned, Prof. Goldwin Smith's inimitable little brochure entitled "A Trip to England." This little book has given great delight to the limited number of readers who have been privileged to enjoy it in the earlier edition, and it ought now to have great currency in its new form.

The Diary and Letters of Madame D'Arblay (Frances Burney). With notes by W. C. Ward, and Prefaced by Lord Macaulay's Essay. In three volumes, 12mo, 447-468-480. New York: Frederick Warne & Co. \$3.

The reproduction of standard works that delighted our grandparents is a good sign of the times, and one may justly hail with pleasure the appearance in thoroughly good form of a three-volume edition in the Chandos Classics of the Diary and Letters of Madame D'Arblay. Miss Burney's characterizations are full of vivacity and humor, and give one a thousand entertaining pictures of English court life in the period just following the American Revolution, and including the period of the French Revolution and subsequent social and political upheavals. As the first in the series of English women novelists of high rank, Fanny Burney will always hold her place in the history of English literature; but, after all, the sprightly jottings of her diaries are the writings which will give her most enduring fame.

Philosophy and Physical Science. By Mattoon Monroe Curtis, M.A., Ph.D. Paper. 12mo, pp. 53. Cleveland: Adelbert College.

An inaugural address delivered at Dr. Curtis' entrance upon the professorship of Philosophy at Adelbert College.

RELIGION AND THEOLOGY.

The Only Good Thing in All the Worlds. By Professor J. B. Turner. 12mo, pp. 167. Chicago: The Open Court Publishing Co. \$1.

No better or more genuine protest against the needless confounding of man-made theologies and the divine truths of a practical religion has ever been made than is embodied in this little volume by Professor Turner, of Jacksonville, Ill., now in his 87th or 88th year, whose long life has been one of good works and broad views. He makes a plea for the simple Christianity taught by Christ himself, as against the elaborate and human structures, ecclesiastical and theological, which grew up four or five centuries after the death of Christ. The professor's is the Christ creed as against the Church creed.

Paganism Surviving in Christianity. By Abram Herbert Lewis, D.D. 12mo, pp. 324. New York: G. P. Putnam's Sons. \$1.75.

The Rev. Dr. Lewis has written several preceding books upon the origin and history of the Sabbath, and upon the relationship of the modern Sunday to the ancient Jewish Sab-

bath. This new volume, which purports to treat of the remains of paganism in Christianity, is a book of much learning and much curious information. It discusses Asiatic and Greek pagan water-worship and the ancient water-worship of Europe and Mexico and their influence upon the doctrine and practice of baptism. The pagan sun-worship and its relationship to the subsequent Sunday observance that grew up inside the Christian church, and that replaced the keeping of the Sabbath day, affords a topic for several chapters. The author also holds that any form of State religion is of pagan origin. He instances various practices and ceremonials in use in some portions of the modern Christian church as having been introduced from pagan religions. His principal conclusion would seem to be a return to the observance of the seventh day as a Sabbath, to be kept as a strictly religious day.

Proceedings of the Sixth Annual Convention of Christian Workers in the United States and Canada. Paper, 8vo, pp. 488. New Haven: Christian Workers' Bureau of Supplies. \$1.

We have received a copy of the report of the proceedings of the sixth yearly convention of Christian Workers, held last November at Washington, D. C. The volume is packed with accounts of new and hopeful forms of practical religious work and with suggestions for more effective work in the future. No better sign of a true spirit of Christian unity could well be found anywhere than the evidence contained in this very remarkable volume. Many of the addresses and papers included in the report are of great value and significance. The book is particularly useful as showing what is being done in missionary work for the rescue of the unfortunate of all classes in great cities.

Ephphatha; or, the Amelioration of the World. By F. W. Farrar, D.D. London: Macmillan & Co. 3s. 6d.

The sermons included in this volume were preached by Dr. Farrar in Westminster Abbey and St. Margaret's Church. If Mr. Price Hughes had preached and published them he would have called the volume "Social Christianity," and it would have been a better title. But the Archdeacon is a social reformer almost as radical as the Methodist Price Hughes; and these admirable discourses do indeed show that "it is possible for a clergyman without offense to deal with questions which may fairly be called political."

POETRY AND THE DRAMA.

Columbus: An Epic Poem. By Samuel Jefferson, F.R.A.S., F.C.S. 12mo, pp. 247. Chicago: S. C. Griggs & Co. \$1.25.

Mr. Samuel Jefferson has had some experience in epic poetry, having done the "Invincible Armada" in verse. Being an "F.R.A.S." and an "F.C.S.," it would seem that poetry is with him merely a diversion from more wonted scientific tasks. He entitles his poem "Columbus: An Epic Poem, Giving an Accurate History of the Great Discovery in Rhymed Heroic Verse." The composition can scarcely be called poetry, for it is not a work of imaginative art; but it is a simple straightforward narrative of the Columbian discovery of America told in smooth rhymes.

Songs of the Lowly, and Other Poems. By George Horton. 12mo, pp. 241. Chicago: F. J. Schulte & Co. \$1.50.

Mr. Horton's poems, though of very uneven merit, have much of the genuine ring about them. His volume would have made a better impression if he had been more willing to sacrifice some of the children of his fancy. His best work is good enough so that one could wish that the rest were better. Mr. Horton shows a lyrical facility which sometimes ensnares him into carelessness.

Songs of a Day. By Frank L. Stanton. 12mo, pp. 108. New York: John B. Alden.

A little volume of lyrics, to which is appended about a dozen Georgia dialect poems which the author calls "Songs of the Soil." The leading characteristics of all these verses are gentleness, purity and simplicity. The spirit of love is in them all—love of nature, of men, and of God. So predominant is this latter love that the volume might almost be called "Religious Poems." Their religion is of no mysterious, esoteric sort, but is the simple religion of Christ. The most apparent fault of the volume is a lack of vigor. We could sometimes wish to hear the author cry out against death, even defy it—anything to show that he possesses a passion for living. But he is always calmly resigned. This fault, however, is compensated for by the obvious sincerity of the poems. There is not an artificial note in the volume.

FICTION.

Columbia: A Story of the Discovery of America. By John R. Musick. 12mo, pp. 357. New York: Funk & Wagnalls Company. \$1.50.

Estevan: A Story of the Spanish Conquests. By John R. Musick. 12mo, pp. 405. New York: Funk & Wagnalls Company. \$1.50.

Mr. John R. Musick has set before himself a task which it will be very difficult to perform without degeneracy into methods somewhat mechanical and perfunctory. His undertaking is nothing less than a complete history of our country, from Columbus down to the present day, in the form of twelve complete stories. The first two volumes are already in the market, and they impress us altogether favorably. If, in their conscientious attempt to present history, the information is somewhat more fully developed than the romantic element, the seeming fault may in fact be a merit. The first volume, "Columbus," treats of the voyages and success of the great navigator. The second volume, "Estevan," covers the further period of Spanish discovery and conquest. The heroine of the book is the daughter of Balboa. From the literary and historical point of view these volumes may be safely recommended for young people. They throw many a faithful and attractive side-light upon the bare and sober record of the early history of our continent.

Life and Adventures of Martin Chuzzlewit. By Charles Dickens. 12mo, pp. 828. New York: Macmillan & Co. \$1.

The Old Curiosity Shop, and Master Humphrey's Clock. By Charles Dickens. 12mo, pp. 674. New York: Macmillan & Co. \$1.

In their reprint of the first edition of Charles Dickens' novels, Messrs. Macmillan & Co. now send us "Martin Chuzzlewit" and "The Old Curiosity Shop." As the volumes in this series succeed one another, we are the more charmed and impressed with the great special value given them by the full explanatory introductions prepared by Charles Dickens the younger, in which every material circumstance and incident connected with the writing and publication of the story is faithfully recorded. The reproduction of the original illustrations, moreover, add much to the charm of the volumes and to their value for the library shelves. No book buyer of good taste and moderate means will supply his young people at home with the cheap and badly-printed pirated editions of the Dickens novels when once he becomes acquainted with these specimens of genuinely good book-making. It only remains to be said that Dickens continues to hold his place as the most popular novelist in the English language.

"Ground Arms!" The Story of a Life. By Bertha von Suttner. 16mo, pp. 286. Chicago: A. C. McClurg & Co. \$1.

No one who has never come into contact with life in Austria, Hungary, and the other parts of southern Europe can well imagine the terrible strain of apprehension under which the thoughtful element of the population rests, and particularly the wives and mothers of the educated classes, in view of the possibility of an outbreak of war at almost any moment. The situation has become almost unbearably terrible to these sensitive and foreboding women. That feeling has found expression in a remarkable novel by the Baroness Bertha von Suttner, which has now been adequately translated from the German by Alice Asbury Abbott. "Ground Arms!" is a story of great power, and one which has made a profound sensation in Germany and continental Europe. Its author, who had already won some reputation as a sentimental novelist, has now emerged as an untiring advocate of international arbitration as a remedy for war, and of the disbanding of the great European armies. This is one of the books worth reading.

The History of a Failure, and Other Tales. By E. Chilton. 16mo, pp. 205. New York: Longmans, Green & Co. \$1.

These little stories have a touch of humor and pathos of their own, with a decided religious tendency. They are very charming and readable.

Pierette. By Honoré de Balzac. 12mo, pp. 337. Boston: Roberts Brothers. \$1.50.

In their beautifully gotten up edition of the novels of Balzac, translated most carefully and adequately by Katharine Prescott Wormeley, the Messrs. Roberts Brothers send us, as (their latest) the twenty-second volume, the charming but

sorrowful tale "Pierette," with which is bound the novellette "The Vicar of Tours," which Balzac dedicated to his friend the great sculptor David. In the cycle of his works, so presented as to portray the comedy of human life, these two tales fall into the group which pictures scenes from life in the French provinces.

Nicholas Blood, Candidate. By Arthur Henry. Second edition. 16mo, pp. 200. Chicago: F. J. Schulte & Co. \$1.

"Nicholas Blood, Candidate," has reached a second edition. The negro question in our South is producing a literature of its own. This bit of realistic fiction deserves no mean place in the list of books devoted to that momentous problem. It is written from the point of view of the white race, as a terrible warning against the dangers of negro domination.

Emma. By Jane Austen. Two vols., 16mo, pp. 319-315. Boston: Roberts Brothers. \$2.50.

We have already had occasion to congratulate the Messrs. Roberts Brothers upon the perfect specimens of American book-making which they are giving us in their republication of the novels of Jane Austen. "Emma," in two volumes, has now made its appearance, following in uniform style the two volume editions of "Sense and Sensibility," and "Pride and Prejudice."

The Wrecker. By Robert Louis Stevenson and Lloyd Osbourne. Octavo, pp. 427. London: Cassell. 6s.

There is too much padding in this book. The early life of Mr. Loudon Dodd in Paris and in Edinburgh has little to do with his subsequent career. Nor does the padding serve the purpose which the earlier chapters of some of Mr. Rider Haggard's novels serve—that of telling adventures, interesting indeed, but small as compared with what is to follow, so that the reader is worked up by degrees. Contrast, not climax, is to be found here. The opening chapters are as flat as the latter part of the book is piquant. From the moment that Mr. Dodd first hears of the *Flying Scud* the story goes with an irresistible rush. A very able hand, too, has given to all the leading scenes touches of color which cling to the memory. The seabirds screaming, fighting, and dying among the sacks of waste rice make a picture life-like to see and hard to forget. What a pity that a striking story cannot be relieved of its encumbrances!

The Old Maids' Club. By I. Zangwill. Octavo, pp. 326. London: Heinemann. 3s. 6d.

Having succeeded with "The Bachelors' Club," it is quite natural that Mr. Zangwill should try his literary luck with its feminine counterpart. Imitative volumes of this sort are generally failures; but, if anything, "The Old Maids' Club" is even more amusing than was its predecessor. Now, Mr. Zangwill can fairly say that he has produced two of the most original volumes of humor which have appeared for some time.

Sarchedon: A Legend of the Great Queen. By G. J. Whyte-Melville. Paper, 12mo, pp. 438. Chicago: Rand, McNally & Co. 50 cents.

"Sarchedon" is a highly-wrought romance of ancient days, in which the great Assyrian queen, Semiramis, figures as a conspicuous character.

Leah the Forsaken. By Dr. S. Mosenthal. Paper, 12mo, pp. 122. Philadelphia: T. B. Peterson & Brothers. 25 cents.

This is a translation of the original German novel of Dr. Mosenthal, from which the widely popular play of the same name has been dramatized.

Kate Kennedy. A Novel. By Mrs. C. J. Newby. Paper, 8vo, pp. 114. Philadelphia: T. B. Peterson & Brothers. 25 cents.

Dreams of the Dead. By Edward Stanton. 12mo, pp. 268. Boston: Lee & Shepard. \$1.

This volume purports to be a story. It seems, however, to be a series of chapters in the personal experiences of the author, who is an occultist of the theosophical type.

The Other Bond. By Dora Russell. Paper, 16mo, pp. 372. New York: John A. Taylor & Co. 50 cents.

NOW READY

Annual Index and Guide to the Periodicals of 1891.

This Index covers the periodical literature of the year 1891, and contains many improvements on the issue for 1890. Its main features are:

(1) A carefully prepared "biographical" notice of the leading magazines and reviews of the world, describing their character, aim and scope; and giving in each case the name of the editor and publisher, the address of the office and the price of the periodical.

(2) A complete classified index of all the articles that appeared in the chief English and American quarterlies and monthlies—120 in number—each entry showing (in addition to the title of the article) the name of the magazine, the number of the volume, the month and the page. The author's name, where possible, is included; and where maps and illustrations accompanied the article, these are also indicated.

It is incomparably more elaborate than any other in the same field and contains many portraits of Editors and Writers. Bound in stiff Cloth Covers and Gold. PRICE, \$2. SENT BY MAIL—POST-PAID.

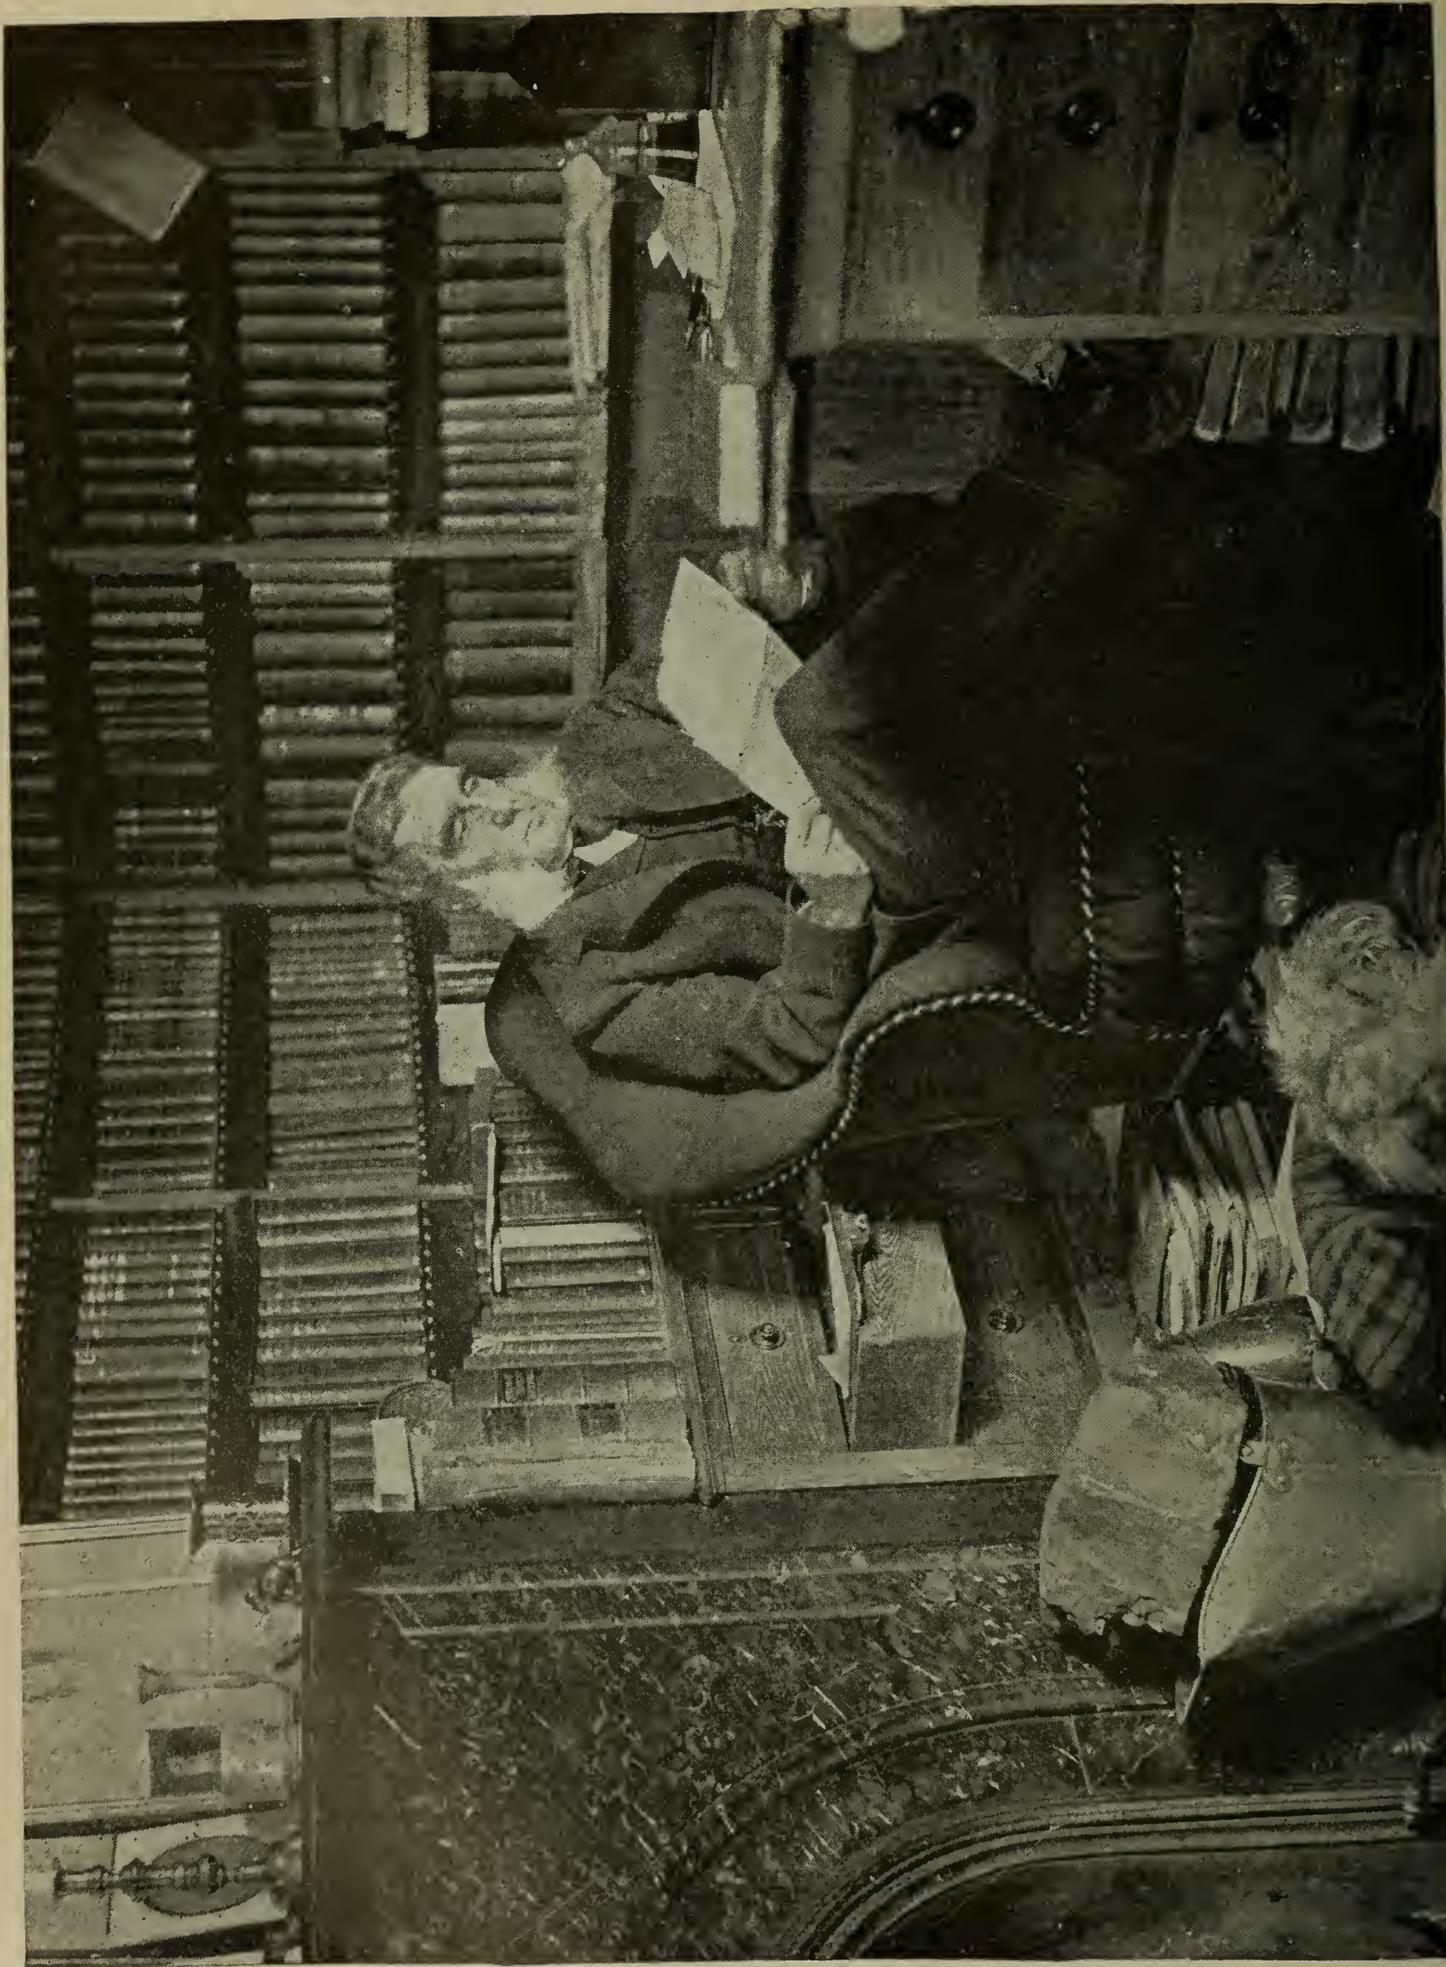

THE REVIEW OF REVIEWS, 13 Astor Place, New York.

THE REVIEW OF REVIEWS, AMERICAN EDITION, EDITED BY ALBERT SHAW

The Review of Reviews is published each month in New York and London, the two editions differing in many features, but publishing numerous articles in common. The English Edition is edited by W. T. Stead, Mowbray House, Norfolk St., Strand, London.

CONTENTS FOR OCTOBER, 1892.

George William Curtis Frontispiece.

THE LATE GEORGE WILLIAM CURTIS, IN THE "EASY CHAIR."

THE REVIEW OF REVIEWS.

VOL. VI.

NEW YORK, OCTOBER, 1892.

No. 33.

THE PROGRESS OF THE WORLD.

THE GENIUS OF COLUMBUS.

(A Sculpture from the New-York Monument.)

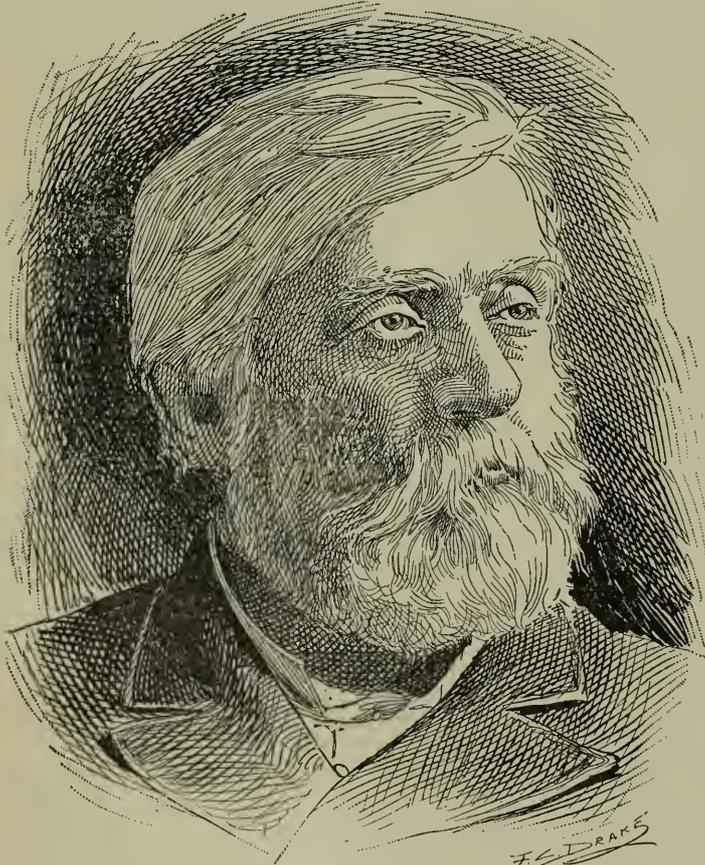

THIS month of October, 1892, brings the four hundredth anniversary of the discovery of America by Columbus. Few people have paused to reflect that the world's celebration of this particular anniversary is merely the result of the accidental or arbitrary adoption of a decimal system of reckoning. A year is a natural measure of time, but a century is a purely artificial period. In the essential nature of things there is no more reason for making a great occasion out of the four hundredth anniversary than out of the three hundred and eighty-seventh or the four hundred and thirteenth. But the human mind is so constituted that it likes to measure off time in round periods of equal duration, and it happens that we have a system of counting and calculating that makes one hundred a round, complete number. According to this system, five hundred is an even more symmetrical number than four hundred, and accord-

ingly our posterity must be expected to make the most stupendous of celebrations in 1992. But by that time the duodecimal system of reckoning may have come into vogue, and a "seculum" or "age" of one hundred and forty-four years—twelve twelves—may have taken the place in ordinary usage of the old-fashioned century—the completion of ten tens. In such a case the date 1992 would mean nothing whatsoever to anybody, and the world would wait as best it could seventy-six years longer in order to outdo itself in rapturous demonstrations in the year 2068, on the completion of the fourth duodecimal seculum. Many eminent mathematicians contend that we ought for all purposes to abandon the decimal in favor of the duodecimal system; and therefore it is not at all improbable that the fashion of attaching significance to centennial anniversaries may pass away in the comparatively early future.

Yet, arbitrary as are their making, how momentous are the real historical results that sometimes accrue from the improvement of these purely fictitious historical occasions! The American government and people could never have been spurred up to the immense concentration of energy that resulted in the "Centennial" of 1876 at Philadelphia but for a kind of magical virtue that seemed by common consent to belong to the round figure 100. Viewing the matter philosophically, no reason could have been more trivial or irrelevant for the holding of a great national and international exposition. But the exposition—itsself created out of meaningless deference to a mere date in the calendar—was an event which made for that date a great historical significance of its own. For as the Declaration of 1776 gave political birth to the nation, so the Exposition of 1876 was the beginning of a new national career in industry, art and general culture. The French in 1889 celebrated by a magnificent exposition at Paris the one hundredth anniversary of the establishment of the First Republic. The attachment of importance to the date as such was merely fanciful; but the celebration was of a character so influential as to give the date 1889 an independent historical value in the French chronology. In view of the fact that the project of a Columbian World's Fair on a scale of unprecedented magnificence derived its whole initial velocity from the circumstance that this very month of

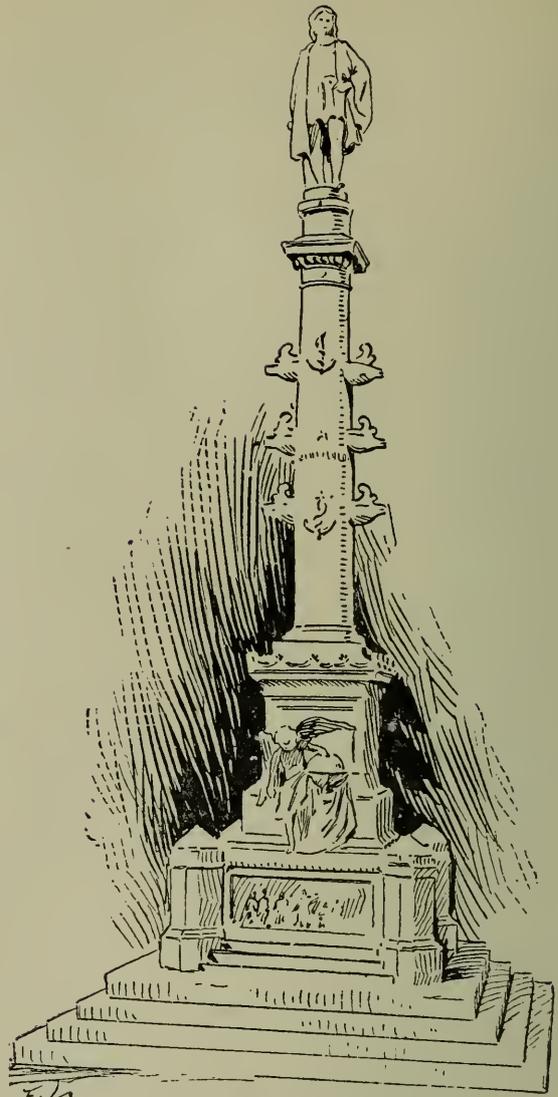

October, 1892, will mark the completion of four hundred years since Columbus first crossed the Atlantic, it is to be noted as exceedingly curious that all this splendid furor of enthusiasm for a particular date in the calendar is destined to miscarry by one year, so that 1893 rather than 1892 will perpetually wear the honors.

¹⁸⁹³
versus
^{1892.} A hundred years hence, if our people shall still feel this impulse to do honor to centennial periods, they will have to recognize first the Columbian quincentennial in 1992, and then in 1993 they must pay a centennial tribute to the epoch-making and ever-memorable celebration of 1893. In all seriousness, the preparations for 1893 bid fair to make that date so brilliant and so great in the world's history that its anniversaries will be as likely to win observance as those of the great Navigator's crowning achievement. The Chicago Fair will prodigiously accelerate the material progress of all nations. But even more emphatically it will affect the world's moral and intellectual progress and the relationships of different nations and races of men. Who can name anything ever attempted before that could be

HON. W. C. P. BRECKINRIDGE, OF KENTUCKY,
Columbian Orator, Chicago, October 21.

compared in possibilities of vast influence, with the World's Congresses, more than one hundred in number, that will be held in Chicago in 1893? Elsewhere in this issue of the REVIEW our readers may learn from President Bonney the scope and method of these Congresses; and through the courtesy of Dr. Barrows, chairman of the committee, they may understand the boldness and amazing spirit of tolerance in-

THE COLUMBUS MONUMENT.
New York, October 12, 1892.

volved in that crowning project, the World's Parliament of Religions. These events will make 1893 the most luminous date in the chronology of this century, quite regardless of Columbus.

Nevertheless, 1892 is not disposed to abdicate altogether in favor of next year; and a very imposing array of festivities in honor of the great Christopher will have marked the four hundredth anniversary with punctilious regard for the date. Besides the European celebrations, there will be dedicatory formalities at Chicago intended to mitigate the offense of the postponement till 1893 of the real show—to soften the shock and minimize the discrepancy, so to speak. A great oration by Mr. Breckinridge, of Kentucky, has been promised as one of the chief incidents of the occasion. The New York celebration will consist chiefly of a naval review in which our own government will make its best possible appearance, and in which every sea-going State of Europe, Asia and the Western Hemisphere will be represented by at least one public vessel. Besides, there will be elaborate civic and military parades in the streets of New York City, and the metropolis will be decorated almost beyond rec-

ognition. Not the least interesting part of the celebration will be the erection of the new Columbus monument with its surmounting statue, at Eighth avenue near Central Park. This noble work of art has lately arrived from Italy in a special ship and is a gift to New York City of the resident Italian

GAETANO RUSSO,
Designer of the Columbus Monument.

colony. The designer, now our guest in this country, is Signor G. Russo, of Rome. This monument will stand henceforth as one of the finest ornaments of New York.

From Columbus to Lieutenant Peary. The discovery of America, begun by Columbus, has been a continuous process. It has gone on steadily for four hundred years and is not completed yet. There still remain portions of the interior and of the northern coast lines that are not definitely known. Counting Greenland as a part of our western world—as geographers have habitually done—we may regard Lieutenant Peary's exploit in this very anniversary year 1892 as simply a continuance of the work of Columbus and his successors. Look at a map of the Arctic regions and you will see that no northern outline is given for Greenland, at least for a long distance. It has not been given by the map makers, because it has not been determined by the explorers. But Lieutenant Peary (of whose views and purposes an account is given in our department of "The New Books") has this summer made a sledging expedition across the ice fields of Greenland from his camp beyond Cape York to the unknown north coast, and has brought back definite geographical information that will help geographers to complete the outline map of that portion of America. The REVIEW OF REVIEWS last year told of the perilous undertaking and of the anxiety that was felt for the little party wintering so far north. The *Kite*, which took Peary, his wife and his associates last year and left them in McCormick Bay, has now had the happy fortune to find them and bring them back. The return of the Peary Expedition was one of the pleasantest incidents of the month of September.

LIEUTENANT ROBERT E. PEARY, U.S.N.

MRS. JOSEPHINE DIEBITSCH PEARY.

GEN. JOHN N. PALMER,
Commander of the Grand Army.

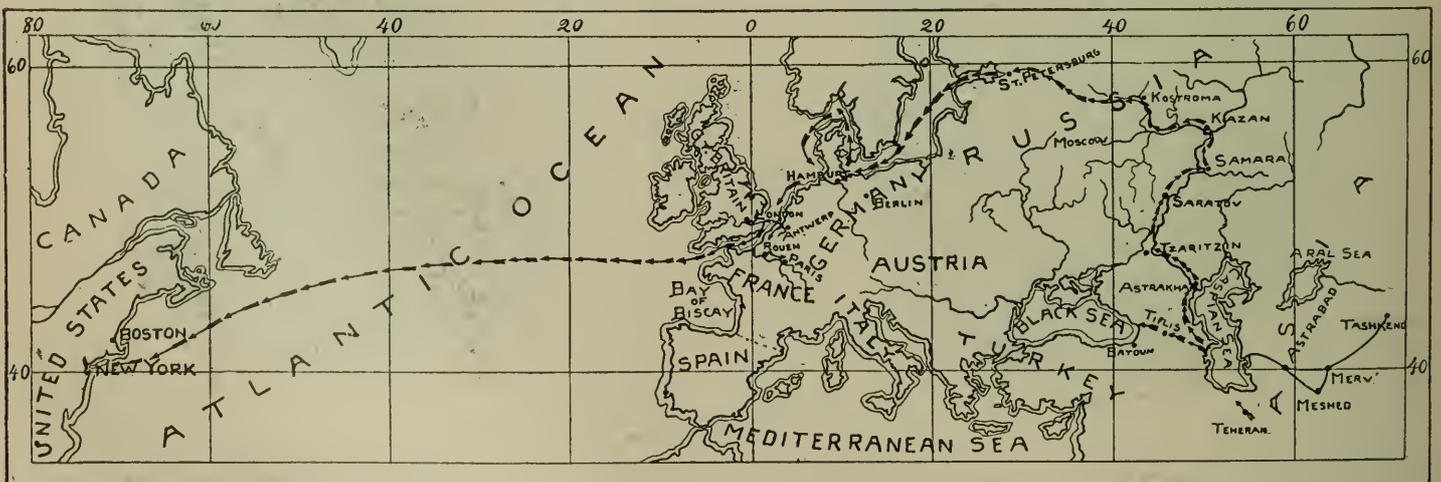

The Grand Army at Washington.

The most impressive event of the month, doubtless, has been the twenty-sixth annual meeting of the Grand Army of the Republic, at Washington. The Union troops made a grand review in Washington in 1865 at the close of the war, and were then mustered out of the service. They hastened to take up again the pursuits of peace, and they have ever since been at the fore-front of almost every profession, trade and calling. The stern

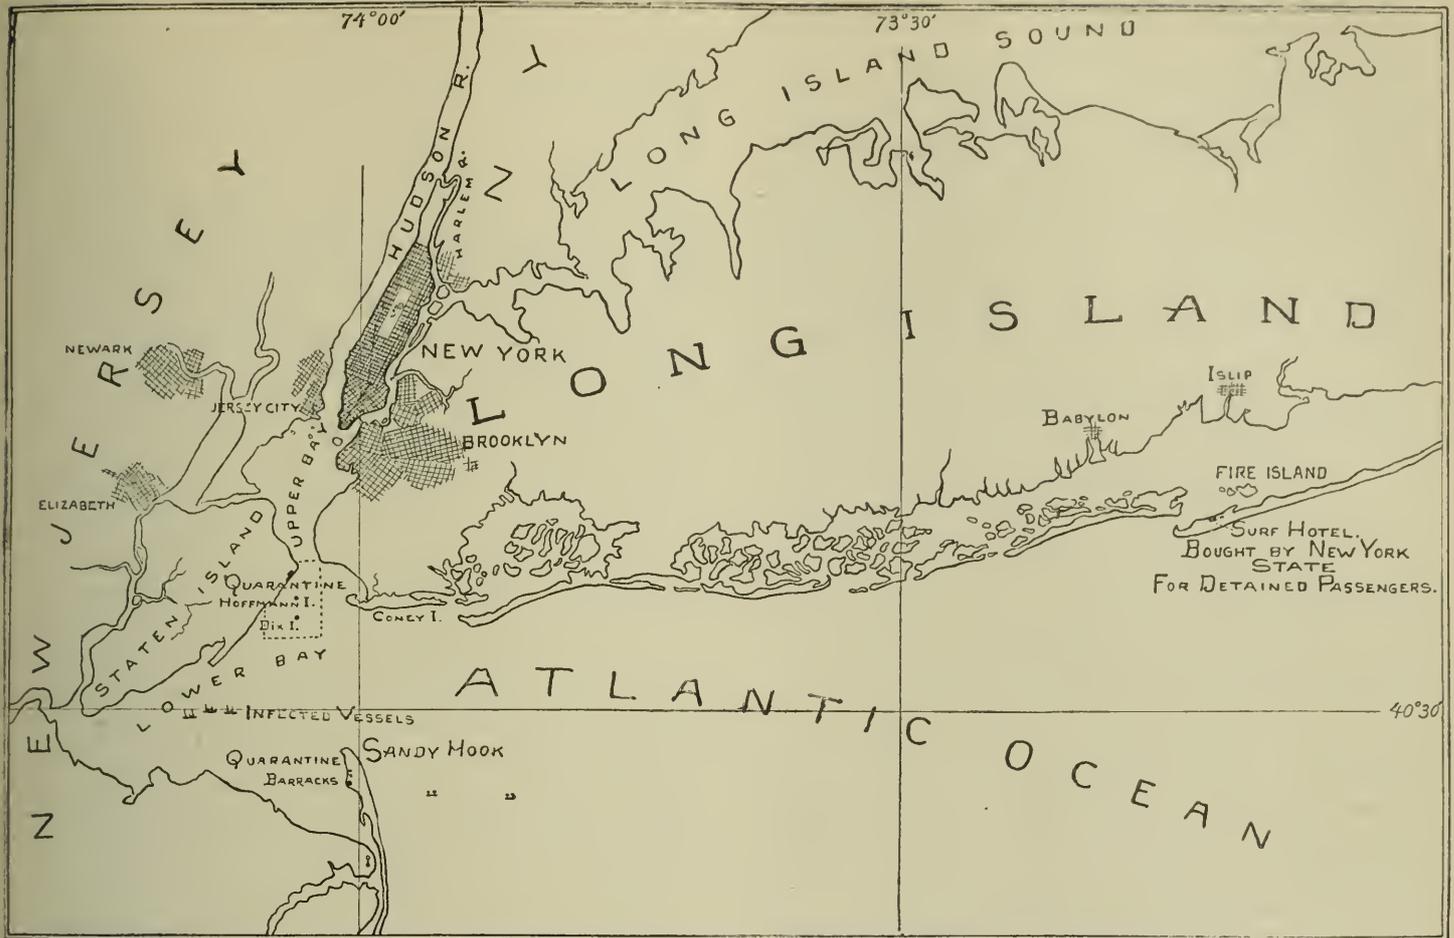

emergencies of the war seem to have evoked such energy, capacity and self-reliance in the young men who composed the armies of both sides as to have insured for them an extraordinarily high average of success in the pursuits which afterward occupied them. Soon after the war the Union veterans formed an association which they called the Grand Army, and which rapidly grew until it included a large majority of the survivors of the Federal armies. The yearly "national encampments" are always memorable spectacles: but this year's at Washington has been unusually interesting. Naturally, the veterans made especial efforts to be present, and it is reported that hardly less than 100,000 men who carried arms in the war for the Union were participants in this encampment. Most of the Grand Army men are farmers and mechanics. The annual encampment, with its cheap railway rates and its frugal and military but inexpensive shelter and "mess," is a fine opportunity for an annual journey and holiday on the co-operative plan. And these occasions always stimulate patriotism, without fomenting any sectional antagonisms.

The Cholera's Path across Russia.

Russia, which sent the grippe upon its frightfully destructive course through Europe and America, has now to take the responsibility of spreading abroad that comparatively harmless, yet infinitely more fear-compelling scourge, the cholera. The accompanying map shows very well how it has all come about. Russia has pushed her activities far beyond the Caspian Sea into Turkestan, and the Transcaspian Railway extends nearly a thousand miles, through Askabad, Merv and Bokhara to Samarkand. Starting from India some months ago the cholera followed the caravan routes across the mountains of the Khyber Pass, visited Cabul and the Afghan cities, reached the northern line of the Russian Transcaspian travel, and made its way westward both by the Merv route and also by way of Persia, where in Teheran and other crowded centres it has been terribly severe. It passed across and around the Caspian and broke out in Astrakan on the European side of that sea, at the mouth of Rus-

VICINITY OF NEW YORK, SHOWING QUARANTINE ARRANGEMENTS.

sia's great river, the Volga. It made its way up the Volga Valley to Nijni Novgorod, the city of markets and fairs, and thence it moved quickly to Moscow, and at length to St. Petersburg and the Baltic.

It Comes with the Russian Emigrants. In former seasons the cholera might well have made this course and gone no farther. But this year its spread to other parts of Europe was made almost inevitable by the enormous emigration of Russian Jews that Baron Hirsh and his agents are conducting. The final destiny of most of them is the United States. They are shipped first to Hamburg or some other port from which steamers sail to New York, and there they are transferred to the steerage of the Atlantic emigrant vessels. Definite arrangements had been made for the transportation this summer of many thousands of these poor people, and even after the cholera had broken out among them every effort was made to carry out the contract and dump them on American shores, quite regardless of the danger to us. It was thus that the infection was carried to Hamburg and Havre, and thence carried to various points in Germany, to Paris, and to other Continental cities. Nothing but New York's excellent water and generally favorable sanitary conditions averted a terrible scourge of typhus brought here by these wretched Russian Hebrew immigrants some weeks ago. Now nothing averts an epidemic of the cholera in New

York except a quarantine almost savage in its un-sparing rigors. President Harrison's proclamation of a twenty-day quarantine against emigrant ships from infected ports has acted temporarily as a rather effectual embargo upon immigration. If this step could but lead to a definite measure shutting off nine-tenths of the volume of Europe's least desirable population that is rolling in upon us, the whole American nation would rejoice. The politicians have long handled this question in a timid and time-serving spirit. But they need not be afraid any longer, for restriction will henceforth be an amply popular cause.

New York's Health Administration.

A few cases appeared in New York in spite of all precautions; but the quarantine measures adopted were substantially successful. Many people were surprised and perturbed, however, to find that the health authorities of the port and of the city, although they had been warned for months by the existence of cholera abroad, had seemed never even to dream of a course of action to be pursued in case the cholera should actually steam up the bay. All that was done was subsequent to the arrival of the disease, and was done with an amount of fumbling, delay, irresolution and awkwardness that excited the most serious alarms. It was many days before the authorities could bring enough concentration of energy to bear upon the matter to provide a way to separate well passengers from sick

ones. They kept the ships from coming into port, but were guilty of the horrible barbarity of refusing to allow well cabin passengers to be removed from ships carrying infection in the steerage. Turkish quarantine, which is effectual though not very scientific or humane, might possibly have involved some of the wicked and ignorant stupidities that formed a part of the heroic attempt of ill-qualified Tammany officials to keep cholera out of New York. But in no other country, except Turkey, would these things have been possible. Turkish officialism and Tammany officialism are remarkably alike in many respects. It was all very generous for Mr. Morgan to charter a steamer for the relief of the imprisoned and imperiled passengers of the *Normannia*, for Mr. Austin Corbin to make the improvements for a detention camp on Sandy Hook, and for Governor Flower to advance the money to buy Fire Island; but these and other similar incidents have only brought into more painful notice the total unpreparedness of the public officials whose business it is to meet such emergencies, and their extremely limited ability to act adequately in the face of a serious danger.

The Sanitary Inspector of Nature. It sounds paradoxical, but it is true that the threatened visitation is a blessing in disguise. The Asiatic cholera is the great sanitary inspector of Nature. He may be regarded as the author of modern sanitation, and whenever the zeal of the sanitarian burns low, the cholera goes his rounds and revives the faith of mankind in measures of public health. There can be little doubt that the cholera saves far more lives than the few whom it sacrifices. There is hardly a capital in Europe which is not being made cleaner, sweeter, and therefore more habitable and healthy because of the threatened visitation. We are all putting our houses in order, clearing away our middens, emptying our cesspools, purifying our water supply, and generally waging a holy war against dirt and uncleanness. It is a striking illustration of the immense utility of sensationalism in the economy of the universe. The cholera is really one of the least deadly of diseases if deadliness is to be computed by the numbers slain. Half a dozen other maladies slay, year in and year out, ten men for one taken by the cholera; but they do it in a quiet, stealthy, strictly non-sensational fashion. Hence they kill, and kill, and kill, and it does no good. But when the cholera comes along it produces the maximum of sensation by the minimum expenditure of life, and does more good in its sensational tour of three months than all the other diseases do in as many years. It is no doubt due to their appreciation of this fact that the journalists exhaust their resources in striking head-lines as if to get up a cholera panic. Otherwise their method of dealing with the cholera news would be murderously cruel.

Even in Bokhara. Every one has heard the story of the dervish who met the cholera on the desert and asked where it was bound. "To Damascus to slay 20,000 men." Meeting it again on

returning, the dervish said: "You rascal, you killed 100,000!" "No," said the cholera, "I killed only 20,000—fear killed the rest." That panic fear, however, is less deadly to-day, because it stirs up the sanitary inspectors, flushes the drains and incurs expenditure which, save on compulsion of cholera, would never be sanctioned by parsimonious sanitary boards. M. Lessar, the brilliant Russian diplomatist and engineer, who for some time past has been the Resident at Bokhara, told Mr. Stead the other day that his Ameer had averted the visitation of cholera by a vigorous sanitary reform, which has made Bokhara one of the cleanest cities in Central Asia. The Ameer wanted to visit St. Petersburg. M. Lessar gave him a hint that he could not be received if Bokhara remained a reeking cesspool; and forthwith the work of sanitation was begun. All the abattoirs are now outside the city, and every morning all the night-soil is carried by asses into the country. Bokhara has not had a single case of cholera, and the Ameer will be graciously received in St. Petersburg this autumn. It is an excellent illustration of the value of sanitation, even in the most unlikely quarters. Unfortunately we have no equivalent to a longed-for trip to St. Petersburg with which to bribe our local Ameers into a display of sanitary activity. Nothing will do that short of the sudden and sensational slaughter of a certain number of taxpayers; and as this human sacrifice seems to be indispensable, it is a merciful arrangement that the work should be intrusted to a disease as rapid and decisive as the cholera. It passes in about three weeks, and as its victims are seldom ill three days, there is at least no prolonged torture before death.

The Tariff Question. The political situation remains in a nebulous state. The platforms adopted at Minneapolis and Chicago promised us a square, unequivocal contest between the two great parties upon the broad issue of a protective tariff. The Chicago convention did not adopt its tariff plank with the usual passive acquiescence in the report of a committee on resolutions, but it fought the question out in open debate; and amid great enthusiasm, by a large majority, it adopted a plank denouncing protection as a fraud in practice and as a violation of the Constitution in theory. But candor must compel the comment that the Democrats are not waging their campaign upon the Chicago tariff declarations, and that they have thus far given the country no clear indication of the practical policy they will adopt when they come into power with the executive department and both houses of Congress in their control. The entire Democratic press has now assumed a tone of great confidence, and this is fully shared by the so-called independent press that joins in support of Mr. Cleveland. They promise us that the Republicans will be forced to surrender both the White House and the Senate, and that the Democrats will easily retain their enormous preponderance in the House. In view of this abounding confidence it would be somewhat reassuring if the country could know to

what extent a Democratic Congress and Administration would overhaul Mr. McKinley's tariff. It is not really probable, however, that the party would proceed in a spirit of great violence. Responsibility has almost invariably made every American party cautious.

Vermont and Maine. A large share of this hopefulness professed by the Democratic politicians and press is attributed by them to the falling off of the Republican majorities in Vermont and Maine. These two States hold their local and congressional elections several weeks earlier than the presidential election in November. The other States of the Union, excepting these two, Rhode Island and Arkansas, have adopted the November date for their State and local elections. The Rhode Island State election was held several months ago, and the Republicans were the gainers. Arkansas' recent election resulted in an increased majority for the Democrats—the Australian ballot system, used for the first time, having diminished the number of illiterate colored Republican voters. In Vermont and Maine the Republicans were, of course, as usual successful by strong majorities, but in both States there was a somewhat marked decline from the former average size of the majority. The Democrats hold that this shrinkage of Republican majorities in northern New England points to a still greater proportionate decline of the November Republican vote in the closer States.

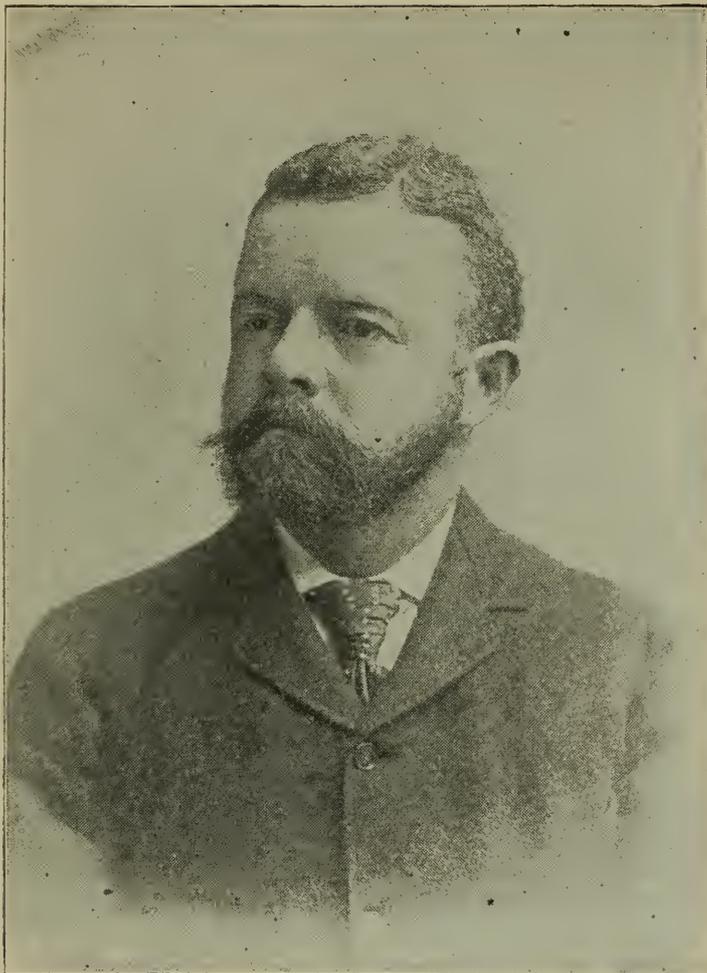

The Peck Incident. The curious state of feeling upon the tariff question has been illustrated by the Peck episode in New York. Mr. Peck is the New York State Commissioner of Labor Statistics, and is a Democrat. He has brought out, as his annual report, a volume summing up an investigation into the statistics of wages and industrial production in the manufacturing establishments of New York State for the year before the McKinley tariff went into effect, and the year following. Having compiled the confidential reports sent to him by the manufacturers of the State, he has discovered an average increase of wages and a considerable increase in the total value of manufactured commodities. Mr. Peck's compilation was undoubtedly a perfectly conscientious one, but it contains nothing at all conclusive either for or against the McKinley tariff. The Republicans naturally attempted to make capital out of it, while certain persons representing the Democratic National Committee rather absurdly charged Mr. Peck with fraud, and attempted by legal process to obtain possession of the confidential returns which manufacturers had sent in under the pledge that their statements should be used only to merge in the averages. The fury of Mr. Peck's detractors has lent quite an undue importance to the summaries contained in that statistician's very inconclusive report. It is a simple fact that the past year has been one of good wages and a high average of general prosperity in this country. It does not

follow at all that the McKinley tariff is in any important sense the cause of this condition.

Various Issues.

President Harrison's long delayed letter accepting the Republican nomination is an able and highly ingenious document, defending the Republican policies of protection and reciprocity, reviewing the foreign complications with which his administration has dealt, and very especially warning the country against the Democratic demand for the repeal of the tax that has suppressed the issue of currency by State banks. The President's letter was followed by a brief but no less impressive one from the pen of Mr. Blaine, setting forth his views of the topics which ought to be kept at the front by the Republicans in the pending campaign. Protection, reciprocity and opposition to State bank currency are the three strong positions which Mr. Blaine advises his fellow-partisans to occupy, to the practical exclusion of all other issues. Certainly the Democrats at Chicago were led into a very weak and unnecessary position when they agreed to demand the repeal of the tax against State bank notes. The real answer to President Harrison and Mr. Blaine is, that this is an accidental rather than a deliberate and essential part of the Democratic platform; and that with ever so large a majority in both houses of Congress the Democrats would not do so ridiculous a thing as to make possible again the old ante-bellum wildcat currency system.

The Democrats seem disposed to magnify the Force bill issue, although no Republican can be found anywhere who is advocating a force bill. The President in his letter virtually abandons the doctrine of a federal election law by reviving his old-time recommendation of a non-partisan commission to consider the perplexing subject of races and the ballot in the Southern States. The sober second judgment of the Republican party has apparently rejected the idea of a federal election law. But it is unfortunate that the Republican leaders have agreed upon the policy of ignoring or slighting the topic. In the last Congress they made it so conspicuous an issue that the country has a right to ask what are their present views and purposes. Evasions of this kind, which constitute the most glaring sin that besets our American politicians of both parties, are really very bad politics. Anybody who cares to read between the lines can see that the President has given up all idea of a revival of the Lodge bill, and that Mr. Blaine utterly repudiates any such doctrine or measure. As for Mr. Lodge himself, although his participation in the New England campaign is very active, he seems thus far to have treated his own erstwhile all-absorbing measure with a voluminous silence. This silence would appear to mean that Mr. Lodge acquiesces in the general verdict not only of the country as a whole, but of the Republican party itself, in favor of the largest possible State autonomy in the regulation and conduct of elections. Mr. Lodge's many ardent friends

HON. HENRY CABOT LODGE, OF MASSACHUSETTS.

in Massachusetts have him in training for the Senate to succeed Mr. Dawes, who is expected to retire at the end of his present term, now approaching its completion.

Mr. Morley at the Helm. Mr. Morley has signalized his advent to the Irish office by repudiating Mr. Balfour's Coercion act, and restoring to all parts of Ireland the ordinary processes of law. What to do about the relief of the evicted, and the treatment of the imprisoned dynamiters, is still under consideration. The appointment of a member of the House to a Cabinet post compels him to go back to his constituents and secure a re-election. The opposition to Mr. Morley in Newcastle had taken such a form that he entered this second contest with serious misgivings; but he won a splendid victory, and his prestige is now higher than ever before. Of all the newly appointed Ministers, Mr. Morley alone was seriously opposed in the second election. Mr. Farmer Atkinson, the eccentric Wesleyan, who sat for Boston in the late Parliament, compelled Sir W. Harcourt to re-register the solid Liberal vote at Derby, but Mr. Morley had to fight for his life. At the general election, Mr. Hamond, a gas-and-water Home Ruler, who declared himself in favor of establishing a Parliament at Dublin as far back as 1874, was returned at the head of the poll with a majority of 3,000. As his 13,000 supporters were whipped up by the Unionists,

although they were much more interested in Sunday drinking and fair trade than the fate of the Union, this was regarded as equivalent to a Unionist victory. Newcastle, it was asserted, by returning the Home Ruler, Mr. Hamond, as the colleague of the Home Ruler, Mr. Morley, had declared itself against Home Rule. To put this extraordinary assertion to the test, Mr. Morley's re-election was opposed, not by a Conservative Home Ruler, but by an out-and-out Unionist. The contest, which was fought out with immense enthusiasm, ended in a brilliant victory for Mr. Morley, who was returned at the head of the poll with 1,739 majority. The Tynesiders are staunch, and, after having returned Home Rulers of one kind and another ever since 1874, they naturally refused to apostatize last month even at the bidding of the Great Apostate of the North.

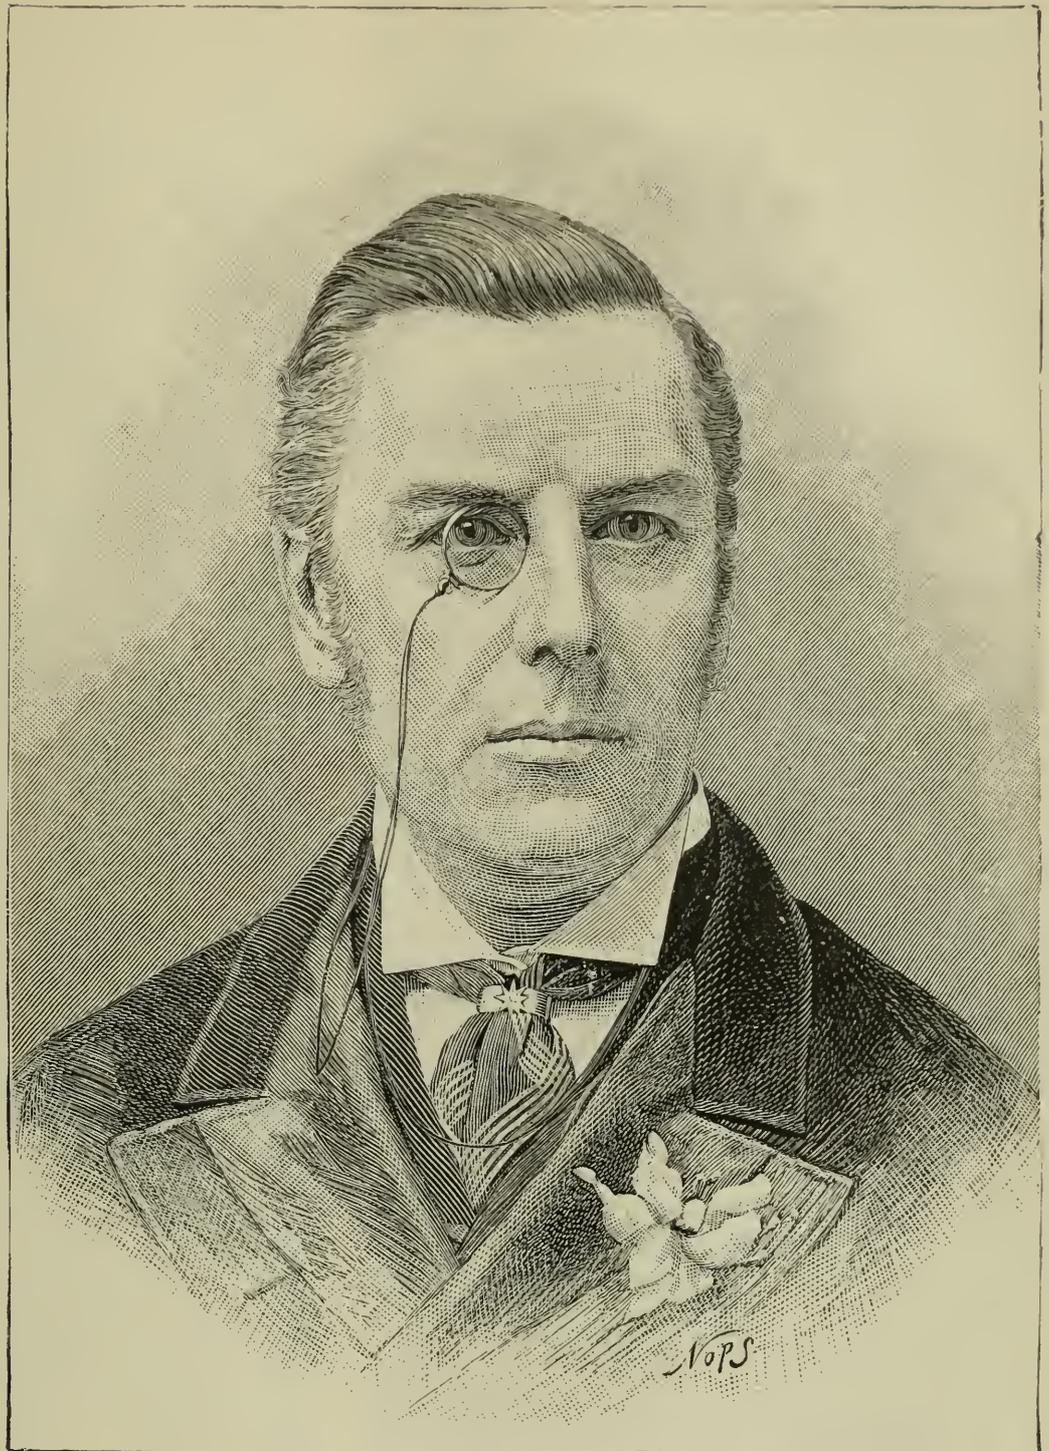

Mr. Gladstone's Gloomy Outlook. Unquestionably, Mr. Gladstone and his lieutenants are going to encounter much tribulation before the Irish question can be settled. They will find themselves between two bitter fires. The speeches made by Mr. Chamberlain and Mr. Redmond in the debate that ushered out the Salisbury Ministry summed up everything with terrible distinctness. Mr. Chamberlain, whose speech was one of the most incisive and effective ever delivered in Parliament, set forth with extraordinary lucidity and force the fixed determination of the mass of the British people never, under any pressure whatever, to concede to Ireland that full measure of colonial independence which Mr. Frederic Harrison declares to be the only solution of the question. As Mr. Chamberlain read out extract after extract from the speeches of Gladstonian Ministers, he made it abundantly clear even to the dullest understanding that any attempt to pass such a Home Rule bill as Mr. Harrison demands would shatter the Gladstonian party to its base. Mr. Redmond, speaking as the representative of the extreme Nationalists, formulated his demands with a precision which left nothing to be desired. Mr. Gladstone was invited to declare—(1) that the 5,000 evicted tenants should be reinstated in their holdings; (2) that the dynamiters and Phoenix Park murderers should be set at liberty; (3) that the Home Rule bill should establish an Irish Parliament even more absolutely free to legislate than any Colonial Parliament. For the veto of the Crown, according to Mr. Redmond, must be exercised not on the advice of the Imperial Cabinet, but on that of the Irish Ministry. It was amid the brooding darkness of a coming storm that the newly appointed Ministers crossed the Solent to take over the seals of office, and when the investiture was complete they recrossed the troubled water amid endless salvoes of thunder, while the livid lightning flashed incessantly around the steamer. In London, during the debate which preceded the fall of Lord Salisbury's Government, the sky became so dark that it was difficult for members, even in the middle of a midsummer afternoon, to see without artificial light

across the floor of the House. It was a curious coincidence. Imagination is not a strong point with politicians; otherwise we should have had the Liberals borrowing from Milton the idea that the World, like Hell, grew darker at the frown of Sin and Death, whose kingdom was threatened by the advent of the new Government, while Conservatives would have seen in the sulphurous mirk

"A hue like that when some great painter dips His pencil in the gloom of earthquake and eclipse,"

a grim presage of woe to come. But science has paralyzed that kind of imagination, and the Gladstonians did not even claim the thunder peals as a royal salute from the skies, although some ingenious Unionist was clever enough to discover some mysterious connection between Mr. Gladstone's return to office and the eruption of Etna.

Mr. Chamberlain Americans and His Maker. who have a fondness for following the great game of English politics should not fail to observe the significant enhancement of Mr. Joseph Chamberlain's importance. His "mugwump" party is much smaller than before in the House; but his own personal weight in politics has gained not a little, and he is no longer to be regarded as a statesman who has sacrificed his political future. Seldom has any general election been productive of so little prestige to the leading combatants. Mr. Balfour has maintained, and possibly improved, his position. Lord Randolph has simply disappeared. Mr. Goschen stands where he did. Mr. Gladstone has distinctly fallen off from his old Midlothian form. Mr. Morley bore himself nobly in the fray, leaving Sir W. Harcourt far behind, but he suffered a severe reverse in his own constituency. The one conspicuous figure who is now on a higher pedestal than before the election is Mr. Chamberlain. He is now the acknowledged dux of the West Midlands. Birmingham is his washpot,

RIGHT HON. JOSEPH CHAMBERLAIN, M.P.

over Stafford he has cast his shoe. Amid the pelting hail of Liberal successes the West Midland district remained impervious to Home Rule attacks, offering a shelter like a high rock in a weary land to the dwindling remnant of the Liberal Unionists. Mr. Chamberlain, if he be capable of magnanimity, which is doubtful, has the ball at his feet. At the same time, it must not be forgotten that although his pedestal is higher than it was, the statue is not necessarily any larger. And nothing is more certain than that the statue did not build its own pedestal. The pedestal builder in the West Midlands was Mr. Bunce, the editor of the *Birmingham Post*. All the Unionist victories were won in his parish. Outside

the limits of the circulation of the *Post*, Mr. Chamberlain's influence counted for little or nothing. The perversion of the West Midlands was not effected by a few slashing speeches from Mr. Chamberlain, delivered after every one had made up his mind. It was the work of six years' steady sap and mine, carried on day after day, week after week, year in and year out, in the columns of a newspaper which for thirty years had proved itself to be the friend of every Liberal reform, the champion of every programme of progress. Not Mr. Chamberlain but Mr. Bunce is the real hero of the elections, and but for the inveterate jealousy or self-effacing modesty of the British journalist the fact would be recognized everywhere instead of being, as now, regarded as a somewhat fantastic paradox.

The Labouchere Issue. Even yet the exclusion of Mr. Henry Labouchere, editor of the London *Truth*, from Mr. Gladstone's Cabinet continues to occupy a large place in the world of English politics. Much of the trouble grew out of original uncandor on the part of some of Mr. Gladstone's *entourage*, who attempted to saddle the Queen with responsibility for Mr. Labouchere's absence from the Administration. This was cowardly on their part, and as unconstitutional as it was untrue. Her Majesty has always acted in a strictly constitutional manner in those matters, and Mr. Gladstone could have made Mr. Labouchere a Cabinet Minister if he pleased. But Mr. Gladstone did not please, and his familiars would have shown more regard both for his own reputation and the position of her Majesty if they had boldly admitted that Mr. Gladstone was determined not to have Mr. Labouchere at any price. The result of their meddling was that Mr. Labouchere, being led to believe the Queen vetoed his nomination, said so in plain, blunt terms, which compelled Mr. Gladstone to throw over his injudicious and inaccurate satellites, and to assume the entire responsibility for leaving the editor of *Truth* outside his Administration. Mr. Gladstone did not want Mr. Labouchere, and when Mr. Gladstone does not want anything he can always conjure up any number of plausible reasons for not getting it. It can hardly be said that he was particularly happy in finally selecting the ground upon which he rested his justification for ignoring Mr. Labouchere. According to the letter which he wrote to the member for Northampton he was unfit to be recommended as a Minister of the Crown, because he was editor of *Truth*. That in plain English was the gist of Mr. Gladstone's letter, although it was wrapped up in the customary Gladstonese of the choicest kind. "Special circumstances, which bore witness to his energy and influence, and were in no degree derogatory to his personal honor, nevertheless rendered it unfit to offer him office." It comes very near saying that the journalist is disqualified, as a journalist, from any place in the Administration. That this is Mr. Gladstone's opinion seems to be confirmed by the remarkable exclusion of Professor Stuart from the Ministry. Professor Stuart has been a faithful

Abdiel, the *fidus Achates* of the Liberal Æneas. He was in many respects admirably qualified to be Vice-President of the Council. He had slaved for years in the great work of reviving Liberalism in London. But all this availed him not against the fact that he was editor of the *Star*. For office in a Liberal Administration no editors need apply. It is a curious rule, not very complimentary either to the editors or to the Ministers. All rumors to the contrary notwithstanding, Mr. Gladstone had a perfectly free hand in choosing his colleagues. Of course Her Majesty would have objected to the nomination of the Tichborne Claimant as Home Secretary, or to any proposal to give office to Sir Charles Dilke; but as Mr. Gladstone is presumably sane, there was no need to stipulate that he should not make appointments that would have been manifestly mad. In the "Character Sketch" there is sufficient said about the new Cabinet; but it may be noted here that neither Mr. Stansfeld, nor Professor Stuart, nor the Aberdeens, figure in the new Administration. The conjunction of these names is curious and suggestive. Let us hope that it may not possess a sinister significance, testifying to what a Canadian correspondent calls "the overpowering influence of that truculent condottieri, Sir W. Harcourt." The substitution of Lord Houghton for Lord Aberdeen as Viceroy of Ireland can hardly be attributed to Mr. Gladstone.

England's Foreign Activities. Truly John Bull strides athwart this mundane sphere in a very masterful manner. Just now the Venezuleans are in distress because John Bull, from his narrow strip called British Guiana, east of the Essequibo, is asserting proprietorship all the way to the Orinoco, and thus gathering unto himself about one-third of the entire territory of this South American Republic. Certainly the benefit of the doubt, if there be any doubt, ought to lie with the Venezuleans as against the claims of a Transatlantic power. Moreover, England has been causing some further uneasiness in the South Seas by taking possession of islands hitherto under their native rulers. If the British would properly organize the empire they already possess before grabbing any more territory, it would be better for them in the end.

