Annual Index and Guide

TO THE Periodicals of 1891.

This Index covers the periodical literature of the year 1891, and contains many improvements on the issue for 1890. Its main features are:

(1) A carefully prepared "biographical" notice of the leading magazines and reviews of the world, describing their character, aim and scope; and giving in each case the name of the editor and publisher, the address of the office and the price of the periodical.

(2) A complete classified index of all the articles that appeared in the chief English and American quarterlies and monthlies—120 in number—each entry showing (in addition to the title of the article) the name of the magazine, the number of the volume, the month and the page. The author's name, where possible, is included; and where maps and illustrations accompanied the article, these are also indicated.

It is incomparably more elaborate than any other in the same field and contains many portraits of Editors and Writers. Bound in stiff Cloth Covers and Gold. Price, \$2—Sent by Mail, Post Paid.

THE REVIEW OF REVIEWS,

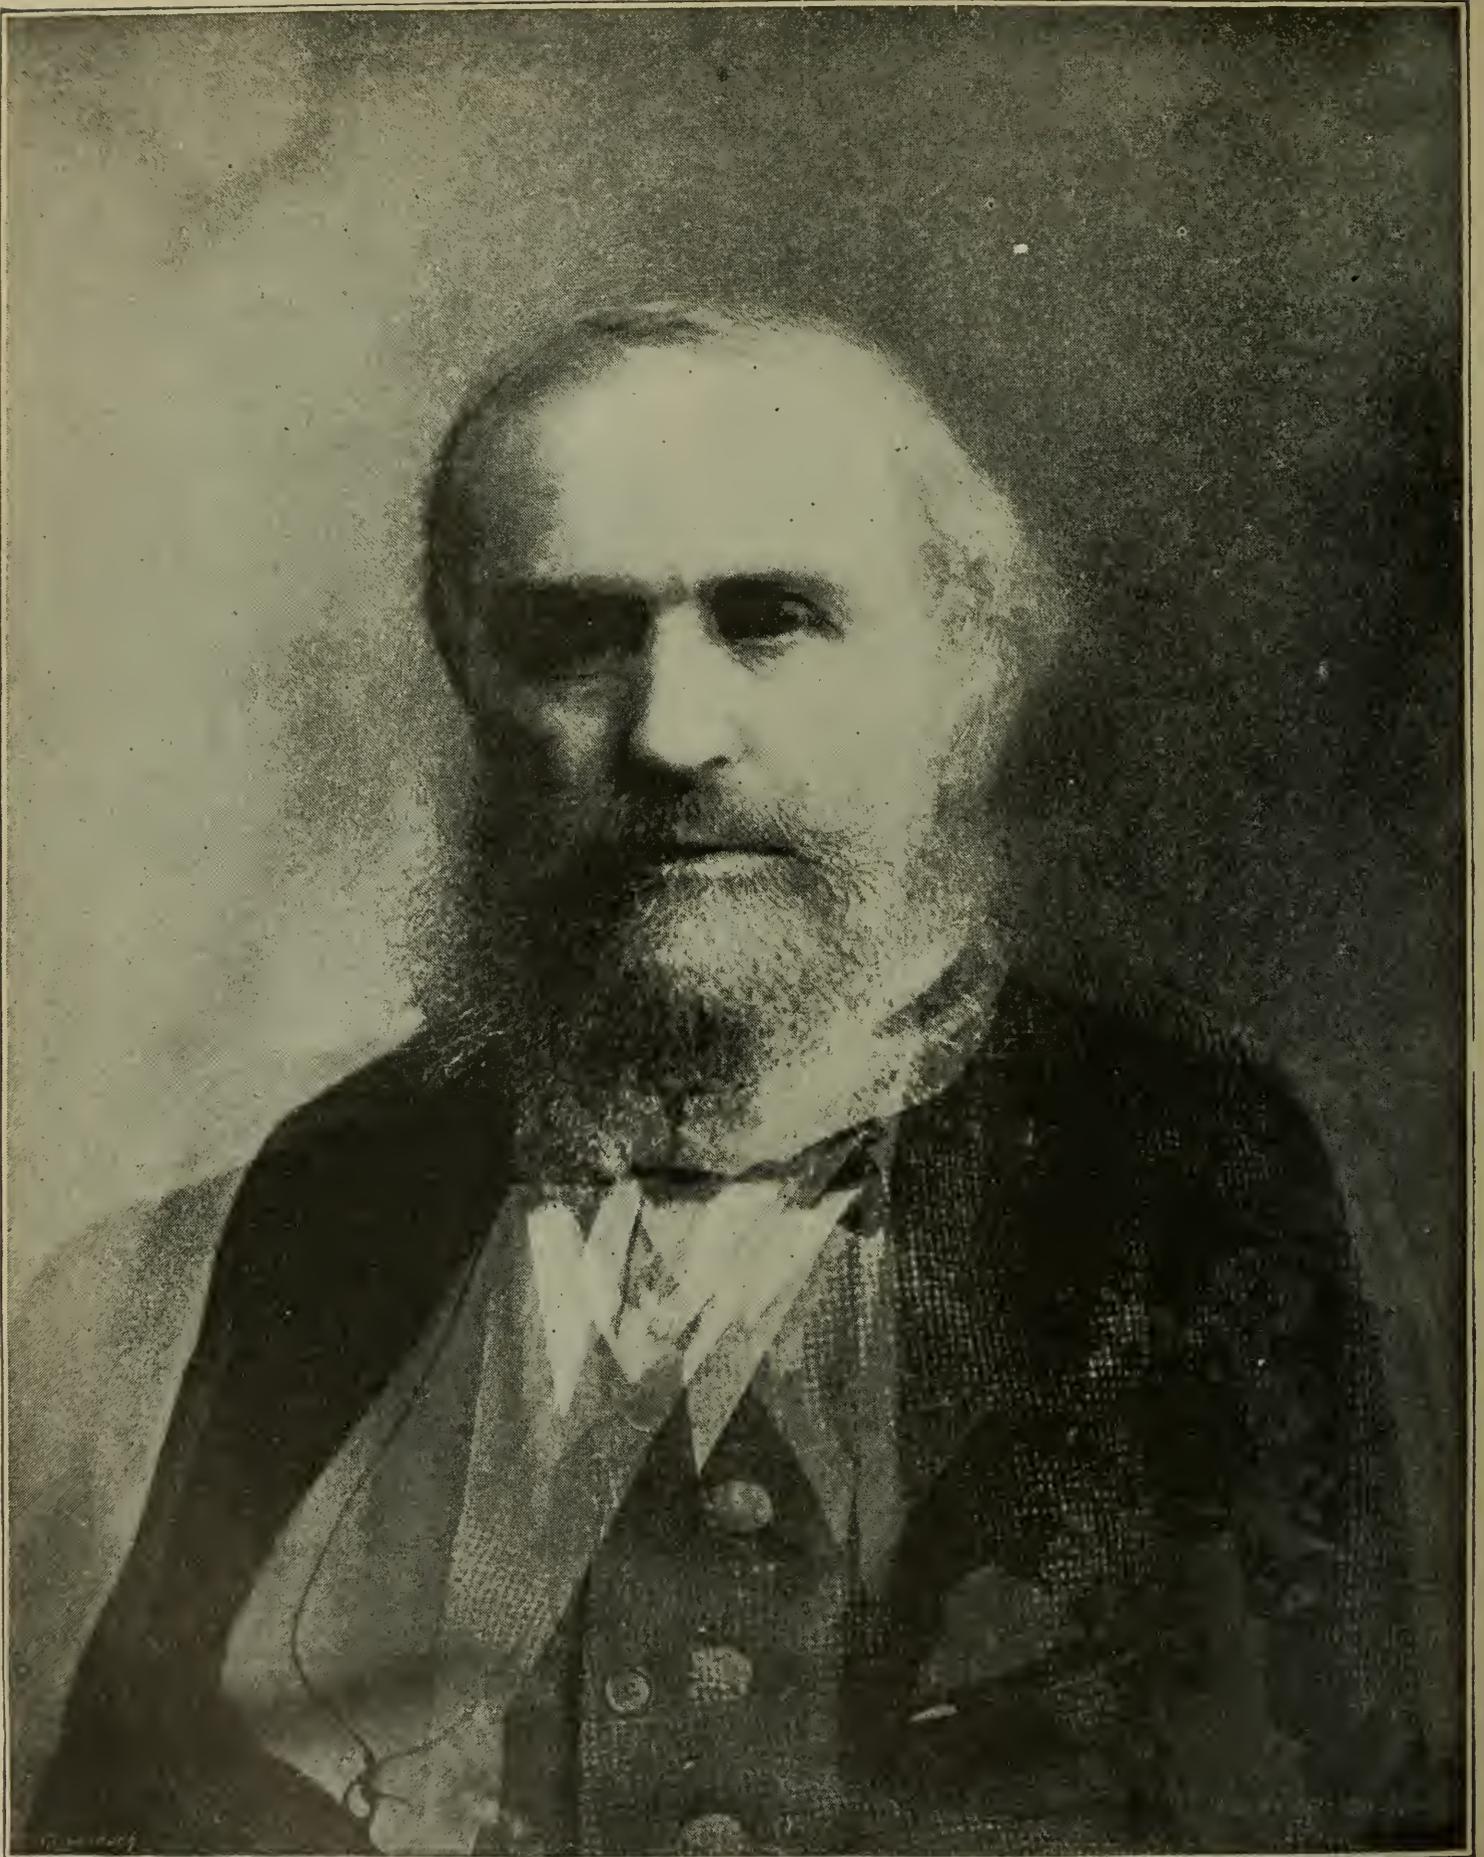

13 ASTOR PLACE, NEW YORK.

THE REVIEW OF REVIEWS, AMERICAN EDITION, EDITED BY ALBERT SHAW

The Review of Reviews is published each month in New York and London, the two editions differing in many features, but publishing numerous articles in common. The English Edition is edited by W. T. Stead, Mowbray House, Norfolk St., Strand, London.

CONTENTS FOR NOVEMBER, 1892.

A Composite Photograph of Mr. Gladstone's CabinetFrontispiece.	The Uncrowned Queen of American Democracy 427
The Progress of the World—	With portraits of Miss Willard, Miss Willard's Mother and views of the Women's Christian Temperance Temple at Chicago and Eastnor Castle.
Conduct of the Campaign..... 387	Leading Articles of the Month—
As to Venal Voting..... 387	The Vote Market..... 445

THE REVIEW OF REVIEWS.

VOL. VI.

NEW YORK, NOVEMBER, 1892.

No. 34

THE PROGRESS OF THE WORLD.

Conduct of the Campaign. As against the political pessimists who are giving the United States so evil a reputation for corrupt practices and for general decay of electoral honesty, the REVIEW OF REVIEWS is disposed to assert, as a part of the real and valuable "progress of the world," that a more orderly, reputable and enlightened national campaign has probably never been conducted in this country than the one that will have closed with the polling on November 8. The contest has been singularly good-natured. There has been so little of personal malignity expressed against leading candidates that its absence has been widely noticed and approved. Both President Harrison and ex-President Cleveland have been treated, for the most part, with studied respect by political opponents. Campaign manners have thus shown a gratifying improvement. The country has once honored both these gentlemen by giving them a term in the White House, and it believes that they are both men of exceptional capacity, character and patriotic devotion. It prefers to hear them both well spoken of, and to have each regarded by common consent as a fit representative of a great national party. Not the least reason, perhaps, why the campaign has been so comparatively devoid of excitement is the fact that Mr. Cleveland and Mr. Harrison are regarded by the community at large as alike in being men of normal and conservative tendencies—"safe" men—and also as alike in possessing strong individual purpose and tenacity of will. In case of Republican success and the subsequent death of the President, Mr. Whitelaw Reid would step into the White House with the reputation of a discreet and careful man, who had been seasoned and prepared by wide experience and much arduous responsibility. It is unfortunate that the second place on the Democratic ticket is not occupied by a candidate of a corresponding reputation for conservatism. But Mr. Stevenson's personal standing is not questioned, and heavy responsibilities might develop in him unforeseen traits of seriousness and caution. The essential attitude of Mr. Harrison and Mr. Cleveland toward many leading questions is not very dissimilar; and

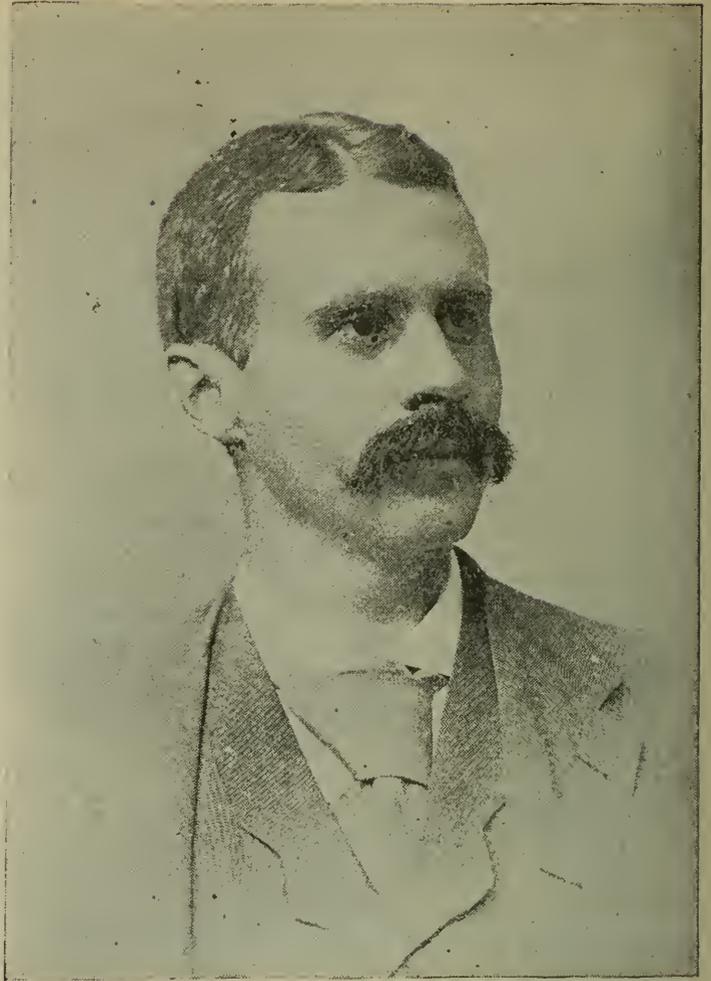

the prevailing confidence in both men accounts in part for what seems a commonplace and apathetic quality in the contest.

As to Venal Voting. The main reason, however, for the lack of noise and smoke and grime and violence in the campaign is due to a change of method. The transition began several years ago, and its full significance now begins to be apparent. It is smokeless and noiseless powder that has been introduced, with a corresponding revolution in tactics. What is the new method? Perhaps some of the readers of recent magazine articles (witness, for example, those summarized in our own department of "Leading Articles of the Month") will answer that the new method is simply the very elaborate and stealthy organization of vote-buying, the principal business of campaign committees being to see how many venal votes can be actually bought and safely delivered with the great sums they collect and disburse. This is an entirely wrong view. There are infected spots, truly, where the disease of electoral venality has become endemic, and where both parties seem compelled to pay their own members for taking the time and trouble to come to the polls, while an element more venal still is shamelessly selling itself to the highest bidder. These spots apparently are to be found chiefly in New England, although the disease has its small but distinct areas of infection in various other States. The real political leaders on both sides hate and deplore the accursed traffic in votes, though their henchmen are guilty of using what they claim as the only means that can now be used effectively in the infected districts. There is some reason to believe that the day is near at hand when both sides will join hands in a powerful attempt to stamp out this horrible disease, as the sanitary authorities would localize, isolate and stamp out the cholera infection. Our investigators and reformers are rendering a good service in their attempts to make a scientific and statistical study of venal voting, and the attention of the country cannot be focused too sharply upon these dangers and abuses. "Honest Politics" clubs, of inter-

partisan membership and permanent character, ought to be formed in every community for the sake of fighting corrupt methods and practices. But, after all, let no man suppose that either the National Democratic Committee or the National Republican Committee has been relying upon "corruption" as a principal weapon in this year's campaign. The new method is, on the contrary, at the very furthest remove from vote-buying

The Old Campaigning Methods. The old method in this country was that of noise, clash and enthusiasm. Its motive was very simple. All that was desired was to play upon party feeling in such a way as to get everybody magnetized or gravitated into one or other of two hostile camps. The more prejudice and hostility the better. Republicans were taught to detest and despise the name Democrat with a perfect loathing; and Democrats were taught to hate the idea and name of a Republican with a bitterness that breathed of the spirit of violent extermination. Reason was laid aside in the campaign, and passion reigned supreme. There were great parades with miles of torch-lights; and barking little cannon were dragged along the streets and discharged—if the parade were Republican, for instance—in front of Democratic headquarters, Democratic newspaper offices and Democratic saloons, for the sake of shattering the window glass. It was the host of "the Lord and of Gideon," the party of "God and morality," hurling defiance into the strongholds of the uncircumcised Philistines. The Democrats, of course, retaliated in precise kind, and with good vengeance. Those were the days of mighty barbecues. There was plenty of florid oratory, all of it meant to intensify the party excitement and to prevent any dispassionate consideration of public issues. It was the time of "roorbacks," of forged charges, of campaigning so bitter that poison and assassination, figuratively speaking, were used as adjuncts to the noise and glitter and clash of the open fight. Something of the old method remains, of course, and in certain localities it still predominates. But, so far as the central management is concerned, the old method has been largely abandoned. It has been superseded by what is known as "the campaign of education."

The New "Educational" Methods. There was always a considerable use of campaign literature. But in the former days it consisted chiefly of speeches made in Congress, reprinted at Washington and distributed under Congressmen's mailing franks. That plan has now been systematized and enormously extended. Under the disguise of quotations in speeches, several Democratic members in June or July secured the entire republication in the *Congressional Record*, in several successive installments, of Henry George's large book on "Protection and Free Trade;" and hundreds of thousands of copies printed by the Government were "franked" as campaign documents. But large as is the work of the "literary bureaus" of the National Congressional Committees

HON. JOSIAH QUINCY, OF MASSACHUSETTS,
Chief of the Democratic Literary Bureau.

at Washington, it is hardly perceptible in comparison with the colossal work that the National Campaign Committees at New York have accomplished through their "educational" agencies. Much was attempted in 1888, but all former attempts have been eclipsed by the achievements of 1892. At the head of the Democratic "educational" bureau is Mr. Josiah Quincy, of Massachusetts, the talented scion of a family distinguished for several generations by eminent and honorable public services. The exponent and chief organizer of the Republican educational campaign is the Hon. James S. Clarkson, of Iowa, who, despite any impressions to the contrary, has always, as a political manager, contended for the value of a propaganda of ideas—that is, for the most legitimate and intelligent form of campaigning.

The Vast Output of Documents. Big election funds in this country do not of necessity mean a corrupt or an improper use of money. The number of carefully written, well-edited, attractively printed pamphlets and documents issued by the two committees in this campaign will have reached more than a thousand millions of copies. These are of great variety and of a high order of excellence for their purposes. They are not free from blemishes of exaggeration and uncandor; but they are not, as a whole, scandalously abusive or untruthful, and they mark a great im-

provement in the tone and quality of campaign literature. Some of the handbooks and brochures issued on both sides are remarkably elaborate. Other publications, distributed by the tens of millions, are mere leaflets. But the aggregate literary output is so enormous as almost to challenge credulity; and a collection of specimen copies shows a versatility and ingenuity that would excite admiration anywhere. The system of distribution throughout the United States has been devised with great thoroughness.

Political "Plates" for the Newspapers. But the writing, printing and distributing of documents is only a part of the "educational bureau's" work.

Each has a large organization of reporters and journalists engaged in furnishing readable press news. Leading party men from all portions of the country are daily interviewed, and the party papers are promptly supplied—by messenger, by telegraph and by mail—with copies. Greatest of all is the branch of the work that supplies the country weekly press with electrotyped columns of political news, argument and opinion, freshly and attractively prepared. The Democratic committee regularly furnishes several hundred papers with this "plate matter," and it is said that the Republican committee use six large stereotyping establishments at different centres to manufacture and distribute several columns of plates per week to nearly two thousand newspapers.

Where the Money Goes. A portion at least of the cost of maintaining the stereotyping foundries is collected from the newspapers using the "matter;" but it is easy to see that the operations of the "educational bureau" as a whole require a vast amount of money; and this certainly is a legitimate kind of political warfare. Much money, also, is spent in efforts to bring out full registrations, and in local work to prevent fraud. Moreover, the more modern sort of political speaking, which deals in argument and appeals to the reason, and prefers many small and quiet meetings rather than a few great "rallies," is a source of a large expenditure that is not immoral or improper. It is a grave and lamentable fact that much money is corruptly used in our elections. But it is also a fact that the main efforts and main expenditures of both great central organizations this year are in strictly legitimate channels. "Political work" through Mr. Clarkson's great system of Republican clubs means a kind of propaganda that is in England regarded as in the highest sense virtuous and meritorious; and the same thing may be said of the Democratic club system and of Mr. Quincy's literary and educational bureau.

Certain Party Evasions. To a frank man the worst thing about the campaign has been certain evasions of which both sides have been guilty. Two years ago in Congress the Republicans introduced and stoutly supported a bill for the national control of federal elections. It was defeated in the Senate by the opposition of a few Republican Senators. The measure was a mistake, and most Republicans now know that it was. A large element of the Demo-

cratic party have insisted upon fighting the ghost of the so-called "Force Bill" as the main issue of this campaign. They have not scrupled to say to their followers that it is one of the main planks of the Republican platform, although it is not in the platform, either directly or by implication. Yet the Republicans, by virtue of their recent record, are morally committed to the measure in such a way that frankness and

HON. JAMES S. CLARKSON, OF IOWA,
Chief Republican Exponent of Educational Campaigning.

candor would require them to say something about it. By apparent agreement all along the line, they have determined to ignore the subject. Not one prominent Republican had—when these remarks were written, late in October—said a single frank word on this subject that they had all been discussing so voluminously two or three years before. This silly and stupid policy of uncandor will unquestionably have cost the Republicans many votes. Why could not each individual Republican speaker have spoken simply his own views, since the platform had omitted the subject? On the other hand, the Democrats at Chicago declared squarely against protection and denounced it as unconstitutional. They have, in fact, played fast and loose with the tariff question all through the campaign. Mr. Cleveland's letter of acceptance did not accord with the platform, and there is no Democratic doctrine of the tariff whatsoever, except a very ill-defined denunciation of the McKinley bill. In this

campaign the Republicans have been the most consistent and the best agreed; but they have been the least frank. The Democrats have been driven to evasions by actual differences of opinion when campaign exigencies required the appearance of harmony.

The Southern Democratic Revival. The overwhelming defeat of the People's party in the Alabama State election some weeks ago, resulting in charges of the grossest frauds against the Democratic managers, has been followed by Democratic victories in the Georgia and Florida State elections, the majorities being unwontedly heavy, and the general fairness of the elections being conceded. The People's party, which had sprung up so amazingly in the South, and which promised to carry several States, has thus vanished into thin air. And the Republicans, who had hoped to see the Solid South broken by the new movement, may thank the spectre of their so-called "Force Bill" for the Democratic revival in Dixie. The danger of "Negro Domination" sustained by Federal bayonets was preached so effectively that the sundered factions of Southern whites became unanimous again. If Republicans had frankly disavowed the Election bill as a dead and buried issue which they would not try to revive, the South might have divided on other questions *ad libitum*, and the "Populists" might have cut a great figure.

Still the Old Pivots. Thus the Democrats may well hope to give Mr. Cleveland the Electoral votes of all the Southern States, and the points of severe pressure will be found in the same group of doubtful States that have for many years been called "pivotal." New York, Indiana, New Jersey and Connecticut will have the closest and most anxious attention in the final days of the contest, and the result will, in all likelihood, depend upon New York. Nor is it likely that any forecast can be accurate enough to have the slightest value. The State of New York is likely to go for Harrison or for Cleveland by a majority so small as to constitute a very small fraction of one per cent. of the voters. All predictions will be idle guesses. No man's knowledge is superior enough, under these circumstances, to give any value to his prediction that one candidate or the other will win. What is true of the uncertainty of New York's situation seems to be almost equally true of Indiana, although the variations in the balance of that State are seldom so delicate as those in New York.

The Arrested Exodus. Of all the migrations in history there is no migration to equal that great human flood which streams incessant from the Old World to the New. Year in, year out, Europe pours forth her armies across the Atlantic. Every twelve months a vaster horde of human beings than Napoleon marched to Moscow, or the Crusaders carried to the Holy Land, crosses the watery wilderness over which Columbus pioneered four centuries since, but though

the ocean highway is black with the smoke from the furnaces of the ferry steamers, and the wail of those who bemoan the departure of their kith and kin is almost as ceaseless as the monotone of the surf on the shore, the great exodus attracts little or no attention. It is only the overflow of the Old World gravitating to the New, and it has become a matter of course, like the ebb and flow of the tide, or the rising and the setting of the sun. But this great unnoticed Exodus, which is one of the most portentous and world-shaping events of our time, has been arrested in mid-career by the cholera alarm which occasioned practically prohibitive rules against the landing of immigrants at New York.

Barring the Gates. New York is the European gate of the American Continent. Through its narrow portals enter the host of the New Exodus, seeking the promised land, which lies beyond a broader and a stormier Jordan. The outbreak of cholera at Hamburg, which is the American gate of the Continent of Europe, led to a sudden interdict on the landing of any steerage passengers. But a great stream like the Old World Exodus cannot be arrested in a moment. The army was in movement, and when the interdict was launched the army of emigrants was straggling, in long, irregular lines, all the way from Liverpool to the Russian frontier. It is marvelous with how little visible commotion the great multitude was brought to a halt. But steerage passengers are, for the most part, of the inarticulate class, and it would be a mistake to infer from the absence of uproar and articulate protest that the arrest of their advance has not occasioned terrible privations. For that West-marching host is not migrating for the sake of pleasure. It is migrating as the buffaloes used to do, because the old pastures have been grazed bare. They march, these Legions of the Steerage, driven by Hunger and Want; fleeing from the curse of conscription or the plague of persecution. And when the quarantine authorities called a halt they stood, confounded and confused, literally between Death and the Deep Sea. The sudden stoppage of emigration, that safety-valve of the world, will probably have occasioned more misery and more death than all the ravages of the cholera.

Fasten the Bars to Stay! The plight of these poor people certainly calls for America's generous sympathy. Yet we in America have some plain duties to perform in the protection of our own people. There is a limit to the number of millions of Europe's poorest and least vigorous and desirable inhabitants whom we can safely receive. But for the accidental barring of the gates as a result of the cholera, the immigration of 1892 would have been almost, or quite, unprecedented in volume, and decidedly the lowest and least desirable in average quality ever admitted. The cholera will perhaps have diminished the total for 1892 by 200,000 souls. But if something is not done by Congress to give permanent effect to the tem-

porary check, we shall simply be flooded with a stream the more heavily swollen next year. Let Europe overflow in some other direction for twenty years, while the United States takes account of stock, so to speak. There is hardly a thoughtful person in this country who does not now perceive the desirability of imposing radical restrictions upon immigration. We might continue to manage a quarter of a million well-selected immigrants every year; but more than that number we ought firmly to exclude. Applicants should be held to certain tests, and should be obliged to await their turns, the annual admissions being limited in number.

*Our Foreign
Elements on
Columbus Day.*

It is, of course, possible to take too dark a view of the evils and dangers of our unrestricted immigration. The happier and more hopeful side must have suggested itself to thoughtful persons who witnessed the recent huge Columbian parades in New York or Chicago. The Italian societies were particularly strong in the street pageants, and their uniforms and banners were gay with festive colors. Their appearance showed unmistakable content and prosperity. Bohemian, Polish, Russian-Hebrew and other foreign societies, all splendidly uniformed, formed most imposing parts of the marching host. New York and Chicago are made up almost wholly of heterogeneous foreign elements. And the honest pride that most of them feel in their new American citizenship was illustrated most forcibly in the course of these Columbian celebrations. They are nearly all doing well, and their condition in life has been immeasurably improved by coming to America. As a rule, they are well-meaning and law-respecting people, and their children will be American in every fiber. In fact, the great school parade in New York, which brought forty thousand scholars into the line of march, and was conspicuously successful, was made up in large part of the children of these very immigrants. The American flag alone was allowed in the school parade, and the children's parents, no less than the children themselves, were happy to have it so. We need not despair, then, of making good Americans out of the material now on hand, but we ought to cease accumulating the raw stuff. There is a limit to our power of assimilation.

*The
Columbian
Celebrations.*

It is not particularly creditable to the breadth of our intelligence that we should so generally have forgotten that the Columbian discovery applied to any other territory than the United States. The simple fact is that we are not adept in pageants and celebrations, and that the Spanish Americans, who understand those things much better than we, have celebrated the quadricentennial in their various capitals with a grace, an apt symbolism and an æsthetic sense that New York and Chicago did not equal. Thus New York's much-advertised attempt at an evening parade with symbolic floats and glittering pagentry, which brought a million expectant people into compact masses along the

line of march, was a very meagre affair indeed when compared with little Havana's remarkable spectacular parade. Chicago attempted less than New York in the form of street shows, the new "White City" in Jackson Park being the real thing on exhibition. Mr. Breckinridge at a very late day declined to speak, and Mr. Henry Watterson, one of the finest and most brilliant figures in all the list of our politicians, journalists and orators, gracefully accepted as third choice the invitation of the perplexed Chicago committee. Mr. Watterson and Mr. Depew made a noble pair of orators. Both are men who can rise splendidly to an emergency.

GENERAL CRESPO, THE VENEZUELAN VICTOR.

*Crespo
and
Venezuela.*

South America has been doing much more in October than to celebrate—very appropriately and gaily—the four hundredth anniversary of the discovery of the Western Hemisphere. In Venezuela a destructive civil war, that has raged for many months, is at an end, and the right and just cause has triumphed. The late President, Palacio, assumed dictatorial powers and attempted to perpetuate his own authority by a law-defying course that seems to have been far less excusable on its face than the similar course Balmaceda had pursued in Chili. There resulted a revolutionary movement of which General Crespo took the lead. The capital, Caracas, remained in Palacio's hands, as did the chief port, La Guayra. The revolutionists included the best men in Venezuela, but they were sorely handicapped by lack of arms and ammunition. They endeavored to obtain these, with some success, from private sources

in the United States. The course of the civil war has singularly resembled that in Chili. The hero, Crespo, entered Caracas in triumph on October 6. La Guayra was taken a day or two later. The defeated political and military leaders, including Villegas-Pulido, who had succeeded Palacio as President, took refuge on board French and Spanish men-of-war. Our own Admiral Walker was conspicuous in the interest of the United States and of the smoothest possible transfer of authority to the victors. Crespo has established his new Ministry, has revived the Supreme Court that Palacio had suppressed, and is entering upon his administration with good promise. The war has been a costly and sad one, but it leaves the country in the hands of its best men.

PRESIDENT PENA, OF THE ARGENTINE REPUBLIC.

Argentina and its New President. The Argentine Confederation, which has had so much experience of political and financial upheaval and of revolution and social disorder in the past two years, has also settled down to a steady and a chastened course of existence. The new President, Saenz Pena, was inaugurated on October 12. He is a man who enjoys the unbounded respect of his fellow citizens and who has stood for everything that is good, in a public career of more than thirty years. He has for twelve years been the Chief Justice of the Supreme Court of Argentina. He was elected President of the Republic by the unanimous vote of the representative electoral body which, under the Argentine constitution, is authorized to make the choice. He has been a life-long promoter of education and of the best political and

social objects. It is fortunate for the great and ambitious Republic of the Plata that its administration has fallen into hands so eminently safe and worthy. South America—so deeply and generally distracted in the period 1890-92—bids fair to have in 1893 a year of welcome quietude and recuperation.