The English in Morocco. The Sultan of Morocco, tormented with rebellions and menaced by French designs on his Algerian frontier, has had to deal with Sir Charles Euan-Smith, the British Envoy, who brought for his acceptance a treaty which was ultimately rejected. Sir Charles having taken the wise precaution of having a special correspondent in his suite, seems to have behaved with considerable picturesqueness of demeanor. The demands made in the treaty were approved by all the Powers excepting France. They were as follows:

1. The lowering of the export duty on wheat and barley;
2. The free export of camels, asses, horses, mules, &c.;
3. Freedom of the coasting trade between all the ports of Morocco for all Moorish products;
4. The establishment of mixed tribunals;
5. The aboli-

tion of slavery ; 6. The rectification of the Madrid Convention of 1880 to clause 11, liberty to purchase and own land ; 7. Establishment of a British Vice-Consulate at Fez, with the right to hoist the British flag ; 8. Concession of a telegraph line from Tangier to Mogador, passing through the towns on the coast ; 9. The project of a Moorish State Bank, to be created with English capital ; 10. The creation of a police force for Tangier and the coast towns, under the supervision of the Sultan and the foreign powers ;

SIR CHARLES EUAN-SMITH.

11. The concession of waterworks for Tangier ; 12. market and public slaughter-houses for Tangier.

There were other clauses, of which the most important was the recognition of British sovereignty over Cape Juby. The Sultan shilly-shallied, threatened, promised, wheedled, but ultimately refused to sign. On one occasion there was talk of a massacre. The mob was incited against the mission. Lady Euan-Smith, a soldier's daughter, photographed the rioters with her kodak, and Sir Charles told the Sultan quietly that if he were killed another British minister would take his place, but that "then there will no longer be a Sultan at Fez." The Sultan collapsed. A fine was paid for the riots, and all seemed going well, but at last the Sultan tried to bribe the envoy with £30,000 to accept an altogether nugatory treaty. "Tell your master that I will have neither his bribe nor his treaty," was Sir Charles' reply, as he tore the document into half a dozen pieces and flung them at the Grand Vizier. Thereupon the negotiations ended, and no one can foresee what the final outcome will be. The Sick Man of the West is very sick; but these old empires, as was said long ago, are like an old cart. They creak so abominably that strangers think they are going to pieces, but they outlast many a spick and span new carriage.

*England and
Russia
in Asia.*

There have been many rumors of impending conflict between the English and the Russians over the occupation of the Pamirs, that divide England's India from Russia's Asiatic possessions. But M. Lessar, who represents

Russia in those regions, now declares in London that there is not the least reason for anticipating any trouble about the Pamir dispute. The governments can quarrel about the Pamir as they can quarrel about the cholera if they want to quarrel, but as they don't they won't. M. Lessar says it is mere nonsense to imagine that any importance, strategic or otherwise, can be attached to a region in which no European troops can exist for six months of the year. The Pamir is the roof of Asia, and it is about as comfortable a place to occupy as the coping stone of a house top. The real trouble in Central Asia—we are still quoting M. Lessar—is not to be sought in the lofty plateau of the uninhabitable Pamir, but on the Afghan frontier, across which hundreds and thousands of the Ameer's subjects are flying for safety into the Russian empire. The Ameer is suppressing or trying to suppress a rebellion. The turbulent tribes who are related by race with Russian subjects across the border have been getting the worst of it, and hundreds of families have streamed over the frontier imploring the Russians to give them land on which to live. As the Russians have no land to spare, this kind of pauper immigration causes them much uneasiness. They don't know exactly what to do with their unwelcome guests, and they are wishing, naturally enough, that Lord Lansdowne would tell the Ameer to let the tribes live in peace. Abdur Rahman, however, who is nourishing his gout in Scotch whisky at Cabul, appears to be in an ugly temper, and the proposed visit of Lord Roberts to Jellalabad is indefinitely postponed. The worst of it is that if England stops his subsidies, she virtually cuts his throat; and it does not suit her to throw Afghanistan once more into the throes of a civil war.

*The Pope and
the Reign of
Money.*

After reading Mr. Keir Hardie's declaration that every man who lives on either rent or interest is the natural enemy of the workmen, it is refreshing to turn to the utterances of the Pope on the burning question of the hour. Leo XIII., interviewed last month by Madame Severine, for the *Figaro*, made a notable and characteristic declaration as to the attitude of the Catholic Church on the social question. As the interview was subsequently revised by Cardinal Rampolla, it may be accepted as authentic. The Pope said many things about the error of persecution, which would have led some of his predecessors to send him to the Inquisition; and some things about the Jews which their historians will question. But the important word which he uttered was that in which he spoke of "the Reign of Money as the latest of the scourges of the world and of the Church." The exact words, as reported by Madame Severine, are as follows:

"Finally, while the mission of the Church is to defend the weak, it is also her mission to protect herself against all attempts at oppression. And now, after so many other scourges, the reign of money has arrived—and, with a stern look in his eyes, the Pontiff added, 'it is attempted to subdue the Church and

domineer over the people through money ; neither the Church nor the people will submit to that. I am with the weak, with the humble, with the disinherited—those who were loved by Our Lord.”

*Catholicism
and
Labor.*

The great transformation for which Cardinal Manning worked and prayed so earnestly is in progress. The Pope has broken with the Royalists in France. If he were to undertake to lead mankind in the name of the Carpenter of Nazareth against those who abuse the power of wealth, then liberty and justice would probably be safer in his hands than if the movement were left to the O'Donnells of America and the Keir Hardies of Britain. It is by such exploits, if at all, that there will be achieved the Catholicizing of the English-speaking world, about which so much pious exultation was indulged in by the prophetic souls who gathered together last month to witness the first public ceremonial of the investiture with the Pallium which England has had since the Reformation. Men love those who help them, and if the Pope to-day were to take a vigorous initiative in securing for every worker, even on railways, post offices and tramways, the right to one day's rest in seven, he would do better business for his Church than by any miracle. Human society needs a centre, the forces of progress need a leader, in the struggle for liberty and justice ; we need an excommunicator—in other words, the Comtists are quite right in declaring that the world would get on much better if it had a rational, up-to-date Pope.

*M. Zola at
Lourdes.*

It must be admitted also that there is a good deal more rationality about many of the features of the Roman Church which excite the special ire of the good Protestants than most people imagine. The researches of psychologists, the phenomena of hypnotism, the strange new science of psychometry, are bringing to light the foundations upon which many much contested Catholic doctrines really rest. Psychometry gives a rational basis for the veneration of relics, and it is being discovered there is more to be said for prayers for the dead, pilgrimages, and many other elements of faith and practice which Protestants regard as most irrational. In proof of which we need go no farther than point to the fact that M. Zola is to make the miracles of Lourdes the subject of his next romance, and that the great realist, who has been on pilgrimage, has been profoundly interested and moved by the cures which he saw wrought before the grotto. Speaking to an interviewer, he said :

“ It is certain there is at the present moment a marked return toward mysticism, and this outburst

of faith is rather astonishing at the end of this stirring century, when we are witnessing the general breaking up of everything. Why this unexpected retrograde movement? Because science has not kept its promises. Could it keep them all? The disappointed multitude turns back toward religion.”

The Pope, in short, has an immense chance. His spirit, indeed, is willing, but the deadweight behind him is enormous.

*Bismarck's
Hint.*

Bismarck, after blazing comet-like round his southern ellipse, has come back to North Germany. At Jena he suggested that the time had come when a parliamentary and national movement should be organized against the absolutism of the Kaiser and the domination of the Pope. It is significant that the stoutest and strongest politician in private life in Europe is so impressed by the growing power of the Catholics that he cries aloud against the possible advent of a Centre Ministry as a misfortune and a danger to the Empire. To avert such a calamity he takes up what was the favorite idea of Paul Bert and the French Republicans, and urges the Germans to substitute the idea of the Nation for the idea of the Church. “ We have no National Church,” he said ; “ but might not the idea of the nation be the sanctuary round which all parties should gather?” Always and everywhere this idea of the sanctuary rallying-point haunts the mind of man. If the widest idea wins, it is not the Church that will go to the wall. But the Roman Church has so clipped its world-shadowing wings with the sectarian scissors of compulsory dogma and compulsory ritual that it, too, is only a sect. For catholicity in the sense of universality, Mr. Rhodes would probably assert that the British Empire need fear no comparison with the Roman Church. But the British Empire suffers, like the Roman Church, from a *vis inertia*. It is not half vitalized. Above all it lacks faith. Its rural districts at home have not even the rudiments of those institutions which are the nerves of States. A shuddering dread of applying the federal principle to a handful of Irish close to their door blocks all progress. As for attempting to draw closer together the English-speaking communities under their own flag, that seems not to be thought of. Even so simple, so obvious and so politic a measure as that of making the penny post universal through their realms is scouted by the timid officialism of their post office. This will be the test of the Imperialism of Mr. Arnold Morley and the new Government. They have not a long term of office, but in the next six months they might give penny postage to the Empire.

RECORD OF CURRENT EVENTS.

August 21.—Russian troops, while suppressing a labor riot, kill several persons....Great excitement among Canadian officials when it becomes known that President Harrison has imposed tolls on Canadian shipping passing through the "Soo" canal.

August 22.—The International Peace Congress opens session at Berne, Switzerland....The annual convention of the Deutscher Krieger Bund opens at Kansas City... The yacht *Wasp* defeats the *Gloriana* at Newport....J. P. Washburn, United States Minister to Switzerland, and S. H. Boyd, United States Minister to Siam, return home....Reports of cholera in Hamburg.

August 23.—Switchmen on the Delaware, Lackawanna and Western and on the Buffalo, Rochester and Pittsburgh Railroads go on strike... The Supreme Lodge of Knights of Pythias meet in convention at Kansas City....The celebration of the two hundred and fiftieth anniversary of the founding of Gloucester, Mass., opens....The authorities at Hamburg admit that the so-called cholera prevalent in that city is true Asiatic cholera....A cloud burst in Roanoke, Va., does \$100,000 damage in half an hour.... The American Economic Association meets at Chautauqua....The Argentine conflict between government and congress brought to a satisfactory conclusion.

August 24.—Grand Master Sweeney declares the switchmen's strike "off," the chiefs of other labor unions having refused to order a sympathy strike....Mr. Gladstone is re-elected for Midlothian and Sir Vernon Harcourt for Derby....Annual meeting of the American Bar Association opens at Saratoga.

August 25.—John Bidwell, Prohibition candidate for President, makes public his letter of acceptance....Chancellor McGill, of New Jersey, grants a temporary injunction against the lease of the New Jersey Central Railroad Company to the Reading, and orders the property turned over to the former management....The Supreme Lodge of the Knights of Pythias elect W. W. Blackwell, of Kentucky, Supreme Chancellor, and Walter B. Ritchie, of Ohio, Vice-Chancellor....Employees of the Carnegie mills at Pittsburgh begin a sympathy strike.

August 26.—John Morley re-elected from Newcastle-on-Tyne....The Newfoundland Legislature passes the act for rebuilding the city of St. Johns, which was recently destroyed by fire....All the troops, except the Fourth Brigade, quartered at Buffalo for the purpose of preventing outrages by the striking switchmen, leave for home.... Two cases of Asiatic cholera are discovered on a steamer from Hamburg at Gravesend, on the Thames....Nearly one hundred and fifty miners lose their lives by an explosion and fire in a Welsh coalpit....The Ameer of Afghanistan asks the Indian government what course he shall pursue, as he cannot longer endure the hostile action of Russia....The Chautauqua Assembly holds its closing exercises for the season.

August 27.—Another death from cholera at Gravesend, and two cases at Glasgow....Metropolitan Opera House of New York damaged by fire to the extent of about \$200,000....Seven factory buildings destroyed by fire in lower New York City, injuring several persons, one fatally

....Serious fires in Kansas City, Petoskey, Mich., Augusta, Ga., and Muncie, Ind....The Russian town of Mozir destroyed by fire.

August 28.—The last of the troops withdrawn from guard duty at Buffalo....A political crisis is threatened in Germany over the Military bill....Nearly one thousand houses, including government buildings, burned at Barrissoo, Russia.

August 29.—Six persons are arrested in Homestead charged with conspiracy and aggravated rioting....A typhoid fever epidemic reported in and around Cressona,

MRS. MAYBRICK.

For whose release from an English prison numerous American ladies have petitioned the Queen.

Penn....Cholera makes its appearance in Bremen and Berlin....Orders are issued to the New York municipal departments to put the city in good sanitary condition, in view of the approaching cholera, and stringent rules are adopted by quarantine officials....Several cases of the disease are reported from various parts of Great Britain.

August 30.—The steel and iron plant of Shoenberger, Speer & Co., at Pittsburgh, shuts down because of a strike among the workmen....President Cordera's Ecuadorian Cabinet is announced....The Marquis de Mores is acquitted of the charge of murder for killing Captain Mayer in a duel.

August 31.—The steamer *Moravia* from Hamburg arrives in New York harbor with cholera on board, twenty-two passengers having died during the voyage.... Cardinal Gibbons issues a proclamation appointing Sunday, Oct. 16, a day for special services commemorating the discovery of America.... Mr. Gladstone is attacked and knocked down by a heifer in the park at Hawarden, but escapes serious injury.

September 1.—In the preliminary trial of Lizzie Borden, of Fall River, for the murder of her father and step-mother, the prisoner is adjudged probably guilty and held for action of the Grand Jury.... The steel steamer *Western Reserve* breaks in two on Lake Superior, thereby drowning 26 persons.... President Harrison issues a circular requiring all immigrant vessels from infected ports to be held in twenty days' quarantine.... The new Chinese exclusion act and the retaliation proclamation against Canada go into effect.... Indignation in Victoria over the seizure of sealing vessels by Russian gunboats.... A New York Central mail train plunges into an open draw-bridge near New Hamburg, N. Y., killing three persons outright and injuring many.

September 2.—Moorish rebels submit themselves to the Sultan's authority.... Funeral of George William Curtis, at West Brighton, Staten Island.

September 3.—The *Normania*, *Rugia* and *Stubbenhuk* from Hamburg arrive at quarantine with cholera aboard.... Hugh O Donnell and four other Homestead strikers are arrested, charged with murder.... Nineteen smuggled Chinamen are arrested at Monterey, Cal.... Great Britain places the Gilbert Islands under a protectorate.... Officially announced that Russian emigrants will no longer be permitted to enter Germany.

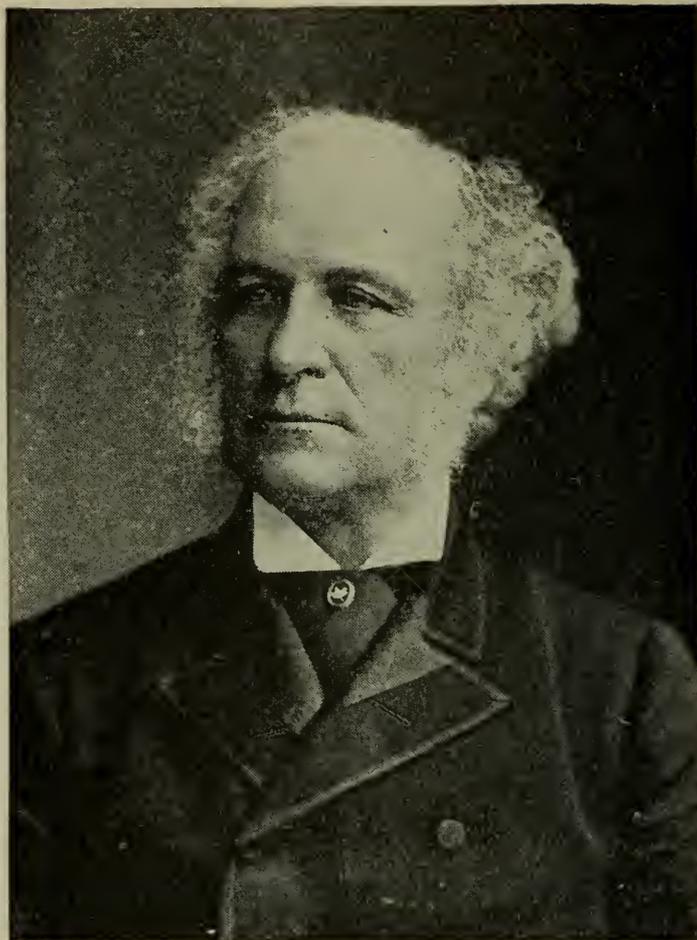

September 4.—Secretary Foster visits New York for the purpose of inspecting quarantine.... The Italian transport *Garigliano* arrives at New York with the statue of Columbus aboard which the New York resident Italians are to set up in New York.... Italian radicals attack a meeting of monarchists in Andria, Italy, wounding several.

September 5.—President Harrison's letter of acceptance published.... Three deaths from cholera at New York quarantine.... Labor Day observed throughout the country.... Health officer Jenkins decides to act in accordance with the President's instructions.... The revolution in Honduras put down by the arrest of the leader of the insurgents.... The International Congress of Orientalists meets in London with Max Müller in the chair.

September 6.—Eleven new cases of cholera and one death at quarantine, New York.... The Naval War College Building is opened at Newport.... Colorado capitalists purchase the famous Trinity River gold mines in Southern California for \$1,500,000.... M. Grenier, French Navy Department clerk, is sentenced to twenty years' penal servitude and twenty years' banishment for furnishing official documents to Captain Borup, of the United States Army.

September 7.—Vermont is carried by the Republicans by about 20,000 majority, and Arkansas is carried by the Democrats by about 23,000 majority.... The champion pugilist, John L. Sullivan, is defeated in New Orleans by James Corbett.

September 8.—Four deaths and two new cases of cholera at quarantine, New York. Announcement made by the Local Government Board that there is no more cholera in

From Photograph by Gutekunst, Philadelphia.

THE LATE DANIEL DOUGHERTY.

Great Britain.... The King and Queen of Italy go to Geneva to take part in the Columbus fêtes.... Announcement made that the White Squadron is to be disbanded.

September 9.—President Harrison grants the government grounds on Sandy Hook for quarantine purposes.... The forty-second anniversary of the admission of California into the Union celebrated.... European missionaries and native Christians massacred in the province of Sze Chuen, China.... Photographs of the North Star are taken by the Brush photographing telescope in Boston.

September 10.—A priest in Peru sentenced to death for burning a girl charged with witchcraft.... Two deaths and eleven new cases of cholera at quarantine.

September 11.—Residents of Fire Island refuse to allow the *Normania's* passengers to land.... Lieutenant Peary, the Arctic explorer, and his party arrive at St. Johns, N. F.... Reports received of the collision of the Cunard steamer *Servia* with a sailing vessel; no damage.

September 12.—Great excitement at Fire Island; residents undertake to prevent the landing of the *Normania's* passengers; Judge Barnard grants an injunction restraining Governor Flower and all officers concerned from landing the passengers; Governor Flower commands the sheriff to preserve the peace.... Republicans carry Maine by about 12,000 plurality.... A run is made on the Birkbeck Bank of London.

September 13.—Governor Flower orders out the militia to quell all attempts at riot at Fire Island, and the

Normania's passengers are safely landed....The Empress of Germany gives birth to a daughter....The Russians evacuate the Pamirs....Mrs. Harrison announced to be critically ill.

September 14.—Board of Health announce that there have been six deaths from cholera in New York City....The Irish Privy Council revokes all proclamations made under the Coercion act.

September 15.—One new case of cholera in New York City.....Report of the signing of a military convention between France and Russia.....News received of the seizure of more Behring Sea sealing vessels by a Russian cruiser.....The National Convention of the Republican League meets at Buffalo.

September 16.—The cornerstone of the Columbus monument laid by Italians in New York....The Mexican Congress opened by President Diaz....One new suspected case of cholera in New York City....The steamer *Bohemia* from Hamburg arrives at quarantine with a report of fifty-two cases of cholera on the voyage.... Announcement is made that President Harrison has consented to act as arbitrator between Brazil and the Argentine Republic in reference to boundary disputes....Stockholders of the Metropolitan Opera House decide not to rebuild, but to auction off the burned building.

September 17.—Canada declares a quarantine on the border against New York City....Negotiations proceeding for a commercial entente between Germany and Russia....Generals Weaver and Field accept the People's party nominations for President and Vice-President....Two new cases and one death from cholera at quarantine.

September 18.—A meeting is held in Linnerick to urge the release of Irish-American political prisoners from English jails....Mrs. Harrison much improved in health....Kossuth's ninetieth birthday is celebrated at Buda-Pesth....A marked change for the better in the cholera condition abroad....A Russo-Chinese convention is concluded, granting Russia right to several consulates in China.

September 19.—The G. A. R. encampment opens in Washington....Alexander Berkman, who attempted to assassinate H. C. Frick, is condemned to twenty years imprisonment....The Nile rising rapidly and doing much damage.

September 20.—The twenty-second anniversary of the nationalization of Italy is celebrated....The eviction of tenants is resumed by several Irish landlords....The G. A. R. makes a parade of 50,000 men in Washington.

OBITUARY.

August 21.—William Henry Rushforth, of Rutherford, N. J., a well-known inventor.

August 22.—Charles Allen Perkins, of Syracuse, N. Y., who has held various foreign missions under the United States government....Edward N. Fisher, former editor of the *Richmond Dispatch*....Ex-Chief Justice Bermudiz of the Supreme Court of Louisiana...Rev. Dr. Hiram Buck, a prominent Methodist minister of Illinois.

August 23.—Ex-Governor Myron H. Clarke, of New York....Ex-Governor E. Louis Lowe, of Maryland....Ex-President da Fonseca of Brazil.

August 24.—Chief Justice Irving, of the First Judicial Circuit Court of Maryland.

August 26.—Judge William A. Stewart, of the Baltimore Supreme Court....Thomas H. Rodman, former District Attorney of Kings County.

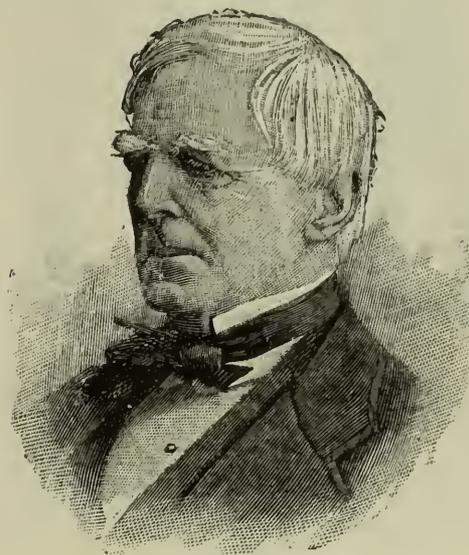

August 27.—Gabriel Reville, Chief of the Sisseton Indians.

August 24.—Brigadier-General J. R. Blauvelt, of Nyack, N. Y.

August 30.—Judge James McMillan, of the California Supreme Court.

August 31.—George William Curtis, aged sixty-eight.

September 2.—William C. Beck, ex-Chief Justice of the Supreme Court of Colorado....George Vernan, of Bordentown, N. J., one of the oldest and best-known engineers in New Jersey.

THE LATE LORD SHERBROOKE.

September 3.—Col. E. P. C. Lewis, of Hoboken, N. J., ex-United States Minister to Portugal.

September 5.—Daniel Dougherty, of Philadelphia, orator and lawyer....Col. John F. Bates, of Washington, former Superintendent of the Free Delivery Department.

September 7.—John Greenleaf Whittier, at Hampton Falls, N. H., aged 85....Ex-Senator F. Kernan of Utica, N. Y.

September 8.—Arthur Brend Winterbotham, Member of Parliament for East Gloucestershire....General Enrico Cialdini, Italian soldier and statesman.

September 10.—The Most Reverend John Medley, D.D., Metropolitan of Canada.

September 11.—Rear-Admiral John Cumming Howell, on the retired list of the United States Navy.

September 14.—David Bruce, of Brooklyn, inventor of the type-casting machine.

September 15.—Mrs. John Henry Towne, widow of the Philadelphia philanthropist.

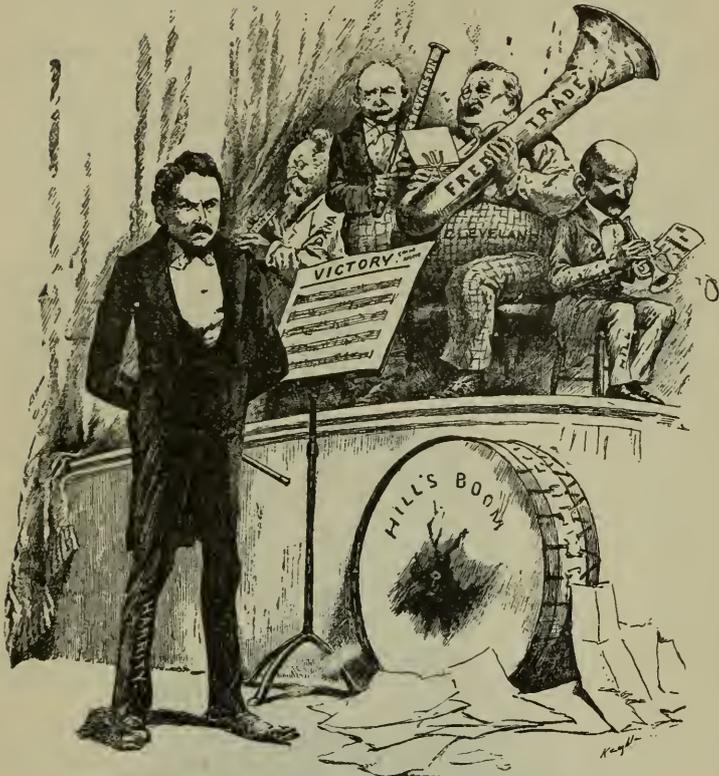

September 16.—Cardinal Edward Howard....Rev. Henry P. Tarsey, D.D., LL.D., a prominent educator of Maine.

September 17.—Brigadier-General Daniel M. Clark, of Upper Nyack, N. Y.

September 18.—D. A. McKinley, Hawaiian Consul and brother of Governor McKinley....Rudolph Ihering, the distinguished German juriconsult.

September 20.—Major-General Daniel Ullman.

CURRENT HISTORY IN CARICATURE.

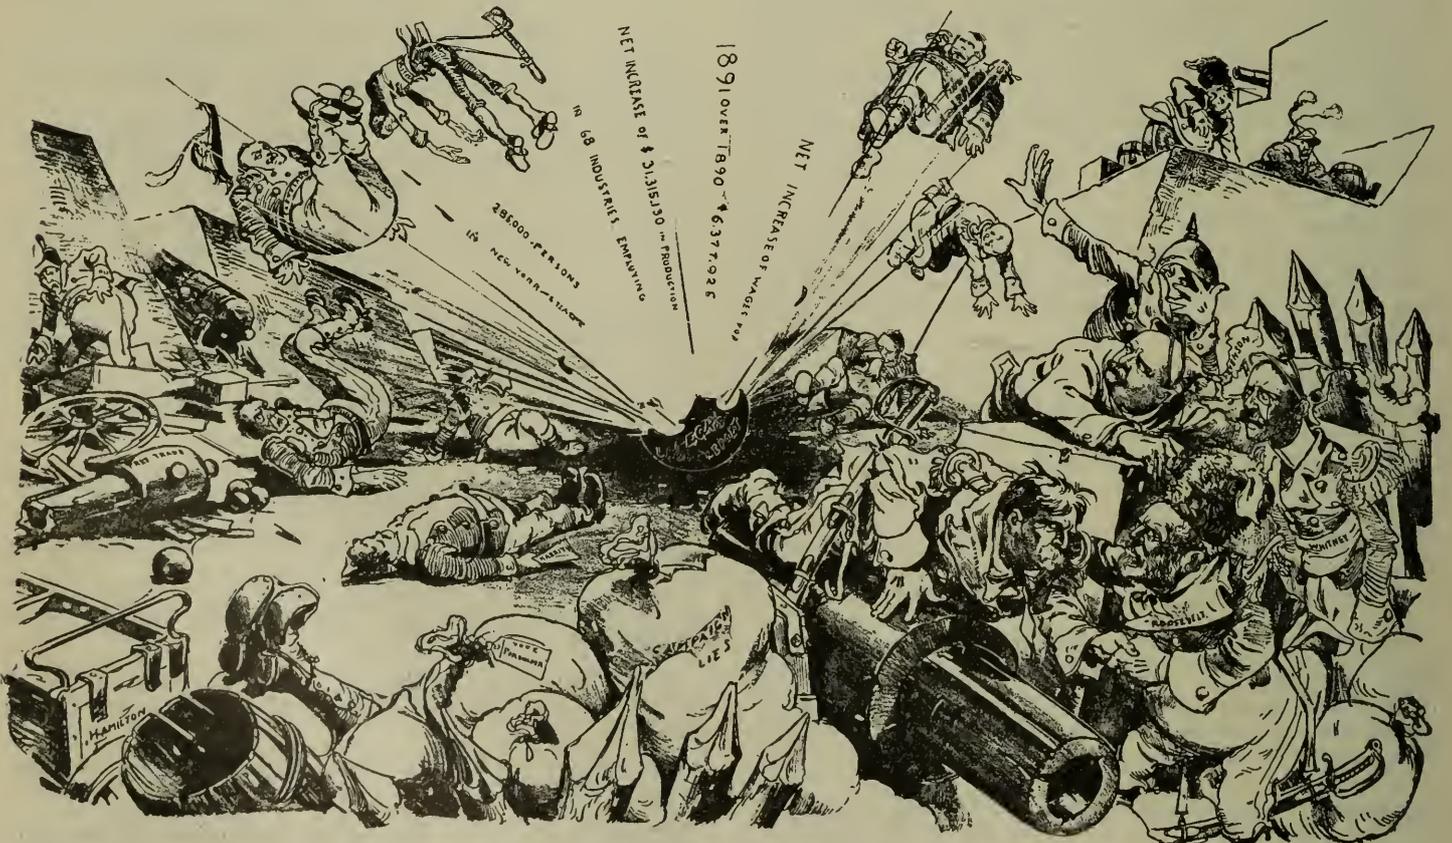

THE DISCORDANT DEMOCRATIC ORCHESTRA.

CONDUCTOR HARRY.—“Boys, I'm afraid we'll have to try another tune. There's no harmony in your music. Grover drowns everything else with his horn, and it ought to be played very quietly. Dana's piece ought to be heard above all, but somehow it doesn't work. Adlai, you're no good, any way. David B. seems to be playing hard enough, but no one can tell whether he's in tune or not.”—From *Frank Leslie's*.

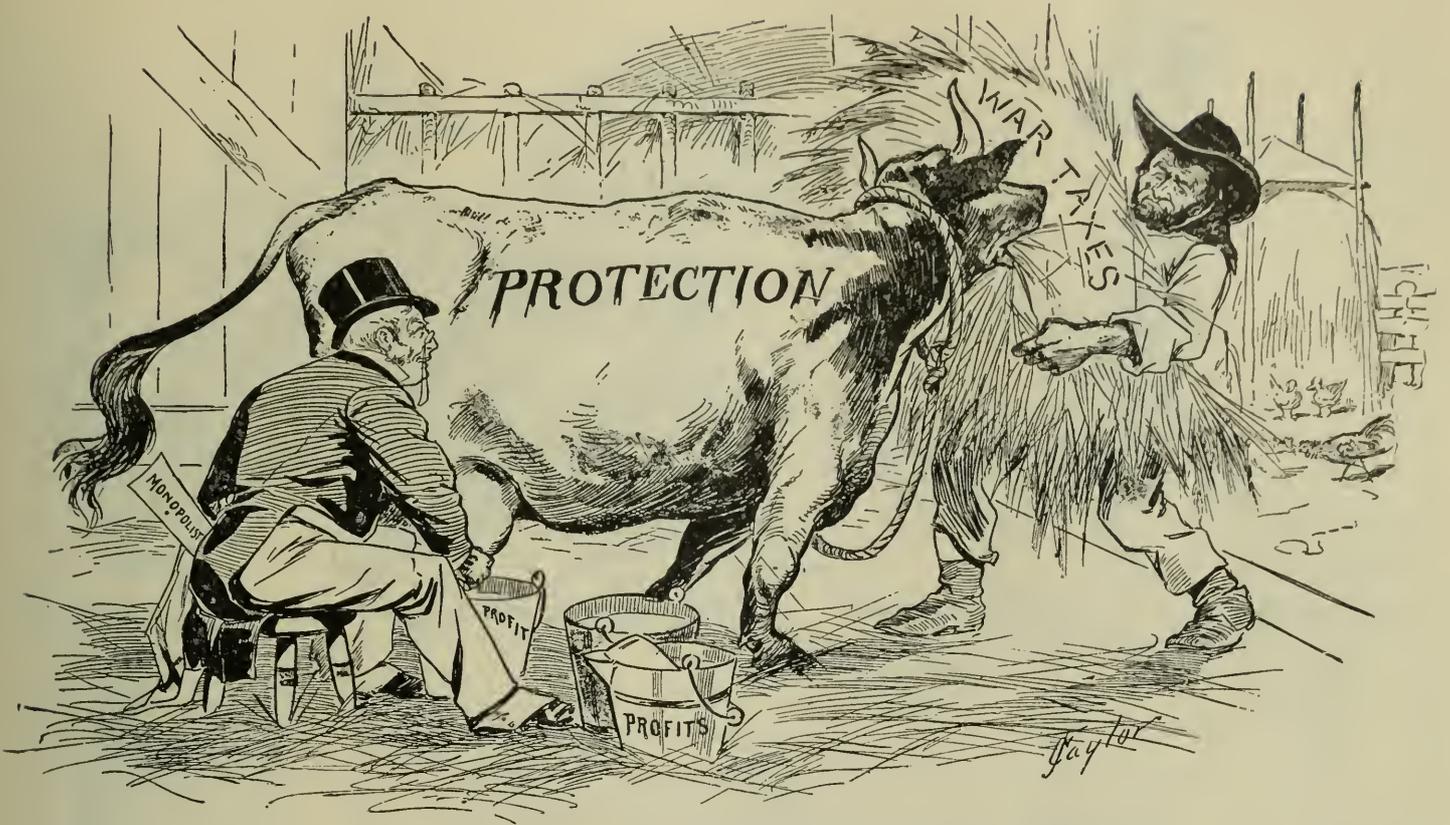

MCKINLEY HELD TO ACCOUNT.

THE AMERICAN WORKINGMAN.—Where's that increase in wages you've been talking about? I haven't seen it—you must have it—hand it over!—From *Puck*.

THE BOMBHELL.

Charles F. Peck, Democratic Commissioner of the Bureau of Labor Statistics of New York State, presents a wonderful statement of the prosperous condition of affairs under the McKinley bill. Mr. Peck's totals show a net increase in wages for 1891 over 1890 of \$6,377,925, and a net increase in products in New York State, during the same period, of \$31,315,130. His report shows that there were just 285,000 men whose salaries were raised as the result of this law.—From *Judge*.

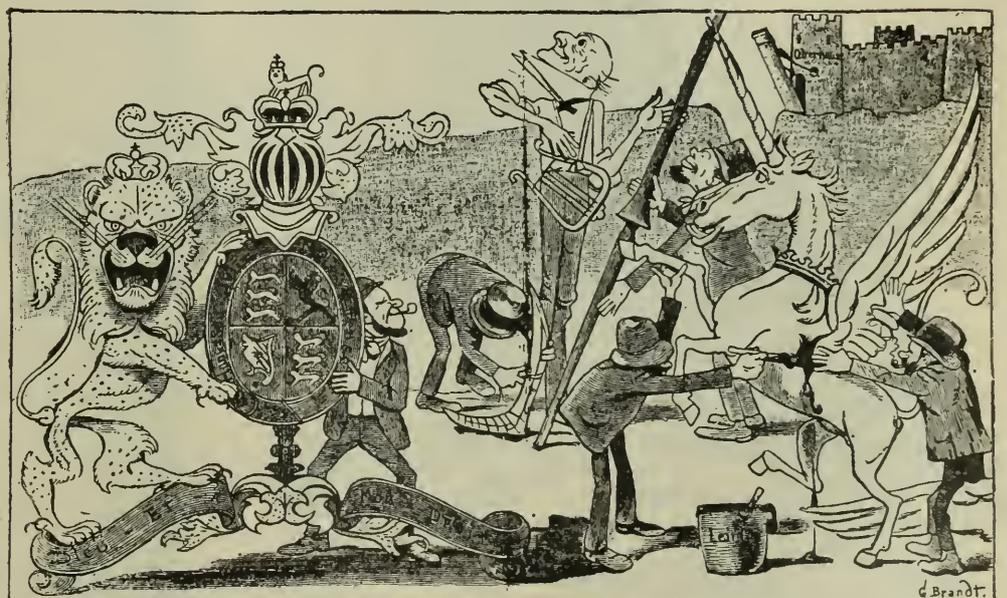

THE TARIFF COW.

The Farmer feeds her—the Monopolist gets the Milk.
From *Puck's Tariff Reform Extra*.

MR. LABOUCHERE BARRED OUT.
From *Pall Mall Budget*.

THE LION AND THE UNICORN (German Version).

GLADSTONE: "Upper House, rejoice, we are coming! Gladly and Paddy!
Once more, ye Muses, saddle me the winged steed,
To ride into the old romantic land!
How pleasantly the charming madness
Plays about my unfettered bosom!"
From *Kladderadatsch* (Berlin).

MR. TIM HEALY AS THE IMP OF MISCHIEF.
From *Judy* (London).

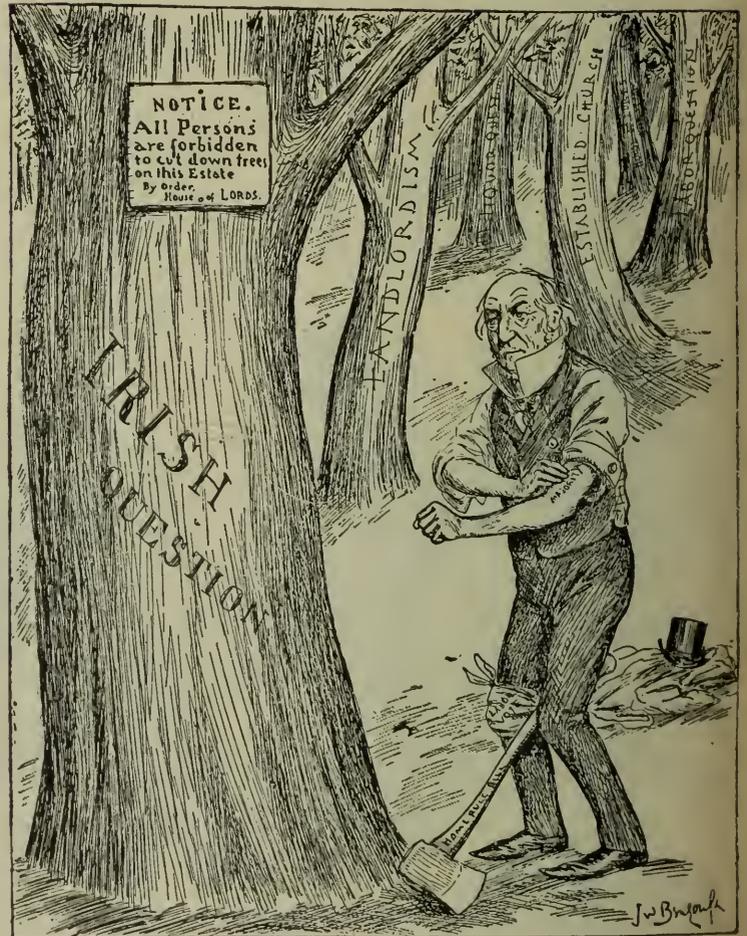

THEY DANCE TO MR. GLADSTONE'S TUNE—AT PRESENT.
From *Judy*.

OUR MASTER'S MASTER.

The British Lion—Mr. W. E. Gladstone.
His Trainer—Mr. Tim Healy.
From *Moonshine*.

NOW FOR THE SUPREME EFFORT.

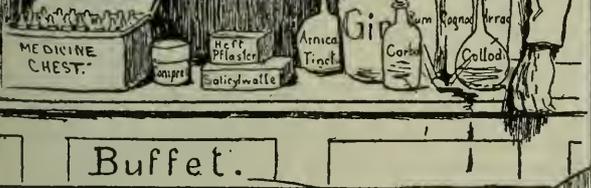

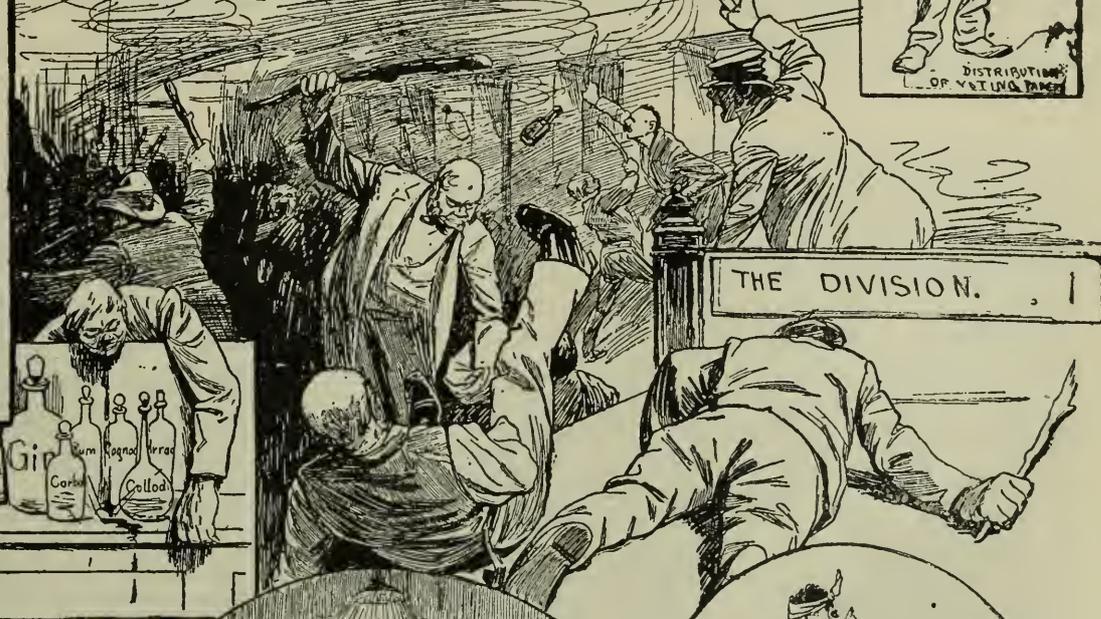

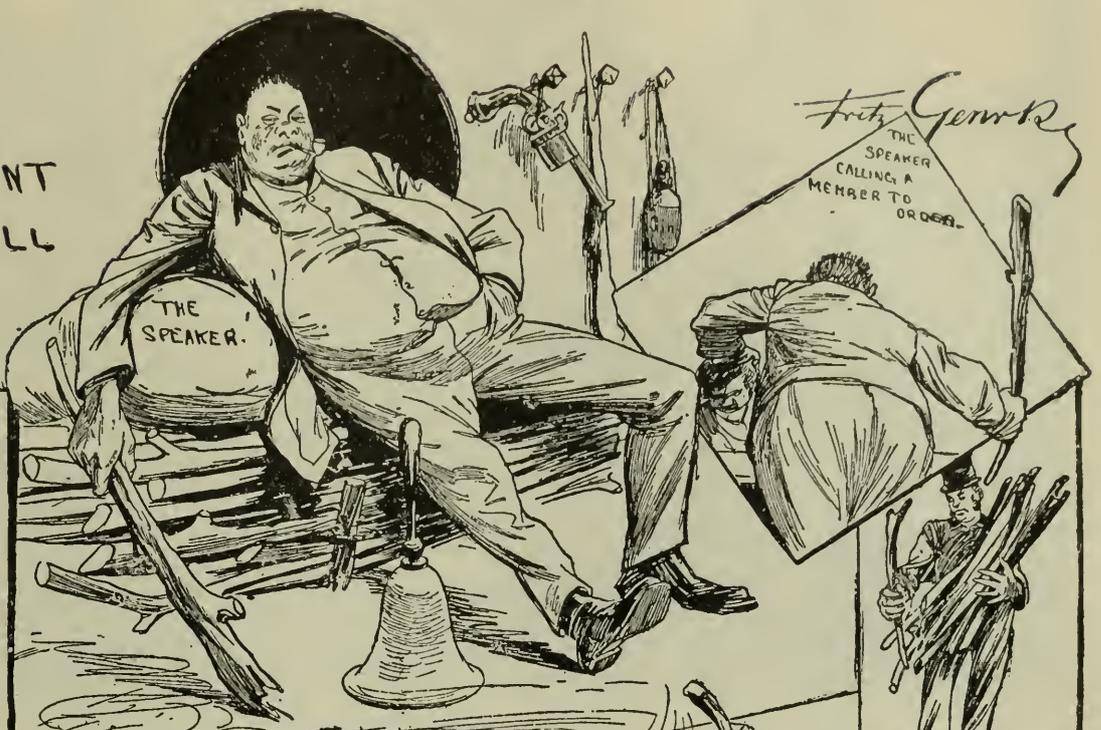

GLADSTONE: "I'm not so strong as I had hoped and expected to be, but the Job's got to be done somehow!"—From *Grip* (Toronto).

A GERMAN VIEW OF HOME RULE FOR IRELAND.

The Irish hope that after the elections their desire for an Irish Parliament in Dublin will be fulfilled.

From Kladderadatsch (Berlin).

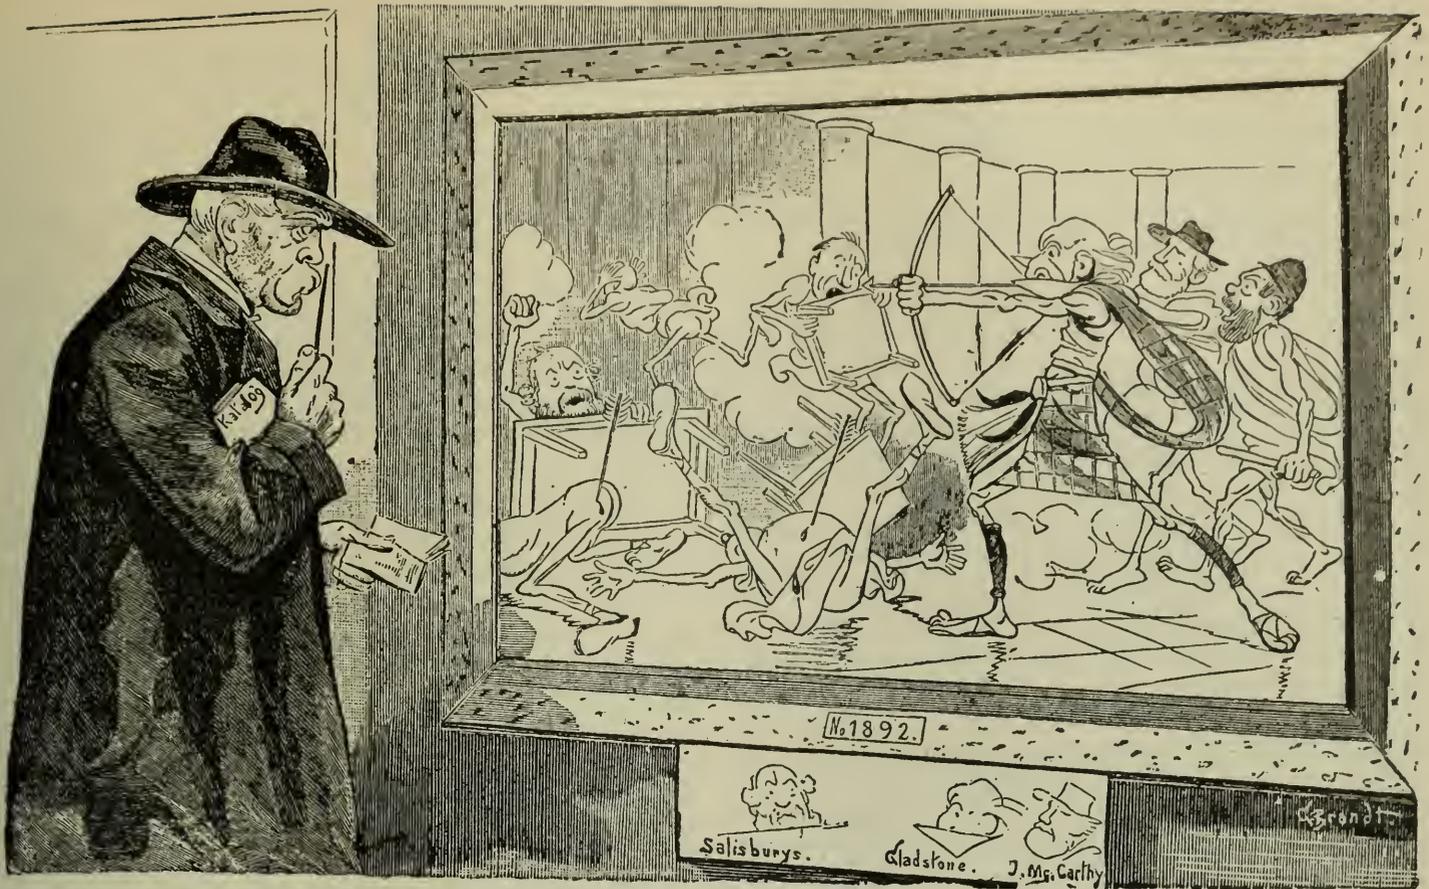

BEFORE THE GENERAL ELECTION OF 1886.

"See what a lot of noisy fellows are joining with Mr. Gladstone to embarrass my empire. But it shall not happen, even if I have to spend millions by the dozen. I don't want obstacles. I wish that this road may be absolutely free."—From *Il Papagallo* (Rome), June, 1886.

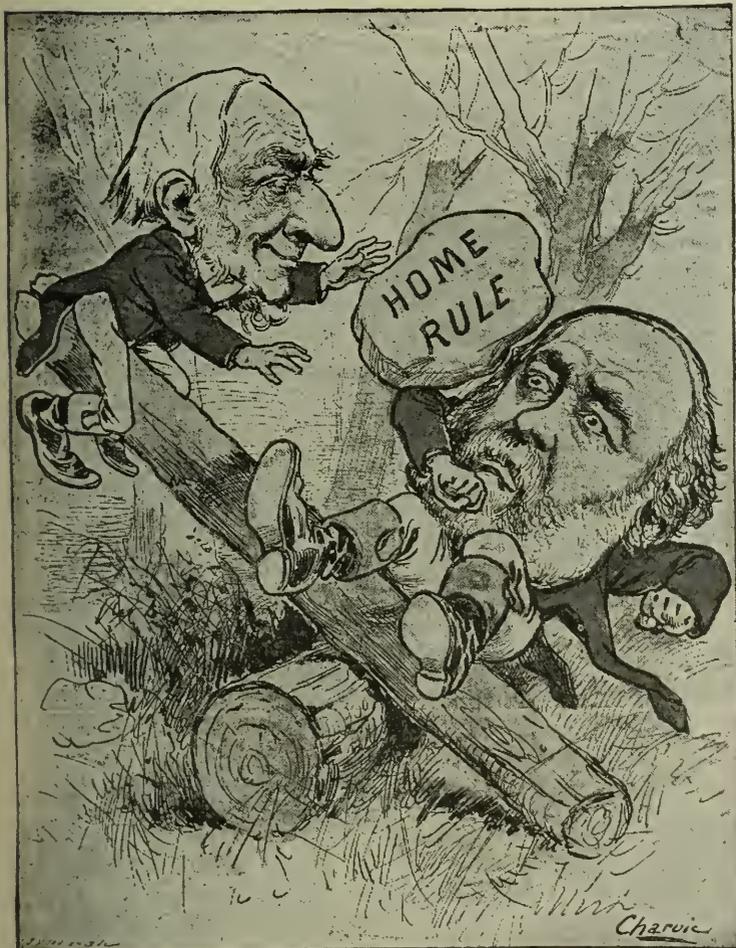

THE GENERAL ELECTION OF 1892.

"See then, O intrepid Gladstone, what evils your journey along this road has produced. You have even troubled the quiet dreams of the Scotch."—From *Il Papagallo* (Rome), July, 1892.

THE RETURN OF ULYSSES, OR THE ENGLISH ELECTIONS.

The old art critic (Bismarck) does not find the action in this picture sufficiently life-like. He would treat the subject quite differently. From *Kladderadatsch*.

THE ENGLISH ELECTIONS.

"Salisbury deposed. . . . Gladstone holding the upper hand! Hurrah for the Grand Old Man."—From *La Silhouette* (Paris).

THE MODERN COLOSSUS.

Mr. Dadabhai Naoroji has bridged the gulf between India and England by his patriotism and loyalty on the one hand, and by his patience and perseverance on the other.—From the *Hindi Punch* (Bombay).

TWO GREAT AMERICANS : GEORGE WILLIAM CURTIS AND JOHN G. WHITTIER.

SINCE the completion of the September number of this REVIEW, two of the most eminent and best beloved of America's sons have finished life's course. The daily and weekly press of the country has honored itself in the brilliant and appreciative character of its tributes to Mr. Curtis and Mr. Whittier, and there remains no new word to be spoken here. Every young man must rise from a reading of these newspaper biographies and character sketches with a quickened American patriotism, a strong sense of gratitude and a new aspiration to possess worth of character. It is pleasant to observe the warmth of sincere feeling with which men of all parties and creeds have made haste to express their appreciation of the unselfish public services rendered through long years by these two gentle, refined, altruistic American citizens. Each gave the ardor of his youth to the despised anti-slavery cause ; but neither of them ever urged the movement in a hateful, sectional or disruptive spirit. Both lived to be honored in the South and accepted everywhere as types of the highest form of American citizenship.

BOTH WERE NEW ENGLANDERS TO THE CORE.

There are other reasons beside the fact that they were among the last survivors of a group of famous men of letters, and that their deaths happened only a week apart, why they may well be written of together. Both were New Englanders. In politics, in literature, in the promotion of reforms and in the work of public teaching, they have always shown qualities typically if not exclusively peculiar to New England. A dominating moral consciousness is the heritage of New England; and in Whittier, Curtis and many other gifted men and women of New England origin, the sense of duty and right in affairs public as in affairs private, has ever held ascendancy over the merely artistic or literary sense. Each found his own place and lived and labored in his chosen way ; yet each was bearing witness to the greatness of the New England traditions and ideals. Neither Whittier nor Curtis was in sympathy with the old Puritan theology. Whittier's family had, indeed, revolted from the harshness of the orthodox church, and had turned Quakers at a time when the Puritans in Massachusetts were persecuting the gentle followers of Fox, and the poet remained a member of the Society of Friends to his dying day, with a creed so simple and broad that he hardly would have attempted to pass a Boston examination for foreign missionary service. His theology is summed up in his beautiful poem, "The Eternal Goodness." Mr. Curtis, on the other hand, represented the Unitarian revolt from Puritan theology. His high place in the esteem of

the Unitarians was shown by his presidency of the national association of their churches. But his was the uncompromising, inexorable New England conscience ; and this alone affords the true key to his life and character, as it does to Whittier's.

NEITHER WAS COLLEGE-BRED.

For so long had Whittier and Curtis lived in comparative retirement and literary leisure that it is hard to realize fully the romantic, unusual and altogether stirring and energetic phases of their earliest manhood. Both began the independent activities of life very young. Each began with a strong bent toward literature, with glowing impulses and high ideals. Both became journalists. Neither of them was educated at Harvard or at any other college, and each may be said to have acquired a more original and untrammelled development from this very fact. Quite probably if they had gone through Harvard College they would have passed on into a regular professional career, whose exactions would have precluded the literary and public services they have rendered to their country.

It is no criticism of our colleges to remark that they have tended to lead young men into conventional callings, and that the burdens imposed by such callings have stood somewhat in the way of original careers. And thus a large majority of our leading writers, reformers and men of original genius have seemed to be fortunate rather than otherwise in their freedom from the obligations to work in prescribed channels that were formerly supposed to lie strongly upon college-bred men. Both came to be men of very high attainments and culture, but not through the processes of the schools.

Two years ago Mr. Curtis entered upon the somewhat nominal but highly honorable dignities of the Chancellorship of the University of the State of New York. The University is not a teaching body, but is a federation of the numerous institutions of higher education in the State, is in charge of the State library, holds an annual convocation which brings together the chief educators of New York, and exercises other supervisory and general functions. It is rather remarkable that a non-graduate should attain so high an academic post as this chancellorship ; but Mr. Curtis abundantly deserved it.

WHITTIER'S BOYHOOD ON THE FARM.

Boyhood on an old-fashioned New England farm is nothing that has ever needed to have apology made for it. Where has there ever been a better training for useful and honorable life ? It was not a demeaning kind of existence. There was "plain living" always, but there was always "high thinking" some-

where in the immediate neighborhood. There was the church and the district school, with the possibility of a winter's term or two at the village academy. At least a few good books were within reach of the lad who cared enough to make an effort. The whole regimen of life tended to the making of strong, capable, upright men.

The Whittiers had come to New England before 1640. They had become Quakers within a generation thereafter. John Greenleaf Whittier was born on a farm at Haverhill, Mass., December 17, 1807. For nearly two hundred years his ancestors had been frugal, intelligent, God-fearing, Massachusetts farmers, members of that ideal democratic society in which the tiller and proprietor of a moderate-sized farm was the representative citizen, and in which the church, the school and the town-meeting were the representative institutions—a society so admirably described by De Tocqueville at the very moment when young Whittier was entering upon his manhood's work. In "Snow Bound," the poet many years afterward gave us an immortal picture of the life of the farmhouse.

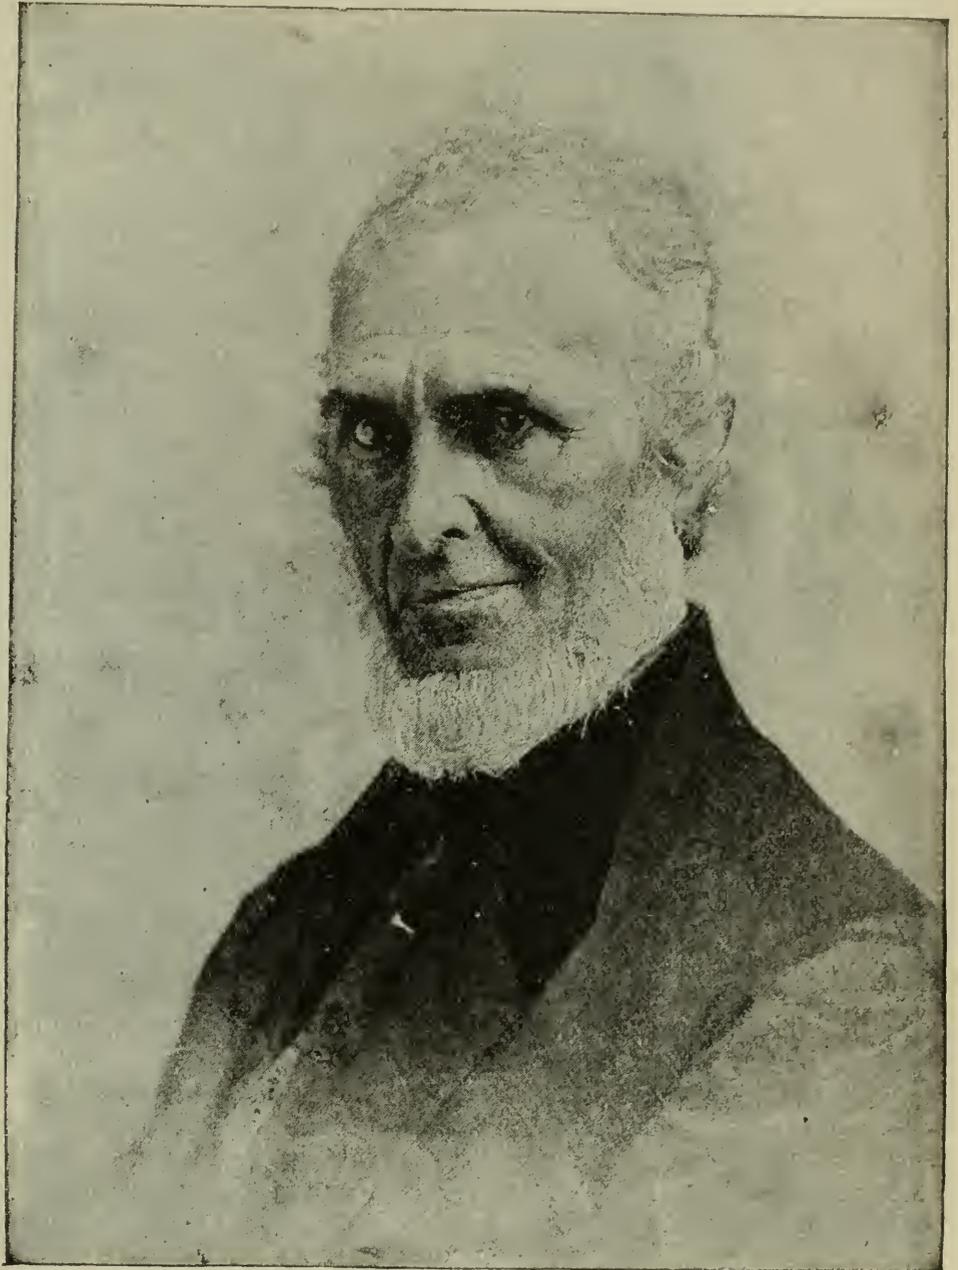

Until he was twenty years old Whittier toiled on the home farm, going to the district school in winter like all American farmer boys, and managing to gain the benefits of two half-year terms at the Haverhill Academy. Shoemaking as a farm industry was common enough in those days, and Whittier paid for one term of the Academy by working at this handicraft, while he paid for the other by teaching a term of country school—a very familiar and common sort of experience.

HIS TEN YEARS OF ACTIVE JOURNALISM AND POLITICS.

Meanwhile, he had developed a passionate love of nature, had been an earnest reader of the best books he could borrow, and had at length been thrilled with a new delight by making the acquaintance of Burns' poems. His muse had much in common with that of the Scotch singer. At nineteen he wrote a poem that he thrust, timidly and stealthily, under the door of William Lloyd Garrison's printing office. Young Garrison was editing the *Free Press* at Newburyport. The poem was printed, and the two young men became friends. Whittier's literary talent now developed rapidly, and his natural and family bias toward the abolition movement was accentuated by his asso-

ciation with the strenuous young reformer at Newburyport.

Almost immediately he found himself launched into the very thick of affairs as a journalist. He was not yet twenty-two years old when he was called to Boston to edit the *American Manufacturer*, a protectionist organ which did not succeed particularly well; and in the following year, 1830, he accepted the place made vacant in the editorship of the weekly *New*

JOHN GREENLEAF WHITTIER.

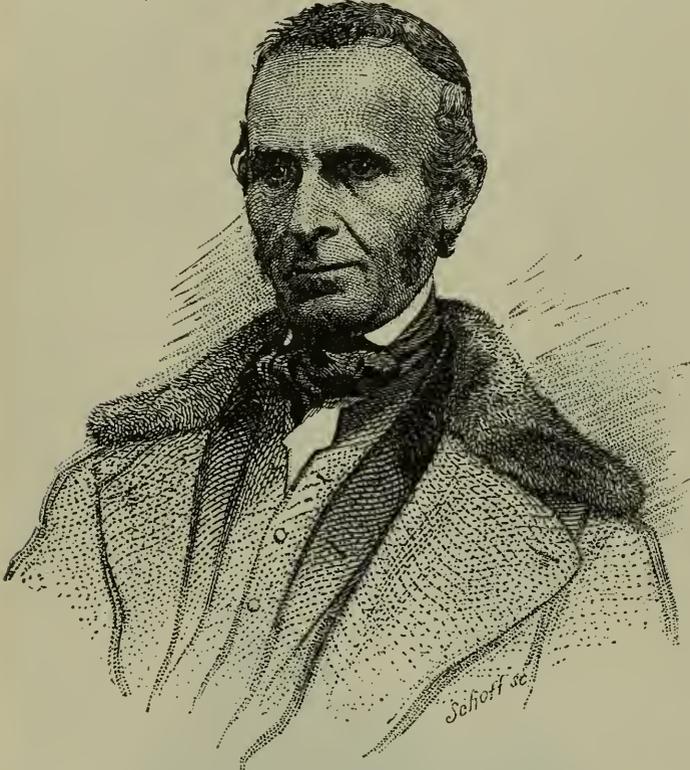

England Review, at Hartford, Conn., when George D. Prentice went to Louisville. It was a period of intense activity, and the young Quaker wrote poems, prose sketches, editorial arguments and all sorts of miscellany in a manner that made for him, forthwith, a place among the literary men of the day.

But his father's death called him back to the farm to care for the family. There he remained for several years, writing much, however, for various newspapers and periodicals, cultivating his poetical muse, and taking a part in local politics. He even served a

term in the State legislature. In 1836 he found it possible to leave home, and accepted a secretaryship of the American Anti-Slavery Society, which took him to Philadelphia, where he remained until 1840, and where also for some time he conducted the *Pennsylvania Freeman*.

WHITTIER AND THE ANTI-SLAVERY CAUSE.

Strong as were his sympathies with the slaves and his abhorrence of the institution of slavery, he could

WHITTIER IN EARLY MANHOOD.

not work with Garrison. Whittier was a Quaker and a devotee of peace. Garrison's tone and line of policy were becoming more and more violent. His theoretical if not his practical attitude toward institutions he thought to be wrong was that of the anarchist, who justifies the most extreme methods. Whittier was not that kind of an abolitionist. He gave up the secretaryship, ceased to work in affiliation with Garrison, and went back to Massachusetts to retire from active life at the age of thirty-two. This retirement did not, however, preclude interest and zeal as a citizen, and constant service in his own way to the anti-slavery cause. Repudiating the violent doctrines of the Garrisonian abolitionists, he joined the men who sought to bring about the era of freedom in a peaceful, orderly manner through the work of a constitutional political party. Thus he was one of the early members of the Liberty party, which grew into the Free-Soil party and was afterward merged in the Republican party. Meanwhile, his pen was busy; and in stirring lyrics as well as in prose arguments he was devoting himself to the cause of freedom. He had yearned for a peaceful solution, and had always believed it attainable. He was a non-combatant on principle. He was, of course, for the Union; but he could not sympathize with a war,

whether to preserve that Union or to free the blacks. The end of the war brought him inexpressible relief.

THE BOYHOOD OF GEORGE WILLIAM CURTIS.

Whittier was a lad of sixteen when George William Curtis was born, in February, 1824, at Providence, R. I. His father, George Curtis, a successful merchant, had come from Massachusetts; and while still a very small boy George William was placed in a school near Boston, where he was kept until fifteen. His father then brought him to New York and put him in charge of a private tutor for a year's instruction preliminary to entrance upon a business career. A position was found for him in the counting-room of an importing house. But the father had not divined the son's aptitudes. The lad was already a book-worm and a dreamer of dreams. He had no liking for the career of a merchant. And before he was seventeen, after a few months with the importers, he abandoned his position, and with a brother joined the Brook Farm Association, a communistic society in West Roxbury, Mass.

HE JOINS THE BROOK FARM COMMUNITY.

Almost everybody who had anything to do with Brook Farm afterward became famous in literature or journalism. The leading spirit was George Ripley, then about thirty-seven. Closely associated with him were Ralph Waldo Emerson and Margaret Fuller. Emerson also was at that time (1840) thirty-seven years of age, and Miss Fuller was thirty. Hawthorne, of the same age as Ripley and Emerson, was at Brook Farm for a time, and afterward enshrined it in "The Blithedale Romance." Bronson Alcott, and Parker, Channing, Thoreau and other eminent young thinkers were either residents or sympathetic visitors of the Brook Farm community. Charles A. Dana, who had just rounded his twenty-one years, was an ardent and influential member of the community.

BROOK FARM AS A FORMATIVE INFLUENCE.

It would be a very ill-proportioned biography of George William Curtis that should pass lightly over his Brook Farm experience. That strange but fascinating experiment lasted about six years. Curtis lived on the Farm and participated in its life and work for four years, and then he continued under the same influences for two years longer by finding a home in a farmer's family at Concord, and living as a neighbor and friend of Emerson, Alcott, Hawthorne, Thoreau and other less famous but highly cultured people.