How Hamburg throttled the Cholera Fiend.

To revert again to the cholera question in its international aspects, one naturally begins at Hamburg, where, mute and deserted, the fleet of Atlantic liners has been lying in the Elbe, a grim and silent street of ocean steamships, waiting until the interdict at New York should be removed. Of west European towns, Hamburg almost alone was severely smitten with the plague. It is worth while for us to consider how the infection spread at Hamburg, and how the disease was at length grappled with and conquered. It began quietly enough. From August 1 to August 20 there were only 86 cases. Then it began to take hold. On the 21st there were 83 cases, and the day after 200. By August 27 they rose to 1,000 per day. In ten days there were 9,000 cases and over 4,000 deaths. There have been 17,000 cases and 9,000 deaths. If London were to experience a similar visitation, there would be 170,000 cases and 90,000 deaths. Under such circumstances it is not surprising that for a time the dead lay unburied in the corridors of the hospitals and that panic reigned supreme. But out of the very extremity of the peril came deliverance. The city was placed, as it were, in a sanitary state of siege. A medical officer at the head of a sanitary column was placed in command of each of the twenty districts into which the city was divided. Every school was closed and the school premises were converted into sanitary headquarters, fitted up with boilers for distilling water and with complete disinfecting apparatus. Ambulances ready horsed stood in constant readiness, with carts for removing the clothing and the dead. The moment a man was down with the cholera the police were to be notified, and as soon as the notification was received a telephonic message to the headquarters brought the sanitary column to the house. The patient was whisked off to the hospital, all movables were carried off to the disinfecting station, and the sanitary column washed and scrubbed the room and covered it with disinfectants.

Rights of the Social Organism.

Salus populi suprema lex. When life is at stake and you are at close grips with death, the social organism ignores everything but the promptings of self-preservation. An American doctor of the most advanced school, describing with triumph the arbitrary dealings of the sanitary authorities, was asked timidly, what about personal liberty. "Personal liberty!" exclaimed the good man, with supreme disdain, "Personal liberty! Your grandmother!" He was right, no doubt; for the despotism of doctors, like drumhead courts martial, is sometimes an inevitable and indispensable evil. But it is a penalty only one degree less bad than the cholera,

and if it were to be made a precedent, it would be one degree worse than the cholera. Fortunately, there is not much danger that we shall see the domination of the sanitary column established in permanence, even in Hamburg; but it is a relief to turn from this enforced sacrifice of liberty to save life to the enthusiasm and devotion of the doctors and nurses and others who hastened to Hamburg to render the sore-stricken city the assistance it so greatly needed. Among these were two English young ladies, the Misses Kenealey, nurses, who belong to a family always swift to help the unfortunate, and who on this occasion rendered double service; for they not only nursed the sick in Hamburg, but, by their letters in medical journals, enabled the profession at home to profit by their experience. They were like Cæsar in his campaigns—at once active combatants and special correspondents. The United States was also—as always and everywhere in cases of emergency—represented by some of its undaunted newspaper men. An American reporter or special correspondent will go jauntily where others of his craft prefer not to follow. Special attention has been called to the daring of Mr. Aubrey Stanhope, correspondent of the *New York Herald*, who was inoculated at Hamburg with the cholera virus and spent weeks in the most intimate contact with the disease. Mr. Stanhope is a young Englishman of American newspaper training.

*Are We
to be
Exempt?*

The precautions taken against the importation of cholera into England and America seems, so far, to have been successful. The few cases that have occurred here and there, being promptly isolated, have not led to any general outbreak, and every one is hoping that the English-speaking world will be spared the visitation that has overtaken Hamburg. The odds are heavy against such immunity. When Nature's sanitary inspector starts on his rounds, he usually makes the tour of the world. It will be disastrous if cholera should strike the United States in the World's Fair year; but it is by no means improbable. The bridging of the Atlantic, which Columbus began, has destroyed all hope of isolating America. The best-informed English sanitarians tremble at the thought of having to cope in London with an epidemic even on one-tenth the Hamburg scale. The present epidemic of fever has exhausted the resources of the Asylum's Board, and there are many towns in America which would be as helpless as London. The consolation is that the cholera will not only employ the scavenger. It will be as a prophet of the Lord, preaching the solidarity of mankind, and reminding all of us that in the familiar phrase, we are all members one of another. It may, after all, need the cholera to quicken the Church into the conviction that even municipal affairs are matters pertaining to the Kingdom.

THE MISSES KENEALEY, ENGLISH NURSES AT HAMBURG.

MR. AUBREY STANHOPE.

From a Photograph taken at Hamburg.

*Our Composite
of the
English Cabinet.*

Our frontispiece this month is a subject of peculiar interest. As soon as Mr. Gladstone's new Cabinet was formed, Mr. Stead determined to try the result of a composite photograph of the seventeen. They consented very graciously to be photographed for the purposes of the REVIEW OF REVIEWS, and the London Stereoscopic Company undertook to evolve the desired composite. Our readers may like to know how it was done.

The Stereoscopic Company began by dividing Mr. Gladstone's sixteen colleagues into batches of four, each with its own head man. The head man in each group of four was the last to be photographed. In making up the fours, regard was necessarily paid to the similarity of visage. For instance, the first group was made up of Lord Rosebery, Mr. Asquith, Mr. Acland and Mr. Arnold Morley—four members of the Cabinet who are clean-shaven. Lord Rosebery was naturally the captain of this beardless four. Sir William Harcourt was the captain of the big-headed men, and he had as his colleagues Mr. Fowler, Mr. Mundella and

Mr. Campbell-Bannerman. The third group, with Mr. Morley at its head, consisted of Lord Herschell, Mr. Shaw-Lefevre and Lord Ripon. The fourth, or Lord Spencer's group, included Mr. Bryce, Lord Kimberley and Sir George Trevelyan. Of the four groups, Lord Rosebery's impression was portrayed most strongly upon his group. Sir William Harcourt, on the other hand, is entirely merged, Mr. Fowler's strongly marked features being much more conspicuous than those of any other of his four. The Morley group resembles no one in particular; it has Mr. Morley's forehead, Lord Herschell's nose and Lord Ripon's beard. In the Spencer group, Mr. Bryce's portrait comes out very conspicuously. Having got these four composite groups, they were all combined, and then Mr. Gladstone's portrait was photographed upon the whole. The result is seen in the frontispiece.

Students in physiognomy will be interested in endeavoring to discern the contribution made by each of the seventeen Ministers to the mild and benevolent looking entity which has resulted from the combination of seventeen portraits into one. The composite portrait, looked at from one point of view, somewhat resembles Mr. Gladstone; but it has no such distinctive stamp of his well-known features as Lord Rosebery and Mr. Bryce have made on the composite portraits of their respective quartets. The predominating note of the type which has thus been evolved is that of a benevolent and thoughtful gentleman of about sixty. The eyes are very strongly marked, and there is more harmony and proportion in the result than might have been expected, considering the extremely varying features out of which it has been built up.

*Mr.
Gladstone's
Holiday.*

Mr. Gladstone has been taking a holiday on the top of Snowden, where he was the guest of Sir E. Watkin. An ill-tempered cow which attacked him in his own park, and knocked him down, did him no harm, but signed her own death warrant. She was killed and sold piecemeal as relics; each of her teeth is said to have brought as much as six shillings. Her calf will, according to current report, be one of the attractions of the World's Fair. If the teeth of a cow that merely knocked down a Prime Minister are worth six shillings each, what would have been their value had he unfortunately been killed? Mr. Gladstone does not concern himself with conundrums, even when they illustrate his popularity. He has been writing a paper on a Homeric subject for the Oriental Congress, and discoursing on patience in politics to Welshmen clamorous for Church and Land bills. So far as the work of the present Parliament is concerned, there is about an equal degree of actuality in Homeric archæology and Welsh Disestablishment. Of course there will have to be some semblance of an attempt made to disestablish the Church of England in Wales; but it will come to nothing. The House of Lords blocks the way. Mr. Gladstone in his speech accused the Welsh landlords of not being as ready to

reduce their rents in bad times as English landlords, a remark which has created much controversy, and was probably intended to herald a bill which will create more.

England's Policy Abroad. Lord Rosebery has his hands full of small but important questions. The arbitration about the seals of Behring is now worrying the governments at Washington and London; and the law officers of the Crown are sorely tried by the utterly irreconcilable claims of their Canadian fellow-subjects on the one hand and the American government on the other. The question of the future of Uganda, however small it may be so far as the precise province is concerned, is important, as it involves the control of the Nyanza. If the British East African Company withdraw from what is properly Imperial business, and confine themselves to the development of the commercial and industrial resources of the territory nearer the coast, they may abandon the Lake as well as Uganda.

The Uganda Cabinet Meetings. There were two British Cabinet meetings in September summoned expressly to consider what was to be done about Uganda. Ministers decided to let Uganda go. The decision may be necessary, but it is none the less unfortunate. A Ministry which proposes Home Rule for Ireland ought to pray for opportunities to prove that its Irish policy is not due to any indifference to the Empire and its responsibilities. The British East Africa Company find that it costs £40,000 a year to keep the flag flying on the far side of the Victoria Nyanza, and, as they have not that money to spare, they intend to clear out on December 31st. The Gladstone Ministry will help them with a quarter's expenses to do the evacuation handsomely by March 31, if they find it absolutely impossible to get out honorably by the end of the year. Uganda is not worth much. It is a mere shadow of its former self, and it is possible to control the Victoria Nyanza without touching Uganda. But many responsibilities have been incurred, and it is difficult to wipe the slate and repudiate your obligations. When an English officer pledges England's word to defend a tribe or administer a territory, that pledge should be kept.

English Policy at Home. Mr. Asquith, at the Home Office, has begun somewhat unfortunately by endorsing as his own the departmental prejudice inherited from Mr. Matthews against Mrs. Maybrick. That, however, will have to be reconsidered. One may pass to the more agreeable duty of congratulating the new Home Secretary upon his visit to the Welsh mine where one hundred and forty poor fellows lost their lives, and upon the decision at which it is understood he has arrived concerning Trafalgar Square. A meeting is summoned for November 13, to celebrate the anniversary of Bloody Sunday by reasserting the popular right to the Square. Nothing can be more obvious than the

solution upon which ministers are said to have hit. The Square is London's open-air town hall. The rights of the citizens to use it for purposes of orderly public meetings will be recognized, due notice being given beforehand by the representatives of those who wish to assemble in the Square. Such notice is necessary to prevent the monopoly of the open-air town hall by any single section of the community, and to provide that the police shall not be taken unawares when called upon to regulate the crowd and maintain order. It is said that some ministers are in favor of restricting the right of public meeting to Saturday and Sunday; but their sober second thoughts will recoil from a hard and fast limitation that would challenge King Demos to contest the right of a Liberal Ministry to confiscate five-sevenths of his privilege of public meeting on this historic gathering ground. Mr. Asquith is also supposed by Tories to be engaged in considering how many dynamiters and assassins he can let loose upon the country in deference to the demand for amnesty. Here his line is not so clear; but no general amnesty is to be anticipated.

Mr. Morley at Dublin. Mr. Morley has been trying to get to work in Ireland under difficulties. There are about 50,000 persons, or say 10,000 families, against whom, by due process of law, judgment has been obtained, but who are living on their holdings as tenants at will, execution of judgment being suspended *sine die*. Their landlords can evict them whenever it is convenient. To inaugurate the Home Rule Administration by a plentiful crop of evictions was a temptation to which any Irish landlord might succumb, and the only wonder is that there have been so few. Mr. Morley cannot suspend the operation of the law of his own motion, any more than he can check the ebb and flow of the tides. If the landlords choose they can make trouble, but the probability is that they will not make very much. The evicted tenants who are clamoring to be reinstated offer difficulties that are two-fold. The first is to discover what is the best solution; and the second, and by far the most serious, is to discover how to get the House of Lords to agree to any solution, whatever, of any difficulty of any kind. It is their interest to preserve every difficulty as zealously as if difficulties were pheasants or foxes, in order to trip up the Government. The same insoluble problem confronts our British friends at every turn. How can a man walk forward when one of his legs persists in walking backward?

Mr. Morley's First Step. Mr. Morley's first step has been eminently cautious and practical. In a letter to Mr. McCarthy he points out that the 13th section of the Land act of 1891 has been an entire failure. It has only brought about 187 settlements in all Ireland, 103 of which were on a single estate. Six hundred police, costing £45,000 per annum, are exclusively maintained in order to keep order in the districts disturbed by this unsettled question. One

single estate has cost the Exchequer £13,000 for this cause since 1881. Seven hundred and fifty-three persons are still under special police protection. The evil exists, but before deciding how to deal with it "we require fuller and more precise information than is now in our possession." A small commission has, therefore, been appointed to examine and report with strict impartiality, and as promptly as may be, as to the actual circumstances and practical equity of the case. This inquiry, instituted in good faith, is to be specially directed to ascertaining (1) what the prolongation of the present state of things is costing, and (2) what means should be adopted for bringing about settlements and the reinstatement of evicted tenants. The work of the Commissioners will be no child's play, and they will do well if they have their report ready by the reassembling of Parliament.

*Mr. Fowler
and the
Liquor Question.*

Mr. H. H. Fowler, Minister of Local Government Affairs, has his work set and no mistake. He has to prepare for the cholera epidemic that is due next year; he has to draft the bills reforming the whole rural government of England; he has to appoint a Royal Commission on the Poor Law; and, most difficult task of all, he has to satisfy the temperance people by some arrangement of local control which can be disguised as the "Direct Veto." He may keep out the cholera; he may frame a Parochial Councils bill that will be more popular than a circus; he can constitute without difficulty a good Commission on Poor Law Reform; he will never satisfy the teetotalers. The London *Speaker* and the Bishop of Chester have been putting forward, more or less tentatively, various suggestions for giving the local community some really effective control of the drink traffic; but there is too much reason to expect that their suggestions will be scouted with scorn. The Temperance Alliance men, with whom the "Direct Veto" to be exercised by a two-thirds voting majority, without compensation, is a fetish, will do as they have always done. They are the Bourbons of English politics, and there is more hope of an arrangement with the Redmondites than there is of coming to a *modus vivendi* with the disciples of Sir Wilfrid Lawson.

*The Power
of the
"Publicans."*

The worst of it is that while the teetotalers are so impracticable, the "publicans" are full of the most practical common sense. It is every day becoming more apparent that the Unionists will be driven irresistibly to rely more and more every month upon the liquor sellers. It is beer, and beer alone, which will save the Union, if it is to be saved. As yet the publicans have by no means put forth their full strength. But they have given a sample of what they will do when the fight really opens, in the South Bedfordshire election. Mr. Whitbread, the Liberal candidate, bore a name which ought to have disarmed Boniface. But he was a Liberal, and that was enough. The word went forth that he had to be opposed; and, after a stiff fight,

the Liberal majority was pulled down from 1,019 to 242. This reduction is attributed almost exclusively to the fact that every public house was a canvassing centre for the Unionists. South Leeds, earlier in the month, showed a reduction of the Liberal majority from 1,535 to 948. So far as by-elections go, notwithstanding Mr. Morley's brilliant success at Newcastle, they have rather damped the spirits of the Liberals. The Conservatives are already declaring that the flowing tide is with them. Possibly. What is much more certain is, that with them is the flowing tap!

*The
Citizenship
of Women.*

Another question which Mr. Fowler will have to face is that of limiting the choice of members of the District and Parochial Councils to men and women of reputable life. The Shoreditch Vestry last month, in considering a District Council scheme, formulated by the Islington Vestry, carried an amendment expressly disqualifying for seats on the Council all persons "who during the previous seven years may have been convicted of felony, gross immorality, gambling or bankruptcy." Some such clause might with advantage be introduced into all acts defining persons eligible for election to offices of public trust. Mr. Fowler will also have to decide whether or not women are to be eligible to sit on Parochial and District Councils. If he says no, he will be taking a backward step; for women can already sit on Boards of Guardians of the Poor, whose duties will be taken over by the new bodies. If he says yes, he practically gives up the interdict which at present forbids the election of women as County Councillors. There ought not to be much hesitation as to which way he will move. New Zealand last month gave a timely hint as to the direction in which modern democracy is moving by passing the bill giving the right to vote to women. The measure was impaired by a clause giving permission to the new voters to vote by voting papers—for no such privilege should be given to either sex—but that is a minor detail of no importance.

*Australasia
Leads.*

The fact that New Zealand should be the first of British colonies to confer full citizenship upon women, is another reminder of the way in which the people at the antipodes are leading progressive movements throughout the English-speaking world. The Eight Hours movement comes from Australia; the Australian ballot, long established in Great Britain, is now making the tour of the United States; and now New Zealand, in conferring the suffrage upon women, has taken a step which, sooner or later, England and America will follow. In another matter Australasia sets some of its fellow-subjects a lesson, notably in Canada. On this subject, Mr. Fitchett, the editor of our Australasian edition, writing upon the result of the inquiry into the administration of the New South Wales railways, makes the following very satisfactory observations:

The State railways of Australia, by the huge amount of capital they employ, and the opportunities for favoritism they afford, might easily become the nurseries of corruption; but, as the Selvey Commission proves, their administration is found, under the most searching investigation, to be absolutely honest. And honesty is a note of public life in the colonies everywhere. Australian parliaments are not always wise; they are not often far-sighted—the colonial politician is, indeed, an obstinate and hopeless “opportunist”—but they are always clean! Nothing would so instantly and finally wreck a Cabinet or a party as a well-grounded suspicion of playing false with the public funds. The Mercier scandals of Canada and the notorious “lobbying” of the United States are, at present at least, impossible in Australia; and this, not because human nature, but only because circumstances are different with us. In communities so small as the Australian colonies, moreover, public men are exposed to a closeness of inspection which greatly invigorates honesty. Dishonesty is fatal, if only because it is sure of detection.

The Trades Union Congress. The Trades Union Congress met at Glasgow in September, and its president, Mr. John Hodge, discoursed upon the problems of labor. In an address which did not excite much remark, one observation deserves note. He said: “Many trades are cursed with unnecessary Sunday work, to abolish which means a great industrial war.” Therein Mr. Hodge is surely mistaken. If the Trades Union Congress will specify particulars, and lay a memorial before the representatives of the churches and before Parliament, setting forth the unnecessary Sunday labor complained of, and a practical legislative proposal for preventing it, the evil will be promptly remedied. Both Mr. Morley for the Liberals and Sir John Gorst for the Conservatives are ready to legislate for the six days working week. The Congress, as a whole, passed off fairly well without any sensation. The old and the new Unionists in Great Britain are settling down together so comfortably that it will soon be very difficult to tell the one from the other.

The Eight Hours Bill. The Congress, after long debate, carried by 205 votes to 155 a motion instructing the Parliamentary Committee to promote a bill regulating the hours of labor to eight per day, or forty-eight per week, in all trades and occupations excepting mining; with the proviso that the organized members of any trade or occupation should be permitted to exempt their industry from the operation if they cared to protest by means of a test ballot. A brisk debate arose over the action of Mr. Fenwick, the paid Parliamentary Secretary, who had spoken against the Eight Hours bill which the committee had been instructed by the Congress to promote. No greater tribute could have been paid to Mr. Fenwick than the large majority which affirmed that he might continue to oppose, as a Labor member, a measure which he was instructed to promote as a paid secretary. The motion in favor of the Eight Hours bill for miners was carried by 281 to 56. Note in this

connection that Mr. Joseph Chamberlain has made a significant speech at Birmingham, on the Early Closing bill. Mr. Chamberlain is prepared to give, say, to eight butchers in any small town, if they can get the assent of the Town Council, the right to have fines and imprisonment inflicted on any four other butchers who dare to keep their shops open half-an-hour longer than the time fixed by the eight as closing time. There is a great deal to be said in favor of this proposal; but what with “Direct Veto” and “Early Closing,” the minority of less than one-third will soon be held to have neither rights nor liberties.

The Socialist Congress. The chief event from the Socialist point of view this fall was the meeting of the Socialist Congress at Marseilles, over which the German Socialist Liebknecht presided. The Congress was notable for four things. First, because it denounced the English trades unionists for confining themselves to the Eight Hours day and for organizing an International Congress in London. Secondly, be-

WILHELM LIEBKNECHT.

cause it decided that the Socialists must enter the electoral arena in every district in France. Thirdly, because it drew up a programme of Socialism for the peasants. And fourthly, because of the speech of Herr Liebknecht and the way in which it was received. Its rural programme is as follows:

(1) That a *minimum* rate of salaries be decreed for all workmen and servants. (2) That Equity Courts be created for the promotion of agricultural interests. (3) That the right of disposing of their real property be withdrawn from the communes. (4) That the real estate possessed by the communes be placed at the disposal of non-possessing families. (5) That a pension fund for aged agriculturists be created. (6) That the communes purchase agricultural implements and let them out at cost price. (7) That estates of less than 5,000 fr. in value be free from any tax on the sale

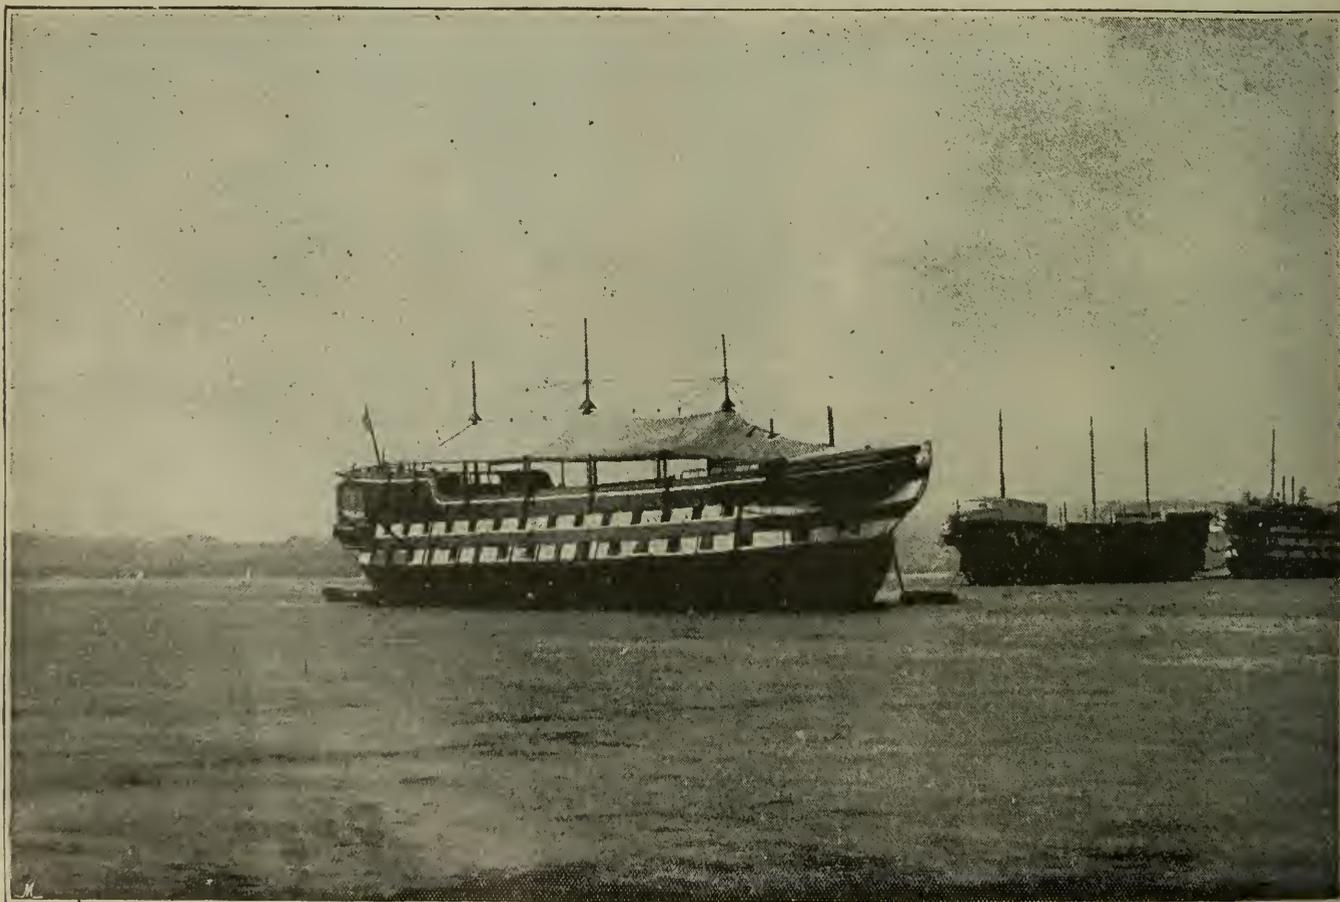

of same. (8) That leases, as in Ireland, be drawn up by the Arbitration Courts. (9) The repeal of Article 2,102 of the Civil Code, which provides that proprietors shall have a privilege lien on the crops. (10) The revision of the survey of the country. (11) Creation of gratuitous agricultural schools.

The Socialists and Alsace-Lorraine. Liebknecht, the German Socialist leader, excited immense enthusiasm by declaring that French and German Socialists knew no other enemy but the middle classes. When Germany was a Social and Democratic Republic the question of Alsace-Lorraine would be got rid of, and peace would exist between the peoples. Interviewed afterward, he is said to have suggested the cession of the disputed provinces to Switzerland. As for war, if France attacked Germany it would be treachery for the German Socialists not to defend their Fatherland. But if the middle classes in Germany began a war of aggression against France, the German Socialists would revolt. They will have no need to resort to such a drastic measure if Herr Liebknecht is right, for he predicted the speedy triumph of the Social Democrats. We shall gain a million votes, he said, lead two and a half millions to the poll, and secure fifty Deputies in the Reichstag. It is evident, however, from his frank expression of disgust at the way in which the French are courting the Czar, that the brotherhood of the Franco-German Socialists is hardly skin deep.

The German Army. While Socialists are talking, Kaisers are acting, and the Germans are confronted with a demand for an addition of \$20,000,000 per annum to their military budget in order to place them on an equality with France. By way of

a bribe to secure the voting of this heavy addition to the crushing burden of military expenditure, Caprivi proposes to reduce the period of service in the army from three years to two. This, however, will be accompanied by much greater stringency in passing every male citizen through the ranks. To meet the financial difficulty it is proposed to increase the tax on beer. Now, you may do many things in Germany with impunity. But beer is as the Ark of the Covenant, on which no profane hand may be laid with impunity. Bismarck sees the danger which threatens his successful rival, and he has already opened a campaign in the press against the proposed changes. No one can as yet foresee what the result will be, but the odds seem heavy that Caprivi will be worsted. If, however, taking a leaf from Bismarck's book, he gets up a war scare, he will secure his millions. But without a scare? Hardly.

Historic War Ships. There has been much clamor in England over the sale by the Admiralty of one of Nelson's old flag ships, the *Foudroyant*, to a German shipbreaker and junk dealer, for \$5,000, to be reduced to firewood and old iron. The *Victory* is fitted up at Portsmouth, England, so that visitors to that great naval arsenal can for years to come see the man-of-war that Nelson commanded when he fell at Trafalgar. But for one person who has a chance of seeing the *Victory* there are a hundred who would enjoy the opportunity of seeing another of Nelson's flagships if it were moored off Somerset House, in the Thames at London. Yet when the *Foudroyant*, of which Nelson said, "I love her as a father loves a darling child," could no longer serve any useful purpose as a hulk at Plymouth, they in-

NELSON'S FLAGSHIP THE "VICTORY" AT PORTSMOUTH.

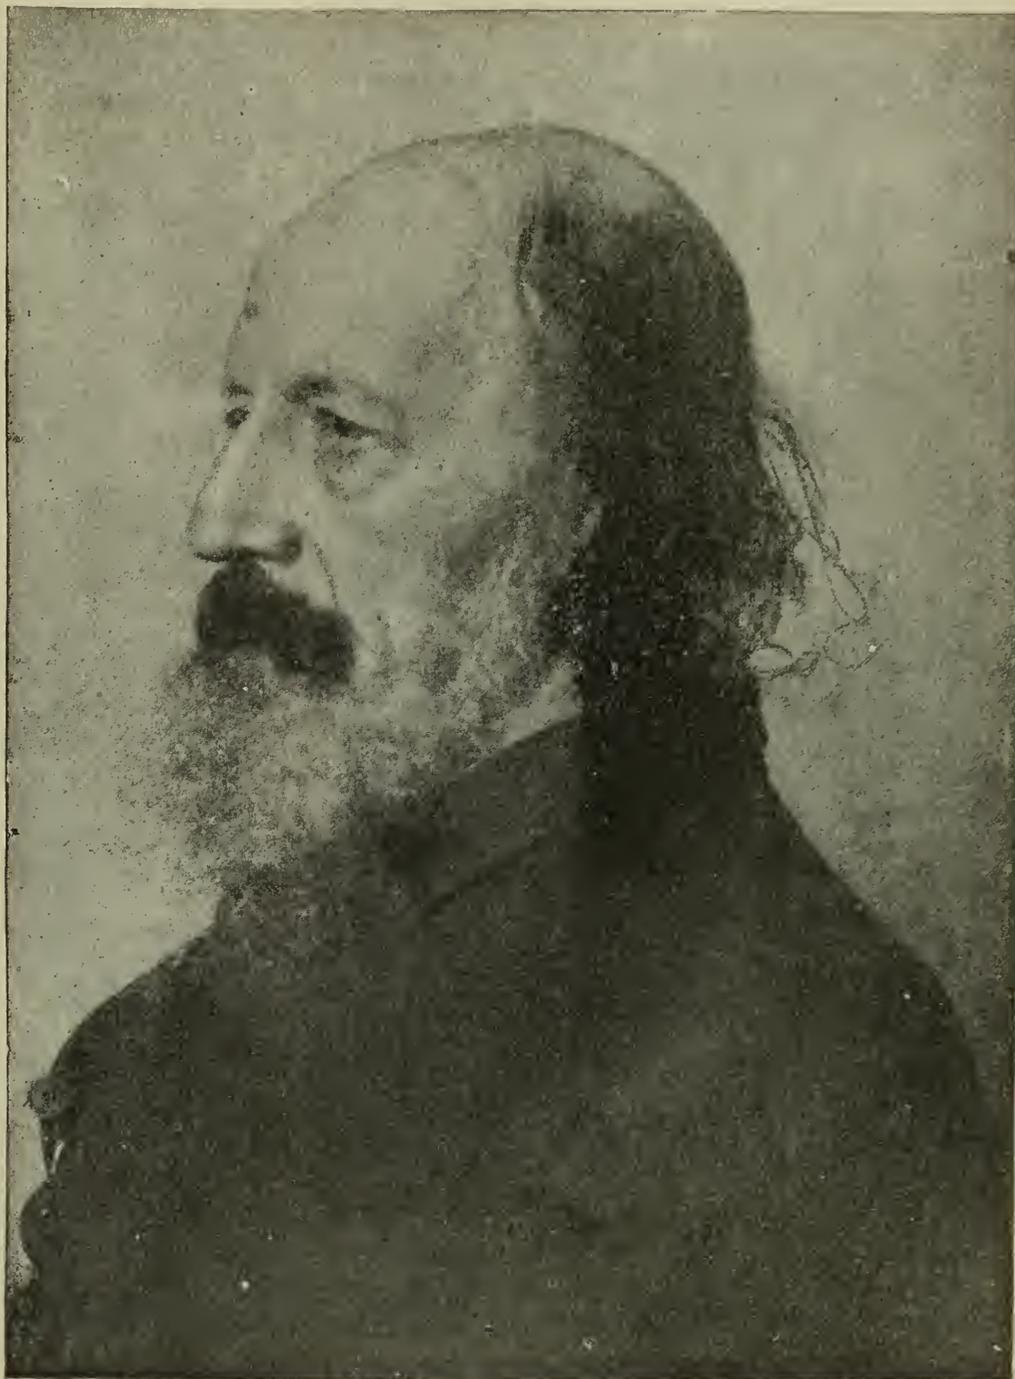

continentally sold her. The *Foudroyant* was Nelson's flagship, inseparately associated alike with his glories and his frailty, and as such she should have been jealously preserved as an inestimable heirloom by the nation whom he protected by his valor and glorified by his genius. Just imagine what vividness and color the *Foudroyant* might give the story of the old wars to all Londoners if it were but used as the naval object lesson. She should be moored opposite Somerset House, where her great Sea-King Captain lay in state when he came back dead from the greatest of his victories, and be fitted up from stem to stern with relics and records and pictures of all the great sea fights by which English sailors have kept the seaward wall of Albion inviolate. On the anniversaries of great naval battles she should be beflagged, and her guns should fire a salute to wake the echoes of ancient glories.

Four Old American Vessels. It would be well if we in America could catch enough of the spirit of the protest which, as is now cabled, has resulted in the rescue by a private English syndicate of Nelson's flagship, to secure the proper preservation of our own historic vessels. Most of those which would have been our chief pride have already been destroyed. But there remain in the navy four ships that possess a true historic interest. The old *Constitution* is the receiving ship at Portsmouth, New Hampshire. She was saved from destruction some years ago by the protest of Dr. Oliver Wendell Holmes and others. But for their agitation she would have been broken up. The *Constellation* is now the practice ship at the Naval Academy, Annapolis. But with the completion of the new ship *Bancroft* in the coming spring she probably will go out of commission, and may be sold for junk; for there is no special provision for her maintenance or repair. Ought she not to be saved as an object lesson to school children and a tangible memorial of our old navy? It is gratifying to know that the *Kearsarge* and the *Hartford* are protected by special acts of Congress, which provide that these

two ships shall not be sold, but shall be kept in repair even if the cost should exceed the 20 per cent. limit fixed as the maximum that may be allowed for the repair of wooden ships.

Tennyson and Renan.

Since our last number was printed the world has been called to mourn the death of the greatest poet of this generation, Lord Tennyson. The next number of the REVIEW OF RE-

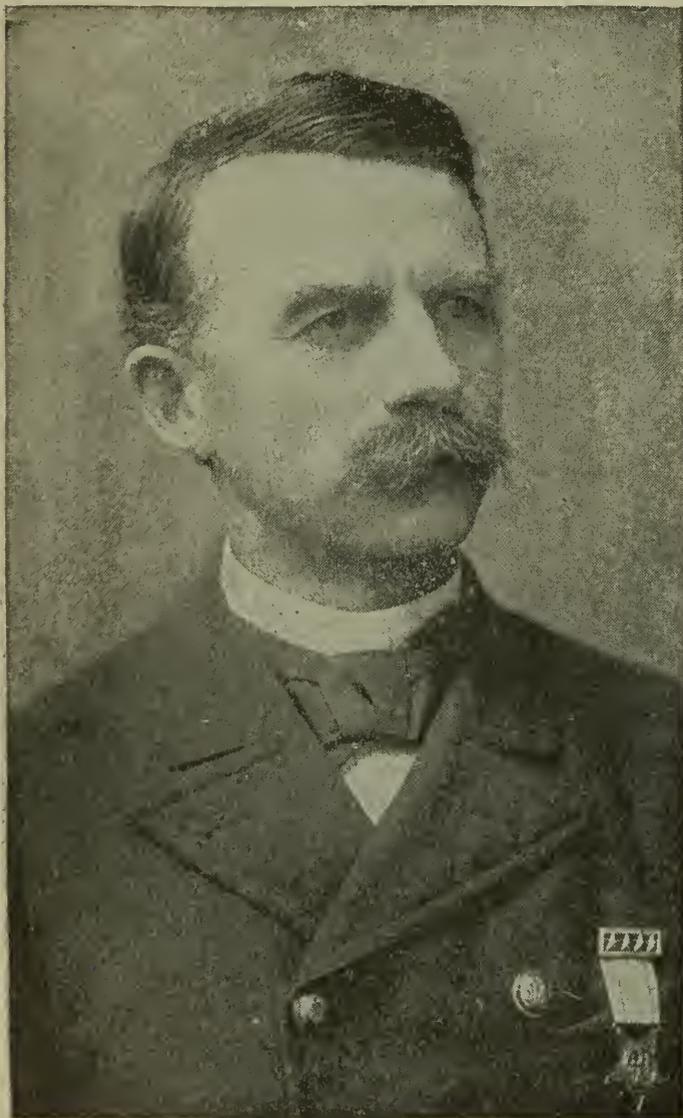

THE LATE LORD TENNYSON.

VIEWS will contain a character sketch of this great teacher and citizen of the English-speaking world. The French also have lost their witty, scholarly and distinguished man of letters, Ernest Renan. The Christian world had long regarded him with extreme disfavor because of his attacks upon the essential creeds of Christianity. But he had many eminently attractive qualities of mind and spirit.

RECORD OF CURRENT EVENTS.

September 21.—The session of the G. A. R. encampment begins in Washington, D. C.; Indianapolis selected for the second year's meeting....The Grand Jury at Pittsburgh returns bills against 167 Homestead strikers for murder and riot...The Melbourne Legislative Assembly adopts a motion favoring a Universal or Imperial union for the

A. G. WEISSERT,

The New Commander-in-Chief of the Grand Army of the Republic.

introduction of the decimal system in money, weights and measures.

September 22.—Gen. A. G. Weissert, of Milwaukee, elected Commander-in-Chief of the Grand Army of the Republic....Officers of the Carnegie Steel Company arrested on charges growing out of the Homestead riot.... Celebration of the centenary of the French Republic President Carnot pardons Edward Deacon, committed to prison for murder....Cholera increases in Berlin and Brussels....The Pan-Presbyterian Alliance meets in Toronto, Canada.

September 23.—Governor McKinley, of Ohio, speaks on the issues of the campaign at Philadelphia....Monuments are dedicated at Gettysburg by Vermont and Massachusetts regiments....The wealthy Chinese merchants of Chicago unite with the Six Companies of San Francisco to fight the Gerry Exclusion Law....New Zealand's Woman's Franchise bill passed by the Legislative Council....The Hoang Ho River, China, overflows its banks: twelve towns are inundated and many lives lost.

September 24.—Judge Porter refuses to allow bail in the case of Hugh O'Donnell, the Homestead strike leader, charged with murder and riot....The federal authorities of Germany have yielded assent to a proposed two years' service in the army....The Literary and Artistic Congress in session at Milan closes.

September 25.—Governor W. E. Russell renominated by the Democratic State Convention of Massachusetts in session at Boston....Sixty-four new cases of cholera and twenty-three deaths from the disease in Hamburg, thirty new cases and seventeen deaths in Paris, and in St. Petersburg twenty new cases and two deaths.... Two British sealing cruisers seized off the Siberian coast by Russians.

September 26.—Mr. Cleveland sends the Chairman of the Notification Committee a letter accepting the nomination for President of the United States....The International Congress on Maritime Law opens at Genoa with 250 delegates present, representing the Civil and Naval authorities of various countries.

September 27.—Announcement by Mr. Morley, Chief Secretary for Ireland, that the Government has decided to appoint a commissioner to inquire into the cases of the evicted Irish tenants.

September 28.—The three hundred and fiftieth anniversary of the discovery of Santiago Bay in Southern California celebrated....The Italian Parliament adjourned....Nancy Hanks breaks the world's record by trotting a mile in 2.04 on the regulation track at Terre Haute, Indiana....Pope Leo gives orders to erect the Diocese of Texas into an Archbishopric.

September 29.—The Regents of the University at Albany, N. Y., elect Professor Anson J. Upton, of Auburn Theological Seminary, to succeed Chancellor George William Curtis....Mr. Stuart Knill, a Roman Catholic, elected Lord Mayor of London....The Anti-Parnellites issue a manifesto predicting the early triumph of Home Rule....Herr Zelle elected Burgomaster of Berlin....Emperor William confers the Grand Cordon of the Order of the Red Eagle upon the Khedive of Egypt....The British Government annexes the Union Group and Gilbert Island in the Pacific...General Diaz publicly declared President of the Republic of Mexico for four more years, commencing December 1, 1892....The trial of the Coeur d' Alène miners at Coeur d' Alène City, Idaho, on charges of conspiracy, results in the conviction of four of the defendants and acquittal of ten....Mascot at Terre Haute, Ind., lowers the pacing record for a mile to 2.04.

September 30.—Senor Lowe, the new Spanish Minister, is presented at Washington....The Pan-Presbyterian Council at Toronto closes its session....Senator Sherman speaks at Fairfield, Ohio, on the political issues of the campaign.

October 1.—Nine members of the Homestead Advisory Board arrested on charges of high treason....The *Pull Mall Gazette* changes its policy from Radical to Liberal Unionist....The Wisconsin Supreme Court declares the recent Apportionment Act unconstitutional....The University of Chicago opens.

October 2.—Governor Hogg, of Texas, issues a proclamation withdrawing the cholera quarantine against New York....Father Martin, a Spaniard, elected General of the Society of Jesus... In the school elections at Faribault, Minn., the "Faribault Plan" is defeated by a majority of two hundred in one thousand votes....Dr. G. S. Burrows, of Amherst College, accepts the presidency of Wabash College, Crawfordsville, Ind....Michael Davitt suggests the starting of a land league in Great Britain in opposition to the Irish Landlord Campaign.

October 3.—International Monetary Conference is announced to meet at Brussels, November 22....Lord Houghton, the new Viceroy of Ireland, makes his public entry into Dublin....The New York Presbytery decides to begin the trial of Dr. Briggs on November 9.

October 4.—Lt. Miklos wins in the muck-talked-of long distance ride between Berlin and Vienna....Low Churchmen are attacked at Folkestone, England, during the meeting of the Anglican Church Congress....Railroad record is broken on the Hudson River Road by a heavy train making the distance between Albany and New York in one hour and seventeen minutes.

October 5.—The Protestant Episcopal Church begins its Triennial Conference at Baltimore, Md....Georgia goes to the Democrats by some 40,000 majority....A terrible battle at Coffeyville, Kansas, between the marshal's posse and the famous Dalton boys, desperadoes, in which the Dalton gang is annihilated and four citizens are killed....Budapest in the grip of the cholera.

October 6.—The cholera appears in London....Destructive storms rage in Italy and France...The famous chess master, Emanuel Lasker, arrives in New York to do battle at the Manhattan Chess Club.

October 7.—At La Rabido, Spain, the Congress of Americanists opened....The French forces defeat the Dahomeyans, killing 200 of them....The funeral of M. Rénan is held in the College of France....The war in Venezuela is ended by the utter repulse of the government forces at San Pedro by General Crespo's Army.

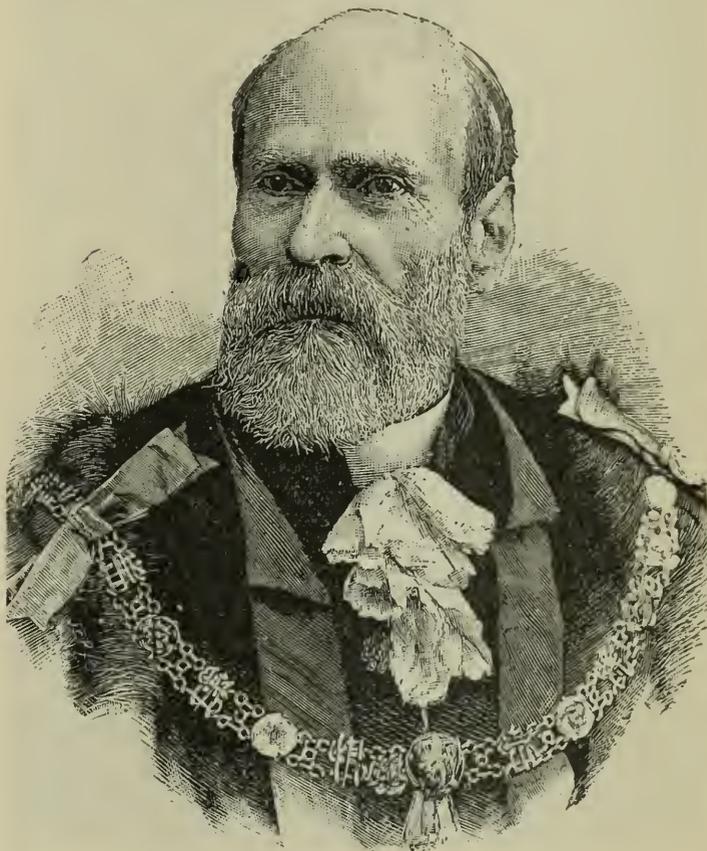

October 8.—Columbus celebration begun in New York by the opening of the Art Loan Association....President Carnot pardons 60 miners who were imprisoned at Lille for participation in the recent riots.

October 9.—The French forces win again in Dahomey and prepare to crush King Behanzin....A collision during a fog in Puget Sound causes the death of five persons and serious injury of seventeen....A great opium smuggling scheme successfully carried through in San Francisco....General Joaquin Crespo enters Caracas, and is proclaimed provisional President of Venezuela. He appoints his cabinet.

October 10.—A grand parade in New York City of 25,000 school children in honor of Columbus....Mme. Modjeska appears in New York at the Garden Theatre....Chief

Justice Paxson, of Pennsylvania, delivered his charge to the Grand Jury in the case of the Homestead rioters.... In Spain the Columbus celebration is continued at Huelva with the added presence of the Queen Regent of Spain and the young King, and there is a grand naval parade at Cadiz.

October 11.—In New York the Columbus celebration is continued by a midday naval parade in the Bay and North River, and in the evening a Roman Catholic parade....The Homestead strikers and Carnegie officials indicted by the Grand Jury for treason....The Protestant Episcopal Convention in session at Baltimore finishes the revision of the Episcopal prayer book....The Austrian and German Emperors meet at Vienna.

MR. STUART KNILL,
The New Lord Mayor of London.

October 12.—In New York the Columbus Celebration is concluded with a great military and civic parade in the day time and with a brilliant night character pageant; public and private buildings all over the city illuminated....The yardmen on the "Big Four" Railroad go on strike....The triennial Congregational Council begins its sessions in Minneapolis....Funeral services over the interment of the Poet-Laureate in Westminster Abbey.

TO SAINT PATRICK'S CATHEDRAL.

(Columbian Celebration Day, October 12, 1892.)

As lone, gray crags, which shield the sea-bird's brood,
Amidst the tempest towering, calm, abide ;
So rests, above the pageant's beating tide,
The peace of thy majestic solitude.

Wave free her flag whose spirit unsubdued,
Gave freedom's birth to souls that else had died !
To-day her children's song has satisfied
For all the bitter pangs of motherhood.

Far heavenward, the sister spires are crowned
By faith's most sacred cross ; her voice uplifts
Our hearts, while wrong and earth-pain overwhelm.

Nor church, nor country, can life's yearning bound.
Beauty, sublimity—thy noblest gifts—
Are fruits and prophesies of her true realm.

SELDEN L. WHITCOMB.

CURRENT HISTORY IN CARICATURE.

THE American cartoonists have been exceptionally busy through the presidential campaign, and their bold and clever work will have played no small part in the result. Both national committees have not only made an unprecedentedly extensive use of campaign literature, but have also made vast official use of certain cartoons which were deemed particularly effective. The two official cartoonists whose work has been most widely displayed have been the veteran Nast for the Republican side and the veteran De Grimm for the Democratic side. De Grimm's work, perhaps, as much as any other one thing, has been responsible for the restoration of the Democratic party to its hold upon a "Solid South." As a matter of historical interest, we have reproduced on the adjoining page the two cartoons with which the Southern States have been most liberally supplied in the form of large posters conspicuously displayed everywhere. In one of them Mr. De Grimm arouses the white voters of the South by making them feel that the "Force Bill" would subject them to armed negro domination at the polls. The other cartoon played a large part in the breaking up of the "People's Party" Southern movement, by arousing prejudice against the candidate, General Weaver, reflecting as it does upon his personal record and conduct in the South as a Union officer in the late war. Another cartoon much used by the Democratic managers, upon great yellow poster sheets, represents the Republican party as an

overgrown plutocrat, sitting upon a laboring man, with Harrison and Reid on his shoulders. The Republicans, on their part, have made the most widespread use of Nast's cartoon representing Mr. Cleveland's head as being turned by the securing of a third nomination, which had been denied to all predecessors, even to Grant himself. Subsequently, Nast drew for the use of the Republican Committee a cartoon representing the Democratic Tammany leader General Sickles as pointing to the Cleveland cartoon, and saying that no Union soldier could vote for Grover Cleveland. Other effective cartoons of the month represent the dominance of Tammany. New York is shown as a prostrate Knickerbocker with the Tammany tiger surmounting his prostrate form; and Mr. Cleveland's reconciliation with the Tammany leaders is well represented by Mr. Gillam, the cartoonist of *Judge*, in a drawing which is shown on this page. In another cartoon which we reproduce from *Judge*, Mr. Gillam represents Candidate Cleveland as a political Columbus standing at the prow of his vessel and peering anxiously for land which he does not yet discover. On the other hand, *Puck* represents Mr. McKinley at the prow of a galley ship wherein a host of laboring men toil at the oars, while the political leaders of the Republican party sit and drink their wine at their ease. The range of our foreign caricature selections this month is wide, and the subjects touched upon are numerous. For the most part the cartoons are self-explanatory.

BJÖRNSTJERNE BJÖRNSON :

THE NORSE PATRIOT, REFORMER AND NOVELIST.

BY PROFESSOR CHR. COLLIN, OF THE UNIVERSITY OF CHRISTIANIA.

THE reader who will compare Professor Collin's sketch of Björnson, which follows herewith, and that of Miss Frances Willard, which Mr. Stead has also prepared for this number, can but be impressed by the similarity in the views and doctrines of the American woman and the Scandinavian author. They are approaching various social questions of the day in the same spirit and with the same remedial prescriptions. They are among the most potent and forceful personalities of our times; and there seems to us a felicity that is more than fanciful in presenting sympathetic sketches of them in the same number of this REVIEW. Professor Collin is in the near future to publish a biography of Björnson, and he writes of his gifted countryman with intimate knowledge and strong admiration.—AMERICAN EDITOR.

BJÖRNSTJERNE BJÖRNSON, the Norwegian Apostle of Peace, is one of the most combative of men. One would think that he must have been meant for a warrior: his head, his figure are those of a chieftain. When his gray eyes flash

BJÖRNSTJERNE BJÖRNSON.

under jutting brows, and his bushy hair looks bewildered, as if startled by some earthquake of passions beneath, then, with his nether lip slightly pouting and his broad shoulders drawn back, he makes one think of some old Norse Viking bent on battle and ready for the fray.

But Mother Nature seems to have made sport of this her gifted child. Carefully has she equipped him for combat, and carefully has she planted him in the most peaceful surroundings. Born in Norway, once the nest of sea-rovers and a nursery of civil war, but the home of a placid and cautious race—born, moreover, a parson's son, and himself marked out for the Church—he seems to have been set apart for some curious experiment in the rearing of new varieties of character.

HIS ANCESTRY.

Björnstjerne Björnson's father, although a quiet rural parson, was something of a giant, who once threw the strongest man in the district out of his study and down a staircase, and who, after making

his arrival in a new parsonage, surprised his parishioners by dragging the plow along his field. "How strong you are, father!" the future poet once said to him. "Not I!" said the parson; "you should have seen my grandfather!"

"I do not greatly wonder that this strong parson got impatient at waiting for the proper and appointed plough-horse. For he had been a farmer, or rather a peasant proprietor, before he went up to the university and reached that goal of peasant ambition: a wide cassock and a daisy-like clergyman's ruff. And his son has inherited the old family fondness for work in the fields. You are not likely to hear him boast of having written country tales, at once delicate and racy, like "Synnöve Solbakken" and "A Happy Boy," or vigorous plays like "A Bankruptcy," "A Gauntlet," and "A New System," or the words of those songs which fill the air wherever Norsemen sing their love of dear old wrinkled, weather-beaten Norway.

HIS PEASANT INSTINCTS.

But if you visit his plain country house up in a side valley of the Gudbrandsdal you will see that he is proud of having added fifteen acres to Norway's hard-won corn fields, and of having relieved his land of a hundred thousand cartloads of stones. I do not know whether it is due to the fact that modern novelists are given to symbolic expression, but stone-breaking is certainly Björnson's favorite sport. "I was much more proud," he once said to me, "when I first saw my own name on a spade than when I saw it shining on the cover of a book."

But these agricultural instincts, deep rooted in the old stock of freeholders, did not awaken till Björnson had gratified his roving spirit and his southward longings by two long visits to Italy and many other rambles besides.

POET BY HEREDITY.

Still earlier awoke his poetical gifts, perhaps inherited along with some of the delicacy and tenderness of his nature from his mother's family, which at this same time reared in its own nest a most original tone poet. His name was Richard Nordraak, and he proved a valuable kinsman of Björnson's by linking wonderfully fresh and simple music with some of his first cousin's finest poems.

Hymns were Björnstjerne Björnson's first poetical

outburst, when he was still a little boy, trying to master the form of poetry placed within his ken in the parsonage. "Very good," said his mother; "but your hymns have no rhyme and no meter!" For, as he had only heard hymns sung, he ignored the fact that words were to be ordered by the strict discipline of verse.

At school, in the lovely town of Molde, he fought for the small boys against the bigger ones. Next he organized a club, called the "Union," with "Liberty" for its literary organ. And when, in the year 1848, the French Presidential election was warmly discussed in the club and finally put to the vote Björnstjerne Björnson, then in his sixteenth year, voted for Lamartine, the poet, as President of the French Republic.

HIS SAGA PERIOD.

During his school-days, he steeped his mind in the records of the old Norse and Icelandic Saga heroes. And long after he had become a student he seems to have resorted to the times of Olav Tryggvason, Olav the Saint and Sverre Sigurdson as the favorite haunt and playground of his fancy. The first little drama of his that was acted, "Between the Battles," shows that he had drawn the olden times near unto himself, and striven to enter into the complex soul of Sverre, the most puzzling and fascinating of the old kings.

This was in 1857, the same year that his "Synnöve Solbakken" was born—to live as long as the Norwegian language. Four years later he made King Sverre the hero of a new drama, written in Rome, at a time when Björnson was watching with deep interest Garibaldi's gallant fight for freedom. And the following year he wrote the most stirring of his Saga plays, the trilogy of "Sigurd Slembe," being the tragedy of an ill-starred pretender to the throne, by nature intended for a chieftain, but thwarted and belittled by evil circumstances. The most vibrating chord of this dramatic poem is that which sounds

the strong and gifted man's yearning to be a leader of men, and to lead them only for the good of his country.

Ten years later, in 1872, Björnson wrote his last Saga play, about "Sigurd Jorsalfar," the old king and Crusader. And even now, in his sixtieth year, he may be heard reading aloud to his family and his neighbors a splendid scene from the old Sagas, describing in masterly, brief speeches the gathering of chieftains at Bergen, assembled to elect a new king. This scene Björnson reads like a consummate actor, making each chieftain individually distinct by inflection of voice and manner of diction.

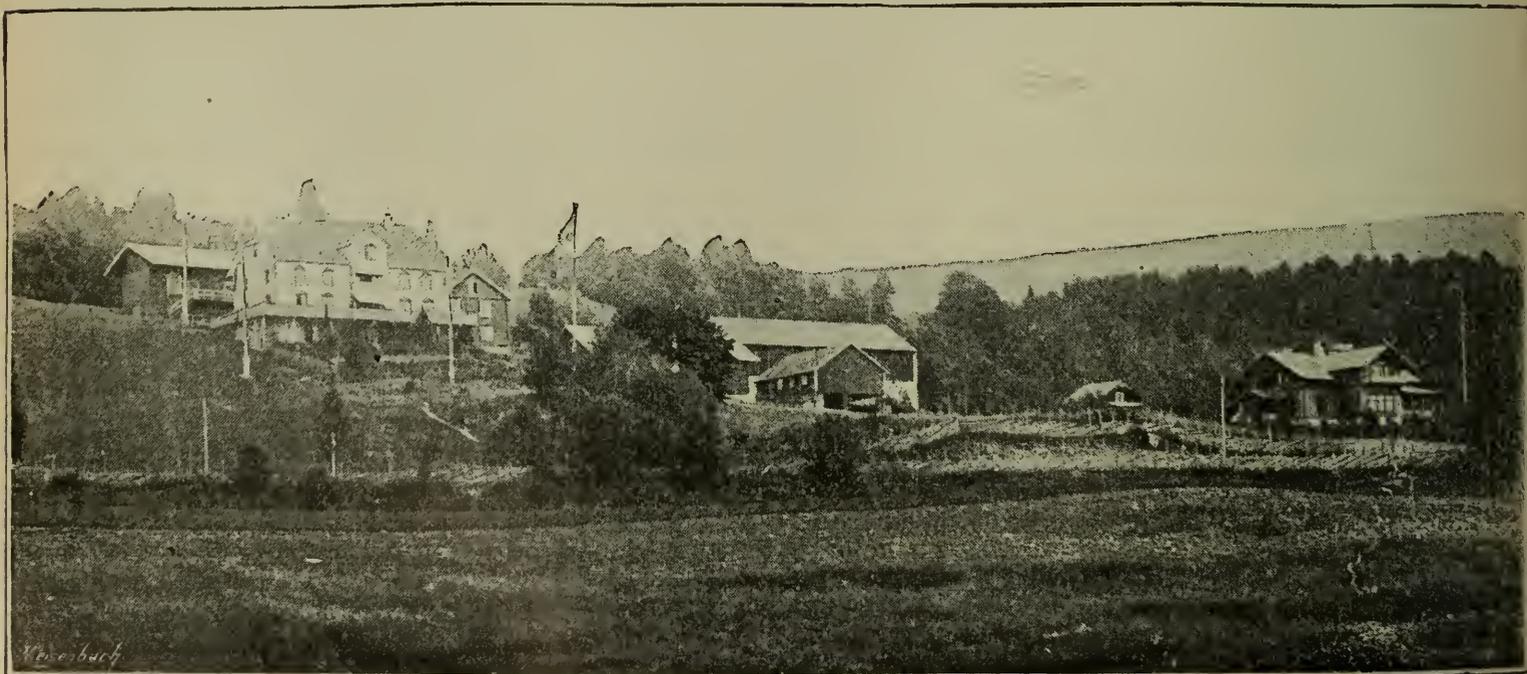

But while Björnstjerne Björnson had thus been living into the characters of the greatest and also of the most unhappy of Saga chieftains, the surrounding conditions of his life had been gradually entangling him in modern everyday struggles, perhaps more useful but much less heroic.

He had been allowed to freely feed his combative instincts on the old battle records, but only to have them forced into small modern channels. While brandishing the rusty sword of Sverre in the realm of shades, he had been learning to wield a journalist's pen in the workaday world, and quickly became famous for his brief sentences, "incisive as sword-cuts."

THE THEATRE WAR.

He became a public leader of men, in a small way, as early as 1856, when he led what is known as the "theatre battle," which, enlivened by seven hundred whistles and cat-calls, young Björnson himself headed with a long Scotch watchman's pipe. This battle, directed against the supremacy of Danish actors on the Norwegian stage, was not without its effect, especially as Björnson in more private circles had dimmed the halo of the Danish tragic actors by splendidly mimicking their somewhat mincing, staccato pronunciation.

But it was mainly by his plays that he, along with

THE NOVELIST'S HOME.

Henrik Ibsen, not only conquered the Norwegian stage, but also invaded the Danish and Swedish theatres. Nay, since he began writing modern dramas in 1874, he has, along with Ibsen been beleaguering most of the great European stages, often taking the public by storm.

HIS POLITICAL CAREER.

Like Henrik Ibsen, Björnson has been a stage manager, but at last he left his position at the Kristiania Theatre, because he was not allowed to have his own way. It is said that afterward some of his conservative opponents regretted that they did not let him have free scope on the boards. For then they might have been spared the annoyance of seeing him, at every critical moment, burst forth as the manager of the political stage. The theatre might have served as a social safety-valve, as it had often done before. Only think what would have happened if those impetuous, combative instincts of his had not, from his early youth, been diverted into the channels of fiction, and enlisted in fighting over again the old heroic battles, which are at least harmless to those now living!

Well, enlisted only up to a certain degree. For even as a young stage manager at Bergen he had not been quite absorbed by his Saga plays, nor contented to be a leader of phantoms of the stage. During a political crisis he had, by his vigorous press articles, greatly helped to decide the election of the Bergen representatives to the Storting. And from this time he has been, in an increasing degree, a driving force in Norwegian politics, being not only an eloquent interpreter, but often a maker, of public opinion. The amount of strong language spent upon him by the opposite party is a fairly good dynamometer of his influence.

I cannot here enter into an account of his many political campaigns, but as a popular orator he towers above all the speakers of his country, fascinating alike the urban and the rustic mind by the undulating rhythm of his eloquence.

A VIKING OF PEACE.

This, then, was the way in which the outward circumstances of Björnson's life experimented, as it were, with his inward gifts and instincts. His inborn battle-spirit, nourished by the records of ancestral exploits, was forced into the channels of modern bloodless warfare. Imagine an old chieftain, bard and warrior, transplanted from the social soil of civil war, where sword and axe argued the Gospel of Peace on Earth, into some modern soil, where grow the arts of a gentler warfare. If such an experiment could be tried, I believe we should see a character not very unlike that of Björnstjerne Björnson.

But he would not wish to exchange his modern war for the old battles of Olav and Sverre. Nor do I think that when Björnson made his gallant crusade, through Norway, Denmark and part of Sweden, against the double standard of sexual morality, he envied Sigurd

Jorsalfar crusading in the days of yore to the Holy Land.

Some of Björnson's countrymen think it a good, though involuntary, joke on his part, that he, of all men, should have become an ardent apostle of peace and a fervid believer in the abolition of war. But he wants peace only in order to carry on a new and higher warfare. I dare say his own personal history has shown him that the combative instincts, once trained and developed in the brutal struggle for

Björnstjerne Björnson

the rights of the stronger, may now be used in contending for the rights of the weak. War, apart from its other abominations, diverts valuable and inherited energy away from the modern holy wars.

CONTRASTED WITH TOLSTOI.

Both as an apostle of peace and as an apostle of purity, Björnstjerne Björnson is exceedingly different from his great contemporary, Leo Tolstoi. While the latter preaches a kind of Buddhist non-resistance to evil, Björnson believes in the duty of active struggle for right, even by arms, if need be, but much rather by moral weapons. For the enemy is

no tangible man, but certain evil or ignorant desires in the minds of men. How absurd to maim and mangle their bodies, when we really want to get at their minds, and correct something twisted in their character! These invisible enemies, which are beyond the reach of any bullet piercing a man's brain, can often be reached by a soft and gentle word. Words are weapons, more far-reaching and more penetrating than any projectile of steel. Words are the only bomb shells that carry mind-force within them, and are made to explode within the mind. And with these subtle shells, from poets and pressmen, we are daily pelted, however ignorant of the fact that we are standing in the midst of the glorious battle of mind against mind.

This is the combat where Björnson feels at home. To him war is a survival of the past, when people did not know the subtle guise of their real enemies, often hiding within themselves, and not seldom being the "ghosts" of ancestral sins.