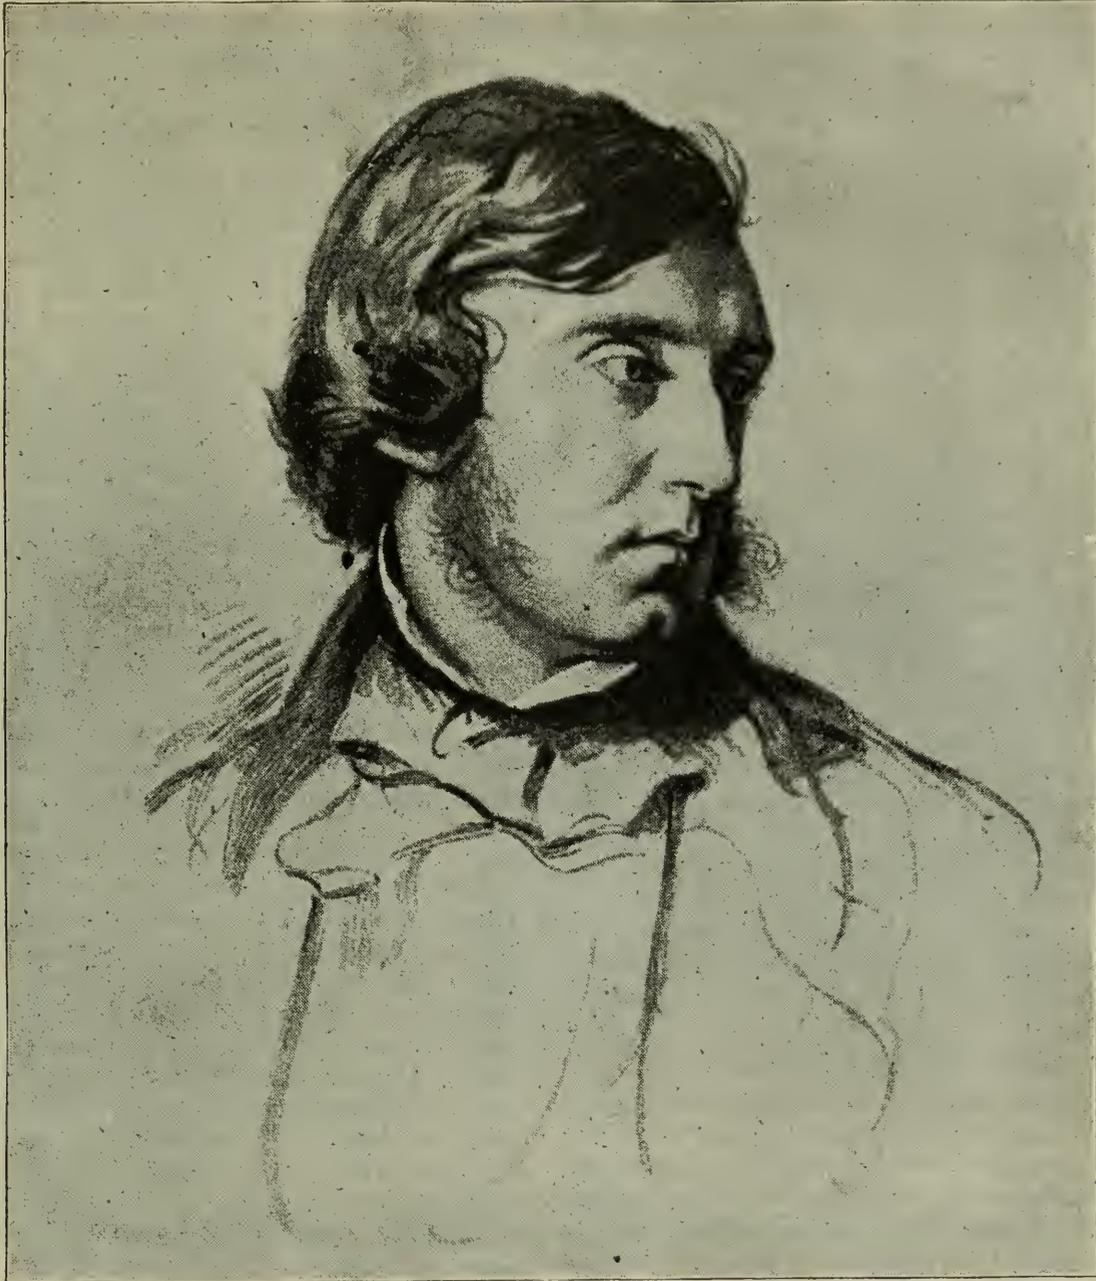

Garfield was wont to remark that a slab bench, with himself at one end as pupil and Mark Hopkins at the other as teacher, was a good enough university for him. Curtis might well have said that six years—from his seventeenth to his twenty-third—spent with the brilliant group of young transcendental philosophers, *littérateurs*, poets and idealist social reformers who dwelt in Roxbury, Boston, Concord and that general vicinity, were quite a satisfactory substitute, at least for purposes of stimulus and inspiration, for

any formal university course in America, England, Scotland or Germany.

The wave of Fourierism that swept across the United States between 1840 and 1850 was transient enough, and to those whose generous hopes were lifted high upon its crest there came bitter disappointment when it subsided so completely and hopelessly. But nobody has ever adequately traced and

It should be said that Whittier was in touch with this movement and was a writer for the *Harbinger*.

This digression must not grow into a chapter on the utopianism of the years from 1840 to 1848. But much of the sweetness and light in the character of George William Curtis was derived from that utopianism, whose simplest forms were expressed by Robert Owen and Cabet, whose more elaborate for-

GEORGE WILLIAM CURTIS AT THE AGE OF THIRTY.

(From the Lawrence Portrait.)

set forth the abiding influence of that movement in forming the intellectual and moral characteristics of many men who have played distinctive and notable parts in the life of the nation. Let the inquiring student of to-day go to the libraries and find, if he can, a file of the *Dial*, edited in the early forties by Miss Fuller, Emerson, Ripley and others, and a file of the *Harbinger*, published in the later forties, and edited chiefly by George Ripley and Charles A. Dana. In those pages he may discover many an evidence of the ardent spirit that prevailed some fifty years ago.

mulas were set forth in the works and by the respective followers of St. Simon and Fourier, and whose manifestation in New England was greatly affected by the vogue of the "transcendental" school.

FOUR YEARS OF FOREIGN TRAVEL.

Mr. Curtis left Concord to travel in Europe and the East. He sailed in the summer of 1846 and spent four years of well-used leisure in observing men and things. He came into close contact with some of the most stirring events of that year of revolutionary

fervor, 1848. He saw much of Italy, Germany and the Continent in general, and made a tour of Egypt and Palestine, ending his travels in England. He had made friends with the Brownings in Venice, with Thackeray in London, and with numerous great ones elsewhere.

"THE TRIBUNE" AS A RALLYING-POINT.

Meanwhile, Brook Farm had collapsed and the New York *Tribune* was the gainer. Mr. Greeley himself was an ardent "associationist," being interested in a Fourierist phalanstery near New York, with Albert Brisbane and others. Charles A. Dana and George Ripley, of Brook Farm, became members of the *Tribune's* editorial staff. Mr. Dana remained for ten years as managing editor and Mr. Ripley all his long life as literary editor. Margaret Fuller also wrote much for the *Tribune*. Henry J. Raymond, who at this time left the *Tribune* staff to become editor of another paper, was also an "associationist" in his sympathies, and Parke Godwin, Bryant's son-in-law, was an ardent advocate of the new movement. In the old Clinton Hall, Astor Place, on the spot where *THE REVIEW OF REVIEWS* is now edited and published, these gentlemen in those days waxed eloquent in their support of American Fourierism. It was with them that Mr. Curtis had been associated; and through them he found his way into the journalism of New York. The friendships and aspirations of Brook Farm led straight to the editorial rooms of the *Tribune*, where Dana and Ripley were now entrenched, while the others hovered about as regular or occasional correspondents. Mr. Curtis sent letters descriptive of his travels to the *Tribune*; and when he returned in 1850 he joined the *Tribune's* staff, the musical and dramatic criticisms being his principal task. His felicity in these subjects is too well known to be dwelt upon. That early experience gave him a fund of knowledge concerning the opera and the drama in New York upon which he drew for delightful reminiscent essays in the "Easy Chair" up to the very last.

HIS CONNECTION WITH MAGAZINES.

The notes of his foreign travels, and various essays and papers of a descriptive and literary character which had been contributed to the *Tribune*, gave Mr. Curtis materials which were preserved in several charming volumes that will always have a place in American literature. The house of *Harper's* became his publishers, and Mr. Curtis was led in about 1852 to form a departmental contributor's connection with *Harper's Monthly Magazine*, which continued with small interruption down to the close of his life. The only interruption was during a part of the time when he was one of the editors of *Putnam's Magazine*, a periodical whose brilliant career was cut short by the financial crash of 1857. Mr. Curtis lost money in the failure of the magazine, and he assumed obligation for debts not legally binding against him. For ten or fifteen years he used much of the money earned by his pen and his popular lectures to wipe out these debts. Such was his fine sense of honor that he could not have done otherwise.

ENTRANCE INTO POLITICS.

In 1856, at the age of thirty-two, Curtis became active in politics. This was just the age at which, some years before, Whittier had retired from political turmoil to the quietude of literary seclusion. The polished young essayist and musical critic became at once a foremost political orator, entered with enthusiasm into the Free-Soil campaign under Fremont, and was one of the striking figures and stirring speakers at the Chicago convention that nominated Lincoln in 1860. He became a leader in the Republican organization of New York, and was one of the radicals of the party, with strong anti-slavery proclivities.

A GREAT POLITICAL EDITOR.

From this time forth we have in George William Curtis two distinct personalities: Curtis, the graceful essayist and critic, the man of travel and letters, preserves his identity without break or deterioration in the long series of papers written from the "Easy Chair" of *Harper's Magazine*. Curtis, the political thinker and worker, was always to be found in party conventions; but he wielded his chief influence as editor of *Harper's Weekly*. He assumed control of the two editorial pages of the weekly in 1863. At once he took rank with the great political editors of the country. He made the *Weekly* a power and an authority in the Republican party. Considering the whole period from 1864 to 1884, he may be pronounced without hesitation the foremost Republican editorial writer of the country. His manner and style as an editor exerted a most elevating influence in American journalism. Dignity and lucidity were never sacrificed, and high ideals were faithfully held up.

IMPORTANT POSTS DECLINED.

His private life during the last twenty years was passed in a quiet and secluded fashion at his home on Staten Island and his summer residence in Ashfield, Mass. He was never a seeker after office. No man would better have graced the United States Senate; but he was content with the even and independent course of life upon which he had entered. He declined to become editor of the *Times* when Henry J. Raymond died. He declined also to accept from President Hayes in 1877 the post either of Minister to England or Minister to Germany. Our English friends should know that he would have represented us as brilliantly as Lowell himself.

CURTIS AS AN ORATOR.

He was the most accomplished and graceful of all our public speakers. Mr. Edward Cary writes as follows of his oratory:

With Mr. Curtis we lose the greatest American orator of our time. We think of him, linking his name with Beecher, with Phillips, with Sumner, some of us with Everett. He had some of the qualities of each; it is not unreasoned praise to say that he was the equal of any. His grace of manner was not less than that of Everett, while his native force of feeling was far greater. His wit was not so caustic as that of Phillips; it was more justly directed. He had not the quickness of sympathy of Beecher; his sympathy was steadier, his influence on his

audience more lasting. He had hardly less majesty, at times, than Sumner; there were moments when he was even more impressive. Oratory with him was an art, carefully studied, subtly applied, but it was not art for art's sake; it was art, in the fine words of Victor Hugo, for humanity. Such addresses as those he delivered on the unveiling of the Washington Monument, on Sumner, on Phillips, on Lowell, were only in name "occasional." They will live as long as the subjects to which they were devoted, as long as the American reader shall care for patriotism, for freedom, for genius. And who that heard him will ever forget Mr. Curtis' "after-dinner speeches"—their gentle humor, their charm of form and manner, and the serious thought of which these were but the graceful and becoming drapery? He was very generous with this gift, but he never gave it lightly, for he was exceedingly averse to the reputation that too often accompanies it.

THE LEADER OF CIVIL SERVICE REFORM.

The next generation will honor Mr. Curtis chiefly for the unremitting devotion with which he labored for the cause of Civil Service Reform against the enmity and ridicule of the spoils politicians and against the general apathy of the public. This has been no romantic course that appealed strongly to the sentiments, but it has been and is essentially a moral cause, having at its heart the purity of our political life and the preservation of our best institutions and ideals. Mr. Curtis early became the leader of the movement. His only experience as a public officeholder was his chairmanship of President Grant's Civil Service Commission. For years previous to his death he had been president of the National Civil Service Reform League, and his annual addresses before that body form the best history of the progress of the cause.

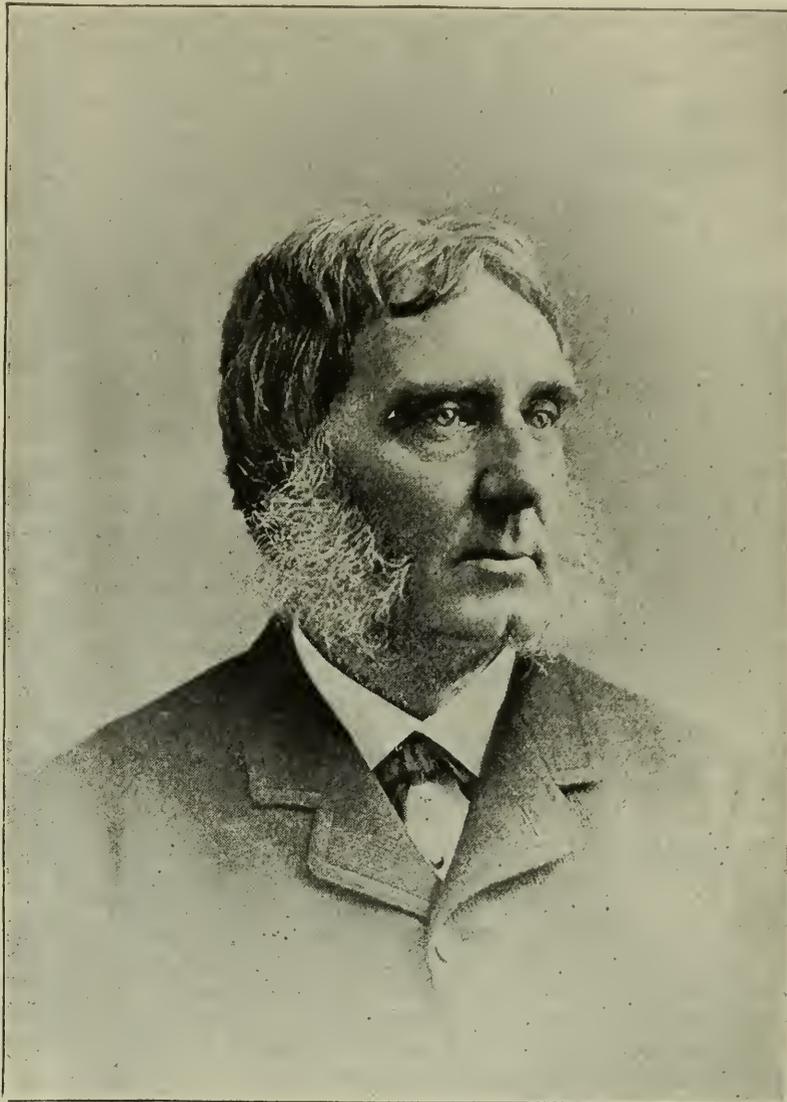

ALSO A WOMAN SUFFRAGIST.

Moreover, Mr. Curtis had the courage, with Colonel Higginson and a few other literary and journalistic luminaries, to espouse the so-called "women's rights," or suffrage cause, unpopular as it has been in this country. Less aggressive in tone and less caustic, he was none the less as truly a reformer as Wendell Phillips, with whom in several respects he may be likened.

WITHDRAWAL FROM THE REPUBLICAN PARTY.

In 1884 Mr. Curtis declined to support Mr. Blaine's nomination for the presidency on grounds of personal disapproval, and he returned from the Republican convention to throw his weight into the scale for Mr. Cleveland. Since that time he has been a foremost leader of the Independent or "Mugwump" contingent, chiefly supporting the Democrats. He was for Cleveland in 1888 and again in 1892. It is needless to say that his withdrawal from the party in which he had played so great a part was painful to him, and was deeply regretted by the friends who

could not go out with him. But candid men of every political opinion have always recognized in Mr. Curtis the model citizen, faithful to his conscience. Mr. William D. Howells remarks of him that "he did indeed create anew for us the type of good citizenship, well-nigh effaced in a sordid and selfish time,

(From a recent photograph.)

GEORGE WILLIAM CURTIS.

and of an honest politician and a pure-minded journalist." Mr. Howells, by the way, is a Republican.

MR. HOWELLS' TRIBUTE TO MR. CURTIS.

In a most touching and beautiful tribute to the value of Mr. Curtis' life, Mr. Howells pens the following passages:

His whole life taught the lesson that the world is well lost whenever the world is wrong; but never, I think, did any life teach this so sweetly, so winningly. The wrong world itself might have been entreated by him to be right, for he was one of the few reformers who have not in some measure mixed their love of man with hate of men; his quarrel was with error, and not with the persons who were in it, so that he had no enemies but those of his cause. He was so wisely tolerant and so gently steadfast in his opinions that no one ever thought of him as a fanatic, though many who held his opinions were as-

sailed as fanatics, and suffered the shame if they did not win the palm of martyrdom.

POLITICS VERSUS LITERATURE.

Mr. Howells adds a further word that expresses well the feeling of many of us who had found delight in "Prue and I," and had long appreciated its author's great literary possibilities :

He was never far from any man of good will, and he was the intimate of multitudes whose several existence he never dreamt of. In this sort he became my friend when he made his first great speech on the Kansas question, which will seem as remote to the young men of this day as the Thermopylæ question to which he likened it. I was his admirer, his lover, his worshiper before that for the things he had done in literature, for the "How-adj" books, and for the lovely fantasies of "Prue and I," and for the sound-hearted satire of the "Potiphar Papers;" and now suddenly I learnt that this brilliant and graceful talent, this traveled and accomplished gentleman, this star of society who dazzled me with his splendor far off in my Western village obscurity, was a man with the heart to feel the wrongs of men so little friended then as to be denied all the rights of men. I do not remember any passage of the speech, or any word of it; but I remember the joy, the pride with which the soul of youth recognizes in the greatness it has honored the goodness it may love, and all the glow of that happy moment comes back to me, with the gratitude and the new hope that filled me. Mere politicians might be pro-slavery or anti-slavery without touching me very much; but here was the citizen of a world far greater than theirs, a light of the universal republic of letters, who was willing and eager to stand or fall with the just cause, and that was all in all to me. His country was my country, and his kindred my kindred, and nothing could have kept me from following after him.

I should not find it easy to speak of him as a man of letters only, for humanity was above the humanities with him, and we all know how he turned from the fairest career in literature to tread the thorny path of politics because he believed that duty led the way, and that good citizens were needed more than good romancers. No doubt they are, and yet it must always be a keen regret with the men of my generation who witnessed with such rapture the early proofs of his talent, that he could not have devoted it wholly to the beautiful, and let others look after the true. Now that I have said this I am half ashamed of it, for I know well enough that what he did was best; but if my regret is mean I will let it remain, for it is faithful to the mood which many have been in concerning him.

WHITTIER AND CURTIS ALIKE IN MOTIVE AND SPIRIT.

The spirit that was in Curtis was remarkably like Whittier's, dissimilar as were their outward circumstances. Whittier broadened from moral and politi-

cal journalism into the man of letters; and Curtis, with the dilettante tastes and beginnings of the æsthetic *littérateur*, grew by the compelling force of a deep and true conscience into moral and political journalism, with a sacrifice of his purely literary prospects. But Whittier in retirement was still a power for righteousness, and he conscientiously expended his poetic fire and genius with the chief motive of helping to "right the wrong" and of inspiring his fellow-countrymen to high ideals and to worthy actions. As Curtis neglected literature in order that he might in journalism and politics serve the best causes of his time, so Whittier turned to literature as the means by which he could render better aid to those same causes than in controversial politics and journalism. Both were manifestly right. Each found the best way in which he could teach and uplift. The moral influence of both their serene and beautiful lives is alike wholesome in nature and effect.

BOTH BELONG TO THE ENGLISH-SPEAKING WORLD.

It would be profitless to attempt to fix their places in our literature. Both were distinctly American; yet both belong rather to English literature as a whole than to any sharply separate body of American writers. We may compare Whittier with Bryant and Longfellow; but we must also compare him with Burns and Wordsworth. As a satirist Curtis must at times suggest comparison with his friend Thackeray; and he may be likened to Lamb quite as profitably as to Washington Irving. After all, the best literature of the English-speaking people cannot very easily and naturally be grouped upon the basis of allegiance to the British Crown or to the American Republic.

YET BOTH WERE TYPICAL AMERICANS.

Whittier in his subject matter is, of course, a more American poet than Longfellow. His verse will long remain endeared in thousands of homes. And the new and good fashion of teaching the best poems of our writers to children in the public schools will within a decade have given the people a broader familiarity with him than they have had in his lifetime. Mr. Curtis' fame cannot, in the nature of his work, be of so popular and "household" a kind; but his name, too, will live in the list of the great and typical Americans whose production is, after all, the most creditable of our national achievements. Both believed that "character is everything." Both cared supremely that America should be rich in high manhood and womanhood.

MR. GLADSTONE'S NEW CABINET.

A CHARACTER SKETCH, BY W. T. STEAD.

W. E. GLADSTONE.

AFTER the curious evidence which psychological science has adduced to prove the multiplex character of the personality of the individual, it is not difficult to conceive of the Cabinet as a personality only a little more complex than that which is possessed by any of the subjects of our previous sketches. Each Cabinet

is a distinct entity with a strongly marked personality of its own, although it is true that some Cabinets have been chiefly characterized by the absence of any character at all. They may not collectively have a body to be kicked, but, undoubtedly, if Schiller was right in proclaiming that history was the Day of Judgment, they have a soul to be damned. The capacity to will, which is the distinguishing characteristic of the soul of man, is also a distinctive characteristic of the Cabinet. We hear constantly the Cabinet met, the Cabinet considered, the Cabinet decided. And the ingenious may find another curious analogy between the collective Cabinet and the complex personality of man in that the operations of the mind in both are buried in impenetrable secrecy, and carried on, so far as the outer world is concerned, in profound silence. For the acts and deeds of the Cabinet the whole collective Cabinet is responsible. Probably, in most cases, these are different and distinct from what the acts and deeds of any one of its members would have been, had he been free to act solely according to his own judgment. As a Cabinet it deliberates, as a Cabinet it decides, and as a Cabinet it will be judged.

A PERSONALITY COLLECTIVE AND STRONG.

Therefore, I make bold to make the subject of my Character Sketch no single member of the Cabinet, but rather the Cabinet as a whole. A new entity has been born into the world since our last number appeared, and to that new entity is committed, for the next six months at least, the absolute control of the policy and destinies of the greatest Empire upon which the sun has ever shone. It is thoroughly in keeping with the odd ways of the British Constitution that the Cabinet, which governs everything, has no recognized place in the Constitutional machinery. Queen, Lords and Commons—all these are duly recognized, and even her Majesty's Privy Council, which may be said to exist only *in partibus*, has its appointed niche in the edifice of the Constitution; but the Cab-

net, which is everything and rules everything, is an anomalous and irregular outgrowth—a kind of illegitimate adjunct of the Constitution, which it nevertheless governs and controls.

Ten thousand years hence, learned pundits will probably discover and demonstrate to their own satisfaction that the Cabinet was a generic or family name like Pharaoh, given to the supreme ruler of the British Empire during the half century through which the realm was nominally under the sway of Queen Victoria. Many a curious myth will grow up over these mysterious Cabinets, who will in time come to be recognized as the husbands of the regnant Queen, to whom she hands over on her wedding day all the attributes of sovereignty. Many ingenious and erudite speculations will be wasted upon the vexed question of the extreme mortality of Cabinets compared with the extreme longevity of their royal spouse. One shool will imagine that the Queen was a Semiramis in her love of change, while another will attribute the short duration of the existence of Cabinets to the anger of the obscure but mighty Demos at the sterility which sets in with the fifth year of the life of the Cabinet. The frequent reappearance of the same name among the members of the Cabinet will be held to give support to the theory of reincarnation; 1892, for instance, will be held to be the fourth incarnation of the Gladstone Cabinet, and it is quite inconceivable how many fine theories will be spun in order to account for this extraordinary persistence of the same name among the descriptive titles of the Victorian Cabinets. The first, second, third and fourth Gladstone Cabinets will come to be as the numbered dynasties of ancient Egypt, even if they do not undergo that further transformation which has overtaken many notable figures in history, and become metamorphosed into the central figure of a fairy tale.

The Cabinet is a personality of power. Wise it may not be. Strong it is, and must be, by the very nature of its existence. For it wields the strength of all English-speaking men, outside the American Republic. At its word the cannon roars along the deep. It makes a sign, and thousands of stalwart warriors march with beat of drum to death in African deserts or Asian jungles. At its command the purse strings of three hundred million subjects are unloosed, and their contents are at its disposition. Yet all this immense potentiality of strength may be as weakness if the heart of the Cabinet be faint or if it is of feeble mind. A Cabinet without a backbone, or a Cabinet of unstable mind—such monstrosities have not been unknown even in our time. What is the Cabinet like? What will be its character? Is it a Cabinet worthy of England, fit to bear rule in the land which Cromwell governed, capable of defending the empire of the

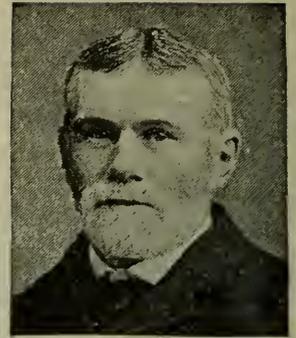

G. SHAW-LEFEVRE.

SIR G. TREVELYAN.

FOUR "OLD STAGERS" OF FORMER LIBERAL CABINETS.

seas held since the dispersion of the Armada? Time will show. As yet we can only surmise, infer, and speculate. So now let us to our work of analysis.

THE CABINET'S NATIVITY AND RELIGION.

The Cabinet is almost exclusively of English and Scotch parentage. There is only one slight strain of Irish and no Welsh or colonial blood in its constitution. Yet it is supreme in Ireland and Wales, and over all colonial and imperial policy it has a sole and exclusive authority.

It is a Protestant Cabinet: only one of its members, Lord Ripon, is a Catholic. The Lord Chancellor, although the son of a Nonconformist minister, is now a churchman. Mr. Fowler is a Wesleyan. Mr. Arnold Morley is the son of the Lay Pope of Congregationalism. Mr. Bryce is a Presbyterian. Mr. Asquith and Mr. Mundella were Congregationalists in their youth. Mr. John Morley is outside all churches. It is a middle-aged Cabinet, the average age of all its members being fifty-six, so that it wants but fourteen years more to enable it to complete the allotted three-score years and ten. The Cabinet is living in wedlock, with the exception of its youngest members, Mr. Arnold Morley and Mr. A. Acland. Its family is not large. It can boast for the most part of a liberal University education. Of its seventeen members, eight were educated at Oxford and six at Cambridge. It is literary in its tastes, and the list of its works fills a page in the appendix to this sketch.

ITS TRAVELS.

It has not been on the whole a much traveled Cabinet. Mr. Gladstone has never seen a great British Colony or an American State. Lord Ripon has the distinction of having settled the Alabama question in Washington, and of having raised the native question by the Ilbert bill at Calcutta. Lord Rosebery has seen most of the civilized world, although being a young man he has never held office in the colonies. Mr. Bryce is almost as much at home in America as in England; and Lord Kimberley, in addition to having held a post in Russia, has had the honor of having the capital of the diamond fields called after his name. Sir George Trevelyan began life in the Indian Civil Service. Mr. Mundella is cosmopolitan—an Italian by descent, who made his money by manufacturing in Germany, and his mark by philan-

thropic agitation in England, has seen America. Mr. Morley has also visited America; but Dr. Playfair, who may be described as the American of the last administration, is not in the new Cabinet.

ITS BIRTH AND WEALTH.

The Cabinet is four-seventeenths aristocratic and thirteen-seventeenths plebeian. This distinction, however, is somewhat arbitrary. The peers by birth are Lord Spencer, Lord Ripon, Lord Rosebery, and Lord Kimberley. Lord Herschell, although ennobled by elevation to the Woolsack, is of the Nonconformist middle class. On the other hand, Sir W. Harcourt, although not technically noble, is a descendant of the Plantagenets. One of the haughtiest men in the Cabinet is the new Postmaster, the son of the hosier and haberdasher of Wood street. He is the representative of the plebeian plutocrats, as Lord Rosebery, by marriage, may be said to represent the titled variety of millionaire. Of the members of the Cabinet, five—Mr. Gladstone, Lord Spencer, Lord Rosebery, Lord Ripon, and Lord Kimberley—inherited wealth and estate to an extent which has freed them from any necessity to work for a living. Lord Herschell and Mr. Asquith made their living at the Bar. Mr. Morley and Mr. Bryce made theirs by making books. Sir George Trevelyan is a hybrid between the country gentleman and the man of letters, while Sir W. Harcourt is another variety representing the country gentleman crossed with the lawyer and the University professor. Mr. Campbell Bannerman is a man of wealth and official experience. Mr. Acland is the son of a great squire, with a reputation as university man and philanthropist. There are only two members of the Cabinet who made their money in trade—Mr. Mundella, who makes ribbons, and Mr. Arnold Morley who sells them. Mr. Shaw Lefevre is the country gentleman, to whom official employment has been not only a career but a livelihood, and Mr. Fowler has the distinction of being almost the only solicitor who has ever been a Cabinet Minister.

ITS HOMOGENEITY.

The most important thing about a Cabinet is that it should be all of a piece. The last Cabinet was a unity. Will the new Cabinet be the same? Will it be one and indivisible or will it rather be a motley conglomeration of more or less antagonistic atoms?

The Gladstone Cabinet of 1880-85 was virtually a three-headed monster. Mr. Gladstone, Lord Hartington, and Mr. Chamberlain represented three distinct sections, each with instincts and wills of their own, which were from time to time in more or less sharp antagonism, with results that were in the last degree deplorable. The Salisbury Cabinet, after it had cast out the reckless and random Randolph, was a homogeneous entity, with one head, one heart, and one policy. The new Cabinet will be more homogeneous than the Cabinet of 1880-85, but its chief is less capable of mastery. He has only one interest left to bind him to public life. To be a Prime Minister you should have many.

THE CABINET GEOGRAPHICALLY DISTRIBUTED.

When we look at the localities which they represent, it is curious how diverse are their local connections. Mr. Gladstone, for instance, was born in Lancashire, lives in Wales, sits for a Scotch county, and is Prime Minister of the Crown in order to give Home Rule to Ireland. Mr. Morley, like Mr. Gladstone, was born in Lancashire, he lives in Chelsea, has been elected by Newcastle, and is Chief Secretary for Ireland. The Marquis of Ripon has his seat in Yorkshire, Lord Spencer in Northamptonshire, Lord Kimberley in Norfolk, while Lord Rosebery has residences and estates in Surrey, Buckingham and Midlothian. Mr. Asquith is a Yorkshireman, who lives in London and sits for a Scotch county. Mr. Bryce hails from the North of Ireland, is returned by a constituency in the North of Scotland, and sits in the Cabinet as Chancellor of a Duchy in the North of England. Mr. Campbell-Bannerman has a house in London, a park in Kent, and a castle in Scotland. Sir W. Harcourt, who sits for Derby, has a seat at Malwood in the New Forest. Mr. Shaw-Lefevre lives in Kent, and sits for Bradford. Mr. Fowler lives near his constituents in the Midlands. Sir George Trevelyan is a Northumbrian squire, and a member for Glasgow. Mr. Mundella made his money in Nottingham, and sits for Sheffield. Mr. Arthur Acland, of Devonian stock, sits for Rotherham in Yorkshire; while Mr. Arnold Morley lives in London and represents Nottingham. These three last, like Mr. Morley, have no other residence but their London house.

A NORTH COUNTRY CABINET.

Twelve Ministers thus may be said to represent the following counties:

Aberdeen.	Nottingham.
Glasgow.	Wolverhampton.
Stirling.	Newcastle.
East Fife, County.	Bradford.
Midlothian, "	Sheffield.
Derby.	Yorkshire (Rotherham).

Thus five out of the twelve sit for Scotch seats, six for English towns, and one for an English county division. The English counties return one hundred and three Liberals to the House. Only one of these has a seat in the Cabinet, while the sixty-eight Liberal borough members have six representatives in the Cabinet. Yorkshire has three representatives, or

four, counting in Lord Ripon. Lancashire has none, and London has none. Wales and Ireland are equally unrepresented, while Scotland has more Cabinet Ministers than all the rest of the United Kingdom, excluding Yorkshire. From north of the Humber come nine of the twelve elected members of the Cabinet. The remaining three are all from the Midlands; Derby, Notts and Stafford having one each. No Cabinet Minister represents a constituency further south than Wolverhampton. If we take the Wash instead of the Humber as the dividing line, Mr. Fowler is the solitary elected representative of southern England in the Cabinet. The peers somewhat redress the balance, but not very much. Lord Rosebery and Lord Ripon bring the Scotch-Yorkshire contingent up to ten. Lord Herschell used to sit for Durham city, so that the North country may be said to have twelve out of seventeen.

LORD HERSCHELL
ANOTHER "OLD STAGER."

Contrast this with the Salisbury Cabinet. That also consisted of seventeen members, of whom only nine were members of the House of Commons. Of these, two represented London, one Middlesex, two Lincoln, one Warwickshire, one Gloucester, one Yorkshire, and one Lancashire. Thus only two members of the Salisbury Cabinet were elected by constituencies north of the Humber. The Salisbury Cabinet was a Southerner, the Gladstone Cabinet a Northerner.

ITS PHYSIQUE.

Physically the Cabinet is robust—with exceptions. Mr. Gladstone is rather deaf, but as an athlete he could give Lord Salisbury long odds and beat him. Sir W. Harcourt's eyes are failing him, and his constitution is much less tough than it is bulky. Mr. Morley is a gouty subject, and Lord Rosebery suffers from insomnia. Lord Spencer is a master of the hounds, Mr. Campbell Bannerman is a stalwart, and most of the other members of the Cabinet could insure their lives without a premium in any life insurance office.

Philanthropy is strongly represented: Mr. Mundella and Mr. Acland. Mr. Morley and Mr. Fowler, to say nothing of Lord Ripon and Mr. Gladstone, are all humanitarians of the best type. Labor has no direct representative, Mr. Burt not having been deemed worthy of Cabinet rank. The army and the navy, the shipping and the banking interests, are equally unrepresented. One half of Her Majesty's subjects are as usual without a spokesman—Mr. Stansfeld being shelved to make room for Mr. Arnold Morley.

In good looks the Cabinet is at least equal to its predecessor. Mr. Gladstone has a more remarkable face than Lord Salisbury. Lord Herschell is no

beauty, but he is more presentable than Lord Halsbury. Mr. Balfour, on the other hand, is much handsomer than Sir W. Harcourt. No member of the outgoing Cabinet possessed such a nose as Mr. Mundella, or so sleek and good-looking a gentleman-in-waiting as Mr. Arnold Morley. Mr. John Morley, Mr. Bryce, and Mr. Arthur Acland represent culture better than any three of their predecessors. Lord Spencer is a proper man, a very proper man, who may challenge comparison with any of his rivals; nor had the late Cabinet any one more venerable than Mr. Fowler or more youthful looking than Lord Rosebery.

ITS CAPACITY.

All these things are, however, but of the fringe. The supreme question is, not how the Cabinet looks, but how it will think and how it can debate. Of its thinking we may speak when we come to consider its component parts. Of its debating power, it may safely be said than it can more than hold its own. Mr. Gladstone can give Mr. Balfour long odds and beat him any day with one hand tied behind his back. Sir W. Harcourt can hold his own with the quarterstaff against Mr. Goschen. Mr. Morley is more powerful on the platform, if not in debate, than Sir M. Hicks-Beach. Mr. Asquith is a much more effective debater than Mr. Matthews, and Mr. Campbell Bannerman is much more powerful than Mr. Stanhope and Lord George Hamilton rolled into one. Mr. Chamberlain and Sir Henry James, who were not in the late Cabinet, may be paired off against Mr. Sexton and Mr. Healy, who are equally outside the new ministry, and although there may be a howl at the comparison for the rough-and-tumble-late-and-early work of the Commons, the Irishmen are probably more serviceable than the Liberal Unionist chiefs.

The Cabinet, therefore, has a heart, a tongue, and a brain. It now remains to pass in review its various members.

MR. GLADSTONE.

First and foremost in our consideration of the character of the Cabinet comes the character of its head and its creator. This Cabinet is Mr. Gladstone's Cabinet. The gray matter in the ministerial brain has not admitted for a moment that it has not full and absolute control over all the nerves of the Cabinet down to the little toe of the left foot, in which the cartoonist, Mr. Gould, has appropriately located Mr. Arnold Morley, late Whip and now Postmaster-General. But the question of questions which all men are asking is how far that masterful brain will be able to dominate the extremities. How soon may we expect to see symptoms of those spasmodic twitchings and unregulated movements which tell of the emancipation of subordinate members from the magistral control of the brain? In other words, how long will Mr. Gladstone be Prime Minister and not merely Home Rule bill framer? He has told us all that Home Rule is the one tie that binds him to public life. It is admittedly his dominating interest. It will probably absorb nine out of every ten minutes which he bestows to the consideration of political

questions. But, although Home Rule may be a cause worthy of the supreme devotion of the supreme Minister, it is impossible to mount a whole Cabinet even upon the most sublime of one-legged hobby horses. A Cabinet is a society of fallible men above the average in strength of character, of all ages and sizes, and religions and politics, who are apt to degenerate into something very much like a servant's kitchen if the Prime Minister does not keep them well in hand. A Prime Minister needs to sit on the box and keep all the ribbons in one hand and the whip in the other. It never does for him to endeavor to concentrate all his attention upon even the leading horse in the team. What every one fears is that this is exactly what Mr. Gladstone will do. He breakfasts, lunches, dines, and sups off the eternal Irish stew, and the more he eats the more his appetite expands. The fear is that all his colleagues will take to going as they please, and with results that may easily be disastrous to the ministerial coach.

PRIME MINISTER OR IRISH MINISTER?

It is taken for granted that Mr. Gladstone, who is now eighty-three years of age, will not if he could and cannot if he would pay much attention to anything but the one question which he has made his own. This has always been his characteristic, even before he passed four-score. In the summer of 1880, when the Turk had to be coerced and the Beaconsfieldian mess brought into something like order, it was difficult to get Mr. Gladstone to speak a word or spare a thought about Ireland. Now it is Ireland, Ireland all day long. Not even the palpable resemblance between Bloody Sunday in Trafalgar Square and the shooting at Mitchelstown could rouse him to take any but the most perfunctory interest in the question which was destined to help him to more seats in London than could have been won by Mitchelstown. One of Mr. Gladstone's secretaries told me some time ago that this was all a mistake, and that no one excelled Mr. Gladstone in keeping his weather-eye fixed upon all coming questions. It may be so; but if so, he dissembles it rarely. And when the question in hand is that of controlling a Cabinet of seventeen, this understudying on the sly, as it were, is not much of a help. What is wanted is the consciousness of the leader's eye, the touch of the leader's hand, without which the Cabinet is apt to dissolve into a mere jumble of cliques and cabals. Mr. Gladstone found mighty fault with Lord Salisbury on high constitutional grounds for uniting in his own person the functions of Prime Minister and Foreign Secretary. The union of offices was criticised by others on the more practical ground that the duties of the Foreign Secretary were so engrossing as to leave a man no time to keep his colleagues together and to discharge the humdrum but indispensable duties of Prime Minister. Mr. Gladstone is not Foreign Minister, but he is, to all intents and purposes, Irish Minister, with Mr. Morley as his Chief Secretary. And the Irish Minister who has to frame a great constitutional measure that is to be the first step to the federalization of the

Empire, will find it quite as engrossing as the transaction of the ordinary business of the Foreign Office in the piping times of peace. Mr. Gladstone, we take it, will of necessity concentrate his attention upon Ireland, and let his colleagues do their business in their own departments very much in their own way.

MR. STANSFELD.

It is this which gives such immense importance to the constitution of the Cabinet, to the allocation of the right offices to the right people, and here it must be admitted that, even his enemies themselves being judges, Mr. Gladstone has excelled himself. He has turned out a better Cabinet than any one believed to be possible—a better Cabinet, that is, in the sense of a safer Cabinet—and one that is less likely to make mischief or to play tricks. It is not perfect—that no doubt is true. It was a mistake, and a bad mistake, not to have retained the services of Mr. Stansfeld at the Local Government Board. Mr. Stansfeld, although over seventy, is one of the most loyal and most experienced of all ex-ministers. He knows the subject, and he has thought out many questions of administrative reform upon which Mr. Fowler would be the first to admit he has hardly a conception. Above all, Mr. Stansfeld is a man of heroic moral courage, joined to the most absolute disinterested-

MR. STANSFELD,
AN "OLD STAGER" SHELVED.

ness—and we shall not go many months before Mr. Gladstone will have cause to regret that he has exchanged new lamps for old. Mr. Fowler, of course, was marked out for Cabinet rank, but no one, unless it was Mr. Arnold Morley himself, either wished or expected to find the late Whip in the Cabinet—so that it would not have been impossible to have made room for Mr. Fowler without expelling Mr. Stansfeld.

MR. LABOUCHERE.

With that exception, Mr. Gladstone has surpassed the expectations of his admirers, and confounded the lugubrious predictions of his enemies. It is sometimes said that Mr. Labouchere ought to have been in the Cabinet. But the Liberal Prospero knew better than to include his tricky Ariel in the Administration. Mr. Labouchere is a clever man, and a very much better man than he ever allows himself to appear, but he is not a colleague to be desired by an octogenarian statesman who wishes to be able to dream of Home Rule by night and by day without being awakened in the midst of his constitution-making visions of some brilliant mischief devised by the fertile ingenuity of the member for Northampton. This is so obvious that no one was surprised that Mr. Gladstone did not saddle himself with a colleague of whose escapades he must have stood in very sincere dismay. Mr. Labouchere has his own ideas

on many subjects, and they are certainly not the ideas of Lord Rosebery. Had he been in the Cabinet there would probably have been either a crisis in six months or Mr. Gladstone would have had to lay aside his beloved Home Rule for a season, in order to patch up some miserable compromise about Egypt or South Africa which would have satisfied no one and spoiled everything. Mr. Labouchere therefore remains the member for *Truth*, as Professor Stuart remains member for the *Star*. Mr. Gladstone seems to believe

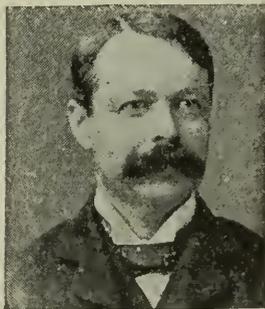

MR. LABOUCHERE.

that a man who has a newspaper to console him has no need of a portfolio. In another direction Mr. Gladstone might with advantage have been a little bolder, but here also everything was subordinated to the desire to avoid friction, and to allow nothing to stand in the way of Home Rule. Mr. Burt, the first elected and the most respected of all workmen who ever took a seat in the House of Commons, instead of being in the Cabinet, has been relegated an under secretaryship. He ought to have been Minister for Labor, of Cabinet rank. But to make such a post would have been a new departure, it would have involved a special act of Parliament to provide the salary of the new minister, and as an octogenarian statesman, with one idea in his head, does not take kindly to suggestions of novelties, the Ministry of Labor, it is probable, will be left over to be created by the next Conservative Administration, which is already committed by Sir John Gorst to its establishment.

MR. GLADSTONE AS CABINET MAKER.

Having said so much by way of palliating the defects which some have pointed out in the new Cabinet,

PROFESSOR STUART.

it is necessary to say that even when all allowances have been made Mr. Gladstone has done well. Cabinet making is difficult and disagreeable work. Mr. Gladstone has always said it was the only administrative duty which ever cost him a sleepless night. He was crippled in his choice by the refusal of the Irish members to take office, and by the extremely small number of Liberal peers that were available.

Considerable difference of opinion exists as to whether Mr. Gladstone in constructing his last Cabinet has enjoyed altogether a free hand. Some say that Mr. Gladstone never before was so masterful and imperious, that he consulted nobody, and that there is considerable irritation in certain quarters in consequence. But others, especially those in the immediate Gladstone *entourage*, assert that the Prime Minister was obliged to pay more regard to the opinion of

Sir W. Harcourt and Mr. Morley than under other circumstances he would have paid to any of his colleagues. It is not for me to decide which is true. Perhaps both are true. There are obvious conveniences in having Mr. Spenslow behind the curtain to explain how it is that the obliging Mr. Jorkins cannot possibly accommodate his friends. But it may be taken for granted that, whatever deference Mr. Gladstone may have shown to Sir W. Harcourt's opinion in matters on which he was comparatively indifferent, he had his own way wherever he cared to have it. He may have sacrificed Lord Aberdeen, Mr. Stansfeld, and Professor Stuart to oblige Sir W. Harcourt. No amount of persuasion or pressure could induce him to offer office to Mr. Labouchere.

Mr. Gladstone's eye has almost recovered from the blow inflicted by the gingerbread thrown at him in Chester by a too enthusiastic admirer, but there is no recovery of his hearing. Deafness, as in the case of one of the early Russian chancellors, is sometimes a most convenient diplomatic resource. It is, however, rather an inconvenience in Cabinet. The minister who possesses the ear of his chief by sitting next his hearing ear has his colleagues at a disadvantage. Mr. Gladstone, who has not disdained to use spectacles to ward off the inconvenience of the applemoan's effusive affection, may perhaps astonish the House of Commons by coming down "wearing an ear trumpet," after the fashion of Mr. Bramwell Booth. What a convenience it would have been if the Cardinal in the last year of his life would have resorted to that resource of civilization! But unfortunately, while every one wears glasses when their sight grows dim, it is not considered the right thing to use an ear trumpet when another sense gives out.

LORD ROSEBERY.

The only excitement of the recent Cabinet making was that occasioned by the doubt about Lord Rosebery's return to the Foreign Office. Lord Rosebery, for a year past, has steadily declared that he was not going to return to office. Shortly after his wife's death he intimated to Mr. Gladstone his decision not to accept office if it should be offered. This resolution was based, so it was stated, exclusively upon private grounds. What those private reasons may have been no one as yet can divine. For Lord Rosebery, among other accomplishments, is a past master in the useful but uncommon art of keeping his own counsel. There is no reason to doubt that he was perfectly sincere in arriving at this conclusion. He always spoke as if he were an outsider contemplating with intelligent interest the evolution of a great drama in which he had no longer a personal share. When he talked in this way some scoffed, others shrugged their shoulders, while a few who believed him marvelled in sorrow. Why? they kept asking themselves. Why? Why? Why? But answer there was none.

THE CABAL OF THE COCK AND BULL.

But the great public, like nature, abhors a vacuum. Where there is a demand there is inevitably a supply.

So, as Lord Rosebery refused to enlighten the public as to the why and wherefore of his decision to resign, the wise and understanding public set itself to invent reasons of its own. When savages are starving, they lessen the pangs of hunger by filling themselves with clods of clay. On this principle the *Times*, being unable to divine the real reason of Lord Rosebery's reluctance to assume office, invented the story of a cabal against him. If there was a Liberal majority of more than fifty, we were assured Lord Rosebery was to be dispensed with. The Foreign Office was to go to Lord Kimberley. The scuttlers and Little Englanders, with Mr. Labouchere at their head, were determined to stand no nonsense. Nay, to such fantastic lengths went the erratic imagination of Printing House Square, that Mr. Morley, of all men in the world, was indicated as one of the leaders in the intrigue against Lord Rosebery. All this was a mere cock-and-bull story. There was no intrigue. There was no cabal. Some of the men who were said to be scheming to get rid of Lord Rosebery were ready to do anything and everything to induce him to reconsider his decision to retire from public life. But Lord Rosebery was obdurate. He would not hearken to the appeals of his chief, to the entreaties of his former colleagues. More than once, in the very crisis of Cabinet-making, it was announced that he was not going to join the Ministry.

Lord Randolph Churchill, judging Lord Rosebery by himself, is said to have declared that it was only the coyness of the lady who loved to be wooed. Others who were nearer the truth attributed Lord Rosebery's reluctance to take office to insomnia, from which he has long been a victim. Others again imagined that Mr. Gladstone wanted Lord Rosebery to subordinate his views upon foreign policy to those with which the Foreign Secretary had little sympathy. There is no truth in this story. Where the truth actually lay no one, not even Lord Rosebery's intimates, appear to know. He has at least the honor of having added a worse than Asian mystery to the problems of politics.

LORD ROSEBERY.

WHY LORD ROSEBERY IS INDISPENSABLE.

In the end, however, Lord Rosebery was compelled to take office. By what method of compulsion, short of presenting a loaded revolver at his head, Mr. Gladstone succeeded in inducing Lord Rosebery to accept the Foreign Secretaryship is not known. The probability is that Mr. Gladstone would have failed if it had not been for the extraordinary pressure that was brought to bear upon the recalcitrant earl from

all quarters. It is not too much to say that an absolute feeling of dismay pervaded the Liberal ranks when it was known that Lord Rosebery really meant what he said. There was hardly a Liberal member who did not feel that a ministry without Lord Rosebery was a ministry without a future. But the dismay of the party probably weighed with him less than the assurances which poured in upon him from sovereigns and statesmen who were better able than borough members to foresee the consequences of his abstention. Two years ago I remember talking to a British ambassador at one of the most important Courts in Europe as to the effect of a change of Ministry. He replied: "I think they have accepted the return of Mr. Gladstone as inevitable, but being assured that Lord Rosebery will be at the Foreign Office, they regard this with composure. But if by any misfortune Lord Rosebery did not go to the Foreign Office I think we should have a very bad time." This was the universal opinion of British diplomacy. We have had six years of tranquility. Europe has been at peace. That peace might at any moment be disturbed by accident or design. The situation was too serious for it to be safe for any one to play tricks. And to place at the British Foreign Office any Minister who might plausibly be believed to entertain the fantastic dream of an Anglo-French alliance, might have upset every calculation and plunged the Continent into the abyss of the incalculable and the unknown. So at last Lord Rosebery, having assisted in turning Lord Salisbury out, was bound by the consequences of his own act to help his Queen and his country to minimize the mischief that might otherwise have resulted from the change of government.

THE COMING MAN.

When at last Lord Rosebery consented to waive his objections and subordinated his private inclinations to the imperative call of public duty, a great sigh of relief went up from all patriotic men. For Lord Rosebery stands for the Empire. The greatness and the honor of his country are to him even more important than scoring a point in the electioneering game. He understands also something of the permanent balance of forces in the outer world, and he realizes, as some of his colleagues unfortunately do not, the importance of the colonies and of the navy, if Britain is to retain her position among the nations of the world. The net result of the indecision and delay has been to convince every one, perhaps even Lord Rosebery himself, that he is indispensable, and to mark him out as having the next best right to the Liberal Premiership. It is no doubt true that there are some who do not much admire a patriotism which needs to be driven almost at the point of the bayonet, or rather under the pressure of innumerable atmospheres, into the service of the Empire. But the net effect on the whole will be in his favor. Here, at least, is no office-seeker, no ambitious aspirant after place and power. Here is the man whom Britain cannot afford to spare, whom all the world outside Britain knows and trusts. Lord Rosebery, if he can

but learn to sleep, issues from the crisis as the coming man.

MR. MORLEY.

The other indispensable minister is Mr. Morley. Lord Rosebery is not more indispensable for foreign affairs than Mr. Morley is for the management of the Irish Nationalists. It is a strange paradox. No man in the whole Cabinet is less Irish than Mr. Morley. His sedate and sternly restrained temperament is as far removed from that of the excitable and imaginative Celts as the austere Cato was from the ancient Gauls. Mr. Morley has the sense of justice of the Puritan, the poise of the philosopher and the severe taste of the literary precisian. Yet he and no other is the recognized leader and chosen representative of a party which idolized Mr. Parnell, and counts Mr. Tim Healy as one of its bright and shining lights.

J. MORLEY.

Mr. Morley has had no training in administration, yet he is universally declared to be indispensable for one of the greatest administrative posts in the service of the Crown, he is one of the few public men who have publicly and definitely broken with the orthodoxies of the churches, and he is installed with the approbation of the Catholic hierarchy as the only acceptable ruler and governor of

one of the most Catholic nations in Europe. The Irish movement is primarily nationalist, secondly agrarian and thirdly religious. Mr. Morley has never been remarkable for his enthusiasm on behalf of nationalities, he is the hope and bulwark of the opponents of socializing experiments, and he has written harder things of the Catholic Church than any other public man except Mr. Gladstone. To add to this strange congeries of paradoxes, he has found his most persistent and rancorous opponent in the quondam Tribune of the North, the erstwhile devotee of nationality, Mr. Joseph Cowen, who in his youth was an apostle of Home Rule, but who is today the hope and the trust of every Tyneside Tory.

THE CONTEST AT NEWCASTLE.

Mr. Morley's electoral contests at Newcastle have constituted the most interesting episode in the election. After the infamy of the election for the Forest of Dean, there was no result that cast a greater slur upon the democracy of England than the return of Mr. Hamond at the head of the poll for Newcastle. It is nearly a quarter of a century since there was the stormy scene before the hustings at Sandhill, when Mr. Hamond in vain endeavored to obtain a hearing. It was a curious chorus that drowned his voice. I was an apprentice boy on the Quayside, and I remember, as if it was yesterday, the salute of the unenfranchised. An odious scandal had come to light a short time before, and Mr. Hamond's appearance was hailed by a continuous angry howl of "Wife, wife, wife!"

—the significance of which was well enough understood on the hustings. Mr. Hamond has ten times offered himself to the suffrage of his fellow citizens, and twice he has been successful. He is an old man now, but age has not abated his natural impudence, his supreme self-complacency, or the unfettered luxuriance of imagination which led him to invent the extraordinary fiction that Mr. Morley had promised to resign his seat if he did not get a majority of two thousand over his Unionist opponent. Mr. Hamond's majority of three thousand was a sore blow and a crushing disappointment. Mr. Morley, who is one of the most sensitive of men, felt it as a cruel discouragement. If the wife of your bosom, of whom you have been pardonably proud, were suddenly to elope with the vilest varlet in your scullery, even a philosopher might wince. Mr. Morley's discouragement was but momentary, and his second campaign was one of the finest and most brilliant in the whole election. Mr. Cowen, in his most impassioned moments, never appealed more directly to the heart of the northern democracy than did Mr. Morley, when he opened the campaign after his appointment to the Irish Office. Seldom has any electoral reverse ever been more brilliantly retrieved. Mr. Hamond and Mr. Cowen between them have made Mr. Morley the first man in the party, after Mr. Gladstone. The conversion of a minority of 3,000 into a majority of 1,703 in the course of a few weeks, is one of those achievements of which a statesman may well be proud. Mr. Morley nailed his colors to the mast. He fought a straightforward, honest fight against a powerful and unscrupulous combination, and after a struggle of unparalleled intensity he achieved a magnificent victory. Mr. Morley has won a seat for life, and it is difficult to know whether to congratulate Newcastle most upon that fact or upon the final quietus it has given Mr. Cowen.

MR. H. H. ASQUITH.

The great surprise of the ministry was the selection of Mr. Asquith as Home Secretary. I remember a leader of the House of Commons declaring once, in private, not in public, that any one could be Home Secretary, and that there was hardly any office where it was as safe to trust an untried man as the Home Office. Everything, he said, is admirably organized. All the work is done by the permanent officials. All that is needed in a Home Secretary is ordinary common sense and ability to express himself intelligibly in the House. It would really seem as if this theory were accepted by both political parties. Mr. Disraeli astonished every one when he pitchforked a Lancashire lawyer, in the shape of Mr. Richard Cross, into the Home Office in 1874. Lord Salisbury, acting on Lord Randolph's advice, selected Mr. Matthews as Home Secretary in 1886, immediately after his great forensic triumph in the Dilke divorce case; and now Mr. Gladstone has outdone both Mr. Disraeli and Lord Salisbury by making Mr. H. H. Asquith Home Secretary to the new Administration. Mr. Matthews did not turn out a particularly brilliant success, to put it

mildly, while Sir Richard Cross achieved a tolerable reputation. Whether Mr. Asquith will be a success or a failure remains to be seen. That he is a smart man, almost a "drefful smart man," is universally admitted. But his promotion at a bound to one of the highest offices in the Cabinet, before he has even served his apprenticeship to administrative duties, is very audacious, and it is to be hoped that it may have the success of its audacity.

Mr. H. H. Asquith is the son of a Yorkshire Congregationalist, who has achieved a moderate reputation at the bar, where, until he became Home Secretary, he made a tolerable livelihood. In appearance he is a small edition of Mr. Chamberlain, whom he also resembles in one or two other respects. He is ambitious, he is persuasive, he married young, and he comes of Nonconformist and provincial stock. But Mr. Chamberlain has more force, more nerve, more fire, more enthusiasm than Mr. Asquith. There is as little color in his face as there is glow in his oratory. There is no more fire in him than there is in Lord Derby, whom he succeeds as the thin embodiment of incarnate common sense. Mr. Asquith is better cut out for a judge than a politician. He could do better in summing up a case for a jury than as a master in the arts of parliamentary debate. He is a demon for work, industrious, persevering and foresighted. He is a man capable of planning out his life and taking his own course regardless of the warnings of friends and the lugubrious warnings of all the authorities. At the bar he had all the qualities necessary for a great forensic success, except the total inability to rise, even for a few moments, into that exalted region from which a great advocate is able to sweep before him all the misgivings of a jury and melt the prejudices of the Court. He is a thin, pale-faced man, kindly-dispositioned enough, but with no glow in him. He is legal common sense incarnate in the silk of a Q.C., acute, calm, cool and critical.

I only heard him cross-examine once. Sir Charles Russell, who is always good to his juniors, handed over poor Mr. Macdonald of the *Times* to his tender mercies, and he discharged the duties of his position with the merciless precision of a Grand Inquisitor. He defended Mr. Cuninghame-Graham at the Old Bailey when the right of public meeting in Trafalgar Square had to be vindicated in the dock, but he has not figured conspicuously in the famous lawsuits of recent years. "Keep your eye on Asquith," Mr. George Lewis said to me five years ago, "he is certain to rise and rise high." Mr. Lewis is a rare judge of men, but even he was probably astonished at the rapidity of Mr. Asquith's promotion. On the other hand, a judge before whom Mr. Asquith has practiced declares that while Asquith is good enough at an opening speech, he is not particularly able as a counsel. Success in the courts is, however, no criterion as to success in the Commons. Mr. Gladstone thinks that Mr. Asquith is the man for the post. Mr. Fowler, it is believed, differs entirely from Mr. Gladstone in this matter; but Mr. Fowler's judgment is perhaps a little prejudiced.

In Parliament Mr. Asquith has made some dozen set speeches. He left the impression that he had carefully written them out, and then as carefully committed them, word by word, to a retentive and capacious memory. They were lucid presentations of his case, the sentences were compact and consecutive, and his voice arrested the ear of the House. These exertations, however, prove nothing as to his ability to hold his own in the rough and tumble of debate. Mr. Asquith's appointment is a great experiment. It may easily be a great failure.

Mr. Asquith will have many troublesome questions to face. The first is the demand for the amnesty of the dynamiters and Phoenix Park assassins. Mr. Gladstone has handed over to him the duty of reconsidering the sentences of these patriots, whose zeal carried them into murder—wholesale and retail. Another pressing question is that of Trafalgar Square. The square is the historic gathering ground of London's democracy. It is London's open air town hall. It has been closed to the people by brute force ever since Bloody Sunday, 1887. A meeting has already been summoned to celebrate in the square the crime of November 13. Mr. Asquith will have to decide whether to allow the meeting, or interdict it, or regulate it. The square is in Mr. Shaw-Lefevre's department. Being the property of the Crown it is difficult to hand over the regulation to the County Council. In any case this can not be done before November 13. Mr. Asquith will have to decide what should be done. The true, perhaps the only policy, is to declare that the ultimate control of the square will be transferred to the County Council, but that the use of London's open air town hall will be restored to the people of London, subject to certain specified simple but obvious regulations, framed in order to prevent the abuse of the privilege of public meetings or its monopoly by any single set or crowd of demonstrators. Behind these two questions stands the great subject of Prison Reform. Mr. Asquith will not face the outcry that would be raised against the one drastic measure which would refuse to allow any judge or magistrate to pass a sentence until he had himself done at least a week's hard labor as an ordinary criminal convict, special provision, of course, being made for subjecting the non-criminal judicial candidate to the ordinary prison treatment. But he may do much to make our prisons at once more humane and more severe by reducing long sentences, giving prisoners the option of the lash, and letting more outside humanizing influence into the dim, dull precincts of the gaols. Mr. Asquith is not an enthusiast; he is not quite a genius; but he has very little trash in his mind, and he is not badly qualified to act as the supreme court of appeal in all hanging sentences.

MR. H. H. FOWLER.

Mr. Fowler was talked of as a possible Chancellor of the Exchequer and as a possible Home Secretary. Mr. Gladstone decided that he must be President of the Local Government Board. Mr. Fowler is reported to have made a wry face and hinted that he would

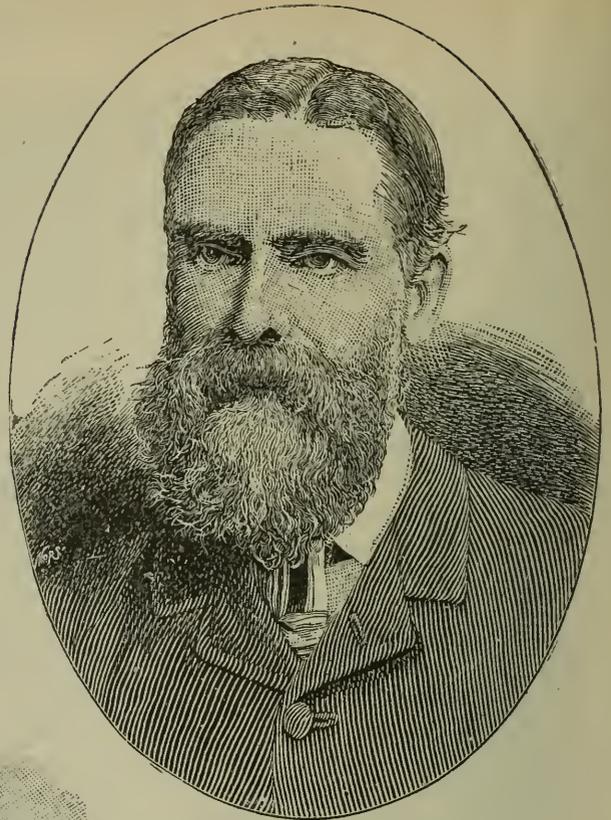

have preferred the Home Office. Mr. Gladstone, however, had only the Local Government Board to give him. It was a case of that or nothing. Mr. Fowler preferred it to nothing, and that is all that can be said. But in reality it is a better post than either of those to which he aspired. The whole question of Poor Law Reform, the immense problem of District and Parish Councils, together with the settlement of the Temperance Question, all fall to the share of Mr. Fowler. If he wanted a place in which to be useful, the Local Government Board is worth both the others put together. Ill-natured gossip, however, asserts that Mr. Gladstone refused him the other posts in order to mark his condemnation of the "base compact" by virtue of which he had saved himself from a contest at Wolverhampton in return for a pledge to respect Mr. Chamberlain's political preserves. Be that as it may, the ministerialists are well content to have Mr. Fowler where he is. Mr. Fowler will be a lucky man if the general estimate of his ability is as high this time twelve months as it is to-day. Mr. Bryce said of the Gladstonian majority that it was little, but that it was a fighter. That is just what Mr. Fowler is not. He is not little and he is not a fighter. He is a cautious, canny man, who prefers to attain his ends by arrangement rather than by swashbucklerism. The coming session will severely test the metal that is in him. He can stand up to the Tories well enough, for 'tis his nature to, but he is apt to get demoralized by a flank attack. "If ever I have to go tiger hunting," said one of his colleagues on one occasion, "I will take care not to choose a Wesleyan solicitor as my sporting companion." As there will be a good deal of tiger hunting in the new parliament it is to be hoped Mr. Fowler will show more of the spirit of John Wesley than of the diplomatic caution of the head of the firm of Fowler, Perks and Company.

MR. ARTHUR ACLAND.

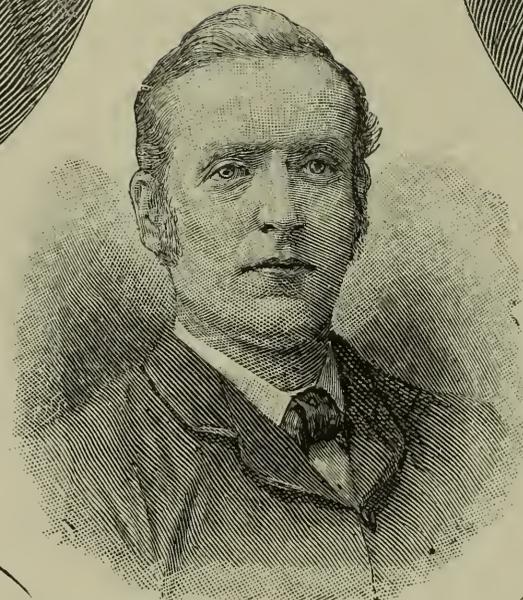

Mr. Arthur Acland has long been regarded as one of the coming young men. He is the son of Mr. Gladstone's old friend, Sir Thomas Acland, and Mr. Gladstone does not forget his old friends or his old friends' sons to the third and fourth generation. Lord Houghton, who is Viceroy of Ireland, is an old friend's son, and so is the Postmaster General. But, as the Irishman says, even if he had never had a father, Mr. Arthur Acland would have deserved recognition. He is a philanthropist, an educationist, a co-operator, a university extensionist, and, in short, just the kind of man to form a committee of three with Mr. Mundella and Mr. Fowler to undertake in earnest the regeneration of rural England. As vice-president of the Council, he will have to try his hand at licking into shape the chaos of secondary education, and at endeavoring to bring some practical common sense into the practical instruction of the children of our villages. I have a kind of dream that Mr. Acland is destined to universalize the use of the magic lantern as an educational agent, but whether he does this or not, he can hardly fail to leave his mark impressed deeply on the education of the nation.

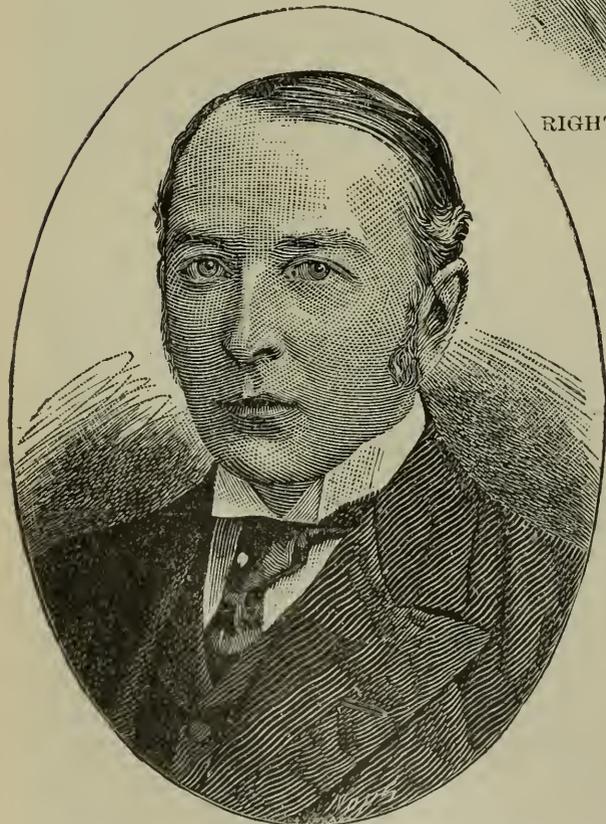

RIGHT HON. HENRY FOWLER, M.P.,
President of the Local Government
Board.

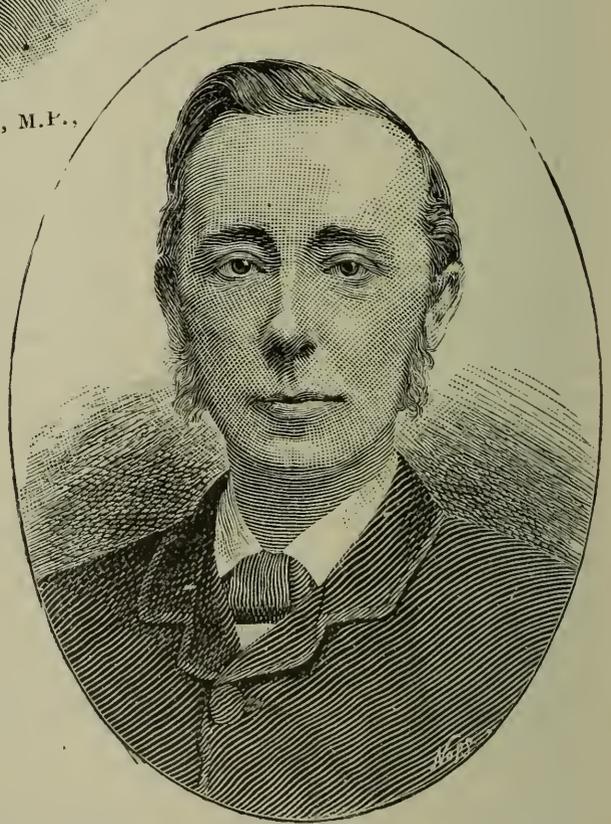

RIGHT HON. JAMES BRYCE, M.P.,
Chancellor of the Duchy of
Lancaster.

RIGHT HON. H. H. ASQUITH, M.P.,
Home Secretary.

RIGHT HON. ARNOLD MORLEY, M.P.,
Postmaster-General.

RIGHT HON. A. H. DYKE ACKLAND, M.P.,
Vice-President of the Committee of Council on Education.

THE YOUNGER MEMBERS OF THE CABINET.

MR. ARNOLD MORLEY.

Mr. Arnold Morley, the son of Mr. Samuel Morley, is Postmaster-General. He is a handsome bachelor, whose ambitions are more social than political or religious. His father was a kind of lay Nonconformist Pope. He was Liberal Whip and is part proprietor of the *Daily News*. No one expected to see him a Cabinet Minister, although the haughtiness of his manners would have prepared members to hear that he had been made a duke, or at least an archangel. As Postmaster he has got to establish penny postage throughout the English-speaking world, to decide that everything published periodically at intervals of a month is a newspaper, and as such entitled to be carried at newspaper rates, and generally to sit upon Sir Arthur Blackwood until he consents to bring England up to Mr. Henniker Heaton's ideal of a civilized postal community. Apart from the praiseworthy desire of pleasing Mr. John Morley by adding a namesake to the Cabinet, Mr. Gladstone's motives in making Mr. Arnold Morley a minister are somewhat mixed. He is a Gladstonian balast for one thing, and then again he adds one more to an unwieldy Cabinet. There is safety in numbers, quoth W. E. G.

MR. JAMES BRYCE.

Another member who takes his seat in the Cabinet for the first time is Mr. James Bryce. There is only one thing to say about this, and that is that most people imagined he had been in the Cabinet before. He ought to have been, which is another matter. He was Under-Secretary for Foreign Affairs in 1886, and he is now Chancellor of the Duchy of Lancaster. The only Irishman in the Cabinet, he is an Ulsterman, from the black north, the son of a Presbyterian divine. Mr. Bryce is cultured, traveled, philanthropic, and sensible. If he has one fault it is that he is just a trifle too superior and too well informed for anything but a professor's classroom. He is not in favor of woman's suffrage, but he helped to amend the law by which a male legislature deprived the mother of any right to the custody of her own offspring, and also to amend the equally chivalrous outcome of masculine domination, the law which made marriage equivalent to the robbery by the husband of all his wife's property, past, present and to come. Mr. Bryce is almost as well known in the United States as in the United Kingdom. He has written the classic work on the American Commonwealth, and is equally at home on the Swiss Constitution and on the Alps. He does not excite as much enthusiasm as might be desired, but he is an eminently useful, trustworthy, public spirited public man.