"THE RIFLEMEN'S MARCH."

Only once, I think, in Björnson's career did matters look as if he were going to be put back from the real modern combat into something like the old Saga conditions. This was during the great political crisis which ended in the *Rigsret* or Impeachment of the whole Conservative Ministry. It was then generally believed that if the King and his councilors should baffle or reject the judgment of the Supreme Court, their action would lead to a civil war, and thus far bring back the times of Olav the Saint and of King Sverre. To counterbalance the fear of Swedish troops being marched into Norway, the Liberals founded rifle corps all over the country, Björnstjerne Björnson being one of the instigators of this movement; and he crystallized his combative feelings into the spirited, cheerful words of a "Riflemen's Song."

Björnson left Norway in the autumn of 1882, after having helped his friends at the elections to send an overwhelming Liberal majority to the Storting, to go to Paris to do literary work "between the battles." But in case Swedish troops had invaded Norway and occupied the eastern parts of the country, Björnson was determined to take up arms and start a guerilla war from the western fjords and highlands.

However, there was to be no resurrection of the ghosts of the ancient civil wars. The King and the Ministry gave way; and as to the Swedish nation, it does not seem to have felt the least inclined to interfere. But it was during these critical years that Björnson wrote two of his most bellicose works. One is a drama, called "A Gauntlet;" the other a novel, "The Heritage of the Kurts."

THE KURT PROSE EPIC.

This prose epic of the Kurt family bears witness that it has been forged in the fire of a great national movement. It is the poetical offshoot of our greatest political crisis. If only on that account, the book will be looked upon by future Norsemen as a national monument. While the representatives of the peo-

ple were slowly and deliberately setting the heavy machine of the Supreme Court agoing, and while the judicial proceedings kept winding along their circumstantial course, Björnson had to vent his eagerness for action through the outlet of fiction. That impetuous energy of his, which might have become a driving force in a sanguinary struggle for liberty, now blossomed forth into epic and dramatic poetry, which is instinct with the stored-up fire of patriotic will-power. The books glow with battle-joy and combative humor. But the most remarkable thing about "The Heritage of the Kurts" is the strange kind of war which the book celebrates. How different are the scenes from the threatening spectre of civil war! In the Family Saga of the Kurts one of the chief victories is won in a cemetery, at a mother's funeral, and Thomas Rendalen, the last of the Kurts, leads an army of white-robed girls, singing children's songs and strewing flowers. The last and decisive battle, also led by Thomas Rendalen, and still more victorious, is fought in a church at a wedding; but here the whole active army consists of a mother robed in black and her little baby.

FOR THE RIGHTS OF MOTHERHOOD.

Both at the funeral of the mother and at her daughter's wedding the same battle is fought by the white army of innocent girls and by the dishonored woman in mourning. The battle is fought for the rights of motherhood. In both cases the real struggle takes place in the minds of those present, and the enemies are invisible powers, some of which are the ghosts of ancestral excesses.

How far Björnson must have traveled from the time when he celebrated the feats of Sverre and Sigurd! Here, at this epoch of his life, he was almost within sight of a new civil strife, in the old, manly Saga style; but instead of reviving in imagination those spectres of the past, he spent this period of suspense in celebrating a women's war. He causes his hero, the holder of the Kurt Heritage, to be educated among girls and to become the chieftain of a "staff" of hoydens. And yet it is the most vigorous tale produced in modern Scandinavian literature.

THE GERM OF THE STORY.

The story of the Kurts, the author told me, has grown out of one pregnant scene, which is rendered in the closing chapter of the book, and forms the keystone of its whole structure. Many years back his mother had told him of a curious hitch which had occurred at a nuptial ceremony in Kristiania—a woman appearing on the threshold of a church and laying down her baby before the feet of a bride, who was just about to enter the sacred building. Did the bride make her way over the other woman's child to join hands before the altar with the child's father? On this point tradition seems to have been forgetful. Perhaps all the more vividly must the strange scene have stood before the poet when he first heard it told. But he carried the germ of his prose epic many a year. How came the seed to be awakened?

A PROTEST AGAINST THE DOUBLE STANDARD.

About the time of that great political crisis Björnson felt as if he himself had been thoroughly awakened. As a social and political reformer he had often been led by his keen, instinctive scent as a poet to follow up the track of social wrongs till he found their hidden source in some individual defect, in some crookedness of character. What else are they doing, the most powerful novelists and playwrights of our age, but digging up the "ethological" problems which lie at the root of social difficulties? In the subtle springs of individual character Björnson had become aware of something very much out of joint, something that dislocates the whole social machinery. In that spirited play "A Gauntlet," which is like a forerunner of "The Heritage of the Kurts," "Svava Riis" throws her glove in the face of her *fiancé*, as a protest against the double standard of morality. Why should the duty of self-restraint weigh unevenly on man and woman? Why with lighter pressure on the stronger sex? In a speech at a Scandinavian club in Paris Björnson went the length of attributing the defeat of France by Germany in some degree to the greater slackening of the spring of sexual self-discipline in the French, especially in their officers.

HOW HE WORKED IT OUT.

Thus the seed of the story of the Kurts ripened. The vision arose of a desperate mother defying a bride to step over a child on her way to the altar. This scene was only a broken fragment which had floated down the stream of tradition. Björnson eagerly undertook to restore that curious little incident to its place in the lives of a cluster of families. He went in search of types of all the actors in the scene, and he found some of them living around him. It was easy enough, so the author told me, to find out the bridegroom, and the bride as well. But the mother of that baby—how did she get the courage to interfere at a nuptial ceremony in a sacred building? How did she, that had lost her character, dare to stand in the way of a pure and spotless bride, and use the evidence of her own disgrace, the baby, as a weapon of attack?

Perhaps she had some one to back her up. Perhaps some strong-willed, combative persons, who had a personal interest in the struggle for the rights of motherhood. Who could they be?

WHY KURT WAS CREATED.

Such a bold and theatrical action seemed to point to a nervous, impetuous family, which had itself suffered from the dissolute habits of some of its members, and was now strongly reacting against its own dangerous heritage—reacting, perhaps, with some of the inherited rashness and reckless resolve.

As a ball running uphill betrays by its speed from what height it has rushed down, so the reckless energy shown in making such a "scandal" in a church seemed to betray an inherited capital of impetuous vigor, once working downward, but now pulling uphill again. It looked like a case of transformation of

mental energy. And Björnson, the novelist, went over the hunting-grounds of fiction in search of the same kind of motive power which Björnson, the social reformer, was eager to collect and to organize.

The driving force of the scene in the church was the unknown quantity which goaded his curiosity and gave a free scope to his imagination. And rarely, I think, has a modern realistic writer taken greater advantage of a gap that was to be filled up by his creative skill. The hidden force which did not clearly appear in his mother's tale swells out in Björnson's mind into a long family procession, spreading out over two centuries.

I doubt whether he would have thought of extending the scene from which he started backward into a whole family chronicle, if he had not from his youth up been familiar with the fine old Icelandic Family Sagas, like that of *Njál*. Although the story of the Kurts is intensely modern in its treatment, yet the rapid pace of events and the close-knit nervous sentences remind Norwegian readers of the masterpieces of the old language.

THE INFLUENCE OF HERBERT SPENCER.

As to the modern scientific spirit which pervades the book, Björnson told me that he owed much of it to the works of Mr. Herbert Spencer, especially to his book on Education. It was on a visit to the United States, in 1880 and 1881, that he came across one of that great English philosopher's works at a railway station. Mr. Herbert Spencer's philosophy strengthened the tendency in Björnson to look upon the question of heredity from a less gloomy point of view than Henrik Ibsen had done in "Ghosts" or M. Zola in "Les Rougon—Macquart." In fact, Björnson's novel is a counterpart of Ibsen's play, which latter was published in 1881, nearly three years before "Heritage of the Kurts."

BJÖRNSON AND IBSEN.

The difference between Fru Alving and Fru Rendalen is all the more striking because of the likeness in their position and place in life. Both are widows, and both of them have to struggle with the "Ghosts" of their husbands' excesses resuscitated in their sons. But the two mothers are made of different stuff. While Mrs. Alving, of the "Ghosts," shirks the combat again and again, Björnson's heroine, who is by race and training splendidly equipped for the struggle, succeeds in turning the fate of the Kurts, and trains her son to conquer the old family curse. The unpleasant feature in Ibsen's beautifully simple and plastic drama is the lack of a really heroic struggle, however unluckily it might end. This play has reminded some critics of the old Greek tragedies, not only by the fewness and high relief of the characters, but also by its theme; a struggle against an inherited family curse. Ibsen might have turned his disheartening drama into a bracing tragedy, if he had put into it a stronger and bolder woman. Perhaps Ibsen would say that he had not met with such a heroine in real life, to which Björnson would probably an-

swer: "If she is not real, we must make her real." And one means toward this end is to force a vivid vision of her on the minds of real women, and use all the suggestive power of poets.

DRAWN FROM LIFE.

How did Björnson find the woman who was to bend the fate of the Kurts, and turn his novel into a heroic prose epic? The outward frame and part of the energy he borrowed from a model, whom I have had the pleasure of knowing. "The frame was good," said the author, "but I was obliged to put some new machinery into it." I believe Björnson would hardly care to be a poet and an evoker of life-like figures, if he could not create some of them anew in his own likeness, and people the minds of men with a strong, buoyant and cheerful race of his dream-children,

destined to live with a good many succeeding generations and take part in their struggles.

In his search for all the characters that were to act in his epic, Björnson has pressed not a few of his friends or acquaintances into his service. Even opponents could be used to act a part on the losing side. If they do not seem sufficiently alive in the real world to be able to live in the thinner air of fiction, he fuses two or three models into one figure. If Björnson the chieftain could have used people as freely in reality as Björnson the poet uses them in fiction, I believe he would weld most of us who are his friends or followers into new and more complete characters—perhaps every five or six of us fused into a new unit. In that way he might have got strong enough soldiers for his social campaigns. But then he would hardly have written books.

OUGHT MRS. MAYBRICK TO BE TORTURED TO DEATH?

A CONFESSION FROM SOUTH AFRICA AND AN APPEAL FROM AMERICA.

THE Maybrick case has from the first, in certain widely extended circles in this country, aroused the most intense interest; and it has created much bitter indignation against the British Government for its denial of palpable justice to an American woman. Mr. Stead has at length had his attention called to the subject in a manner so startling and sensational that he has been specially investigating it. The result is the following article, which, whether it humiliates Englishmen or not, will certainly gratify Americans as showing how frank one Englishman can be in admitting the abominable miscarriage of justice under which Mrs. Maybrick is dying in prison.

A SOMEWHAT curious experience befel me this autumn. A voice, as it were, from the grave compelled me to look into an almost forgotten past, and reconsider conclusions which seemed at one time to be final. Three years ago, when I was editor of the *Pall Mall Gazette*, Florence Maybrick was tried and convicted and sentenced to be hanged for the wilful murder of her husband. In accordance with principles on which I had always acted, with one fatal exception, the *Pall Mall Gazette* objected to any retrial of the case by the Home Secretary in deference to clamor. I was on holiday at the time, and paid no attention to the case, merely assuring my *locum tenens* that I approved his adherence to the sound principle that a judge and a jury who have seen the witnesses and heard them give their evidence are more likely to be right than a heterogeneous *omnium gatherum* of newspaper readers who had no opportunity of forming an opinion of the comparative credibility of the opposing witnesses. Logically, Mrs. Maybrick should have been hanged. Mr. Matthews, however, was Home Secretary, and Sir Fitzjames Stephen was the judge, and between them they contrived to make as nice a botch of the whole business as wrong-headedness on one side and semi-

dotage on the other could have brought about. Not daring to carry out the capital sentence, they evaded the gallows by a solemn declaration that there was a reasonable doubt whether any murder had ever been committed; and then, instead of sending Mrs. Maybrick for trial on the charge of attempting to poison, they commuted the sentence passed for murder to penal servitude for life. Mr. Labouchere, who was one of the most strenuous believers in her guilt, admitted sorrowfully that Mr. Matthews by his explanation had knocked the bottom out of the whole case against Mrs. Maybrick.

The excitement, however, died down, Mrs. Maybrick went to her living tomb in Woking, the newspaper reader passed to the next sensation, and probably not a vote was lost to the Unionist party at the general election on account of the illogical absurdity of the Home Secretary's dealing with Mrs. Maybrick.

Her case was buried and forgotten, at least on this side of the Atlantic, and I certainly had not the least inclination to refer to it again.

But no sooner was the general election over than the Maybrick case was thrust upon my attention by a letter which reached me from the Transvaal Republic—of all places in the world! It was a quaintly

addressed letter, bearing the postmark of Krugersdorp, July 19, and franked by four penny stamps of the South African Republic. The address was as follows:

Staed Esq
 Editor of the Palmall
 Gazeeth and Rewen of Reweujs
 London. England.

On opening this missive, which reached me August 15 or 16, I found it was dated Rithfontein, July 10, 1892, and contained a remarkable communication, purporting to be the deathbed confession of a man who accused himself of having conspired with others to bring suspicion upon Mrs. Maybrick. At first I was not disposed to pay it much attention. When any great murder case is in the air there are usually some people ready to accuse themselves of a share in it, especially if they are at a safe distance or at the point of death. But after a time I reflected that the Maybrick case was not by any means in the air, and that even if it had been before the public at home the contagion of morbid curiosity could hardly have spread to the banks of the Limpopo. There was also an air of genuine conviction about the letter which impressed me more in a second and third reading than it did at first. The extraordinary spelling, due to the effort of a South African Dutchman to spell English as he pronounces it, gave the communication an unmistakable stamp of authenticity so far as its writer was concerned. So after much consideration I decided to look into the matter. But before printing my conclusions let me give my readers the exact text of the letter, first in its original spelling and then in ordinary English, together with a reproduction in facsimile of the confession:

Rithfontein 10th July 92

This being Englished, runs as follows:

MR. STEAD:

DEAR SIR.—Please will you insert this in your valuable and widely read paper, in justice to a poor woman who is still in prison for a crime another person has committed. It is about five months ago since (I was) in company with Harry Wilson from Mashoualand to the Transvaal. He was sick with fever, and

at last died on January 14, 1892. Before he died he made the following confession, which he instructed me to send to Sir Charles Russell, Barrister-at-law, London, England. There were four of us who started back, and all three died from fever except myself.

And as nothing has been done in the matter—Sir C. Russell has not moved in the matter—I hope that you, loving justice to your fellow-men, will move in the matter. He died on the Limpopo Flats on January 14, 1892, and was buried by me, and what is the worst part I was the only one of the four left to hear that miserable confession.

Trusting that you, loving justice, will take this into consideration, I will subscribe myself your most humble servant,

MOREAU MASINA BERTHRAD NEUBERG.

These I will swear to at any time. M. M. B. N.

CONFESSION OF HENRY WILSON.

He stated that he, in conjunction with a woman by the name of ———, tampered with medicine which was intended for Mr. Maybrick, put arsenic into the ———. He said because Mrs. Maybrick and he could not agree, and he had a grudge against her. There was also another woman, he called her Sarah, but I don't remember the other name. It was somewhere near Manchester, some time ago, and she is still in prison. He told me to send this statement to Sir Charles Russell, Barrister-at-Law.

On communicating with Sir Charles Russell, he kindly afforded me an opportunity of perusing the letter which had been sent to him. Without reproducing the Dutch spelling, this is the first letter Englished:

JOHANNESBERG, March 25, 1892.

SIR CHARLES RUSSELL:

SIR.—A man of the name of Henry Wilson made a confession to me in my tent at Mashonaland that he put arsenic into some medicine for purposes of revenge on Mrs. Maybrick, near Manchester, some years ago. She was convicted of the crime of murder and sent to prison for life, and he wants me to write to you his confession of the crime. He died, and was buried on the Limpopo river, near the drift crossing to the Transvaal.

CONFESSION OF HENRY WILSON.

He said he wanted to be revenged on Mrs. Maybrick. He with a servant girl tampered with the medicine for Mr. Maybrick, and put arsenic into it; but how much I could not get to know, as he was delirious for fourteen days. He died and I buried him on the Limpopo Flats on the other side of the Transvaal two months ago. Trusting you will interest yourself on behalf of the woman Mrs. Maybrick, I remain, your most humble servant,

M. M. BERTHRAD NEUBERG.

This is written on arrival from Mashonaland. I am sorry there is not another witness to this miserable statement.

M. M. B. NEUBERG.

After carefully reading and rereading these pathetic appeals from the solitary survivor of the ill-fated party of farmers in Mashonaland, I came to the conclusion that it was simply impossible to refuse to look into the whole matter. Mr. Neuberg was evidently profoundly convinced of the serious importance of the case. He seems to have written to Sir Charles Russell as soon as he got within range of a post office. After waiting four months, when he heard nothing from Sir Charles, who, however, had sent his letter at once to the solicitors, he could not remain at rest, and all difficulties of caligraphy notwithstanding, he wrote off to me, believing that I would at least look into the matter as "one loving justice for my fellow-men."

A NATIONAL DISGRACE.

So, without more ado, I did look into the matter, with this result, that whether there is anything in the confession or whether there is not, I cannot resist the conclusion that the case is so scandalous an illustration of the very worst sides of the British judicial system and of the British character, that, if only to give us a chance of burying the matter in oblivion, Mrs. Maybrick should be released. I do not care how prejudiced any one may be against Mrs. Maybrick. No Englishman can feel otherwise than ashamed of having to defend the manner in which she has been dealt with by our courts and our Governments. If, as seems by no means improbable, the case should become a subject of diplomatic representations between the governments, as it has already become the subject for very vehement journalistic disputation between the papers in America and Great Britain, we shall not be able to escape a gibbeting that is little short of a national humiliation. The Americans, who in high places and in low, are criticising the way in which we dealt with Mrs. Maybrick, have us on the hip. A sorrier exhibition of all that is worst in the blundering, wrong-headed illogical side of John Bull has seldom or never given occasion for his enemies to exult and his friends to wince.

MR. MATTHEWS' LAST WORD.

The climax of the whole tragedy of errors was not, however, reached until the publication of Mr. Matthews' response to the American appeal for Mrs. Maybrick's release, in which the world is solemnly told that "the case of the convict is that of an adulteress attempting to poison her husband under the most cruel circumstances," etc. The reluctance I felt to grapple with the subject disappeared before this revived imputation of the charge of adultery, as if it were to fill in and make up for all deficiencies of evidence in support of the major charge.

Mrs. Maybrick may or may not have been unfaithful to her husband on the one solitary occasion that she undoubtedly compromised herself, when she was smarting under the discovery of her husband's infidelity, when conjugal relations had ceased, and she was almost out of her senses with excitement and

hysteria. But the worst offense which senile malevolence on the Bench or in the Home Office can impute to this unfortunate woman is a trifle light as air compared to the debauchery in which her husband lived and moved and had his being.

MRS. MAYBRICK'S FATAL MISTAKE.

James Maybrick is dead and gone to his account. The adage *de mortuis* does not apply when silence as to the dead inflicts cruel injustice upon the living. But for the chivalrous anxiety of Mrs. Maybrick to shield the reputation of her dead husband, even when she stood in the dock accused of having murdered him, she would not to-day be slowly pining to death in Woking Jail. Let there be no mistake about this matter. When the Messrs. Cleaver, her solicitors, were in consultation with her before the trial, Mrs. Maybrick pathetically implored them "to spare Jim as much as possible." "I know," she said, "he has done many wrong things, but he is dead now, and I would be distressed if his life were to be made public." Her solicitors yielded to her entreaties, consoling themselves, from a professional point of view, that to comply with her earnest entreaty might not materially injure the case. If they had laid too much stress upon the immoralities of Mr. Maybrick it might have been held to have suggested a motive for his removal, so they kept silence. Nothing was said to bring the actual facts of Mr. Maybrick's life before the jury, and the judge was able to indulge to his heart's content in portraying the unfortunate wife who stumbled once as a horrible adulteress—false to a husband who, for aught that appeared in court, was entitled to her love and honor and respect.

That fatal chivalry of the loving heart of a deeply injured woman is primarily responsible for the hideous miscarriage of justice, which has as its latest expression this Ministerial reference to the "adulteress" who is now being slowly done to death in a convict prison.

MR. MAYBRICK A CONFIRMED ARSENIC EATER.

I went down to Liverpool last month to look up the evidence. I found that on two points there seemed to be no difference of opinion. First, that Mr. Maybrick was habitually and notoriously immoral; and, secondly, that in order to counteract the enervating consequences of dissipation he constantly drugged himself with arsenic. Here, for instance, is a statement which would have been made on oath under cross-examination at the trial but that the unfortunate illness of the witness rendered him practically unable to give his evidence clearly. Mr. James Heaton, Fellow of the Pharmaceutical Society, says:

"I am a chemist and druggist, carrying on business in Liverpool. The late Mr. James Maybrick was a customer of mine. He used constantly to come to me for medicine, usually for liquor arsenicalis, for which he presented a prescription, believed to be American. This liquor arsenicalis he would sometimes take as often as five times a day. I have also seen him take arsenic in white powder out of his pocket and place

it on his tongue. He carried arsenic about with him. He used it, as he used the liquor arsenicalis, as a 'pick-me-up.'"

Mr. Maybrick, in short, kept himself on his legs by dosing himself with arsenic. He had arsenic everywhere—arsenic in his pocket, arsenic in his house, in capsules and powders and solutions. I have in my possession one of the capsules of arsenic and iron, which the prosecution kept back until the middle of

MRS. MAYBRICK AT HER MARRIAGE.

the trial, but which they admitted he had procured for his own use. To assume that the arsenic found in his body had been placed there by any other hands save his own is a supposition which would need to be supported by very strong evidence indeed before it could be believed.

But of that evidence, where is there even a shred or a tittle to be found? Mrs. Maybrick had a prescription for an arsenical facewash for her complexion, which, unfortunately, was not discovered until after the trial, and its existence was doubted. But it was found afterward, and it is printed in Macdougall's book. But beyond the infinitesimal quantity of arsenic which she used for her complexion, there is no evidence whatever to prove that she ever had procured any poison anywhere. If Dives had perished of a surfeit, it would have been as reasonable to accuse

Lazarus of having choked him with the crumbs which he shared with the dogs as to saddle Mrs. Maybrick, because of her cosmetics and her flypapers, with the responsibility for poisoning the *roué* who used arsenic as part of his daily diet.

THE ATTORNEY-GENERAL ON THE JUDGE.

The fact is that the case was decided not in the least upon the evidence of experts, but solely upon the prejudice imported into the case by the judge on the last day of his summing up. Sir Fitzjames Stephen, who was much prejudiced against wives suspected of misbehavior, had worked himself up into a kind of frenzy at the thought of Mrs. Maybrick becoming a popular heroine. The judge's charge was of a nature happily almost without precedent in British courts. Sir Charles Russell, the Attorney-General, in his memorandum to the Home Office, used the following weighty words of censure of the judge's conduct. After saying that it was eminently a case in which the judge was bound to allay prejudice instead of exciting it by vehement appeal, Sir Charles pointed out that Sir Fitzjames Stephen had "passionately invited them" to find a verdict of guilty. He made suggestions which were untenable, and had never been advanced by the prosecution, and went out of his way to make misleading references. Sir Charles continues :

But most important of all, instead of distinctly separating the two issues of cause of death and the prisoner's guilt in connection with it, he appears to have told the jury not to consider the case separately, but as a whole. It is submitted this is clearly wrong and misleading.

It is no exaggeration to say that every point made by the prosecution was put by the learned judge, and with greater insistence, as well as other points which the prosecution had not made—while, at the same time, he does not seem to have realized the importance of many of the points made on the part of prisoner, and did not put some of them at all, and those which he did put he minimized and discounted.

To begin with, he took two days to sum up. The first day he spoke as a judge. The second day some malign influence seemed to have possessed or obsessed him, and he raged like a violent counsel for the prosecution, leaving no stone unturned to excite prejudice against the unfortunate woman in the dock. Why this change no one can say. All that was known was that he paced his room the night before the verdict as in a frenzy, and came into court, charged horse, foot and artillery upon the wretched, forlorn woman in the dock. He laid himself out to excite prejudice against this "horrible woman," but even when he had finished his twelve-hour harangue for the prosecution from the Bench, he had sufficient judicial acumen left amid the perceptible decay of his faculties to doubt the possibility of a verdict of guilty. I was assured in Liverpool, by one who had it direct from the official concerned, that when the jury retired the judge called up the clerk and asked him what the verdict would be. "My Lord," he replied, "I am not the jury." "Oh," said the judge, "it is impossible for them to find her guilty in face of the

medical evidence." That, also, was the opinion of the prosecution.

THE REVOLT AGAINST THE VERDICT.

The conviction that a verdict of "Not Guilty" was inevitable was so firmly entertained that both the evening papers printed special editions announcing a verdict of "Not Guilty," and sold them in the streets. When the jury returned, after an absence of thirty-eight minutes, with a verdict of "Guilty," the sensation was overwhelming. Even the judge felt it, and in passing sentence of death he placed the whole responsibility upon the jury and the jury alone. Outside the ebullition of feeling was almost unprecedented. I do not remember any case in which the public protested so vehemently against the decision of a court of law. Nor was it only the general public. Every member of the Bar present at the Assizes, with the addition of the Recorder of Liverpool, signed the memorial in her favor.

Sir Charles Russell, in his memorandum to the Home Office, says :

Lastly. It is important to note that the verdict came as a surprise upon the trained minds of the Bar of the Northern Circuit, and that to the very last moment (even after the summing-up), the leading counsel for the prosecution, Mr. Addison, Q.C., M.P., persisted in saying that the jury could not, especially in view of the medical evidence, find a verdict of "Guilty."

MR. MATTHEWS' VERDICT—NO MURDER.

The Home Secretary, under the chaotic system of British jurisprudence, is the Supreme Court of Criminal Appeal. Being clamorously summoned to retry the case, he went into the evidence with the assistance of the judge who tried Mrs. Maybrick. The result of his retrial of the issue was the summary but decisive overturn of the very foundation upon which the verdict of murder had been given. The judge had submitted to the jury as the first question which they must decide—

Did James Maybrick die of Arsenic ?

And in order to prevent any misunderstanding he told them that, "it is a necessary step—it is essential to this charge that the man died of poison, and the poison suggested is arsenic." Further, he distinctly asserted that "it must be the foundation of a judgment unfavorable to the prisoner that he died of arsenic." The judge did not need to remind the jury that if there was any reasonable doubt it is the established principle of English law that the prisoner must have the benefit of that doubt. That goes without saying. But the jury, notwithstanding the evidence of four most distinguished medical experts, who swore that the deceased did not die of poison, decided that there was no reason for doubting but that

James Maybrick did die of Arsenic.

Then comes the Home Secretary, who retries the case, and proclaims to the world that, after taking the best medical and legal advice that could be obtained, he has come to the conclusion that "the evidence

does not wholly exclude a reasonable doubt whether his death was in fact caused by the administration of arsenic!"

The Home Secretary's verdict is directly opposed to that of the jury. His finding is:

I doubt whether James Maybrick did die of Arsenic.

As the prisoner is always entitled to the benefit of the doubt, this knocks the very foundation out of the verdict of the jury. If there was no murder no one can be guilty of murder. If there is a "reasonable doubt" that Maybrick did not die of poison, then clearly there can be no ground in law or in reason for convicting his wife of having poisoned him. But, although the Home Secretary thus summarily destroys the foundation of the verdict of the jury, he refuses to alter the decision that she is guilty of wilfully murdering a man who, he admits, may never have been murdered at all.

We shall have to ransack the annals of Topsy-Turvydom to discover a precedent for this absurd and ridiculous conclusion. But it stands to this day unreversed, and this morning Mrs. Maybrick was recalled by the harsh clangor of the prison bell at Woking to the lot of a convicted murderess, doomed to spend her life in penal servitude, to expiate a murder which the judge who tried her and the Home Secretary who retried her agree in declaring may quite possibly never have been committed.

OF WHAT, THEN, WAS MRS. MAYBRICK GUILTY?

The answer is that, although the verdict of wilful murder has been practically annulled, the Home Secretary decided that the evidence clearly pointed to the conclusion that Mrs. Maybrick administered and attempted to administer arsenic to her husband with intent to murder, and that for attempting to poison she may be lawfully imprisoned for life. If so, so be it. But in that case let us clearly understand that Mrs. Maybrick is at this moment a convict in Woking, not for committing wilful murder, but for attempting to poison. That surely is clear enough for the decision of the Home Office. Yet so anomalous are the ways of the circumlocution office, so labyrinthine the maze of British jurisprudence, that the Home Office still maintains that Mrs. Maybrick is under sentence, not for attempting to poison, but for wilful murder. It is such banal futilities which will yet make the British Home Office the laughing stock of the world.

DID SHE EVER GIVE HIM POISON?

But is it true that the evidence points so clearly to the administration of poison by Mrs. Maybrick? She herself admitted having put a powder, at her husband's urgent request, into a bottle of meat juice, and at the trial a bottle of meat juice, which Mrs. Maybrick declares she never saw before, was produced which contained arsenic. But it is admitted that none of that arsenious meat juice was ever administered to him; so that, whatever her intent may have been, it was not carried into effect. Where, then, is the evidence that she administered the arsenic, if she

ever gave him any, which is not proved, with felonious intent? If she gave him arsenic in his medicine, it may have been at his own request, or she may have given it to him inadvertently, owing to the poison having been placed in his medicine by other parties. The former is the conclusion which is suggested by the notorious habits of Mr. Maybrick; the latter is put forward by the confession from South Africa. In either case there would be no reason for keeping Mrs. Maybrick in jail.

THE AFRICAN CONFESSION.

The case for Mrs. Maybrick, I take it, if we accept the confession of Harry Wilson as genuine, is that Mr. Maybrick did not die of poison, and that after he was dead conspirators in the household put about the arsenic and the arsenical liquor which the dead man had in his possession, so as to excite suspicion against Mrs. Maybrick. Mr. Matthews, I believe, satisfied himself that the arsenic found in solution in the meat juice could not have been put there in powder, so that it is not accounted for by Mrs. Maybrick's story about the powder. Now, however, we have the statement of the man, Harry Wilson, that he, for purposes of revenge, aided by nurses or servants in the house, put arsenic into the medicine or into the tea. I admit the difficulty of believing that any human being could be base enough to join in so wicked a plot against an innocent woman, and to carry it out at the very moment when their unfortunate victim was lying in a swoon into which she fell when her husband died. But here we have Harry Wilson's confession, and as some, at least, of those about had made up their minds Mrs. Maybrick was a poisoner, they may have had slight scruples at making assurance doubly sure by assisting in preparing the evidence in support of their case. But I lay no stress on this.

WHAT THE MEDICAL EXPERTS SAY.

But is there any proof anywhere that Mrs. Maybrick ever attempted to poison her husband? No one could prove she ever procured any arsenic anywhere, or administered it at any time. Dr. C. M. Tidy, one of the official analysts to the Home Office, and Dr. Macnamara, who were called as medical experts for Mrs. Maybrick, published after the trial a toxicological study of the case, in which they referred to "the disastrous result of a trial which, if often repeated, would shake the public faith in English justice." These high authorities thus sum up their judgment as follows:

Two conclusions are forced upon us:

1. That the arsenic found in Maybrick's body may have been taken in merely medical doses, and that probably it was so taken.
2. That the arsenic may have been taken a considerable time before either his death or illness, and that probably it was so taken.

Our toxicological studies have lead us to the three following conclusions:

1. That the symptoms from which Maybrick suffered are consistent with any form of acute dyspepsia, but that

they absolutely point away from, rather than toward, arsenic as the cause of such dyspeptic condition.

2. That the post-mortem appearances are indicative of inflammation, but that they emphatically point away from arsenic as the cause of death.

3. That the analysis fails to find more than one-twentieth part of a fatal dose of arsenic, and that the quantity so found is perfectly consistent with its medicinal ingestion.

MR. ASQUITH'S OPPORTUNITY.

The confession from South Africa, even if it were quite valueless, has been of good service in directing attention once more to the travesty of justice which has exposed us to serious remonstrances from the other side of the Atlantic. It is most humiliating for an Englishman to have to answer before the bar of American public opinion for such a farrago of blunders and illogicalities as we have passed in review. Mr. Asquith, dealing with a petition handed him on entering office, has declared that he sees no reason to depart from the decision of his predecessor. I have too much respect for Mr. Asquith to take this as his final deliverance. It is not necessary for him to publicly array the British Goddess of Justice in a white shirt and put ashes on her head in order to terminate this unseemly business. As Mr. Matthews reduced the charge from wilful murder to that of attempting to poison, Mr. Asquith can reduce the sentence from penal servitude for life to one for five years, which is the more usual sentence for such an offense. This five years' sentence—shortened by the usual allowance for good behavior—is almost on the point of expiry. Mr. Asquith, while reconsidering the sentences of the convicts under his charge, may easily arrange that Mrs. Maybrick shall not spend another Christmas in jail.

MRS. MAYBRICK'S IMPENDING DOOM.

Mrs. Maybrick is being slowly tortured to death in solitary confinement; and if she is not speedily released by the clemency of the Crown, she will die. She has been under medical treatment as an invalid since December. The medical officers have done what they can to alleviate her sufferings, and to restore her to a regular and normal state of health. They have utterly failed, and for this reason: the malady from which she suffers is directly engendered by incessant brooding over a cruel wrong in a silence unbroken even by the voice of the warder in the solitude of an isolated cell. Too weak to labor, she spends twenty-three hours in every twenty-four in sunless gloom, with nothing to do except to indulge in brooding over the steady approach of insanity or death. She suffers agony from racking headaches, which, from the family history, are probably the preludes of the consumption to which her brother succumbed. Pain, despair, gloom and disease—all these are visited upon Mrs. Maybrick, and unless Mr. Asquith relents the pressure will be steadily kept up until the miserable woman is tortured to death. It would be more merciful and more logical to hang her

off hand than to persist in wearing out her life by this horror of slow torment out of regard for the *amour propre* of an ex Home Secretary and a superannuated judge.

A CASE FOR THE CABINET.

Even if Mr. Asquith should turn a deaf ear to the plea thus put forward, we should not despair. The matter is one which goes beyond the limits of a single department. Lord Rosebery is certain to have to deal with the matter, and Mr. Gladstone himself may find it expedient to spare a little time to consider whether or not it is worth while following President Lincoln's example, and strain a point, rather than persist in rigor which creates on the other side of the Atlantic a very lively sense of the illogical injustice of British jurisprudence. For my own part, with my responsibility for the only political periodical circulating equally in both Empire and Republic, which aims, above all things, at the establishment of a close union based on mutual respect between the two great sections of the English-speaking race, I can only present this plea respectfully before the new Administration, with the deep conviction that the permanent interests of both countries would be best served by the removal of a cause of dispute which is certainly not calculated to contribute either to our self-respect or our reputation for either justice or mercy.

THE OPINION OF THE ATTORNEY-GENERAL.

In conclusion, I may add that the opinion that Mrs. Maybrick was wrongfully convicted has been entertained from first to last by her solicitors, Messrs. Cleaver, of Liverpool, and her counsel, Sir Charles Russell, now Attorney-General. Everything that has since come to light has but confirmed the views expressed by the legal advisers of Mrs. Maybrick at the trial, viz., that the evidence was in her favor, and they have never ceased to promote every measure for obtaining her release. Sir Charles Russell's position is somewhat delicate. He was Mrs. Maybrick's counsel. He is now the legal adviser of the Government. This hampers him. He might be accused of using his official position to advise the release of his client. But before he was Attorney-General he drew up a memorial to Mr. Matthews, in which he expressed himself in terms which he abides by without hesitation to this hour. From this memorial I quote the following passage:

On the whole, it is submitted that looking to all the facts—to the strange habits of the deceased and to the strong conflict of medical testimony—coupled with the summing up of the judge, which took captive the judgment of the jury, the verdict cannot be regarded as satisfactory, and the irrevocable penalty ought not to be inflicted.

The capital sentence was not inflicted; but penal servitude for life is, under present conditions, a sentence of death. Surely, considering all the circumstances, the time has come for that sentence to be revoked.

THE AMERICAN APPEAL FOR
MRS. MAYBRICK.

Gail Hamilton has addressed an "Open Letter to the Queen," on the subject of Mrs. Maybrick, which appears in the *North American Review* for September. Gail Hamilton is one of the numerous band of American women who have espoused the cause of Mrs. Maybrick with a zeal and an enthusiasm which is beyond all praise, whether or not we think it in accordance with knowledge. Gail Hamilton lays before her Majesty what may be regarded as the most powerful American plea for Mrs. Maybrick that has as yet been penned. Lord Rosebery will do well to read it, and the Home and Foreign Secretaries might do worse than consult together to see whether something might not be done to make a more adequate response to the American appeal than Lord Salisbury and Mr. Matthews could be induced to recommend. Gail Hamilton starts effectively enough with a reference to the pardon by President Lincoln of Alfred Rubery, an English subject, who bought a ship, stuffed it full of powder and shot, with a view of seizing the forts of San Francisco and raising a rebellion in California. Rubery was found guilty in 1863 and sentenced to ten years' imprisonment. Shortly afterward John Bright appealed for the pardon of Rubery. President Lincoln promptly granted the pardon, and the entry in the law reports states that the pardon was granted as a mark of the respect and good-will to Mr. Bright, by whom it had been solicited. Gail Hamilton suggests from this that England might pardon Mrs. Maybrick in deference to the appeal of America. English people will read with surprise of the interest which the Maybrick case has excited in the most influential quarters in America. The wives of the President, the Secretary of State, the Secretary of the Treasury and the Secretary of Agriculture signed a petition to her Majesty the Queen, praying her grace "on behalf of our young countrywoman, Florence Maybrick, a widow, a mother, fatherless, brotherless, wearing out in prison a life sentence of penal servitude." When the wife of the President of America and the wives of the principal Ministers at Washington earnestly and respectfully entreat the Queen of England to pardon and release Mrs. Maybrick, it is to be regretted that a petition so influentially supported should have been received so cavalierly by Lord Salisbury. Not only did the wives of the President and his Ministers appeal to the Queen, but a petition urgently asking Mr. Matthews to advise her Majesty to order the pardon and release of Mrs. Maybrick has been signed by forty bearing the most representative names in America. This petition was drawn up under the immediate instigation and revision of the Chief Justice of the Supreme Court of the United States. The Chief Justice, it seems, is connected with Mrs. Maybrick on the mother's side by marriage. Two other judges of the

Supreme Court were nearly akin by the father's side to Mrs. Maybrick. Among those who have signed the petition were the following :

The Vice-President of the United States and President of the Senate; the Speaker of the House of Representatives; all the members of the Cabinet; many chiefs of bureaus; the General commanding the Army and several brigadier generals; Cardinal Gibbons, the highest authority of the Catholic Church in America, of whose communion are Mrs. Maybrick and her mother; the Minister to France; the Acting Judge Advocate-General, and others.

The petition which was so signed contained a statement of the facts as to the profound impression produced by the conduct of the trial, that there had been a miscarriage of justice, and a reference to the reasonable doubt which the Home Secretary said as to whether there had been any murder or not. The petition goes further and arraigns not unjustly the scandalous defect of the English judicial system which fails to provide any court of Criminal Appeal before which the question raised in the Maybrick case could be properly raised and decided. Whether or not this American impeachment of English justice nettled Lord Salisbury or not it is difficult to say, but many Englishmen will read for the first time with regret and with astonishment that Lord Salisbury replied to this petition in the following terms :

Taking the most lenient view which the facts proved in evidence, and known to Her Majesty's Secretary of State, admit of, the case of this convict was that of an adulteress attempting to poison her husband under the most cruel circumstances, while she pretended to be nursing him on his sick-bed.

The Secretary of State regrets that he has been unable to find any ground for recommending to the Queen any further act of clemency toward the prisoner.

Gail Hamilton concludes her paper by making a somewhat bitter reference to the cases of Mrs. Osborne and Mrs. Montague, and it ends with an eloquent appeal on behalf of this American woman immured in Woking Prison, whose release is prayed for by the agonizing entreaties of a mother and the tender urgency of the wife of the President of the United States, and the respectful petition of the most eminent men of the American Republic.

It is unfortunate for England that her peculiar institutions should come up for review under such circumstances as this of the Maybrick trial. This American woman was sentenced to be hanged by a judge on the verge of dotage, after the counsel for the prosecution had remarked that it was impossible to find a verdict of guilty in the face of the medical evidence. She was declared by the jury to have been clearly proved guilty of wilfully poisoning a man, who the Home Secretary, sitting as Court of Appeal, declared was possibly not murdered at all; and she is now serving a sentence which was not pronounced by the judge, for an offense which was neither alleged against her in the indictment nor submitted to the jury at trial.

“HOW TO LEARN A LANGUAGE IN SIX MONTHS.”

A STRIKING REPORT OF PROGRESS.

JACK STEAD.

IT is seldom the fortune of any magazine article to create so extraordinary an interest as that which has been aroused by the publication in the REVIEW OF REVIEWS of the article entitled “How to Learn a Language in Six Months.” The article was an exposition of the Gouin method as introduced in England by Messrs. Howard Swan and Victor Bétis. It was followed the next month by a commendatory letter from the pen of the venerable Professor Blackie, of Edinburgh. Not a little additional interest was given to the first article by its statement that Mr. Stead’s little eight-year-old son “Jack” would be set to learning French at once by the new method, and that a report of results would be duly made. This report was to have come after six months of experimental instruction; but we are prepared to give so satisfactory an account of the progress that three months had secured that there is no particular need to postpone the announcement, especially as a great number of people on both sides of the Atlantic have been wanting to know how the lad has been coming

on with his new-method French lessons. Mr. Stead’s children had been under M. Bétis’ instruction just three months, at their home (Wimbledon, near London), when they were examined by Monsieur A. C. Poiré, who has been for many years a prominent teacher of French in England by the old-fashioned methods. Monsieur Poiré writes to the REVIEW OF REVIEWS as follows upon the new method:

LITTLE JACK’S THREE MONTHS’ ACHIEVEMENT IN FRENCH.

18 PORTLAND PLACE, HALIFAX, August 19, 1892.

SIR: Having read in a recent number of the REVIEW OF REVIEWS the very remarkable article on Monsieur Gouin’s new method of teaching and learning languages, and also the interesting appreciations of Professor Blackie and Mr. Wren, I adopted what I thought to be a practical method before pronouncing on the system. I first read and studied the book explaining the method; then I attended the course of daily lessons in French and German held during August, to see how it would work in practice. I had long conversations with Messrs. Howard Swan and Victor Bétis, who have undertaken to make the method known in England, and who thoroughly explained it to me; and lastly, but most important of all, I solicited and was granted the favor of judging of the result on your own children, after three months teaching—one hour a day in the case of Jack (eight years old), and after three months at two hours a day in the case of his elder brothers, who, however, had been taught on the older system for some time before.

To express my impressions after that visit, I find only two words—wonderful! incredible! If, before reading the book, before having it thoroughly explained to me, and before attending the lessons, I had heard the children speak French, I certainly could not have believed that only three months had been needed to attain such results. Honesty compels me to make here a very humiliating confession. My pupils, taught by the old method, cannot do after years of hard, tedious work what Jack can do after three months of interesting play.

Two examples will show what results may be expected. Jack could repeat, at my request, an episode in the life of the shepherd, containing at least twenty-five sentences, many of them idiomatic, and that in perfect French. Not only could his brothers do the same for a piece which they studied six weeks ago and never saw or heard since, but they did what I—a Frenchman—could not have done: they heard half a column of the *Petit Journal*, which I had brought, read by the professor in the tone in which he would have read it to French listeners, and the young English listeners repeated it almost *word for word* in perfect

French. Let those who have tried to study a foreign language say whether I was justified in using the words—wonderful! incredible! Monsieur Bétis seems to have done in three months what he had undertaken to do in six, and I am now quite convinced that English children can be taught in a year, at one hour a day or five hours a week, to *speak* fluently and correctly in French, German, or indeed any other language, and not only to speak, but also vastly increase their thinking power and reasoning faculties.

Two things also struck me during the lesson given in my presence to your children: 1. Not a single word of English was spoken by master or pupil from beginning to end, and yet the pupils understood perfectly all the explanation given, 2. Jack's power of forming pictures in his mind, of seeing clearly and quickly the logical succession of actions described, and the astonishing rapidity with which he repeated the verb expressing each action, and afterward the sentences constructed on those verbs.

I then saw clearly that the great discovery of Monsieur Gouin, the one point which is the very basis of the system, and on which it is necessary to insist, is the representation in the mind of the actions spoken of. Every one who has studied children knows the wonderful faculty that the child possesses of imagining a logical succession of actions, of seeing quite clearly the images in his mind, and of expressing those images by words already heard in connection with those actions, which follow each other in a certain definite order in his mental vision as when told in a tale. That power to evoke images, pictures, scenes, actions, is very great in a child. It is the means by which he learns and remembers. The use of that power is also intensely interesting to him, just in the same way as the magic lantern is interesting, because one image follows another without giving the eye time to tire of the details of the scene. Now if, while the child is engaged at looking at the picture, the master describes in a loud, distinct voice the action or scene represented, that sound (whether native or foreign, known or unknown) becomes almost indissolubly associated with the picture seen, and that point has been clearly demonstrated to me during the German lessons. Though continually reminded to imagine the fact, I very often saw in my mind the printed or written form of the idea, the result being that my more fortunate neighbor, who knew no German at all, and therefore could only see the image of the action, could repeat far more correctly than I could.

The adult possesses the same quality as the child, but in a lesser degree, simply because, by our old method of teaching, we have continually striven to stultify instead of develop that glorious gift of nature, inasmuch as we have directed the attention of the pupils to printed signs and abstract conceptions instead of trying to make the thought—that is, the scene—clearer and more distinct in his mind.

The training course for teachers, which has just ended, would be for me another proof of the excellence of the method. Most of the members are ex-

perienced teachers; and many, like myself, came somewhat prejudiced, our minds full of the traditions of the past, ready to present objections and find fault. We *all* believe now that Monsieur Gouin's method will enable us to attain far greater results, not only with private pupils and small classes, but also with the average classes of thirty or forty pupils. We believe that, by that system, we shall have no more dull boys, because we ask the pupils *not* to work, *not* to listen, but to *see*, and all teachers know (or ought to know) that what we call a dull boy is the one boy who cannot or will not make the mental effort necessary to grasp abstractions, but is following a cricket or football match in his mind, while we are speaking words instead of describing images before him.

I am so convinced of the practicability of the method that I shall use it for my evening classes, and shall try to induce a head master to let me apply it in the elementary class. Several of the teachers who have attended the course intend to do the same.

We are not here in presence of a new method scarcely different from other methods, but of what I believe to be *the* method, necessarily true because it is that of nature aided and improved by art, and if you think any part of this letter may help to call the attention of teachers to its importance, I shall be glad if you will publish it.—Believe me, sir, yours truly, A. C. POIRE (French master at the Huddersfield College, at the Heath (Halifax) Grammar School, etc.).

P. S.—Allow me to mention that I have taught French in English schools for eighteen years, that my pupils have gained distinctions in almost every public examination, and that I give lessons to more than 500 students every year; therefore I may claim to know something of the subject I am writing about.

RESULTS OF THE TEACHERS' SUMMER COURSE.

A vacation course was formed as announced in July, and was held for three weeks in London, for the purpose of training teachers and demonstrating the practice of M. Gouin's method. A class of between twenty and thirty persons was formed, consisting mostly of teachers, head masters and professors of languages. This class has been exceedingly successful, as would appear from the testimonial sent in at the end, signed by those in attendance. Some 100 or more exercises were worked through in class on the system, the matter of the lessons being scenes (in “series” of idiomatic sentences) expressive of the life around the family in the house, dressing, the toilet, the housework of a day, the breakfast and cooking and the life of a shepherd, giving the expressions of mankind in simple primitive life. These lessons were interspersed with conferences on the great part the imagination may be made to play in language-teaching; on the gift for languages—in what it really consists, and how it may be acquired; on the importance of the verb in the phrase; on the organization of language into that expressive of the object-

ive facts of life and that expressive of subjective thoughts ; on the method of training the memory by logical association ; and on the organization of grammar-teaching on a more interesting and psychological basis. Demonstrations were also given in class on a number of children, and a course of German was also carried on. Not the least interesting were the specimen lessons in unknown languages, such as Spanish, and the application of the use of mental visualization, so greatly used in the system, to the teaching of geometry, the multiplication table, the alphabet and science.

At the conclusion of the course, a vote of satisfaction in the results of the course was moved by Mr. Richard Waddy, M.A., of the Abbey School, North Berwick (who said he came convinced of the theoretical value, and was now equally convinced of the practical possibilities of M. Gouin's work), and was seconded by Mr. Guy M. Campbell, of the Royal Normal College for the Blind (who said he had come prejudiced against the system, but now remained an earnest adherent). The following letter was then signed by those in class on the last day, and was forwarded to M. Gouin :

34, John Street, Bedford Row, London, W. C.
August 19, 1892.

To Monsieur François Gouin, Paris.

Dear Sir.—This address proceeds from the students and teachers of languages who have attended here during the past three weeks, to acquire, under the guidance of Messrs. Howard Swan and Victor Bétis, a practical knowledge of your "Series Method."

The recent publication in England of your book on "The Art of Teaching and Studying Languages" awakened in those who read it an ardent desire to know more of a method that seemed so full of hope. Accordingly, we gladly availed ourselves of the holiday class opened by Messrs. Swan and Bétis, and now we feel ourselves in a position to judge, from actual experience, of the merits of the new system. Briefly, then, we came, we saw and we were conquered! We, one and all, intend to adopt and spread your method so far as in us lies.

Before separating we wish to send to you, into whose labors we have entered, this expression of our thanks, and to bid you God-speed on the work you have in hand. And, lastly, we would congratulate you on having secured in Messrs. Swan and Bétis two such able exponents of your opinions. It is impossible to remain unkindled by their enthusiasm, or unconvinced by the earnestness and lucidity of their teaching.

(Signed)

RICHARD W. WADDY, M.A. (The Abbey School,
North Berwick).

MARGARET C. CROMBIE (Kindergarten Training School, Leyland, Stockwell).
LAURA ANNE WARD (Kindergarten, Beckenham).
GUY M. CAMPBELL (Royal Normal College for the Blind, Upper Norwood).
ROBERT C. CRAIG, M.A. (Hemel Hempstead).
N. C. PRYDE (Head Mistress, Bedford Park High School).
ADA M. SWALLOW (High School for Girls, Bury).
GERTRUDE E. M. SKUES (Nunhead, London).
F. A. W. TAYLER, M.A. (Orwell Rectory, Royston, Camb.).
CHAS. ALLOWAY (Church School, Bulwell, Nottingham).
M. E. BARNES (Eton College, Windsor).
ELISE ZURCHER (High School, Leicester).
HENRY BELKE WOODALL (Milldown House School, Blandford).
EMILY PATTEN (Goole, Yorks).
HANNAH ROBERTSON, B.A. (North London Collegiate School for Girls).
MLLE. DE ST. MANDE (ditto).
FLORENCE MAYS (ditto).
ARTHUR H. COOMBS, B.A. (Keyford School, Frome, Somerset).
FRANCIS C. THOMPSON (Northampton).
S. RAWLINGS (Reddish).
E. P. KELLY, F.R.C.S. (West Hampstead).
A. C. POIRE (French Professor, Huddersfield College and Heath (Halifax) Grammar School).
MARY L. SWALLOW (Wandsworth).

No further classes are being held at present at Gray's Inn, though no doubt holiday and other training classes for teachers on the system may be arranged there or elsewhere. Very probably a holiday course in French and German will be held next year in Paris. Arrangements are being made for the method to be applied at once in several schools in London and the provinces for the elementary teaching of French, German and Latin.

It was stated recently that the latest prodigy in mathematical calculations, the calculating boy, Inaudi, who was investigated recently by the French Academy, acquired his extraordinary faculty by a process similar to that by which Monsieur Gouin teaches languages. In an article in the *Chautauquan*, for September, by Alfred Binet, this is stated to be incorrect.

M. Bétis has, however, carefully investigated the method of calculation adapted by Inaudi, and many of the questions posed in the Academy investigation were given at his instigation. He has worked out the method employed by these so-called "prodigies" into a system, and has already trained an artificial calculating boy. His researches on this interesting subject are to be published.

[The first article in this series upon Learning Languages by the Gouin method appeared in the July number of the REVIEW OF REVIEWS. It was followed by an approving and appreciative article in the August number from the pen of that veteran linguist and teacher Professor Blaikie, of Edinburgh, recounting his own experiences. These articles have brought so many inquiries to the office of the REVIEW OF REVIEWS that we have arranged to mail directly—as a matter of convenience to our readers—copies of M. Gouin's valuable new work upon the "Art of Teaching and Studying Languages" upon receipt of the price, \$2.25. Address the REVIEW OF REVIEWS, 13 Astor Place, New York.]

“THE UNCROWNED QUEEN OF AMERICAN DEMOCRACY.”

A CHARACTER SKETCH OF MISS FRANCES E. WILLARD.

BY W. T. STEAD.

MISS FRANCES E. WILLARD.

IF the nineteenth century be, as some declare, the Woman's Century, Miss Willard is one of the most conspicuous personages of our epoch. For the importance—the comparative importance—of individuals depends much more upon whether they are on the right line of progress than upon their intrinsic value. There were, probably, men of much more commanding genius, and far greater intellectual attainments, in the court of Pharaoh of the Exodus than Caleb the son of Jephunneh, or Joshua the son of Nun, or even of Aaron, the first of the high-priests; but all the pundits and the potentates of Memphis have gone down into the abyss of oblivion, while the friends and companions of the hero who led the Jews through the Wilderness still count for permanent factors in the evolution of man. The reason for this was that the Exodus marked the beginning of a new departure, pregnant with immeasurable consequences to the future of the world. Hence, to have carried a spear or packed a wagon in the Israelitish hosts was a task fraught with more world-wide consequences than the more imposing duties of commander-in-chiefs and rulers of provinces in Egypt.

A shrewd mechanic who helped Stephenson to perfect “Puffing Billy” was worth more to the world's progress than the ablest engineer of his day who applied himself solely to the perfection of the old stage coach. The great question is whether you are in the

line of advance, whether you have grasped the coming truth, or whether you are merely doddering on with the worn-out remnants of an exhausted system. The man who rears a stately mausoleum may be rich and mighty and noble and famous, but he is nowhere compared with the poorest nurse in his own household, for the builder of sepulchres for corpses belongs to the past, whereas the nurse of the child sits by the cradle of the future.

Frances E. Willard, even if she had been a maker of sepulchres, would have been a personality well worth studying. As a human she is, in many respects, unique. As a woman she occupies a place by herself apart. A beautiful character is beautiful although its beauty blushes unseen, and no one who has had the honor of Miss Willard's friendship would deem it otherwise than a privilege to have the opportunity of introducing her to the widest possible circle of readers. But the supreme importance of Miss Willard consists in the position which she holds to the two great movements which, born at the close of this century, are destined to mold the next century as the movements born in the French Revolution have transfigured the century which is now drawing to its close. The Emancipation of Man and the Triumph of Free Thought, which were proclaimed by the French Revolution, were not more distinctive of the eighteenth century than the Emancipation of Woman and the Aspiration after a Humanized and Catholic Christianity are characteristic of our own century. Of both these movements Miss Willard is at this moment the most conspicuous representative.

In the English-speaking world two women stand conspicuous before the public as contributing most of the change that is taking place in the popular estimate of the capacity and the status of woman. They are each distinctive types of their sex—one English, the other American. Each has had a serious and responsible post to fill, which brought them conspicuously before the eyes of their contemporaries, and each tested by the practical strain and wear and tear of fifty years, has displayed supreme capacity, both moral, intellectual and physical. No one can over estimate the enormous benefit it has been to the cause of progress that during the whole of the period during which the conception of woman's citizenship was germinating in the public mind, the English throne should have been occupied by a woman as capable, as upright, and as womanly as Queen Victoria. The British Constitution has many defects, but it has done one thing which the American Constitution would never have done: it has given an able woman an un-

equaled opportunity of proving, in the very forefront of the State, that in statesmanship, courage and all the more distinctively sovereign virtues she could hold her own with the ablest and the most powerful men who could be selected from the millions of her subjects. The Queen has lived in the heart of politics, home and foreign, for more than fifty years. The problems which it is held would demoralize the female householder if once in seven years she had to express an opinion upon them at the ballot-box have been her daily bread ever since her childhood. She is a political woman to her finger tips. She knows more about foreign politics by far than the permanent secretaries at the Foreign Office, and in all constitutional and domestic affairs she can give tips to Mr. Gladstone in matters of precedents, and to any of her ministers as to questions of procedure. John Bright said of her, after knowing her for years, "She is the most perfectly truthful person I ever met." Mr. Forster, another sturdy Briton of Quaker antecedents, said as emphatically that no one could ever be with the Queen without contracting a very sincere personal regard for her. Even Mr. Gladstone, of whom Lord Beaconsfield said he forgot his sovereign was a woman, and conceived her only to be a Government department, has paid high homage to her extraordinary memory and her marvelous mastery of what may be called the tools of the profession of a constitutional monarch. Broadly speaking, it may be fairly said that the Queen would be acknowledged by all her ministers, Liberal or Conservative, to have more knowledge of the business of governing nations than any of her prime ministers, more experience of the mysteries and intricacies of foreign affairs than any of her foreign secretaries, as loyal and willing a subservience to the declared will of the nation as any democrat in Parliament, and as keen and passionate an Imperial patriotism as ever beat in any human breast. And yet, while all that would be admitted, not even the most captious caviler will pretend that the tremendous pressure of politics, kept up daily for over fifty years, has unsexed the Queen. She is a woman as womanly as any of her subjects, and she is the standing refutation of the silly falsehood that a lady cannot be a politician. As long as the one woman, who has to toil at politics as a profession, is our "Sovereign Lady the Queen," the sneer of the popinjays whose ideal woman is a doll well dressed, but without brains, is somewhat pointless to the common sense of Her Majesty's subjects. Hence it is, perhaps, not very surprising that the two prime ministers who have seen the most of the Queen of late years, Lord Beaconsfield and Lord Salisbury, both voted for female suffrage. With that object lesson in the highest place, of the capacity of woman to discharge with advantage to herself and to others the most responsible of all political duties, it was simply impossible for them to maintain the position of antagonism to woman's suffrage, which is only natural to those who despise the capacity or distrust the character of one-half the human race.

The English woman who has done the most to

familiarize the world with the capacity and utility of the woman in statesmanship upon a throne has given her name to the Victorian era. In America there are no thrones on which a woman can sit. Even the Presidential chair is the monopoly of the male. The platform and the press, the pulpit and organization, these are the only means by which, in the Republic of the West, either man or woman can prove themselves possessed of eminent capacity, and can make their personality potent in influencing the thoughts and actions of the nation. And no one has even cast so much as a cursory glance over the dead level of American society without realizing that among American women Miss Willard stands first, the uncrowned Queen of American Democracy.

Even those who would deny her that proud title would not venture to assert that it could be more properly bestowed upon any other living woman. The worst they could say would be that America has no queens, crowned or uncrowned. America, as President Carnot said the other day of France, has no men, only institutions, and it may be held to be treason to the Republic to ascribe prominent position to any mere citizen, male or female. A Britisher, however, has a Britisher's privileges as well as his prejudices, and it may be permitted to me to remark that from this side of the Atlantic there is no woman between the Atlantic and the Pacific who is as conspicuous, as typical and as influential as Miss Willard. Hers is capacity of the American order, quite as notable in its way as the capacity of the constitutional monarch. No more perfect realization of the ideal of constitutional sovereign has ever graced a throne than our Queen. It would certainly be difficult to find any more completely typical and characteristic daughter of American democracy than the earnest, eloquent and energetic President of the Woman's Christian Temperance Union.

Yet, unfortunately, although Miss Willard's name is familiar, and we are continually hearing of her emissaries in South Africa, India, Australia and the uttermost parts of the world, there are comparatively few among us who could, if suddenly put to it, pass an examination in the biography of Miss Willard, or in the growth of the great movement of which she is the leading spirit. It is not impossible that even in the United States the full significance and possible development of Miss Willard's Union may have escaped adequate recognition in many quarters. I have, therefore, all the greater satisfaction in attempting to present a rough outline portrait of Miss Willard to the English-speaking world, and to give some kind of explanation as to how she came to take her place among those

On Fame's eternal bederole
Worthy to be fyled.

I. Ancestry and Upbringing.

The ordinary British conception of the American child is usually repulsive and occasionally loathsome. A German emissary from the Vatican, who visited the States a year ago, told me that he was most im-

pressed in America by the fact that American builders had adopted the Tower of Babel as their ideal, and that American children interpolated “Thou shalt not” at the beginning of the Fourth Commandment. If filial piety be a virtue, then assuredly the yellow-skinned Mongolian will enter the Kingdom of Heaven before the English-speaking Americans, who are spoiled in the nursery and taught that their parents were created for their benefit. I think it was Trollope—or was it Dickens?—who is responsible for the typical anecdote of Young America, which tells how a boy was told that his father had been found drowned in the river. “Confound it,” was the only response of the Young Hopeful, “he had my jack-knife in his pocket.” Occasionally we are favored in England with specimens of the product of the real spoil-system of the American nursery, who fill us with increased reverence for the wisdom of the sage responsible for the adage, “Spare the rod and spoil the child.” More detestable samples of unredeemed vulgar human selfishness than some of these unlicked cubs of the American Republic it would be hard to find under the sun. Hotel life is answerable for much of this, and the swift, restless rush of money-making which incapacitates parents from the thoughtful culture of their offspring. The extent to which these evils have eaten into the child life of America is no doubt enormously exaggerated. But the prejudice exists, and no better means could be found for combating it than by telling forth the way in which this typical American woman was reared “out West.”

THE RIGHT TO BE WELL BORN.

Frances Willard, in one of the latest of her writings, says: “A great new world looms into sight, like some splendid ship long waited for—the world of heredity, of prenatal influence, of infantile environment; the greatest right of which we can conceive, the right of the child to be well born, is being slowly, surely recognized.” As a child she had that greatest of all rights. She was well born, of pious and healthy parents, in an almost ideally happy home. Her mother, Mary Willard, who, full of years and of honor, passed away this autumn, was one of those who have a natural genius for motherhood. In her own phrase, to her “motherhood was life’s richest and most delicious romance.” “Mothers are the creed of their children,” was another of her sayings, and, like most people who do things supremely well, she was always painfully conscious of her utter inability to realize her own ideal. But her daughter, writing of her after fifty years of wide experience of men and women, said: “For mingled strength and tenderness, sweetness and light, I have never met her superior.” Her supreme gift of motherliness reached, in her children’s estimation, the height of actual genius.

THE WILLARD FAMILY.