THE FIGHTING SERVICES.

There is no need for any one to go through all the other members of the Cabinet. The most useful Cabinet Minister, who may yet lead the House of Commons, is Mr. Campbell-Bannerman. He is one of the few ministers who know the difference between a cavalry regiment and a protected cruiser: for interest in "the services" is not the leading characteristic of Liberal statesmen. Mr. Campbell-Bannerman is rich and tough and capable. He is the

Liberal W. H. Smith, who is much cleverer than the late Mr. W. H. Smith. He ought to succeed Mr. Gladstone as leader of the House. If Sir W. Harcourt's eyes are not better he probably will. Mr. Campbell-Bannerman has only one fault. He is lethargic. A few crackers ignited under his coat tail would do him good. If he could be induced to become a vegetarian and to read only one French novel a month, he might depose the Duke of Cambridge, and become famous in history as the man who created the British Army. But, failing the crackers, and in the absence of personal ambition or patriotic self-abnegation, what is to be done?

Every one was delighted when it was known that Lord Spencer was the new First Lord of the Admiralty, and that delight was increased when it was known that Sir Edward Reed was not going to have any post in the Administration. Lord Spencer is an ideal English nobleman. A master of the hounds, the owner of Althorp, a trusted statesman, simple in his tastes, chivalrous in his character, the one man in the Cabinet whom every one respects and whom all who know him love. A modest, upright, fearless Englishman, he takes his place at the head of the great service in whose traditions he was reared, resolved that the fame of his forefathers shall suffer no diminution in his hands. He will have his work set, keeping up the fighting strength of the navy with Sir W. Harcourt at the exchequer. But Lord Spencer will do his duty. Mr. Caine would have been a more efficient and capable assistant than Sir Ughtred Shuttleworth, but the inexperience of the new political will help to make the staff at Whitehall more than ever sure of their ground.

H. CAMPBELL-BANNERMAN.

THE COLONIES AND INDIA.

The story runs that Lord Lansdowne threatened to resign if Lord Ripon went to the India Office. So Lord Ripon went to the Colonial Office, where he will miss Sir R. Herbert's kindly coaching, but where he will find an ample field for his energies. During his stay at the Colonial Office, Studley Royal should become the country seat of colonial statesmen on a visit to this country, and a pilgrimage to Fountains Abbey one of the recognized duties of every minister in the colonies. Lord Kimberley is established at the India Office. Mr. Gladstone is said to have declared that this peer is good in council. If so, he obeys the precept to do good by stealth,

LORD SPENCER.

to have declared that this peer is good in council. If so, he obeys the precept to do good by stealth,

for he certainly does not let his left hand know what his right hand doeth. He is industrious and a Gladstonian. He has got a capable lieutenant in Mr. G. W. Russell, who will find the representation of the interests of the Indian Empire in the House of Commons an odd change from the chairmanship of the Music Halls Committee of the County Council. The rapid fall in the value of the rupee will make the lives of these good men a burden unto them—a burden which, if they are wise, they will pass on with as little delay as possible to Sir W. Harcourt.

SOME OLD STAGERS.

Sir George Trevelyan, who wrecked the Home Rule bill in 1886, is Secretary for Scotland in a Home Rule Administration. Mr. Mundella is at the Board of Trade, determined, if possible, to develop his Under-Secretary, Mr. Burt, into a Minister of Labor, and full of great schemes of applying the principle of ar-

GEORGE RUSSELL.

bitration to the strikes and lock-outs of our time. Lord Herschell, who, like Mr. Bryce, is the son of a Nonconformist minister, is restored to his former place as Keeper of the Conscience of the Queen. On the Woolsack he is the right man in the right place. Mr. Shaw-Lefevre is back again at the Woods and Forests, and lastly, there is Sir W. Harcourt, Chancellor of the Exchequer, of whom nothing need be said, for in this character sketch we must only say good things of its subject.

SOME MINISTERS OUTSIDE THE CABINET.

Sir Charles Russell has consented to sacrifice \$35,000 a year in order to help the Prime Minister to give Home Rule to Ireland. That represents the difference between the fees of the Attorney-General and the average income of the leader of the bar, the law officers of the Crown being now for the first time forbidden to take private business. If this rule is enforced Sir Charles will probably be the last leader of the bar who will consent to be Attorney-General. That is the trouble which Sir Richard Webster brought upon the profession and upon the country by

his fatuous folly in taking the brief of the *Times* against the Parnellites. Mr. Rigby is—is Mr. Rigby, Solicitor-General, whose fame is caviare to the general. Mr. Robert Reid and Mr. Lockwood are left out in the cold. Sir Horace Davey succumbed at Stockton, so that he is out of the running. Sir Edward Grey, the most promising of all the younger men, is Under-Secretary for Foreign Affairs. Sir Edward, like Mr. Campbell-Bannerman, wants a spur. He is too happy in his domesticities and among his Northumbrian flower beds to care for the dusty arena at Westminster. He is as able as he is unambitious, but the position he holds with enemies on his flank will impel him to action. It is an ill wind that blows no one any good, and the Forest of Dean may congratulate itself upon having made the cause of the scuttlers from Egypt practically impossible owing to the odium excited by the man who, after breaking all his own pledges, thinks he has a mission to help the French to remind England of the promises under which we went to Egypt. Mr. Sydney Buxton and Sir Walter Foster are to have their chance. Mr. Buxton is Under-Secretary for the Colonies, and Sir Walter Foster is at the Local Government Board. Of the others nothing need be said except that Irishmen lament the non-return of the Aberdeens to the Castle. Lord Houghton may do well, but the Irish know nothing about him, and there is no Lady Houghton. A bachelor Viceroy is a one-legged monstrosity. It is understood that the Aberdeens are going to Canada when Lord Stanley returns. Before their term of office expires the Dominion may be the pivot on which may turn the destinies of the Empire.

MR. RIGBY.

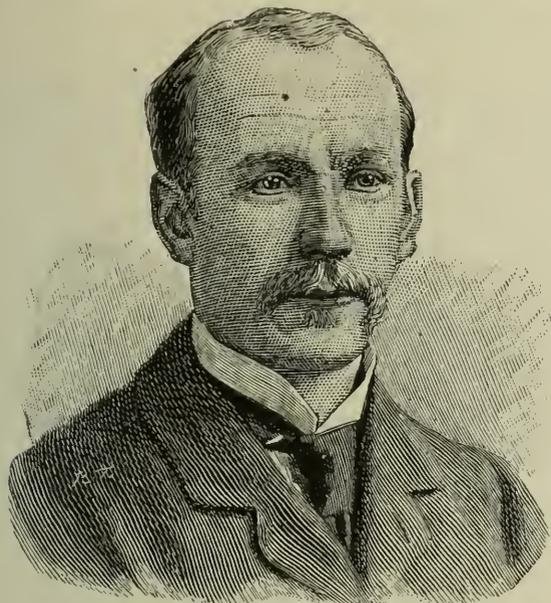

IN CONCLUSION.

The Cabinet, as a whole, will not survive any accident to its head. Should Mr. Gladstone retire next

SIR EDWARD GREY.

year, the Cabinet would be reconstituted—possibly under Sir W. Harcourt—but in any case nothing would be done until after another general election. The prospect before this administration is about as black as ever overshadowed any government in times of profound peace. The Home Rule bill, which is now in process of incubation, will, it is understood,

SYDNEY BUXTON.

have precedence over every other measure. The House of Lords will throw it out, and in so doing will be admittedly well within their constitutional and moral rights. Mr. Gladstone is not in a condition to raise a storm about this informal referendum. The Queen would not give him permission to flood the Upper House with new peers. There will be another appeal to the country upon Mr. Gladstone's bill, but, possibly enough, without Mr. Gladstone to lead it. Of course, the unforeseen may always happen. But, humanly speaking, the odds seem heavy that after a year or two, in which everything will be sacrificed to Home Rule, another Cabinet will be formed which will be neither Gladstonian nor Liberal. Nevertheless, with this dreary prospect before it, the new Cabinet strides into the imperial amphitheatre. If it wants a motto this perhaps will be most appropriate :

Ave, Caesar ! te moraturi salutamus !

THE LITERARY RECORD OF THE NEW MINISTRY.

The new Cabinet is more than usually literary, some eight out of the seventeen of its members having produced books, both wisely and well, on political, social, historical, literary and economic subjects. It has occurred to us that a list of the volumes that have been written by each Minister might be interesting. Mr. Gladstone and Mr. Morley, of course, head the list both in the number of their publications ; but Sir George Trevelyan, Professor Bryce and Mr. Acland have each rendered incalculable service to literature. Lord Rosebery has, so far, produced only

one book, but that is so excellent that it is to be hoped that his literary labors will not cease with his resumption of official duties :

The Right Hon. W. E. Gladstone, M. P. :

"Financial Statements," 12s. (Murray, London) ; "Rome and the Newest Fashion in Religion," 7s. 6d. (Murray, London) ; "Social Aspects of the Irish Question," 4s. (Murray, London) ; "Studies on Homer and the Homeric Age," 33s. (Clarendon Press, London) ; "Juventus Mundi : The Gods and Men of the Heroic Age," 10s. 6d. (Macmillan, London) ; "Primer of Homer" (Macmillan, London) ; "Homeric Synchronism," 6s. 6d. (Macmillan, London) ; "The Impregnable Rock of Holy Scripture" (Isbister, London) ; Speeches in course of publication, edited by A. W. Hutton, Vol. I., 10s. 6d. (Methuen, London) ; "Landmarks of Homeric Study," 75 cents (Macmillan, N. Y.).

The Right Hon. the Earl of Rosebery :

"Pitt" (Twelve English Statesmen series), 75 cents (Macmillan, N. Y.).

The Right Hon. John Morley, M. P. :

"Diderot and the Encyclopædists," 2 vols., \$1.50 each (Macmillan, N. Y.) ; "On Compromise," \$1.50 (Macmillan, N. Y.) ; "Critical Miscellanies," 3 vols., \$1.50 each (Macmillan, N. Y.) ; "Rousseau," 2 vols., \$1.50 each (Macmillan, N. Y.) ; "Voltaire," \$1.50 (Macmillan, N. Y.) ; "Aphorisms," 25 cents (Macmillan, N. Y.) ; "Edmund Burke : An Historical Study," \$1.50 (Macmillan, N. Y.) ; "Edmund Burke" (Englishmen of Letters series) (Macmillan, N. Y.) ; "Chatham" (Twelve English Statesmen series), 75 cents (Macmillan, N. Y.) ; "Walpole" (Twelve English Statesmen series), 75 cents (Macmillan, N. Y.) ; "The Study of Literature," 25 cents (Macmillan, N. Y.) ; "Studies in Literature," \$1.50 (Macmillan, N. Y.) ; "Richard Cobden," 2s. (Chapman & Hall, London).

The Right Hon. Sir George Trevelyan, M. P. :

"Cawnpore," \$1.75 (Macmillan, N. Y.) ; "Early History of Charles James Fox," 6s. (Longmans, London) ; Competition Wallah ; Ladies in Parliament, Etc., 50 cents (Macmillan, N. Y.).

The Right Hon. James Bryce, M. P. :

"The American Commonwealth," \$3.50 (Macmillan, N. Y.) ; "The Holy Roman Empire," \$1 (Macmillan, N. Y.) ; "Transcaucasia and Ararat," \$2.50 (Macmillan, N. Y.) ; "Social Institutions of the United States," \$1 (Macmillan, N. Y.).

The Right Hon. A. H. Dyke Acland, M. P. :

"A Guide to the Choice of Books for Students and General Readers" (Stanford, London) ; "Working Men Co-operators" (written in collaboration with Mr. Benjamin Jones) (Cassell, N. Y.) ; "The Education of Citizens : The Substance of Many Lectures" (Central Co-operative Board, Manchester) ; "Inaugural Address at the Lincoln Co-operative Congress, 1891" (Central Co-operative Board, Manchester) ; "A Handbook in Outline of the Political History of England to 1887," \$2 (Longmans, N. Y.) ; "A Skeleton Outline of the History of England," 60 cents (Longmans, N. Y.) ; "Studies in Secondary Education," edited by A. H. D. Acland, \$1.75 (Macmillan, N. Y.).

RELIGIOUS CO-OPERATION—LOCAL, NATIONAL AND INTERNATIONAL.

A GROUP OF EIGHT ARTICLES.

UNDER the generic title of "The Layman's Movement" the REVIEW OF REVIEWS last February grouped together several brief articles descriptive of certain efforts and tendencies which were making toward a higher degree of harmony and a more effective practical co-operation among Christians of all denominations or of no denomination. The remarkably wide interest aroused by that group of articles has placed us under a kind of moral compulsion to return to the theme with a report of progress. The past summer has, in a great variety of ways, conduced to the furtherance of what may be termed religious solidarity. We have already made reference to the usefulness of such recent gatherings as the Christian Endeavor Conference in New York. The present group of papers recounts the notable success of the Grindelwald Conference in bringing together English Churchmen and Nonconformists; notes the cheering advance of Mr. Stead's "Civic Centre" movement in Great Britain; recounts in like manner the progress of Mr. Seward's Christian Unity movement in America; contains a highly appreciative forecast of the World's Parliament of Religions at Chicago next year, and further includes very timely utterances in behalf of a united and practical forward movement in applied Christianity by Dr. Strong of the Evangelical Alliance, Dr. Dana formerly of St. Paul, now of Lowell, Dr. Washington Gladden and the Rev. Hugh Price Hughes.

I. PRACTICAL CO-OPERATION IN CHURCH WORK.

BY REV. JOSIAH STRONG, D.D.

“WHAT are the prospects of lay co-operation in Christian work?”

The great obstacles in the way of such co-operation in the United States have been, first, the estrangement of the various denominations from one another, which has led to a lack of confidence, not to say mutual hostility; second, separate interests which have resulted in rivalries; and, third, an undue emphasis on creed.

These obstacles are being removed by the force of circumstances. Isolation is becoming as difficult for communions as for communities. Ignorance naturally breeds suspicion, but the conditions of modern life are forcing men of different religious creeds to become acquainted. They ride in the same cars, they meet in business and in politics, they read the same papers, the same magazines, the same books. To a considerable extent they attend the same religious gatherings. The Young Men's Christian Association and the Woman's Christian Temperance Union have afforded valuable points of contact, while the Young People's Society of Christian Endeavor, with its marvelous growth, and the King's Daughters are uniting hundreds of thousands of the rising generation in a broad Christian fellowship which crosses denominational lines and actively cultivates mutual confidence and love. Thus acquaintance is forcing different denominations to give over their unworthy suspicions one of another.

The settlement of the great West has naturally

stimulated denominationalism. Between 1870 and 1890 the number of evangelical churches in the United States more than doubled, rising from 70,148 to 142,599. While the denominations are each struggling to get a foothold in the rapidly multiplying communities of the frontier, their interests seem separate and rivalries result. But this century will practically bring to a close the era of settlement, and conditions will then be much less favorable to denominational competition.

No less effectively is the third great wall of separation being breached. Non-essential doctrines, on which men may differ and be equally honest and equally Christian, are not magnified as they once were, until deemed a sufficient ground for disfellowship and even persecution. There is now less tendency toward an exaggerated estimate of the importance of doctrine as compared with conduct. Men are beginning to see that conduct is a much larger proportion of Christian living than is creed, that Christianity is less a belief than a life.

Moreover, the solution of the great sociological problems of our times awaits the application of Christian principles. This application the churches must make, and happily there exist among them no historical differences along sociological lines. Though divided in doctrine and polity, they can unite in seeking to solve the problems of labor, of pauperism and of crime. And the magnitude of the difficulties which confront the churches demands their united efforts.

Here in the field of practical Christian work the co-operation of the churches is at the same time the most needed and the most practicable.

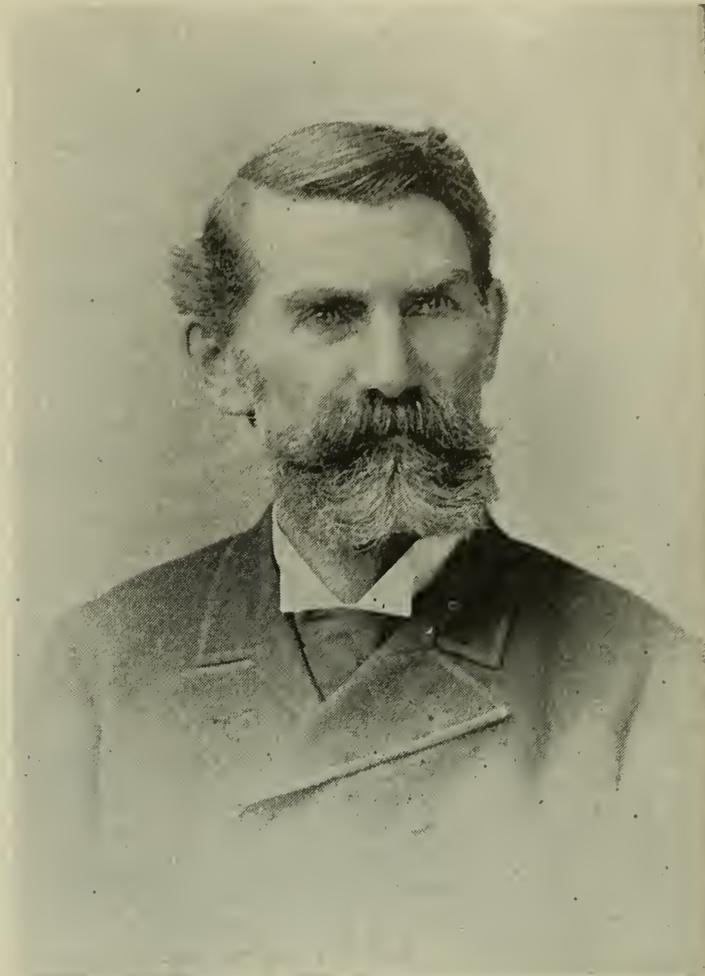

The great forces of civilization are all working in favor of combination, co-operation, organization, centralization. The churches could not resist this powerful tendency of the times, even if they tried. The very stars in their courses are fighting against existing sectarianism and denominational competition. Carlyle somewhere describes the insight of genius as a "co-operation with the real tendency of the world." Those who are seeking to bring the fragments of the dismembered church of Christ into closer relations, and finally into organic union, may be said to possess this insight, and may see their triumph from afar.

Co-operation is a necessary step toward such union. The writer heard the lamented Dr. Roswell D. Hitchcock say, a short time before his death, "If ever organic union comes, it will come through co-operation." Certainly denominations which cannot co-operate cannot coalesce.

The form which co-operation is to take is still something of a question. Some advocate denominational federation, which would make possible an official ecclesiastical co-operation. This would be good so far as it went, but such co-operation would be subject to very serious limitations. It would stop the competition of the various home missionary societies, which would be a great economy of men and of money and a distinct gain every way; but such a body would be weak in the prosecution of reforms and in attempts to solve the great sociological problems of our times. On all such questions its position would necessarily be conservative; it could not lead. It could never go faster than the slowest denomination entering into the federation. As there could be no compulsion, the denomination which was least advanced on any question would necessarily determine the position of the federated body. Such would be the result of federation *at the top*.

Federation *at the bottom* promises larger results. By that I mean the federation of the local churches. A half dozen neighboring churches, representing as many denominations, can be induced to take a much more advanced position concerning needed reforms

and new methods of work than the half dozen denominations which they represent. The conservatism of one community would not keep back a less conservative community. This is the co-operation which the Evangelical Alliance for the United States is ad-

REV. JOSIAH STRONG, D.D.,
Secretary of the Evangelical Alliance.

vocating and inaugurating—the co-operation of the local churches in applying the principles of the gospel to the entire life of the community, to all its institutions, to all its industries, to all its activities, to all its relationships.

II. NEW METHODS WANTED IN HOME MISSIONS.

BY REV. M. MCG. DANA, D.D.

IT is one of the hopeful signs of the hour that increasing attention is being paid to the waste of Christian force. We are still being called by the exigencies of the religious situation to the study of the economics of Church work. For years we have in all households of faith been confronted with unwise expenditures in the so-called home missionary fields, the proof of which is found in the multiplication of dependent churches, with their poorly supported

ministers. Sectarian rivalry, and the habit of ignoring by one denomination what has been done by others, is mainly responsible for this state of things. In some sections of our land competition in church extension has been as pronounced as in business enterprises. We have long professed to deplore it, and have constantly apologized for it, but as yet nothing definite has been done to bring it to an end.

Of late a new interest has been awakened in this

subject, and from thoughtful Christian laymen, as well as from ministers desirous of a change in present methods, have come suggestions deserving, to say the least, of the most careful consideration.

At present money enough is raised by the various denominations to reach all parts of our country with evangelizing agencies and influences, but it is unwisely expended. Each denomination ignores largely every other, so that there is overlapping of work: too much is spent in some places, resulting in an over supply of churches, while other and needy sections are overlooked. All over our Western land is this the case, and it constitutes one of the most grievous trials of home missionaries, as it certainly is the shame and weakness of our Protestant faith. In Great Britain the same state of things exists, and it is in every rural community especially a burning question. Various schemes have been proposed, such as yoking together contiguous churches under the pastoral care of one missionary. This is the modification of the old "circuit" system, which yielded good results, and certainly is religiously and pecuniarily economical.

But antecedent to this, possibly making such a "resource" unnecessary, is the unity of several weak churches in any given locality into one strong self-supporting church. That is the dictate of common sense, and is a move in the direction of practical Christian union. This method would release from their starveling charges men who are needed elsewhere, and this would help meet the deficiency of laborers, now so generally lamented.

Such consolidation, however, of churches in localities where the latter are redundant can never be brought about under the management which now obtains and which is distinctively ecclesiastical. The work and worth of State, conference or synodal missionaries or superintendents are largely gauged by the number of new churches they organize every year. This puts a premium on denominational zealotry, which is quite often not according to wisdom. For this reason it has been suggested that some sort of "advisory board" composed of laymen, representing different denominations, might be charged with the responsibility of determining when and where a new church is needed and of what character it shall be. This simply applies business principles to the grave matter of church extension, and brings, through such a constituted board, the evangelical denominations into co-operative effort. The opinion of such a body of men representing Christian sagacity, enterprise and brotherhood would not, it is claimed, be disregarded in any community where the establishment of a church was being considered. Should this board advise against the formation of a new church, because not needed religiously, it surely would be a sufficient and safe reason for missionary societies withholding aid, especially if in face of this advice the projectors of the enterprise went ahead. A good many churches are born of religious spunk and sectarian zeal, and both are out of place in this evangelistic age.

No denomination should now attempt to plant a church of its own in a field already occupied without conference with representatives of sister denominations. To do so is to ignore all the principles of Christian comity and economy as well. It is a sin in these days to over supply a community with missionary churches, for among other things injurious, it involves the misapplication of funds given to supply the really destitute with religious privileges. Two-fifths of the Presbyterian and Congregational churches average less than fifty members, yet each of these dependent struggling churches wants the entire time and service of one missionary. Why not unite where two or more such weaklings are found in the same village or town? Our missionary field has been so long studied from a denominational view point that it is all the more difficult to introduce the idea of co-operation and union.

Among the signs of promise now discernible is the "Layman's Congress," which has been described in this REVIEW, and has about it so many features of interest. Just such a body as that could succeed in combining the religious forces of a State, and prevent that waste which now results from purely denominational work. "The Civic Church," described by Mr. Stead, shows what the union of churches in a given city to battle against common and acknowledged evils could effect. "One church for one town," is a cry just now heard from our British brethren and is another protest against a divided and therefore weakened Protestantism.

By no means the least noteworthy among recent movements is "The Brotherhood of Christian Unity," which aims to unite all churches and Christians in those efforts which promise to promote human weal, but which cannot be achieved without this fraternal union. Diffused and sporadic attempts to do good will, by means of the latter, become concentrated and strong endeavors, having back of them the undivided support of all who are loyal to Christ. Co-operation is at last becoming a talismanic word in the religious, as it has been in the industrial world. Man in his sharply defined and selfish individualism is being superseded by mankind in co-operative communion and mutual beneficence.

Our great evangelistic problems call for a readjustment of methods, and denominational efforts need to broaden out, until at least the waste of treasure and labor incident to their sectarian character shall be saved, and each shall agree to respect the work done by the other; then the field in all its immensity can be covered by the churches. Acting in harmony, territory already occupied by one Christian Church will be considered as under its care, and another seeking to prosecute its evangelistic mission will pass on to new fields where the neglected and needy may be ministered to in the Master's spirit. That method will simplify the home missionary problem, will save funds now unwisely spent, will prevent duplication of work, and enable the churches of Christ to provide the entire land with gospel institutions.

III. A CHRISTIAN BROTHERHOOD SUNDAY.

IN the REVIEW OF REVIEWS last February, Mr. Theodore F. Seward gave our readers an account of the Brotherhood of Christian Unity, which had lately come into being and of which he is the founder and guiding spirit. Mr. Seward's excellent movement has meanwhile been making such good progress as to justify a further report in these pages. The wide acceptance of the simple creed and pledge of this distinctively laymen's movement is one of the significant signs of the times. A list of the members of Mr. Seward's advisory committee will show more clearly than could any other equally brief statement how wide has been the approval won for the plan:

ADVISORY COMMITTEE.

John Greenleaf Whittier, Danvers, Mass.
 Miss Frances E. Willard, Pres't Woman's Christian Temperance Union.
 Hon. C. C. Bonney, Pres't World's Congress Auxiliary of the Columbian Exposition.
 Rev. William P. Merrill, Pastor Chestnut Hill Pres. Church, Phila.
 Mrs. Julia Ward Howe, Boston, Mass.
 Rev. Lyman Abbott, D.D., Editor *Christian Union*.
 Thomas W. Bicknell, Esq., Boston, Mass.
 William R. Harper, Ph.D., Pres't University of Chicago.
 Rev. Tennis S. Hamlin, Pastor Church of the Covenant, Washington, D. C.
 Franklin Fairbanks, Esq., St. Johnsbury, Vt.
 Rev. George Dana Boardman, D.D., LL.D., Pastor First Baptist Church, Phila.
 Rev. Josiah Strong, D.D., Gen. Sec. Evangelical Alliance.
 William E. Dodge, Esq., New York.
 Rev. F. E. Clark, D.D., Pres't Young People's Society Christian Endeavor.
 Rev. C. H. Parkhurst, D.D., Pastor Madison Square Pres. Church, New York.
 Rt. Rev. Bishop J. H. Vincent, Chancellor of Chautauqua University.
 H. E. Webster, Ph.D., Pres't Union College.
 M. L. Perrin, Ph.D. (Gött.), Prof. Teutonic Languages in Boston University.
 Albert S. Cook, Ph.D., Prof. English Literature, Yale University.
 Rev. Edward P. Sprague, D.D., Ph.D., Pastor First Pres. Church, Auburn, N. Y.
 Rev. T. T. Munger, D.D., Pastor United Congregational Church, New Haven, Conn.
 Rev. J. H. Barrows, D.D., Chairman of Committee on "The World's Parliament of Religions."
 Rev. Charles F. Deems, D.D., Pres't of the American Institute of Christian Philosophy.
 Prof. G. Brown Goode, LL.D., Ass't Sec'y Smithsonian Institution, Washington, D. C.
 Rev. Friz W. Baldwin, Pastor Trinity Congregational Church, East Orange, N. J.
 Hon. A. B. Nettleton, Ass't Sec'y of the Treasury, Washington, D. C.
 Miss Grace H. Dodge, New York.
 Mr. George W. Cable, Northampton, Mass.
 Rev. Edward Everett Hale, D.D., Roxbury, Mass.
 Rev. A. H. Bradford, D.D., Montclair, N. J.
 Mrs. A. M. Diaz, Belmont, Mass.

Prof. Joseph Leconte, Ph.D., University of California.
 Rev. Theodore F. Wright, Pres't New Church Theological School, Cambridge, Mass.
 Rev. Joseph T. Duryea, D.D., Omaha, Neb.
 Gen. A. W. Greeley, Chief of Signal Service, Washington, D. C.
 Mr. R. B. Hassell, Redfield, South Dakota.
 Mrs. Alice Freeman Palmer, Cambridge, Mass.
 Rev. W. S. Rainsford, D.D., Rector St. George's Church, New York.

MR. THEODORE F. SEWARD.

It is pleasant to note, as one pays tributes of gratitude and respect to the memory of Whittier this month, that one of the last acts of a long career devoted to furthering the spirit of Christian unity was his enrollment in the new brotherhood and acceptance of a place on the advisory committee. In doing this Mr. Whittier wrote to Mr. Seward: "For years I have been desirous for a movement for uniting all Christians with no other creed or pledge than a simple recognition of Christ as our leader. I have read thy public articles on the subject with hearty approval and sympathy."

Mr. R. B. Turner, of Jacksonville, Ill., now in his eighty-eighth year, whose identification with Western material and moral progress will perhaps never obtain as large a recognition as it deserves, some time

ago wrote as follows to the editor of the REVIEW OF REVIEWS: "I wish to thank you and the REVIEW for helping me to find the little creed herein inclosed. It is the only church creed I ever saw proposed, since the great apostacy of the fourth century, that renders Christian unity even a hopeful probability on earth. It represents Christ and the Christ-words and his kingdom on earth, as He is reported to have represented Himself, in his own commanded words, and not as others, whether apostles or churchmen, saints or sinners, have chosen to represent Him. I therefore hastened at once gladly to subscribe to it, or to direct my writer to do it, as I cannot see to read or write myself. I sent it down to our picture-framer's to put the finest frame and glass around it in town, to hang up in my library, where all others can see to read it if I cannot. . . . When I first read this little creed I wrote to the friend who helped me to it that it was the first sound of the trumpet of the Christ-word for the resurrection of the dead that I had ever heard—our dead churchmen and laymen—dead and buried fifteen hundred years ago under huge piles of old books, creeds and documents, all of which Christ had either discarded by His baptism or had never heard of."

Mr. Seward has begun the publication of a small quarterly entitled "Christian Unity," which is to serve as the organ of the brotherhood. The first number reprints the REVIEW OF REVIEWS' group of articles which appeared last February under the title of "The Laymen's Movement," and it contains many evidences that the plan of the brotherhood has vitality enough to live and flourish.

AS TO MR. SEWARD HIMSELF.

The question being asked of Mr. Seward how it happened that he, being a layman, has been led to devote himself to this religious work, he replied:

"My entire life has been a preparation for it. Here are the lessons which I was providentially set to learn in the school of experience. My native village (Florida, Orange County, N. Y.) was the scene of a bitter feud between its churches, the old school and the new school, Presbyterian. No one understood (as no human being can understand) the doctrinal distinctions over which they were quarreling, and thus I was led even in my childhood to realize the folly and wickedness of such controversies.

"My profession—music—incidentally continued my theological education in the same direction. As organist of churches belonging to different denominations, I could not but see the real union in essentials beneath the variance in non-essentials. Suffering all my life from insomnia and nervous weakness, the spiritual gradually came to take precedence over the material in my mind. And, finally, working twelve years for an unpopular cause in my own profession (introducing the English Tonic Sol-fa into America),

having to overcome public inertia, professional prejudice and the opposition of vested interests, gave me a special training in the methods of propagandism."

THE BROTHERHOOD'S PLEDGE.

It may be well for the benefit of those who have not seen Mr. Seward's articles to reprint the pledge. It is as follows:

I hereby agree to accept the creed promulgated by the Founder of Christianity—love to God and love to man—as the rule of my life. I also agree to recognize as fellow-Christians and members of the Brotherhood of Christian Unity all who accept this creed and Jesus Christ as their leader.

I join this brotherhood with the hope that such a voluntary association and fellowship with Christians of every faith will deepen my spiritual life and bring me into more helpful relations with my fellow-men.

Promising to accept Jesus Christ as my leader means that I intend to study His character with a desire to be imbued with His Spirit, to imitate His example and to be guided by His precepts.

A SUNDAY TO PROCLAIM UNITY.

The Christian Unity Brotherhood has decided to urge upon the ministers of all denominations in the United States that upon the last Sunday in October, the 30th, they preach a sermon upon the idea of the brotherhood and co-operation of all Christian people: and the 21st verse of the 17th chapter of the Gospel of John has been designated as a text. It is proposed that at some point in the sermon the following question be discussed: "Cannot a universal Christian brotherhood be founded or organized on the basis of love to God and love to man under the leadership of Jesus Christ, leaving the more definite parts of the creed to the denomination, the Church, or the individual?" More explicit information regarding this Christian Brotherhood Sunday may be obtained by addressing Mr. Theodore F. Seward, at 19 Park Place, New York.

It would seem to the REVIEW OF REVIEWS not inappropriate that besides the idea of a brotherhood united by acceptance of a common pledge or creed, these Christian Unity sermons might in some cases be made also to touch upon the question of practical co-operation among Christian people and the well-disposed of all shades of belief, for the moral and social improvement of their own neighborhoods. Mr. Seward has expressed the following opinion: "Competitive Christian effort can be exchanged for co-operative Christian effort in a single year if a few earnest people will take up the question with a vigorous combination of faith and works." October, 1892, is the month which rounds out the four hundred years that have passed since Columbus added America to Christendom. It will be a good time to impress the idea of the essential brotherhood in Christian belief and in co-operative good works that should pervade the land.

IV. THE MUNICIPAL IDEA OF THE CHURCH.

BY REV. WASHINGTON GLADDEN, D.D.

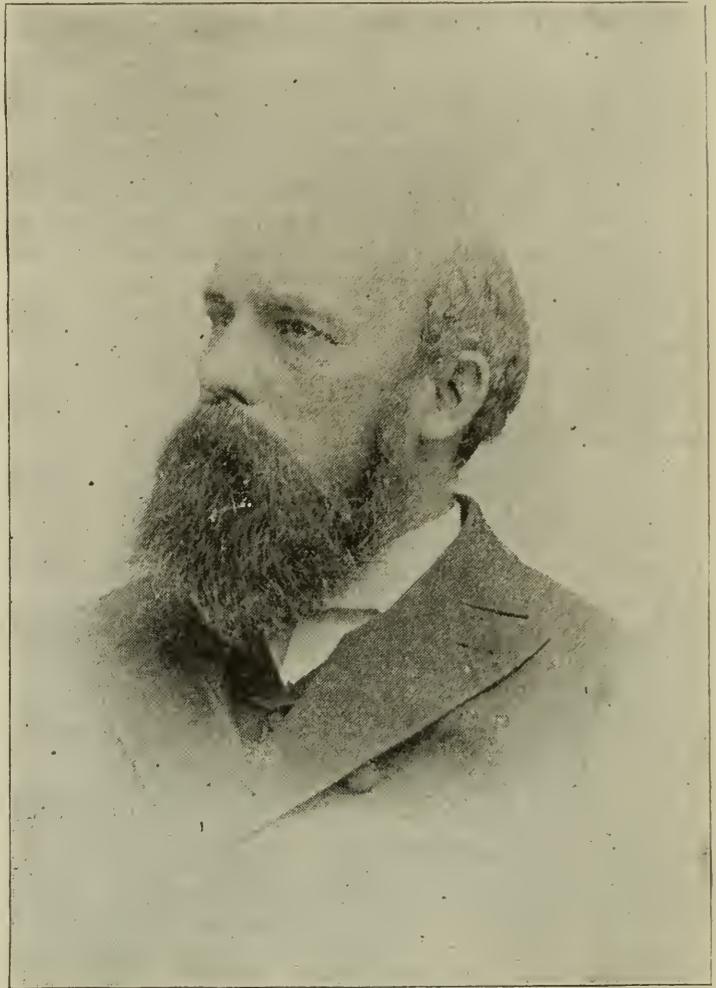

THE trouble about Christian Union is in the application of principles to which everybody agrees. Theoretically we are all united now. We can get together in union meetings and talk beautifully about our love for one another; we are all ready to affirm that our differences are about non-essentials; but when we go out into our field of labor we crowd one another to the wall and cut one another's throats, ecclesiastically, with very little compunction. We are like that New England philosopher who was "in favor of the prohibitory law, but agin its enforcement." We are enthusiastic in our devotion to principles which we are quite unwilling to apply.

It is easy to show where the shoe pinches. In the rural communities which are stationary or decaying we feel the pressure first. When I lived in New England, I supposed that the overchurching of old towns was peculiar to that region; but I find worse conditions in Ohio than I ever saw in Massachusetts. The rural communities here are decaying, just as in Massachusetts; the country villages are depopulated by the growth of the cities, and in nearly all these old towns there is a ridiculous excess of church organization. It is not at all uncommon to find six churches in a population of one thousand people—most of them dying of gangrene or anemia; and although the breath of life seems to be in them we find that the respiration is mainly artificial—that it is sustained by a vigorous working of the bellows with home missionary money contributed by the city churches. In most of these stationary or decadent communities one or two churches could be fairly maintained, and one or two would be far more useful than five or six. Manifestly, this is the first place to apply the principles of Christian union, but it is the last place, I fear, in which they will be applied. The outlook in this direction is not very cheering. The rural Ephraim is pretty firmly joined to his sectarian idols.

In the new towns of the frontiers the need of the enforcement of this principle is also manifest. The strife of the different home missionary agents for possession of these new communities has sometimes led to very unseemly exhibitions; but there has been, I am told, some mitigation of this curse. Attempts have been made to introduce a little Christianity into this business of planting churches. There are those who have been bold enough to say that Christian churches, situated in the same community, are neighbors, and that the law which bids us love our neighbors as ourselves is binding upon them. It has even been intimated that there is no good reason why the agent of a home missionary society, engaged in pushing the interests of his denomination in the new communities, should not be a Christian gentleman—observing in his conduct the laws of courtesy and

comity to which other gentlemen are amenable. Such considerations have, I am told, been prevailing increasingly on the frontiers. The outlook in that direction is more cheering.

In the cities, the work of propagandism goes on without much reference to Christian principles. Each

REV. WASHINGTON GLADDEN, D.D.

denomination pushes its own enterprises with small regard for the welfare of the enterprises of its neighbors. The law that prevails is the survival of the strongest. Mr. Fiske says that this is not the law of civilization; that it only rules among brutes and barbarians; that as tribes emerge into civilization they cast off the brute inheritance and govern themselves by a higher law—the law of sympathy and co-operation. But the sectarians still trust in the law that rules over the lower kingdoms of nature. I have been told by a pious and devoted denominationalist, when urging consultation and Christian consideration in the planting of new enterprises in cities, that competition was the right principle for church extension; that it was idle and even mischievous to try to regulate such matters by considerations of comity; that the only sensible way was the way of the most; let each denomination rush into every promising field,

and push its enterprises with all its might and let the strongest win. Not many are ready to avow this principle, but the great majority act upon it. Is it not strange that in a day when evolutionists repudiate this law of strife as ethically defective, and when political economists clearly recognize the waste and destruction of unchecked competition, our denominational propagandists should still be leaning upon it as the regulative principle of their work?

These are the three places in which the sectarian scandal is most injurious, and the realization of the principles of Christian union is most difficult. And what are the remedies for this state of things?

It may help a little toward better conduct to reflect that what we call Christian *union* is, in substance, nothing but the application to ecclesiastical life of the Christian law. The simple question is, "Will you, as churchmen, as denominationalists, govern yourselves in all your relations to one another by the law of Christ? Will you love your neighbors as yourselves? Will you accept this as the rule of your life: 'Doing nothing through faction or vain-glory, but in lowliness of mind, each counting others better than himself; not looking each of you to his own things, but also to the things of others?'" If you will not accept and obey this law as the law of the relation of your churches to one another, what right have you to profess or call yourselves Christians? And if you will accept and obey this law, all your sectarian scandals will speedily disappear."

Another step toward the realization of this good end is a vigorous protest against the cant of Christian union as uttered by people who do not mean to behave like Christians. For my own part I am done with swapping pious sentiment on this subject with people who go out of the union meetings and push their sectarian projects on the basis of a cut-throat competition. Let us beware of this leaven of the Pharisees which is hypocrisy.

A more fundamental, and perhaps a more practical, remedy is the enforcement of a new theory of the Church. We may say that theories are of small consequence; but it may be well to remember that it was a theory of the State that bombarded Fort Sumter, and a theory of this nation that triumphed at Appomattox. If the right theory of the Church can only be clearly discerned by all Christian people, we should, I believe, find ourselves in the open path to a substantial and practical unity.

What is the right theory of the Church? Where shall we look for the authoritative statement? I am not inclined to think that the New Testament gives us stereotyped forms, whether of doctrine, or of ritual, or of polity. I should not expect to find in the Acts of the Apostles or in the Epistles of Paul any formulated scheme for the organization and government of the Church. The New Testament gives us constructive ideas and principles, and leaves each generation free to work them out in its own way. The spirit is constant, but the form constantly changes.

The constructive idea of Christian polity, as it is outlined in the New Testament, is the idea of the

municipal Church. So, at any rate, I read the New Testament. The Church in any community included all the Christian people in that community. In any town or city there was but one Church. The Church at Antioch, the Church at Jerusalem, the Church at Corinth, the Church at Ephesus, are constantly brought to our notice by the New Testament writers. There is no intimation that any of these churches was gathered in a single congregation; there are several indications that this could not have been the case. Probably there were in some of these cities several congregations, but there was only one Church. It may be that there was considerable variety of ritual, and that different intellectual conceptions of the Gospel prevailed in different congregations. Each of these congregations had its own officers, teachers, leaders, but all the congregations were united in the one Church. This municipal Church recognized itself, I suppose, as responsible for the Christianization of its municipality; all the congregations were for this purpose one body; and over this body some kind of supervision was exercised, sometimes by a board of elders, sometimes by a chief pastor or superintendent appointed for this purpose.

The municipal Church differs widely, it will be seen, from the national sect, composed of all the people in any State or nation who think the same thing or pray in the same form, or baptize in the same way, and of no others; and which includes, in any community, only a fraction of the Christian population; it differs widely also from the Congregational Church, which consists of a single local congregation. The municipal Church embraces all the Christian disciples of the municipality. It is founded upon the idea that the primary business of the Christians in any community is to Christianize that community; that their obligation to co-operate for this purpose is a great deal stronger than the obligation of any of them to co-operate with other congregations in distant cities for the propagation of a few theological or ritualistic fads of their own; and that their primary Christian duty is not done until they are firmly and compactly banded together for the systematic and thorough evangelization of their own community.

Now, I believe, for my own part, that if there is one central and constructive idea of polity in the New Testament this is the one, and I am persuaded that we shall never attain unto any sensible or successful Christian union until we have clearly comprehended this idea and heartily adopted it.

Just how we are to effect this consolidation of the Christian forces in any community is a secondary question. It might be done by choosing a Board of Superintendents, consisting of one representative of each denomination, and committing the supervision of the work to them. It might be done by selecting some one man, beloved and trusted by all, as chief pastor or bishop, and giving him the oversight of the work, with such a board as I have suggested, for his council.

Possibly this would meet the demand of our more liberal Episcopal brethren for the attainment of unity

through Episcopal supervision. If the liberty of the Municipal Church to choose its own superintendent could be conceded, the crux of sectarianism might be solved.

Under this order, each congregation would be free to develop its life in its own way; it might teach Calvinism or Arminianism; it might worship with a Prayer Book, or by the formless rites of the Quakers; it might sing the Psalms of David or the songs of Sankey; but it would recognize the other congregations round about it as members of the one Church; it would be in constant conference with them, and it would co-operate with them in supplying the neglected fields in caring for the outcasts and in building up the Kingdom. No new enterprises would be started except by approval of the Advisory Board and the Superintendent: the shameful waste and scandal of sectarian competitions would be avoided, and the work carried forward with unity and efficiency.

There would be no reason why the churches of each denomination should not continue to contribute to the missionary boards of their several bodies, and to

maintain their State and National organizations. Nevertheless, it is to be hoped that the existence of the municipal Church would tend to develop a municipal consciousness—that the bonds of fellowship binding Christians of the same community together would grow stronger and stronger.

One great reason why the problem of municipal reform is so difficult is found in the fact that there is among the good people of the city so little unity. The organization of the municipal Church is what is needed to develop and foster this unity. It must be fundamentally a religious unity; there is no other sufficient bond.

The plan, I need hardly say, is just as applicable to small towns as to large ones, to new communities as to old ones. The Christians in the decaying towns and in the frontier "cities" need nothing so much as to recognize the fact that there can be but one Christian Church in any community. When they get that idea into their heads they will be able to see that it is poor economy for one small family to keep up half a dozen kitchen fires.

V. PROGRESS OF THE "CIVIC CENTRE" MOVEMENT IN ENGLAND

IT is gratifying to be able to report that the Civic Centre movement, as described by the REVIEW OF REVIEWS last winter and so fully elaborated in Mr. Stead's address upon the "Civic Church of Newcastle," has been making steady progress. The object which Mr. Stead has at heart and which he has urged at public meetings in a score or more of the large commercial and manufacturing towns of England, is admirably applicable to the United States. There are, indeed, reasons why the plan should be more easily inaugurated here than in England. The publication in the American REVIEW OF REVIEWS of Mr. Stead's Newcastle address has already had the effect to aid in the promotion of kindred movements in a number of American cities. Thus, initial steps have been taken in Philadelphia, in Oakland, Cal., in Washington, D. C., and elsewhere. It is due to those of our readers who have expressed their interest in the general plan that we should make some further report upon its progress in England. Of the Newcastle Centre it may be merely remarked that it holds steadfastly upon its way with prospects of great usefulness.

THE BRIGHTON CENTRE.

The Brighton Centre is organized upon a very broad basis, and has begun its work most hopefully. Moreover, it has gone about its business in precisely the manner Mr. Stead most cordially desired. Although the movement had its initiation in an address made at Brighton by Mr. Stead, it was obvious to

him that its success must depend wholly upon the Brighton people themselves, and that its prospects of usefulness would be far better if it were regarded as a purely indigenous undertaking and not as a movement instituted expressly by Mr. Stead and his particular friends and disciples. The *Co-operative News*, published at Brighton, contains in a recent issue an article by Mr. Alfred Hood, which gives a good account of this "New Civic Centre." We cannot render our readers a better service than to quote a page from his description:

At Brighton, after Mr. Stead's visit, the committee met to discuss what should be done. It was said, over and over again, that there was no need to follow any particular man, and that there was no need to adopt the programme of any one person. It was felt, indeed, that the people of Brighton ought to know best what are the needs of Brighton, and that therefore they had better formulate their own scheme. Early in the present year, therefore, the band of men and women who were called together last December formed what is now known as "The Civic Centre:" and, in February, 1892, they issued a circular letter, in which it was stated that: In a town like Brighton, where there are so many churches and philanthropic societies, all seeking in various ways to overthrow wrong, to exalt right, to help the weak, to guide the strong, and to build up a nobler manhood and womanhood, it is felt that much energy would be saved and more good accomplished if all those who seek righteousness could be brought into closer touch with each other. To this end it is desired that a "Civic Centre," a kind of "telephonic

exchange," should be *developed*, irrespective of class, or creed, or party, which should include, as far as possible, representatives of every society in the town which seeks for the betterment of mankind.

Thus it will be seen that the Civic Centre of Brighton is wider in its basis than the Civic Church of Newcastle; and as it already has a large number of working men and women within it, and hopes to have still more, its minimum annual subscription is fixed at one shilling, whereas that of the religious conference in the north is fixed at half a crown. The Brighton Civic Centre desires, moreover, not only to have representatives of the various societies of the town, but, as far as possible, to have elected delegates. At its last meeting, therefore, it was unanimously resolved to invite every trades union and friendly society to send two delegates as their representatives, so that these various bodies of working people shall be kept in touch with the work of this central committee, or "telephonic exchange." It may here be added that the Brighton Equitable Co-operative Society has nominated its president and vice-presidents as delegates, and that Mr. G. J. Holyoake has been elected as a vice-president of the Civic Centre.

THE PROGRAMME.

But a difficulty very soon arose. Before people would join this "Civic Centre," they wanted to know what it was for, and what it meant to do. There has, therefore, been issued the following programme, with the full understanding that it only indicates the kind of work which it desires to see carried out, and with no intention of tying its own hands:

1. Decrease of public houses and enforcement of the laws concerning the liquor traffic.
2. Enforcement of the laws against gambling, especially against juvenile gambling.
3. Better lighting of back streets and slums.
4. Improved dwellings of artisans.
5. Increase of public bath accommodation and the establishment of wash-houses.
6. Increase of technical and moral education.
7. To secure shorter hours of labor where needful, and seats in shops for assistants.
8. The establishment of free news rooms.
9. Gymnasiums and swimming accommodation for boys and girls.
10. Provision of more open spaces and of playgrounds for children.
11. The election of suitable persons for public bodies.
12. Strengthening the hands of the vigilance committee.
13. To secure shelters for flymen.

Some one may say: A very good programme—a good baker's dozen! But how will it get carried out? To this I would answer: "Where there's a will, there's a way," and the Civic Centre has the will, and doubtless will find the way. But it is not the object of the Centre to do the work of any other society, or for any other society. Its business is to urge all public bodies, and all public men and women, to work harder, and especially more faithfully for the well-being of their fellow-citizens. Its business is to strengthen the hands of all real workers for the good of man, to bring them into closer sympathy with each other, and to foster true union and co-operation.

Already the Civic Centre has held fourteen meetings this year, including committee meetings and the public meeting in the Pavilion, which it called to advocate the establishment of free news rooms in various parts of the town.

It so happens that the fourth item in the above programme was really the first to engage the attention of the

Civic Centre. The Corporation of Brighton, having condemned certain areas in the town, has bought land where artisans' dwellings are to be erected for the people thus displaced by the demolition of their insanitary houses, and it was felt here was an opportunity not to be lost of urging the Town Council to build the new artisans' buildings itself, and to keep them as town property. In this way it was hoped that the people might get better houses at lower rentals than if the work were done by speculative builders; and further, that the town would keep control over the buildings, and prevent overcrowding.

HOW TO WORK THE PROGRAMME.

The Civic Centre is not without hope that the eleventh item in its programme, which deals with the election of suitable persons on public bodies, will eventually give it power to carry out all the other items in due course. Being a central committee, formed irrespective of class, or creed, or party, or sex, and thus incorporating into its ranks men and women of resolution, who are determined that something shall be done, as much as possible shall be done, for the good of the people, the Brighton Civic Centre will not rest content till those, if any such exist, who stand in the way of the public good shall be compelled by public opinion to stand aside and make room for better men, who will join heartily with them in making the lives of the people healthier, purer, more full of joy. And, finally, this new Civic Centre hopes that before long similar public bodies will arise in every town of the kingdom, and be the means of elevating and blessing the whole nation.

ACTIVE WORK BEGUN.

Already the Brighton Civic Centre has taken active steps toward the accomplishment of several desirable ends. The fact that it comprises not only representatives of the religious bodies of Brighton, but also of the trades unions and other civil bodies and associations, gives its expressions of opinion in practical affairs a great weight. It has, in the first place, undertaken to secure a better administration of the liquor-selling laws and ordinances and to diminish somewhat the number of drinking places by securing the abrogation of licenses in the case of liquor dealers against whom any misconduct has been reported. It has also undertaken to secure for Brighton a series of free public news and reading rooms, such as one finds in a considerable number of English cities. In both of these practical steps it has proceeded with such prestige, and with such good judgment and moderation of tone, as to insure almost certain success. There can be but little doubt of the great and progressive usefulness of the Brighton Civic Centre.

THE MANCHESTER SOCIAL CRUSADE.

In February Mr. Stead addressed at Manchester the Congregational clergymen and laity of that city, Salford, and the general region. As a consequence there has been initiated a movement entitled "The Social Crusade." As yet it is too soon to secure a report of the practical work achieved by this organization, but its constitution may well furnish hints for those in our American cities who may be proposing some similar kind of undertaking. The constitution is as follows:

I.—TITLE.—"The Christian Social Crusade of Manchester and Salford."

II.—OBJECTS.—To obtain information as to the moral and social condition of the people in Manchester and Salford.

To devise schemes for the removal of moral and social evils, and for the promotion of purer and more satisfactory conditions and modes of social life, as part of the duty of Christians in relation to their fellow-citizens.

To develop and direct the interest of Christian people in regard to the moral aspects of the actual social life of the people.

III. MEMBERSHIP.—Subscribers of 2s. 6d. per annum who are willing to co-operate in the crusade.

IV. OFFICERS.—President, treasurer, convener, minute secretary, statistics secretary, corresponding secretary, financial secretary.

V. MEETINGS.—Monthly, of all members.

VI. COMMITTEES.—A. *Information Committees*. 1. Public house committee. 2. Gambling committee. 3. Brothels' committee. 4. Temperance organizations' committee. 5. Wholesome recreation committee. 6. Ragged schools, lads and girls clubs' committee. 7. Homes, refugees, etc., committee. 8. Public worship and Sunday school attendance committee. B. *Executive Committees*. 1. Temperance legislation committee. 2. Gambling suppression committee. 3. Social purity committee. 4. Coffee rooms, "Tee-to-tums," etc., committee. 5. Popular entertainments' committee. 6. Labor bureau. 7. Recruiting committee. 8. Electoral vigilance committee. Each committee to consist of six members and a secretary and convener.

THE MOVEMENT AT ROCHDALE.

As recently as the 10th of September Mr. Stead has been called to the famous manufacturing town of Rochdale to address a series of meetings held to get into operation a movement to secure the general co-operation of all the good forces and agencies of the city for the municipal well-being. The first meeting was held on Saturday afternoon under the chairmanship of the Mayor of Rochdale, Mr. Stead making an address upon his view of the Church in Rochdale and what it might do and accomplish. This conference was one for free discussion. In the evening a great public meeting was held, presided over by Archdeacon Wilson, to discuss the question, "How to bring about true co-operation among the churches in Rochdale." The following resolutions were adopted :

First resolution : "That it is desirable that members of the various churches in Rochdale should work heartily together in social and moral reforms and in all that concerns the public welfare, and, in particular, in promoting temperance, purely in public and private life, the health and recreation of the people, and in saving and elevating the most neglected and helpless class."

Second resolution : "That as this result is most likely to be attained by the formation of a Christian Conference for the discussion of questions of practical religion and civic life, and for giving expression to Christian opinion thereon, this meeting resolves : 'That such a conference be formed in Rochdale, and that it shall meet at least three times annually, and shall be composed of persons of both sexes who wish to combine for the foregoing objects.'"

3. "That . . . be appointed as secretaries to issue invitations to all ministers of religion, members of the Town Council, guardians of the poor, leaders of labor organizations and others known to be interested in social and

moral questions, and make the necessary arrangements for the first meeting."

There were also several meetings the following day devoted to similar themes. The result will undoubtedly be a broad and strong practical movement in the town famous for its pioneer work in the cause of distributive co-operation.

IN LIVERPOOL, CARDIFF AND ELSEWHERE.

Mr. Stead also accepted invitations to address conferences in Liverpool in September, the movement having already made a beginning there, with an altogether hopeful outlook. There is no city in Great Britain in which such an organization might expect to find a wider scope and more inviting field than Cardiff, and we are informed that the constitution and working programme of the "Cardiff Union Council" was adopted in May. It was not expected that a great deal of active work should begin until the autumn. In the important town of Swansea also the movement was initiated in the month of May, and in Birkenhead, Chatham, Burnley, Walsall and numerous other towns, something has been accomplished.

THE GLASGOW SOCIAL REFORM CONFERENCE.

A movement, wholly similar in its scope, has been undertaken in Glasgow under the most influential auspices, both religious and civic, as the following quotation will show :

The work in Glasgow began in a conference held in the Hutchesons' Hall, 2 John street, on December 4, the Lord Provost presiding. It was summoned by the Presbytery Committee, but the following public bodies appointed representatives : Established Church Presbytery, Free Church Presbytery, United Presbyterian Church, Episcopal Church, Barony Parochial Board, City Parochial Board, Govan Combination Parochial Board, Merchants' House, Trades' House, Landlords' Association, House Factories' Association, Trades' Council, Charity Organization Society, Social Union, Ruskin Society.

The following subjects were submitted for discussion, placed in the order of urgency :

1. The organization of labor centres, where work may be provided for all who are willing to work.
2. The housing of the poor, and practical suggestions for the improvement of their dwellings.
3. How to provide rational and pleasant recreation for the citizens generally, and especially for those with slender means.
4. The condition of the class guilty of minor offences, in relation to short terms of imprisonment.
5. The vagrant class : How to put down vagrancy and rescue the children of vagrants.

Several of the committees appointed at that meeting have already submitted reports, which are full of significance, and which show great courage in the innovations they suggest. Those who may have read an article of mine in the *Century Magazine*, some two or three years ago, describing the social activities of the municipal government of Glasgow, will not be surprised by the recommendations these committees have now made of a series of labor bureaus and a

series of municipal recreation and amusement centres, to be distributed through the crowded localities of the town.

Without entering into any detailed account of this new Glasgow movement, which I hope at another time to describe at length, I may simply say that it seems altogether likely to result in the accomplishment of reforms which should attract the attention of

crowded industrial centres in all parts of the world. The idea of a federation of all the institutions and agencies which have at heart the religious and moral improvement, the physical and educational advancement, and the innocent recreation and amusement of town populations, is too valuable to be allowed to remain untested in any modern English-speaking community.

VI. THE REUNION CONFERENCE AT GRINDELWALD.

THE readers of this magazine were apprised early in the season of the plans which had been devised by the Rev. Dr. Henry S. Lunn, general editor of the *Review of the Churches* (London) for a series of inter-denominational religious conferences under a pleasant vacation environment at Grindelwald in Switzerland. The plans partook at once of the nature of co-operative holiday sojourning and of serious discussions designed to bring into closer harmony all branches of Protestant Christianity in Great Britain. The programmes provided for a large number of addresses and discussions in July, a comparative suspension of effort in August, and a renewal of active sessions in September.

The great feature of the July meetings consisted of a presentation and discussion of the question upon what basis it might be possible to secure some kind of an ecclesiastical union between the Church of England and the leading bodies of English Nonconformists. Besides this discussion, there were important special addresses, followed by brief debate. One of these was the Rev. Hugh Price Hughes' fine address upon "National Christianity," a portion of which we reprint in this number of the REVIEW. Another was a noteworthy paper upon the Reformation from the Congregational standpoint, presented by the Rev. Dr. Mackennal, a well-known Congregational leader and thinker. The Rev. W. Hay M. H. Aitken, a learned clergyman of the Established Church, led an important discussion by presenting a paper upon "Points of Contact in Opposing Views on Eschatological Subjects." These addresses are published in the *Review of the Churches* for August 15.

The whole tone of the discussions was most encouraging to those who hope that it may yet be possible for the Established Church and the Presbyterians, Congregationalists, Methodists and Baptists to find a basis for fusion into a truly National Church. The Rev. Canon Fremantle and the Rev. Mr. Aitken, who were the most prominent representatives of the Church of England, among the Grindelwald speakers, were quite as full of the spirit of concession as were any of the representatives of Nonconformity. The Rev. Mr. Aitken presented the plan set forth by the Anglican bishops in the famous "Lambeth Pro-

posals" with great persuasiveness. The Lambeth Proposals, as our American readers may not all understand, are an address drawn up by a conference of the ecclesiastical leaders of the Church of England, setting forth a plan upon which from their point of view a reunion of English Protestantism might be accomplished. There is nothing whatever in the Lambeth Proposals which need offend any Nonconformist, except possibly the retention of the order of bishops. Upon this point Mr. Aitken is reported by the *Review of the Churches* to have made the following very interesting remarks:

TWO VIEWS OF THE EPISCOPAL OFFICE.

Among Churchmen two prominent views were taken as to the episcopal office. Some regarded the bishops as the direct successors of the Apostles, armed with all those supreme prerogatives of Church government which belonged to them. Others regarded them as ministers of the Church occupying a position of precedence, and therefore of authority, but not regarding them in the full sense of the word as a distinct order, but rather as a class of ministers who, by the good providence of God, had been pushed into a position of eminence, and whose position of eminence worked for the good of the Church. If such varied views could obtain among those already members of the episcopal community the acceptance of the historic episcopate in some modified form would not necessarily imply upon the part of intelligent Nonconformists the acceptance of any particular theory respecting it. Prominent Nonconformists had told him that they would meet them half way, barring the theory of Apostolical succession. But there were scores of Churchmen themselves who did not believe in the theory. There were numbers who did, of course; but he ventured to say that the majority of clergymen did not. That being so, the presence of such a theory among them, and its interpretation of the episcopal office in the light of that theory, need be no stumbling-block to reunion.

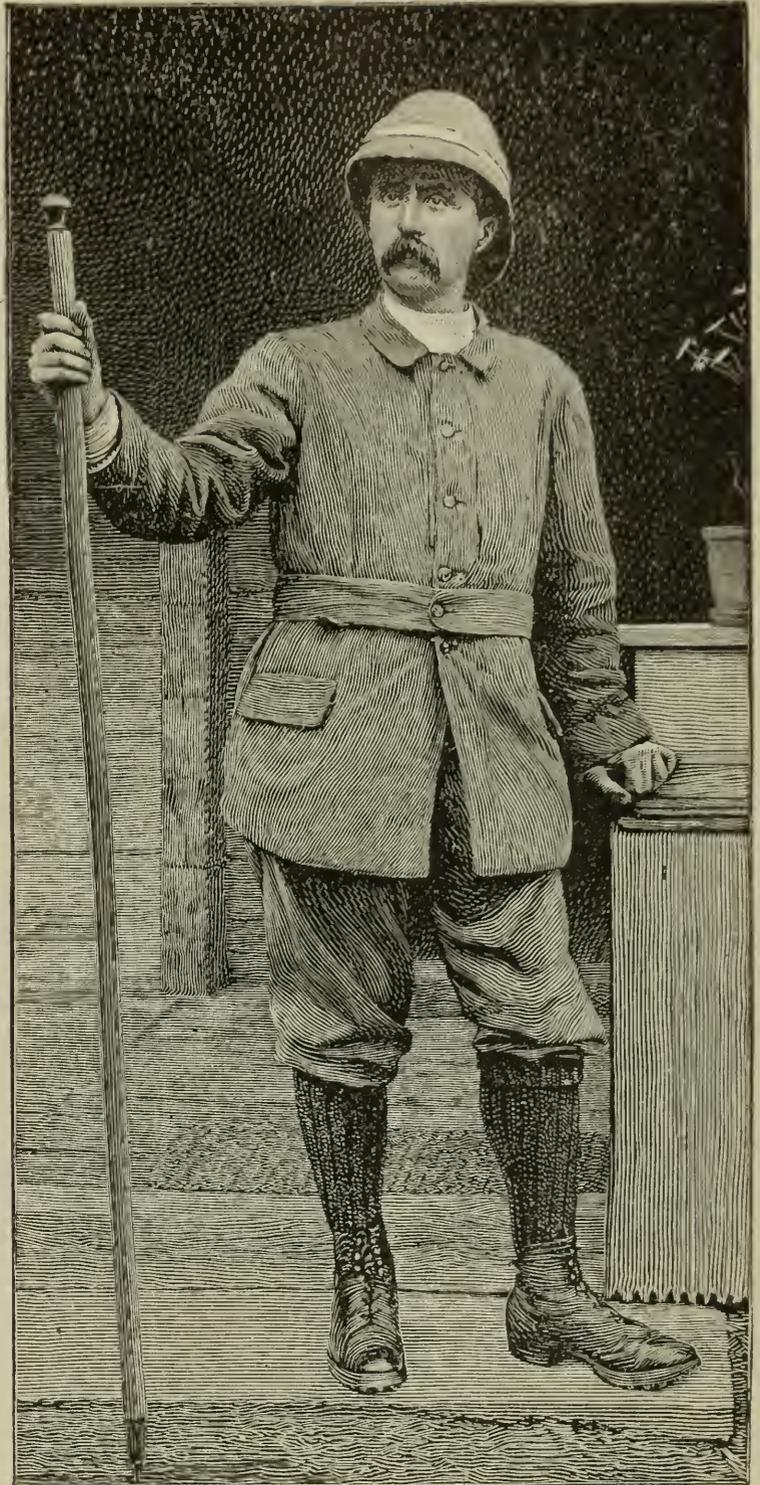

A PROPOSED BASIS OF AGREEMENT.

As a principle he thought they might lay down that where two classes of persons endeavored to approach each other with the view of union, in whatever particular, there is a conscientious conviction on one side, and no conscientious conviction on the other, there should be a disposition to yield on the side where a conscientious conviction is not involved and no disposition to yield so far as to involve a breach of conscientious obligation on the

part of that side where a conscientious conviction lies. The question was raised as regards Churchmen: Do you regard the historic episcopate as a matter of conscience?" and they would reply, "We do." If they, on the other hand, asked the Nonconformists, "Do you regard the total severance of all connection with episcopal authority as a matter of conscience?" and they replied, "Yes, we do," then reunion was hopeless. If it was a matter of conscience on one side to retain the bishops' authority, and on the other not to recognize their authority, then they must give up the case. But if the reply of the Nonconformists was this: "We do not regard it as a matter of conscience; we have our history—you have yours; we have gone on very well without bishops, but we want to approach you—you have approached us; if it is a matter of conscience with you that this order must be retained, it is a matter of conscience with us not to assign to that order what it has no right to claim; but if you do not demand of us, by accepting any formulas, that we shall recognize your position, but simply demand that we shall bring ourselves into contact with this institution, it is not a matter of conscience to have nothing to do with the laying on of hands for those who occupy the position indicated by the term bishop"—if this was the reply, and it was not a matter of conscience, then according to the principle he had endeavored to lay down, they who were not under an obligation of conscience ought to be ready to meet the concessions of those who were under an obligation of conscience. They might retort that that would be a one-sided bargain; but would it?

THE CATHOLICITY OF THE LAMBETH PROPOSALS.

The document issued by the bishops filled him with amazement when he considered the qualities of a bishop. It was said that the first great requirement for an occupant of the episcopal bench was caution. When the bishops looked down from the heights of Lambeth Palace upon a divided country, Christian warring against Christian, and hearing the cry of England's disunion ringing up into the ears of the Almighty, weaker spirits among them would have said, "We must be conservative, we must stand up for our position; pædo-baptism, for instance, we must put our foot down there!"—but there was not a word about it! He wished them to consider all the points which the prelates—these cautious men—had waived in the intensity of their desire to co-operate in the promotion of Christian union. They had waived all claim for the extension of the Anglican system into the various denominations by which the Anglican system was surrounded. Fifty years ago an archbishop's hair would have stood on end at such a proposal! They made no claim to interfere with any methods employed by their co-religionists. If they liked a liturgical service they could have one; if not, they could do without. When they considered that in the time of Charles II that ruinous expulsion from the Church of a number of clergymen who became Nonconformist ministers was all about a miserable question of wearing a rag of surplice, and remembered now that the bishops with one voice were prepared to lay aside all such considerations, could they regard that as a small matter or as yielding nothing? The Thirty-nine Articles again—which some of them were so fond of and which some were not so fond of—were no longer to be an indispensable condition of reunion—and a very good thing, too! But it must have cost the bishops no small twinge and pang to suggest Home Reunion apart from the Thirty-nine Articles. Then that wonderful composition—which he would like to see relegated to the British Museum—the Athanasian Creed, was gone. They might have said, "We must

DR. HENRY S. LUNN AT GRINDELWALD.

insist upon the Apostles' Creed and the Nicene Creed," but they said nothing at all. It was clear from what he had said that great concessions had been made, the spirit of charity had been exhibited, the right hand of fellowship had been stretched forth, and the question now was:

ARE NONCONFORMISTS WILLING TO MAKE CONCESSIONS;

willing to grasp the hand that had been extended so that actual organic union might be restored to their divided land? It being a principle with Churchmen that the historic episcopate should continue, was it a matter of principle and conviction with the Nonconformists present and throughout the land to have nothing in the world to do with it? He was hopeful that the answer would be: "No, it is not a matter of principle, but it is a matter of

conscience to see that our liberties are not interfered with. If there was any inherent indisposition on the ground of principle to have anything to do with the episcopal office, was it possible to assume this position: "If there be anything in episcopacy by all means let us have the benefit of it, and if there be nothing in episcopacy by all means let us avoid allowing it to be a bar to the re-

REV. CANON FREMANTLE.

union of Christian bodies?" How could they work that out?

DR. MACKENNAL'S REPLY TO MR. AITKEN.

The Rev. Dr. Mackennal opened the discussion on Mr. Aitken's address with an acknowledgment of the large spirit of catholicity which breathed through the Lambeth Proposals of the Church of England bishops. He had been struck with the marvelous spirit of generosity and of self-abnegation which characterized the various articles. The bishops had made four principal affirmations, the first three of which Dr. Mackennal regarded as model statements tending toward complete unity. These three enjoin, first, the acceptance of the Bible; second, the earliest and most universally accepted creeds of all Christian churches and, third, the generally accepted Christian sacraments. But Dr. Mackennal objected to the fourth affirmation of the bishops, which held to the historical episcopate as a necessary article of faith. He felt that the bishops were exalting a non-essential matter

to a place of equal rank with the great fundamentals of Christian faith and church organization.

CANON FREMANTLE'S PRACTICAL SUGGESTIONS.

The Rev. Canon Fremantle dwelt especially upon the necessity for union in the practical mission of the Church in the world, and deplored the too great prominence that public worship has had accorded to it in the life and functions of organized Christianity. His views are reported as follows:

"Unless they got over that narrow idea which confined the Church to public worship and its adjuncts, and took in the broad view of Christianity as embracing the life of mankind as a whole, they were put into a forced position in seeking for reunion; and reunion, if attained, might prove to be the greatest curse they could have. Our Saviour did not redeem men simply that they might worship together publicly and have a few adjuncts of beneficence connected with it, but He redeemed the whole estate of man in all its branches. He did not merely form an organization for public worship, and yet the whole of that discussion had been upon organization for public worship. He did not want in any degree to put any slight upon public worship or upon its ministers, but to exalt the one function of public worship and call that the Church, and to call those who conducted public worship ministers to the exclusion of all the rest was to pervert Christianity.

THE PRIESTHOOD OF ALL BELIEVERS.

The Reformation was Luther's great affirmation of justification by faith and the universal priesthood of all believers. He held that he who judged rightly was the minister of God. Tyndal, the great reformer, who had been too greatly neglected, held in the most distinct manner that the king's law was God's law, and that when men went to the judge to have it administered they went to God. So in every part of human society, where two or three were gathered together in the name of Christ, not only for prayer, but for life of every kind, there was Christ in the midst of them. Until they admitted that they were in danger of making public ceremonial of supreme importance, and giving birth to all the unreality, hypocrisy and the evils which our Saviour denounced. If they could agree to live the Christian life together, to make the whole body of the people altogether Christian, and to keep their minds fixed on that great end, all those questions of Apostolical succession, the laying on of hands, baptism, and so forth, would seem—he did not say unimportant, but in a secondary or third grade.