Mrs. Willard was a native of Vermont, where she was born in 1805. Five years after Waterloo was fought she began to earn her living as school-teacher

near Rochester. They were a long-lived family. Her father lived to be eighty-six, her grandmother ninety-seven; Mrs. Willard herself lived to be eighty-seven. It was a sturdy stock, with sound minds in sound bodies, with the light of humor laughing in their eyes, and the imperious conscience of the New England Puritan governing their life. Mr. Willard, father of Frances, traced his ancestry up to one Major Simon Willard, a Kentish yeoman who crossed the Atlantic in 1634. The Willards are an old English family,

MISS WILLARD'S MOTHER.

whose name occurs five times in Doomsday Book. The first American Willard was one of the famous founders of the town of Concord, and a notable figure in early New England history. From him Miss Willard comes eighth in direct line of descent. Among the famous Willards was Samuel, who opposed the persecution of the witches, and Solomon, the Architect of Bunker Hill Monument, whose “chief characteristic was that he wanted to do everything for everybody for nothing.” The Willards served in the Revolutionary War, and always bore themselves valiantly alike in council chamber and in field. Miss Willard’s father was born the same year as her mother, in the same State. They married in Ogden, N. Y., when they were six-and-twenty, and remained in New York until after Frances was born. They had five children. The first-born died in infancy; the second was the son Oliver, afterward

editor of the *Chicago Evening Post*; the third was a daughter, who died just as she was beginning to talk, when fourteen months old. Frances was the fourth. Her sister died a year before her birth, leaving the mother with a solitary five-year-old boy.

BEFORE BABY WAS BORN.

Like Hannah of old, Mrs. Willard prayed earnestly for a child, and when her prayer was being answered she shut herself up with the Bible and the poets, occasionally, however, going to singing school, where there was a young woman whose auburn hair, blue eyes and great intelligence she wished to see reproduced in her expected daughter. When the child arrived September 18, 1839, she was pronounced to be

“Very pretty, with sunny hair, blue eyes, delicate features, fair complexion, long waist, short limbs. She was called the doll baby of the village.”

She was named Frances, at her father's wish, after Frances Burney and Frances Osgood, an American poet. Had her mother's wish been heeded she would have been called Victoria, after our young Queen.

A PRECOCIOUS INFANT.

She was a precocious, noisy, delicate baby, who was brought up on the bottle, and who could not walk till she was two years old. When she was three the family removed to Oberlin, in Ohio, where, before she was four years old, she used to be put on a chair after dinner to sing for the entertainment of guests. The children—for another girl, she of the “Nineteen Beautiful Years,” was born to the Willards—was brought up with a strict regard for truth, but they were allowed to do pretty much as they pleased. They were taught to love books, but they were not driven to housework, and they were encouraged to read and to inquire. Frances was from the first given to question everything. When first told the Bible was God's word, she immediately asked, “But how do you know?” and it was one of the standing difficulties of her childhood, how if God were good he could permit the ghastly horror of death. Her inquiries were never checked, but rather encouraged, and her mother had the satisfaction of seeing her daughter a declared Methodist Christian before she had attained her twentieth year.

Discipline, although wisely lax, so as to allow free scope for the natural elective affinities of the child's nature, was nevertheless enforced on occasion. There was somewhat of the Roman in Madame Willard's nature, and saucy Frances, or Frank, as she was always called, sometimes tried her severely.

Home life was spent in the presence of one or other of the parents. The father and mother agreed, when the children came, that they would never leave them. One parent was always at home. Living in the country very much alone, their culture was necessarily home culture. They could seldom attend church, being miles away from any meeting-house, and they got but little Sunday schooling; but they learned all they knew of this world and the next from books and at their mother's knee. Every Sunday they had one

full hour devoted to sacred song, and the rest of the day was spent in reading books borrowed from the nearest Sunday school library, and the Sunday school magazines. They were taught to repeat by heart whole chapters of the New Testament and screeds of poetry.

DANCING À LA PURITAINE.

More wonderful still, they were taught a kind of dancing. *Harper's Magazine* for the current month tells an amusing story to illustrate the heinous nature of dancing in the eyes of some Americans. A negro, who was threatened with excommunication for having danced a little at a frolic, succeeded in escaping the dreaded penalty by pleading drunkenness. Said the sable reprobate: “I nuvver denied 'fore de court dat I ded dance; but I jist proved to 'em dat I was so drunk I nuvver knowed what I was doin', and so of co'se dey couldn't tu'n me out.” In the Willard household they turned the difficulty in another way. Miss Willard says:

“Of course we did not learn to dance, but mother had a whole system of calisthenics that she learned at Oberlin, which she used to put us through unmercifully, as I thought, since I preferred capering at my own sweet will out of doors. There was a little verse that she would sing in her sweet voice and have us ‘take steps’ to the time; but the droll part was that the verse was out of a missionary hymn. And this is as near as I ever came to dancing-school! I remember only this:

“Bounding billow, cease thy motion—
Bear me not so swiftly o'er!
Cease thy motion, foaming ocean:
I will tempt thy rage no more.
For I go where duty leads me,
Far across the troubled deep,
Where no friend or foe can heed me,
Where no wife for me shall weep.”

What a spectacle was that! Mother teaching her children dancing steps to the tune of “The Missionary's Farewell!” She had a copy of Lord Chesterfield's letters to his son, and we read it over and over again. We used to try and carry out its ceremonial to some extent, when we had our make-believe banquets and Fourth of Julys.

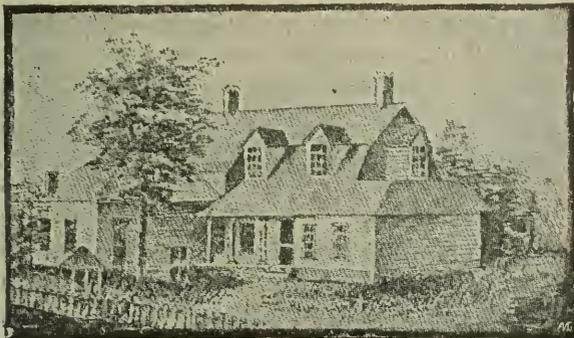

CHICAGO FIFTY YEARS AGO.

Four years after settling in Oberlin (and where these remarkable parents had studied diligently in the college) Mr. Willard's health began to fail, and they decided to go West to Wisconsin. What a curious picture it is—that of the exodus from Oberlin! All that they had was placed into three white-covered wagons; Mr. Willard drove one; Oliver—then a twelve-year-old boy—drove the second, while Mrs. Willard drove the third. Frances and Mary sat on the writing desk in their mother's wagon. The big Newfoundland dog trotted behind. They were three weeks in accomplishing their journey. When they reached Chicago “we found so many mudholes with big signs up, ‘No bottom here,’ that father said he wouldn't be hired to live in such a place. Once

the horse my mother drove went down in the quicksand almost to the ears, and men had to come with rails from the fences and pry him out.”

FOREST HOME.

When at last they reached Forest Home in Wisconsin, they had everything to build. They entered their house before it had either windows or door, but in time they made it the prize home of the whole country. It was situated on the edge of oak and hickory groves on Rock River, while far before them the prairie stretched away to the horizon. Here Frances Willard lived from her seventh to her nineteenth year,

FOREST HOME.

with no neighbors within a mile, but with nature all around. Her parents were enthusiastic lovers of nature. Her mother early introduced her children to the poems of Coleridge, Cowper, Thomson, and Wordsworth, while the father was a kind of prairie Thoreau.

He felt at one with the denizens of the woods; their sweet, shy secrets seemed to be open to him. The ways of birds and butterflies, the habits of gophers, squirrels and ants he seemed to know about as a faun might; and he taught us, Sunday and every-day, to study them; to know the various herbs and what their uses were; to notice different grasses and learn their names; to tell the names of curious wild flowers.

BROTHER OLIVER.

Fortunate in her parents, Frances was also most fortunate in her brother:

Oliver was our forerunner in most of our out-doorishness, and but for his bright, tolerant spirit our lives, so isolated as they were, would have missed much of the happiness of which they were stored full. For instance, one spring Oliver had a freak of walking on stilts, when, behold! up went his sisters on stilts as high as his, and came stalking after him. He spun a top—out came two others. He played marbles with the Hodge boys—down went the girls and learned the mysteries of “mibs” and “alleys,” and the rest of it. He played “quoits” with horseshoes—so did they. He played “prisoner’s base” with the boys—they started the same game immediately. He climbed trees—they followed after. He had a cross-gun—they got him and Loren to help fit them out in the same way. . . . After awhile he had a real gun and shot muskrats, teal, and once a long-legged loon. We fired the gun by special permit, with mother looking on, but were forbidden to go hunting, and did not

care to anyway, there was such fun at home(I did go hunting later on).

A SENSIBLE UPBRINGING.

The Willards held strongly to the sound doctrine that girls and boys, being by the wisdom of the Creator born in one family, should be brought up together. Miss Willard says :

It is good for boys and girls to know the same things, so that the former shall not feel and act so overwise. A boy whose sister understands all about the harness, the boat, the gymnastic exercise, will be far more modest, genial and pleasant to have about. He will cease to be a tease, and learn how to be a comrade ; and this is a great gain to him, his sister and his wife that is to be.

This is the case everywhere, but especially is it the case in country districts, where there is little or no society, and the family must depend on its own resources. Speaking of this time, Miss Willard says :

We had no toys except what we made for ourselves, but as father had a nice “kit” of carpenter’s tools we learned to use them, and made carts, sleds, stilts, cross-guns, bows and arrows, darts, and I don’t know what beside, for our amusement. Oliver was very kind to his sisters, and let us do anything we liked that he did. He was not one of those selfish, mannish boys, who think they know everything and their sisters nothing, and who say, “You’re only a girl—you can’t go with me,” but when he was in the fields ploughing he would let us ride on the beam or on the horse’s back ; and when he went hunting I often insisted on going along, and he never made fun of me, but would even let me load the gun ; and I can also testify that he made not the slightest objection to my carrying the game ! I knew all the carpenter’s tools, and handled them ; made carts and sleds, cross-guns and whip-handles ; indeed, all the toys that were used at Forest Home we children manufactured. But a needle and a dish-cloth I could not abide, chiefly, perhaps, because I was bound to live out of doors.

WILHELMINA TELL.

A free Robin Hood kind of existence it was, in the course of which the usual perils were encountered safely, and some indeed that were unusual.

We used to shoot at a mark with arrows, and became very good at hitting—so much so that, at my request, Mary, whose trust in her sister was perfect, stood up by a post with an auger hole in it, and let me fire away and put an arrow through the hole when her sweet blue eye was just beside it. But this was wrong, and when we rushed in “to tell mother,” she didn’t smile, but made us promise “never, no, never,” to do such a thing again.

It is not difficult to see how the whole future career of the president of the W. C. T. U. was being molded and inspired by these early years of frank comradeship with her brother in the fields and woods.

POOR HEIFER DIME.

Frances Willard, however, was not a girl who was easily balked. Her ambition to do all her brother did drove her, when forbidden to ride a horse, to saddle and ride her cow. Here is the story of this characteristic episode :

Father was so careful of his girls and so much afraid that harm would come to us if we went horse-

back riding that I determined to have a steed of my own, and contrived a saddle and trained a favorite heifer, Dime, to act in that capacity. I took the ground that the cows were a lazy set, and because they had never worked was no reason why they shouldn't begin now. Up in Lapland they made a great many uses of the deer that people didn't where we live, and he was all the better and more famous animal as a result of it. So since father wouldn't let me ride a horse I would make Dime the best trained and most accomplished cow in the pasture; and Dime would like it, too, if they would only let her alone. So with much extra feeding and caressing and no end of curry-combing to make her coat shine, I brought Dime up to a high degree of civilization. She would "moo" whenever I approached, and follow me about like a dog; she would submit to being led by a bridle, which Loren, always ready to help, had made out of an old pair of reins; she was gradually broken to harness and would draw the hand-sleds of us girls; but the crowning success was when she "got wonted" (which really means when she willed) to the saddle; and though I had many an inglorious tumble before the summit of my hopes was reached, I found myself at last in possession of an outlandish steed, whose every motion threatened a catastrophe, and whose awkwardness was such that her trainer never gave a public exhibition of the animal's powers, but used to ride out of sight down in the big ravine, and only when the boys were busy in the field.

AFTER THE HEIFER—LORD CHESTERFIELD!

Yet, although the Willard girls were allowed to frolic round in this natural fashion, their mother was not unmindful of the amenities and proprieties of civilized existence.

She made us walk with books upon our heads, so as to learn to carry ourselves well, and she went with us through the correct manner of giving and receiving introductions—though, to be sure, "there was nobody to be introduced," as Oliver said. "But there will be," replied mother, with her cheerful smile.

Lord Chesterfield's "Letters on Politeness, written to his Son," was a book read through and through at Forest Home. Mother talked much to her children about good manners, and insisted on our having "nice, considerate ways," as she called them, declaring that these were worth far more than money in the race of life.

CHILD LIFE ON THE PRAIRIE.

The great charm about this country life was the close fellowship which it established between the children and the world of nature. They lived in the midst of animals and birds, which, as in the case of Louise Michel, became almost members of the family. There was Simmie, the learned lamb:

Sukey, the pig, that drank lye and was cured by the loppered milk; Stumpy, the chicken, whose legs froze off, and which knew so much that it could almost talk; Ranger, the dog, that killed sheep and had to be killed itself; Nig, the black goat; Trudge, the Maltese kitten, and Roly-Poly, the lame mouse.

and many others—peacocks and guinea hens, and piggy-wiggies galore. Sometimes the intimacy was too close to be pleasant—as, for instance, when weeding onions Frances pulled out a good-sized snake by the tail. The flower garden was the show place of the

county. It was covered over with trailing vines, and gay with roses and all manner of bright flowers. Frances had an eyrie, which she named "The Eagle's Nest," in the heart of a black oak, where she could read and write quite unseen from below. Mrs. Besant, it may be remembered, had the same delight in roosting in trees. Occasionally the children would vary their perch by sitting on the house roof or by climbing the steeple on the barn. In springtime they helped to sow the seed, and skipped along by the edge of the plough. At night time in autumn they watched the prairie fires.

The grass so long, thick and sometimes matted, made a bright high wall of flame, sending up columns of smoke like a thousand locomotives blowing off steam at once. At night these fires looked to us like a drove of racing winged steeds, as they swept along dancing, curtsying, now forward, now backward, like gay revelers, or they careered wildly like unchained furies, but always they were beautiful, often grand, and sometimes terrible.

HAIRPINS AT LAST.

The time came, however, when the glorious freedom of the girl had to be exchanged for the restrained propriety of the young woman. It was a bitter moment. Miss Willard told me at Eastnor Castle last month that, on the whole, it was about the bitterest and blackest sorrow she had when she had to assume the regimentals of civilization.

No girl went through a harder experience than I, when my free, out-of-door life had to cease, and the long skirts and clubbed-up hair spiked with hairpins had to be endured. The half of that down-heartedness has never been told and never can be. I always believed that if I had been let alone and allowed as a woman what I had had as a girl, a free life in the country, where a human being might grow, body and soul, as a tree grows, I would have been ten times more of a person "every way."

She wrote in her journal at the time:

My "back" hair is twisted up like a corkscrew; I carry eighteen hairpins; my head aches miserably; my feet are entangled in the skirt of my hateful new gown. I can never jump over a fence again as long as I live.

The young colt was broken in notwithstanding, but to this day Miss Willard cherishes a regretful grudge against hairpins and stays and skirts. She is a dress reformer of the most advanced type (though you would never guess it!), and will never rest until she can see girls delivered from the bondage under the yoke of which she passed in her youth. A dress in which they can cycle would probably satisfy her, but in dresses as they are to-day she declares she can hardly even walk.

"BOOKS THAT HAVE INFLUENCED ME."

In this home education, books naturally played a very considerable part. If Miss Willard were to contribute to "Books that Have Influenced Me," she would trace most of her characteristic tendencies to the books she read in her early days.

First and foremost there was of course the Bible, which was read through every year at the regulation

rate of three chapters a day and five on Sunday. Then there was the “Children’s Pilgrim’s Progress,” “the sweetest book of my childhood.” But the life-shaping book for her was a little fanatical Sunday school Abolitionist book, entitled “The Slave’s Friend.” Miss Willard says:

“The Slave’s Friend,” that earliest book of all my reading, stamped upon me the purpose to help humanity, the sense of brotherhood, of all nations as really one, and of God as the equal Father of all races. This, perhaps, was a better sort of religion than some Sunday school books would have given. It occurs to me that I have not estimated at its true value that nugget of a little fanatical volume published for children by the Anti-Slavery Society.

“The Slave’s Friend” was a tiny juvenile paper, no larger than a post card, and it was out of this little periodical that Miss Willard was taught to read. One story, “Little Daniel,” impressed her much, and it is easy to see how it influenced her. The Abolitionist hero is represented as being abused as a fanatic, an incendiary, a brawler, a cut-throat and a fool; but, nevertheless, he is the righteous man. Such early reading robbed these epithets of their sting; and Miss Willard, writing long after, says: “I owe to that little anti-slavery paper my earliest impulse to philanthropy, and much of my fearlessness as a reformer.”

The *Youth’s Cabinet* gave her a love for natural science, outdoor sports and story reading. Novels were forbidden in the Willard household. Mr. Willard would have none of these miserable love-stories. She was eighteen before she was allowed even to read the Brontë novels, when “Shirley” became her great favorite. But the term novel was not construed rigidly, for when eleven she wept over “Uncle Tom’s Cabin,” and was fascinated by a story called “The Shoulder Knot.” Shakespeare was freely sanctioned and eagerly devoured. “Don Quixote” and “Gil Blas” were also permitted—surely a much worse book than “Shirley” or “Villette.”

NEWSPAPERS AS EDUCATORS.

She read from childhood the *Mother’s Assistant* and the *Oberlin Evangelist*. The list of the papers that came to the Wisconsin prairie farmhouse in early days is significant: The *Mother’s Assistant*, the *Oberlin Evangelist*, the *Youth’s Cabinet*, the *Morning Star*, the *Myrtle*, the *National Repository*, the *Ladies’ Repository*, the *Horticulturist*, the *Agriculturist* and the *Prairie Farmer*. Later on there were added to these *Putnam’s Magazine* and *Harpur’s Monthly*, the *New York* and *North-Western Christian Advocate*. All these the children were freely permitted to read; but Mr. Willard had, in addition to these multitudinous family and Church papers, his own political newspapers, which were forbidden to the youngsters. Mr. Willard “did not want his family, and, above all, his women-folks, to know about anything so utterly detestable as politics.” Therefore, as might have been expected, stolen waters being sweet, Frances found no papers

which came into the house so delightful as these political papers, which she devoured whenever occasion offered. Mr. Willard was at first a Democrat, but went over to the “Free Soilers,” afterward Republicans, on moral grounds, and Horace Greeley’s *New York Tribune* became the standby of the household. Says Miss Willard:

It was journalism that tracked us into the wilderness, kept us company in our isolation, poured into our minds the brightest thoughts of the best thinkers, and made us a family of rural cosmopolites.

“THE FOREST HOME TRIBUNE.”

Under such circumstances it was not unnatural that Oliver decided to be an editor, and that at the farm the family established a paper called *The Forest Home Tribune*, with three columns to the page. “Mother contributed the poetry, my brother wrote the solid articles, and I did the literary part.” When fourteen she sent up a paper entitled “Rustic Musings” to a scholastic paper. The editor could not use it, and did not believe it was written by a lady. Some time afterward, however, she got herself into print by a contribution of a most ornate description entitled “Falling Leaves.” It was a rhapsody written against time in competition with her brother. Her mother gave them the theme and twenty minutes in which to work it. Then she took a prize offered for the best essay on the “Embellishment of a Country Home,” and afterward drifted gradually into journalism. “Of poems, I wrote many, of which happily almost none have seen the light. My epic was begun at nineteen.” It was an account of Creation, and the MSS. was burned quite recently. Her mother familiarized her with poetry from her earliest childhood, and it has always been a delight to her to escape from the storm and stress of political agitation into the serene atmosphere of the classic poets of England and America.

“FORT CITY.”

“But all that,” it may be said, “is common to many an English family in the old country.” That which differentiates the Willard family from the households in this land is the extent to which the American political or democratic habit of thought worked itself out among the children. English boys and girls read books and romp, but they don’t undertake to organize townships and draw up constitutions. Few things interested me more in Miss Willard’s “Glimpses of Fifty Years”—an autobiography written at the request of the W. C. T. U., from which most of these extracts are made—than the incidents which show how the American Constitution recreates itself in every American home, so that even in the nursery the principles of the Republic are instilled into the sucking citizen. A visitor from town having remarked that she thought it lonesome down there in the woods, the Willard children forthwith determined to constitute their farmhouse a city. “I propose,” said Frances, “that we set at work and have a town of our own.” It was carried unanimously, and “Fort City” came into being. Everything was done that a

budding township out West does when it decides to be a city. Imposing names were tacked on to humble edifices; the cornyard became the city market; the henhouse, the family supply store; and the pigpen, the city stockyard. They constituted a board of trade, issued paper money, edited a newspaper, and, finally, drew up a complete constitution for Fort City. Then the laws of Fort City were drawn up by authority. We find as the first clause: The officers shall be elected once a month by ballot. These officers consist of a mayor, secretary, treasurer, taxgatherer and postmaster. Their duties were laid down, fines imposed for infringement, while "Mrs. Mary T. Willard shall on all occasions act as judge in law cases as to

MISS WILLARD AT NINETEEN.

which side has gained the day." Politics surely run in the blood of a race whose children, fresh from the nursery, find their pastime in making their family life a microcosm of the political organization of the Republic.

THE ORGANIZING INSTINCT.

The mania for organization showed itself in other ways. When they went to a picnic

Mary wore the official badge of "Provider," for the practical part of the expedition was in her charge. This badge was a bit of carved pine, like a small cane, painted in many colors and decorated with a ribbon.

Frances Willard, who began to keep a journal when twelve years old, wrote poems to the old trees doomed to the axe, and began a novel which never got finished, organized two clubs, the Artists' and the Rustics', for the purpose of giving a sufficiently grandiose and constitutional setting to the sketching and hunting amusements of herself and her sister. The clubs were duly constituted, with president, secretary, regular meetings, and carefully defined laws. The last clause of the laws of the Artists' Club was significant:

We, the members of this Club, pledge ourselves to keep faithfully all these, our own laws.—FRANK WILLARD, MARY E. WILLARD.

The Rustic Club had the same membership, but still more elaborate rules. The object was defined as being that of giving its members the enjoyment of hunting, fishing and trapping, with other rural pleasures, at once exciting and noble.

If the child is father to the man, the girl in the Wisconsin farm house may be regarded as mother to the future president of the W. C. T. U.

II. "Schoolmarm."

After nineteen years spent in this happy, natural rural life on the prairie and among the trees and animals of Forest Home, Frances Willard began to pine after an independent existence. From the age of twelve she had gone to school at a neighbor's house. Two years later a little schoolhouse was built, and when she was seventeen she went to Milwaukee Female College, and then graduated at the Northwestern Female College, Evanston. She was passionately fond of reading. When sixteen years old she says:

I read Dr. Dick's "Christian Philosopher" and "Future State," and was so wrought upon that when I had to help get dinner one Sunday I fairly cried. "To come down to frying onions when I've been among the rings of Saturn is a little too much," I said impatiently.

When she was eighteen she records that up to that time life had known no greater disappointment than the decision of her practical-minded mother that she should not study Greek. In that year the family removed to Evanston, the chief suburb of Chicago, where Miss Willard has been at home ever since. She broke down from over-study before she graduated, but her indomitable will carried her through. She had an almost savage lust for learning, and she often rose at four, and more than once was found on the floor in dead sleep, with her face in Butler's "Analogy." When she was twenty she left college, determined to "earn my own living, pay my own way, and be of some use in the world."

DAY DREAMS.

Like most romantic school girls whose thoughts do not turn to the predestined Prince Charming, she dreamed of incongruous destinies, and ultimately settled down to be a school teacher.

I once thought I would like to be Queen Victoria's Maid of Honor; then that I wanted to go and live in Cuba; next I made up my mind that I would be an artist; next, that I would be a mighty hunter of the prairies. But now, I suppose, I am to be a teacher—simply that and nothing more.

But even when settling down to be a schoolmarm she never lost faith in her star:

I was fully persuaded in my own mind that something quite out of the common lot awaited me in the future; indeed, I was wont to tell my dear teacher that I "was born to a fate." Women were allowed to do so few things then that my ideas were quite vague as to the what and why, but I knew that I wanted to write, and that I would speak in public, if I dared, though I didn't say this last, not even to mother.

The life of Margaret Fuller, which she read at

Evanston, encouraged her vastly. When she finished these memoirs she wrote :

I am more interested in the “Memoirs of Margaret Fuller Ossoli” than in any other book I have read for years. Here we see what a woman achieved for herself. Not so much fame or honor—these are of minor importance—but a whole character, a cultivated intellect, right judgment, self-knowledge, self-happiness. If she, why not we, by steady toil?

“OH, THAT I WERE DON QUIXOTE!”

Of ambition, the last infirmity of noble minds, she had enough and to spare. She says: “I am fully purposed to be one whom multitudes will love, lean on, and bless.”

Of one thing she was quite sure—she would not stay at home and do nothing. Her father, who was well to do and a member of the Legislature of Wisconsin, urged her to remain under the old roof-tree. “Nobody,” she said, “seems to need me at home. In my present position there is actually nothing I might do that I do not, except to sew a little and make cake.”

As life's alarms nearer roll
The ancestral buckler calls,
Self-clanging from the halls
In the high temple of the soul.

And already the observation that the poor and the unlovely fare hardly in this world of ours had wrung from her the exclamation :

Oh, that I were another Don Quixote in a better cause than his, or even Sancho Panza to some mightier spirit, who I trust will come upon this poor old earthsome day!

EPICETUS IN THE SCHOOL ROOM.

So by way of making a beginning she went out to be a schoolmarm when in her twenty-first year. From 1858 to 1874 she had thirteen separate seasons of teaching in eleven separate institutions and six different towns, her pupils in all numbering about two thousand. Excepting the first two, all her engagements came unsought, and in only one case, when there was a difference of principle, she was warmly invited to return. Yet she was far from being a typical schoolmarm. She hated routine, and only kept herself from breaking down under the irksome strain at first by reading Plato and Epictetus. After her mother and the New Testament, she says Epictetus helped her “to like what you must choose when you cannot choose what you would like.” In her first school she had to whip a boy as tall as herself and did it with success. “Fathers would come to the door with a stick, asking me to beat their children with that particular one, which was the only form of aristocracy recognized in my institution.”

AT WORK AS TEACHER.

I must pass somewhat rapidly over this stage of her training, merely pausing to quote the first two rules she laid down for herself as a teacher.

1. Never let your pupils feel that they understand you or know what to expect from you. Be a mystery

to them. Invent painless punishments. Resort to expedients they least expect.

2. Demand implicit obedience in small as well as great matters, and never yield a point.

It is no child's play teaching, as the following record of one day's work shows. When twenty-three, as preceptress of natural sciences in the Northwestern Female College, she wrote :

Rose at six, made my toilet, arranged the room, went to breakfast, looked over the lessons of the day, although I had already done that yesterday; conducted devotions in the chapel; heard advanced class in arithmetic, one in geometry, one in elementary algebra, one in Wilson's “Universal History;” talked with Miss Clark at noon; dined; rose from the table to take charge of an elocution class, next zoology, next geology, next physiology, next mineralogy; then came upstairs, and sat down in my rocking chair as one who would prefer to rise no more—which, indeed, is not much to be wondered at.

A NOVEL SCHOOL BANK.

When she taught in the Grove School, Evanston, she introduced some educational novelties. She says :

Our school had many unique features, but perhaps none more so than the custom of the pupils to write questions on the blackboard for their teachers to answer. This turn about was but fair play, stimulated the minds of all concerned, and added to the confidence between teacher and pupil. As we had all grades, from the toddler of four years old to the elegant young lady of sixteen, the problem of government was not so simple as it might appear. After trying several experiments, I introduced the Bank of Character, opening an account with each student in my room, and putting down certain balances in his favor. Then by a system of cards of different values, which were interchangeable, as are our bank notes of different denominations—that is, one of a higher value being equivalent to several of a lower denomination—the plan was carried out. Every absence, tardiness, failure in recitation, case of whispering, was subtracted from the bank account; and so emulous were those children that my tallest boys were as much on the *qui vive* to know their standing as were their youngest brothers. Aside from the lessons, into which we introduced as much as possible of natural history, object lessons, drawing and gymnastics, we gave out questions at each session, keeping an account of the answers, and putting at a premium those who brought in the largest number of correct replies.

WILD OATS IN EUROPE.

Miss Willard in 1868 made a two years' trip to Europe with Miss Kate Jackson, who defrayed the expense. They visited Egypt, the Holy Land, Russia and all the rest of Europe. This European trip was Miss Willard's one experience of life, as worldlings live it. She says :

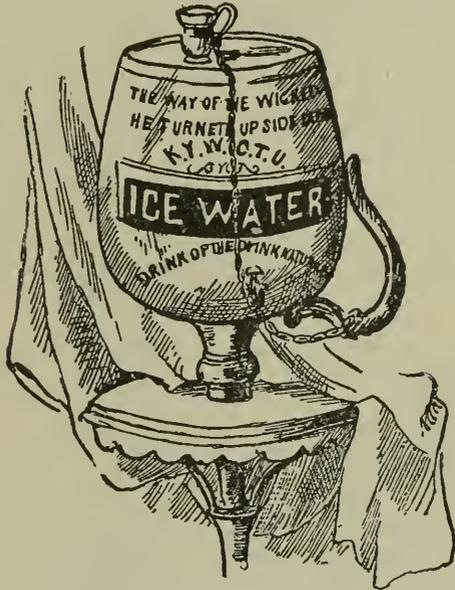

Three things I did, once in awhile, during my two years and four months of foreign travel, that I never did and never do at home. I went to see sights on Sunday, went to the theatre, and took wine at dinner.

She learned to love Rudesheimer and Grand Chartreuse, and in short she did in Rome as the Romans do, honestly avowing, as she still avows, that the forbidden pleasures were sweet, and were abandoned with a sigh.

THE MAGIC LANTERN.

But even when traveling for pleasure, she never forgot her obligations to her people at home. She brought home 800 photographs, and set up a kind of forerunner of the Magic Lantern Mission.

Many of these I had produced on glass, so that they could be thrown on the screen of the stereopticon, and decrified to the entire class at once. It was my

A NEW USE FOR A WHISKY JAR.

earnest hope that, after I had taught the theory and history of the fine arts for a few years, I might be able to prepare a text-book that would be used generally in schools, and would furnish the introduction, of which I so much felt the need, to the study of the European galleries and of art in our own land.

THE SHUNTING.

On her return she became president of Evanston College for Ladies, where she elaborated her system of self-government, with a roll of honor, concerning which I need say nothing here beyond recommending Miss Willard's experience to those who have to do with the higher education of women here and elsewhere. Unfortunately, when the college was merged in the Northwestern University, the authorities did not see their way to allow her to continue her peculiar system. The clashing of the theory of a woman's college with the president's theory of a man's university led to her resignation, and her career as a school-marm came to final termination. It cost her many bitter tears, but it was but the shunting, necessary to get her upon the right road.

III. Apostle.

Miss Willard was thirty-five years old before she found her true vocation. All the first part of her life was but preparatory to the career on which she was now to be launched. College studies, European travel, and a dozen years spent in actual tuition, had equipped her admirably for the work that lay ready to her hand, but of which, even up to the last, she was utterly unaware.

In spite of her frankly confessed but temporary lapse from rigid teetotalism in Europe, Miss Willard was hereditarily disposed to temperance work. Father and mother had been lifelong teetotalers, and their children were accustomed from infancy to the pictorial representation of the case against alcohol.

From my earliest recollection there hung on the dining room wall at our house a pretty steel engraving. It was my father's certificate of membership in the Washingtonian Society, and was dated about 1835. He had never been a drinking man, was a respectable young husband, father, business man and church member; but when the movement reached my native village, Churchville, near Rochester, N. Y., he joined it. The little picture represented a bright, happy temperance home, with a sweet woman at the center, and over against it a dismal, squalid house with a drunken man staggering in, bottle in hand.

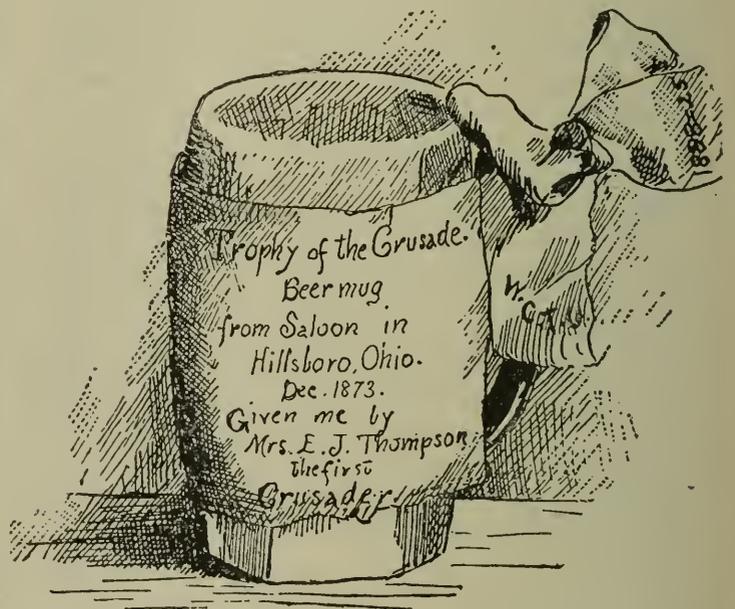

HER FIRST PLEDGE.

She began temperance work when seventeen years old:

In 1855 I cut from my favorite *Youth's Cabinet*, the chief juvenile paper of that day, the following pledge, and pasting it in our family Bible, insisted on its being signed by every member of the family—parents, brother, sister and self:

A pledge we make no wine to take,
Nor brandy red that turns the head,
Nor fiery rum that ruins home,
Nor brewers' beer, for that we fear,
And cider, too, will never do.
To quench our thirst we'll always bring
Cold water from the well or spring;
So here we pledge perpetual hate
To all that can intoxicate.

It was as natural to be teetotal in Evanston as it is to drink wine in Paris. The strictest prohibition was

enforced by charter, and she never in her life but once saw wine offered in her own country before 1875, and she no more thought it necessary to speak against intemperance than against cannibalism.

PENTECOST, 1873.

But a rude awakening was soon destined to shatter her idyllic dreams of a temperate society. There was in 1873, as it were, a latter-day Pentecost, or outpouring of the spirit on the women of the West. It was in Hillsboro', Ohio, when, after a lecture by Dr. Dio Lewis, Mrs. Judge Thompson, a delicate little woman of singular beauty and heroic soul, felt moved of the spirit to begin the woman's crusade against the saloon. In her own house she read the Crusade Psalm (146), and then after much prayer-wrestling and inward heartbreak, she fared forth to her church, where she communicated her sacred enthusiasm to other women, and then two and two they started out to pray the saloon down. The movement thus begun spread like wildfire through Ohio. The praying women literally besieged the rum shops with prayer and the singing of psalms and hymns. If they could hold their prayer meetings inside the saloon, they did so; if not, they knelt on the pavement. All other engagements were postponed to the prosecution of this sacred war. A revival of religion followed the attack on the saloons. Thousands signed the pledge and professed conversion. For a time the liquor traffic was suppressed in two hundred and fifty towns and villages in Ohio and the neighboring States.

Since Savonarola made his famous bonfire in Florence of the pomps and vanities of his worldly penitents, there have been few scenes more dramatically illustrative of the triumph of moral enthusiasm over the fleshy lusts which war against the soul than this same temperance crusade.

The church bells pealed in the steeples and the sound of jubilant thanksgiving rose from the street, as the crusading ladies were besought by the penitent publican to stave in casks of liquor and empty the contents into the gutter. No wonder that “men say there was a spirit in the air such as they never knew before; a sense of God and of human brotherhood,” which was not to pass away without bearing fruit.

THE DIVINE CALL.

Of course there was a reaction. The women could not camp *en permanence* at the doors of the saloons. The mere attempt to enforce Sunday closing in Chicago led to the immediate repeal amid a violent outburst of mob savagery of the Sunday closing law. This, however, was the best thing that happened to

the temperance cause, for it was this temporary triumph of the liquor sellers that brought Miss Willard and her “White Ribbon Army” on the field. From that time she has been an Apostle of Temperance. She had addressed missionary meetings and had spoken on educational subjects, and she was asked to speak at a midday “crusaders' meeting” in

MISS WILLARD. (A NEW PORTRAIT.)

Chicago. She consented, and soon found herself in the heat of the fray. When she resigned her position at the university, she went East and began to devote herself to the work of Gospel Temperance. She went to Maine and saw Neal Dow; to Boston, and saw Dr. Dio Lewis. Her life lay before her. A New York ladies' school offered her the principalship with a large salary. She had no means of subsistence save her profession. But her soul longed to be in the field of temperance evangelization. An invitation came from Chicago to take the presidency of the Woman's Temperance Society there, but it was unaccompanied by any offer of salary. How was she to live? Then she remembered the text, “Trust in the Lord and do good; so shalt thou dwell in the land, and verily thou shalt be fed.” Her mind was

made up. She declined the New York appointment, and became president of the Chicago Woman's Christian Temperance Union.

IN APOSTOLIC POVERTY.

Miss Willard, when asked if she wanted money, because if she did the Society would try to get some, replied, "Oh, that will be all right." She said to herself, "I am just going to pray, to work, and to trust God." Her salary was nothing per annum, paid quarterly. She starved on it, but worked away all the same, and for several months went hungry and penniless. It was in this way that the foundations were laid :

I had some pretty rings, given me in other days by friends and pupils ; these I put off and never have resumed them ; also my watch chain, for I would have no striking contrast between these poor people and myself. To share my last dime with some famished looking man or woman was a pure delight. Indeed, my whole life has not known a more lovely period. I communed with God ; I dwelt in the Spirit ; this world had nothing to give me, nothing to take away.

It was in this period of impecuniosity that she was so uplifted in soul as to declare : "I haven't a cent in the world, but all the same I own Chicago." She was full of plans for helping the hungry. She proposed to start a workhouse, where the homeless, dinnerless, out-of-works could render an equivalent of food and lodging ; but the wise men shook their heads, and nothing was done. She went on preaching, teaching, holding prayer meetings, visiting, organizing—her hands running over with Christian work, until at last from overwork and under feeding she collapsed with rheumatic fever.

ON A BUSINESS BASIS.

Then her brave, sensible old mother, having her headstrong daughter now at an advantage, gave her a very much needed piece of admonition. "You are flying in the face of Providence," she said. "The laborer is worthy of his hire; they that preach the Gospel shall live by the Gospel. This is the law and the prophets from St. Paul down to you."

God isn't going to start loaves of bread flying down chimney nor set the fire going in my stove without fuel. I shall soon see the bottom of my flour barrel and coal bin. You are out at the elbows, down at the heel, and sick, too. Now, write to those good temperance ladies a plain statement of facts, and tell them that you have made the discovery that God works by means, and they may help you if they like.

Miss Willard obeyed, and immediately she was provided with funds, and no mortal has ever been more tenderly cared for by her comrades. In the autumn was founded the National Woman's Christian Temperance Union. Created in order to preserve the fruits of Crusade victory, it was "the sober second thought of that unparalleled uprising." Miss Willard was appointed National Secretary, and applied herself diligently to the work of organization.

TEMPERANCE AND WOMAN'S SUFFRAGE.

It was in the autumn of that year (1875) that Miss Willard's eyes were opened to the wider bearings of

the temperance cause. But for this the movement with which she was associated would have counted for as little among the world's forces as do most others. But Miss Willard, with her sound American political instinct, no sooner addressed herself to grapple with the evil of intemperance than she discovered that the key to success lay in the extension of full citizenship to women. There have been temperance reformers before Miss Willard and women suffragists also. But Miss Willard was the first to recognize that the two causes are as the left and right hands of moral reform, and that the temperance men who refuse to enfranchise women elect to go into battle with their right hands tied behind their backs.

THE LONGING TO VOTE.

Miss Willard was prepared from childhood to desire the franchise, and no citizen in the States was more competent to use it. When her brother Oliver was twenty-one, and voted for the first time, she wrote in her journal :

This is election day, and my brother is twenty-one years old. How proud he seemed as he dressed up in his best Sunday clothes and drove off in the big wagon with father and the hired man to vote for John C. Fremont, like the sensible "Free-soiler" that he is! My sister and I stood at the window and looked out after them. Somehow, I felt a lump in my throat, and then I couldn't see their wagon any more, things got so blurred. I turned to Mary, and she, dear little innocent, seemed wonderfully sober too. I said, "Wouldn't you like to vote as well as Oliver? Don't you and I love the country just as well as he, and doesn't the country need our ballots?" Then she looked scared, but answered in a minute, "'Course we do, and 'course we ought, but don't you go ahead and say so, for then we would be called "strong-minded."

ITS MORAL BASIS.

The time had not come then. It came in the spring of 1876, when Miss Willard, the Secretary of the National W.C.T.U., was by herself alone one Sunday morning, preparing for a service, by Bible reading and prayer, in the town of Columbus, Ohio—an auspicious name :

Upon my knees, alone in the room of my hostess, who was a veteran crusader, there was borne in upon my mind, as I believe from loftier regions, the declaration, "You are to speak for woman's ballot, as a weapon of protection to her home and tempted loved ones from the tyranny of drink," and then for the first and only time in my life there flashed through my brain in an instant a complete line of argument and illustration.

Writing after she had completed her fiftieth year, she said :

I do not recall the time when my inmost spirit did not perceive the injustice done to woman, did not revolt against the purely artificial limitations which hedge her from free and full participation in every avocation and profession to which her gifts incline her, and when I did not appreciate to some extent the State's irreparable loss in losing from halls of legislation and courts of justice the woman's judgment and the mother's heart.

She was not disobedient to the summons. From 1876 forward she has never failed to deliver her

THE WOMEN'S TEMPERANCE TEMPLE, CHICAGO.

message and to enforce its lesson. "Put in suffrage strong," was her only direction to me as to what I should say in this character sketch.

"SO PERSECUTED THEY THE PROPHETS."

The new dogma was met, like all new truths, by determined opposition. The first president of the Union peremptorily forbade Miss Willard even to mention the subject of the convention. At Newark it was, in face of the earnest, almost tearful, pleading of her friends that she made her deliverance on the subject at a temperance convention. The chairman repudiated all responsibility, and told her at the close, "You might have been a leader, but now you'll be only a scout." So blind and dull are even the best informed and best disposed when confronted with the new truth.

After this Miss Willard, hoping thereby to help the

White Ribbon movement, took a spell as assistant with Moody, the evangelist, in Boston. She severed her connection with him on a question of principle. Moody objected to Miss Willard appearing on a temperance platform side by side with Unitarians. It was one of the crucial points in her career. Fortunately she never wavered. She saw more clearly than the pious evangelical the immense issues which lay behind the question of temperance, and she dared not refuse the co-operation of any who were willing to help because their shibboleths differed.

A WOMAN'S VIEW OF TEMPERANCE.

When she quitted Mr. Moody, she set forth her religious conception of the exceeding breadth of temperance work as she understood it :

Mr. Moody views the temperance work from the standpoint of a revivalist, and so emphasizes the

regeneration of men. But to me, as a woman, there are other phases of it almost equally important to its success—viz., saving the *children*, teaching them never to drink; showing to their mothers the duty of total abstinence; rousing a dead Church and a torpid Sunday school to its duty: spreading the facts concerning the iniquitous traffic far and wide; influencing legislation so that what is physically wrong and morally wrong shall not, on the statute books of a Christian land, be set down as legally right; and, to this end, putting the ballot in woman's hand for the protection of her little ones and of her home. All these ways of working seem to me eminently religious, thoroughly in harmony with the spirit of the most devoted Christian man or woman.

Brother Moody's jacket was too straight; she could not wear it.

In 1877, Miss Willard had the satisfaction of getting the thin end of the wedge into the plans of the Union by the acceptance of the resolution which declared that "woman ought to have the power to close the dramshop door over against her home."

AN APOSTOLIC TOUR.

Miss Willard then began a systematic visitation of the whole American continent. Since 1878 she has addressed meetings in every town in the Union of 10,000 inhabitants, and in most of those with 5,000. In the ten years, 1878-88, she averaged but three weeks a year at home, and she addressed an average of one meeting every day during the whole of that period. There is probably no other living person who can claim to have covered the States as she has done. She worked in the entire forty-four States and five Territories in one year, traveling with her friend, Miss Anna Gordon, thirty thousand miles by rail, river and stage. Nothing interfered with her propagandist zeal. Such energy could not fail to tell. Wherever Miss Willard went she coupled temperance reform and woman's suffrage, and soon the opposition to the latter began to melt away even in the convention.

PRESIDENT OF THE W. C. T. U.

At Baltimore in 1878 a proposal to indorse woman's suffrage as a temperance measure was rejected, but the official organ was permitted to publish reports of the work of societies on that line. The next year at Indianapolis Miss Willard was elected president of the National W. C. T. U.—a post which she has held ever since. Under her presidency the convention next year declared in favor of woman's suffrage, and the whole work of the organization was revised. Individual superintendents were substituted for committees, "on the principle that if Noah had appointed a committee the ark would still have been on the stocks."

The work was then divided up into Preventive, Educational, Evangelistic, Social, Legal, and Organizing departments, and the W.C.T.U. began to be a power in the Republic. At the convention when Miss Willard was elected president only twenty States were represented. With the exception of

Maryland, no Southern State sent a delegate. Last year at Boston every State in the Union was represented, and delegates were there from every continent, in the Old World or the New. This is not the place to tell of the continuous growth of the organization. It has gone on steadily from strength to strength. The mere bulk of its minutes tells the tale of progress:

The minutes of our St. Louis convention (debates are never reported) covered two hundred and sixty-three pages of a large pamphlet; those of Philadelphia, three hundred and ninety; those of Minneapolis, four hundred and eleven; of Nashville, four hundred and fifty-three.

The severe struggle over the question of the relation of the W.C.T.U. to the rival parties of the State is a subject which cannot be dealt with adequately here. Miss Willard being a Prohibitionist, is for a Prohibitionist candidate for the Presidency. But beyond stating this there is no need to enter into that most thorny and disputatious region.

THE PROTECTION OF GIRLS.

Seven years after the W. C. T. U. added Woman's Suffrage to the planks of its platform, its scope was still further widened. I am proud and grateful to know that a work accomplished here in London, amid the virulent denunciation of many good men and one or two good women, was blessed in being the means of contributing to the beneficent activities of Miss Willard's organization. Speaking on the subject, Miss Willard said:

But, after all, it was the moral cyclone that attended the *Pall Mall Gazette* disclosures which cleared the air and broke the spell, so that silence now seems criminal, and we only wonder that we did not speak before.

A White Cross department, pledged to the promotion of purity and the protection of children from vice, was at once organized; and, thanks to the untiring energy of the W. C. T. U., many of the laws which in some of the States put a premium upon the ruin of child-life, have been amended into something more in accord with the moral temper of a Christian people.

A TALE THAT TOLD.

Miss Willard, however, did not need the "Maiden Tribute" to appreciate the significance of the moral movement along this line. She says:

The first time the thought ever came to me that a man could be untrue to a woman was when, on entering my teens, I read a story in the "Advocate of Moral Reform," entitled "The Betrayer and the Betrayed." It haunted me more than any story in all my youth, except "Uncle Tom's Cabin." It was brief, but it was tragic, and the lovely young girl was left at the close in a mad-house, while of the man I remember this sentence: "I see him often passing to and fro in his costly carriage. Beside him sits his wedded wife; around him are his happy children, and he is a candidate for the State legislature." As I used to think over the situation, there came a deep, honest purpose in my inmost spirit always to stand by women in every circumstance

“ THE BLACK WAGON.”

Mrs. Butler will read with satisfaction the following brief but piquant summing up of the secret of the great moral result of the last twenty-five years :

In the year 1869, while studying in Paris, I used often to see passing along the pleasant streets great closed wagons covered with black. Inquiring of my kind landlady the explanation of these somber vehicles, she answered sorrowfully: “It is the demi-monde, who go to be examined.” . . . Always, after that, those awful wagons seemed to me to form the most heart-breaking funeral procession that ever Christian woman watched with aching heart and tear-dimmed eyes. If I were asked why there has come about such a revolution in public thought that I have gained the courage to speak of things once unlawful to be told—and you may listen without fear of criticism from any save the base—my answer would be :

“Because law-makers tried to import the black wagon of Paris to England and America, and Anglo-Saxon women rose in swift rebellion.”

That is simply and literally true. It was the C. D. acts which fired the charged mine of moral and humanitarian enthusiasm. Never did evil better serve the cause of good.

HER WOMANLINESS.

Of Miss Willard in her personal relations to her friends and relatives, to the men who have adored her, and the women who have loved her, I have unfortunately not left myself space to speak. No one who has read “Nineteen Beautiful Years,” which she dedicated to the memory of her beloved sister Mary, can doubt the intensity of sisterly affection which glowed in Miss Willard. In all her human relations, alike in the affairs of the heart and the affairs of the home, Miss Willard has been intensely womanly and therefore intensely human. She has got the idea of motherhood more deeply impressed on her brain than have most mothers, and she has also grasped the idea that, as women must have a larger place in the State, man must have a larger place in the home. “Motherhood will not be less, but fatherhood will be a hundredfold more magnified. To say this is to declare the approaching beatitude of men.” “Woman more in the State, man more in the home, while women must determine the frequency of the investiture of life with form, and of love with immortality”—these are the ideals to which she is faithful; for in all her speculations the protection and the glorification of home are constantly before her eyes.

IV. The World’s Catholic Temperance Union.

So far Miss Willard has achieved a success exceeding the most sanguine hopes of her school-girl days :

I never knew what it was not to aspire, and not to believe myself capable of heroism. I always wanted to react upon the world about me to my utmost ounce of power, to be widely known, loved and believed in—the more widely the better. Every life has its master passion; this has been mine.

This at least is frank. A Methodist woman, trained from childhood to introspection, she has no hesitation in stating the facts as she found them. And it must

be admitted that if her ambition is vast, her confidence is commensurate. She says: “I frankly own that no position I have ever attained gave me a single perturbed or wakeful thought, nor could any that I would accept.” The fear of failure has never vanquished her. If the work is the Lord’s, then why need she be afraid? As she once told her helpers :

If God be with us, we can save our country as surely as Joan of Arc crowned her king.

And hitherto Miss Willard seems to have had the comforting confidence that she was called of God, at least ever since she dedicated herself to the temperance work. A faith that has been tested in a twenty years’ campaign may fairly be regarded as having given proofs of its reality and its capacity to bear strain.

This is of good augury for the future, which may hold in it vaster duties for Miss Willard to perform than any of those which she has yet essayed. For out of the Woman’s Christian Temperance Union it seems as if there were destined to emerge a World’s Catholic Temperance Union which may give humanity that universal platform of co-operation in all efforts to realize the Christian ideal for which the world has been longing.

A BORN LEADER.

It may be so, and if so the personality of the leader who incarnates the cause is of immense importance. Miss Willard, it must be admitted, even by her enemies, is intensely human. She is a child of nature as well as of grace. She is as broad in her religious beliefs as Dean Stanley, as fervent in her evangelicalism as Mr. Moody. Naturally sceptical, she is a devout believer and an intensely interested inquirer into all manifestations of psychical marvels which promise to supply a scientific basis to the belief in another world. She has a keen sense of humor—perhaps of all quantities the most indispensable. She has a genius for organization on the principle of Home Rule and Federation, and she is heart and soul in sympathy with all the moral and ameliorative movements of our time along the whole line, from Socialism to Sunday Closing. She has only one conspicuous drawback. She has never been married. But she has lived in the midst of family life. Her center has ever been a home, not a barracks, a church, or a cell. She has loved passionately, suffered bitterly, and triumphed marvelously over a host of difficulties which love, disguised as jealousy, has sown around her path. She is free from all the unworthy and unnatural carping at man which characterizes some advanced women. She is, in short, more admirably qualified than any other living woman to be the leader and director of this great new force which is influencing the world. So obvious does this appear that it is doubtful whether the time has not come to recognize that the union which she has helped create is bidding fair to realize more closely the ideal of the Church of God in America than any of the more distinctively ecclesiastical organizations can claim to be.

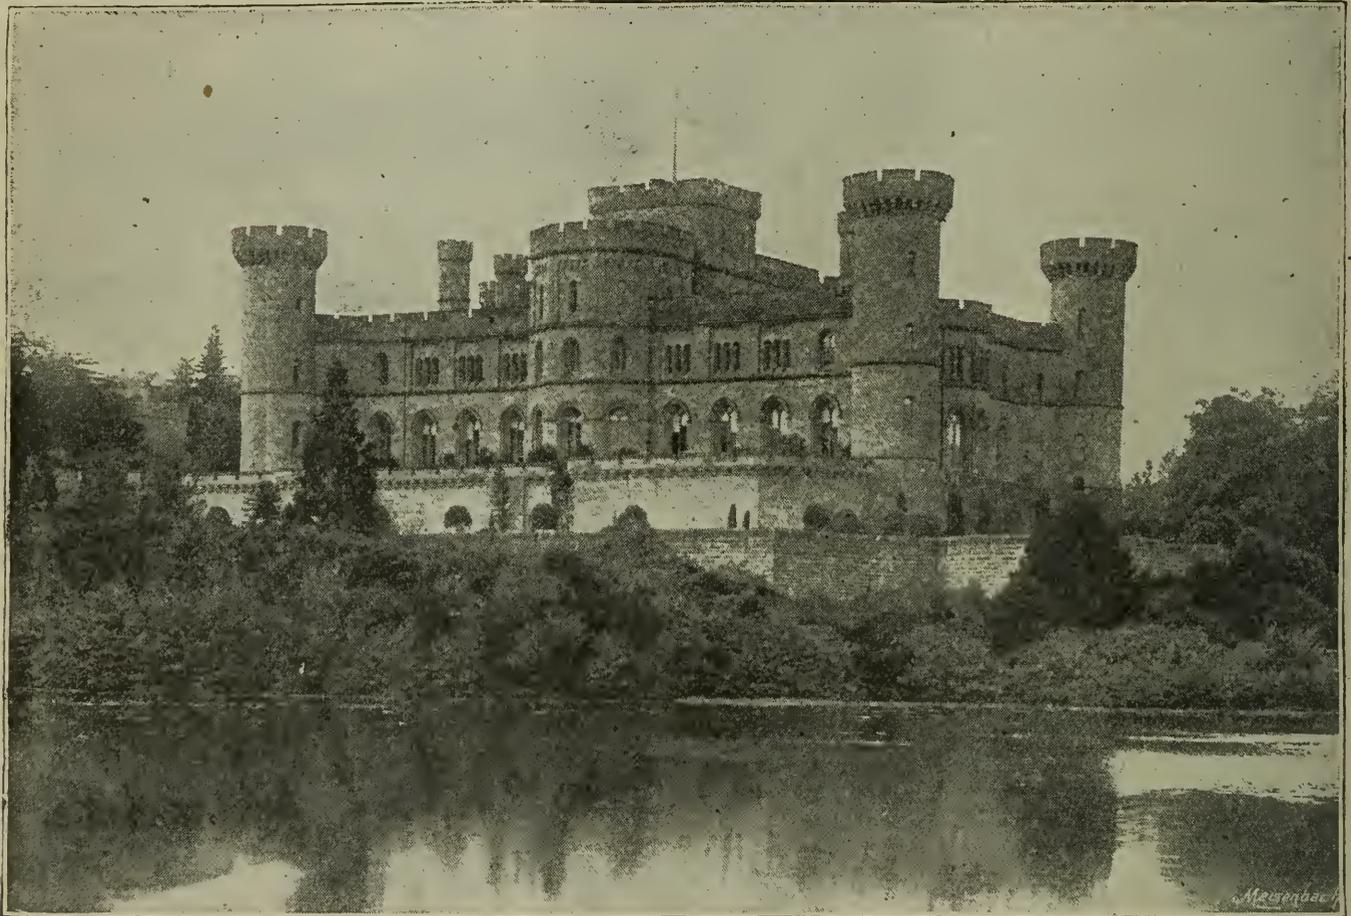

"THE CHURCH OF GOD IN OGDEN."

This may appear to some to be absurd, but if they will pause to reflect it will not seem so far from the literal truth. When Miss Willard's father was a young man, a revival broke out in the village of Ogden, N. Y. Out of that revival a Church was formed, consisting of Baptists, Methodists, Presbyterians, Episcopalians and Congregationalists, which, in the fervor of a revived faith, agreed to be known by no other name than the Church of God in Ogden. If we look over the American Republic to-day, where is there any organization which so fully and fairly

manner C. must stand for catholic, not for Christian, because while the label Christian if absent would not in the least impair the Christian spirit of the Union, while its presence alienates and excludes many Christians in spirit who could not honestly profess themselves to be Christians in name. With that alteration I do not see why we should not find the W. C. T. U. as near an approach to a humanized Catholic Church as we are likely to see in our time.

ITS CATHOLICITY.

Miss Willard decided definitely the essential Catholicity of her movement when she sorrowfully but

EASTNOR CASTLE—THE SEAT OF LADY HENRY SOMERSET, WHERE MISS WILLARD VISITED LAST MONTH.

represents the Church of God in the United States as the W. C. T. U.? All ecclesiastical organizations, whether Catholic, Episcopal, Methodist, or Baptist, are by their essence sectarian and sectional. They are not national and universal. Of the other societies, what one is there which is at once co-extensive with the nation in its organization, and which covers so large a portion of the work of the Christian Church as the W. C. T. U.?

"W. C. T. U." NEW STYLE.

Of course, I am prepared to admit that although, as Miss Willard says, two-thirds of the members of all the churches are women, still no organization can claim to be representative of the Church of God which limits its members to one sex. Hence, if the W. C. T. U. is to realize its full possibilities, the W. must stand not for women, but for world, and in like

decisively severed herself from Mr. Moody. She then wrote these wise and weighty words :

For myself, the more I study the subject the more I fail to see that it is for us to decide who shall work in this cause side by side with us, and who shall not. I cannot judge how the hearts of earnest, pure, prayerful women may appear in God's clear sight, nor just when their loyalty to Christ has reached the necessary degree.

The subject has long been familiar to her, although hear earlier tentative proposals are obviously inadequate. The Church of God in America must have, no doubt, the living soul of the creed of the Apostles in its heart, but it must on that very account not impose any profession of allegiance to that creed upon those who wish to help in the objects for which the Church was created. At the New York convention, in 1888, Miss Willard spoke as follows under this head :

A PROPOSED CHURCH UNION.

“ Meanwhile, many letters and consultations with men and women in high Church circles develop on the part of some a plan like this :

“ An organization to be formed called the ‘ Church Union,’ made up of those who are unwilling longer to leave inoperative the protest of their souls against a government of the Church by its minority : this Church Union to be open to any and all who will subscribe to the Apostles’ Creed, and the triple pledge of total abstinence, anti-tobacco, and social purity ; none of the members obliged to leave a church to which they now belong in order to join this ; men and women to be on terms of perfect equality, and women to be regularly licensed and ordained. The special work of this Church Union would be among the masses of the people, still, alas ! so generally un-gospeled, and in foreign lands, especially among the women. In this country, buildings now devoted to amusements to be utilized rather than new ones erected, and everywhere the steadfast effort made to go, not to send, and to go rather than to stay at home and say ‘ Come’ to the great humanity that beats its life along the stony streets.”

That is not a bad outline, although not broad enough to secure all the co-operation that is necessary.

A CHURCH MILITANT.

As to the fact that the W. C. T. U. is more of a practical Church Militant against the worst mischiefs that trouble the world than any ecclesiastical Church, there cannot be much dispute. If the test of the divinity of any Church is the care it devotes to little children, the W. C. T. U. need not fear the result. For the W. C. T. U. going beyond all other Christian Churches, has a department of heredity, and proclaims aloud the supreme importance of giving children the fundamental right of being well-born.

The time will come when it will be told as a relic of our primitive barbarism that children were taught the list of prepositions and the names of the rivers of Thibet, but were not taught the wonderful laws on which their own bodily happiness is based, and the humanities by which they could live in peace and good-will with those about them. The time will come when, whatever we do not teach, we shall teach ethics as the foundation of every form of culture. The effort of good women everywhere should be to secure the introduction of a text-book of right living ; one that should teach the reasons for the social code of good manners, every particular of which is based on the Golden Rule, and those refinements of behavior which involve the utmost kindness to the animal creation, including the Organization of Bands of Mercy in all our public schools.

THE CHURCH AS A CENTRAL HOME.

Miss Willard has ever been a great advocate for utilizing the churches. She said a few years ago :

I have long thought that the spectacle of well-nigh a hundred thousand church edifices closed, except at brief intervals when meetings were in progress, was a travesty of the warm-hearted Gospel of our Lord ; and I rejoice to see that, just as woman’s influence grows stronger in the Church, those doors stay open longer, that industrial schools, bands of hope, church kindergartens, reading-rooms, and the like, may open up their fountains of healing, and “ put a light in the window for thee, brother.”

The time will come when these gates of Gospel grace shall stand open night and day, while women’s heavenly ministries shall find their central home within God’s house, the natural shrine of human brotherhood in action, as well as human brotherhood in theory.

FOR PROGRESS ALL ROUND.

Of Miss Willard’s hearty sympathy with every progressive movement there is no need to speak. Her absorbing idea for many years has been the combination of the labor, the temperance and the woman’s party. The W. C. T. U. is strong for arbitration as against strikes, for shortened hours of labor, and for all that humanizes and elevates the workmen. It is all for peace, for purity, and for the elevation of the standard of beauty and of comfort in the homes of the people. Nor must it be imagined that Miss Willard is opposed to amusements. She writes :

For the stage I have a strong natural liking. In England I saw Sothorn as David Garrick, and it lifted up my spirit as a sermon might. But in this age, with my purposes and its demoralization, the stage is not for me. Somewhere, some time it may have the harm taken out of it ; but where or when, this generation and many more to follow this, will ask, I fear, in vain.

That depends upon whether the regeneration of the drama is to be added to the forty-four objects specified as coming within the scope of the W. C. T. U.

AN AMERICAN MAGNIFICAT.

Of course there will be an outcry against the idea of the Church of God in the United States being founded by women. Men who chant the Magnificat every week will be shocked at the suggestion that “ He who put down the lofty from their seats and remembered the humble estate of His handmaiden” may have once more chosen a woman as his instrument in founding His Church. Of one thing we may be quite sure : the claim suggested here on behalf of the W. C. T. U. cannot possibly appear to any one half as blasphemous and outrageous as did the suggestion that Mary, the wife of Joseph of Nazareth, had actually given birth to the Messiah, must have appeared to the best contemporary authorities in Church and State in Jerusalem.

WHAT THE W. C. T. U. HAS DONE.