HOW TO ATTAIN REAL UNION.

In order to do that they must fix their minds steadily upon those great social questions which awaited settlement, and recognize in it common service on behalf of Christ. The saddest conceivable spectacle was that of men refusing to take part in social movements because they were not connected with their own places of worship. Personally, he would be quite prepared to go on as at present if men would all agree to work together. The liberty of the pulpit he considered an essential matter, and if they could have some council in the different parishes where they could focus all Christian effort it would be a good thing. But little was required beyond those two points. In the second place, all such matters as they had been discussing should be placed in the second rank. Righteousness, truth, faith and episcopal succession must not all be placed in the same line. No, faith and righteousness first; those were the things by which they were saved, and which

Christ came to bring about. Human arrangements must come afterward, however sacred they might be. Lastly, all these things could not be done without great self-sacrifice. They must follow Jesus Christ, who sacrificed Himself. From the moment when Christ declared that ceremonial could not be put in the same rank as righteousness and faith, He was rejected by the Pharisees. It was an excellent thing to wash the hands before dinner, but if such an act was demanded as a part of religious teaching, away with it! It might be so with those who took the same line of action; but let them place the essentials first, and the other matters could be settled afterward.

VIEWS OF THE EDITOR OF THE "CONTEMPORARY."

There followed a speech by Mr. William Percy Bunting, editor of the *Contemporary Review*, who is one of the most active Methodist laymen in Great Britain. He brought the disputed issue of the episcopacy to a practical point by asking Mr. Aitken if Anglican bishops under the terms of the Lambeth Proposals would or would not accept as true bishops in a scheme of reunion the Methodist superintendents in the United States commonly designated as bishops, and a like order in England, if the Wesleyan Methodists of that country should decide to follow the American branch of Methodism in instituting such a body. "I am very glad," said Mr. Bunting, "that the Lambeth Conference puts its faith in the historic episcopate instead of attempting to define a bishop—to show exactly how he should be appointed, what powers he must have, how long he must remain in a diocese, and how long he should continue to hold the episcopal office. Instead of attempting to define all these things, it made a frank appeal to history, and I am quite content to accept it." Mr. Bunting proceeded to express the conception of an evolution in religion, as in politics, that was working from within and that would eventually bring about the federation of the churches, just as the development of modern political ideas is tending toward larger political unities and understandings among the peoples and nations of the world.

CANON FREMANTLE'S SUMMING UP.

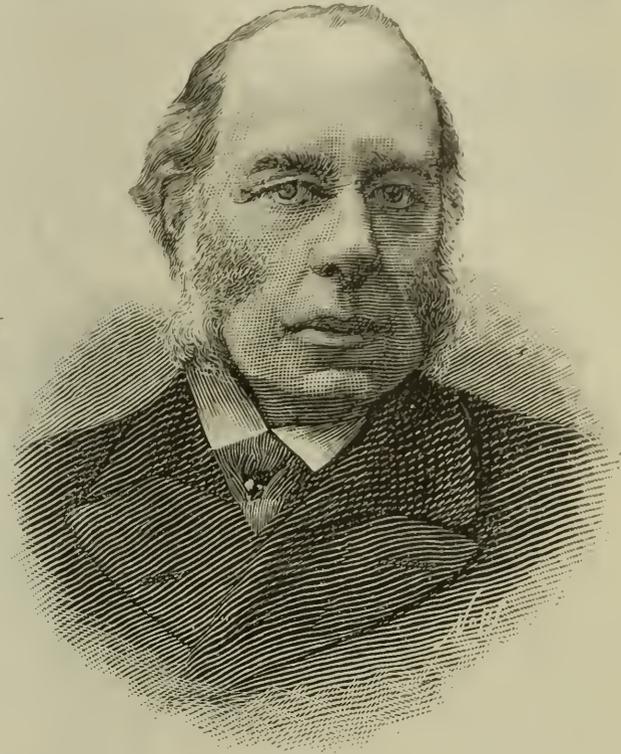

We may well conclude this brief report of the Grindelwald Conference by quoting from two accounts of it subsequently written by the Rev. Canon Fremantle and the Rev. Hugh Price Hughes. Canon Fremantle writes as follows in the *Review of the Churches*:

SOMETHING DONE.

These gatherings in Switzerland have shown that Christian unity, at least for purposes of friendly conference, is a reality, and can stand the strain even of the most burning questions. It is probable that, if they are carried on again in some place as accessible as Grindelwald or more so, the numbers who will take part in them will become excessive. Is it necessary, it may be asked, to go to Switzerland? May we not meet with still greater effect at home? Or, if the holidays abroad are so important an element, might not the home meeting take place at some other time in the year? The Church Congress has shown that this is possible for Episcopalians, with the most salutary result. Why should not the Church Congress open its doors to Nonconformists? Or why should not a Christian Congress take place from time to time in one of the great English towns? It would seem, from our experience

at Grindelwald, that we are ripe for this; and the effect of such a congress, if successful, would be incalculable.

Another practical inquiry which is forced upon me is this: Is it not possible to begin some common Christian work at once? I would not suggest common worship first, but social work undertaken in common. It is not easy;

MR. W. PERCY BUNTING,
Editor of the *Contemporary Review*.

for almost every work of charity has been overlaid by denominationalism. But is there no privileged locality where Christian visitation—the relief of poverty, the better housing of the poor, the promotion of temperance and other kindred works—can be carried on in common by all who will set their hands to them in Christ's name? One such experiment successfully carried out would be the best outcome of our conferences. It would serve as a model for other localities, and each step thus taken would lead men to trust each other more, and to aim at further progress, in unity, with results for which we silently pray, but of which the hope baffles sober expression.

A larger view must be taken of the Church, as a society existing not primarily for public worship and doctrinal teaching, but for the conduct of life in its widest sense. If we come to admit that the family, the social, municipal and political life, the lay and practical life, lived out in the Christian spirit, are most really Church life, the common effort after these, and the building up of the kingdom and righteousness of God, may gradually lessen our denominational differences till they drop away as a mere anachronism.

HUGH PRICE HUGHES' SUMMING UP.

And in his own paper, the *Methodist Times*, the Rev. Hugh Price Hughes expresses the following hopeful views:

It has been proved that the ecclesiastical differences between Anglicans and Dissenters are not so vital and insurmountable as to forbid the hope of ultimate reunion. The attitude of the Anglican divines, and especially of Mr. Hay Aitken, was most gracious and conciliatory. They made, even at that stage, concessions so enormous

Mr. Horton. Mrs. Hughes. Hugh Price Hughes. Dr. Lunn. Rev. J. B. Heard. Mr. Battersby. Mr. Buckland. Rev. H. Stead.
 Dr. Glover. Rev. Hay Aitken. Dr. Mackennal. Canon Fremantle. Mr. Bunting. Sister Katherine.

SPEAKERS AT "THE REVIEW OF THE CHURCHES" REUNION CONFERENCE, GRINDELWALD.

that if their predecessors at the Savoy Conference, in the reign of Charles II, had displayed similar reasonableness Dissent would never have assumed vast proportions in this country. Churchmen have set an example which we Nonconformists, in the name of Jesus Christ and in harmony with His prayer, are bound to follow. Our leaders have never yet realized what vast and unprecedented concessions the Lambeth Manifesto of the Anglican bishops expresses or wishes. Happily, nothing was said by any of the representatives of important Dissenting communities which would justify the dread that nothing could be done. Congregationalism is obviously further from Episcopalianism than either Presbyterianism or our own connectionalism; and yet the best representatives of Congregationalism, partly in public and partly in private, admitted that the tentative overtures of Mr. Hay Aitken

furnished a sufficient basis for preliminary conferences. It may take thirty years to consummate an organic reunion of the great British Churches, but the ice is broken, and it is demonstrated that there is nothing in our divergent creeds to hinder further prayer, inquiry and consultation. For a long time to come these *pourparlers* must be informal and unofficial, but they will be none the less practical and useful on that account.

Dr. Lunn has won the approbation and thanks of generous men in all English denominations for the remarkably successful manner in which he has arranged and carried out the Grindelwald Conferences. His success this year must unquestionably lead to efforts even more ambitious and yet more fruitful in the years to come.

VII. THE MEANING OF NATIONAL CHRISTIANITY.

BY REV. HUGH PRICE HUGHES.

[FROM A SPEECH AT THE GRINDELWALD CONFERENCE.]

NATIONAL righteousness, we are all agreed, is a moral impossibility except on a Christian basis. I hold, according to the fine saying of Lafates, that for every State in Europe there are only two alternatives—Christianity or despair. Those of us who do not believe in the establishment and endowment of any Church by the State are as firmly convinced as any one on the other side that there must be a national recognition of God and national righteousness upon a positively Christian basis. Many of us Nonconformists are very largely to blame for the misconceptions which have arisen with respect to our views. I believe strongly myself, and I do not hesitate to say here what I have said elsewhere, that the most awful mistake the religious Nonconformists of England made was when they accepted a secular platform for national education, at the suggestion of Joseph Chamberlain and other clever men who knew nothing about evangelical Christianity. A few years ago when the question of national education came to the front I made a personal and public appeal to Dr. Dale, Mr. Guinness Rogers and Mr. Charles Williams, of Accrington, three of the most prominent representatives of Nonconformity, to repudiate the secular platform of the Birmingham League, and although these brethren, owing to stress of political circumstances, did not see their way to respond then, as a matter of fact to-day all the great Nonconformist bodies of England have now by express vote at their assemblies repudiated the secular position altogether; and that is an approximation toward the religious conception of the State full of significance to those who weigh it.

THE SECULAR DOCTRINE A DOCTRINE OF DESPAIR.

The secular doctrine of the State which then existed in certain quarters is a doctrine of despair. It arose from the fact that there was so much bitterness

introduced in religious matters that some imagined they could get rid of all by ignoring Christianity and God in public life. I entirely agree with Mazzini that the attempt of any State to ignore the existence of God is an unspeakable folly, and cannot lead to anything but national disaster. We have had an illustration of this in one of our Australian colonies, where it was impossible to teach reading, writing and arithmetic without also teaching a little morality to the children—to tell the truth, to be honest, to be pure in life, and so on. But what motive were they to use? The Christian motives being excluded, they were obliged to issue an ethical text book for boys and girls, in which they accepted John Stuart Mill's utilitarianism as the basis of moral conduct. Afraid of exciting religious susceptibilities, they said: "You must tell the truth because it means the greatest good to the greatest number." It simply means, if you reject Christ you must accept Mill, and I am not prepared to accept that.

THE APPEAL TO THE FOUNDERS OF NONCONFORMITY.

Some years ago Dr. Fairbairn bore very strong testimony to the fact that although some modern Nonconformists, under circumstances which have been already hinted at, were prepared to argue that the State should be purely secular, our Protestant forefathers all believed in national Christianity. Last autumn I stood on Plymouth Rock, and I cannot express the emotion with which I did so. When the Pilgrim Fathers crossed the Atlantic in the *Mayflower* it was not for the purpose of establishing a secular State. In their pamphlets, manifestoes, public discourses, and in every way in their power they asserted as positively as any Churchman could that religion must be recognized by the State, and that men in public as well as private must obey Christian principles. I can imagine the contempt with which such

a sturdy Independent like Oliver Cromwell would have confronted the theory which has prevailed to some extent in Europe since the French Revolution, that the State can ignore religion altogether. My only complaint is that Oliver Cromwell seems to go to the Old rather than the New Testament for his conception of the particular way in which the State should obey the law of God. I mention these things in order to assert very strongly the fact that if some of us are opposed on conscientious grounds to the establishment and endowment of religions by the State, it is not in the least degree because we are so intensely individualist that we deny the duty of the State as such to be Christian. I venture to say that personally I entirely agree with the principle which Mr. Gladstone laid down in that essay which Macaulay made famous, that it is as much the duty of the State in its corporate capacity to be Christian as it is of the individual members who form that State.

I am well aware that many take the old view, but I should have no difficulty in producing such evidence as I have to-night in favor of the other to which we adhere. What the Duke of Wellington called our marching orders—"Go ye into all nations and make disciples of all nations"—was intended to be as true of nations in their corporate unity as of the individuals who compose those nations. But holding that view, which is, I presume, opposed to the convictions entertained by those who think that as a consequence of it religion should be recognized by the State, as it has been in many countries since the time of Constantine—although holding that very strongly, we are of opinion that the establishment and endowment of a particular Church is not the most effectual way of securing the end we all have in view—the making of the State, as such, Christian. My own conviction, with which many will not agree, is that the plan tried by Constantine is historically a failure. In many parts of the world it has made the Church worldly without making the world Christian; and I argue further, if a particular State establishes and endows a Christian Church, it no more makes that State Christian in itself and by itself than that a drunkard or a scoundrel, by building a church and paying great respect to its minister, would become a Christian. St. John said, "He that doeth righteousness is righteous," and that is true of the State as well as of the individual.

HOW THEN DOES THE STATE BECOME CHRISTIAN?

I argue it becomes Christian not by paying a great deal of public money to any particular Church, nor by recognizing it politically, but first of all by making Christian laws.

CHRISTIAN LEGISLATION THE FIRST CONDITION.

The Christianity of a State must be determined not by the way in which it treats a particular body of Christians, but by the way in which it acts. I look to the statute book of any State to see whether it is Christian or not; and I hope you will not be horrified when I express my personal conviction that the world has not yet seen a Christian State. Well, that is my

opinion; and it will be a happy day when we have a State the statute book of which is absolutely Christian from first to last, a State the laws of which are all favorable to virtue and unfavorable to vice. Is there any one here who will argue that the statute book of England will bear that label at the present time, when there is a public house at the corner of every street, when all sorts of facilities for vice are still permitted, when nothing whatever is done to prevent the awful growing curse of gambling, when we still tolerate so much ignorance, when even our efforts to prevent physical vice are so slight, when pauperism exists to the degree to which it exists in our own land, and when we so often go to war? I hold that the real Christianity of a State is to be determined by its attitude to the great social scourges of intemperance, impurity, gambling, crime, ignorance, disease, pauperism, and war. A State which does not in all legitimate ways discourage every one of these great evils is not a Christian State, however much money it may give to the Church, and whatever professional or perfunctory respect its prominent representatives may pay to officers of any Christian Church. "By their fruits ye shall know them." "He that doeth righteousness is righteous." It is the duty of every State that desires to be called Christian to enact laws which promote the physical, mental, and moral welfare of the people.

CHRISTIAN POLICY AT HOME AND ABROAD THE SECOND CONDITION.

My other test of a Christian nation is the observation of a Christian policy at home and abroad. A Christian policy at home is a policy of justice, of humanity, of tender and Christ-like care for the unprivileged, the friendless, the lonely and the destitute, so that so far as so great a result can be accomplished by law—and I am well aware of the limitations of law—the laws should be altogether favorable to a social condition in which every human being shall have the best opportunity we can give him to reach his highest moral and intellectual development. My second and yet more decisive test of a Christian State is the foreign policy it adopts. If any State professes to be a Christian State it is bound to adopt a policy of peace. Jesus Christ was pre-eminently the friend of peace. I confess personally that I believe nothing is more scandalous in the condition of the civilized world than the fact that we Christians have been so much divided that we tolerate six millions of armed men on this very continent. I remember saying years ago to the late Cardinal Manning that if every minister of religion in Europe, from the Pope down to myself, would agree to go into their pulpits on a given Sunday and declare, every one of them, that they would stand no more nonsense on this subject, and that not one single drop of innocent human blood should ever again be shed in Europe, we might defy all the kings and politicians and statesmen in the world. He agreed, and said he would communicate our conversation to the Pope. I have not yet heard the result of the communication, but I am not with-

out hope that so humane a Pope as Leo XIII would sympathize greatly with the proposal to substitute, at least in Europe, rational arbitration for the brutality of the sword.

AN OVERTURE FROM AMERICA.

I wish especially to take this opportunity of informing those who do not yet know it that a very remarkable overture came to our own government, from the President of the United States twelve months ago, proposing that the British Empire should make with the United States of America, not a treaty of arbitration to deal with one special case, as Lord Salisbury had so happily and wisely done, but a permanent treaty of arbitration binding both sections of the English-speaking world, so that if any difficulty arises the whole matter shall be referred to an impartial tribunal before any hot blood is aroused. I cannot conceive anything more for the glory of God and for the benefit of man than such a position as that. After we have done that we may not despair of persuading the French and Germans to take a similar course.

THE CAPTURE OF THE FOREIGN OFFICE.

I hold very strongly with Joseph Mazzini that it is the duty of good men to capture the Foreign Office. Supposing we succeeded in that, and had a Foreign Minister who made it his first business to promote peace, we could do a thousand times more than all the peace societies in the world. I do not despair on the point. The little Republic which gives us such hospitable entertainment has set us a noble example, and if in our greater affairs we succeeded in imbuing the Foreign Office with the peace principles of Jesus Christ, so that whenever our Foreign Minister spoke to foreign lands on our behalf he would speak as Christ would have done, it is almost impossible to estimate the benefits which would accrue.

THESE RESULTS INDEPENDENT OF STATE CHURCHISM.

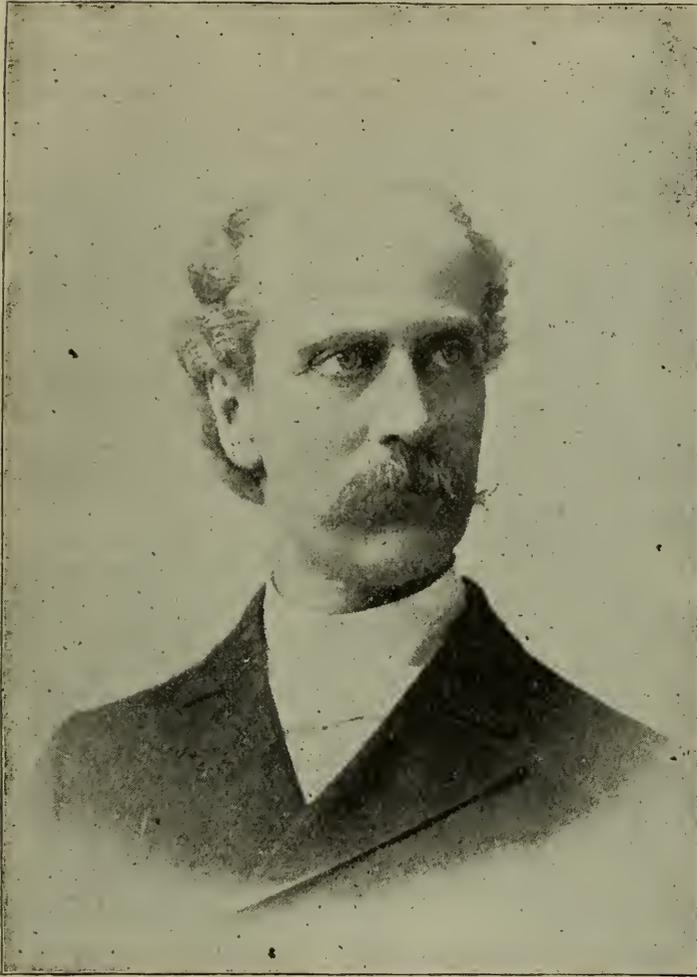

Now all I have been saying has nothing to do with the establishment or endowment of any Church. All this might be done with the utmost ease if there was no Established Church anywhere. It would be quite as possible in Canada, or Australia, or the United States of America, where there is no Established Church, as in our own country. While I wish to pay all respect to those who believe in Establishment, I want also to comfort them, in view of the possibility which certainly lies before us of disestablishment in Wales, by assuring them that all those things for which they are mainly concerned would not and could not be lost. The mere profession of Christianity by the State, as many States have professed it since the time of Constantine, is not necessary to national Christianity; indeed, my personal conviction is that it has had the opposite effect of fostering opinions which prevent them from realizing that they are Christian only in name. That is why I deprecate calling any land a Christian land,

for if we once admit in the face of Oriental nations, in the face of the opium traffic and the drinking customs which we tolerate, we have made a fatal admission. As men and women loyal to Jesus Christ, we must acknowledge that our country is not what Christ would have it be, and never will be until we cease to quarrel with ourselves, and unanimously quarrel with the devil. My point is that the establishment of a national Church is not the only, or the necessary, or the best way of promoting national Christianity, and has no vital relationship whatever to the real Christianity which consists in Christian legislation and policy. Moreover, it is useless to deny the fact that the political privileges of one particular Church are a perpetual hindrance to co-operation with other churches in making our common country truly Christian. If some things should be lost by what seems to many of us to be the inevitable course of events, we should at least gain this—it would be much more possible to co-operate, not only in Grindelwald, but at home. My main point is to insist that Liberationists as well as State Churchmen are intensely anxious that the nation in its collective capacity should be really Christian, and I sincerely believe that by trying to grasp that fact we shall do as much to promote the unity and the spirituality of the churches as by limiting our discussions to those vital and spiritual truths of the Christian faith in which we all more or less agree. That is why I look with hope to this gathering. It is not the vital doctrines of Christianity that keep us apart, but subsidiary points, and if people removed the prejudice, ill will, pain and suspicion occasioned by divisions of this sort, they would probably have done more than could be done in any other way to restore the shattered unity of Christendom.

THE CHRISTIAN MISSION NATIONAL AS WELL AS INDIVIDUALISTIC.

I hold as strongly as any State Churchman—and I believe the majority of Nonconformists agree with me—that we are bound to obey Christ in public life and in politics as much as in private and prayer meetings. I believe personally that it is impossible to speak too strongly of the mischief wrought by unnecessary divisions. They have greatly impeded reunion; and I also believe they have to a great extent narrowed the scope and extent of the Christian programme. Our mission is not mainly to the individual. No one believes our mission is to the individual more than I do. I hold strongly with the great American, Bushnell, that "the soul of all improvement is the improvement of the soul." Unless the individual is truly regenerated by the supernatural power of Jesus Christ we cannot make any effective progress. But our mission is not only to the individual; our mission is to the nation as well, and through the nation to the entire human race. We have by the grace of God to regenerate individual souls; that is the beginning, but that is not the end. The end, having done that, is to reconstruct society according to the mind of Christ.

VIII. THE FIRST PARLIAMENT OF RELIGIONS.

REV. JOHN H. BARROWS, D.D.,
Chairman Committee on Religious Congresses.

OF all the signs and prognostics that make up the world's hopeful outlook, by far the most dazzling and extraordinary is the plan of a Universal Congress of Religions, to be held in connection with the World's Fair at Chicago next year. The idea has been growing constantly, both in the minds of the projectors and in the imaginations and hearts of the religious and ethical leaders of all lands and faiths, ever since it was first suggested. It is now far beyond the stage merely of a beautiful conception, and has become an assured fact. There was the necessity first of a cordial co-operation in our own country on the part of religious leaders of every denomination. And when all the great prelates of the Catholic Church with most sincere cordiality joined hands with the denominational leaders of every shade of Protestantism, and with the rabbis of the Jewish Church as well, there was practical certainty that the project could not come short of a very substantial success. To many minds the strangest novelty in this whole magnificent proceeding was the attitude and tone of the leaders of the most unimpeachable Protestant orthodoxy. There was eagerness and enthusiasm in the responses with which they welcomed the idea of

a parliament of religions and promised their co-operation. Their recognition of elements of great worth and high truth in all the chief cults of mankind, and their feeling that it would be profitable for Christians to fraternize with Mohammedans, with Hindus, with Brahmins, and with Confucians in a great Congress designed to emphasize the things common to all religions, would have been simply incomprehensible twenty-five years ago. What this change involves, one may hardly dare to imagine. But that it involves no sacrifices of essential beliefs, and that it seems to be fraught with such results as a great broadening of the sense of the brotherhood of mankind, may surely be asserted.

The religious congresses at Chicago, viewed as a series, are to comprise, first, a great parliament of all religions; second, a congress composed of representatives of all branches of Christendom, including namely, the Catholic Church, the Greek and other Oriental churches, and all denominations of Protestantism; and, third, some twenty-five or thirty special congresses of different churches. Thus, there will be a world's Catholic congress, a world's Presbyterian congress, an ecumenical Methodist congress, and so on through the list of important denominations, and there will be a great congress of missionary organizations, a special congress of women's missionary societies, a meeting of the International Evangelical Alliance, and, in short, such a succession of great assemblages representing religious bodies and movements as has never before entered into the minds of men as a possibility. The best of it all is that these magnificent projects are not simply ambitious schemes upon paper, which are likely to end in small and non-representative results, but that every one of them is already so organized, under efficient local committees with world-wide advisory connections, as to make conspicuous success a certainty beyond any reasonable question. Here, then, we are to find the new spirit of denominational co-operation, as against the old divisive spirit of religious competition and antagonism, exemplified in a manner that gives a better and brighter outlook for the twentieth century than aught else that could possibly be named.

Great as will be the material evidences of the world's progress at the Chicago Fair, and imposing as will be the long array of scientific, educational and other general congresses, these religious gatherings culminating in the parliament of all religions will be the very crowning feature and the most important and abiding achievement of all. The theme appeals so powerfully to the imagination that it cannot easily be dismissed when one enters upon it. The great efficiency with which the Rev. Dr. Barrows, in his capacity as chairman of the general committee on religious congresses, has prosecuted the undertaking already supplies us with a large amount of material and information as to the happy reception in all parts

of the world of the main idea and as to the manner in which it can be carried out. But the REVIEW OF REVIEWS could perhaps make no better use of the space it may devote to this subject than to publish a translation (for which it is indebted to the courtesy of Dr. Barrows) of an article which has recently appeared in the *Revue de Belgique*, Brussels, from the pen of the distinguished Count d'Alviella.

COUNT D'ALVIELLA ON THE CHICAGO PARLIAMENT OF RELIGIONS.

1. Religious bodies have often held assemblies for regulating points of discipline and questions of dogma. Such have been the grand councils of Buddhists and of Christians, such are the assemblies of synods, the conferences, conventions, ecclesiastical congresses, which, availing themselves of the increased facilities for communication assemble, annually, now in one city, now in another, especially in the heart of Protestant countries.

Controversial reunions have also occurred where theologians of opposing faiths have tried to convince each other and to gain for their respective tenets new adherents from their auditors, particularly the temporal authorities which convened them.

Such was the famous dispute of Elijah and Baal on Mount Carmel, when the adversaries argued with thunderbolts; such have been the edifying controversies between Brahminists and Buddhists so frequently invoked in the works of the latter; the oratorical tournaments between Pagans and Christians, between monks and rabbis, the colloquies between Catholics and Protestants, immediately after the Reformation. Except in the golden legends it is rare that these discussions have led to the conversion of any one, although each party has invariably claimed the victory. If they have sometimes resulted in an official decision, it is because these judges sought a pretext to justify an intervention decided upon in advance, and dictated by reasons of State.

Our century has seen, for the first time, different religions allowing themselves to be represented by their leader in assemblies which pursue a philanthropic or general ethical aim—peace and temperance congresses, associations for social reform, public morality, organizations for relieving distress, etc. Doubtless these objects interest current theology but indirectly. It was much, however, to have led men to unite in view of a common action who have hitherto denounced and anathematized each other.

It was reserved for Americans to go one step farther in taking the initiative of a congress to which are invited those of every faith, all sects, all spirits sympathetic with religious progress, not to plead the superiority of their respective theology, but to seek and set forth the principles common to all religions.

The significance of such an attempt cannot be too much insisted upon. In opposition to sectarian points of view which identify religion with the doctrines of one or another particular form of worship, it implies: 1. That religious sentiment possesses general forms, and even a sphere of action independent of any particular theology. 2. That men belonging to churches the most diverse can and should come to an understanding with each other in order to realize this programme common to all religions.

The initiative of the project is due to the organizers of the special congresses which the different sects of the United States propose to hold at Chicago during the World's Exposition. The directors of the exposition

called a simultaneous meeting of Baptists, Roman Catholics, Congregationalists, Jews, Episcopalians, Lutherans, Methodists, Quakers, Swedenborgians, Unitarians and Universalists, to confer regarding the material organization of their respective bodies. From this reunion a permanent committee was constituted under the leadership of a Presbyterian clergyman, the Rev. John Henry Barrows. The plan of an Ecumenical Council of Religions was formulated, which should include the representatives of all the grand historic religions, with a view of bringing out the harmony and religious unity of humanity, as well as the moral and spiritual factors of human progress.

This committee enlarged its numbers by adding to itself an advisory council, consisting of eminent persons chosen from among the different denominations of the United States and the Old World; at the same time addressing to all religious organizations a circular wherein the nature and aim of the project was set forth, and in which this appeal was made:

"Now that the nations are being brought into closer contact and friendlier relations with each other, the time is apparently ripe for new manifestations and development of religious fraternity. Humanity, though sundered by oceans and languages and widely differing forms of religion, is yet one in need, if not altogether one in hope. . . . It is proposed to contribute to those forces which shall bring about the unity of the race in the worship of God and the service of man. Let representatives from every part of the globe be interrogated and bidden to declare what they have to offer or suggest for the world's betterment, what light religion has to throw on the labor problem, the educational questions and the perplexing social conditions of our times; and what illumination it can give to subjects of vital interest that come before the other congresses of 1893."*

It is interesting to observe that among the signatures of this document are found, besides Jews and Unitarians, not only orthodox Protestants, but even Roman Catholics, even American Roman Catholics, notably Archbishop Feehan, who has accepted without a scruple a seat in this selected committee, of which a Presbyterian pastor is chairman and an Anglican Bishop vice-chairman. More than this: among the first names in the list is that of the American Cardinal Gibbons, followed closely by that of a Mussulman well known in India, Ameer-Ali, of Calcutta.

Many Buddhists of Japan have promised their co-operation, their presence, even, thus giving the finishing touch to this veritable mosaic—this unprecedented tentative of religious syncretism. †

The president of the World's Congress Auxiliary of the World's Columbian Exposition has already published his first report on the preparatory work of this congress, in which he says: "It is our expectation that the Parliament of Religions will be the most important, commanding and influential, as surely it will be the most phenomenal fact of the Columbian Exposition. The spirit of fraternity is growing among nations and among the churches of Christendom. If, in 1893, not only Catholics and Protestants, Jews and representatives of the Greek Church, but Buddhists, Brahmins, Confucians, Parsees and Mohammedans shall sit together in frank and friendly confer-

* Preliminary Address, by the Rev. John Henry Barrows, chairman.

† I can but regret that, with an emphasis somewhat local, the word Parliament should have been substituted for Congress. A parliament suggests a hall where one imposes the decisions of the majority; a congress calls up the idea of an assembly where one tries to find a common ground by agreement and good will of all.

ence over the greatest things of our common spiritual and moral life, this one fact will impart to the Columbian Exposition a great celebrity and importance.

He then publishes extracts from letters of sympathy and acceptance which have been received, signed, for the most part by names well known in America, England, Germany, Belgium, France, Italy, Switzerland, India and in Japan. Among others those of Gladstone, Whittier, Tennyson and Edwin Arnold. Cardinal Gibbons writes: "I deem the movement you are engaged in promoting worthy of all encouragement and praise. . . . I rejoice to learn that the project for a religious congress has already won the sympathies and enlisted the active co-operation of those in the front rank of human thought and progress, even in other lands than ours. If conducted with moderation and good will, such a congress may result, by the blessing of Divine Providence, in benefits more far-reaching than the most sanguine could dare to hope for." Ameer-Ali, after having expressed the desire to be in Chicago in 1893, in order to participate in the greatest achievement of the century, adds: "You have my most cordial sympathy in the great work of bringing together, on a common humanitarian platform, the representatives of all important moral creeds. I regard your programme as marking an epoch in the history of religious development."

"I sympathize with the spirit of your circular," writes the president of the Anglo-American College at Constantinople, "and I have no doubt that such a congress will impress the world with the fact that there is a unity in religion broader and deeper than has ever been generally recognized. The more I am brought into contact with many different faiths the more am I impressed with the thought that there is a God to whom we are responsible for our actions; that to do justly, love mercy and walk humbly with God, is essentially the foundation of religion." "Such a reunion," writes T. F. Seward, "would never have been possible until the present day, and it now marks a distinct epoch in the evolution of the race." The Methodist Bishop John H. Vincent, wishes that, after a two hours' session of denominational sections there should be a reunion of the whole, to recognize their general relations with humanity. "This would be," he adds, "the most magnificent spectacle the world has ever seen." "I do not doubt," writes Professor Simon, of Edinburgh, "that the idea of the congress will greatly promote that brotherhood of the nations for which so many of the best men of the race are longing and working. While sitting last year on the shore of your wonderful lake, I fell into dreaming of the day when the English-speaking branches of the human race should be federated. Your dream includes mine—is grander. May it be much more than a dream, and that soon." Rev. William C. Gannett, pastor of an important Unitarian congregation, says: "Your plan will summon the most truly Ecumenical Council of Religion that the world has ever seen or dreamed of. Whoever cares for freedom, fellowship and character in religion must needs wish the beautiful hope success, and be glad to do anything he can to further it."

"Among the many noteworthy features of this century," writes the Rev. J. Estlin Carpenter, D.D., "none impress me more than the heightened interest in religion among the English-speaking race. . . . To bring these activities into friendly relation to each other; to keep them to a truer interpretation of their meaning and impart to them a fresh impulse for the common service of man in common love to God—this is, indeed, a worthy aim, and I rejoice with all my soul that your vast plan has awakened so much sympathy among the churches."

Among the universities of the United States which have sent sympathetic responses should be mentioned those of Minnesota, Michigan, Washington, Lake Forest, etc. According to Dr. Peabody, of Harvard University, "Nothing can contribute so largely to the honor of religion, to the establishment of Christian faith, as a mutually good understanding among those of every name who believe in the Fatherhood of God and the brotherhood of man."

President William C. Roberts, of the Lake Forest University, values the rich materials which this congress will furnish to those engaged in preparing a Philosophy of Religion, and the Rev. J. E. Rankin, president of Howard University at Washington, cries with enthusiasm: "It is as though the Babel tongues of the world were coming back to speak the one dialect of heaven. The conception is worthy of the age in which we live, of the Continent which Columbus discovered—nay, better, of Him who would draw all men to Himself." Finally, Dr. Francis E. Clark, about to make a tour of the world, lends himself to the promotion of the plan in Europe, Asia and Australia.

The various letters given in this report have this point in common: they all insist upon the novelty and importance of the congress. The writers all see in this project the manifestation of a growing sympathy between different sects, and all express the hope that from it may result a more intimate fellowship among religious people to the profit of justice and mortality.

It must be admitted that there are traces of American rhetoric in some of these responses. But the general accord of sentiment is none the less a remarkable and significant symptom.

Doubtless the greatest difficulties are yet to be met, and the critical hour has not yet struck. It is one thing to obtain the adhesion of generous men, belonging to most opposed forms of worship, to this grand plan, and quite another to bring these same persons to discuss the delicate problems of faith without mutual irritation, to find a common ground where religion shall have a field outside of denominational divergence.

Nevertheless, the fact that such an idea should arise, should receive organization, and secure so large a number of avowed sympathizers in churches the most diverse, will suffice, whatever may follow, to make of this attempt, as its promoters have well expressed, a sign of the times, and a new point of departure in the development of religious evolution.

The adhesions mentioned above are an accomplished fact. Now, consciously or unconsciously, they contain certain large consequences for the nature and rôle of religion.

If a religious congress is judged to be possible, beside and apart from sectarian congresses, which are to be held at Chicago, it must be admitted that the themes with which it shall be occupied have in themselves distinct existence—of importance, superior, even, to those with which the latter will deal.

There is, then, a religion which is the religion, *par excellence*, and which is superior to any particular religion whatsoever. This universal religion includes the beliefs common to all churches—faith in God, in moral recompense, in the imperative character of duty; its observances consist in love toward God and man, in the practice of morality, in united efforts for perfecting individuals and ameliorating their social relations. All known religions tend to blend in this vast synthesis, at once divine and human; they are no longer anything but sects, rites, local and transitory forms of the Church Universal, and

their respective value, as one of the most esteemed leaders of an orthodox faith said recently, is measured by the degree with which they favor the progress of humanity.*

Doubtless it is all in good faith that the promoters of the congress declare that their object is not "to create the temper of indifferentism in regard to the important peculiarities distinguishing the religions of the world, but rather in bringing together in frank and friendly conference the most eminent men of different faiths, strong in their personal convictions, who will strive to see and show what are the supreme truths and what light religion has to throw on the great problems of the age."

Nevertheless, the affirmation that there exist in religion "supreme truths," and that these may, by mutual understanding between different sects, be considered apart from the others, implies that these *other* truths—those held exclusively by certain denominations—are *not* 'supreme,' or, at least, that they are of secondary importance compared with the first.

It is, moreover, evident that a religion which can claim at once the faith of Christians, Jews, Mohammedans and Confucians—granting the existence of such a faith—should be considered as doing away with doctrines in virtue of which these various religious groups not only contradict each other, but too often outlaw one another. I will add that this common religion, the only universal religion, is, by this very reason of its universality, the most conformed to the exigencies of human brotherhood; and it would not be difficult to show that it is also the least opposed to the pretensions of science, which tends to assure it an immense advantage in our epoch and social environment.

We are only beginning, at least, on the European Continent, to take into account the crisis into which we are precipitated by the divorce of religion and science. The scientific spirit, forced to develop itself in antagonism with dogma, once freed from the bonds in which the Church had hoped to imprison it, has affected to despise and try to uproot the religious sentiment which it considered exclusively under the features of a narrow and irrational fanaticism. But the religious sentiment, which is essentially the universal aspiration toward the ideal, has taken its revenge, like a spring kept down too tightly, and has unloosed the mystical reaction whose irresistible force is making itself felt about us in art, drama, literature, politics and philosophy, as well as in religion. This reaction is making its way, even where it has not taken the form of a return, pure and simple, to old forms of worship. It depends upon us in a measure that this reactionary movement shall become, not only an instrument of æsthetic, moral and religious revival, but a new force in the service of human progress and social pacification. For this end we should facilitate, for all religions, access to the way in which the promoters of the congress have not hesitated to enter; and it is for this reason that I feel that these pioneers of a new Reformation have a right to all our sympathies as to all our encouragement. While elsewhere one sees men fold their arms and shut their eyes,

* "The service of humanity in the most exalted sphere of life and activity is the sovereign touchstone of the value of the churches."—Mr. John Clifford, President of the Baptist Union: *Religious Systems of the World*: London, 1890.

they, with the practical American spirit, have put themselves resolutely to work.

Now let us not deceive ourselves between the two great problems which hold within themselves the support or decadence of our civilization—the social question and the religious question; the relations are closer than our shortsighted economists or even our State Socialists imagine.

It is no longer possible to escape from this double enigma. Either we must solve it rationally or the Sphinx will devour us.

The assurances of co-operation which Dr. Barrows is constantly receiving from cultured representatives of the ancient religions of Japan, China, India and Persia, as well as from all parts of Christendom, would of themselves make an interesting volume. Perhaps no man in the world is so situated as to have a better knowledge of the mind and spirit of men of all religions than the Rev. Dr. George Washburn, president of Roberts College, the American institution that has made so proud a record on the shore of the Bosphorus, near Constantinople. Dr. Washburn, who is now in active service as the Eastern agent of the Chicago committee, and who is distributing the committee's preliminary address in different languages among the leaders of various Oriental creeds and cults, wrote as follows when he first learned of the parliament:

"It will be something to bring together Catholics, Jews and Protestants of different denominations, but the congress should also include representatives of the Eastern Churches, Mohammedans and the Indian and Chinese religions. It will be very difficult to induce really representative men to go to Chicago and take part in this congress; for you must have able men, pious men, who have full faith in their own religion, and are yet broad enough to confer with 'infidels.' You also want men who know English. For the Eastern churches it may not be difficult, but I fancy you will have to find your Mohammedan representatives in India. An Armenian might be found here; for the Greek Church there is this difficulty, that there is no one Greek Church. The Russian Church is, of course, much the most important. Perhaps some one might be sent from St. Petersburg, and in addition some one from Athens and Constantinople. I sympathize with the spirit of your circular; and I have no doubt that such a congress, meeting in the right spirit, would impress the world with the fact that there is a unity in religion, broader and deeper than has ever been generally recognized. I am more and more impressed with the thought every year, as I am brought into close contact with so many different faiths, that there is a God to whom we are responsible for our actions; that to do justly, love mercy and walk humbly with God, is essentially the foundation of all religion. The Holy Spirit leads men of the most diverse faiths to the knowledge of our common Father."

When Dr. Washburn's view is generally comprehended the result will not be a paralysis of missionary efforts, although there may be something like a revolution in missionary methods.

THE WORLD'S CONGRESSES OF 1893.

THE REVIEW OF REVIEWS had desired to make recognition of the present month as bringing the four hundredth anniversary of the discovery of America, by presenting a somewhat elaborate account of the plans now each day becoming more complete and perfect for the great Columbian World's Fair at Chicago. But, after all, no adequate presentation of so vast a subject can well be made in a single number of the magazine; and it is convenient to defer an account of the architectural and material aspects of this incomparable exhibition to some future number. No men more generously and fully than the projectors and organizers of these material exhibits confess that the most significant part of next year's celebration is to be conducted by the World's Fair Auxiliary, an organization having charge of the series of great World's Congresses. These gatherings are to be distributed through the entire six months of the fair, a special building is in process of erection for their accommodation, and the most elaborate plans have been made to insure their fullest success. At the head of the World's Congress Auxiliary, as its President, is the Hon. Charles C. Bonney, whose executive ability and whose breadth of culture have now become apparent to the leaders of thought, knowledge and progress in all parts of the world. We cannot more fitly, therefore, recognize the anniversary month than by presenting the plan of World's Congresses as it has now been fully outlined; and a better presentation could not possibly be made than one in Mr. Bonney's own language. At the recent Saratoga meeting of the National Educational Association Mr. Bonney made an explanation which so perfectly conveys the information we should desire to give our readers that we shall herewith reproduce its principal parts.

PRESIDENT CHARLES C. BONNEY'S ADDRESS.

It may, in a preliminary way be said, that the National Congresses of 1893 are planned to constitute a World's Summer University, in which may be studied the progress of mankind in all the departments of civilized life. They are to be arranged and conducted by the World's Congress Auxiliary in connection with the World's Columbian Exposition. That the exhibit of human achievements in material forms will be a magnificent success is already known throughout the world.

But what is the World's Congress Auxiliary? What is its relation to the World's Columbian Exposition? What is its relation to the Government of the United States? What is the scope of the World's Congress Scheme? What has actually been done in the execution of that scheme? What still remains to be ac-

complished, and by what means does the auxiliary expect to attain the desired results?

The word has become familiar with the idea of international exhibitions, and the tremendous influence which they have exerted in advancing the civilization of the age is universally recognized. The exposition at London in 1851, at Philadelphia in 1876, and at Paris in 1889, confessedly marked new eras in human progress.

"The spiritualization of thought" in France, wrought by the magic power of the last exposition at Paris, is of such a remarkable character that it has justly excited the surprise and admiration of those who watch with solicitude the important events of the age.

It is safe to say that no recent event has excited more widespread wonder than the selection of Chicago, the youngest great city of the globe, as the site for the proposed Quadri-Centennial Celebration of the Discovery of America by Christopher Columbus. We naturally look to the older centres of civilization for the highest displays of human genius and aspiration; and it almost seems as though some mighty and mysterious power must have intervened to so change the common course of events.

As soon as the location of the exposition was fixed at Chicago, it was felt that no merely material exhibit would answer the demands of the time. The intellectual and moral forces of the nineteenth century have become so potent and active that there at once arose a demand for their proper presentation in connection with the proposed exposition.

A formal proposal of a series of World's Congresses soon followed, and the evolution of that proposal has steadily proceeded until the present time. The primary idea of the project was that many of the leaders of human progress will naturally come to the exposition of 1893, and that it is due to them that some arrangements be made under which those of similar tastes and callings from different countries may have the acquaintance of each other, and engage in friendly conference on matters of common concern.

This primary idea developed into the secondary thought, that to increase the benefits of such acquaintance and conference, and to enlarge the attendance at the exposition, a reasonable effort should be made to induce a general attendance of those who have taken an active part in any of the great fields of human endeavor.

This secondary idea speedily developed into a third; that instead of leaving the intellectual and moral administration of 1893 to occupy a merely incidental relation to the material exhibit, a proper organization should be effected, an adequate and comprehensive plan devised, and a persistent and well-directed effort made to crown the exposition of 1893 by a

proper presentation of the achievements of human genius in a series of great assemblies to which the chief apostles of progress in all countries should be invited, and by the formation of a series of world-wide fraternities to promote the future welfare of mankind.

With these ideas, a committee was formed to make the preliminary arrangements. The general proposal was received with so much favor that the necessity for a separate and relatively independent organization soon became manifest, and the World's Congress Auxiliary was accordingly organized. It consists of the usual general officers; a local membership divided into various committees of organization and direction; advisory councils to assist these committees, and general honorary and corresponding members. The Committees of Organization are necessarily local, to enable them to attend the committee meetings and execute the details of the necessary arrangements. The Advisory Councils constitute the non-resident branches of the various committees. The members of such councils are selected from different countries throughout the world; and such members are expected to co-operate actively, by means of correspondence, with the committee to which they are adjoined. The general honorary and corresponding members constitute what may be called the Advisory Council of the whole Auxiliary.

Although originally authorized and supported by the Directory of the World's Columbian Exposition and subsequently by the government of the United States, the World's Congress Auxiliary has, nevertheless, always had the independent control and conduct of its own work.

The Auxiliary was, soon after it entered upon the execution of its plans, formally recognized by the government of the United States. The original announcement of the World's Congress scheme was sent with the President's invitation and other documents to foreign nations. An act of Congress was passed making an appropriation for the support of the Auxiliary, recognizing it as the proper agency to conduct the proposed series of international congresses. Subsequently the Senate of the United States, in acting on a report of the Committee on Foreign Relations, formally declared that the World's Congress Auxiliary so represents the Government of the United States in respect to such international congresses, that any further action on the part of the President of the United States, or of Congress, is unnecessary. In pursuance of the action thus taken, the foreign ministers of the United States have been instructed to invite the governments of the countries to which they are respectively accredited to select and appoint delegates to all or any of the proposed World's Congresses, in addition to the representatives who are expected from the various institutions and societies throughout the world.

The organization for the proposed World's Congresses has been developed to meet the needs presented from time to time. The committees are not of any fixed number. Each committee is formed according to the circumstances of the case, and an addi-

tion to its membership may be made for cause at any time. While the committees of organization are generally of small numbers, the advisory councils may consist of any convenient number, located as they are or may be, in all parts of the world. No committee has been appointed except when the occasion for it arose. If the committees are numerous the demand has made them so.

HON. CHARLES C. BONNEY,
President of World's Fair Auxiliary.

The idea of a series of separate and disconnected conventions of various learned societies has never been entertained by the Auxiliary. On the contrary, the leading idea from the beginning has been to bring the highest and best representatives of all the departments of human progress together in a series of harmoniously arranged and closely connected conventions, to occupy the whole six months of the Exposition season of 1893. It is obvious that if a large number of independent organizations should attempt to meet in Chicago next year, and each hold its own separate convention, it would be impossible to provide adequate places of meeting, and the value of the proceedings would be seriously impaired by the repetitions and duplications which would be inevitable. For this and other reasons it was very early determined that all the learned institutions and societies which should respond to the invitation to participate in the World's Congresses of 1893 should be asked to merge their papers and discussions in appropriate

World's Congresses, in which all should have just recognition. At the same time it was seen that such societies should be afforded an opportunity to transact any necessary business without holding an additional meeting at any other time and place. Arrangements will therefore be made for brief sessions to enable the various existing organizations to transact such business.

It is also expected that arrangements will be effected to secure the publication of the proceedings of the whole series of World's Congresses; their distribution by the government of the United States to foreign governments, libraries and other institutions, and a supply of the proceedings of all or any of the congresses at cost, to all persons who may desire to obtain the same.

The World's Congress work, as thus far organized, consists of seventeen departments, subdivided into more than one hundred general divisions, in each of which a congress will be held. Each of the sciences, for example, has its appropriate division, and will of course have its own congress. The popular sessions for the presentation of subjects, in which large numbers of persons will be interested, will be held in one or both of the large audience rooms, while the meetings of the chapters or sections of a division will be held in the smaller rooms, which will doubtless be sufficient to accommodate those who will attend.

But how will the various congresses be constituted, and under what regulations will the proceedings be arranged? The first public official act of each committee is to issue its preliminary address to be sent to persons interested throughout the world, to inform them of the general plans and purposes of the proposed congress, and to invite their suggestions of persons, themes and modes of proceeding to be utilized in forming the programme of the congress.

The World's Congress Auxiliary expressly disclaims the idea of organizing and conducting a series of World's Congresses without the co-operation of persons interested in all countries. The Auxiliary, therefore, defers the formation of any programme until such persons shall have had opportunity to furnish the desired suggestions. With such opportunity the managing committees will form the appropriate programmes, and with due advice from the advisory councilors will finally settle and promulgate them.

The World's Congresses of 1893 will not seek to do everything. If they should attempt to do this, confusion and failure would result. Their work will be limited to certain specific objects, which are believed to be capable of attainment. They will endeavor to present in every department a Summary of Progress down to the date of the Columbian Exposition. They will also endeavor to present in a graphic and comprehensive manner the Pending Problems of Progress; the difficulties which impede their solution, and the means by which those difficulties may be removed. It is obvious that there will not be time nor opportunity for any prolonged debate over any of the great themes which will be presented in any of the proposed congresses. The papers for the con-

gresses of 1893 are not to be submitted to the passing decision of those who may happen to attend, but to the deliberate judgment of the enlightened world. Themes will not be selected to suit particular persons, but, the proper subjects having been chosen, the persons believed to be the best fitted to make adequate presentation of them will then be chosen. It is expected that each selected writer will be given at least half a year for the preparation of the paper assigned to him. The regulations in regard to papers and discussions will all be fixed with reference to the proposed publication, and not merely with reference to the oral presentation during the congress. The Auxiliary Committees will trust their advisory councilors throughout the world to give them good advice in relation to themes, persons and modes of proceeding; and hope that, on the other hand, it will be believed that they are both willing and able to follow the good advice so to be given.

Very obviously, a well-considered World's Congress scheme would not only embrace but largely depend upon the co-operation of existing societies and institutions of the various participating countries; and it was, therefore, provided that such societies and institutions be not only invited generally to attend and participate in the various congresses, but that they also be asked to appoint committees of co-operation to represent their respective organizations, and take an active part in connection with the committees and advisory councils in arranging plans for the various conventions to be held. By such committees of co-operation existing organizations may not only have proper recognition, but may also be given opportunities to participate more actively than would otherwise be practicable in the arrangements in which they are concerned.

The administration of the several congresses will be such as to present to the attending participants the largest practicable number of leaders in the department. Distinguished representatives will be invited to preside at different sessions, or at different parts of the same session, of a given congress. While controversial debate will be excluded, arrangements will be made for remarks by eminent specialists in elucidation of a subject which shall have been presented. The utmost pains will be taken to economize the time at disposal and secure the most useful and lasting results. The aim will be to make such a presentation of the actual state of education, literature, science, art, government, agriculture and the other departments of progress in the different countries of the world as will be a worthy and enduring memorial of the exposition of 1893.

But of all the benefits which are expected to flow from the World's Congresses of 1893, none can exceed the advantage of mutual acquaintance and the establishment of friendly relations among the leaders of mankind from various countries. For such acquaintance and relation will be sure to promote the peace of nations and the general welfare of all people by making moral and intellectual forces dominant throughout the world.

GENERAL PROGRAMME OF THE SERIES OF WORLD'S CONGRESSES.

In order that our readers may see in detail the scope of these great congresses, Mr. Bonney has sent us the last revision of the list, giving, so far as now determined, the dates that will be observed. It should simply be noted by way of preface that each of the seventeen main divisions specified below is so broad in its scope as to comprise a varied programme of congresses of its own, and that there will be in all more than one hundred great assemblages, many of which will be still further differentiated into special sectional gatherings.

THE PROGRAMME.

Department of Woman's Progress.—General congress of representative women of all countries commencing May 15.

Department of the Public Press.—Including the general divisions of the daily press, weeklies and magazines, the religious press, trade journals, etc. The congresses of this department will be held during the week commencing May 22.

Department of Medicine.—Including the general divisions of general medicine and surgery, homœopathic medicine and surgery, eclectic medicine and surgery, medical jurisprudence, medico-climatology, dentistry, pharmacy. The congresses of this department will be held during the week commencing May 29, excepting dentistry and pharmacy, transferred for special cause to the week commencing August 14. Public health will precede the agricultural congresses in October, and has been made a separate department on account of its interstate and international relations.

Department of Temperance.—Including the general divisions of the Woman's Christian Temperance Union, the Catholic temperance societies, the National Temperance Society, the Independent Order of Good Templars, the Sons of Temperance, the Templars of Honor and Temperance, the Royal Templars of Temperance, the Non-Partisan W. C. T. U., the Law and Order Leagues, Vegetarian Societies and like organizations. The congresses of this department will be held during the week commencing June 5.

Department of Moral and Social Reform.—Including the general divisions of philanthropy, prevention, charity and reform, as represented by the national conference of charities and correction, women's exchanges, lodging houses, newsboys' and bootblacks' homes, humane societies, provident associations, industrial schools, children's missions, children's aid societies, day nurseries, relief societies, orphan asylums, homes for old people, asylums for incurables, hospitals, little sisters of the poor, fresh-air work, soup houses, penal institutions, woman's refugees, Houses of the Good Shepherd, reform schools, the Salvation Army and the like. The congresses of this department will be held during the week commencing June 12.

Department of Commerce and Finance.—Including the general divisions of banking and finance, boards of trade, stocks and bonds, water commerce, railway commerce, insurance, building associations, mercantile business, etc. The congresses of this department will commence on June 19.

Department of Music.—Including the general divisions of orchestral art, choral music and training, songs of the people, organ and church music, musical art and literature, musical criticism and history, opera houses and music halls. The congresses of this department will be

held during the week commencing July 3. The congress of the general division of public instruction in music will be transferred from the department of education to the department of music for the obvious mutual advantage both of musical education and musical art.

Department of Literature.—Including the general divisions of libraries, history, philology, authors, folklore and copyright. The congresses of this department will commence on July 10.

Department of Education.—Including the general divisions of higher education, public instruction, the kindergarten, manual and art training, business and commercial education, instruction of the deaf, education of the blind, representative youth of public schools, college and university students, college fraternities, psychology physical culture, domestic and economic education, agricultural education, authors and publishers. The general division of public instruction in music is transferred to the department of musical art. The congresses of these general divisions will commence on July 17, and will be followed by the World's General Educational Congress, in which all the departments of education will be properly represented.

Department of Engineering.—Including the general divisions of civil engineering, mechanical engineering, mining engineering, metallurgical engineering, electrical engineering, military engineering, marine and naval engineering, aerial navigation, engineering education. The congresses of this department will be held during the week commencing on Monday, July 31.

Department of Art.—Including the general divisions of architecture, painting, sculpture, decorative art, and photographic art. The congresses of this department will be held in parallel with those of the department of engineering, the places of meeting being adequate as mentioned below.

Department of Government.—Including the general divisions of jurisprudence and law reform, political and economic reform, city government, executive administration, intellectual property, arbitration and peace. The general division of jurisprudence and law reform will include the laws of nations, expatriation, naturalization and extradition, international privileges of citizenship, the administration of justice, etc. The general division of political and economic reform will include political economy, economic science, profit-sharing, social science, the single tax and other theories, public revenues, statistics, weights and measures and coinage, postal service, suffrage in republics, kingdoms and empires, civil service reform, etc. The general division of city government will include public service, public works, police protection, public revenues and expenditures and other important subjects. The general division of executive administration will include the nature, office and application of executive power in municipal, State and national government. The general division of intellectual property will include trademarks and patents, both national and international. The subject of copyright has been transferred from the department of government to the department of literature. The general division of arbitration and peace will include the establishment of permanent international courts of justice, the substitution of arbitration for war, the establishment of courts of conciliation and arbitration for the voluntary settlement of private controversies, etc. The congresses of this division will commence on August 7.

General Department.—In this department are included congresses not properly belonging to any other department; and also congresses which for any special cause could not be held in their appropriate places in any of the

other departments, among which are the Dental Congress, the Pharmaceutical Congress, the Horticultural Congress, and the Chess and Checker Congress. The congresses of this department will commence on August 14.

Science and Philosophy.—Including the general divisions of general physics, astronomy, meteorology, geology, geography, chemistry, electricity, botany, zoology, microscopy, anthropology, ethnology, archæology, Indian ethnology, African ethnology, psychical science and philosophy. The congresses of this department will commence on Monday, August 21.

Labor.—Including the general divisions of the historic development of labor, labor organizations, conflicts of labor and capital, labor economics and legislation, woman's work and wages, child labor, education, public opinion and progress. The congresses of this department will be held in the last days of August and the first days of September, closing on Labor Day, Monday, September 4.

Department of Religion.—Including to this date, and subject to pending additions, the following general divisions: Baptist, Catholic, Congregational, Christian Evangelical Association, Evangelical Church, Friends, Jews, Lutheran General Council, Lutheran General Synod, Lutheran Synodical Conference, Methodist Episcopal, New Jerusalem, Presbyterian, Protestant Episcopal, Reformed Church of North America, Dutch Reformed Church, Reformed Episcopal, Swedish Evangelical, United Brethren, Unitarian, Universalist, Missions, Evangelical Alliance, Society of Christian Endeavor, Epworth League, Brotherhood of Christian Unity. The Catholic Congress will commence Tuesday, September 5. The World's Parliament of Religions will commence on Monday, September 11. The Denominational Congresses will commence on Thursday, September 21. The Missionary Congresses will commence Thursday, September 28, and will be followed by the congresses of the Evangelical Alliance and other bodies named.

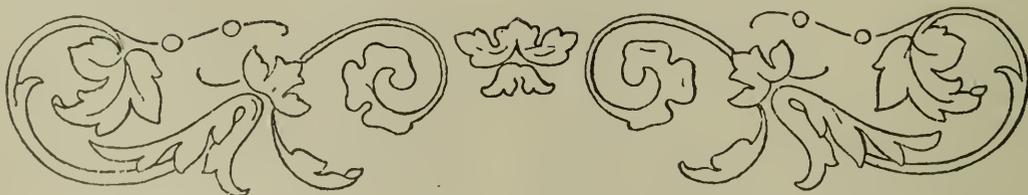

Department of Sunday Rest.—Including the general divisions of the physiological relations, the economic and business relations, the governmental and political relations, the social and moral relations, and the religious relations of the weekly rest day. These congresses will be held immediately after those of the religious societies above named.

Department of Public Health.—Including the general divisions of sanitary legislation, public health authorities, governmental administration in relation to epidemics and contagions, food inspection and other food problems. The congresses of this department will follow that of the Department of Sunday Rest, and the exact date will be announced hereafter.

Department of Agriculture.—Including the general divisions of farm culture and cereal industry, animal industry, agricultural organizations and governmental departments of agriculture, agricultural education and experiments, and horticulture, the latter of which has been transferred to the general department as above noted. The congresses of this department are assigned to commence on Monday, October 16.

WHERE THE CONGRESSES WILL BE HELD.

The World's Congresses of 1893 will be held in the Permanent Memorial Art Palace, erected on the Lake Front Park, through the co-operation of the Art Institute of Chicago, the city of Chicago, and the Directory of the World's Columbian Exposition. This "World's Congress Art Palace" will have two large audience rooms arranged to seat about three thousand persons each, and more than twenty smaller rooms, which will accommodate from three hundred to seven hundred persons each. Meetings of such a character as to draw a large popular audience will be held in the main audience rooms, while meetings of chapters or sections of different congresses for the discussion of subjects of a more limited interest will be held in the smaller rooms. It will thus be possible to have two congresses and twenty sectional meetings in session at the same time, and to have three times that number of meetings within a single day. It is not anticipated that so many meetings in a single day will be required in any department of the World's Congress work, even though arrangements are in progress for more than one hundred congresses of the general divisions of the various departments in which the World's Congress work has been organized.

LEADING ARTICLES OF THE MONTH.

HOME RULE AND IMPERIAL FEDERATION.

TWO political articles which seem to have attracted rather particular attention in England this month deal with the question of Home Rule in a somewhat drastic and militant style. The first is by Mr. Frederic Harrison, and is entitled "How to Drive Home Rule Home." It is the opening paper in the *Fortnightly*. The second is by Albert Shaw, editor of the *American Review of Reviews*, and is the opening paper in the *Contemporary*. It is entitled "An American View of Home Rule and Federation." Mr. Harrison is a Home Ruler of the most pronounced type, and advocates the immediate passage of a Home Rule bill by the use of the *cloture* in the House of Commons and by the process of packing the House of Lords with new Liberal peers. Mr. Shaw's article describes the recent Republican and Democratic conventions for the benefit of English readers, and holds up before the British eye a picture of the practical equality of American citizens throughout the States, and of the sister States themselves, in our great federated republic, in order to show by contrast how reasonable is the claim of Ireland for a Home Rule analogous to that enjoyed by an American State, and how important it is for the permanent integrity of the British Empire that its great outlying English-speaking dependencies should be made part of a federated imperial structure. Mr. Stead sums up both of these articles—together with two in the *Nineteenth Century* discussing somewhat similar subjects; and although his comments and quotations are quite strictly from the British point of view, it may interest our American readers to reproduce them precisely as he has chosen to make them for the readers of the English edition of the *Review*.

A New Policy of "Thorough."

It used to be said long ago that Mr. Frederic Harrison would never be happy until he had got the guillotine established as a going concern in his back garden. That was so long ago, and Mr. Harrison has been so quiet for so many years, that the old joke lost much of its point.

THE GUILLOTINE IN THE BACK GARDEN.

In the *Fortnightly Review* for September, however, an article signed by Mr. Frederic Harrison, under the title of "How to Push Home Rule Home," recalls the memory of the time when the guillotine joke was invented. Mr. Harrison is one of the most incisive and slashing writers of English now living, and in this article in the *Fortnightly*, he has put forth all his strength. It is a characteristic performance, full of go, dash, audacity—and nonsense. It is magnificent, but it is not politics. I should like to see Mr. Morley's face when he reads these pages, or to hear what

Mr. Gladstone thinks of the heroics of his literary henchman. As an exercise it is interesting; as a contribution to serious politics it can hardly be said to have any influence. The article would not have been so absurd—might, indeed, not have been absurd at all—if the result of the general election had been what it was hoped it would be. As it is, it is about as rational as a demonstration of the ease with which the French could invade England, provided the Channel were suddenly to be converted into *terra-firma*.

WHAT IS MR. HARRISON'S "NATION?"

The gist of Mr. Harrison's article, which he expresses with all the splendid vigor which is his special characteristic as a writer, is that the Government, by the aid of its majority of forty, should rush the Home Rule bill through the House of Commons, and if the House of Commons dared to throw it out, Mr. Gladstone and the nation are to thunder at the House of Lords. "The nation"—that is the term Mr. Harrison uses—but what nation? To ask that question is to pierce with a needle the inflated windbag of Mr. Harrison's rhetoric. Mr. Harrison is not so careless a writer as to use the term nation as a description of the people of the three or four nationalities who make up the United Kingdom. The only nation strong enough to end the House of Lords, or to thunder at the doors of the Upper Chamber, is the English nation. What, then, is the sense of proclaiming this nonsensical, this tremendous attack upon the House of Lords for voting in accordance with the declared wishes of the majority of the English electors, who, after all, we suppose, may be taken as representing the nation?

THE BOTTOM FACT OF THE VALUATION.

The simple fact is—and the sooner we face it the better—that it is no use talking of crusading against the House of Lords until the House of Commons puts itself in opposition to the wishes of the majority of the English people. If Mr. Gladstone had a majority of forty, or any majority at all from England, there might be some sense, although even then there would not be very much, in Mr. Harrison's swagger. But when every one knows, and no one better than Mr. Harrison himself, that England has returned a solid majority of seventy-one members who are pledged to defend the Union and support the House of Lords in throwing out the Home Rule bill, is it not child's play to mount the high horse and talk as Mr. Harrison does of making a clean sweep of the Upper Chamber?

NO MAJORITY FOR COLONIAL HOME RULE.

Mr. Harrison's article is very interesting, and even amusing reading; but any attempt to put it into practice would leave Mr. Gladstone without any majority

in the House of Commons. For Mr. Harrison is an enthusiastic advocate of what may be called Colonial Home Rule, and Colonial Home Rule is the one thing which the present majority will never give to Ireland. If Mr. Harrison could convert the British electorate to what he considers the saving faith of the Positivist prophet, and convince them that the Empire is an evil thing, the dismemberment of which is one of the highest and holiest duties in which its citizens can be engaged, well and good! But the British electorate has not yet been converted to that saving faith, and any attempt to pass a Home Rule bill on Mr. Harrison's lines would end not the House of Lords, but the Gladstone administration, as soon as the proposal was clearly before the House. For Mr. Harrison contemplates the ultimate exclusion of the Irish members from the Imperial Parliament, their immediate reduction by one-third, and he would deny to the Imperial advisers of the Crown any right to veto Irish legislation. Nothing short of Canadian or Australian Home Rule will content Mr. Harrison, but as neither Australia nor Canada contribute a penny-piece to the Imperial exchequer, and as one of the indispensable conditions of any Home Rule bill is that Ireland should continue to contribute to the Imperial exchequer as many millions per annum as may be amicably agreed upon as just in the Imperial Parliament, Colonial Home Rule can never be applied to Ireland.

THE A B C OF THE QUESTION.

All this is the very A B C of the question. Mr. Harrison says that the question of Home Rule has been finally and irrevocably settled. Never has there been in English history any political issue which has been so exhaustively fought out in the three corners of the kingdom. The whole adult male population have had the issue driven upon their minds, explained, argued out and illustrated *ad usque nauseam*.

So he says. But there is one among the adult male population who does not seem to have mastered even the elementary facts of the situation, and that one person is none other than Mr. Frederic Harrison himself.

WHAT MR. HARRISON SAYS.

Having said this much by way of introduction, now let Mr. Harrison speak for himself. He begins by declaring that at last we have got down to a genuine Democratic Republic; the principle of Home Rule is finally and irrevocably settled, and we must no longer parley with those who choose to talk nonsense. The nation having, with infinite toil, decided a direct issue, will not stand any trifling. It must be distinctly understood that the rejection of the Home Rule bill by the Peers will be followed by a bill for the superannuation of the House of Lords. The Upper Chamber, if it makes itself an insufferable nuisance, will crumble up like matchboard.

As a last resource, Mr. Gladstone could march a regiment of Life Guards into the House to take their seats as peers on the ministerial side. The Crown would hesitate to sanction so violent a measure; but

if the Crown were to hesitate, the Crown itself would be instantly menaced by public opinion. But the primary difficulty will not lie in the House of Lords, but in the House of Commons. Mr. Gladstone must take example from the London County Council, and use the cloture as the French Revolutionists used the guillotine, which went always.

THE GAG FOR THE COMMONS.

Here is Mr. Harrison's new policy of Thorough:

"Give fair time to consider the new bill; six weeks ought to suffice. Give one full debate on principle—say four nights of six or seven hours each. Divide, and suffer no second debate on principle. In committee allow two or three weeks as a maximum, using the cloture every hour; and if amendments multiply obstructively, cloture them. It was done for coercion, and it should be done for Home Rule—*fas est et ab hoste doceri*. Only it should be done far more drastically—fairly, honestly, but rigidly. Let it be understood that a fixed time—say three weeks as a maximum—be allowed for committee. It will be necessary to fix a time limit for speeches in committee. One debate, limited to two nights, for bill as finally drafted. In this way it would pass before Easter. The conditions of dispatch are these: rigid time limits for debates and separate speeches; constant, hourly resort to cloture; no compromising or mangling of the original scheme, but the bill, the whole bill, and nothing but the bill. Make it part of the Liberal programme that rejection of the bill will be instantly followed by a movement for the suppression of the Upper Chamber. Send the bill back after rejection, without debate, and with new terms after each rejection. If need be strike out of the bill, after repeated rejection, such clauses as may be specially designed for the advantage of their friends. Make it clear that the *ultima ratio*, the creation of Peers, remains.

THE CROWN TO MADAME TUSSAUD'S.

There may be difficulties in the way, possibly in very high places; but Mr. Harrison is prepared to trample as with hobnailed boot upon all obstacles which impede the execution of his programme:

"We must one day get rid of the whole of the idiotic gold stick and court dress business—send them to Madame Tussaud's wax-work show; we must get rid of the whole of the courtier's fanfaronade—and with these we must be freed from the interminable prolixity of the various stages, and the intricate pedantry of legislative process which invites obstruction and encourages chatter."

FIVE HUNDRED SWEEPS FOR THE HOUSE OF LORDS.

The House of Lords is to be compelled to surrender its veto in practice, and if the Crown will not elevate five hundred sweeps to the Peerage in case of need, the House of Commons must be prepared to refuse supplies and arrest the machinery of government. And all this, be it remembered, in face of a solid English majority in the House of Commons in favor of the House of Lords.

The rest of Mr. Harrison's article is taken up with declamation as to the absolute necessity of conceding almost everything Mr. Redmond demanded. He thinks that the right of the Imperial Parliament to pass an act to abrogate any particular act, legislative or administrative, of the Irish Parliament is quite sufficient security to provide for any emergency, or to fully protect any subject of the Queen.

FREE SHOOTING FOR ULSTER.

As for the difficulties in Ireland, if Ulster objects, Mr. Harrison would remind that turbulent and braggart minority that there is in the Castle archives the famous order, "Do not hesitate to shoot!" Liberals, he says, will live to repent it if, having their heel placed on the Unionist neck, they take it up for mere howling until the work is done.

There! There is the policy of Thorough laid down by a swaggerer who is more like Bobadil than Strafford. Seriously speaking, if Mr. Harrison had been hired by Mr. Chamberlain to produce a pamphlet that would do the maximum amount of mischief to the Liberal cause, he could not have given him on any number of printed pages better value for his money than this deplorable outburst in the *Fortnightly Review*.

How to Save the Empire—An American Prescription.

Dr. Albert Shaw, the editor of the *American Review of Reviews*, has a paper in the *Contemporary Review* for September, which affords much food for thought. For Dr. Shaw, being asked by Mr. Bunting to set forth in plain terms what is the American view of Home Rule and Federation, has done so in a way which will make most Britishers gasp. But it will do them good. It is an excellent thing to have so much plain truth bluntly stated. I wish I could quote the whole of this admirable paper; but I must confine myself to a few extracts, which, however, give a fair idea of the very drastic and unsparing criticisms of this American observer.

POOR JOHN BULL!

Dr. Shaw gives John Bull a piece of his mind without mincing his words. He says:

"I confess that if I were an Englishman I should not take much pride in the so-called 'Empire' as it now exists; and I am very sure that any American if he were a British subject in any part of the Empire outside of the United Kingdom would think that the huge affair was on very pernicious lines. Your colonial and imperial system, measured by its easy possibilities, has been the most colossal of failures. And now, when the first step toward clearing the situation for entrance upon a large and worthy imperial policy is so simple, so safe and so obvious, in its principles, the whole world looks on in amazement at the silly sophistries and the dense stupidities that do serve as arguments against allowing the Irish people to manage purely Irish affairs in Ireland."

GO TO SCHOOL AT UNCLE SAM'S.

Dr. Shaw contrasts with the fatuous stupidity of the Britisher the far-seeing sagacity of the statesmen who founded the American Commonwealth. They based their union upon Home Rule, which is the secret of their cohesion.

"The accident of territorial contiguity, let it be observed, is not the cement that binds together the parts of the American Republic. The cement is a product arising out of the intense affinity of the three principles of (1) perfect Home Rule in all matters of local concern; (2) perfect and indissoluble union in affairs of general or imperial concern; and (3) a universality of citizenship. The original States kept no hegemony, and manifested neither jealousy nor sense of superiority toward their colonies. When the test of war came the seceding States were conquered and the Union was preserved. The British, or any European government, would have held the subjugated region under military occupation, with some kind of colonial status, for at least a century. The region would have been Irelandized under coercion acts and military occupation. But Americans had faith enough in the principles of Federation and Home Rule to restore the recreant States, almost before the smoke had cleared from the battle-fields, to full authority as sovereign members of the Union."

AND GIVE HIM THE CONTRACT TO SAVE YOU!

Dr. Shaw is an intrepid man. He sees what ought to be done and how it ought to be done. He says:

"If Americans were to take the contract for reorganizing your British Empire they would lose no time in telegraphing for the strong men of both Canadian parties; for Mr. Rhodes, Mr. Hofmeyr and the other empire builders of South Africa; for the experienced and staunch politicians of the Australian States, and for Englishmen everywhere who were actually engaged in maintaining British supremacy. After a conference they would draw up certain tentative proposals and call an Imperial Convention to draft a final scheme of Federation. This scheme should provide for a true Imperial Parliament to take over from the existing local parliament of the United Kingdom all imperial business. It would place the navy, the army and the postal service upon an imperial basis. It would establish absolute free trade between all parts of the Empire, although it might allow certain parts to maintain differential tariffs against non-British countries. It would allow Ireland Home Rule as a matter of course—subject *not* to the United Kingdom, but to the British Empire."

SUPPOSE HE ANNEXES IRELAND!

As we shall not give Americans the contract to save the Empire, Dr. Shaw warns us that under our blind statesmanship—

"Ireland itself might falter in its loyalty at some time of crisis. We do not want Ireland, yet obviously we could make her very comfortable and happy as a State in our Union. And in the nature of the thing it is not easy to see why the American flag might not

float over the Emerald Island with as much propriety as the British flag in territories contiguous to our border. Moreover, there might be much moral justification for our reception of Ireland in the fact that we should at once give that community a place in a rational system of political organization, and promote its general welfare and progress; whereas, without Home Rule, it must remain in a distraught condition. Our mission in Ireland would be the same as England professes in Egypt—to pacify, restore and bless. But we could have no object in undertaking this necessarily expensive annexation of Ireland, except the welfare of humanity and the progress of the English-speaking communities of the world.”

THE UNION OF THE ENGLISH-SPEAKING RACE.

Dr. Shaw does not conclude, however, without saying a kindly word of brotherly sympathy. We may, be, and no doubt are, both fools and blind; but we are English-speaking men for all that. So he tells us—

“Blood is thicker than water. Most Americans are of British origin, and they are devotedly attached to ideas and possessions that are our common heritage. They rejoice in the exploits of a broad-visioned kinsman like Mr. Cecil Rhodes. They have the kindest interest in the development of the English civilization of the Australian continent. They do not wish to see the dismemberment of the British Empire, and they would respect and admire the statesmanship of a leader in England who should attempt the real knitting together of that Empire. With such an Empire they would have no occasion for controversy. The frictions that have endangered the relations of Great Britain and America in recent years have grown out of the mischievously anomalous political situation of Canada. A unified Imperial economic system might soon lead to a reciprocity treaty between the two English-speaking federations that would hasten the advent of the universal Free Trade that all intelligent Protectionists anticipate and desire.”

So far Dr. Shaw. Now do not let any proud, impatient Briton sniff or storm or venture to ignore the significance of this very plain warning. It is but the latest repetition of the Cassandra-like prediction: “We must federate or perish.” And the first step to the only possible federation is Home Rule!

Some British Suggestions.

In the preceding article I have summarized what Dr. Shaw has to say on this question from the American standpoint. In the *Nineteenth Century* for September, a New Zealander and an Englishman give their ideas on the same subject.

A CHANCE FOR CANADA.

Sir Julius Vogel comes forward to suggest that Canada should take the initiative in summoning a congress of the self-governing colonies in order to elaborate a scheme for laying the foundations of a “Zollverein of the British Dominions.” There are great and obvious difficulties which Sir Julius Vogel fully recognizes, but he thinks that he can get round them by making the imposition of a bounty of 10 per cent. on all goods produced in the British Possessions on

articles similar to those produced in the United Kingdom, *i. e.*, he would give a 10 per cent. bounty to the colonial producer of wool, grain, butter, cheese and meat; but in order to meet the suggestion that this is subsidizing colonial producers in order to compete with English farmers in the English markets, Sir Julius says: “It is fair to consider that they are prejudiced to the total extent of the bonuses paid on these articles, and we suggest that such payment should be made, the total amount to be divided among all the producers in such manner as may be found most satisfactory.”

He thinks that the bounty would amount to over five and a quarter millions to-day, and that it would rise to over £8,000,000, one-third of which should be paid by the British Possessions, and two-thirds by the United Kingdom.

TO FREE TRADE VIA BOUNTIES.

By this means he thinks the way would be paved toward universal freedom of trade beyond all ports of the British dominions. He says:

We now come to the conditions which should accompany the agreement to make the payments recommended. We suggest as follows:

1. The British Possessions agree to impose an extra *ad valorem* import duty of ten per cent. on all foreign commodities of the same character as those imported from the United Kingdom.

2. Any of the bonuses described shall cease to be paid six months after the United Kingdom declares a ten per cent. differential duty on any of the commodities subject to such bonuses coming from foreign countries. Thus, for example, whenever the increased production of the British Possessions made it safe to place a ten per cent. duty on grain from foreign countries the proposed bonus on grain would cease.

3. On three years' notice (issued not sooner than seven years from the date of the bonuses coming into operation, and not later than eighteen years) that the United Kingdom will impose not less than a ten per cent. duty on all foreign commodities, the British Possessions and the United Kingdom will agree to an exchange, free of customs duties, of all commodities of their own production or manufacture. The British Possessions are also to impose a duty on foreign commodities of not less than ten per cent., but to be at liberty as well as the United Kingdom to make the duty on foreign commodities larger than ten per cent.

With these exceptions, if any, within twenty-one years—probably much earlier—there would be a complete Zollverein within the British dominions. It may be added that the various customs departments would have no difficulty whatever in carrying out the details of the scheme.

It cannot be denied that, as far as the United Kingdom is concerned, these provisions will confer prodigious benefits. They will largely increase the demand for the manufactures of the model country; they will give an impetus to British trade and British shipping at a time when both are threatened by the increasing hostility of foreign countries. The power to go be-

yond the 10 per cent. duties will be a formidable weapon in the way of repressing foreign unfriendliness—a weapon the want of which the ablest statesmen have lamented.

Canada and Imperial Federation.

In his article, "Canada and Imperial Federation," which has first place in the initial number of the new Canadian monthly, *The Lake Magazine*, Mr. J. Castell Hopkins argues for a closer union between the Dominion and the rest of the British Empire. He believes that independence for Canada is a "dangerous dream," and annexation with the United States a "disgraceful impossibility."

WHAT INDEPENDENCE FOR CANADA WOULD MEAN.

"Independence for Canada means dependence upon the United States; diplomatic weakness abroad; inability to protect our rights and privileges; the necessity of an enormous expenditure upon defensive armament; increased debt and a steadily growing taxation as a consequence of added burdens; loss of possible trade preferences in the British market, or chance of a treaty with the United States short of commercial annexation; provincial difficulties without any increased federal power; all combined with the constant scheming of American politicians, railway and commercial interests, desiring, and very naturally, to obtain possession of so valuable a territory, so important an addition to their material estate, and such magnificent fisheries as Canada possesses upon the Pacific and Atlantic coasts. It involves a similar declaration of independence by Australia; the loss to England of her coaling stations, harbors and fortresses and the command of the sea; the destruction of her prestige and the possible loss of India; in short, the disruption and destruction of the British Empire.

ANNEXATION NOT TO BE SERIOUSLY CONSIDERED.

"Annexation is hardly worthy of discussion. No nation has voluntarily surrendered its name and institutions of freedom for any consideration which could be presented. The United States had a cause and reason for separation from England—we have none. If in any degree the American people seem better off than the Canadian, and it is merely an appearance due to a larger population and greater cities, it should be remembered that the United States has one hundred years the start of Canada, and never had to compete with a great nation twelve times its size upon its southern frontier. Had Mexico been another United States, I doubt whether that present degree of apparent prosperity would have ever been attained. But our people are built of better stuff than even our neighbors to the south, worthy as they are of admiration, and no fear may be felt that annexation will ever come up for serious consideration by the nation. If it should, the crushing which Commercial Union has received at the polls would be but a bagatelle in comparison to its fate."

WHAT IMPERIAL FEDERATION WOULD INVOLVE.

Mr. Hopkins comes out strongly for the other alternative, that of Imperial Federation. He summarized as follows the most important of the matters which this closer union would involve:

"1. The abrogation of all treaties interfering in any way with the domestic affairs of the British Empire, or imposing limitations upon its internal trade.

"2. Any Imperial penny post, or, at any rate, a cheaper system than that now existing.

"3. The adoption, throughout the self-governing portion of the Empire, of identical laws upon such subjects as patents, copyrights, marriage, etc.

"4. The fixing of some general standard for the conferring of university degrees, and the similar recognition of professional qualifications.

5. The development of some careful scheme by which a portion of the people of England, now living 311 persons to the square mile, may be removed to Canada or Australia, where only one person to the square mile at present exists.

"6. The imposition of a small duty by Great Britain upon foreign goods in return for a distinct preference, in all Colonial and Indian markets.

"7. A contribution granted by each self-governing portion of the Empire toward its naval defense in return for the above trade discrimination, and for a certain share in molding the foreign policy of the British Realm.

"8. The establishment of fast steamship lines, notably between Canada and Australia and England, together with a cable system which will unite the whole Empire in close electric communication.

"9. The holding of Imperial conferences at not very long intervals for the discussion of these various problems and their presentation to the parliaments of the Empire, with a view to the solution of the question along the lines of gradual growth.

"10. Evolution, not revolution, or a steady growth toward closer union; not a sudden straining of the present constitutional structure—the probable development of these Imperial consultation into some form of an Imperial Council."

Canada's Political Future.

In the *Lake Magazine* for September, Hon. J. W. Longley, Attorney-General of Nova Scotia, contends for a fair and rational consideration by the Canadian people of the subject of Canada's political future. He insists that in the discussion of the question every man, whether government official or private citizen, shall have an unqualified right to freely express his opinion, and he criticises Sir Oliver Mowat for removing Mr. Elgin Myers from office because that gentleman ventured to assert his opinion that Canada's most advantageous arrangement would be a union with the United States government. He lays down the principle that, while it is the undoubted duty of every official to expose any attempt by insurrection to hand over Canada to any foreign government, that such official nevertheless is always at liberty to express his

opinion as to the course which he considers would best advance Canada's interests.

There are, according to the writer, four alternatives, any one of which Canada may adopt for her future regulation. It may, first, remain as it is, a colonial possession of Great Britain; second, establish a direct political alliance with Great Britain; third, consummate a political union with the United States; and, fourth, establish an independent nationality.

While the writer does not commit himself to any of the four alternatives, and strenuously denies that he is in favor of a political union between Canada and the United States, he nevertheless states fairly and strongly in the following paragraphs the line of argument for the advocates of this scheme:

"Why must we seek alliances with European countries, when we have the full outlines of a most perfect civilization on our own Continent? Why do you seek to impose upon Canadians the burden of maintaining a standing army simply to take a hand in the selfish game of European diplomacy! Besides us on this Continent is a nation that within the compass of a little more than a century has outstripped in population, in accumulated wealth and internal resources the greatest of European nations. She stands without a rival in industrial progress. Every citizen is a wage-earner and a producer, while every nation in Europe is supporting hundreds of thousands of men in idleness so far as productive returns are concerned, solely as a national police and a necessary safeguard against invasion and conquest. In America standing armies are needless, because we are not concerned in the wastes and burdens which afflicted the military-ridden nations of modern Europe. Besides us and sharing the Continent with us is a nation speaking the same language, sprung from the same race and animated by the same impulse as ourselves.

"The United States was once a colony like ourselves and derived its origin from the same cradle. With its enormous progress it must in time have established an independent nationality in any case. Under normal conditions the communities which now constitute Canada would have been linked with the communities which now form the United States. Unfortunately, incidents occurred more than a century ago which caused them to separate from the mother-land in anger and by force. We in Canada represent, for the most part, the descendants of those who preferred to stand by the Empire. But history has decided that the resisting colonists were justified, and time has demonstrated that as descendants of the great Anglo-Saxon race they had the capacity for self-government and the power to achieve the most wonderful national progress the world has ever seen. Time has mellowed the old animosities and completely changed the conditions under which our ancestors separated from theirs. Why should we longer remain apart? Our interests are identical. Why should we form an alliance with less than forty millions of people in a country several thousands of miles away, and with national interests distinctly diverse, when we can form an alliance with over sixty millions at our own doors with common national interests."

JUSTIN MCCARTHY'S FORECAST OF THE GLADSTONE MINISTRY.

THE *North American Review* publishes a forecast by Justin McCarthy, M.P., of the probable course of action which Mr. Gladstone's new ministry will take.

HOUSE OF LORDS AND HOME RULE.

It is to be presumed that when Mr. Gladstone's Home Rule bill passes the House it will be rejected by the Lords, on the ground that Great Britain having elected a Conservative majority, the will of the country is evidently opposed to the measure.

What will Mr. Gladstone then do?

There are two things which Mr. Gladstone could then do. He could appeal to the country against the House of Lords, which Mr. McCarthy thinks he will scarcely do, and he can threaten the House of Lords with the creation of a sufficient number of peers to enable him to pass the measure—a menace which might at once bring the Lords to terms. But as the same bill cannot be introduced twice in one session of Parliament, what will be done if this measure is rejected?

TWO OTHER REFORMS.

There are two other reforms which the Liberal party is exceedingly anxious to push through. One is the "One Man, One Vote" reform, whereby each man shall have one vote and no more, instead of the present system by which a man is allowed to vote in as many places as he holds property. The other reform is the complete reorganization of the complex registration system, for as the case now stands "although a voter may be perfectly entitled to his vote, he has to fight his corner and prove his case at every annual registration, or he loses his vote—if any one objects to having his vote recorded." Some of the extreme Liberals, such as Mr. Labouchere, think that Mr. Gladstone's wisest plan would be to introduce these two reforms first as preliminaries to the Home Rule bill. But Mr. McCarthy considers that such a programme is impossible, because of the pledges which Mr. Gladstone has made to make Home Rule the first object of his attention. According to Mr. McCarthy the Premier will probably act in one of two ways: Either he will himself "introduce a Home Rule scheme on one day, and others of his colleagues will introduce a One Man, One Vote bill and a reformed registration bill the same day or the day after," or he will introduce his Home Rule bill in the first session, and then upon its repeal by the House of Lords, he will call another session immediately and again present his bill. The effect of the first plan, Mr. McCarthy thinks, would be to get the two subsidiary reforms passed, the House of Lords not daring to refuse these important measures in one session, and as soon as these minor reforms go into effect the greater reform will be a matter of certainty. The second plan might have the effect of so arousing the country, after the first refusal of the Home Rule bill, that the House of Lords would not dare to jeopardize its own safety by making a second refusal.

THE HOMESTEAD STRIKE.

THREE papers on the Homestead strike appear in the *North American Review* for August.

The Cause of the Trouble.

The first is by Representative William C. Oates, chairman of the Congressional Committee appointed to investigate the troubles between the Carnegie Company and their employees, who considers the subject from the point of view of the legislator. He attributes the strike indirectly to our Protective Tariff law, which has, he declares, by encouraging the investment of capital in the manufacture of iron and steel, caused overproduction of these products and a consequent reduction in the wages of the laborers in this industry.

Mr. Oates lays the blame for the conflict directly upon the "stern," "brusque" and "uncompromising" Mr. Frick, and is persuaded that if the company had approached its employees in a less autocratic way an agreement would have been reached, and all the trouble which followed would thus have been avoided. From his knowledge of the case, he is inclined to suspect "that Mr. Frick, like many other manufacturers, is not infatuated with labor organizations, and hence is opposed to the Amalgamated Association and its methods, and had no very great desire to contract with his workmen through that organization."

While conceding that the company had a legal right to put Pinkerton men into the works at Homestead as guards, Mr. Oates thinks that the introduction of these outside forces was the greatest mistake it could have made. It precipitated a conflict, which he feels sure would have been prevented if Mr. Frick had first appealed to the county and State authority for protection. Mr. Oates holds to the view that Congress has not the power to interfere by legislation in labor troubles such as were recently witnessed at Homestead. He believes, however, that Congress "can contribute much toward allaying agitation by repealing class legislation and greatly restricting foreign immigration."

A Constitutional View of the Affair.

Hon. George Ticknor Curtis, in the second paper, takes a constitutional view of the Homestead strike. He sums up the various points in the case of Carnegie versus Homestead Strikers, as follows:

First, That the owners of the mills had a perfect legal right to employ any necessary number of men to defend their property.

Secondly, That all the acts of the Pinkerton men at Homestead were lawful; and that, as watchmen, they had a right to bear arms on the premises of the Carnegie Company in order to protect life and property, whether they were or were not deputized by the Sheriff of Allegheny County; and that the agency had the right to ship arms for such purposes from Chicago to the Carnegie yards at Homestead; and that, in view of the attack on the barges, the watchmen had the right to bear arms and defend themselves; and that all their acts in firing in

self-defense from the barges after the attack on them were legally justifiable under the laws of the United States and the State of Pennsylvania.

Thirdly, That the killing of Klein by one or more of the riotous strikers was a murder.

Fourthly, That all who stood by, sympathizing with and encouraging the strikers, or not exerting themselves to prevent the strikers who were armed from firing on the barges, were accessories to the murder.

Having thus stated the law in the case, Mr. Curtis next proceeds to discuss what he considers to be the duty of the legislative power in the States of the Union in reference to strikes: "The first duty of the legislative power is to emancipate the individual workman from the tyranny of his class. Unless this be done, capitalists can afford no aid to the solution of any labor problem whatever. Of what avail is it that a mill owner or a railroad company is willing to make fair terms with workmen if the state of things is such that they cannot employ whom they please, on such terms as will be agreed to by the men who want employment? It is only by making the individual laborer a perfectly free man that society can do its duty to him and to those who wish to buy his labor for a price that he is willing to take, and which is for the interest of those who are dependent upon him to have him take."

Until these doctrines are accepted and carried out in legislation, Mr. Curtis maintains that there can be no successful reconciliation between the interests of capital and the interests of labor. He holds that associations of workmen transcend their legitimate power when they organize for purposes other than of discussing the subject of wages with their employers, of obtaining and diffusing information about the price of labor in different places, and of mutual associations in times of sickness. He declares that the corporate body of a trade union should not be permitted to bind their members to quit work as a body, when ordered to do so by the governing authority of the association; and moreover that the coercion of non-union men, however tempted and in whatever it ends, should be made a crime and should be punished with severity.

Master Workman Powderly's Version.

The Knight's of Labor view is presented by Master Workman Powderly, who stands uncompromisingly by the Homestead strikers. He says: "The principle involved in the Homestead trouble is the same as that by which the founders of this republic were governed in rebelling against the British Government. To have accepted decisions, decrees and laws without question, and without a voice in their making, would have stamped the colonists as slaves. To accept, without inquiring the why or wherefore, such terms and wages as the Carnegie Steel Company saw fit to offer would stamp the brand of inferiority upon the workmen of Homestead. Independence is worth as much to the workingman as it can be to the employer. The right to sell his labor in the highest

market is as dear to the workman as the right of the manufacturer to sell the product of that labor can possibly be to the latter. It is folly to assert that the workman has no right to a voice in determining what the minimum rate of compensation shall be. If the manufacturer is permitted to invade the market place and undersell competitors, a reduction in the wages of his employees must inevitably follow. It was to protect the manufacturer as well as the workman that the Amalgamated Association insisted on a minimum rate of pay. The fixing of that rate imposed no hardship on the manufacturer; it gave no competitor the advantage over him, for the majority of mills were operated under the Amalgamated scale, and this of itself fixed a rate below which manufacturers would not sell. The minimum rate was therefore as advantageous to the manufacturer as to the workman in the steel trade. The question at issue between the Carnegie Steel Company and the steel workers does not so much concern the price as the right to a voice in fixing that price.

"The corporation, composed of many men, is an association of capital which delegates its authority to an agent whose duty it is to deal with the workmen and make terms with them. The Amalgamated Association, and all other bodies of organized workmen, stand in the same relation to the men as the corporation does to the capitalists whose money is invested. One invests money, that is, his capital; the other invests his labor, which to him is not only his capital but his all. That the workman should have the same right to be heard through his legitimately appointed agent, the officer of the labor organization, that the corporation has to be heard through the superintendent or agent, is but equity. This is the bone of contention at Homestead, and in fact everywhere else where a labor organization attempts to guard the rights of its members."

Mr. Powderly makes the statement "that every law, every right, every concession that the workmen now enjoy has come to them through the labor organization." What the laboring man demands at the present time, says Mr. Powderly speaking for his organization, "is the enactment of laws providing for the arbitration between employers and employed, and to enforce the decision of arbitration."

"It should be a law in every State that in disputed cases the employer should be obliged to select two arbitrators and the employees two, these four to select the fifth; this arbitration commission to have access to all books, papers and facts bearing on the question at issue from both sides. It goes without saying that the commission should be made up of reasonable, well-disposed men, and that publicity would not be given to such information as they might become possessed of."

"An established board of arbitration, appointed by a governor or other authority, is simply no board of arbitration at all, for the reason that the workmen would have no voice in its selection, and the other side, having all the money and influence, would be tempted to 'fix' such a board preparatory to engag-

ing in a controversy with workingmen. For either side to refuse to appoint its arbitrators should be held to be cause for their appointment by the Governor of the State. No strike or lockout should be entered upon before the decision of the board of arbitrators. Provisions for appeal from the decision of the arbitrators should be made in order to prevent intimidation or money from influencing the board."

Naturally Mr. Powderly objects to the introduction of armed forces, such as Pinkerton detective agencies arm and equip. He ends his article with the exclamation, "What the law will not do for men they must do for themselves, and by the light of the blazing guns at Homestead it was written that arbitration must take the place of 'Pinkerton.'!"

The Lesson of the Strike.

Hon. Chauncey F. Black, taking the Homestead affair as his text, draws from it a lesson which he presents in the *Forum* for September, as a remedy for labor troubles. He takes the position that the rapid concentration of capital in centers going forward, on the one hand, and of working men, on the other, has changed the conditions which existed when the present laws were enacted and that this change calls for a readjustment by law of the relations between corporations and their employees. "Capital massed on one side and men massed on the other make a situation to which neither the common law nor the statute law of our foregoers is at all adequate. The principles of those laws are as applicable and as effectual to-day as ever, but they need elaboration and the support of new machinery. A dispute between an employer and eighteen thousand men—the number said to be in the service of the Carnegie companies—who with their families make sixty or seventy thousand souls, cannot be satisfactorily disposed of by ordinary judicial procedure. While executives, courts, and juries are confessedly unable or unwilling to cope with unlawful combinations of capital, how can we expect them to deal promptly, successfully and justly with vast multitudes of aggrieved laborers, too often technically at fault." The State defends itself against unlawful combinations of capital, adds Mr. Black, with writs and bills in equity, and against the disorders of which workingmen have been guilty, with its rifles. "Why not," he asks, "the writs in both or the rifles in both? Why this summary suppression here, and the tender toleration there?"

In order that labor and capital may treat on something like equal terms, Mr. Black suggests that laws be enacted by our various States, providing for the incorporation of labor bodies, as for instance of the "Amalgamated Association," which shall have power to make contracts with capitalist corporations, to sue and to collect damages. As means whereby to pay the damages for the breaches of its contract, Mr. Black suggests that there should be inserted in the charter of this labor corporation a provision "requiring that a sufficient percentage of its whole earnings should be withheld from distribution and invested in public securities, never to be distributed or

expended except for that purpose." Obviously the membership would be fitful and shifting, but not more so, it is held, than the stockholders of other corporations.

"But the State has not discharged its duty," continues Mr. Black, "by merely granting a charter to a labor corporation, with even the most careful and elaborate provisions for its safe management. It must also provide for the peaceful settlement of disputes between the aggregations of men on the other hand. It must do this not only in justice to the parties immediately concerned, but in justice to itself. Provisions for arbitration, provisions for speedy litigation in default of arbitration, provisions for preserving conditions against radical changes while the legal settlement is in progress, provisions against call-outs, lock-outs, and strikes in the interim, and above all, provisions against evictions of workmen and the introduction of armed forces—these are the outlines which the wisdom of a legislature bent upon a fair solution of the most difficult problem and the removal of the gravest danger of modern times might be expected to fill in with details that would not defeat the object in view.

"The labor corporation suggested would be that perfection of organization which would best serve the rights and interests of all concerned. It would bring to the front the best character and the highest talents on the labor side, and the responsible manufacturing or mining corporation would be able to buy its labor from an equally responsible corporation having it to sell, and to carry on its business with an almost absolute certainty that the contracts between them would be faithfully and voluntarily observed, and, if not, would be readily enforced. This with the obligation upon each not to strike or to lock out or to evict until a question properly raised and pending should be judicially determined, would probably save the public from these gigantic disturbances, which shake the whole State and therefore sternly demand the public intervention of the State for their suppression."

A Capitalist's Sympathetic View of the Strike.

Mr. John Brisben Walker, editor of the *Cosmopolitan*, contributes to his magazine a most impressive paper on the Homestead strike. The weight of the writer's words is especially great, from the fact that he himself is a prominent exponent of the monied class, which he criticises with such remarkable freedom and vigor.

In discussing the exciting cause of the Homestead outbreak, Mr. Walker speaks as follows concerning the Pinkerton system: "Lovers of the Republic may well tremble at this exhibition, so closely resembling the evil days when rich Romans surrounded themselves by hired bands of fighting bullies. True, our modern rich man does not parade the streets surrounded by his gladiators. He sits in a secret office, removed from danger, and in communication with the telegraph wires, orders his army concentrated from many States by rapid transit and moves it unexpectedly upon his private foes. There is lacking

that personal courage which gave a half-way excuse to the Roman, who, sword in hand, shared the dangers of the fight. But the risk to the Republic is all the greater from these modern methods. For if a man may hire 300 poor devils ready to shoot down their brothers in misery, there is no reason why he may not hire 10,000."

As to the "divine right" of property and the necessity of "intelligence to direct," Mr. Walker avers that there is another side which the workmen cannot be blamed for taking. He agrees with them that they, the immediate producers of our wealth, have intelligence among them and are quite as well endowed by nature with the qualities to command, as are those who have come forward under an uneven and solecistic social régime. He calls attention to the palpable fact that the workman has never really possessed the power of his vote. "Every one knows that this has been true; that the labor vote has never been a unit; that its purchasability has been one of the well-understood factors in ward politics; that there has been no combination, no united effort, no intelligent direction, no willingness to submit to leadership, and that there is to-day no probability of the vote of these people being cast at an early election for the objects in which they are so deeply concerned. The issues that are before the public in either of the great political parties for whose candidates the votes will be cast are very largely those which concern the peoples of means and influence." Mr. Walker emphasizes the huge majority of strength with the labor class, not only in regard to votes, but in physical strength—a preponderance which renders possible at any moment a cataclysm by the side of which the Homestead riot would be trivial.

How are we to remedy this state of affairs? The editor of the *Cosmopolitan* sees relief in several general directions. "Lighten the burdens of taxation upon the poor, by letting those whose wealth is protected by the State chiefly furnish the means of subsistence for the State, at the same time offering a discouragement to the amassing of great wealth. The well-known expedient of income tax would be a step in this direction. Take out of the control of private individuals the power to amass great fortunes at the expense of the public, through the management of functions like railway, express and telegraph, which are purely of a public character. Establish a system of currency, self-regulated by means of postal-savings banks; tax highly the unimproved properties which are held for the purposes of speculation. Finally, let it be a recognized principle that when men employ many laborers their business ceases to be purely a private affair, but concerns the State, and that disputes between proprietor and workmen must be submitted, not to the brute force of so many Pinkerton mercenaries, but to arbitration."

Compulsory Arbitration Necessary.

"The Editor's Table" of the *New England Magazine* is taken up this month with a discussion of the strike bearing the unmistakable ear marks of Mr. Edwin D. Mead, whose comments in that periodical

two years ago upon the New York Central strike attracted much attention.

Mr. Mead is severe in his denunciation of "Pinker-tonism," the death blow to which he thinks has been dealt by the conflict at Homestead. He declares that "it is insufferable and a thing not to be endured in the Democracy, that any men or any companies of men, for whatever purposes incorporated, should have the power of organizing and arming military and police forces of their own to act in the settlement of affairs, in which they are thus interested parties, and shoot men when and how they may direct. The State in which such things are possible, or are apologized for, is, we say, but the parody of a Democracy; and if a savage massacre and rout of the unfortunate Pinkerton men of Homestead is the means of waking the country up to the seriousness and true significance of this whole question, the violence and the bloodshed will not have been in vain."

The tragical affair at Homestead has also done much, Mr. Mead thinks, to hasten the day of compulsory arbitration, and a more efficient supervision of industries by the State. Of the conditions which render necessary some form of enforced settlement of troubles between corporations and laborers he says: "Not only every railroad, but every great industry and enterprise in the country is in a measure a public concern, becoming more and more so in the proportion in which it becomes great; nothing of importance, nothing at all, is a matter simply between wage payer and wage earner. An immense industry like that represented by the Carnegie Company becomes a matter of public concern in almost as great measure as even a great railroad; and it is the more amenable to the State for its just and proper conduct, and the State is under the greater obligation to exercise a firm control over its proceedings and policy, by so much as it is chiefly made profitable—our protectionist brethren themselves like to say possible—by the privileges conferred upon it by the State through its protective laws. But this is only an emphatic illustration of the right and of the need of compulsory arbitration before State boards, in such collisions between wage payers and wage earners as are likely to threaten the public peace or endanger the welfare of a busy community."

Mr. Mead censures the politicians who are seeking to make the strike and its accompanying disorders appear as results of our present tariff system, stoutly maintaining that the strike had no bearing on the tariff, and that "protection" is a distinct issue from that involved in the trouble at Homestead, and in the interest of right and justice should be considered separately.

In the Homestead case he finds two distinct questions involved. "First, whether monied corporations may decline to arbitrate with organized labor, or take arrogant and arbitrary attitudes with a view to breaking the organizations and compelling workmen to deal with them individually—whether, in a word, amalgamated iron shall not have the same rights in court as amalgamated gold; and, second, the question

whether, if collision comes and soldiers are necessary, they shall be marshalled by the corporation, be its hirelings, and get out their guns at its discretion, or be managed by an important third party called the State.

"The American workingmen," concludes Mr. Mead, "are not anarchists, the men of the American labor unions are not anarchists, the sooner all good people take the fact peaceably to heart, the better. Even Mr. Pinkerton confessed his faith to the Congressional Committee the other day that the labor unions are made up, with but the slightest exceptions, of most sober and law-abiding men. The sheriff of Pittsburgh might quite safely have sworn in a thousand of these strikers as policemen—he could have found none better. Not one brick of the Carnegie property was damaged through all the tumult. Not one of the thousands of striking men, we are authoritatively told, was found drunk. Of what company of four thousand bankers or railroad magnates, suddenly thrown into a month's idleness at New York or Newport could as much be said? Great collisions and excitements, like the recent one at Homestead, will usually bring a turbulent minority into lawless proceedings of some sort. It will not be strange if more than once, while passion rages, non-union men are violently interfered with; and shot and shell may be necessary to teach that this also—like the corporation's private army—cannot be permitted in this free republic; there is no more place for the despotism of amalgamated iron than for the despotism of amalgamated gold. But the American workingmen, we say, are not anarchists. There is no class to which the paralysis of industry brings such quick and serious suffering; there is no class which pays so high a price for social disorder and bad government; there is no class whose circumstances so imperatively command patience and forbid foolishness. When, therefore, we find impatience and tumult and madness in their midst, with thousands of them taking great risks together—of loss of place and sustenance, of loss of home—out of a sense, right or wrong, of injustice, it would seem to be time for all of us to seriously study the situation."

GENERAL WALKER'S PLAN OF RESTRICTING IMMIGRATION.

THE subject of immigration is discussed in the *Yale Review* by Gen. Francis A. Walker, who is convinced that if the standard of wages of laboring men is to be maintained at the present level, the time has come for the enactment of more stringent immigration laws. This is the kind of law General Walker would enact if he were President, Senate and House of Representatives: "The United States should make proclamation to all the world that, having given a shelter and a home during the past ten years to five and a quarter millions of strangers from other lands, they deem it only fair and right, and not at all inconsistent with a general purpose of hospitality and fraternity, that they should, for the ten years next ensuing, give themselves a rest; that, in pursuance

of this object, a deposit of one hundred dollars will be required from every alien entering our ports after January 1, 1893; that, in case any person making such deposit shall depart out of the country within three years after the time of such payment, the amount shall be refunded to him; that, at the expiration of such term of three years, the amount of the deposit shall be repaid to every person then remaining in the country, upon the presentation of satisfactory evidence that he is at the time a law-abiding and self-supporting citizen; that no power of attorney given, or assignment made, prior to the day when such payment by law becomes due, shall have any effect to authorize and enable any other person than the immigrant himself to receive such refund, or any part of it; and that no part thereof shall be subject to attachment to satisfy any debt contracted prior to such date. The law should expire by limitation January 1, 1903."

Such a measure, General Walker believes, would at once cut off nine-tenths of the immigration, which would otherwise take place during the next ten years, and would put a stop to the system now in full blast of the wholesale manufacture of European immigration; but would not prevent many thousands of Swedes, Norwegians, Germans and men of other nationalities coming here at their own expense, and would not prevent tens of thousands sending back to the old country for relatives left behind.

General Walker is strongly of the opinion that the money test provision in his law would prove far more effective than a test of education, which would obviously be difficult to enforce, and would not keep out the undesirable anarchists and criminal class.

THE ILLICIT USE OF MONEY IN ELECTIONS.

PROF. J. J. MCCOOK, who has given special study to the questions of pauperism, drunkenness and crime in this country, opens the current number of *The Forum* with an article on venal voting. His information on this subject relates especially to four voting districts in Connecticut—two rural towns and two city wards—and is drawn from "books which have been actually used in campaigns by town committeemen," and from check lists and statements furnished by active politicians.

Professor McCook finds that in the two rural districts he has investigated, in the one 9.08 per cent. and in the other 20.09 per cent of the total number of voters are venal. By venal, it should be stated here, is meant "any person who expects, or who is known to have expected money or other valuable consideration either to 'turn out for his own side' or vote for the other." In the only city ward for which he has data of the percentage of venality, over nine out of every hundred voters are found to be "commercial." The percentage of venal voters who are of American stock is found to be much higher in the rural districts than in the cities. In the two rural towns referred to 59.08 per cent. and 84.08 per cent. respectively of the total of venals are found to be Americans. Professor McCook sums up the result of his investiga-

tion in these three voting districts of Connecticut as follows: "From these it appears that out of several thousand voters, taken not far from equally from city and country, one hundred and thirteen out of every thousand were venal. And of these venal, five hundred and fifty-six in every (assumed) thousand were of American stock; one hundred and seventy-three Irish of the second generation, one hundred and thirty-six Irish born; twenty-eight Germans second generation, fifty-three German born; three are English second generation, six English born; six Scotch second generation, three Scotch born; six colored; six French Canadian second generation, nine French Canadian first generation; and six of other foreign birth. It further appears that out of every (assumed) thousand of intemperate voters, five hundred and forty were venal; in every thousand drunkards, seven hundred and ninety were venal; in every thousand shiftless, all were venal; in every thousand total abstainers, three hundred and forty-two were venal; while in every thousand temperate voters, forty-five only were venal. This latter is again a case where the actual numbers represented on the side of the total abstainers may be so small as to give misleading percentages. The final fact is, however, liable to no such correction. Out of every thousand voters known to have been arrested or imprisoned—chiefly for drunkenness and its attendant crimes—seven hundred and eighty-eight were venal."

Professor McCook estimates that there are twenty-six thousand three hundred and ninety-four purchasable voters in Connecticut.

Publicity as a Cure.

In the same number of *The Forum* Mr. Herbert Welsh recommends publicity as a cure for the undue and the illicit use of money in elections. After reviewing the methods that have been employed in recent presidential elections, he says: "The general remedy, which must be urged with painful reiteration, is the creation of a public interest in public affairs and of that sense of individual responsibility for their right management which makes every man a politician in the true and good sense of that word. The moment that public sentiment demands higher ethical standards in political life, then will they be applied and then will political acts be judged by them. At once the greatest and hardest work in the long struggle for sound administration is to get the good people interested in it and willing to labor for it personally. The specific remedy for the serious abuse existing in the irresponsible and fraud-concealing methods pursued by political campaign committees will be found in the enactment of laws in all the States, possibly also of a Federal law, requiring political committees to publish at the conclusion of a campaign full statements, duly attested before a notary, giving an account of all money received and disbursed by them in the prosecution of their work. It is not sufficient to make such a requirement of a candidate, as is done by the New York law; it should be required of committees, for with these the main danger

lurks. Michigan has such a law, which is part of that State's new and excellent ballot-reform laws. Massachusetts, thanks to the untiring devotion and ability of her strong band of reformers, after several futile attempts, obtained an excellent law during the past winter. This went into operation August 1, 1892."

REPRESENTATIVE HARTER'S PLAN FOR CONDUCTING THE CAMPAIGN.

BELIEVING that the time has come when some radical reforms in the present "perfunctory" and "antiquated" methods of directing national political campaigns can be made to advantage, Representative Michael D. Harter, of Ohio, outlines in *The Forum* a plan of procedure for the Democratic party, which if adopted, he thinks, will work marvelous results, if for no other reason than on account of its "transparent fairness." Simply stated, his suggestion is "to take from the work usually done by the National Committee that part which can be done much more easily and directly, and with far greater results, and places it where it belongs; that is, with the State and other local committees.

"As we believe in local government, in home rule in State and Nation in political affairs, we should apply it to our campaign management. This would not involve anything like close connection between the National Committee and the various State committees and give them entire control of their own territory. The work then of the National Committee would be simplified by being made largely advisory, and in the end it would become more vigorous and efficient; while the work of the State committees, acting independently and practically, as if it were a State and not a National election, would be immensely more effective than it has been in the past half-dozen presidential struggles. The National Committee would still find enough to do, and could perform its work thoroughly and promptly. Securing from the State Committees complete poll lists of Republican and Independent voters, it could supply each of them for three or four months with a leading Democratic weekly paper of national reputation, and occasionally reach them with an extra document or publication of brevity and force. These poll lists, worked in this way, would prove the richest political soil in which to plant and cultivate truth, and a most satisfactory crop could be gathered from it in November. If properly developed, this alone would produce and supply enough extra votes for us to secure overwhelming Democratic success next fall."

IN THE "Gatherer" of *Cassell's Family Magazine*, there are often very interesting items of information about new discoveries and inventions. This month we are told of a French baron who has discovered that, by floating a net a thousand yards square with a mesh of five centimetres outside a breakwater, the waves are kept down as effectually as by floating or by oil.

RABBI SCHINDLER DEFINES NATIONALISM.

IN the September *New England Magazine*, Rabbi Schindler asks himself the question, "What is Nationalism?" and proceeds to answer it for the benefit of the unwitting public.

"To begin with, Nationalism is not an endeavor to upset the existing order of things with one turn; it is the endeavor to evolve a new order of things in a quiet, logical and legitimate manner. Nationalism is not the *shibboleth* of a secret society, of a few disgruntled persons who wish to bring the rest of humanity down to their own level, because they cannot lift themselves up to theirs; it is an irresistible current into which the rising tide of civilization is carrying the whole human race. Nationalism is not a Utopia which has its existence merely in the fertile imagination of a novel writer; its finishing touches are neither the big city umbrella nor the sermon by telephone. Nationalism is not alone the *possibility*, it is the *reality* of the future, the logical consequence of the inventions of the nineteenth century. Its details can as little be apprehended by us as could the details of our cars propelled by steam or electricity be apprehended by people who lived a hundred years ago."

Nationalism, says the rabbi, is not anarchy and communism, but their antipodes. It is not socialism, but strives to do for the nation what Socialism would do for the world, until such time as national boundaries may be stepped over. The writer goes into the philosophy of his subject to the great disadvantage of individualism, the opposite pole of his creed. On the idea of individualism Rabbi Schindler heaps all the blame of our existing social evils, the responsibility of every injustice in our social fabric:

"The aim and end of Nationalism is to make every member of the nation an official, and to burden the government with the care of the production, manufacture and distribution of all articles needed for the support of life. When nationalists are told that this is utopian and can never be accomplished, they have the right to ask: Why not? If the nation can carry our mail, why can it not carry as well and as cheaply our parcels? Why can it not carry as orderly our dispatches? Why can it not carry our persons? In Europe this part of the problem has been solved."

Rabbi Schindler does not play with the objection, so commonly made, that such a system as he proposes would create a class of corrupt officials, with all the ills that paternalism is heir to; he comes out openly in a denial that officials are corrupt as a class, and says that even if they were it would still be better to trust them than the private corporation.

As to the practical and concrete aims of Nationalism: "The nation could carry on besides the mail service, the express service, the telegraph and telephone service; the Treasury Department, which handles thousands of millions already, could be made to manage the whole banking system of the land. The State, which now supervises the insurance business, could just as well handle it. The

city, which now has its Water Department, could have also its gas and electric light departments, the possibilities of uniting a number of companies into one large concern, and the advantages thereof have been demonstrated by the amalgamation of all Boston street car companies into one."

A tax on huge inheritances, and the gradual abolition of inheritance after several generations, about complete the sum of attributes for which Nationalism stands in the mind of Rabbi Schindler.

OLD AGE PENSIONS.

IF we are going to deal with old age poverty "as an isolated phenomenon," it is the opinion of the *London Quarterly*, as of Mr. Fletcher Moulton and Professor Marshall, that Mr. Booth's plan is the best yet proposed. But there are so many "buts!" Here are some of them: "The cost of the scheme, enormous as it is, ought not to be an insuperable obstacle in the way of a nation with an income of a thousand millions a year. The main questions with such a nation (after the moral one) should be: Is the end to be attained, the divorce between age and want, and the facilitating of Poor Law Reform, worth the cost? Could not the millions be used to better purpose in preventing than in palliating pauperism? Are the means proposed the most effectual ones? And are the means proportioned, or, as would seem at first sight, greatly disproportioned, to the end in view? Would it not be practically impossible, whatever might be the circumstances of the nation, to diminish, much less to abolish, the endowment when once made? Would there not be a continual temptation to increase it at the cost of the wealthier part of the community? Would not rival Chancellors of the Exchequer seek popularity for their party by transferring the burden from the many to the few, and would not the multitude be sure to demand more pension, and at an earlier age, when once relieved, apparently, from the necessity of contributing their full share of the cost? In the long run, as before observed, it would be impossible for the many to profit at the expense of the few; but the run might be a very long one, and exhausting, if not ruinous, to all concerned. Moreover, the incipient communism to which this bold proposal unintentionally points might be infectious in a high degree."

Another View.

The same subject is treated by Mr. J. G. Brooks in the *Quarterly Journal of Economics*, in an article which, dated from Berlin, concludes with the somewhat unnecessary warning: "May the English advocates of old age pensions at least not imitate the reckless haste with which the German government hurried, with far too scanty data, from the accident insurance to that of old age and invalidity."

To a large extent the article is historical and expository. The writer has opinions of his own, nevertheless. He speaks of "the complicated and fussy mechanism of the German system" in one place, and in another says: "The stoutest advocates of the Ger-

man old age pensions admit that the great mass of the laborers are, if not sullenly hostile, absolutely careless of this form of State insurance. If Mr. Chamberlain's plan is tried, it will follow quickly that compulsion will be found necessary even for the beginning of success."

LIMITS OF INSURANCE.

Mr. Brooks holds that no principle is more distinctly ethical than insurance, which in six European countries has become a powerful political factor.

"The pith of the question, as it is the pith of the difficulty, is the wholly practical issue of political feasibility. Can the principle of insurance be applied by the State to such vast groups? All private insurance has found limits beyond which its group could not be managed. In the 'Centralized Friendly Societies' the group may reach such irresponsible dimensions that malingering becomes a distinct danger. Other societies have found the limit with women. A French insurance society against hail is now struggling in the Dordogne with the same problem. The State, with vastly lessened motive for sharp, minute, sleepless supervision, has to deal with groups and conditions incomparably more difficult. German experience is now by far the most considerable; and yet, for this form of insurance with which England is now concerned, the German experience has far more of warning than of encouragement."

FRIENDLY SOCIETIES FOUND WANTING.

The writer, *en route* to the above conclusions, has a tilt at the friendly societies:

"To those born with a little property, to the skilled and to the strong, the self-help societies in every form have been an unmeasured good; but to the skillless, the stupid, the weak, to those families in which sickness has been constant, such associations have neither brought advantage nor are they likely to do this. The new trades unionism is just trying its uncertain hand with the unskilled, but has as yet given too scant evidence as to its ability. The older unionism has a membership of some 750,000. If it be once conceded that the masses are to be insured, few would trust to this source. The Friendly Societies have a commanding record. If we include, besides the Affiliated Orders, the Railway and Mining Associations, collecting societies like the Victoria Legal, we have the imposing result of more than five million persons who are of their free choice insured against sickness.

"DIE WAFFEN NIEDER!"—The title of Baroness Bertha von Suttner's famous novel is also the title of an interesting German magazine, started in February under the editorship of the Baroness, to give expression to and to promote "the most beautiful idea of our dying nineteenth century," namely, the peace-idea. It gives articles and poems for and against war by well-known writers of different nationalities, and among the greetings to the editor are some from Ruggero Boaghi and the Bishop of Durham.

A CHINAMAN ON OUR TREATMENT OF CHINA.

YUNG KIUNG YEN, a prominent Episcopal minister of China, states with much force, in the *Forum*, his country's grievances against the United States. His chief complaint against us is that while professedly on terms of peace, we have enacted laws—notably the one-thousand-dollar qualification law—against China without consulting with that government. “If,” he says, “America thinks that the influx of Chinese is ruinous to the country, the only proper course for her is to take counsel with China in the matter; for as long as there is intercourse between the two nations it stands to reason that neither should take any action affecting the name or interest of the other without consulting the other. The statement is abroad that ‘the United States has become the advocate of the principle of international arbitration, and stands to the world to-day as the chief representative of the idea.’ Is this true only when she is in trouble with a really strong nation, and does she forget this idea when dealing with a weaker opponent? Mutual consultation on this emigrant question, as in all others, is the more rightful because it was the United States that first asked for commercial intercourse, not China. It was President Tyler, not H. M. Tau-kwong, who made the advance; and even at this day Chinese officials often say that it is foreigners who want to trade, and that China has everything and needs nothing from them. Again, citizens of the United States first encouraged the Chinese to immigrate.”

Yung Kiung Yen does not pretend to know the true reason for our hostility to the Chinese, but he says: “Of this I am convinced, that opposition from whatever reason is made prominent by race prejudice and by the question being dragged into politics; for as regards labor, I have read that ‘the number of Chinese employed in cheap labor is comparatively small,’ and that Italians, Hungarians and Norwegians receive less pay than Chinamen do. As to the charge that the Chinese who go to the United States belong to low types of character, though it is greatly exaggerated, the same may be urged against others to an equal or greater degree and with less force to the Chinese, inasmuch as they live by themselves and have no opportunity to corrupt the morals of the country. The statement about food and clothing, etc., is puerile, not to say that what is imported for them pays a large duty to the government, and that Americans in China do exactly the same thing. The danger of another ‘negro problem’ is fanciful, because the Chinese here do not intend to become citizens. Against this dark side, if it can be called a dark side, I may say that they are industrious and inoffensive, willing to take up the work refused by white laborers. If they had a free field they would develop American manufactures and increase American commerce.”

The writer urges the adoption of an entirely new treaty between America and China, based on grounds of reciprocity, in accordance with the following sug-

gestions: “Americans in China should relinquish their privilege of carrying on a river and coast trade, whether by steamers, ships, or by lorchas, the privilege of establishing manufactories and that of paying only a low tariff; and the Chinese should give up the privilege of settling everywhere in America, and settle only in certain cities, corresponding in number to those in China open to American merchants, storekeepers, etc. This restricted settling would of itself stop immigration, for laborers would not go to countries where no work was to be had. Those already settled in what hereafter may be called non-treaty cities could be registered by Chinese consuls, so that no new immigrants could go there, and the leaving or the death of the old ones would close these cities to the Chinese altogether. Those who wished to enter China for travel or for education could be regulated by passports as the Chinese are in this country. I am speaking as a Christian; but non-Christians will surely have something to say on the subject of the residing of missionaries in non-treaty cities in China, which is at present allowed under the ‘favored nation’ clause, and to which the Chinese from their standpoint strongly and sincerely object. To meet concessions America ought to give some additional privileges, say in granting more treaty cities than an equal number, or in freeing certain Chinese goods of duty.”

CHINAMEN IN AMERICA.

IN the *Methodist Review* for September-October, the Rev. A. J. Hanson furnishes some statistics worth knowing, concerning the immigration of Chinese to this country. He states that long before restrictive measures were adopted, and even before the anti-Chinese agitation had reached its height, the immigration of Chinamen to America had practically ceased. “The influx fell from a total of 19,038 in 1875 to 7,011 in 1880; at which time the census showed an entire Chinese population of 105,679. There was a temporary increase of the immigration in 1881, owing to the prospect of early exclusion, but this represented a very large number who had gone home for a brief period, and whose business interests or preferences brought them back. The entire number that found admission to the country from 1820 to 1890 is variously set down at from 277,789 to 290,655, while from Europe during the same period we received 13,692,576, often in a single year nearly double the total that ever came from Asia. Probably at no one time in our history have we had more than 150,000 of these people on our shores, and that only in the early seventies, or late in the sixties, when there was an unusual demand for their services as common laborers. The demand becoming less pronounced the tide turned, and the decrease has been steady and persistent, until at this date probably not more than 75,000 Chinese remain in the country.”

The Chinaman in America, socially an alien in taste, ideas and modes of life, politically a nonentity and religiously a “heathen” is not a desirable citizen,

the Rev. Mr. Hanson thinks, and taking this view quite naturally does not regard the restrictions which we have enforced against them as too severe.

THE FUTURE OF INTERNATIONAL ARBITRATION.

M. FERDINAND DREYFUS is about to publish a critical and historical volume on the subject of "International Arbitration." Meanwhile the *Revue Bleue* of July 9 publishes a part of his concluding chapter, from which we in turn quote :

"Nations are moral persons. They are part of humanity. In this quality they assume reciprocal obligations which constitute international right. But they have also their individuality, their conscience, their personal existence. The nineteenth century is the century of nationalities. The French Revolution has proclaimed to nations the right to dispose of themselves. Scattered to the winds during the tempest, the idea has taken root and brought forth fruit. At the voice of France the nations which had fallen asleep woke up, and reclaimed the right of existence. Some of them have fallen into an eternal sleep again, like Poland, but most of them are up and alive. Greece has emerged from the war of 1823, Roumania from that of 1853 and the Treaty of Paris, Italy from the war of 1859, and Servia and Bulgaria from the Congress of Berlin. Germany, as a result of the Treaty of Prague and the events of 1866, has turned against France the liberty which the latter had given to the world.

"This waking up of the nations has disturbed the old States. England, for instance, is menaced by a possible political disruption. Ireland seems on the point of snatching a promise of emancipation from the conquering race; while the young colonies, with an avidity for autonomy, loosen more and more their ties to the metropolis.

"The federal democracies, on the other hand, have adopted the policy of resistance and centralization. In America, where the nations are young, the United States, sure of unity, are trying to attract into their orbit all the American republics, so as to make the most powerful federation that the world has ever known.

"But nations have their passions and their ambitions, and to satisfy these they equip fleets and maintain armies. They fight for commerce, and have their wars of tariffs; they fight for expansion and have their colonial wars; they fight for rivalries of *amour propre*, and have their wars of etiquette. To make men love peace more and war less, patient statisticians have drawn up the balance-sheet of war, and it is monstrous. Two-thirds or three-fourths of the budget of every nation pass to the work of death. But the last months of 1891 brought a series of declarations, ardently pacific, which the historian of arbitration should register as a symptom, perhaps as a hope, in any case as a hint, of the horror which war inspires, even to those who wage it. The officials who have the charge of foreign affairs seemed to have

agreed to say the same things and smile at the future. Nations, too, like sovereigns, are beginning to recognize the gravity of war. But modern patriotism is not always to be trusted. Let us, therefore, respect those who do not despair of humanity. Philosophers, poets, all march to the same end. The infinite diversity of their labors attests the persistence of their efforts and the tenacity of their faith. All preach the same crusade—those who speak in the name of Christianity and those who only believe in the law of progress. War is a malady from which we must recover, and these men are the missionaries of the future.

"Independence, freedom of action in their home affairs, territorial integrity, are points on which nations cannot arbitrate. But outside the rivalries of ambition, interest and *amour propre*, is the national honor placed under the guard of patriotism. It is a compound of traditions and hopes, the legacy of the past and the heritage of the future. It is the undivided capital which generations transmit to one another, which they have received from their fathers, and which they ought to leave intact to their children. As with men, nations have their conscience, where converge and mingle attachment to the native soil, the community of sentiments, manners and language, the notion of a superior Being who guides humanity. This compound of souvenirs, traditions and beliefs is the sentiment of one's country, at once human and divine, mysterious and sacred, for which men fight, suffer and die."

SAVING THE WEST OF IRELAND.

The Good Work of Mr. Balfour.

THE Rev. Mr. Verschoyle, in the *Fortnightly Review*, has a very interesting paper describing the result of his personal examination of the good work which Mr. Balfour has set on foot in the congested districts of the West of Ireland. He begins his narrative at the island of Aran, where the Rev. W. S. Green, "acting for the Congested Districts Board, is carrying out with great ability and success Mr. Balfour's policy of building up by State guidance and aid a permanent prosperity among the poverty-stricken people of the West."

The writer says that until this year the islanders were oblivious to the wealth of the deep-sea harvest at their very doors. Mr. Green set about teaching them. He subsidized seven boats from Arklow and a steamer from Galway to carry the fish, with the result that the Arklow boats made from \$2100 to \$1600 each, and even the local boats with their untrained crews cleared over \$300 each. In one night the boats took as many as 73,000 fish. This unexpected success will lead to good results next year. The herring fishery is also going to be tried, and the autumn mackerel fishing is to be taken in hand. Everywhere on the Connemara coast the fishing folk are looking up to the prosperity which lies within their reach. There is a new spirit of enterprise and hope breathed into their listless lives. Technical education has been begun, a school

has been opened to teach the children to mend nets, and a scheme of technical instruction has been carried out in all that relates to fishing and agriculture. When the first boats went out with Clifton men the priest had absolutely to compel six men to go to sea. They were so incompetent that when rough weather came on they had to be put under hatches to keep from being drowned. They succeeded, however, in making so much money that now there is no lack of volunteers. Mr. Verschoyle thinks that there should be a line of steamers subsidized, as in Norway, to call regularly at all the fishing ports. Harbors need to be improved, and the light railways extended. These light railways have educated the people in habits of steady work. The industry of curing the fish is being introduced by a Norwegian fish curer, and the fishermen are said to be fishing with a perseverance and a success not shown before. Ireland alone spends \$1,000,000 a year in importing what its own fishermen could well supply.

Mr. Balfour's relief works have, as a rule, been excellently well planned and executed. From the coast Mr. Verschoyle went inland. He is delighted with the improvement which has been made in the horses and live-stock. Mr. Verschoyle sums up the whole matter as follows: "I am convinced that the problem of Irish poverty can be solved without emigration, and that in due time it will be solved by the Congested Districts Board, if that board keeps true to the sound economic methods—the gradual and careful application of State aid, for which Mr. Balfour is responsible. Mr. Balfour's methods may be condemned by some as State Socialism; though, strange to say, his Land Purchase act, in common with his Congested Districts act (of which it is really a part), tends to develop a sane and strong individualism in those who are partakers of its benefits. But whatever objections may be made by carping critics, the facts are certain that he has opened up ever-increasing possibilities of prosperity and independence for the thousands of poverty-stricken dwellers in the islands and on the coast of the Western Ocean; and that, much more gradually it is true, but not less surely, he is doing the same for the peasantry of the inland country.

"That the development of peasant proprietorship by the Land Purchase acts has operated to improve the treatment of their farms by the people may be seen on a barren mountain estate, not far off the road to Foxford, where the tenants have bought under the Ashbourne act, and are rapidly improving their farms, the magic of poverty having made them industrious as well as contented."

MRS. E. R. PENNELL, writing in the *Chautauquan*, upon "Women as Cyclists," says: A dress for bicycling has been invented by a woman and is now made and sold by a London tailor. It is a combination of skirt and knickerbockers. But an ordinary skirt, rather skimpy and made so that it can be looped up by hooks and eyes and shortened when one is on the machine, answers the purpose as well.

CAN THE ENGLISH CHANNEL BE BRIDGED?

M. FLEURY begins his paper on "The Crossing of the Channel," in the *Revue des Deux Mondes* for August 15, with a historical survey of the various schemes broached for abridging the journey between Paris and London, and then proceeds to the discussion of the bridge projected by MM. Hienaut and Schneider. A dispassionate consideration of his facts will, we fancy, lead most people to the conclusion that no advantages likely to be derived from the completion of the work can justify the enormous sacrifice of life involved. The sinking of the caissons for the Forth Bridge (where the greatest depth was twenty-four metres) meant death for many men and ruined health for others—the breathing of compressed air necessitated by the conditions of the work leading to anæmia, congestion and paralysis. At thirty-five metres—to which depth many of the Channel caissons would have to be sunk—the human body would be subjected to a pressure three and a half times as great as it was made to bear. For depths beyond this (and between the Colbart sand and the French coast the bottom varies from fifty to fifty-five metres) special arrangements (which M. Fleury does not particularize) would have to be made. Besides this, the difficulty and danger of sinking the caissons at exactly the right spot in the restless Channel seas—which in the finest weather are scarcely ever without a swell—are almost incalculable.

For commercial purposes the present means of traffic, somewhat improved, are amply sufficient. M. Fleury does not think it probable that the cargoes which now leave Liverpool, Hull, Newcastle and Glasgow for the Continent would be sent *via* Channel Bridge or Tunnel, if completed, and failing this the new structure would not carry sufficient traffic to support it. As for the passenger traffic, it seems at least possible that ships of improved construction may provide a means of escape from seasickness. In answer to the question what better outlet can be found for French capital, M. Fleury says: "We have no hesitation in saying that, in our opinion, it would do well to seek employment elsewhere. For the last half century accumulated capital has been spent in developing means of transport. It may be that the time has come to turn in another direction. After increasing the means of transport, it might be a good thing to increase the material to be transported by developing the production of a country, investing money in its industries, fertilizing the sterile parts of its territory, and creating in new lands markets and centres of exchange, the approach to which should be closed by no custom house. A trading station in the Soudan, a few drops of water to the stony desert of the Camarque or the Crau, a little lime on the unproductive moorlands of Brittany will do more for the riches of France than all these great and costly wonders, which captivate the imagination, flatter national vanity and exalt the reputation of famous engineers already overloaded with laurels."

THE ASIATIC CHOLERA.

WITH the Asiatic cholera hanging in quarantine off our coast and threatening us with an invasion, it is imperative upon everyone to acquaint himself as thoroughly as may be done with the nature of this dread disease. Much authoritative information regarding the cholera is to be found in the American medical journals for the month. In the *New York Medical Journal* for September 3, Dr. S. T. Armstrong, visiting physician to the Harlem Hospital, reviews our past experience with this disease, and states the known facts and accepted beliefs about it.

THE CHOLERA IN PAST YEARS.

The first recorded appearance of Asiatic cholera in this country was in 1832. The disease, in this year, may be said to have been pandemic, or generally prevalent, says Dr. Armstrong, and "was followed by the epidemics of 1833, 1834 and 1835, in which more or less extended territories were invaded. Immunity from the disease was enjoyed until 1849, when there was another pandemic that served to originate local epidemics in 1850 on the Mississippi and Ohio rivers. In 1854 the disease was again pandemic in this country and subsequently there was no epidemic until 1866. The last epidemic was in 1873. While each of these epidemics had its *fonset origo* in India, the route that was traveled to reach America was, in the epidemics of 1832, 1849 and 1854 wholly, and in those of 1866 and 1873 partly, via Russia. So the disease in Europe is now following a path similar to that pursued in former epidemics, but with the disadvantage to threatened countries of greater and speedier facility for transmission that 'the shrinking of the earth,' as the increased means for rapid travel have been denominated, has rendered possible."

Of the nine epidemics of Asiatic cholera that have occurred in the United States, Dr. Armstrong shows that those of 1832, 1834, 1849 and 1854 entered the country by the New York quarantine and almost simultaneously via Canada or New Orleans, and that of 1866 alone through the port of New York; and on the other hand, that the disease was successfully excluded in 1855, 1856, 1867, 1873 and 1887 by all our ports. The number of deaths from cholera in New York City during four of the cholera years is given as 3,512 for 1832, 5,071 for 1849, 2,509 for 1854, and 1,210 for 1866.

THE NATURE OF THE DISEASE.

"It is now generally accepted," says Dr. Armstrong, "that Asiatic cholera is a specific, infectious disease that is caused by the comma bacillus of Koch. It is not contagious in the same sense as smallpox or typhus fever, but in the manner of its propagation is similar to typhoid fever. The premise of a specific infection leads to the conclusion of some definite method of introduction, and the disease is chiefly propagated by the contamination of water used for drinking, cooking and washing, by the contamination of articles of food and possibly by the superficial inhalation and subsequent swallowing of

dust containing the comma bacillus. This latter statement is based on the report of many cases of the disease the origin of which is explicable by no other tenable hypothesis."

Instructions of the New York Board of Health Relating to Cholera.

In the *Medical Record*, September 3, appear the instructions relating to the cholera, which have been issued by the New York Board of Health:

"Healthy persons 'catch' cholera by taking into their systems through the mouth, as in their food or drink, or from their hands, forks, plates, tumblers, clothing, etc., the germs of the disease, which are always present in the discharges from the stomach and bowels of those sick with the cholera. Thorough cooking destroys the cholera germs; therefore: Don't eat raw, uncooked articles of any kind, not even milk. Don't eat or drink to excess. Use plain, wholesome, digestible food, as indigestion and diarrhoea favor an attack of cholera. Don't drink unboiled water. Don't eat or drink articles unless they have been thoroughly and recently cooked or boiled, and the more recent and hotter they are the safer. Don't employ utensils in eating or drinking unless they have been recently put in boiling water; the more recent the safer. Don't eat or handle food or drink with unwashed hands, or receive it from the unwashed hands of others. Don't use the hands for any purpose when soiled with cholera discharges; thoroughly cleanse them at once. Personal cleanliness and cleanliness of the living and sleeping rooms and their contents, and thorough ventilation, should be rigidly enforced. Foul water-closets, sinks, Croton faucets, cellars, etc., should be avoided, and when present should be referred to the Health Board at once, and remedied."

Berlin's Cholera Regulations.

We quote from the *New York Medical Record* of the same date the set of instructions which the Ministry of Ecclesiastical, Educational and Medical Affairs in Prussia has published for the regulation of cholera in the city of Berlin, should it become epidemic there:

"1. The virus of cholera exists in the evacuations of the patients, and can be transferred with them to other persons, and can also be transported in articles of the most varied character. Such things are, for instance, linen, clothes, articles of food, water, milk, and other drinks; and if even the slightest traces of the evacuations, not perceptible to the natural senses, exist on or in them, the pestilence can spread. 2. The contagion may easily be carried, therefore, from place to place by persons who are or have been ill of cholera, or have come into contact with such, and who leave their places of residence in order, as they think, to escape the danger that threatens them there. This is all the more to be warned against, as, on the one hand, one may be already infected before departure, and, on the other, one can protect one's self better at home than when traveling, by taking the following precautions: 3. People from places where cholera exists should not be received into houses. As

soon as cases of cholera have occurred in a place, persons coming from it must be regarded as possible bearers of the germ of the disease. 4. Lead as regular a life as possible. Experience teaches that all disturbances of digestion make one specially susceptible to cholera. Be on guard, therefore, against whatever can produce such disturbances, such as excessive eating and drinking and the use of indigestible foods. Avoid especially whatever causes diarrhœa or irritates the stomach. In case of diarrhœa consult a doctor at once. 5. Eat and drink nothing coming from a house where cholera is present. Things by which the disease can easily be transmitted—for instance, fruit, vegetables, milk, butter, fresh cheese—must be avoided or taken only after being boiled. Especially the drinking of unboiled milk is to be avoided. 6. All water which may be polluted by excrement, urine, kitchen refuse or other dirt, must be most rigorously avoided. Water taken from the ground under inhabited places, or from swamps, ponds, drains or rivers, is suspicious, because impurities generally flow into them. Water which may have become polluted in any way by the excrements of cholera patients is especially dangerous. Special care must be taken that water that has been used in cleaning vessels or dirty linen does not get into or near wells, or standing and running waters. The best protection against the pollution of well-water is afforded by iron-tube wells driven straight and sufficiently deep into the earth (Abyssinian wells). 7. If it is impossible to get water that is free from suspicion, it must be boiled, and only boiled water used. 8. All this applies not to drinking water alone, but also to all water used for domestic purposes, because germs of disease can be communicated to the body by water used in cleansing kitchen utensils, cleansing and cooking food, washing, bathing, etc. In general, the belief that drinking water alone is to be regarded as the bearer of the virus, and that one is completely protected if only unexceptionable water is drunk, is urgently to be warned against. 9. Every cholera patient may become the starting point for the further spread of the disease, and it is therefore advisable to send such patients to the hospitals. If this is impossible, nobody must be permitted to approach them without necessity. 10. Never enter a house with cholera in it, except at the call of duty. Never visit places where many people are assembled in cholera times. 11. Never eat, drink or smoke in rooms in which there are cholera patients. 12. As the evacuations of cholera patients are specially dangerous, clothes and linen soiled with them must either be burned at once or disinfected in the manner stated in the instructions for disinfection published simultaneously with this. 13. The most scrupulous care must be taken that cholera evacuations do not get near wells or rivers serving as sources of water supply. 14. All articles which have come into contact with patients, and which cannot be destroyed or disinfected, must be rendered harmless by means of hot steam in special disinfecting establishments, or not used for at least six days, during which they are kept

in a dry and airy place exposed as much as possible to the sun.”

GENERAL BOOTH MEDITATING A NEW DEPARTURE.

THE *Young Man* publishes an interview with General Booth on the social duties of young men; and the interviewer, in his innocence, asks what practical help can young men give to the Darkest England scheme. General Booth's answer was to the point, "Subscribe," he said. When asked whether he could not suggest any way in which those could help who had no money, the General was quite as definite. "Let them join the Salvation Army, it has created a new industry, having something like 12,000 men and women wholly employed, besides the trade employees." But if there are any young men who wanted to help outside, they might lend a hand in a new scheme which he is promoting for dealing with drunkards without taking them away from their homes. He has already had two consultations with a view to organizing a corps of young men to look after the 25,000 men whom he thinks are going down to a drunkard's grave in London alone; and the General was quite sure he could not use any young men unless they were soundly saved, yet he has some helpers in the farm colonies who are not Salvationists.

"Why then," said the interviewer, "do you not try to save them?"

The General replied, "We do very little for that class of people, they are supposed to be saved in castes, or we shall have to rise up and do something for the higher class of society. Still, I think we have gone too largely on the notion that people must come down to our platform, and understand our jerseys and amens and hallelujahs and drums and cross bearing, and if they don't we can have nothing to do with them."

"Then you are coming to regard that as a mistake?"

"Yes, I rather think it is. But whether you can do any other—that's the difficulty. After all, it is the apostolic plan—'not many rich, not many mighty, not many learned.' The early Christians were looked upon as the scum and off-scouring of the earth, but except the people came down to their level and went in with them no good was ever done. Still, my own feeling is that we might go up and get the more educated and refined people what we call 'saved;' then they would be able to understand and come down and enjoy the freedom which is realized by the poorer people.

"But mind you," he added, "I don't believe in salvation by education, or gymnastics, or picnics. A man must get saved before he can move in the right direction."

MR. BENJAMIN KIDD, in *Longman* for September, gives an interesting account of the famous family of the Aphides, which postpones its extinction by reverting to reproduction by budding with such success that the tenth brood of a single aphid would weigh as much as the whole population of China.

SHOULD CLERGYMEN GO INTO TRADE?

ONE of the best articles in the *National Review* is Mr. C. N. Barham's, entitled "Should Clergymen Take to Trade?" Mr. Barham's paper is very carefully drawn up, and contains many facts which are only vaguely known by the general public. He says that the majority of the clergy of England, both established and non-established, are miserably poor. There are no fewer than 12,000 curates in the Church of England; 2,000 benefices are worth less than \$500 a year, and 5,000 worth less than \$750. Last year 750 curates were ordained where only 470 livings were vacant, and only 65 fresh benefices were formed.

Among the Congregationalists there is only one county in England, that of Lancashire, where the minimum stipend of a minister is \$750. In Warwickshire it drops to \$300; whereas in Wales it is even lower. Among the Baptists things are even worse. Many ministers are receiving less than \$5 a week.

With these facts before him, Mr. Barham makes bold to say that as Jesus was a carpenter, the apostles were fisherman, Paul a tent maker, and the mediæval clergy were carpenters, masons, bridge builders, mechanics, architects, inventors, printers, etc., there is no reason why ministers of religion should be compelled to refrain from business.

Mr. Barham refers to the time when a country parson in England was the best rider, the best judge of horses and the most skillful dog doctor in his community; but he says: "The times have changed. Now the clergy are more pious, some of them are more learned; but, being drawn from a humbler class of society, they are less refined. Why should the new order be forbidden to follow their commercial instincts, or be prevented from reviving, with modifications, the callings which were open to their remote ancestors, the apostles, or even to their immediate predecessors, the younger brothers of lords and squires?"

"The impecuniosity of the clergy is leading to evil results. It is not at all unusual to hear of some clerical bankrupt; clergymen's compositions with creditors have become common."

Mr. Barham points out that hundreds of English clergymen are now traders because they hold shares in various commercial companies; others are allowed to sell books and denominational literature. Why should they not have an enlargement of this liberty? Many of them, indeed, have already taken French leave despite the denominational Mrs. Grundy: "A distinguished dissenting doctor of divinity was once the owner of a milk walk in North London. Something more than rumor declares that the late Mr. Spurgeon once engaged in a similar occupation—not for his own benefit, but, with that singular charity which characterized all his actions—to help two struggling women. Another minister, also a Non-conformist, is, or was until very recently, the proprietor of a cutlery establishment in one of the most important cities in the North of England. There is a clergyman who is proprietor of a public house, which, it is only right to mention, came to him through inheritance. This reminds us of the parsons

of the sixteenth and seventeenth centuries, who not infrequently were keepers of ale houses. Some of our pastors and teachers are sleeping partners with the owners of glove shops, linen drapery establishments, grocery stores, wine merchants' businesses and other money-making concerns."

An old-fashioned Yorkshire Baptist minister preached every Sunday for fifty years and cobbled shoes throughout the week. Another, in the Eastern counties, is a her alist. A minister, not far from London, carries on a trade of a florist, growing fine roses and other things for Covent Garden. He is now comparatively wealthy. Another active pastor was for many years partner in an iron bedstead business.

These pioneers are, however, thrown into the shade by the clergyman in the Midland counties, who supplements his salary by driving a flourishing horse-dealing business: "He regularly visits the Irish and the Welsh horse fairs in behalf of his customers, and there picks up those animals which will best suit their interests and his own. In doing this he does not allow his more distinctive work to suffer; he occupies his pulpit and visits at the bedside of the dying. While faithfully discharging his sacred duties, he enjoys the satisfaction of knowing that he honorably employs his talents to prevent his friends and patrons from being victims of unprincipled horse copers."

Mr. Barham concludes that unless the clergy are allowed a free hand many of our rural districts must revert to heathenism.

THE editor of *The Missionary Review of the World* furnishes the following biographical sketch of the Rev. B. W. Chidlaw, D.D., of Ohio, who died July 13, 1892: "This remarkable Welshman was born July 14, 1811, and died on his eighty-second birthday, in his native land, where he was visiting. He was a singular example of usefulness. Brought by his parents to this country seventy years ago, he studied in a log cabin school in Radnor, Ohio, a copy of Webster's spelling book, which he had bought for four pounds of butter; was converted and joined a Presbyterian church at eighteen years, and the same year was graduated at Miami University. He studied theology at Oxford, Ohio, and was ordained at twenty-five, and a year later entered on the long period of service as missionary of the American Sunday School Union, whose representative he was at the Robert Raikes centenary in 1880. He has literally founded thousands of Sunday schools in remote districts, and given the first impulse to new churches. For twelve years he was a Commissioner of the Ohio Reform School for Boys at Lancaster, and during the war did much service in connection with the Christian Commission. He was a devotedly pious man and a very effective speaker."

MISS ZIMMERN'S series of papers on "Statesmen of the Day in Europe," in the *Leisure Hour*, is devoted this month to Germany, and is illustrated with the portraits of Richter, Caprivi, Rickert and Windhorst.

CREED-MAKING IN JAPAN.

ACCORDING to the *Missionary Review* for September, the native Presbyterian Christians in Japan have taken the matter of creed revision into their own hands. The synod of the Church of Christ in Japan, composed of the various Presbyterian bodies, has refused to adopt the Westminster Confession of Faith, or any other similar doctrine; they have fallen back upon the Apostles' Creed:

"In the Confession of Faith will be observed a significant silence upon the subject of retribution and of the future state. It reads thus: 'The Lord Jesus Christ, whom we worship as God, the only begotten Son of God, for us men and for our salvation was made man and suffered. He offered up a perfect sacrifice for sin; and all who are one with Him by faith are pardoned and accounted righteous, and faith in Him working by love purifies the heart.'

"The Holy Ghost, who, with the Father and the Son, is worshiped and glorified, reveals Jesus Christ to the soul, and without His grace, man, being dead in sins, cannot enter the kingdom of God. By Him the prophets and the apostles and holy men of old were inspired, and He, speaking in the Scriptures of the Old and New Testaments, is the supreme and infallible judge in all things pertaining unto faith and living.

"From these Holy Scriptures the ancient Church of Christ drew its Confession; hence we, holding the faith once delivered to the saints, join in that Confession with praise and thanksgiving."

ISLAM AS A SUBSTITUTE FOR CHRISTIANITY.

THE leading article of the *Arena* for the month is one by Ibn Ishak, on the future of Islam.

The writer is shocked at the skepticism and immorality which prevail in Christian countries. To him Christianity seems a failure, and unless something can be done to bring back the nations to an unquestioning belief in an over-ruling God, he sees little hope for man. He thinks that the general adoption of Islam would accomplish this end. Its effect, according to the writer, would be four-fold.

First. It would recover the fast disappearing belief in God. "Islam does not believe in the possibility of society holding together without a national recognition of the Almighty Governor of the Universe." All education starts with this controlling idea: "There are many kinds of 'ilm' or 'knowledge,' but 'ilm' in the abstract is 'to know' God."

Second. The moral nature of man would be bettered by the restraining influence of this religion. It enforces by law habits of temperance, and what is politely called the "social evil" is remedied by a candid recognition of the nature of man. Islam does not tolerate prostitution, but neither does it attempt to legislate the natural instincts out of man.

Third. It would introduce a broader and more beneficial social system.

Fourth. It would establish a common bond of

brotherhood, for it recognizes all men as children of the one Father, God.

These are the arguments by which Ibn Ishak would persuade all people to embrace the religion of the Prophet.

THE GOETHE FAMILY.

UNDER the title "Bourgeois d'Autrefois," M. Arvède Barine contributes a very readable paper to the *Revue des Deux Mondes* for July 1. The immortal portraits in *Dichtung und Wahrheit* have long ago made both Goethe's parents familiar figures to the reading world; but these have recently been supplemented by the private letters and other documents, published since the death of the poet's grandson, Walter von Goethe, in 1885. Several volumes have already appeared, but the "Weimar Cupboard" (whose contents, bequeathed by will to the Grand Duchess, are being edited by a committee of specialists) seems far from being exhausted as yet. The principal charm of the collection is found in the letters of the "Frau Rath," Goethe's mother. Of all the figures on whom fresh light has been thrown by this publication none appears to such advantage as she. Goethe himself certainly has not gained. "We may," says our author, "hold the theory that egotism is one of the foremost rights of genius, ingratitude one of its foremost duties, and that this is necessary that it may not be diverted from the debt it owes humanity. There is something to be said for it—so long as we insist in calling a spade a spade and do not try to cheat ourselves." Wieland, who always defended Goethe, once wrote of him to a friend: "With all his selfishness there is so little harm in him—or, rather, he is such a good fellow at bottom, and he has so powerful a mind, so fertile a talent, that I cannot help loving him." We all love him within such limits as these: we are grateful to him for having given us masterpieces of art, and not having prostituted his genius to the service of evil; but we really must not be expected to go further and extol Goethe's delicacy and sensitiveness of feeling. For the rest, more than one historian has given up the task of defending him—even in Germany!

Poor Frau Rath, light-hearted and joyous as she was by nature, suffered cruelly under the thirty-three years' separation from her son. She had always stood between him and his dry, pedantic father—she encouraged his literary gift in every possible way, and the more obstinately the Hofrath was determined to tie the boy down to the iron plan of life he had sketched out for him the more she bent all her wits to devise a means of escape. It was she who won over the stern old man to consent to his son's passing "a few weeks" at the court of Weimar—the few weeks which extended into a lifetime. How she was rewarded for all this her letters show. Goethe paid one visit to Frankfort, in company with the duke, in 1779. After that, in spite of his mother's entreaties, he always found some excuse for avoiding his native

town. She did not see him till 1792, when he passed through on his way to France.

Yet she could say of him that he had never caused her a sorrow. She never complained—one or two sentences only in her later letters show that she felt the loneliness of her old age. She died in 1808, nursed by Beltiner Brentano, who knew better how to appreciate her than the son she adored. Goethe—by her own wish—was not informed till all was over, and then he bore up with great calmness. "We may console ourselves by the thought that she had a happy old age," he writes. Apparently, he found the thought convenient.

Less painful to dwell on is a side of Goethe's life which has not hitherto been treated with the attention it deserves. He represents the coming to the front of the middle classes. Old Goethe, the worthy Frankfort burgher, kept his place and wanted to see the nobility keep theirs. He had nothing—and wished to have nothing—to do with kings and courts, and Goethe's relations with Weimar made him uneasy. He felt that his son was lowering himself into a servile hanger-on of princes, and did not live long enough to appreciate the change in the times. The real note of *Werther*, M. Barine thinks, is not so much Werther's unhappy love as the false position of the *bourgeois* young man in the midst of a society which half admires, half despises him. Goethe felt this position keenly at first, though he afterward grew out of it.

GERMAN FAUSTS SINCE GOETHE.

IN the September part of *Westermann's Illustrierte Deutsche Monatshefte*, there is a paper by Herr Ludwig Geiger, on the German Faust Poems since 1808.

After referring to the productions of J. J. Schink (published 1782-1804), and of Chamisso (1803), Herr Geiger draws attention to the political Faust of Julius von Voss (1823). Here Faust is represented as being constantly pursued by a noble woman and rescued from many dangers—a foreshadowing of the foundation of a free state. Then there is the religious Faust of Karl von Holtei, "The Magician of the North" (1829), the production of which was prolonged to five hours' duration, owing to the failure of the machinery and other untoward circumstances, so that the only person who went away satisfied was the confectioner, who in consequence of the delay did a splendid business, and rewarded the author with an immense cake and the more encouraging words: "Write such pieces often; they are excellent."

Music played a part in Holtei's drama, but in Spohr's opera (1820), for which J. C. Bernard wrote the libretto, it naturally took the chief part. With the exception of Spohr's opera, none of the pieces referred to ever got beyond Berlin. A much greater success was achieved by Klingemann (1817), who wrote his poem with due regard to the needs and requirements of the stage. His work, which was heard at Berlin and elsewhere, is distinguished from the others in that the devil does not play an all-important part

in it. Instead, he is a stranger who only reveals himself as the devil at the end of the piece.

Grillparzer left some Faust fragments, but we have complete poems by Heine, Grabbe and Lenau. In Grabbe's conception "Don Juan and Faust" (1827), Don Juan is depicted with unmistakable sympathy. He represents the present, however, while Faust is the representative of the eternal. Lenau had much of the Faust nature. He had studied philosophy, law, medicine, etc., and in his Faust (1835-37), sought to portray his own mistakes, aspirations and loves.

As a Faust poet Heine is not to be taken too seriously. His "Dance Poem" (1851) was written at the instigation of Lumley, an Englishman, as the text or basis of a grand ballet. When he boasts of following the old legend closely and blames the faithless treatment of it by Goethe he is only mocking in true Heine vein either his patron or the earlier adapters of the legend.

Heine's Faust exorcises the devil, but receives as a companion a she-devil, Mephistophela. Through her he becomes acquainted first with the picture, then with the person, of the beautiful duchess, and is taken to her court. There he performs great charms, and makes love to the duchess, whom he recognizes as a charmer by a gold shoe, and on one occasion by her neck. He is pursued by the duke, and though he is in love with Mephistophela, hates his rival no less, but cleverly manages to avoid the snares laid for him. In order to give himself wholly to the duchess, he goes with her to the mountain on the Witches' Sabbath, but, notwithstanding all the Witches' arts, returns in sadness, and expresses his aversion to his first beloved and his longing for antique beauty. But this, again, he manages to repress, for he has set eyes on Helena. This new satisfaction, however, does not last; for while he rules with Helena on the throne of the antique beautiful, the beauty of the duchess enters his kingdom, and being thrust back by Faust, she changes everything into ruins, and Helena into a skeleton. Faust in a fury stabs the duchess, and flies with Mephistophela to the upper world again. There, instead of delighting the great with his charms, he practices quackery on the smaller fry. In this capacity he allures old and young at a shooting festival, but at last he is captured by the grace and modesty of a young girl, asks for her hand, and is accepted. Just as he is joining his marriage procession, he receives a command from Mephistophela to follow her, but he disobeys. Then all is veiled in darkness; the people rush to the church for refuge from the darkness and a sudden thunderstorm. But Faust is held back by a black hand, and is obliged to look on as the earth opens and vomits all kinds of monsters and hobgoblins, while Mephistophela, changed into a snake, strangles him in horrible embrace.

THE *Idler* Series, in which authors give an account of their first book, is devoted this month to Mr. Grant Allen. Mr. Allen's first book was "Philosophical Æsthetics," which was published in 1877. It cost \$600 to publish, and he sold three hundred copies and made a net loss of \$200 to \$250 on the transaction.

A FRENCH TRIBUTE TO MRS. BROWNING.

M. JOSEPH TEXTE contributes to the *Revue des Deux Mondes* for August 15 a very interesting paper under the title "Aurora Leigh." The recent translation of "Aurora Leigh" by M. Albert Savine, though sufficiently inadequate, forms his text. This poem has, he says, found readers during the last two or three years, partly because of its being so little known before in France, and partly because "the work is one to which one can return again and again, and so rich in *opercus*, in acute and vigorous views of life, in beauties of all sorts, that one may, without presumption, hope to glean in it—almost *ad infinitum*."

THE EXPRESSION OF THE MODERN SPIRIT.

"But the principal reason is that, among foreign poets, there is not one who is nearer to us and our preoccupations of the moment than this Elizabeth Browning, of whom one may say, without hesitation, that she is the most philosophical poet of our epoch, while at the same time she possesses talent of the most exquisite and rarest kind. Indeed, when one reads the poem again it seems to be of yesterday, so much are questions looked at from a present-day standpoint—so much is the work, taking it as a whole, a confession of this century—so entirely is it a revelation of this 'generous, heroic, passionate' soul, as she was once called by M. Taine, this soul is 'wholly modern in her education, her pride, her audacity, by the continuous vibration of the emotional chords of her nature.' Yes, this is certainly the work into which she has put, as she says on the first page, 'her highest convictions upon life and art.' It is a philosophic and æsthetic testament. There is no book with more actuality about it. If there exists anywhere a gospel of that modern Christianity which is promised us, it is here. This, *par excellence*, is the book of the 'seekers of the future,' and it has only one fault for us in France—it is written in English and in verse. But, most certainly, there is no work which is, in a higher degree, both the self-revelation of a great soul and the poem of a century. Apart from a few details, which are purely English, 'Aurora Leigh' is the poetic evangel of contemporary idealism.

THE TRUE POSITION OF THE INDIVIDUAL.

"Romney Leigh, in his earlier phase, represents the movement which originated the wholesale and somewhat mechanical 'humanitarian' schemes of Owen, Fourier, Cabet and others. One of Mrs. Browning's merits—profound analyst, that she was—is to have placed in a vivid light the conventional, arbitrary, and, in short, unjustifiable element in the 'worship of humanity.' . . . Life is too short to cure the evils of generations. Granted; but the effort made now adds to the actual sum of good in existence, and will bear fruit in some future age. Perhaps so, but it would have been a poor consolation to the race of mastodons to know, before becoming fossil, that their place in life would soon be taken by elephants; they were not elephants, but mastodons, and I, who am a man like the men now living, am not like those who

will perhaps exist one day—I pity the woes of man in the agony of the present.

"This revolt of personality and the inner sense—we cannot but think so with the poet—is not egotism; it is the lawful vindication of the rights of the individual, unduly sacrificed to those of the race. What! to count our personality for nothing, sacrifice our desires, annihilate our will, abase all our thoughts and feelings before the sentiment of the universal in order to secure a problematic happiness to certain human beings who, one day, will live on this planet—if it is then in existence, which is, to say the least, uncertain—with a life as provisional and precarious as our own—is that all the ideal proposed to me? Why should I sacrifice what I am and have to unsubstantial phantoms who, in their turn, if I am to believe you, will have nothing better to do than sacrifice themselves in their turn?

ELIZABETH BROWNING'S RELIGION.

"After all, the main fault of these humanitarian schemes is their materialism. Man does not live by bread alone. The great enemy of these times is the crushing out of the mind by the senses. . . . 'The earth is full of heaven.' But we walk amid these marvels without perceiving them. Of that troop of strolling actors whom we call the human race, passing along their road, pushing their car, and humming their songs, we scarcely find here and there one who will sit down by the wayside, take off his sandals, and remain to dream and admire for a minute or two. The rest will be gathering blackberries on the hedges and playing foolish tricks by smearing each other's faces. What Elizabeth Browning proposes to us, in place of this gross matter-worship, is a religion ancient enough and a faith as old as the world; but renewed, vivified, by an inspiring breath—animated, and, as it were, transfigured by moral experience and the authority of a life of effort.

"A very poetic and noble symbolism, an ardent idealism, an audacity at first disconcerting, afterward infinitely fascinating in its most daring flights; lastly, a very modern Christianity, without, as M. Taine puts it, 'anything official about it'—this, I think, is the foundation of Mrs. Browning's religion.

LOVE AND WORK.

"The end of the poem is quite unique. Never, we doubt not, in any language, has love been expressed in more passionate yet purer accents, more burning and yet more chaste. No hymn was ever yet so caressing and so austere, so fervent and so reverent. It is no use trying to translate the untranslatable. Only such a one—we may say it, since she has said it herself—could write these pages, who, in the midst of life, at the hour when the shadows begin to lengthen, has been, like Elizabeth Browning, saved by love. But, if a satisfied and necessarily exceptional passion is not a law of our nature, faith and hope are laws of the moral world and the first of virtues. The poem ends with a cry of hope and an act of faith. . . . What both Romney and Aurora see is the Jerusalem

of the future—that which will arise triumphant from human effort. But if this faith once lost has returned to them it is at the cost of a hard experience. . . . Truth is the price of an individual effort which we must make for ourselves, without reckoning on the help of others. It is a mistake—even a fault—to say that we cannot do it, for we have in ourselves forces a thousand times greater than we suspect, but instead of concentrating them we waste them foolishly and cast them to the winds. This is why we do not believe in a future of truth and justice, although this future (and the thought is a terrifying one) depends on us. To believe it, we must have begun to realize it in our hearts.

“Assuredly, this is not a great discovery; but if the idealism of the poet of ‘Aurora Leigh’ is not new in its essential traits—and, to say the truth, it would be strange if it were so—it seems to me, nevertheless, that it has the merit of clearly stating the social problem of the time, and that on its true ground, which is the awakening of the moral consciousness. There are epochs when there is a certain novelty in reminding men that the civilization is an affair of the soul.”

CAVE-DWELLERS OF THE RIVIERA.

SIGNOR ARTURO ISSEL contributes to the *Nuova Antologia* (Rome), for July 16, a paper entitled “The Ancient Ligurians,” in which he sums up the results of recent excavations on the Riviera. He thinks the Ligurians of Roman times were the descendants of the cave-dwellers whose bones, flint weapons, pottery and other relics have been discovered at Finale and Verezzi, and that the latter belonged to the brachycephalic race, which inhabited Europe before the Aryans entered it from the East, and of which the Basques are probably a relic. He also thinks that the race had spread into (or from) the lands south of the Mediterranean, and that traces of it might probably even now be discovered among the Hamitic peoples of North Africa, *i. e.*, the Kabyles, Tuaregs and others.

The Romans (as we know from various authors) recognized the Ligurians as an entirely different race from the Celts, with whom, however, they were intermingled in some districts. They are described as short of stature and thin, wearing long beards and hair, and for this reason known as *comati*. They clothed themselves in sheepskins and the fur of wild animals.

In fact, the Neolithic skeletons found in the caves of the Riviera are all of small size. A very curious fact is the occurrence among the finds of objects which have elsewhere been used only by the extinct Guanches of the Canary Islands, and the Indians of Mexico and Central America at the time of the Spanish Conquest. These are the so-called *pintaderas*—seals or stamps of baked clay—by means of which devices in various colors were imprinted on the skin. The analogy of the Guanches strengthens the probability of Libyan relationship, as the Canaries are supposed to

have been peopled by Hamitic settlers from the African mainland. Some strange figures cut on the rocks near the Col di Tenda have been found to resemble those attributed to the Guanches in the Canary Islands, and also others which have been discovered in the province of Sus, in Morocco. Moreover, the shapes and ornamentation of the Ligurian pottery also occur among the Berbers.

The cave-dwellers buried their dead in shallow graves, or sometimes even left them lying on the surface of the ground. Slabs of stone were set up like the sides of a coffin, to guard the corpse (which was laid on its left side, with the left hand under the head, and the knees doubled up), but only at the head-end, as far as the waist. Men had a stone axe buried with them, and also a pot full of powdered red hematite, which appears to have been used in ornamenting the person—as some African tribes paint themselves with powdered camwood. Some children’s graves have been found containing colored pebbles and shells—probably what the little one had played with in life.

The earth which covers the graves was found to be full of the shells of edible mollusks, and the bones of ruminants, mostly broken, and showing signs of cooking; these are the remains of the funeral feast, the fire for whose preparation was kindled on the lower end of the grave, just over the deceased’s legs. The lower limbs of some of the skeletons presented a scorched appearance, which is thus accounted for.

It seems certain that the Ligurian cave-dwellers were not cannibals. The uniformity observed in the construction of the graves, the choice of the implements placed in them, and the discovery of two idols, are manifest proofs that they professed the worship of the dead, and practiced mysterious rites, probably very similar to those celebrated by modern savages—that, in short, they had risen to the idea of a future state.

MORE OF LITERARY PARIS.

MR. THEODORE CHILD has in the September *Harper’s* the second paper of his altogether admirable discussion of “Literary Paris,” the first installment of which we quoted from last month. He begins with the devotees of the religion of egotism, of the *culture du moi*, represented by Bourget, Lemaitre, France and Barrès, “the psychologists, the symbolists, and all who have been inoculated with the subtle and amusing poison of Renanism.” “The basis of their wit is universal irreverence, their philosophy is absolute Nihilism; their *blague* respects nothing, neither grief nor love, neither virtue nor the grave; and their elixir of laughter—a laughter that is never ingenuous and truly hearty—seems to be extracted in most cases from the application to particular cases of Mr. Renan’s pet idea that the world is, perhaps, after all not a very serious thing.”

Those who have been interested in the recent ethico-religious utterances of M. Melchior Vogüé will be reassured to find so cool a critic as Mr. Child

finding for him words of the highest praise. He calls him the great champion of action in the combat against pessimism, and an opener of unexplored paths of intellectual and moral edification.

Like Chateaubriand, whom he resembles in the dignity and splendor of his style, M. de Vogüé loves travel; he goes to the East and to the West for colors and ideas; his interests are as wide as the universe; his ambition, to use a word of his own, is to be "global." A brilliant and striking writer, M. de Vogüé possesses in a very high degree the sense of life and the sense of art—a most rare combination in literature.

RUSSIAN SYMPATHY FOR AMERICA.

MR. HORACE F. CUTTER contributes an article to the *Overland Monthly*, in which he shows how from the beginning of our government Russia has been our unfaltering friend.

In the war for independence the Empress Catherine eagerly offered herself as mediator between the British Government and the colonies. In 1813 the Emperor Alexander offered himself as mediator between the now independent Government and its old mistress.

But the most signal proofs of Russia's friendship were given during the Civil War when Russian war vessels were anchored in the New York and San Francisco harbors under secret orders from their government to place themselves at the disposal of the United States Government in case of the recognition of the Confederacy by France and England.

This statement is made on the strength of the word of Governor Curtin, of Pennsylvania, who was after the war appointed minister to Russia, and Mr. Curtin adds that the knowledge which the French and English governments had of Russia's attitude prevented them from recognizing the Confederate government.

Mr. Cutter closes his article with an extended quotation from a letter written by Bayard Taylor, then Chargé d'Affaires at St. Petersburg, to Secretary Seward, in which Mr. Taylor gives an account of an interview which he had with Prince Gortschakoff. We append an extract from this letter:

" 'You know the sentiment of Russia,' the Prince exclaimed, with great eagerness. 'We desire above all things the maintenance of the American Union as one indivisible nation. We cannot take any part more than we have done. We have no hostility to the Southern people. Russia has declared her position, and will maintain it. There will be proposals for intervention. We believe that intervention could do no good at present. Proposals will be made to Russia to join in some plan of interference. She will refuse any invitation of the kind. Russia will occupy the same ground as at the beginning of the struggle. You may rely upon it, she will not change. But we entreat you to settle the difficulty. I cannot express to you how profound an anxiety we feel—how serious are our fears.' "

THE ROMANCE OF A CONSPIRATOR.

THE Vicomte de Vogüé contributes to the *Revue des Deux Mondes* for August 15 a very readable review of Hyde de Neuville's "Memoirs." The man was a born conspirator, and his escapes were as numerous and almost as wonderful as Monte Cristo's. The whole book is, as M. de Vogüé says, "*du meilleur Ambigu*;" and every one of us, as he further remarks, has a fit of *Ambigu* now and then. George Cadondel once made a remark which might serve as a motto to the volume. He was crossing the channel in an open boat, with Hyde de Neuville, and, when the latter was fast asleep, wrapped in his cloak, suddenly awakened him. "Hyde de Neuville," said he, in his deep voice, "do you know what advice we ought to give the King, if he is restored?" "No," said Hyde. "Why," returned Cadondel, "we ought to tell him that he would do well to shoot us both, for we never shall be anything but conspirators. We have formed the habit now."

Guillaume Hydi de Neuville was descended from an English family, settled in the Nivornais, and was born in 1776, at Charité-sur-Loire. He came to Paris before he was sixteen, and on his first visit to the opera knocked off the hat of Ducos, who had failed to uncover before the French Queen. In the scuffle that ensued, he narrowly escaped with his life. Another time, seeing the Queen's carriage surrounded by a crowd of roughs, he again risked his life by going to the assistance of an officer who was bringing her a glass of water. Marie Antoinette noticed the boy always on the watch when she passed, and said one day to Madame Elizabeth, as they were leaving the Jardin des Plantes, "*Viola un bon jeune homme!*" Hyde overheard the words, and they heightened his enthusiastic royalism to fever heat and bound him forever to the service of beauty and misfortune.

He relinquished his studies, and had his name entered as one of the gentlemen who formed a volunteer guard at the Tuilleries. Recalled to his home in the Nivornais, he only returned to Paris on the eve of the King's execution. He made a vain opportunity to save him by appealing to the clemency of Coffinhal, in a midnight interview, when he found the philanthropic patriot in bed, obtaining a half promise which led to nothing.

When Marie Antoinette was in the Temple, he was constantly conspiring to compass her escape—equally in vain, and so far compromised himself, that a friend of his family, Mme. de Congy, locked him up in a garret to save his life. In such retreats, and under innumerable aliases, he contrived to escape pursuit up to 1805. Sometimes he got into serious scrapes through forgetting which name he was passing under; but at critical moments, he was always saved by a *dea ex machina*—by a woman, frequently a perfect stranger. His youth, his good looks, and personal fascination opened all hearts to him.

It would lead us too far to follow him through his further adventures. Among the most exciting are his attempted rescue of Commodore Sir Sydney Smith and M. de Tromelin from the Temple, and his escape from

the gendarmes in 1800, when hidden in the house of a perfumer in the Rue Fan Saint German, where, while sitting at breakfast he heard the news of his own execution cried about the streets. M. de Vogüé concludes his review by saying: "The stormy life of Guillaume Hyde de Neuville was, intensely, a simple and beautiful one. There may have been more magnificent careers in that age when the harvest of men stood high—there was none more upright. Consecrated to a principle, his life was a perpetual act of devotion—which is rare—to princes who gave very little in return—which is not so rare. A conspirator on occasion, perhaps by vocation, he was never so far one as to descend to the baseness of assassination; the imperial police slandered him when they mixed up his name with the affair of the infernal machine.

THE PERSONNEL OF AN ENGLISH NEWSPAPER.

HOWEVER much English newspapers may differ in tone from American, it does not appear from Mr. Edmund Vincent's account of the London *Times* in the *English Illustrated Magazine* that their personnel is greatly different from that of our own. In the following paragraphs Mr. Vincent draws a picture of the various members of the *Times* staff at their work:

"Accompany me, then, at six in the evening to the door in Printing House Square. Remain without in the flesh, but let your disembodied spirit pass through the folding doors; the men behind the railings on the right will not notice your ghost, but you may notice that they sit at the receipt of telegrams and of envelopes, and that no man bearing the printed envelope of the paper goes away unrewarded. You will notice, too, that the night printers are dropping in one after another, for the great engine is awakening out of her half sleep of the day.

THE COMPOSING ROOM.

"Glide unsubstantially to the right and you shall pass through a lofty room, a wilderness of iron tables and type, to the foot of a spiral staircase of iron, ascending which you shall become aware of a warm smell of oil and of a rattling, crashing sound from a composing room. Look down its length, and the impression produced on the eye is that of an endless series of frames, hybrids between a Venetian blind and an Æolian harp, each attended by its satellites, who work under a strong light concentrated upon the work. Before each man lies his slip of 'copy;' legible or illegible, he must make the best of it; some set by hand, others by machine, played upon with keys like a piano, capable of setting nearly 300 lines an hour, whereas 50 lines is the limit of the best hand labor.

"Be content with a glance here. Know that each man has his work allotted to him by the head printer, that many of them grow to an honorable old age, that all receive pay at rates higher than those earned by any men of their class in London, and that there is not a Trade Unionist among them.

THE EDITOR'S SANCTUM.

"Passing through a green-baize door into a long corridor, remembering that even to the spirits the room of the editor of the *Times* remains closed, and that you are in another man's house investigating the pænetralia of his business. Other rooms in this corridor are those which used to be occupied by Mr. Macdonald and are occupied now by Mr. Godfrey Walter, and the drawing room in which visitors are received, over the mantel piece of which hung, until the other day, a portrait of somebody in antediluvian jack boots whom I always assumed, without any justification, to be Crabb Robinson. There are three writing rooms on this floor, each having a good desk and good chairs, a supply of pale blue slips of paper, and a strong electric reading lamp. There is also number 7, the room in which an army of sub-editors spend laborious nights over oceans of manuscript, much of which, to the infinite annoyance of everybody concerned, is faintly penciled on to greased paper and called 'flimsy.' In spite of the monotony of their work the sub-editors of the *Times* as a body are the cheeriest and the most helpful men in the world, nor do they think it absolutely a matter of conscience to deprive an article of all point and all epigram.

THE REPORTERS.

"Up stairs, on another corridor, are the reporters', the leader-writers' rooms and the foreign room. The leader-writers are wreathed in mystery. I cannot say who they are, how much they earn, how they do their work, how many of them there are, for the maxim of the *Times* office is that of the sage, with variations, 'Call no man a leader-writer until he is dead.' The name of the reporters is legion. The foreign room is one of the busiest in the house. The wires from the Continent click without ceasing; the messages which come require the full attention of four trained men under a chief. It is a mistake, by the way, to call this gentleman, accomplished and distinguished as he is, an editor. The *Times* has but one editor, and in his department he is absolute and supreme.

"We are now in a position to give a rough sketch of the men concerned in producing, choosing and arranging the matter, apart from advertisements, which appears in the *Times*.

THE MEN WHO MAKE THE "TIMES."

"They are the editor, an assistant editor, foreign director, and the so-called City editor, though here again the word 'editor' is to my mind misapplied. There are x leader-writers, there are six or seven sub-editors, and midway between them and the printers are the readers. There are also x special correspondents, y reporters, assigned to districts and peripatetic, and z semi-attached reporters. In the United Kingdom there is a local correspondent of every town of importance; in every country in the world, almost, is an accomplished gentleman entitled to call himself 'our own correspondent.' Of these M. de Blowitz is the type and ideal. Even now I have omitted the full staff of reporters in the House of Commons, who

enable the *Times* to give practically the only competent report of debates published daily in England, and the law reporters, barristers all, including men appointed to each circuit, at the head of whom is the most indefatigable and the most humorous of men, the favorite of bench and bar, who has always a kindly word for a struggling junior and a merry anecdote for the jaded leader.

"Still there remain the multitudinous reviewers, the dramatic critic, the musical critic, the art critic, the gentleman who makes the turf his study, the yachtsman, the rowing critic, the observer of cricket. The names of gentlemen of this class are indeed legion, they are as numerous as the pursuits of men.

"The management of this great organization is conducted by Mr. Arthur F. Walter, with the invaluable assistance of Mr. Moberly Bell. The printing department is in the hands of Mr. Godfrey Walter.

"All the Walter presses have been made in the engineering room at the basement of Printing House Square. Here, too, is the type foundry, for at the *Times* office a large proportion of type is melted up and recast. Finally the composing machines, Kastenbein's with so many improvements that the original idea is almost beyond recognition, have received much attention, with excellent results. At one time it was customary to connect the operators at some of these machines by telephone with persons dictating from the House of Commons, but the practice has been practically discontinued, partly because the House of Commons has become an 'early to bed' institution, partly because the strain on the operator was found to be almost intolerable."

EDUCATION IN THE SOUTH.

MR. CHARLES W. DABNEY, Jr., tells in the *Cosmopolitan* of the extraordinary change and advance in Southern educational methods since the war, how the veterans of the great conflict beat their swords into pens and set resolutely to train their young men into the generation which was to make a new South. From General Lee down, all along the line this duty was acknowledged with marvelous uniformity and the list of post bellum schools and colleges which were manned by these men, experienced in that great study—life, makes a goodly array. Mr. Dabney's reminiscences of the very "homemade" educational apparatus, which was the best accorded to many of these institutions, are very amusing, but the essentials were there—the teacher and the material to teach, and the results of these backwoods schools have done the South no dishonor.

But the courses in the colleges of these days were almost purely literary. The necessity for the "ologies" and technical education was not thought of. With the opening up of Southern mines and building up of Southern industries, a demand was created for an entirely different man, from the youth who used to take his "A.B." degree in Latin and Greek and mental philosophy, teach a few years, and then study for the ministry or the bar. To supply

chemists and civil engineers a new system was needed and arose. It is only since 1875 that any great advance in industrial education was made in the South, but in these last 17 years there has been a deal accomplished. To be sure, the University of Virginia had a chemical laboratory and some industrial courses as early as 1869, but it was six years later when the first purely technical school was erected in Virginia. Mr. John Miller, the founder, left what was thought to be about \$1,000,000 to establish a "manual labor," school in his native county of Albemarle. Judicious management increased the funds he bequeathed, and the trustees soon found that they had a great undertaking. The school was established on a rugged old farm and was pushed with such energy and enthusiasm that it has come to be one of the most useful institutions of its sort in the world, especially so, coming at the time and in the place that it did. "It had trained up to a year ago about 550 boys and girls and the records show that the graduates are doing the work for which they were educated. Of 275 boys who have left this school they have the following report: Twenty-one are machinists, nine teachers in colleges, seventeen carpenters and builders, three electric light engineers, ten are employed in railroad business, eleven are telegraph operators, four are civil engineers, nine students of science, two ministers of the gospel, seven bricklayers, six draughtsmen, eleven farmers, three printers, five druggists, four founders, etc."

There are dozens of other institutions at present in some wise corresponding to the Miller school, but most of them are land grant colleges; "that is, colleges founded upon the act of Congress of 1862, which gave each State a certain amount of land scrip, to be used for the establishment of a college 'where the leading object should be, without excluding other scientific and classical studies, and including military tactics, to teach such branches of learning as are related to agriculture and the mechanic arts in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions of life.'"

But while Mr. Dabney recognizes the necessity and the value of the introduction of the scientific branches, he is inclined to believe that the thing has been overdone, and that we are on the verge of a reaction toward the "humanities." He lays the trouble at the door of the preparatory school, which gives so insufficient a classical training, judged by the European, and especially the German standards, so that a boy graduating from a public school and taking a technical course at college cannot by any euphemism be called liberally educated.

"If this condition continues, where shall we educate the future thinker, the man of affairs, the teacher, the preacher or the statesman? If the pendulum has swung too far it will swing back again. There will be a reaction in favor of the liberal arts. The remedy for this condition is, as suggested, in the thorough preparatory course in languages, literature and history."

THE PERIODICALS REVIEWED.

THE FORUM.

IN another department will be found reviews of the articles, "A Remedy for Labor Troubles," by Hon. Chauncey F. Black; "The Alarming Proportion of Venal Voters," by Prof. J. J. McCook; "A Chinaman on Our Treatment of China," by Yung Kiung Yen, and of the two on "The Methods and Morals of Campaign Committees," by Mr. Herbert Welsh and Hon. M. D. Harter.

THE NEW CHURCH.

Prof. David Swing expounds the process of evolution and enlargement which has taken place in the Christian Church. He says, in substance: All religion, like all government, is a development. Early prophets saw in Nature objects of terror, and they interpreted these objects as the effects of a great cause. The cause was God, the tyrannical ruler of men. Men naturally ascribed to Him all that egotism which they observed to be so characteristic of earthly rulers. This God was to be propitiated by gifts and by continual confession of his transcending glory. This confession was made in the utmost humiliation, in sack-cloth and ashes, for this seemed to heighten God's praise. But some three hundred years ago the human mind began to study itself and its world. If death is only a division between two lives, this present life must be a preparation for that which will ensue, and hence to better this life, bodily, mentally and spiritually, becomes the all-important thing. God is to be worshiped in His works. It is in this faith that all the numberless adjuncts of the Church have been established in the form of benevolent Christian societies.

Professor Swing confesses that just at the present time the tendency is perhaps too much away from direct worship. "It would be a misfortune should the sentiment of worship decline. The sentiment would not in the least fall upon man's God, but rather would it all rest upon the human soul, which in order to be great and blessed must enjoy the advantages of living amid sublime thoughts."

NEGRO COMMUNICANTS.

Mr. H. K. Carroll, special agent of the census of churches, gives as the number of negro communicants in the United States: Colored Baptists, 1,230,000; Methodists, 1,186,000; Catholics, 121,000; Presbyterians, 31,500; Congregationalists, 6,135; Episcopalians, 4,900, or a total of 2,610,525. "This total," Mr. Carroll adds, "does not include some thousands of negro communicants scattered among white congregations or colored congregations in the North and East. The census inquiry has not proceeded far enough as yet to secure full and exact results as to colored organizations, but the final figures are not likely to add more than from 30,000 to 50,000 to the total above given. The proportion of communicants of all denominations to the population of a country is believed to be about one out of every three. This proportion is more than maintained among the negroes."

EDUCATION AT ANN ARBOR.

Prof. Henry C. Adams contributes an article on education in the University of Michigan. He aims to show "how that institution, by following its avowed policy of trusting its development to the choice of the people, is succeeding in providing for the many and varied needs of its constituency. As is well known, the University of

Michigan has, besides its departments of Literature, Science and Art, fully equipped schools of Law, Medicine and Pharmacy. "All departments of the university are domiciled on the same campus; thus the university exists in reality, and not merely in a catalogue or in an announcement. This being the case, it is gratifying to the friends of liberal education to notice the steady growth of the Literary Department, for it shows, contrary to the fears of the timid, that the presence of professional schools is not detrimental to academic training; on the contrary, a close examination of the question discloses the fact that the proximity of the various departments is mutually advantageous. The old lines which separated culture from science and professional learning from them both are fast being effaced. Instruction in liberal arts conforms more and more to scientific requirements; instruction in the sciences cannot disregard the claims either of true culture or of professional needs; while instruction in the professional schools is brought to an unusually high standard by its contact with the arts and sciences. And all this is accomplished through the unconscious coercion of the student body, whose members mingle freely with each other. It is the natural consequence of the organization of the university rather than the result of foresight on the part of those who have administered it. There is not yet, perhaps, that complete formal interchange of courtesies between the various departments which the ideal university demands, but the necessity for this is becoming more and more apparent to the governing body, and its accomplishment will doubtless be the next important step in the development of the institution. The university spirit exists, and it cannot be long before that spirit finds adequate formal expression."

THE NORTH AMERICAN REVIEW.

EXTENDED reviews are given elsewhere of "A Forecast of Mr. Gladstone's New Administration," by Justin McCarthy; "The Garza Raid and Its Lessons," by M. Romero, and of "The Homestead Strike," a symposium by Hon. Wm. C. Oates, Hon. Geo. Ticknor Curtis and Master Workman Powderly.

ELECTIONEERING METHODS IN ENGLAND.

Mr. H. W. Lucy explains some interesting features of the English methods of parliamentary elections. Chief of these is the system by which a man may have a vote in each district in which he owns property, so that, according to Mr. Gladstone, there is one man in England who has as many as forty votes. It is the reform of this system which the Liberals propose in their "One Man, One Vote scheme." Of all anomalies there is perhaps none stranger to the American mind than the institution of the Chiltern Hundreds. There was a time when men were unwilling to go to Parliament, and hence was passed the law forbidding any member to resign unless he did so to accept office under the crown. Thus, although the necessity for the provision has passed away, conservative England still retains the old cumbersome system of resignation. A member wishing to resign makes application for the position of Steward of the Chiltern Hundreds. This office is only fictitious. The member making application for the position is granted it, and is then at liberty to resign this office.

SOCIETY AS A RESTRAINING INFLUENCE.

Mrs. Amelia E. Barr upbraids society for its frivolity, false distinctions and superficialities, but sees some good in its influence upon the great majority incapable of dwelling alone "with their own souls and with the immortal part of other souls." Society has by its conventionalities enforced at least a superficial recognition of the Decalogue. It affords employment to many who are incapable of engaging in more serious matters. It curbs the raw and barbaric instincts of young people.

JOHN BRIGHT.

Mr. Charles McLaren, nephew of John Bright, is reminiscent of his illustrious uncle. Americans will be interested in reading of Bright's love for Americans, which manifested itself not only in great matters such as the questions of the Civil War, but in numerous minor particulars. England and America had equal part in producing his favorite literature, for his four most esteemed authors were Milton, Byron, Longfellow and Whittier.

OTHER ARTICLES.

Mr. Richard Mansfield, in what he calls "A Plain Talk on the Drama," scores the more popular forms of current theatrical amusement and claims the stage as the proper realm of poetry.

Gail Hamilton writes an open letter to the Queen in which she pleads passionately for clemency in the case of Mrs. Maybrick. Senator Morrill, of Vermont, and Congressman Wilson, of West Virginia, meet in the pages of the magazine as on the hustings and set forth the respective arguments of their several parties on the tariff question.

THE ARENA.

THE article, "The Future of Islam," by Ibn Ishak, is reviewed in another department.

THE MENACE OF PLUTOCRACY.

The editor, Mr. B. O. Flower, in reviewing the course of events since the war, sees grave danger in the growth of Plutocracy. This growth he finds accompanied by a corresponding decay of pure republicanism. The fever of speculation which seized upon the nation just after the close of the war, and the class legislation which legitimized this spirit, has "lowered the ethical standard and the higher sensibilities of the nation."

The writer finds two significant incidents which reveal the attitude of the government toward the standing dispute between labor and capital. First, there is the new invention of a Gatling gun which is to be placed in police patrol wagons, and which "is designed to do more effective work in dealing with a mob or in dispersing rioters than could be accomplished by a whole company of infantry." Second, there is the Pinkerton detective agency. These means of suppressing honest protest against injustice are adopted, rather than the peaceful and reasonable method of arbitration, because the capitalists are unwilling to submit to the latter method, the writer argues.

WALT WHITMAN, THE POET OF DEMOCRACY.

Prof. Willis Boughton takes up Walt Whitman's claims to be the poet of Democracy, and shows how this predominating idea led the poet into grave errors of both manner and matter. So anxious was he to strike out into an altogether original domain, that he neglected every touch of art and defied all the restraints of decency. There is in his work material for noble art, but it is in hopeless jumble, and his anxiety to reveal the natural man led him

into excesses of speech that are to be deplored. His great work may yet prove to be the impulse which he has given to the creation of a great national art.

Mr. James A. Hearne chats pleasantly of the days of the old stock theatre companies.

THE CONTEMPORARY REVIEW.

DR. ALBERT SHAW'S paper entitled "An American View of Home Rule and Federation," is dealt with elsewhere.

A BAD WORD FOR EDWARD VI.

Mr. Arthur F. Leach thinks that Edward VI has a great deal too much credit as the founder of grammar schools. What he and his father before him did was to appropriate a pound and give away a shilling.

He says: "The 'true truth' about the matter, is that so far from Henry VIII or Edward VI being benevolent founders of schools, they were their spoilers, and instead of being the munificent creators of a system of endowed secondary education, they were its destroyers. In the most favorable cases the Tudors were reviving, or restoring under new management, an old foundation with the same revenues which it had previously enjoyed before the suppression.

"Henry's usual process was to confiscate a monastery or a collegiate church, which had kept up education perhaps for centuries, and, pocketing property worth two or three hundred a year (with all its possibilities of unearned increment), restore a property of £5 or £10 a year by magniloquent letters patent under the name of the Free Grammar School of King Henry VIII. Edward VI followed his example."

THE STRATEGIC VALUE OF EGYPT.

Major Otto Wachs discusses the importance of Egypt from its strategic point of view. He thinks that the British occupation of Egypt has restored England's prestige in the Arabian world, and that Egypt has a greater usefulness for England to-day than the Cape Colony at the beginning of this century. Egypt is not merely the gate to the East, and the eastern key to the Mediterranean—it has become the second English Thames. Hence, the redcoats must remain there if England has not to abdicate her position among the nations. "Egypt, as history teaches, has seldom, and then only for a short time, brought luck to her conquerors; much more often she has brought them ruin. Does England feel herself strong enough to escape the fate of previous conquerors? For the moment is not far distant when things will be ripe for powder and shot in the country of the Sphinx and then it will be seen whether the words of Renan at the reception of Ferdinand de Lesseps into the French Academy in 1885 will come true, that Egypt was given to England as a punishment for an ambition which exceeds its resources."

OTHER ARTICLES.

Mr. John Rae, in one of those laboriously painstaking articles in which he excels, describes and summarizes the evidence taken before the Labor Commission as to the gradual introduction of conciliation and arbitration in British industry.

Dr. Candy, writing on "Professor Huxley as a Theologian," criticises his recently published essay on "Some Controverted Questions." George Barlow laments over the absence of "Talent and Genius on the Stage," and groans over the proposed conversion of the English Opera House in Shaftesbury Avenue, where Sarah Bernhardt played, into a music hall.

Mr. Dowling writes on the importance of studying the moral philosophy of the herbs of the field. A sacred flora has been the gradual growth of the ages. Plants, shrubs, and trees have been connected with some event in the life of a saint or martyr. Others were associated with saints because they had been used by them medicinally, while others have their Christian associations because they flower about the same time as the festivals of the Church, while there is a fourth class which either in form or color recall some incident in the Gospel. Professor J. W. Hales writes on "The Last Decade of the Last Century," and Professor Wilkinson, replying to Colonel Elsdale's paper as to the superiority of defense with the new weapons of war, points out that at Mars La Tour, where all these weapons were used, with the exception of smokeless powder, a victory was won by an attack with no unprecedented numerical superiority.

FORTNIGHTLY REVIEW.

MUCH the most sensational article in the *Fortnightly Review* for September is Mr. Frederick Harrison's, which is noted elsewhere.

MARS.

Sir Robert Ball, the astrologer in Ireland, has a very interesting essay upon the planet Mars. Sir Robert thinks that there is water in Mars, and there is snow at the Poles. The canals, which are each sixty miles wide and sometimes a thousand miles long, are not artificial but natural phenomena. He believes that it is the highest degree probable that there may have been types of life of some kind or other on Mars, but the laws of probability are against the supposition that there is intelligent life on Mars at the present moment.

As for the proposal that we should make signals to Mars, he thinks that is ridiculous. Our signal flag would have to be as large as Ireland. The most powerful telescope can only bring Mars within 35,000 miles, and the smallest object that would be discernible to Mars must be as large as London. New York would not be visible at that distance.

A PARADISE OF FILTH.

Mr. Lanin has a paper on "Cholera and Cleanliness in Russia." In previous papers this author has reveled in describing the moral and political corruption in which the unfortunate Muscovites are wallowing, taking care to attribute a large, if not the largest, share of the responsibility for their shortcomings to their Autocratic Government and to their Orthodox Church; but this month he has to describe the personal habits of the individuals who are represented as the unfortunate victims of this tyrannical government.

What the Russian people want, judging from this article, is not to be allowed to elect a House of Commons, but to be handed over to an omnipotent sanitary inspector with unlimited power and unlimited soap, who would undertake by main force to scrub the Empire and its inhabitants into some semblance of cleanliness. It is true that your sanitary inspector, even if he spoke English and used nothing but the best of soap, would be regarded with a detestation worse than that inspired by Ivan the Terrible or the worst of modern Czars, but nothing short of that would be of the least use.

Mr. Lanin represents that the whole Empire is submerged in a great cesspool, every country alike reeks with filth. The only impression that remains on the mind after finishing his description is one of amazement that any Russians are left alive at all. The death rate for the Empire is 36 per 1,000. The population is degenerating,

and out of 874,000 young men of twenty called up for the army the government could not obtain more than 258,000 who are fit for military service.

The one important point in Mr. Lanin's paper is that in which he says that all the Stundists and Passkoffskis no sooner embrace the evangelical faith than they become models of cleanliness. This is a miracle indeed!

GORDON, THE AUSTRALIAN POET.

Mr. Francis Adams has one of his excellent literary critical papers under the title of "Two Australian Writers." The two are Thomas Gordon, the poet, and Mark Clark, the novelist, who wrote the preface to the first collective edition of Gordon's poetry. It is impossible to summarize a literary paper, but the following extract is a sample of what Mr. Adams has to say: "Shattered in body and spirit, this man, the darling of an unborn race, brings to the youngest of nations all the *Weltschmerz* of the oldest, perished at thirty-seven, an inept failure on a hundred lines, a failure so splendid as to be a success on one or two—unrecognized, solitary, unconsolated by any knowledge of the future that awaited him. If this is not a tragic fate, then no fate is tragic. It is now more than twenty years since he died, and he has become something very like the heart and soul of the Australian people. His faults, his limitations escape them, in much the same way as the limitations and faults of Burns escaped the democracy of Scotland."

OTHER ARTICLES.

Mr. Herbert Horne has a sensible paper on the "Strand Improvements," and the opportunity which is offered to the London County Council for improving the city over which they rule. Mr. Justin McCarthy sings the praises of "August Strindberg," the pessimist dramatist of Sweden, of whose plays he gives a most interesting account. Mr. Piggott has a paper on "New Japan." A writer signing himself "G." gives us a brief and interesting biographical account of the late Count Gleichen. There is a slight paper upon "Mulready," by Lady Dilke.

THE NINETEENTH CENTURY.

THE *Nineteenth Century* for September is a good readable number. We notice two of the more notable articles elsewhere.

DOWN WITH GENERAL ELECTIONS.

Mr. Goldwin Smith, writing on the "Contest for the Presidency," thinks that the odds of the present are slightly in favor of Mr. Cleveland. He sees and deplors the sporting interest which elections give politics, which makes the presidency contest in the States and the general election in Great Britain a popular substitute for the Derby day.

He says: "The first aim of the constitutional reformer in England should surely be the restoration of the stability and authority of government by the abolition of general elections, now a most pernicious anachronism, and the substitution of some system by which the life of parliamentary government would be made continuous and free from convulsions. . . . The only thing which is certain is that between this time and next November there will rage over the United States a vast faction fight, attended by no small portion of the moral evils of a civil war."

IN DEFENSE OF SHORT SERVICE.

Sir John Adye publishes a summary of facts which he has compiled from published and official sources in order to prove that short service is justified by its results. He

says: "It appears to me abundantly clear that the system of short service and reserve introduced in 1870, while it is more acceptable to the people at large, at the same time is less costly and far more efficient than those which preceded it. It is also well adapted to the special requirements of the defense of the Empire. I therefore place the facts before the public for their consideration, as the improved circumstances do not appear to me to be fully known and appreciated."

A PLEA FOR ARABI.

Mr. Wilfrid S. Blunt, writing on the tenth anniversary of the bombardment of Alexandria, pleads for the release of Arabi, in the hope that the new English Parliament will permit him to return, if not to Egypt where he would witness the partial accomplishment by strangers of his native programme of Egypt for the Egyptians, then, at least, to the society of men of his own language, faith and customs nearer home. He tells once more the story of Arabi's rebellion, and asserts that the original intention of the government was to release Arabi, but that this was abandoned when the policy of the reconstruction of Egypt on a basis of self-government was shunted in favor of the present policy, which has for its object the permanent retention of the government as an annex of the Indian Empire.

WHAT THE ITALIANS HAVE MADE OF MASSOWAH.

The Marquis A. di Dan Giuliano, Member of the Italian Parliament, gives an account of the Italian Colony which has been founded on the seaboard fringe of Abyssinia. He has the lowest possible opinion of the Abyssinians, and thinks that before long the trade of the Soudan should come through Massowah, not through Suakim.

In his description of Massowah, the following curious passage occurs: "The shores and the mole swarm with a many-colored crowd; the cafés are well filled and glittering; and all this *ensemble* of nocturnal life reminds one of Venice and her lagoons. Later on a stranger and more original spectacle is offered to the tourist. The city is transformed into a vast bedchamber; the whole population, European and native, male and female, spread out before their doors, or on their terraces (if the house has more than one story and has a terrace), their *angareb* (bed made of leathern straps), lie down and sleep soundly until the Southern Cross disappears from the horizon. After a very brief silvery twilight, the rays of the tropical sun burst forth without warning, falling straight down, splendid but scorching, upon the sleepy city, and oblige the inhabitants to seek shade and cool in their houses."

PROTECTIVE COLOR IN ANIMALS.

The Rev. B. G. Johns, a clergyman who seems to have something of Gilbert White, of Selborne, in his blood, describes the many methods in which insects and other animals secure themselves from destruction by assuming the color of their surroundings: "Suppose, for a moment, that a protective color, like that which obtains in the fields, woods and hedgerows, ruled in the world of men, what an amazing change would ensue in the outward appearance of affairs!"

This rule does prevail, we are told, to a very considerable extent among men as well as among caterpillars: "Dr. Beddoe says that there is a direct relation between man's pursuits and the color of their hair. An unusual proportion of men with dark, straight hair enter the ministry; red-whiskered men are apt to be given to sporting and horse flesh; while the tall, vigorous blonde man, lineal descendants of the Vikings, still contribute a large contingent to our travelers and emigrants."

OTHER ARTICLES.

Lady Catherine Milnes Gaskell has one of the brightest articles in the current number under the head, "Some Talk about Clergymen." Her dialogue is full of excellent anecdotes about clergymen. Sir Herbert Maxwell, under the title of "The Last Great Roman," gives us a brilliant sketch of Stilicho, the great Roman General who defended the crumbling ramparts of the Roman Empire against Alaric, and has been, in Sir Herbert Maxwell's opinion, grossly maligned by a recent historian. The Countess of Galloway has a light travel paper entitled, "Globe-Trotting in New Zealand." The Rev. Dr. Jessopp gives us a tragic tale of rural life under the title of "Swanton Mill." Sir Lintorn Simmons indignantly repudiates, in the name of Lady Wallace, the universal belief to which Mr. Archibald Forbes gave expression in the last number of the REVIEW, that "An Englishman in Paris" was no other than Sir Richard Wallace. Sir Lintorn Simmons is very indignant about the reflections cast upon the Empress Eugenie. George Strachey, writing on "Carlyle and the 'Rose Goddess,'" quotes from private letters and other documents to prove that Blumine, the Rose Goddess of "Sartor Resartus," was Miss Kirkpatrick. Her name was Catherine *Aurora* Kirkpatrick. She married an Indian officer, and was much happier than she would have been had she married the disappointed philosopher of Chelsea.

THE NATIONAL REVIEW.

THE most interesting article in the *National Review*, "Should Clergymen Take to Trade?" is dealt with elsewhere.

A DANIEL COME TO JUDGMENT.

Mr. W. H. Mallock makes an admirable suggestion in his article, "Wanted—a New Corrupt Practices Act." He calls attention to the fact that while the English Corrupt Practices Act comes down with a sledge-hammer ferocity upon any person who gives away a pot of beer or spends half a crown in corrupting a constituent, nothing is done to punish the habitual misstatements that are indulged in at election times. He, therefore, makes the following suggestion: "The employment of such misstatements, either by a candidate or by his agents, should receive the same punishment and entail the same consequences, as threatening a man, bribing a man, or giving a man a pot of beer.

"Every misstatement of any crucial matter of fact, either wantonly made, or when contradicted not publicly retracted, whether the fact be one relating to the general course of recent politics, or to the personal conduct of a candidate, either politically or in private life—every such misstatement of crucial matter of fact should be treated as an offense of the same nature as bribery, and, if proved, should make void the election of the candidate by whom or on whose behalf it was made."

He then proceeds to make the further suggestion that when there have been follies where meetings have been broken up, and when electors have been denied the opportunity of hearing the arguments of both sides fairly, electioneer devices should be treated as offenses under the Corrupt Practices Act, and whenever "the guilt could be brought home to a candidate or his agents such a candidate should be subjected to precisely the same penalties as at present would result from a proved case of bribery."

THE LESSONS OF THE BRITISH ELECTION.

A Scotch Conservative, writing on the "Decay of Scotch Radicalism," thus summarizes what he believes to be the broad lessons of the British election:

1. The importance of sustained attention to organiza-

tion and registration—matters which must always be attended to if any progress is to be made, but which become more vital and more interesting as parties approach an equality of force.

2. The demonstration that no situation is to be despaired of.

3. The illumination afforded as to the policy which may be adopted with success in reference to the special characteristics of various constituencies.

4. The illustration of the special difficulties with which we are still confronted.

OTHER ARTICLES.

The editor raises a wail over the ingratitude of the country in returning a Gladstonian majority, but consoles himself by reflecting that a final victory is visibly within the reach of the Conservatives. Mr. R. S. Gundry gossips about "Boulogne and its Holy Virgin." Mr. H. Sutton discusses the "Children of Fiction" in a paper which bestows special attention upon the children painted by Miss Broughton, Mrs. Ewing, Mrs. Hodgson Burnett and Mrs. Walton. The object of the paper is to prove that the part played by children in modern literature is a new thing, and that in such literature women pass as men. Mr. W. E. Hodgson contributes one of his dialogues under the somewhat curious title, "The Revival of Ethics and of Laughter." Mr. Grundy has a short story entitled "The Tall Master." Mr. E. W. Wagstaffe has a noteworthy letter on the "Theory of Brain Waves," in which he endeavors to formulate a theory of telepathy based on the supposition that forms of energy, produced and projected by the combustion of matter that occurs in animal life through the molecular movements of the brain, may make this felt far at great distances where they meet with a sensitive recipient.

THE WESTMINSTER REVIEW.

THE *Westminster Review* is not quite so deadly dull as several of the recent numbers. The first place is given to Mr. Peter Ross's article on "The Presidential Contest in the United States." Mr. Ross thinks that Mr. Cleveland will be elected. He says: "The Democracy just now is practically united and is determined, since Protection has been a failure, to give Free Trade a trial. The Republican party is weakened, disheartened, and disjointed; the leader is cold, selfish, and friendless, and among the 'workers' distrust reigns when enthusiasm is most needed. The strength of the Democrats lies in their own unity and in the justness of their proposed policy, and this unity and justice will, there seems no doubt, result in Mr. Cleveland's re-entering the White House next March as President of the United States."

A NEW ZEALANDER ON LONDON POVERTY.

Mr. Edward Reeves, who is a strong land nationalizer, describes his researches among the poor of London. He gives the first place to the Salvation Army, the second to the Church Army, and the third chapter of his paper deals with the Jewish immigration. Mr. Reeves speaks very highly of the Salvation Army, and thus contrasts the two Armies: "The Salvationist acts: Here's food, a wash-tub, and work for you, my poor man. You don't believe in religion? How foolish you are! Look how happy I am, Hallelujah! However, you shall work, and eat, and come to our metropole, all the same.

"The Priest acts: I open a club where the adult can play billiards, smoke, and at the same time enjoy judicious light and serious instruction, reading, recitations, gas, warmth, nice furniture, for the nominal sum of 1d. per week, but he must be a communicant."

He thinks that the Russian Jews are exactly like the Chinese, and he would interdict their coming into the country. He says at the close: "In short, East London is a marvel of charitable institutions and *personal* devotion to the poor, from Dr. Barnardo's Homes, the people's Palace, Sunday-schools, missions for teaching, for preaching, medical missions, nursing, societies for prevention of cruelty, orphanages, homes for all ages and both sexes, boarding-houses for girls, hospitals, down to teas, crèches, coffee for dock laborers, a few bureaux for finding situations, entertainments, clubs, classes, meetings, metropolises, outings for children, dancing, singing, food and shelter. I speak of what I have seen."

A NEW PHASE OF ART.

Mr. Stoddard Dewey under this title proclaims outlines of a new phase of art, marking possibly the beginning of a new school. The author of the new departure is the Swiss, Mr. Arnold Boecklin. His object is to interpret the laughter of man as he thinks over again his old conceptions of Nature and of life. Boecklin is of Zurich, and his work interprets the kind of thought that is everywhere in the air. His character is the result of habits long indulged in of intense and humorous sympathy with classic mythology. "It is this perennial buoyancy of life which commands all the painter's sympathies whether with Nature or with man, who is a part of Nature. And this is in full unison with the thought of our age, which is beginning to look with kindly and contented eyes on the universe as it is."

"FREE LAND."

Mr. Godfrey Gumpel, writing on the "Social Question," gives us a summary of Dr. Hertzka's scheme of a Free Land Colony. Mr. Gumpel says: "Desirous of promoting the undertaking, a number of gentlemen in London have formed themselves into a provisional committee for the purpose of establishing a British Free Land Association, have framed a temporary set of rules, and now invite support from ladies as well as gentlemen by joining the Association.

"Here is an opportunity for the benevolent wealthy to step forward and assist in the solution of a question which is one of the most far-reaching in the history of our race."

PRESENT POSITION OF CANADA.

Mr. Lawrence Irwell sets forth the position of Canada, from a somewhat pessimistic standpoint. "Great Britain is, I fear, becoming disgusted with Canada, her corruption, her slow growth, and her protectionism, and if the bulk of her population expressed a distinct desire to cut the political cable, it is not probable that there would be any very strong opposition upon the part of John Bull."

OTHER ARTICLES.

Mr. V. E. Johnson describes the University of Alexandria under the title "The First University." Mr. Alfred Slater, writing on "Human Selfishness—Trade Disputes," suggests the modification of the Litany "From the tender mercy of mob rule, good Lord deliver us."

BLACKWOOD.

IN *Blackwood's Magazine*, the Lieutenant-Governor, H. E. Jerningham, describes the terrible cyclone which devastated Mauritius on the 29th of April, when 1,100 people were killed, 2,000 were wounded, one-third of the capital was leveled to the ground, and 50,000 persons were left homeless. Mr. Jerningham says that the cyclone made a noise like the boom of a ball from a 100-ton gun. For an hour the roar was stupendous, deafening and sick-

ening. Mr. H. S. Hallett describes the construction of a Burma-China railroad as the best method of coping with the difficulties of Lancashire. Mr. H. Preston-Thomas has a pleasant little paper entitled, "An Experiment in Holidays," telling how he and some twenty or thirty companions went to co-operative holiday-making, and found the experiment extremely pleasant. There is a gossipy bookworm's paper by Arnold Haultain on "Titles." That indefatigable magazine writer, Sir Herbert Maxwell, has a paper on "Games." Mr. W. B. Harris describes "Wazau." The political article, "What Next," is written by a man who thinks that when Mr. Gladstone took Lord Salisbury's place, the honest watch dogs were turned away and the political wolves were admitted to the feast.

SCOTTISH REVIEW.

A FAIRLY varied list of contents is put before us in the current issue of the *Scottish Review*. To begin with, there is an article on the social condition of the Glasgow poor, Mr. J. B. Bury writes on "The Coming of the Hungarians," Mr. G. Omond on the "Porteous Riot," Mr. C. T. H. Wright on "Russian Universities," Dr. Beddoe on the "Anthropological History of Europe," and Mr. John Dowrie on "How the Scottish Union was Effected." In addition to these we have a paper on "The Legend of Orendel," and a review of "Marshal Macdonald's Reminiscences."

The article on the Hungarians opens with an attempt to disabuse our minds of the cherished belief that as the Avars of Eastern Europe were our original hobgoblins, so the Hungarians were our original ogres: "Much as one might like not to believe that the ogres are derived from hell, much as one might like to think that the original ogres were the ancestors of the people of Hungary, I am afraid that we can hardly get out of the comparison of Spanish *ogro*, Old Spanish *huergo*, *huercos*, and Italian *orco*. The philologist, I fear, cannot congratulate the ogres on the repute of their original home. But though the deduction from *Orcus* is right, the deduction from *Ugrian* ought to be right. The idea that the Ugrians were the original ogres was a brilliant one, full of historical truth; and it is really deplorable to find that it is not a fact." After this Hungarian stock ought to go up with a bound. Mr. Bury concludes that the Hungarians are Ugrians, and not Turks.

Some forty pages are occupied by Mr. Moris's review of the Macdonald memoirs, the chief merit of which he describes as being that they bring out in clear relief the noble character of their author, who, born at Sedan in 1765, of a family connected with the great clan of the Lord of the Isles, grew up to be a marshal of France. The Reminiscences, apart from their military value, and a few stories which chiefly depend for their point on their grossness of language, thinly veiled by the conventional —, are most noteworthy for the light, such as it is, which they throw on the character of the First Napoleon, once more illustrating the proverb that men are seldom heroic in the eyes of those nearest to them.

"His Reminiscences from this time forward are not altogether fair to Napoleon; they breathe the discontented and soured spirit of a patriotic and clear-sighted man, himself smarting from the effects of defeat, and indignant that the fortunes of France should be made the sport of utterly reckless ambition. . . . From a military point of view they are instructive in the extreme; they illustrate, by most striking examples, how Napoleon's ambition and lust of power occasionally marred his conceptions in war, and yet they abound in instances of his extraordinary skill and capacity as a great commander."

RUSSIAN UNIVERSITIES.

Mr. Hagberg Wright, in an instructive article on the Russian Universities, mentions that there is one for each of the educational districts into which the Empire is divided. The Government appoints a Curator over each district, who directs all matters concerning public instruction. There are at present over 9,000 students in the five chief universities. The numbers were:

St. Petersburg, in 1891.....	2,087
Moscow, in 1890.....	3,473
Kiev (St. Vladimir) }	2,088
Warsaw }	1,151
Kazan }	785

Every student is bound to go to the university chapel, and to perform his religious duties as a member of the Greek Church. They have not yet quite reached to religious toleration in Russia. On the other hand, Mr. Wright gives credit to the Russian government for the assistance it affords to poor students. A large percentage of students, he says, have always been assisted by the State.

"Numerous amusing citations could be given from the histories of the universities how the student suffered ridiculous punishment for his misdemeanors. For omitting to take off his hat to the governor-general, eight days' imprisonment; for shouting 'bravo' in a theatre, seven days in gaol, on bread and water. Still more absurd is an account of a student who for smoking a cigar was expelled from the University of Kiev. This poor fellow had gone to Odessa for his Easter holidays, and happened to be walking on the boulevard smoking a cigar, when some high officials passed by. An inspector noticed the miscreant, and promptly reported the matter to the inspector of Kiev, who brought the matter before the Council, with the above result."

Mr. Downie, in his article on the Scottish Union, declares the cogency of the economic circumstances that led up to it quite sufficient to explain how it was effected, and rebuts with scorn the allegations of bribery leveled by "Unionists like Finlay and Scottish Home Rulers," who think "that patriotism consists in blackening the fair fame of their country's benefactors."

Mr. Omond tells us that the best accounts of the Porteous Riot are those given by Sir Walter Scott in the "Heart of Midlothian," and "Tales of a Grandfather."

THE EDINBURGH REVIEW.

WITHOUT any remarkable *pièce de résistance* the *Edinburgh Review* has still a fairly interesting sheaf of articles. Travels, theology, memoirs, politics, gardening and geography furnish subject matter for most of them.

"These glorious regions" is the phrase the reviewer applies to the part of Equatorial America—Nicaragua and Ecuador—traversed by Mr. Whymper and party in quest of knowledge. But if you go there to live you must lay your account with earthquakes and revolutions, and the want of a winter. "Some writers consider that the tropical zone is fitted to be the paradise in which the race of man may some day attain its highest perfection. In this paradise, as at present arranged, there are plentiful wasps in the orange groves, there are stinging ants and biting spiders in the savannahs, on the river banks there is 'the insufferable torment of the mosquitos'; there is the *chegueo* or jigger, on land, and in the water the little cannibal fish, which bites pieces of flesh out of bathers and swimmers. The yellow fever is everywhere lying in wait. Before clearance and cultivation, and the ways of highly civilized beings, these discomforts may diminish or retire."

But there is the melancholy chance that with them may retire the choicest glories of the paradise."

An article on "The Discovery of America" retells for us the story of Columbus, and mentions, what most people are now aware of, that Columbus was probably anticipated from Iceland and Greenland. Regarding the pre-Aryan population derived from Northern Asia, all that can be asserted ethnically is that between the men of the New World and those of the Old, there exists no essential difference.

A writer on "Formal and Landscape Gardening," reviews the chief authorities on the subject. The conclusion is sensible: "Above all, if it is desired that the best should be made of the artistic treatment of the garden and park scenery, and that such treatment should become an object of real and living interest, we must get rid of any submission to the dictates of mere fashion."

The memoirs noticed are those of Marshal Macdonald and Madame de Gontaut, and there is a scrambled review of "Irish Spies and Informers." It seems the publication of the *Edinburgh* was delayed for some days in order to comment on the general election. We could have safely waited a month or two to hear that. "If any inference can be drawn from the polls, it is that the opinions of the country are exceedingly divided, and if the opposition has obtained a majority, it has not secured a commanding and irresistible superiority."

THE ATLANTIC MONTHLY.

IN the September *Atlantic* Editor Horace E. Scudder appears in an essay on "The Primer and Literature," criticising the present methods of teaching our young ideas the first of the "three Rs." He thinks that we lose sight of the end of reading in our struggles to attain the mechanical means; that no matter how perfectly we grade our primer exercise in the order of ease of acquisition, the great end of literature—inspiration, and stimulation of the imagination—is past, unless we stop trying to *make* reading books for children, instead of *finding* them, the proper method. Mr. Scudder would have the mechanical difficulties of reading overcome in mere exercises, so that when the child was given a piece of literature to read there would be no obstacles to its enjoyment. "Third, I would make it a cardinal principle with the teacher not to talk about literature, nor to pick it to pieces. The time for enjoyment through the immediate perception comes early; the time for enjoyment through analysis comes late. I would not, even in the early stages, attempt to connect the literature read with the writers who produced it. I would do nothing to distract the child's mind from pure enjoyment."

Mr. S. R. Elliot discoursing on the "Romance of Memory," tells, in the midst of much generalizing, some wonderful stories of General Grant and others, especially of a certain brilliant journalist of New York, who is cited to prove the writer's not very clear-cut theory that much wit and wisdom is merely memory adroitly used. "One night, after a performance of unusual power by Rachel, this man, returning to his revels among boon companions, wrote out a criticism for his journal. Many were present who have since become famous both in journalism and literature, and these were unanimous in the opinion that this article was, without exception, the most able, the most brilliant, the most trenchant, within their ken; whereupon, with that air of comfortable *insouciance* which characterized this literary prodigal he took his work to

pieces, from beginning to end, and showed how Théophile Gautier had contributed the opening sentence, how the second paragraph was Edgar A. Poe inverted, and in fact demonstrated that a very wide range of authors, from Bacon to Baudelaire, had been laid under contribution. Yet was the work so deftly done that the style seemed all his own; so just in dealing with the subject that the criticism appeared to be inspired by that night's performance; so homogeneous, so consistent, that—well, the oldest newspaper man present turned around and said, 'With M. H. memory is genius.'

Olive Thorne Miller is as charming an interpreter of her feathered friends as usual in "Cliff-Dwellers in the Cañon." Margaret Deland begins the number with the first four chapters of a serial, "The Story of a Child," and Mr. Crawford reaches the climax of the "old, old story" in "Don Orsino."

THE CENTURY.

THERE is not much of serious and immediate interest in the September *Century*, though it is a very readable number, with a couple of good descriptive articles—"The Grand Falls of Labrador," by Henry G. Bryant, and "Pioneer Pack Horses of Alaska," by E. J. Glave.

H. E. Krehbiel heralds the coming of Antonin Dvorak, the Bohemian composer, to be director of the National Conservatory of Music—an important event in the history of our musical culture. Dvorak is the son of a Bohemian butcher. Early in his boyhood he revolted from sausage making to music making, and passed through all the successive stages of musical drudgery, from the position of viola player in a band at \$9 per month to the directorship of the Conservatory at \$15,000 per annum. We know him as a composer best by his famous "Stabat Mater."

Many people who see Mr. Brander Matthews' unique article on "Pictorial Posters," will learn for the first time that there is a subtle and well-defined art brought to play in the designing of the great lithographs which stare at us from house and fence. Mr. Matthews talks in what seems an exhaustive manner of the French and German poster artists, and of our own.

"In the ten or a dozen years since the first posters were put on stone here in the United States, there has been developed a form of mural decoration wholly unlike anything which existed before—unlike the Parisian, as I have just asserted, and unlike the American woodcut which preceded it and made it possible. The new work is founded on a thorough knowledge of design, of the harmony of color, and of the technical possibilities of the lithographic press. The result is of varying value, of course. It is often commonplace, dull, empty. It is sometimes violent and vulgar. It is frequently beautiful and delightful. There are many purely decorative posters, printed in soft and gentle tones, which are a delight to the eye both in design and in color, and which now give a zest to every chance ramble through the streets of New York. Consider, for example, the striking and suggestive poster 'From Chaos to Man,' printed by the Springer Company. Consider, again, the 'stand of bills' which Mr. H. L. Bridwell devised to announce the coming of the Lillian Russell Opera Comique Company; note the tenderness of the tints and the fastidious grace of the design; and confess that here is a brilliant mural embellishment of a new kind. Akin to this and due to the same firm, the Strobridge Company, were smaller posters for Mr. W. H. Crane and for Mr. Francis Wilson, delightfully decorative in their simple lettering."

HARPER'S.

MR. THEODORE CHILD'S second paper on "Literary Paris," is reviewed elsewhere.

If the light of the Northwest remains hidden under a bushel it will not be because Mr. Julian Ralph has not done his best by it. This month brings another of his readable articles on "Washington, the Evergreen State." Mr. Ralph has chosen this descriptive title for the land in which, according to their motto, "The Last Shall be First," because "roses, nasturtiums and chrysanthemums may be seen blooming in the gardens the year around. The ocean, and especially the Japan current, keep the climate equable. The mercury seldom rises above 90° in the summer, and to see it at zero in the winter is to see an extraordinary thing. The rains produce semi-tropical abundance of vegetation. Agriculture cuts but a small figure yet [17,000,000 bushels of wheat last year shows a start, though !], but when it is carried on, in the valleys and reclaimed marshes, oats grow higher than a man's head, and so does timothy. Oats will run from 60 to 100 bushels to the acre. Men have been known to make \$800 from an acre of strawberries."

The mines, the timber and the fisheries of Washington are yet to be exploited, and in her area, big as New England and Delaware, are hidden stores which might seem boundless if we did not know our capacity for exploitation. Among other enthusiastic conclusions which the West has brought to Mr. Ralph is the gallant one that "nothing animate or inanimate can be more beautiful than the women" of the Pacific Coast.

Anna C. Brackett makes a clever short article out of her experience at a New England town meeting, where, after much balloting, the three candidates dismiss the assembly, and "for the third or fourth time this town goes without a representative for the next two years, and everybody is perfectly satisfied." The Eastern indifference as to matters political is well illustrated in the general pleasure that there should have been no decision, "after so much excitement," to create hard feeling between the candidates and their constituents.

Those who find a fascination in the study of death masks will be engrossed by Laurence Hutton's first paper describing his collection, with subjects varying from Dante to Ben Count, the prize fighter. There are descriptive articles on "Fox Hunting," by Edward S. Martin, and the "Sand Hills of Maine," by Howard Pyle, and a full array of fiction.

THE COSMOPOLITAN.

WE review on another page Mr. John Brisben Walker's article on the Homestead strike, and Mr. Charles W. Dabney's on the "Advance of Education in the South."

Dr. Edward Everett Hale casts his social lesson this month in the form of a little dialogue drama entitled "What Shall They Drink?" in which the characters discuss the liquor problem, and especially Dr. Rainsford's much-talked-of proposed solution of it. Dr. Hale finds that the New York clergyman argues too much from the point of view of the Englishman's physical constitution and appetite and temptations. That they are different from our own his little anecdote of the custom of giving English high-bred girls a magnum of beer daily to secure the "beer tint" is a sufficient proof. And the *dramatis personæ* generally agree that the drink habit, if it goes, must be supplanted by something else, which something else should be good society and rational diversion; that our hope of stamping out the destructive evil lies in

giving our workmen a place to sit down in with their wives and daughters and children to enjoy themselves.

Mr. Howells engages himself this month in what is very evidently a labor of love—a charming biographical sketch of the late young author, George Pellew, whose name also appears under three very strong and beautiful sonnets illustrated by Walter Crane. Pellew would have been but thirty-three years old now, had he lived; but he had given unmistakable signs of genius, and his modest and irresistible personality had endeared him to the most discriminating and critical circle which our republic boasts. He is probably best known by his book on Ireland, "Castle and Cabin;" but, naturally, Mr. Howells considers him more from the point of his poetic endeavors. "He could not," says his biographer, "deal otherwise than importantly with anything that he touched, and his poems are in uncommon measure the expressions of contemplated emotion. He wished to get all life—passion, taste, motive—fully into that clear light of the intellect where he habitually dwelt, and where he alone felt himself at home, and to reason about it. In this home of his he was the most hospitable of hosts, and he impartially welcomed every one to it. He invited you there on every possible occasion, and asked nothing better than that you should reason with him, even if you reasoned against him."

Another feature of the number from a literary point of view is the first installment of Prof. Hjalmar Hjorth Boyesen's serial, "Social Strugglers," in which he begins to paint with considerable humor and cleverness the ingenious and energetic attempts of the *nouveaux riches* Bulkeleyes to get "into the swim." The little extra perspective which Professor Boyesen enjoys from the fact of his foreign point of view, together with his indubitably true perception of our American social fabric, fit him rarely for the task he has set himself.

THE NEW ENGLAND MAGAZINE.

WE review in another column Rabbi Schindler's paper, "What is Nationalism?"

Nicholas Paine Gilman has a paper on "Profit-Sharing in the United States," in which he describes the well-known successful instances of co-operation in the N. O. Nelson Company, in the Peace Dale Manufactory, and the Pillsbury Mills, of which last THE REVIEW OF REVIEWS had something to say not long ago.

Mr. Gilman, who is a well-known writer and enthusiast on this subject, has not much that is new to tell, except the somewhat surprising extent to which profit-sharing is already practiced in this country. He affirms that there are about one hundred establishments using the system. "If any American citizen should desire, although at undue expense of time and trouble, to patronize only those industries in which profit-sharing is now practiced, he could satisfy a large number of his innumerable wants as a civilized man. . . . He could buy his flour, his butter, his cheese, his soap, candles and tobacco; he could purchase cotton and woolens for cloth, or buy his clothing ready made; he could furnish his house with moldings, sashes and blinds, and with everything that it needs in the way of plumbing and brass and iron work; he could provide his family with shoes and slippers; he could get all his printing done in the best manner; he could take one of the best newspapers in the country and one of the leading magazines, and buy his books bearing the imprint of one of the most prominent publishing houses; his doors could be furnished with a Yale lock; he could buy stationery, paper, chemicals, drugs, oils, shovels and groceries of all kinds; he could patronize profit-sharing bankers

and probably he will soon be able to ride on a profit-sharing railway."

The *New England* adds its voice to the cry, which is constantly growing louder and more imperative, for "An Improved Highway System." Mr. E. P. Powell recites under that head the obstacles that the farmer makes to his prosperity by allowing the present make-shift roads to raise the cost of production of his wheat and corn to unprofitable proportions. He advises as rapid a movement as possible to the Telford or Macadam systems of road-making, and in the meantime the improvement of our present abominable dirt roads by means of proper drainage and dressing with gravel wide enough to allow space for two teams, thus obviating the destructive ruts. Model stone roads should at once be begun by every State, and a central Board of Engineers be created at each State capital to direct engineers in charge of whole counties for the better construction of dirt and graveled roads.

THE CHAUTAUQUAN.

EUGENE L. DIDIER, in an article concerning the female friends of Edgar Allan Poe, retells the story of his second love. After the death of his wife Poe was left desolate. Walking through the streets of Providence one night he saw a woman in a garden, and his poetic fancy was at once impressed. Three years later he met the lady, who proved to be Mrs. Sarah Helen Whitman. He at once fell in love with her, and his affections were reciprocated. Why they were never married has always remained an unexplained mystery. To the end of their lives they loved each other; but for some reason, known only to themselves, the lady refused to marry him.

Mr. Charles Barnard exhorts business and professional men to greater care with their bodies, and holds up to them for an example the athletes, whose patient training and sustained temperance result in such magnificent bodily development.

The magazine contains two very interesting descriptive articles, one on Havana, by James Knapp Reeves, and one on the great West, from California to St. Paul, by Fannie Barbour.

LIPPINCOTT'S.

THE September *Lippincott's* rejoices in the appellation of a "California Number," and things Pacific have full sway in it, beginning with a Californian novellette, "The Dooms-Woman," by a Californian authoress, Gertrude Atherton, and ending up with "The Topography of California," by W. C. Morrow.

Mr. H. De Young writes on "Californian Journalism," telling of the pioneer editors, Colton and Semple, who, in 1846, printed the *Californian* on Mexican cigarette paper, with a hand-press that boasted of no w's in its fonts. "The ingenious American was forced to make two v's serve for the missing letter. By the same irony of circumstances that was seen in all early California history, this newspaper, printed with Spanish type on Spanish paper with Spanish ink, was used to advocate the new American régime and to favor the pretensions of the Bear Flag party." California was the home of originality in journalistic methods. "The majority of the men who have left their impress on California journalism learned what they knew in a printing office; the hard practical school of a newspaper was their college; they had no leisure for broad culture, but the sweat of their brows acted as a mordant in fixing what they learned. They were far-seeing and filled with the spirit of enterprise which attempts everything and never knows failure. It is the greatest compliment to the men who founded and shaped

the California journalism of to-day that, though out of all touch with the East, they actually anticipated many of the changes and improvements made in New York, Philadelphia and Chicago during the last fifteen years. Before the overland railroad was known, and when the telegraph was not to be counted on for effective service over the Plains and the Sierras, illustrations were used freely in my own paper in the daily issues, and a special feature was made of the Sunday paper, which had a distinctive head. The *Chronicle* was the first daily newspaper in the country to issue what has now become so universal—a special Sunday number, of extra size, filled with letters, sketches, fiction and miscellaneous reading matter. This has now become so common that it is difficult for one to realize the hard fight made in many cities to establish Sunday newspapers."

MUNSEY'S.

MUNSEY'S MAGAZINE gives place to a short sketch of Andrew Carnegie, which is scarcely in the critical spirit, but rather catching to the eye, as furnishing a record of the canny Scotchman's wonderful rise into prosperity. "At ten he left his native Scotch town of Dumferline and came alone to America. Arrived there with a single sovereign in his pocket, he had walked the streets of New York for days vainly seeking employment. Thence he had gone to the Quaker City, where he had got work at firing a small stationary engine in a factory cellar. He left the cellar for a telegraph office as soon as he had mastered the geography of Pittsburgh well enough to deliver messages." The youngster persuaded the operator to teach him something of telegraphy, became a Pennsylvania Railroad operator, and at once came to the fore by inventing a new method of train dispatching. After that his rise was regular and rapid to his present position of head of the mammoth manufactories which bear his name, and to a fortune estimated at twenty millions. Mr. Carter H. Hepburn, his biographer, does not touch on the Homestead matter except to say that Mr. Carnegie has not received justice in the popular verdict. "It is not strange that after such a life of toil as his has been he should in his fifty-seventh year have laid the burden of business wholly aside. It is stated, and no doubt correctly, that the management of the corporation that bears his name is entirely in other hands."

Mr. John B. Blake treats the subject of Free Trade in America by selecting a pleiad of Free Traders—Col. William R. Morrison, Congressman Springer, Senator Carlisle, Colonel Watterson and Senator-elect Roger Q. Mills—and sketching their lives and political significance.

THE CALIFORNIAN ILLUSTRATED MAGAZINE.

THE *Californian Illustrated* has another excellent number—especially good when its youthful existence is considered—of which the most noteworthy article is Prof. Elliot Coues' in answer to the question, "Can Ghosts Be Photographed?" Whatever the more conservative reader may think of the subject, every one will agree that Dr. Coues has handled it in a most interesting and sensible manner. While he is sufficiently cautious and ware of the wrath of Psychic Researchers to state that he has no evidence that ghosts can't be photographed, he exploits a most exhaustive collection of so-called spirit photographs, and proves that they, at least, are all spurious—the work of tricksters and charlatans. There are capital half-tone reproductions of the more noted frauds, some of which men have seriously and reverently kept by them as indubitable proofs of immortality. "It is a matter," says Professor Coues, "of prepared plates, repeated exposures and

peculiar management of the lights and shades. Any one can do it who can catch a live sitter for the centerpiece, acquire a number of photographs or printed cuts of other people," and apply certain methods of technical manipulation. The writer exposes boldly and by name several of the famous "spirit photographers."

William Lawrence Merry writes about the financial aspects of the Nicaragua Canal, arguing strenuously against offering the stock in Europe. He thinks that in such a case England would get a controlling interest, would "boss" the canal, and that the Monroe doctrine would be shattered. He is enthusiastic over the monetary prospects, figuring it out that a gross revenue of sixteen millions will be incoming the second year. "The cost of operation and maintenance should not exceed one million dollars per annum under ordinary conditions. The interest on one hundred million dollar bonds will amount to three million dollars, and, deducting two million dollars per annum for sinking fund, there will remain ten per cent. per annum net revenue on the extreme cost of one hundred million dollars. The units of cost in the engineer's estimate are generally higher than the work can now be done for, especially as regards dredging, for which twenty to thirty cents per cubic yard is allowed. Machinery can now be produced which will do this work for one-fifth the estimated cost."

THE LAKE MAGAZINE.

HERE appears this month the second number of the *Lake Magazine*, a periodical published at Toronto, Canada. It is unpretentious in appearance, but within its sixty-five pages it has managed to incorporate a large amount of interesting and valuable matter. It is a welcome addition to current periodical literature.

The chief feature of the current number is an article on "The Future of Canada," by the Attorney-General of Nova Scotia. An extended review of this article will be found in another department.

There are two biographical sketches of very interesting Canadian personages, who are not so well known in the United States as they deserve to be. The first relates some of the marvelous deeds of prowess accomplished by Joseph

Montferrand, the Canadian athlete. This man was of Herculean mold, but he never abused his splendid powers and never became a professional pugilist. Born in 1802, he lived his sixty-two years of life in stormy days, when might was law, and his great might was always used on the side of right and justice.

The subject of the second sketch is Pauline Johnson, the Indian poetess. She is the daughter of a Mohawk chief and an Iroquois woman. Her parents were people of rare culture, and from them the daughter, now a woman advancing toward middle life, inherits her gift of expression. Though thus cultured and educated, her poetry retains the under note of savagery, and this sometimes bursts forth in almost cruel strength, as in her poem, "As Redmen Die." This poem contains sixty ten-syllable lines, and was composed in less than forty minutes, so intense was the fever of passion which inspired it.

Mr. J. L. Payne finds "A New Social Problem" in the fact that women are crowding into the masculine walks of life.

GODEY'S.

THE veteran *Godey's*, pioneer among American magazines, comes out for October resplendent in new cover and make-up generally. It is sixty-two years since Louis A. Godey founded the famous *Godey's Lady's Book*, which proved a vantage-ground on which so many then and since famous writers wielded their pens. The new magazine which has arisen from the ashes of its illustrious parent retains few ancestral traits except the distinguishing one of the colored fashion-plates, which in this initial number represent among other notabilities Mrs. Depew and Mrs. W. K. Vanderbilt. The literary *pièce de résistance* is a novelette by John Habberton, "Honey and Gall," which is announced as a "Companion" to "Helen's Babies," the inimitable piece of work which won that author his name. Mrs. Henry Ward Beecher conducts a "Home Department," and in this number Miss Mattie Sheridan writes on the subject of "The Next Lady of the White House." Well-selected poems and other short articles make *Godey's* quite attractive; delicate and suggestive half-tone illustrations are used with good effect throughout.

THE FRENCH REVIEWS.

THE REVUE DES DEUX MONDES.

IN the number for August 1 M. George Cogordan has an historical article on Cardinal Maury, based on the two volumes of his "Diplomatic Correspondence and Unpublished Memoirs," recently brought out at Lille by Mgr. Ricard. "Maury," the reviewer tells us, "was a priest of the eighteenth century, when the current idea of the clerical character was not an excessively austere one. The Church was a career like any other—the law or the army, for instance—with this difference, that promotion was not bought, and that a certificate of nobility was not an indispensable condition of taking orders. A man entered the Church without considering the necessity of any special vocation; all that was consulted were the *convenances* of fortune and family. For the younger sons of a great house the clerical career obviated some of the inconveniences attaching to the right of primogeniture. For *roturiers* it was a passage from the third rank in the State to the second. For a young man without means, or the support of powerful connections, but intellectually well endowed, and desirous of rising above mediocrity, it offered more attractive prospects than any other." Maury, a shoemaker's son from the neighborhood of Avignon,

certainly entered the Church as a means of getting on in the world, rather than from any other motive, and he certainly got what he wanted. He was not a great orator, but a clever speaker and skillful courtier, and was appointed Court preacher without much difficulty. He was not a literary man by instinct. He ceased writing when he had gained his immediate end—his election into the Academy. He was neither an observer nor a thinker. His correspondence is singularly deficient in general ideas, in broad views, in a comprehensive grasp of facts. Events and men interested him only so far as he could see, in the first, opportunities to seize or dangers to avoid—in the second, auxiliaries or opponents. He was, in some respects, the very type of a successful man. But success is not complete unless connected by the elevation that only comes with dignity of life and elevation of character. And character was precisely what Maury wanted. A courtier of Louis XVI, the Pope, and Napoleon, and Louis XVIII, in succession—he was faithful neither to persons nor to principles. The stone which marks his grave in the church of Santa-Maria in Vallialle, at Rome, is without an inscription—by the express order of Pius VII. Perhaps, the reviewer concludes, the Pope was kinder to his

memory than the ecclesiastic who, by editing his *Memoirs*, has once more drawn public attention to him.

M. Eugène Guillaume writes on some recent discoveries in the Pantheon of Agrippa. A young French architect, M. Chedaune, has, by his researches, thrown much fresh light on this structure. He has discovered that the whole of the cupola was built in the time of Adrian, and that the only part of the building, if any, which can be attributed to Agrippa is the vestibule, which former observers had been inclined to regard as a later accretion. He has also solved various problems which have puzzled architects for centuries, but which, with their solution, will be readily intelligible only to the initiated.

M. Vicomte d'Avenel continues his "History of Prices," of which the present installment is headed "The Credit and Ruin of Capitalists in Ancient Times," and contains some interesting facts about the Jews and Lombards, as bankers, in the Middle Ages.

M. Ferdinand Brunetière contributes, as the sixth of his "Études sur le XVIIe Siècle," an excellent paper on Bayle, the author of the once famous but now almost forgotten "Dictionnaire Historique et Critique," which may be said to be the precursor of all modern encyclopædias. His books, says M. Brunetière, are but series of digressions, each of which leads on to the next, almost at hazard, in the utmost confusion, and with no other limit to their production than the limits of Bayle's knowledge or the caprice of his fancy. "This man was born to tell us, in alphabetical order, everything that comes into his head, and this is why his principal work is a dictionary." The whole article reminds one of a historico-literary study by Mr. Saintsbury or Mr. Gosse.

M. Julien Decrais, in an article on "Foreign Immigration into England," gives a clear and vivid *aperçu* of the sweating system and its causes, and explaining in detail how it is fed by the constant incoming of pauper foreigners. But he has no conclusion to suggest except that strong measures will become necessary sooner or later, and that the only measure likely to be effectual is the total exclusion, by law, of such immigrants. Such a law, he says, is contrary to English traditions and instincts, but the force of circumstances, he thinks, will gradually change the direction of public opinion.

M. G. Valbert's contribution this month consists of a very laudatory review of "The Real Japan"—a book, whose author he describes as "the most cultured, learned and fortunate of journalists." The part of the book most interesting to M. Valbert is that dealing with the probable effect of Western influence on Japan, which he finds less complete and definite than Mr. Norman's brilliant descriptions of the surfaces of things. What will be the issue? Imported institutions are rarely in accordance with the traditions of a country—and the question is, which of them must go? It seems impossible to answer this at present.

In the mid-August number, M. Nourrison, of the *Institut de France*, writes on "The Library of Spinoza," making a recently discovered catalogue of that great thinker's books the text for a pleasant essay with much curious detail. M. Joseph Texte's paper on "Mrs. Browning's Philosophy" is noticed elsewhere, as also M. J. Fleury's on "The Crossing of the Channel Tunnel. Bridge or Ship." There remain besides M. A. Müntz's very technical article on "Phosphates in Agriculture," and the first installment of M. P. Gault's "Journey to Kharizm," in Central Asia, *viâ* Petro, Alexandrof and Khiva. French travels are usually picturesque and readable—when not too exclusively devoted to scientific detail—and this is no exception, but we have no space to quote from it.

THE NOUVELLE REVUE.

IN the *Nouvelle Revue* for August, M. Halponin-Kan-nisski writes on "The Grand Duke Constantine as a Poet," and presents us with some specimens from his works rendered into French verse with the aid of M. Alfred Gassier. "The most prominent characteristic of the Grand Duke's work is the deep sympathy he shows for the lowly and unfortunate, the love of truth and justice which emphasizes every verse." . . . He asks somewhere, "What can the head create without the heart?" If sometimes the rough life of camps has made the poet's muse mute, it has furnished him, on the other hand, with a vast field of study, in which he did not think it beneath him to choose subjects for meditation. He puts into his poetical descriptions of the life of his regiment a great deal of freshness and spirit, and shows a sincere love for his comrades-in-arms and the humble private, whose soul he has been able to penetrate. There is a little poem, called "Death," which is truly a masterpiece of observation, grace and sincerity. It is a perfect picture of the soldier's inner life, of his needs and his suffering, and one wonders how any prince, let him be ever so much of a poet, could so far assimilate to himself the life of the lowly." . . .

Rear-Admiral Reveillière pleads, in an article the style of which recalls that of Victor Hugo's novels, for the development of the French navy and the works which are to make Paris a seaport. Ahmed Bey writes again on "Persian Society," treating, this time, of theatrical and other festivals. The dramatic history of Hassan and Hoseyn here described will be familiar to English readers from Matthew Arnold's article on "A Persian Passion Play." There is an article on "Marriage in the Japanese Middle Classes," by Motoyosi-Saizan, tutor at the Paris School of Oriental Languages; but so much has been written about Japan of late years, that most of it, though it has the advantage of being first-hand information, will not be new to English readers. The Japanese reason for dispensing with religious ceremonies at marriage is curious—it would be unlucky to call in the services of the priests who officiate at funerals. Mixed marriages, between a Japanese and a French woman or American, sometimes, though rarely, take place, and are not, as a rule, looked on with much favor, as a foreigner does not treat her parents-in-law with that extreme deference which is expected from a Japanese wife. The children of these marriages are called *ainoko*. They are very fair in complexion, with some color in their cheeks, and have "quite peculiar eyes, neither black nor blue." Their children are "usually very well-behaved," but it is difficult to bring them up in accordance with Japanese traditions.

There are, besides, an article by M. E. Watbled on "Jeddah and the Mecca Pilgrimages," a short one on the late Count Hübner, over the signature M. N. de R., and M. Edouard Fustin's "Jeunesse Grave," discussing the pessimism of the younger generation, and the gospel which M. Renan has to preach to them. M. Fustin thinks, in despite of all, that the possibilities of the old religion are by no means exhausted. It may be a selfish faith to believe that if you conduct yourself well and fulfill certain religious duties you will be sure of Paradise in the end—and the Church often teaches no more than this; yet what high hopes, what astounding devotion does religion, generously explained, make possible! "And if the day comes when philosophy no longer sustains us, and the excitement of action leaves us athirst, let us say to ourselves that we have not yet advanced far enough in life, and—being henceforth able to do so—simply appeal from M. Renan to the workman passing by with his little boy on his shoulder."

POETRY.

IN the *Atlantic Monthly* for September appears Mr. Whittier's last poem, which was addressed to Dr. Oliver Wendell Holmes on his birthday, August 29. We quote the last four stanzas:

Thy hand, old friend! the service of our days,
In differing moods and ways,
May prove to those who follow in our train
Not valuelss nor vain.

Far off, and faint as echoes of a dream,
The songs of boyhood seem,
Yet on our autumn boughs, unflown with spring,
The evening thrushes sing.

The hour draws near, howe'er delayed and late,
When at the Eternal Gate
We leave the words and works we call our own,
And lift void hands alone

For love to fill. Our nakedness of soul
Brings to that Gate no toll;
Giftless we come to Him, who all things gives,
And live because He lives.

Mrs. Elizabeth Stuart Phelps, in the *Atlantic Monthly*, draws the moral from the story of the way in which Napier captured the Fortress of Cutchee. The Sixty-fourth had lost its colors in disgrace, and Napier addressed the regiment, ordered them to capture the fort, telling them: "Your colors are on yonder height:"

Old is the tale, but read anew
In every warring human heart.
What rebel hours, what coward shame,
Upon the aching memory start!
To find the ordeal forfeited—
What tears can teach the holy art?

Thou great Commander! leading on
Through weakest darkness to strong light;
By any anguish, give us back
Our life's young standard, pure and bright.
O fair, lost colors of the soul!
For your sake storm we any height.

Thomas Bailey Aldrich's light fancy plays "Bagatelle" in the September *Harper's*, the second "game" being "a lyric to order." The poet deplures the fact that the order has found his muse not at home:

"When she is gone Depression sits
Upon your servant's heart and wits,
Invention, that had once some grace,
Shivers beside the chimney-place;
Thought wears an unaccustomed frown.
All things go wrong, upstairs and down.
My handmaid Fancy's face grows glum;
I think each hour the girl will come
To give me warning, so to speak—
And lose her wages for the week!
The nimble sprite that brings me rhyme—
My Mercury, my apt, sublime
Young Buttons—he sulks all the time.
So matters go from bad to worse;
No happy word slips down the verse
Some other happy word to wed,
Like jewels on a silken thread."

The *Century*, as usual, is strong in verse. Edna Dean Proctor sings the praise of "Columbia's Emblem" in spirited stanzas, of which we quote the last :

The rose may bloom for England,
The lily for France unfold ;
Ireland may honor the shamrock,
Scotland her thistle bold ;
But the shield of the great Republic,
The glory of the West,
Shall bear a stalk of the tasseled Corn,
Of all our wealth the best.
The arbutus and the goldenrod
The heart of the North may cheer,
And the mountain-laurel for Maryland
Its royal clusters rear ;
And jasmine and magnolia
The crest of the South adorn :
But the wide Republic's emblem
Is the bounteous, golden Corn !

ART TOPICS.

THESE appears this month a new magazine of art, called *The Art Student*. It is edited by Mr. Ernest Knaufft and is published in New York. The following paragraph quoted from the editorial page explains the purpose of the magazine : "The apology for the existence of this journal is that the editor began a series of papers upon the subject of 'Pen-Drawing for Photo-Engraving' and 'Free Hand-Drawing, a Primer,' in the *Art Amateur*, which the editor of that journal has seen fit to discontinue ; but the author, having received letters from readers all over the country desiring their continuance, has determined to publish them himself."

From this introduction it will be seen that Mr. Knaufft has a very distinct and practical purpose in view, and this first number of his magazine realizes that purpose with excellent good judgment. The little journal of sixteen double-column pages should prove a valuable addition to current art literature. It contains no rhapsodical art criticism, no vague "hints on art," but practical systematic lessons on drawing and illustrating. In short, it is an art teacher, edited by a man who not only loves his art, but is also clear-headed enough to be able to teach this art to beginners. The magazine contains neatly executed illustrations and practical designs for study.

The *Lake Magazine*, published in Toronto, Canada, broaches the interesting question of "Hindrances to Art in America," through the pen of W. A. Sherwood. He accuses photography, while admitting its value in many fields, of being responsible for the despicable condition into which portraiture has sunk, and in general finds that "there may be said to be three conditions that retard the development of art in America. The first, and of the greatest importance, is a fixed indifference to the universal principles of art. The uncertain condition of national character takes second place ; and the third, which more particularly applies to Canada, but also affects the United States, is the hiding from view in secret chambers of the works of the great masters."

In the *Magazine of Art* Mr. Harry L. Tilly has the first part of an article on "Burmese Art." Speaking of the wood-carving, Mr. Tilly rejoices that "there are no schools of art to introduce a dead level of mediocrity ; there are no contractors for art-ware to turn the workshop into a manufactory. Work is individual, and is never repeated ; for each fresh piece, it is hoped, will surpass everything that has been done before. Finish of execution is not thought of much consequence, but general effect is aimed at. This is probably because the work is all made to be set up in the open air, where even teak does not last long exposed to sun and rain." The master-carver is the *teacher*, and to his pupils he is the best carver in Burmah ; and the pupils, although they can be insolent enough to outsiders, are always respectfully attentive to their teacher

THE NEW BOOKS.

By permission from Dr. Keely's "Voyage of the Kite." Copyrighted

THE "KITE" IN MELVILLE BAY.

THE VOYAGE OF THE "KITE."

THE month of September has brought us two very pleasant additions to our knowledge of the frozen regions beyond the Arctic circle. One came in the first week of the month in the form of a narrative of the voyage of the *Kite*, written by Dr. Robert N. Keely, of Philadelphia, with the assistance of Dr. G. G. Davis and Mr. W. H. Burk, all of whom participated in the expedition sent out by the Academy of Natural Sciences of Philadelphia to accompany Lieutenant Peary. The second pleasant piece of information came in the second week of September in the form of a dispatch from St. Johns, Newfoundland, announcing the return of the steamer *Kite* from its second trip in Lieutenant Peary's interest to McCormick Bay, with the gallant Lieutenant and his devoted wife, and the other members of the expedition, with one unfortunate exception, all safe on board. The dispatch further informed us that Lieutenant Peary had been highly successful in attaining the object of his expedition, and that as a result of his bold and original yet comparatively simple plan of exploration, much precise knowledge will be added to the world's present stock concerning the heretofore vague outlines of the northern coast of Greenland.

Dr. Burk, who writes the preface to Dr. Keely's volume, says: "At a time when the whole country is interested in the efforts to rescue the little band of daring explorers who have risked their lives in the cause of science, everything that relates to their journey possesses value, particularly when it is told by one familiar with the members and with the circumstances surrounding their journey to the north. The sentimental interest relating to their fate is scarcely less than was felt concerning that of Sir John Franklin. In the one case it was the sympathy for a devoted wife which caused expedition after expedition to be sent out in search of her courageous husband. In this case another devoted wife refused to leave her husband's side, but has faced the terrors of an Arctic winter with him, and it is to rescue and relieve her that the sympathy of the people has been awakened. The relief expedition has the prayers of a nation that its quest may be successful."

The book had scarcely made its way from the press to the market when the welcome news came that the relief expedition had indeed been wholly successful. We may confidently expect, therefore, a still more elaborate book

from Lieutenant Peary. But his narrative will in no wise lessen the value of Dr. Keely's. The two books will rather be inseparable companions, and they will deserve and hold a high place in the fascinating literature of polar exploration.

The Newfoundland sealing steamer *Kite* sailed from Brooklyn, N. Y., on June 6, 1891, having been chartered by the Philadelphia Academy of Natural Sciences for a summer trip to McCormick Bay, on the west coast of Greenland, at a latitude of nearly 78 degrees north. She had on board two parties or expeditions, closely related to one another, and both under the direction of Lieutenant Peary. One of these, which was the Lieutenant's own especial party, was entitled "The North Greenland Expe-

north to Cape Farewell is one vast sheet, the product of centuries of snow storms. This ice sheet is comparatively level, the inequalities of the mountains and valleys being almost entirely obliterated by the uniform coating of ice. Only the gradual rise of the land, from the level of the sea to an altitude of about six thousand feet in the interior, is preserved. Here and there, in the interior, mountain peaks push their way through the enormous blanket of snow and ice; but except for these landmarks the surface is an almost level plain. Across this surface Lieutenant Peary made his way due east for about one hundred miles. The journey, though made under great difficulties, was without danger or extraordinary fatigue, and served to confirm him in his belief in the correctness of a theory

UPERNAVIK.

dition of 1891-92." The other was an accompanying party representing the Philadelphia Academy of Natural Sciences and headed by Professor Angelo Heilprin. It took the name of "The West Greenland Expedition of 1891." The nature and purpose of both expeditions will more readily be understood when something is told of Lieutenant Peary and his plans and theories. We quote our information from Dr. Keely's first chapter.

"In 1886, Lieutenant Robert E. Peary, of the engineering department of the United States Navy, having secured leave of absence, took passage on the steamer *Falcon* from St. Johns, Newfoundland, to Disko, in Greenland. The *Falcon* was bound on a whaling trip to Lancaster Sound, at the head of Baffin's Bay, but her captain agreed to put the Lieutenant ashore at Disko and call for him on his return voyage in the fall. Lieutenant Peary desired to examine the unknown interior of Greenland, and took this means of reaching his destination. In due time he landed and made preparations for his journey. With only a single companion—a Danish officer, who, when the Eskimos refused, had volunteered to accompany him—the Lieutenant scaled the steep cliffs which everywhere separate the known from the unknown land in Greenland, and set his foot on the mysterious ice-cap.

"All Greenland, as far as it has been explored, with the exception of a strip bordering on the coast, is one vast glacier. What are called glaciers on its shores are merely tongues of ice pushed out into the ocean by the great weight of a continent of ice behind it. From the extreme

which he had formed. *This theory, in brief, was that the true way to solve the many problems which Greenland offers to geographers, and at the same time reach the most northern point attainable by man, was to journey overland on its frozen surface, instead of attempting to work one's way northward along the shores.*

"It was several years after this first exploration that an opportunity offered to definitely prove his theory. In the meantime Nansen had succeeded in crossing the continent from east to west, although at a point below the Arctic circle. The report of the condition of the interior by this explorer agreed with what was found by Peary. A comparatively smooth ice-cap covered the entire breadth of Greenland, at least at that point, and there was every reason to suppose that the same condition prevailed still farther north.

"It is not necessary to detail the modifications which were made of the original plan projected by Lieutenant Peary. His aim was to attain the most northern point yet reached by man. This was 83° 24' north latitude, and was made by Lockwood and Brainard in 1882.

"To do so he required several things: First, he needed to be landed at a point as far north as possible, from which an expedition could start; then he must winter in this locality, so as to take advantage of the earliest possible opportunity to start on his northward journey; he had so to arrange matters as to make such "caches" of food and provisions in the fall of the year as would obviate the necessity of carrying with him all the supplies

From Dr. Keely's "Voyage of the Kite." Copyrighted.

KEELY. BURK. KINEALY. GIBSON.
IN ARCTIC ATTIRE.

that might be necessary for the journey ; finally, he must provide some means of retreat to a civilized settlement, whence he could carry back his party, together with any records of discoveries that he might make.

"To the expedition he was willing to contribute his private fortune, but more would be required. In order to prosecute his researches he needed, besides, the public support of some distinguished institution and leave of absence from the government.

"Government aid was out of the question. The sad result of the Greely expedition had been too recently announced to warrant any hope of help from that quarter. The Lieutenant, after several rebuffs, lectured before the American Geographical Society of New York and the Academy of Natural Sciences of Philadelphia. He enlisted the sympathy of and received such substantial support from these bodies that the expedition was finally sent under the auspices of the last-named institution. The desired leave of absence was obtained, and friends of the Lieutenant and the academy provided the funds.

"It would be difficult, if not altogether unnecessary, to explain how the original plan of Lieutenant Peary to reach his desired point and there deposit the supplies he would need was modified. Eventually it was determined to send out an exploring expedition by the Academy of Natural Sciences. This expedition was to charter a ship, carry Lieutenant Peary, his party, and such material as he deemed necessary, and land them on or about the shores of Whale Sound or Inglefield Gulf, in latitude 78° north, and there leave them. On the return voyage the Academy party, according as time and opportunity permitted, proposed to make investigations of the land and its natural history, and bring back such specimens and information as might be of value to the academy. The supplies for the proposed inland journey and the means of returning to civilization were to be provided by the Lieutenant himself. These included a supply of provisions sufficient to last his party, after the landing had been made, for at least eighteen months, exclusive of the fresh meats which he might obtain on the voyage or at his camp. A portion of the ship's supply of coal was also to be left with him, and, besides this, building material sufficient to construct a small house was carried, together with two large whale-boats, fitted for dragging over the

ice, rowing, and sailing, in which the retreat of the party was to be attempted in the summer of 1892. He had also a full supply of scientific instruments, snowshoes, implements for hunting, etc., and warm clothing. He had hoped to supplement his supplies by the obtaining of Eskimo guides, dogs and sledges at Godhavn. In this he was disappointed, as were also his expectations, to some extent, in the supply of fresh meat. Otherwise all that he desired was taken to McCormick Bay and left on its shores.

"The leader of what is generally known as the Peary Expedition adopted the title of the North Greenland Expedition of 1891-92. The Academy party, therefore, distinguished itself as the West Greenland Expedition of 1891. Both expeditions were under the command of Lieutenant Peary until he left the vessel. Later, the West Greenland Expedition was in charge of Prof. Angelo Heilprin. The personnel was as follows :

"Lieutenant R. E. Peary, the commander of the North Greenland Expedition, is a native of Pennsylvania, but has long been a resident of the State of Maine. He is about forty years of age, and spare built but hardy. He occupies in the government service the position of civil engineer, being attached to the Navy Department with the rank of lieutenant.

"His wife, Mrs. Josephine Diebitsch Peary, was a resident of Washington, D. C., and is a member of a well-known family of that city. She accompanied her husband on his perilous journey, and has remained over winter at the northern headquarters. She is probably the first white woman to winter in such a high latitude."

The other members of the North Greenland Expedition were Langdon Gibson, of Flushing, Long Island ; Eivard Astrup, a young Norwegian ; Dr. F. A. Cook, of Pennsylvania ; John T. Verhoeff, of Louisville, Ky., and Matthew Hensen, a young colored man who had accompanied Lieutenant Peary in his travels in Central America. All these members of the expedition have now returned in safety except Mr. Verhoeff, who perished, as is supposed, by falling over a precipice.

The West Greenland, or the Academy's Expedition, was composed chiefly of a little group of young scientists—Professor Heilprin, the curator of the Academy, being the

YOUNG ESKIMO GIRLS AND NATIVE HUT.

leader, with Professors B. Sharp and J. F. Holt of Philadelphia, as zoologists, Dr. William E. Hughes as ornithologist, Mr. Levi W. Mengell as entomologist, Dr. W. H. Burk as botanist, Dr. R. N. Keely, Jr., as surgeon, Mr. A. C. Kenealy as special correspondent, and Mr. Frazer Ashurst of Philadelphia as an adventurous young traveler.

The *Kite*, as we have said, left New York on June 6, took on coal at Sydney, Cape Breton, left that place on June 12, and passed Belle Isle, headed straight for Greenland, the first sight of which was had on June 23. The party paused and visited the town of Godhavn, with its 150 inhabitants, all of whom are Eskimos except the handful of Danish officials and their families. From Godhavn the *Kite* proceeded to Upernavik, which is in latitude 72° 40', and is practically the farthest north of the settlements that are under Danish control. Then the *Kite* had its experience of the Melville Bay ice-pack, through which it struggled very painfully, meanwhile allowing the members of the expedition an excellent chance to study arctic conditions of water, ice, land and animal life. Next came the rounding of Cape York and interesting experiences in that vicinity, together with the selection of Lieutenant Peary's camp in McCormick Bay. Materials had been taken for a house for the Peary party to winter in, and after remaining in McCormick Bay six days, the *Kite* and the Academy party—that is, Professor Heilprin, Dr. Keely and their companions—bade farewell to Lieutenant and Mrs. Peary and the North Greenland group, and steamed out of Melville Bay to return southward by leisurely stages, pausing at various points on the Greenland coast and securing many interesting archaeological, ethnological and scientific objects, and acquiring much knowledge concerning the manner and life of the hardy Eskimos.

It was Lieutenant Peary's plan to make some brief excursions and such scientific observations as were possible through the autumn and winter, and then in the following spring, when the brief arctic summer was beginning, to make a rapid sledge journey over the ice-cap, to the most northerly coast of Greenland. As the newspapers have now informed us, he succeeded in accomplishing this bold task. On May 15, 1892, Lieutenant Peary and Dr. Astrup started on the inland ice trip to the far north, and on July 4 reached a great bay some seven hundred miles from the camp in McCormick's Bay. In honor of the day they named this far northerly body of water "Independence Bay." Meanwhile Mrs. Peary remained at the McCormick's Bay Camp, the Lieutenant being absent some ninety days upon the inland trip. The *Kite* has made another trip to McCormick's Bay this summer to relieve the expedition, and all members are back again in health and safety.

The Academy's Expedition of 1891 was absent only three months, but its members were alert and made the most of their opportunities. Dr. Keely has traveled in other remote nooks of the world, and is a trained observer. He writes in a very attractive narrative style, and his volume is one that adds both valuably and agreeably to our knowledge of the landscape and the human inhabitants of the Greenland coast. It is such a book as will delight every intelligent and healthy boy. Nothing in the nature of collateral reading or study could do more to make the school study of geography profitable, than just such a narrative as Dr. Keely has here given us.

*In Arctic Seas. A narrative of the voyage of the *Kite* with Peary to North Greenland. By Robert N. Keely, Jr., M.D., and G. G. Davis, A.M. Octavo, pp. 215. Philadelphia: Edward Stern & Co. \$1.50.

RECENT AMERICAN AND ENGLISH PUBLICATIONS.

AMERICAN HISTORY, GEOGRAPHY AND EXPLORATION.

The United States: A History. By John Clark Ridpath, LL.D. Revised and enlarged. Octavo, pp. 789. New York: The United States History Company. \$3.75.

John Clark Ridpath's History of the United States has for some twenty years held a favorite place in the libraries of average American citizens—farmers and mechanics as well as business and professional men. The volume has been revised and considerably enlarged and is now in the market in a so-called "Columbus Edition." It is a truthful and well-written narrative of the historical progress of our country from its discovery down to the middle of President Harrison's administration, with statistical appendices based upon the census of 1890. The chapter covering the administrative period of President Grover Cleveland is very full, and is a *resumé* apparently quite free from partisan bias.

America: Its Geographical History, 1492-1892. By Walter B. Scaife, Ph.D. Octavo, pp. 176. Baltimore: The Johns Hopkins Press.

The most timely and important historical work that comes to us this month is Dr. Walter B. Scaife's history of American geographical development. If one would realize how little Columbus and his contemporaries knew as to the form and extent of the New World, Dr. Scaife's chapter on the Development of the Atlantic Coast in the consciousness of Europe will answer the query. The volume appears in the series of extra volumes accompanying the Johns Hopkins Studies in Historical and Political Science, and it contains in revised form a course of lectures given by Dr. Scaife to the post-graduate men of the historical department of that University last year. It deals, first, with the development of the Atlantic coast geography; second, the development of the Pacific coast geography; third, the geography of the interior and polar regions; fourth, historical notes on certain geographical names; fifth, the development of American National and State boundaries, and sixth, the geographical work of the American

government. An elaborate supplement discusses the knowledge that early Spanish discoverers had of the Mississippi. This volume is a most important addition to the literature of American historical investigation. Dr. Scaife, who was for several years a special historical student in the Johns Hopkins, went subsequently to the University of Vienna, where he was the first American student who has ever taken the degree of Doctor of Philosophy in his lines of study. His historical and geographical researches have been prosecuted in the best libraries of Europe and America, with results that entitle him to high rank in our young school of American historical scholars.

Collections of the State Historical Society of Wisconsin.

Edited and annotated by Reuben Gold Thwaites. Vol. XII. Octavo, pp. 518. Madison, Wis.: Published by the Society.

Many another State in the Union might well learn from Wisconsin what great things a State Historical Society may achieve if it will but rise to the measure of its opportunities and possibilities. The Wisconsin Historical Society has assembled at Madison one of the most inspiring libraries in America; and this has been accomplished not so much by the expenditure of large sums of money as by the rare intelligence and assiduity of the men who have composed the State Historical Society and have acted as its officers and librarians. In several special fields of American history this library is the best in the country; so that Eastern investigators must needs go to Madison to complete their researches. The society has not only rendered priceless services in its work of collecting and preserving historical materials, but it has also prosecuted special historical inquiries and published the results in a series of volumes of great value. The new volume of "Wisconsin Historical Collections" now before us is admirable in the pertinence and the variety of its contents. It is at once scholarly and accurate in its character, and also attractive and popular in its interest. It opens with a memoir—by Reuben G. Thwaites, the corresponding secretary of the society—of Mr. Lyman C. Draper, to whom more than to any other man the Wisconsin Historical Society owes the extraordinary value of

its collections. For thirty or forty years Dr. Draper was a collector of early Northwestern lore in the form of narratives of *voyageurs* and pioneers, Indian chiefs and frontiersmen generally. The solidest part of the present volume is a hundred pages or more of papers edited from the Canadian archives belonging to the period 1767-1814, and relating chiefly to Wisconsin and Minnesota. There is a paper upon the Black-Hawk war and several interesting contributions relating to early Wisconsin history. The most timely study is one by Miss Kate A. Everest, M.A., who is a fellow in history in the State University at Madison, and who has, under the joint auspices of the University's historical department and the State Historical Society, been prosecuting a study into the large German element of the population of Wisconsin. Her chapter is one of great interest, showing as it does how at one time leading Germans had hoped, with some confidence, to make Wisconsin a German rather than an English speaking State. Maps and diagrams show graphically the distribution of German population throughout Wisconsin. In the same line of investigation Mr. John Luchsinger has contributed an entertaining study upon the planting of a Swiss colony at New Glarus, Wis. Such are some of the valuable contents which make this volume a genuine contribution to American historical literature.

Rand, McNally & Co.'s Indexed Atlas of the World.
Chicago: Rand, McNally & Co. Pp. 581.

It is appropriate that in this connection, following a notice of Dr. Scaife's learned essays in American historical geography, the Wisconsin papers dealing with many topics of past and present historical development in the Northwest, and Mr. Ridpath's patriotic narrative of the whole period of our historical life on this American continent, that we should give very prominent mention to what is perhaps the greatest attempt at an American geographical atlas that has yet been made. While Rand, McNally & Co.'s enormous volume deals with the whole world, its treatment of the United States is naturally very much more elaborate than its presentation of other countries. Its publishers declare that they have adhered to the rule that geography and history are twin sisters, which cannot be separated without injury to each of them. They have accordingly printed in connection with each map an enormous amount of historical, descriptive and statistical material. The maps are newly drawn and remarkably minute. This is particularly true of the great maps of the separate States of the Union, upon which the smallest cross-roads village and country post-office is faithfully presented. The most valuable new feature, perhaps, is the series of great detailed maps of the principal cities of the United States. The size of the page is fifteen by twenty-two inches, and when it is explained that great double-page maps are given to each of such cities as New York, Brooklyn, Philadelphia, Baltimore, Chicago and St. Louis, and that full pages are given to smaller cities like Louisville, Detroit or Buffalo, the extraordinary usefulness of the atlas will at once be perceived. Accompanying each State, moreover, one finds an elaborate list of transportation routes and a full alphabetical list of all townships, post-offices and localities. The general maps of the various countries of the world are newly drawn from the most reliable sources upon an elaborate scale, and the general information upon the history and production, as well as the population and other statistical details, is astonishingly diverse and complete. This atlas is certainly a wonderful production.

Maryland's Attitude in the Struggle for Canada. By J. William Black, Ph.D. Paper, 8vo, pp. 73. Baltimore: The Johns Hopkins Press. 50 cents.

In the regular series of Johns Hopkins Studies in Historical and Political Science, the latest monograph is by Mr. William Black, who has recently received a Doctor's degree in the University department of history. Dr. Black has been happy in his theme, for his subject is at once a special and a general one. He has made scholarly use of the Maryland archives, and has also held a broad conception of the struggle between the English and the French for the possession of the Northwestern continent. He has succeeded in writing an attractive and readable narrative, covering the events of the quarter-century preceding our Revolutionary struggle from the point of view of the proprietary colony of Maryland. This monograph is another of the especially timely studies in American historical development.

Recent Archæological Explorations in the Valley of the Delaware. By Charles C. Abbott, M.D. Octavo, pp. 30. Boston: Ginn & Co. \$1.50.

From the University of Pennsylvania, in the University series of monographs in Philology, Literature and Archæology there comes to us a bright and readable report by Dr. Charles C. Abbott, curator of the Museum of American Archæology, of his recent archæological explorations in the valley of the Delaware. The monograph is full of fresh information upon the Indian relics, and the remains of pre-historic men, in that par-

ticular part of the country. Dr. Abbott makes his essay on the primeval peoples of the Delaware Valley as palatable as Miss Everest makes her narrative of the recent settlement of the Germans in Wisconsin.

POLITICS, ECONOMICS, AND SOCIOLOGY.

The Economy of High Wages. By J. Schoenhof. 12mo, pp. 431. New York: G. P. Putnam's Sons. \$1.50.

Mr. Jacob Schoenhof has for some years been an industrious collector and compiler of statistics, the principal object of his efforts being to make a series of cases against the American protective tariff. Under Mr. Cleveland's administration Mr. Schoenhof held a roving commission from the Department of State to examine into the economy of production and the state of technical education in Europe. This commission was revoked upon the incoming of the present administration. Mr. Schoenhof's studies have, however, had real merit and value. His main effort has been to show that intelligence, inventiveness, and a high moral and social standard make high wages, because they add enormously to the actual producing capacity of the workman. He would affirm that American industrial wage-earners are entitled to high pay, because they actually produce enough more than the European laborer to cover fully the difference in time-wages. His facts are largely sustained by the impartial investigations recently made by our Department of Labor at Washington, and they deserve a wide and attentive study. This book is important, because it is based upon a large induction from current verifiable facts. We are inclined to regard it as the most formidable attack which has been made upon the American protection system in any quarter since the formulation of the McKinley tariff.

What Are the Facts? Protection and Reciprocity Illustrated. By Fletcher W. Hewes and William McKinley, Jr. Paper, 8vo, pp. 126. New York: Henry F. Clark, 70 Fifth Ave. \$1.50.

Mr. McKinley himself has lent his co-operation to Mr. Fletcher W. Hewes in the preparation of a little work entitled "Protection and Reciprocity Illustrated." The book is full of charts, and tables graphically presented and printed in colors, intended to illustrate and maintain the protective theory. It is arranged for the readiest reference, and will doubtless be in much demand by Republican campaign speakers. Much of its statistical information would be valuable even to those repudiating its spirit and its conclusions.

Political Economy for American Youth. By Jacob Harris Patton, Ph.D. 12mo, pp. 297. New York: A. Lovell & Co. \$1.

Dr. J. H. Patton has prepared a new text-book of political economy, "written from an American standpoint." The volume is largely devoted to a defense of the theory and working of American protection, this being its central and pivotal doctrine. It is simply and clearly written, and follows the reasoning of Carey, Kelly, Thompson, and the Pennsylvania school in general.

The Tariff: What it Is and What it Does. By S. E. Moffett. 12mo, pp. 112. Washington: Potomac Publishing Co.

This little work on the tariff is of California origin and is a reprint of the series of papers written for the San Francisco *Examiner*. It is an out-and-out free-trade tract.

The Case Against Bimetallism. By Robert Giffen. 12mo, pp. 254. New York: Macmillan & Co. \$2.

Most of the English economists of repute are gold monometalists, but the leading exponent of these doctrines is Mr. Robert Giffen, the eminent statistician of the English Board of Trade, and the brightest luminary of the Royal Statistical Society. Mr. Giffen has published numerous important articles since 1879 upon different phases and aspects of the bimetallism controversy, and these are now re-edited and collected in a volume, apropos of the expected early meeting of the International Silver Conference. Mr. Giffen believes in the least possible governmental interference with the mechanism of money and banking, preferring to trust to the experience and sagacity of the business world. He has always stoutly held that bimetallism is a physical impossibility. He believes that no possible amount of bolstering up through international agreements and legal-tender enactments can, for any protracted period, keep gold and silver at a fixed ratio of price in the open markets of the world. Mr. Giffen handles all statistics with great force and lucidity, and his opinions and demonstrations always deserve respect. But it seems to us that, in this bimetallic controversy, he has not been quite tolerant enough of the opinions of the leading advocates of an international double standard to judge their arguments impartially.

Sinking Funds. By Edward A. Ross, Ph.D. Paper, 8vo, pp. 106. Baltimore: American Economic Association. \$1.

Dr. Edward A. Ross, lately Fellow in Political Economy at the Johns Hopkins University, who has just now entered upon his new duties as Associate Professor of Political Economy and Finance in Cornell University, gives evidence in this monograph upon Sinking Funds of a remarkably clear and strong grasp upon some of the most intricate problems in public finance. He reviews carefully the experience of England and America in managing the gradual extinguishment of their public debt through different processes of amortization—processes known to financiers under the general term "sinking funds." The little volume might have had a still larger usefulness if it had contained some additional chapters upon the practical and theoretical management of municipal sinking fund.

Dictionary of Political Economy. By R. H. Inglis Palgrave, F. R. S. Third Part. Paper, 8vo, pp. 128. New York: Macmillan & Co. \$1.

Part III. of Mr. R. H. Inglis Palgrave's Political Economy Dictionary is fully equal in interest and value to the two preceding parts. Each part consists arbitrarily of 128 pages; and although a considerable period elapses between the appearance of the successive portions, the parts begin and end with broken articles. This third part includes a large number of topics under the letter C between Ch and Co. The last topic in it is, "Conciliation, Boards of;" but alas! when one turns to read the article on this exceedingly timely topic, he finds only seven lines, and he must wait several months for the next part in order to get the body of the article. This Part III. includes articles upon Chambers of Agriculture and Commerce, Charity Organization and State Charity, Children's Labor, Christian Socialism, Clearing Houses, Coinage, Colonies, Combinations, Commerce Communism, Companies, Competition and numerous other important economic topics, with brief personal sketches of Chevalier, Cobden, Colwell, Comte, and various other deceased economists. The articles are especially valuable, because they are written by economists of reputation and are signed.

The Theory of the State. By J. K. Bluntschli. Second edition. 12mo, pp. 575. New York: Macmillan & Co. \$3.

Many students who have used Dr. Bluntschli's work upon the theory of the State, in its original German form, have wished that it might be published in a careful English translation, and they may well feel some sense of gratitude to the group of young Oxford historical scholars who have executed a trustworthy and adequate translation. In their preface they describe Bluntschli's work as an attempt to do for the European State what Aristotle accomplished for the Hellenic. This book is something of a necessity to the student of modern institutional history and general political science.

EDUCATION AND TEXT-BOOKS.

History of Modern Education. By Samuel G. Williams, Ph.D. 12mo, pp. 395. Syracuse: C. W. Bardeen. \$1.50.

The title of this volume can scarcely suggest the rich and varied interest of the materials which it includes. It sums up for us the story of educational methods and systems in all countries from the middle ages to our own time, with sketches of many prominent educational leaders, their theories and their contributions to educational progress. Dr. Williams is the professor of the science and art of teaching in Cornell University, and this work is the outgrowth of his lecture courses.

University Extension No. 1. Edited by George F. James, M.A. Octavo, pp. 521. New York: Macmillan & Co. \$1.75.

The great progress that the University Extension movement has already made in the United States can probably be appreciated by no other means so readily as by an examination of the first bound volume of the serial publication entitled "University Extension." This volume is issued as a Handbook of University Extension No. 1, and is edited by Mr. Geo. F. James, general secretary of the American Society for the Extension of University Teaching.

The Art of Poetry. By Albert S. Cook. 12mo, pp. 320. Boston: Ginn & Co. \$1.25.

The admirable manner in which the university professors are now preparing materials to aid students in the critical study of literature is well exemplified in this piece of schol-

arly editing and annotating. Prof. Albert S. Cook of Yale has brought together three famous poems upon the art of poetry. The first, by the Latin poet Horace; the second, by Vida, an Italian poet of the Renaissance period, who wrote, however, in Latin rather than Italian; and the third, the French poet Boileau. The three poems are printed in the original languages and also in the standard English translations of Howes, Pitt and Soame. Professor Cook has supplied abundant notes and references.

A Companion to the Iliad for English Readers. By Walter Leaf, Litt.D. 12mo, pp. 411. New York: Macmillan & Co. \$1.

Another equally admirable and far more elaborate volume illustrating this new tendency to provide adequate scholarly helps for the student, is Mr. Walter Leaf's Companion to the Iliad. Mr. Leaf has done excellent work in editing Greek texts, and was associated with Mr. Andrew Lang and Mr. Ernest Myers in preparing the English prose translation of the Iliad. The present volume contains an extended introduction, which will add greatly to the general knowledge and interest of the student who approaches the reading of Homer. This is followed by running comments, historical, archaeological, literary and critical, upon successive points in the twenty-four books of the Iliad, which might otherwise not be clearly understood or fully appreciated by the student. Certainly every American teacher of Greek will find it advantageous to use this volume, and many of them will have pleasure in recommending it to their pupils.

The Beginner's American History. Dr. D. H. Montgomery. 12mo, pp. 324. Boston: Ginn & Co. 70 cents.

The children of the rising generation can have no excuse for ignorance of the principal facts in the history of their country, for the recent text-books have been made particularly readable and alluring. The latest of these, Mr. Montgomery's "Beginner's American History," is full of plans, maps and sketchy little illustrations, which make it very attractive. One of its best qualities is its appreciation of the fact that our real history has included many things beside our political annals. Thus nothing could be better in its way than the chapter about Professor Morse. The whole book is based upon the principle that children are interested in personality and will most certainly group facts about heroes. And so we have as chapter heads the names of twenty-nine men, beginning with Columbus and ending with Abraham Lincoln.

A Greek Grammar. By William W. Goodwin. Revised and Enlarged. 12mo, pp. 451. Boston: Ginn & Co. \$1.65.

It used to be thought that the young student of Latin and Greek must first learn his grammar, after which, if time permitted, he might be allowed to try to learn somewhat of the reading and writing of those two formidable old languages. Nowadays the best teachers believe that the best way to learn Latin and Greek is to go directly into the literature, after the least possible study of grammatical forms. The details of grammar are to be learned in connection with points that actually arise in the reading. This more rational use of Greek grammar leads to the enlargement and improvement of the text-books. Professor Goodwin's new and enlarged edition of his admirable Greek grammar is a good instance of the enlightened adaptation of such a book to the requirements of the best modern systems of teaching.

Phonetic Shorthand. A Manual for the Use of Schools and Private Students. By William W. Osgoodby. Fifth edition. 12mo, pp. 118. Rochester, N. Y.: W. W. Osgoodby. \$1.50.

Young persons desirous of becoming competent shorthand writers will find in this manual a most thorough and satisfactory guide to the acquisition of the art. Mr. Osgoodby has been a shorthand writer for nearly forty years, and his book is a marvel of simplicity and compactness. His system is entirely devoid of all those impracticable devices invented by theoretical authors of works on shorthand, which are so attractive to the novice, but so utterly useless in practical work.

Macmillan's Shorter Latin Course. By A. M. Cook, M.A. 12mo, pp. 218. New York: Macmillan & Co. 40 cents.

Cæsar's Helvetian War. Adapted to the use of beginners. By W. Welch, M.A. New edition. 16mo, pp. 126. New York: Macmillan & Co. 40 cents.

From the press of Macmillan & Co. come two small books of first-rate value for beginners in Latin. The one is a first

book in Latin, well adapted for use in high schools, and the other is an Americanized edition of a popular little English arrangement of Cæsar's account of the Helvetian War.

JUVENILE.

The Wild Pigs. A Story for Little People. By Gerald Young. 12mo, pp. 131. New York: Macmillan & Co. \$1.25.

"The Wild Pigs" is a very humorous and amusing story for little people, and in its literary quality is so good that it may well be recommended to the most fastidious households. Its illustrations are numerous and well drawn.

RELIGION AND PHILOSOPHY.

An Introduction to the Study of the Books of the New Testament. By John H. Kerr, A.M. 12mo, pp. 353. New York: Fleming H. Revell Co. \$1.50.

Mr. Kerr is the pastor of the Central Presbyterian Church of Rock Island, Ill. His Introduction to the Study of the New Testament consists of a series of chapters giving the historical circumstances and setting of the production of each of the twenty-seven books. His point of view is conservative, and the volume does not set forth the newest and most critical views; but it is thoroughly intelligent, and can be recommended for the general use of Bible students and Sunday-school teachers.

The Making of a Man. By Rev. J. W. Lee, D.D. 12mo, pp. 372. New York: Cassell Publishing Co. \$1.50.

The Rev. Dr. Lee, of Atlanta, Ga., is the author of a book which cannot be too warmly commended for its elevated views of the meaning of human life and its lucid and brilliant style. It is well named, "The Making of a Man." It deals with nature and the material world about us as merely existent for the sake of the highest and best possible development of the human type, and it treats successively of the provision for the ethical nature of man, the provision for his social nature for his intellectual nature, moral nature, æsthetical nature, and spiritual nature. Finally, it discusses the permanence of the completed life of man. It is a book which should be placed in the hands of intelligent young men to inspire them with a sense of their own possibilities of development and character.

First Steps in Philosophy (Physical and Ethical). By William Mackintyre Salter. 12mo, pp. 156. Chicago: Charles H. Kerr & Co. New York: The Humboldt Publishing Company. \$1.

Mr. Salter is well known as a profound philosophical thinker and writer. The first part of this little volume contains his philosophical analysis of the meaning of the physical world, while the second part deals with ethics from the rational point of view, and contains the substance of the lectures given at the Summer School of Philosophy last year by Mr. Salter.

SCIENCE AND MEDICINE.

A Treatise on Asiatic Cholera. Edited and Prepared by Edmund Charles Wendt, M.D. Octavo, pp. 416. New York: William Wood & Co. \$3.

The most complete work that the American sanitarian, physician or journalist can find upon the history, nature and proper treatment of Asiatic cholera is the volume edited by Dr. Edmund Charles Wendt of New York, with the assistance of Dr. Peters of New York, Dr. McClellan of the United States Army, Dr. John B. Hamilton of the Marine Hospital Service, and Dr. George M. Sternberg of the John Hopkins University. It contains a general history of cholera epidemics in Asia, Europe and America, followed by chapters on the etiology and symptomatology of the disease, and upon its diagnosis, with the methods used by bacteriologists in the study of cholera germs. Dr. Sternberg writes upon the destruction of cholera germs, and Dr. Hamilton upon the prevention of the spread of cholera. Dr. Wendt discusses the treatment of the disease, and the book as a whole is full of timely value, although it first appeared several years ago.

FICTION.

Lady Susan, and the Watsons. By Jane Austen. With a Memoir of Jane Austen by her Nephew, J. E. Austen Leigh. 12mo, pp. 352. Boston: Roberts Brothers. \$1.25.

Letters of Jane Austen. Selected and compiled by Sarah Chauncey Woolsey. 12mo, pp. 343. Boston: Roberts Brothers. \$1.25.

In the Jane Austen series, so beautifully republished by Messrs. Roberts Brothers, there now appear two volumes especially noteworthy. The first contains two hitherto unpublished stories by this famous writer of two generations ago; and although the manuscripts have been laid away in the desks of her descendants as not in form for publication, and as not equal in quality to Miss Austen's complete and famous works, their appearance nevertheless is extremely interesting. The volume also contains a very complete memoir of Jane Austen by her nephew, J. E. Austen Leigh. The other volume is a selection from the letters of Jane Austen, edited by Sarah Chauncey Woolsey. Both volumes have frontispiece portraits of Miss Austen. There could hardly be a greater contrast than that presented by the letters of Fanny Burney and the letters of Jane Austen, living as they did through the same stirring period of the French Revolution. Miss Austen seems to be wholly absorbed in the delightful quiet of rural England, and her letters scarcely hint at the surrounding world of excitement and turmoil; while Miss Burney was a very part of the throbbing national and international life of her time. But Miss Austen's letters in their way are no less interesting and edifying than Miss Burney's. These two volumes lend very marked additional value to the uniform set of Miss Austen's works.

A Spoil of Office: A Story of the Modern West. By Hamlin Garland. Paper, 12mo, pp. 385. Boston: The Arena Publishing Co. 50 cents.

"A Spoil of Office" is Mr. Hamlin Garland's best novel thus far. It deals with the new types of manhood and womanhood, and the new issues of life and motive in the northern Mississippi Valley. The hero is an Iowa boy, whom through his school days and early struggles on the prairie farm we follow to the halls of Congress. We have strong side-lights thrown upon the agrarian movements of the West and upon the low standards and actual corruptions that taint our American political life.

Joshua Wray. A Novel. By Hans Stevenson Beattie. 12mo, pp. 307. New York: United States Book Company.

It may somewhat surprise those who have heard the name of Mr. Hans S. Beattie solely in connection with New York Democratic politics, to know that he has written a new novel, with as pronounced and serious an ethical purpose as the fiction of Mrs. Humphrey Ward herself. Joshua Wray, the hero of the book, is a man who, through most bitter family trials and misfortunes, is brought from his discipleship of Comte and the positivist philosophy to a faith in the larger outlook of Christianity, which expects a future world to rectify the inequalities of this one. The novel has strength of plot, and much merit in its ethical and philosophical discussions.

An Heir to Millions. By Edgar Fawcett. 12mo, pp. 307. Chicago: F. J. Schulte & Co. \$1.25.

A Modern Dick Whittington. By James Payne. Paper, 12mo, pp. 334. New York: John A. Taylor & Co. 50 cents.

Phil May's Summer Annual. London: The Central Publishing and Advertising Co. 1s.

"This annual makes no pretence to elevate or to instruct. The sole purpose of it is to interest and amuse. It is possible that no one will be the better or the wiser for having read it; but no one can be the worse, and some, perhaps, will be the happier." Such is the very candid preface with which Mr. Phil May, caricaturist for *Pick-Me-Up*, opens the 1892 number of his annual collection of stories, poems and sketches, a publication expressly and avowedly intended for summer readers, who read to kill time. It is a refreshing little volume, cleanly printed and handsomely illustrated by the editor, not only with pictures which illuminate the stories and poems, but also with pointed caricatures of many-sided social life. Its list of contributors is a notable one. There are stories by James Payn, David Christie Murray, Augustus M. Moore and Barry Payn; poems by Adrian Ross and H. D. Trail, and a sketch of a visit to Charles Dickens at Gad's Hill, by George Augustus Sala. These are a few of the leading features of the volume.

POETRY AND THE DRAMA.

The Song of America and Columbus; or, The Story of the New World. By Kinahan Cornwallis. 12mo, pp. 278. New York: The Daily Investigator. \$1.