For the organization has long ago proved its right to exist and its power to work. In the course of its existence the W. C. T. U. has collected no fewer than ten million signatures to petitions in favor of prohibition. They have succeeded in making scientific instruction concerning the physiological law of temperance an indispensable study in all the public schools in thirty-eight out of the forty-four States and territories, and they have compelled many unwilling legislatures to raise the age of consent and to strengthen the legislative safeguards against the corruption of youth. They have successfully promoted laws against the sale of cigarettes to boys, and they have

lost no chance of strengthening the law and invigorating public opinion on the subject of one day's rest in seven. They have instituted a journal for the special study of heredity and its conditions, and founded another which has now a circulation of seventy-five thousand a week, for the general propaganda of their views. The Woman's Temperance Publishing Company issues every year for the press no fewer than 130 million pages of printed matter, all directed to the promotion of the objects of the union. They have covered the whole of the States with their organization, so that in every county there is to be found at least one woman who undertakes to see to it that the cause in all its manifold ramifications is properly represented, and that no opportunity is lost whenever an opening occurs for striking a blow or saying a word for temperance, purity, peace and the woman's right to citizenship. Wherever opinion is manufactured, in caucus, convention, church or legislature, there stands the W. C. T. U. picket at the door doing the best that in her lies to influence the element of morality, righteousness and justice into the expected product. The National Union has 10,000 auxiliaries in the United States, and the World's W. C. T. U. now extends to the furthest corner of the civilized world. Already its emissaries meet us in Africa, in India, in Australia, and the islands of the sea. In England, as is well known, these forces are led by Lady Henry Somerset. The organization stands for womanhood throughout the world and, therefore, for manhood. It is a great modernized variant of the Society of Jesus without its despotism, dedicated to the service not of any hierarchy, but to the elevation and emancipation and education of the mothers of the race that is yet to be born. The women's temperance work was the first force that linked together the South and North after the Civil War in America, and it is at present one of the few organizations that works without a break through the whole English-speaking world. It makes for unity everywhere, and is a great school and university in which one-half the race are trained in the duties of citizenship and their responsibilities to the race. The Women's Temperance Temple, the handsomest and largest building in Chicago, is the headquarters of an organization whose influence radiates out to the uttermost ends of the world.

FROM ROME TO CHICAGO.

I have been, as it were, on the watch tower for some years past, looking anxiously around the horizon for the advent of some church that would be as lofty as

the love of God and wide as are the wants of men. It was in order to see whether in the old Roman Church there were yet to be found men who had heart enough to take in the whole world, and brain enough to discern the conditions on which alone it could be guided, that I went to the Vatican in 1889. What I said then was that Humanity needed a leader, and that the social forces making for righteousness wanted organization and direction. If in Rome or elsewhere there were those who were capable of discerning the signs of the times and of attempting manfully to unite in co-operation all the moral forces of our own time, no differences about dogma would stand in the way of the acceptance of that service. The three signs of the times which I mentioned were the approaching ascendancy of the English-speaking world, the arrival of woman on the plane of citizenship, and the necessity for humanizing the conditions of labor.

Rome, in the person of some of its ablest prelates, expressed sympathy, but the deadweight of Italian and Imperial tradition is too great. A hundred years hence the Pope may discern that the centre of the world has shifted from the Tiber to Lake Michigan. But for to-day he is weighed down physically and mentally by the ruins of the Eternal City.

That which I sought in vain at Rome may perhaps be already in process of development at Chicago.

WHAT MAY BE YET TO COME.

The World's Catholic Temperance Union, if we may so render Miss Willard's association, is based upon the very principles which the Popes will not accept in their entirety for many generations. As she said long ago:

Our society stands for no sectarianism in religion, no sectionalism in politics, no sex in citizenship.

It is based also upon a constant sense of the nearness and reality of the living God, and the absolute necessity of His direct guidance and governance, if anything is to be done that is worth doing.

In my thoughts, said Miss Willard, I always liken the Women's Christian Temperance Union to Joan of Arc, whom God raised up for France, and who, in spite of their muscle and their military prowess, beat the English and crowned her king! But evermore she heard and heeded heavenly voices, and God grant that we may hear and heed them evermore.

Amen and Amen! In the case of Miss Willard herself that prayer has not been in vain. Even if her work ceased now, instead of being but on the threshold of its vaster range, she would have afforded a signal example of how much one woman can accomplish who has faith and fears not.

LEADING ARTICLES OF THE MONTH.

THE VOTE MARKET.

THE October *Century* makes its leading feature a long, solid article entitled "Money in Practical Politics," by Prof. Jeremiah W. Jenks, of Cornell University. The writer has industriously gathered from their original sources various details of vote-buying methods, and it is safe to say that never before has there been such a complete and striking elucidation of the uses of "soap" for campaign purposes. Professor Jenks' strange recital cannot be stigmatized as the foolish vagaries of a "theorist," for he writes with the poll-books and check-books of one of the New York county committees open before him.

THE BOOKS.

Before registration day a thorough canvass is made of each election district. The names of all the voters are arranged in these poll-books alphabetically. After the column of names comes a series of columns headed, respectively, Republican, Democratic, Prohibition, Doubtful, Post-office Address, Occupation, and Remarks. Each voter's address is taken, and opposite his name is placed a mark in the proper column showing whether he is a regular Republican, a Democrat, or a Prohibition voter, or whether he is to be considered as "doubtful." After registration day, each man who registers has his name checked in the poll-book, so that the committees of both parties have a complete list of all those entitled to vote in each district. From this book, then, a check-book is prepared.

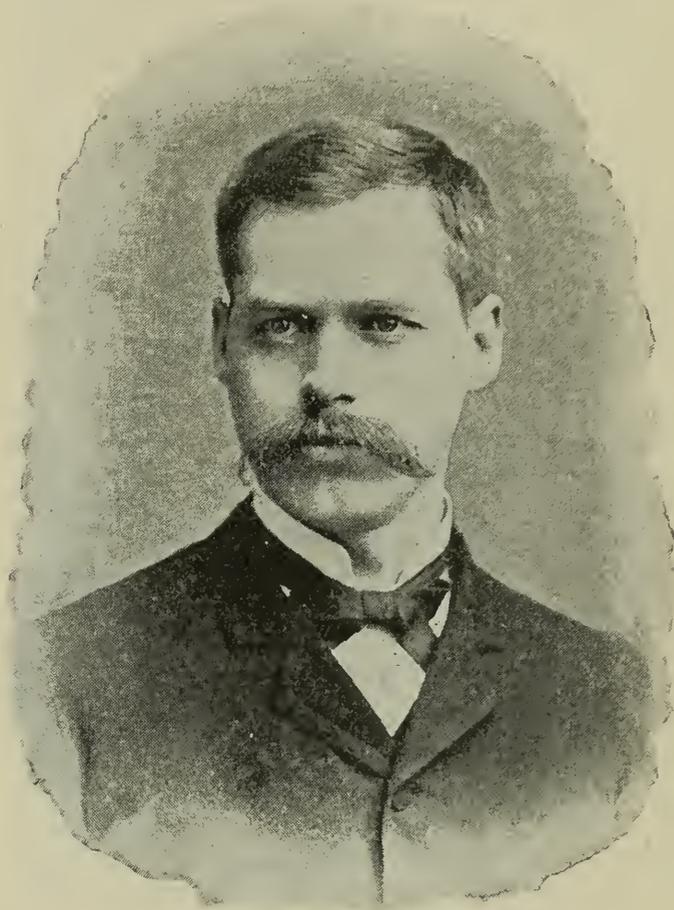

So that with a full list of the "doubtfuls," or "floaters," or "commercial," at hand, the "workers" can lay out their business with system and care. If the "floaters" are numerous as compared with the "workers," the former may be massed in "blocks of five" or ten, or bought in whole clubs or groups; but very frequently—and especially if the voter be a difficult man to "influence"—he is approached personally and privately.

PRICES.

In Indiana, four years ago, "six floaters" were kept under guard in an up-stairs office over night, the next morning taken down, marched to the polls under guard, voted, brought back to the office, and \$96 paid to their leader—\$16 apiece."

"In a small city in Michigan a friend of mine saw two 'floaters' go back and forth across the street several times between a Republican and a Democratic worker. The first bid was a dollar, and the bids were increased a dollar at a time. The men finally voted at \$7. In one of the eastern counties of New York, some years ago, a good church deacon and his son received \$40 each for their votes from a manager of their own party to keep them from deserting to the enemy."

And this is rather the most notable of Professor Jenks' collection: "In one of the eastern counties of New York State, Mr. L—, a local Democratic politician, had a bull for sale. The day before the election of 1888 a farmer came to buy the bull. The price asked was \$20, the amount offered was \$15; no sale was made. The next day L— was at the polls looking out for votes. The farmer, with his two sons, all of whom commonly voted the Democratic ticket, inquired how much he was paying for votes. He told them \$5 a piece. The man went away to

PROFESSOR J. W. JENKS.

see the Republican 'workers,' and soon returned, saying that he had been offered \$6 each, making \$18 in all. L— considered a moment and then said: 'Well, you take these three ballots and go and vote them, and to-morrow come and get the bull.' 'So,' as my informant tells me, 'the honest farmer and his two sons took the ballots, and went and voted for the bull; L— transferred \$20 from the election pocket to his private pocket, and the double transaction was complete.'"

As to the prevalence and magnitude of vote-buying we are told that while in assured districts with overwhelming majorities there is little use of corruption,

and hence little exercise of bribery, in other and more doubtful districts there is as much as \$7000 spent in a single county. "I have been assured," says Professor Jenks, "by thoroughly trustworthy informants from both parties, members of the county committees, that in one township of two hundred voters there is not one thoroughly incorruptible vote. The Democratic managers have not one vote of which they are entirely sure; and while there are some Republicans who cannot be bribed by the Democrats, there is not a single Republican voter in the township who does not demand pay for his time on voting day."

HOW ARE WE GOING TO STOP IT?

Professor Jenks very rightly deprecates the view that the Australian Ballot system—as great an advance as it is—will limit corruption to any final extent. In the eyes of the "practical politician" it is essentially a thing to be evaded, and there are various means by which he can to a certain extent lessen the advantages of the system. Voters can have "headaches" which necessitates a "friend's" assistance into the polls, and thus the secrecy is done away with; and many men can be relied on by "workers" to vote as they are directed and paid to vote. The New York law requiring sworn statements of election expenses is good as far as it goes, but Professor Jenks believes that we should adopt much more stringent cautions, along the line of the English election restrictions.

"Let the amount that can be expended for each candidate on the ticket be strictly limited—a certain small sum for a ward or town office, a larger sum for a county office, and a still larger for a Congressional or State office, etc. The amounts should be liberal for all legitimate needs, and might be graded more or less by the number of voters and the size of the district. Each candidate should be permitted to pay only his own personal expenses. These sums should be limited, and he should be compelled to account under oath for every cent so expended. The rest of his contribution should go to his committee or manager. Every candidate representing a party should be compelled to have his campaign managed by his party committee. All the regular expenditures, except the personal ones mentioned above, should be made by the treasurer of the committee, and he should make a sworn itemized return of every penny that comes into his hands. An independent candidate should elect a manager who, under like conditions of accountability, should manage his canvass. The number of workers under pay at the polls on election day should be strictly limited, and the amount of their compensation prescribed. The English law does not permit the agents at the polls to vote. If their number is limited, however, I do not see the necessity for disfranchisement. Of course all bribery, promises of office, etc., treating and all such practices, should be forbidden, as well as expenditures for certain purposes that, though innocent, are really unnecessary and which are readily used to avoid bribery laws."

Venal Voting; Methods and Remedies.

Prof. J. J. McCook continues in the *Forum* his discussion of the subject of venal voting, begun in the September number. This month he considers the method of life of the venal voter; the means employed by politicians in buying votes, and the remedies for the evil of bribery at the polls. By far the greater part of the venal voters that have come under his investigation he finds to be farm laborers, unskilled laborers, and doers of odd jobs.

HOW VOTES ARE BOUGHT.

As to the way in which votes are purchased, Professor McCook says: "Where the ballot is open the process is simple enough. The person is handed a ticket, accompanied to the polls, watched with hawk-like sharpness until the ballot is in the box; he then goes to the cashier and draws his pay, takes a fist full of tickets and poses as a ticket-peddler for half an hour or so—then quietly drops off and disappears. This is very common in cities. In the country, and not infrequently in cities, the ticket-peddling is omitted as being a useless and too public a farce; otherwise the method is the same. While treating of the disease aspect of the offense I have said that the seller usually seeks the purchaser. This is not always the case. There are in both country and city certain men who have been dubbed in my hearing 'a sort of gang-contractors.' These in one town were three in number. Two of them, of the informant's own party, were ready to work for either side; the third, only for his own. These persons receive from twenty-five to fifty dollars in elections 'when there is any money up,' arm themselves with jugs of whisky, and start for the habitat of the commercial coterie which they specially affect. What cannot be done through the inspiration of the jug is done by the persuasiveness of money, and what can be economized in money stays in the contractor's pocket.

"The contractor in the city is likely to be a liquor dealer. If he can get himself chosen to the chairmanship of a ward committee, so much the greater his chance of perquisites. He may, indeed, have been helped to this position by money of his own or of the opposite party. In this case he draws double pay. His own party intrusts funds to him to use, and the other party goes far beyond in their bid. He is not simple enough to return his party's money, and to use it would be idiocy, for his pay from the other side is to be proportioned to the reduction he can effect in the vote of his own people. He therefore pockets both the campaign funds and the bribe, and accounts for the falling off in his party vote by the 'big pile of money the others were using.' This is not invariably done, nor perhaps frequently, but it is sometimes done I am assured by those who ought to know. Sometimes, however, certainly not."

THE USE OF LIQUOR IN ELECTIONS.

The use of liquor, as a means of securing votes, is described as follows: "Its most impressive use, per-

haps, is when the candidate goes down into the ward and talks pleasantly with 'the boys,' and 'asks them all in for a drink.' But this is hardly its most efficient employment. The 'boys' would be very unusually intelligent indeed and not at all usually thirsty if they were to refuse liquid refreshments thus tendered, from whatever source. But the most telling work is put in by the dealer himself. He receives a liberal donation to be employed for refreshment purposes. This he deals out in the most judicious manner, discriminating of course in favor of those who are 'going in with the rest of the boys to elect A. or B.' In many instances the patron is in debt for previous libations. His credit is now stopped until he 'falls into line.' 'You may clear out! We don't want nothing to do with you if you're not going to be friendly!' The power of such an edict to a man devoured by a thirst which probably surpasses that of the fever patient, or of the wounded soldier under a July sun on the battle-field, can be appreciated only by those who have studied this curious disease face to face with its victims."

THE SECRET BALLOT EASILY EVADED.

According to Professor McCook the secret ballot has not interfered to any great extent with the buying of votes in Connecticut. "Ways of evading it have already been discovered. Ballots have begun to be successfully marked. The famous printer's specks are not the only marks possible. A paster applied to a certain name in a certain way, or an agreed upon fictitious name written in, may be an effectual mark. A manager may sacrifice his own vote in the morning, carry away the stamped official envelope, enclose a vote in it, securely seal it, place it in the hands of a 'worker' and condition payment upon the delivery of a new and unbroken envelope, and this may be kept going all the day. The booth-tender or some one else may be hired to open the door 'by accident' to see whether a ticket in the vest pocket is substituted for the ticket in hand on entering. It may be made a condition precedent that the door be left slightly ajar so that the booth tender, previously signaled, may see whether the ticket carried in is put in the envelope. I mention only methods which I am credibly informed have already been used. Therefore I run the risk of 'corrupting' no one, but may warn many. Even the Australian system may be evaded by the use of a stencil of the exact spacing of the ballot. And for every such system there remains the easy though twice as expensive plan of paying men to stay away, which has probably been used in a certain though not great degree, but which is sure to be used when all else fails."

REMEDIES.

Professor McCook's remedies for these abuses of the privilege of voting are—First. Insist upon fair education and a good moral character before admitting men to vote. Second. Make continuance of the enjoyment of the suffrage dependent upon the sustaining of a good moral character. Third. Enact the best secret-ballot law that can be contrived. Fourth.

There should be absolute frankness and plain dealing with ourselves and others.

THE PRIMARY THE PIVOT OF REFORM.

MR. DAVID DUDLEY FIELD argues, in the *Forum*, that the primary rather than the ballot box is the pivot of reform in elections, taking the view that votes are of little use if the nominations are bad. He states that in his own district—the Third Assembly, of New York City—only from 100 to 150 Republican voters out of a total of 2,005 attended the primary in the last State election. "The truth is," he says, "that the voting plays a secondary part in a New York City election. It is the nomination which turns

DAVID DUDLEY FIELD.

the scale for good or evil, and the primary makes the nomination. If both parties should nominate good candidates, good men would hold office, whichever party won the election. There may, indeed, be elections in which great principles are at stake; but the occasions are rare in which the voter is obliged to choose between a good policy with a bad candidate and a bad policy with a good candidate. The practical politicians jeer at us for our simple folly. This is what one of them said the other day: 'It's great sport to see people go to the polls in hordes and vote like cattle for the ticket we prepare. Reformers don't begin at the right point. They should begin at the point where nominations are made. The people

think they make the nominations, but we do that business for them.' What a boast of profligacy and shame! 'Sport,' is it, to see one's fellow-citizens led like cattle to slaughter, thinking all the while that they are going to pasture? How long shall we endure this profligacy and hear this boast? *Civis Romanus* was a boast; has *Civis Americanus* become a burden?

"There is little new in what is here written. My aim is to reiterate, and by reiteration enforce, if I may be so fortunate, what has been written many times before. For myself, I must say that I would indeed go further, and require a nomination to be made by every voter when he registers his name preparatory to his exercise of the suffrage. Details could easily be arranged to secure the secrecy of such a nomination. It would be useless, however, now to enter upon the discussion of such a scheme. The public is not ready for it. Meanwhile a full attendance of the voters at the primaries as well as the polls would insure, as it seems to me, a real government of the people by the people and for the people. Reform clubs are good in their way. They bring together citizens of like opinions, beget discussion, and conduce to concert of action. But, after all, I venture to affirm that the true reform club is the primary. There is the place to begin the purification of our electoral streams and make the waters clear at the source and the fountain."

COMPULSORY VOTING.

IN the *Social Economist* Mr. Morris S. Wise argues for the adoption of a compulsory voting system, which he declares is "the only real and satisfactory cure for the many political evils against which complaint is made. Give every voter a credit cheque when he votes; collect that cheque within twenty-four hours after election, and warn the qualified voter who is without one on his first offense; fine him twenty-five dollars on his second offense; increase the fine to \$100 on his third offense; and should he offend again deprive him by the sentence of a proper court from ever after exercising the right of suffrage. Brand him as a derelict, a traitor, and a man who is devoid of all sense of the obligation and duty he owes his country and the community in which he lives.

"Of course, sickness and necessary absence from the city, proven in a legal manner, should be a valid excuse. Tuxedo or the races should not. Other valid and sufficient reasons submitted to the judge appointed to pass on these excuses could be considered and in his discretion allowed; but the grand point to be achieved by the adoption of this system would be to make willful absenteeism from the polls obnoxious and unlawful; and, to be perfectly plain and practical, we would in short give the derelict citizen more trouble for not voting than the trouble to register and vote would cost him."

Mr. George Gunton's Reply.

Commenting upon Mr. Wise's view, Mr. George Gunton, the editor, says: "So obvious is the evil of ignorant voting that more stringent naturalization

laws are being demanded, because too many of our foreign-born citizens vote ignorantly. It is to remedy this that the Australian ballot system has been adopted in so many States. If secret voting will eliminate the ignorant, illiterate voters, and indifference eliminate, political-ignorant and cultured voters, our political machinery is in no imminent danger, since those who do not vote will have to be governed by those who do, and the community is sure to be governed by the more competent citizens. We regard compulsory voting as a step in the wrong direction. Political power should never be forced upon any class. Nobody is entitled to the franchise who does not show his fitness by at least desiring to use it, and if for any reason individuals acquire the right of suffrage who are uninterested in public affairs, it is an advantage to the community that they do not use it. Rather than make voting compulsory, we should prefer a law of disfranchisement, making all who failed to vote at three successive elections political aliens, the right of franchise to be thereafter acquired only by the usual process of naturalization."

THE EXPOSITION AT ST. LOUIS.

MR. JAMES COX pays a very hearty tribute in *Lippincott's* to the beautiful city of St. Louis and its bi-annual exposition, which held high carnival in the first days of October.

Notwithstanding croakers who had had "experience" with expositions, the merchants of St. Louis promptly contributed \$1,000,000 when the idea of the fair had been outlined, and the gayeties have come off with all pomp and circumstance and success. Not a small feature was Gilmore's Band in the Grand Music Hall of the Exposition Building.

A GREAT MECHANICAL AND AGRICULTURAL DISPLAY.

"The fair is the greatest mechanical and agricultural display in the West, and is held in a magnificent park known as the Fair Grounds. The park is a favorite objective point of street-car line projectors, and year after year the accommodation has been improved until now six electric lines and one cable road run directly to it. For several years in succession the attendance on Fair Thursday has exceeded one hundred thousand, and one hundred and twenty-five thousand has been recorded more than once. The fair is a splendid exposition of itself, part open air and part under cover, and the exhibits are as costly as varied. The premiums are eagerly competed for and highly prized by the successful exhibitors. Within the grounds is one of the largest amphitheatres in America, in the center of which take place trials of speed of trotting horses and the competition for premiums in blooded stock of all descriptions."

The festivities ended with the gorgeous parade and rites of the Veiled Prophet and a ball at the Merchants' Exchange Hall, one of the finest in the country. To help accommodate the great crowds of visitors a two-million-dollar hotel was erected.

THE TREND OF THE GREAT DAILY.

COL. JOHN A. COCKERILL indulges in some very plain talk in the September *Cosmopolitan* on the subject of "Contemporary Journalism." As a lifelong newspaper man and as ex-managing editor of the *New York World*, Colonel Cockerill has eminently the right to be heard, but his unmitigated arraignment of the lurid faults in our journalistic methods is so sweeping and incisive that one has to rub his eyes to awake to the fact that the writer is talking about his own life-work—that it is, as it were, a confession. It should be added that Colonel Cockerill is now editor and absolute dictator of the oldest paper in New York, the *Commercial Advertiser*, and that its tone is wholesome and bright. It is a different class of papers that he discusses in the *Cosmopolitan*.

Colonel Cockerill does not allow himself even the comfort of holding that the shortcomings of the "great daily" are accidents of prosperity or of merely human management, with a nobler essence of success underlying them. "It is exactly by reason of its glaring obliquities and moral shortcomings, sad as it may seem, that the great metropolitan newspaper is now apparently enabled to address an audience of millions each morning; to send out expeditions into the remote corners of the world; to explore unknown seas and climb inaccessible mountains; to dictate to Presidents and bully statesmen; to foretell the news so accurately as almost to compel the vindication of its predictions; to delve into the inmost heart of man or woman and pluck from it a secret dearer than life itself; to desecrate the sanctity of the fireside and violate all that the family and the individual hold dear; to detect crime and insure its punishment; to pursue malefactors beyond the reach of the slow processes of the law; to annihilate space and make all the difference of time in the world as nothing—in short, to be what it is: the greatest marvel of the intellectual and material powers of man at the period of their highest development."

This gives the fascination of newspaper work, and urges so many able men to fight for the managing editorship—an honor which, Colonel Cockerill most feelingly assures us, is not without its penalties, quoting with approval James Gordon Bennett's opinion that "the life of a managing editor is only five years." For the managing editor must get news. This word "news" arouses Colonel Cockerill.

"THE DAILY CRIMES."

"Show me the news which is presented the most prominently in a journal, and I will tell you the character of its editorial page. While there cannot in the very nature of the case, be any uniform definition of that intangible thing which we describe by the word 'news,' it might be truthfully declared, having due regard for the most successful of our journals, that news is any heretofore unprinted occurrence which involves the violation of any one of the ten commandments; and if it involves the fracture of

the fifth, sixth, seventh, eighth or ninth, and these by people whose names the newspaper readers have heard of, and in whose doings they are especially interested, by knowledge of their official and social position, then it is 'great news.' 'The Daily Crimes' would be the best name for almost any sensational newspaper of to-day. The constant effort made to secure, by telegraph, by special correspondence or by indefatigable reporters at any cost, and to present in the most meretricious form and at any sacrifice, occurrences which will catch the curious eye and hold the morbid

JOHN A. COCKERILL,
Editor *New York Commercial Advertiser*.

fancy, has found its best reward unquestionably in the accumulation of newspaper millions and the erection of costly newspaper buildings."

"Give the people what they want, and that, too, the very worst of it," is the principle which, according to Colonel Cockerill, guides our journalistic management; nor does he see any hope of reform more sudden or efficacious than the gradual advance of the human race toward perfectibility. "If ninety-five per cent. of the papers were to purify themselves over night, the indecency and criminal charm of the other five per cent. would thereby be increased a hundred fold in the eyes of the reading public; and were that reading public to remain without a corresponding purification, the five per cent. of the vicious

would inevitably secure and keep the vast bulk of the profits which had theretofore been shared equally among the hundred."

THE LAST OF THE EDITORS.

The editor is a species rapidly approaching extinction as far as goes any personal influence radiating from the sanctum to the readers. Colonel Cockerill points sadly to three survivors of the race—Henry Watterson, A. K. McClure, and—not least—Charles A. Dana. "The editorial page has gone steadily to

will send him a fruitful day of crimes, tragedies and scandals. "Does it seem possible that there can be intelligent, self-respecting, educated men who are constantly on the *qui vive* for the misery of their fellows, and who profit directly and personally by holding that misery or crime up to the public view in the columns of their employers' newspapers? Whatever it seems, it is."

Of course, Colonel Cockerill is not exaggerating at all when he points out the rivalry and ill-feeling between different papers, and their ungenerous treatment of each other, but we hope he has been led by his subject into a rut of pessimism which may account for his very severe characterization of the greed and jealousy and scheming of writers and employees on the same journal: "Each one is encouraged to be a secret tale-bearer against all the others; and this is the moral influence of the organization; each rejoices in the misfortunes of the others, and all gloat over the defeat of a common enemy."

An American Newspaper Office.

Col. Cockerill, writing in *Lippincott's Magazine* for August on the "Newspaper of the Future," incidentally describes the office of the *Chicago Herald*:

"What better illustration could there be of the vast improvements recently made in the mechanical and editorial departments of a great American newspaper than the present constitution of the *Chicago Herald* in the World's Fair city? No building in the world is probably so thoroughly adapted for the purpose for which it was erected. Certainly no home of industry is so effectively and at the same time so magnificently equipped. What would an *ante-bellum* journalist say to a business office with three thousand six hundred square feet of floor space, flanked by sixteen columns of genuine Sienna marble and with entrance doors, lockless and keyless, which can never be closed, summer and winter, morning and night, day in and day out, through the year? What would the old-time typo think of a composing room with its walls of white enamel, its quadruple cast-iron type-stands with cases for one hundred and eighty men, its electric calls connecting each case with the copy box, its aerial railway conveying advertising matter up to the business office, its separate clothes closets for one hundred and sixty men, its extensive reference library for the use of the proof-room, its marble closets, filtered ice-water coolers, with solid silver, gold-lined drinking cups, its three hundred and forty eight incandescent electric lights and marble-topped luncheon counters and tables? What would have been thought of marble bath-tubs for the stereotypers, of a great central library for the editors and reporters, around which are arranged a score of handsome editorial rooms, each connected by copy and speaking tubes with all the others? What would the old-time journalist, with his long hair lingering affectionately on his greasy coat collar, say to a publisher's apartments in which all the

JAMES W. SCOTT,
Editor of the *Chicago Herald*.

seed in the last decade or two; it has ceased to stand for the views of any individual or to represent the demands of any preëminent power."

THE PROPRIETOR AND HIS PURSE.

Colonel Cockerill paints the evils of non-resident ownership of newspapers, resulting as it does in an absolutely heartless money standard. When the success of a paper and the value of its work are gauged by the amount of the monthly remittances to the proprietor's European banker—all the rest follows.

The managing editor must get money to his proprietor if he wishes to retain his position and reputation. To get money he must sell the paper; to sell the paper he is dependent on a "providence" which

metal fixtures are oxidized silver and all the wood-work of solid mahogany? What would the old-time hand-press foreman think of ten Scott-Potter presses in a straight line, operated by a single line shaft one hundred and twenty four feet in length, of marble closets and bath-rooms for all employees and a constant flow of cold, clean water, day and night, in every room from an unfailing artesian well?

"And yet is there not good reason to believe that in some respects at least the newspaper of the future may as far surpass its forerunner of to-day as the Chicago *Herald* building of to-day has surpassed the cheap and dingy newspaper building of twenty years ago?"

A Well-Known American Journalist.

The following sketch of Mr. Joseph Medill, editor of the Chicago *Tribune*, appears in Mr. James Maitland's article, "The Men Who Made the West," in *Belford's*:

"The dean of the journalistic profession west of the Alleghenies and the most prominent of the Republican editors of the United States is Mr. Joseph Medill, editor and principal proprietor of the Chicago *Tribune*, with which paper he has been identified for nearly forty years. Born in New Brunswick, of good Scotch-Irish stock, in 1823, he removed to Ohio when a boy, practised law for a short time in Massillon, and then began his newspaper career as the editor of a Whig and Free Soil paper in Cleveland. But the little town by the lake did not afford free scope for Mr. Medill's abilities, and he sought and found a wider and more promising field in Chicago.

"In 1855 he purchased an interest in the Chicago *Tribune*. Mr. Medill took an active part in the foundation of the Republican party, which he has supported consistently for many years. After the great fire of October, 1871, while the city lay in ashes, it was felt that there was no time to quarrel over partisan elections for municipal officers. An agreement was reached between the leaders of the Democratic and Republican parties, at which what was known as the 'fire-proof ticket' was prepared to be voted for at the pending city election. Mr. Medill was elected mayor on this ticket. He had served in the previous year in the Constitutional Convention which revised the organic law of Illinois. To him is due the introduction of the system of minority representation, as applied to the election of representatives and the limitations of municipal bonded indebtedness to five per cent. of the taxable valuation.

"Mr. Medill took a lively interest in civil-service reform, and was appointed by General Grant a member of the Civil Service Commission. On several occasions his name has been suggested as a representative of the United States at Paris or London, but all such offers he has uniformly declined. First and last he is a newspaper man, and under his guidance the *Tribune* has become a power in the land and the leading exponent of Republican principles in the West."

YOUNG WOMEN IN JOURNALISM.

MR. W. T. STEAD has an article in *Young Woman* on the subject, "Young Women in Journalism," the salient points of which are as follows:

DON'T PRESUME UPON YOUR SEX.

"The first thing I would like to impress upon young women who aspire to be journalists," says Mr. Stead, "is that they must not presume upon sex, and imagine that because they are women therefore they have a right to a situation or an engagement whenever they choose to apply for it. To be a woman confers many privileges and inflicts many disabilities; but if you were a hundred times a woman, that would give you no right to a niche in the journalistic profession. If you want to be a journalist, you must succeed as a journalist—not as a woman or as a man. All that you need expect, and all that you should ask for, is a fair field and no favor, to prove that you can do the work you ask should be allotted to you. You have a right to ask that your sex should not be regarded as a disqualification; but it is monstrous to erect that accident of your personality into a right to have opportunities denied to your brother.

"If women are to get on in journalism, or in anything else, they must trample under foot that most dishonoring conception of their work as mere woman's work.

"You must not think that, because you are a woman, chivalry and courtesy demand that your work should be judged more leniently than if you were only a man. A woman who comes into journalism and expects to be excused anything because of her sex lowers, by the extent of that excuse, the reputation and worth of women in journalism.

DON'T STAND ON YOUR DIGNITY.

"After the false kindness and undue consideration on the part of some editors which, after all, at the beginning, may be excused for the sake of encouraging the timid to do their best, the chief foe that women have to contend with in journalism is their own conventionality, and the fantastic notion that a lady cannot be expected to do this, that or the other disagreeable bit of work. That such and such a duty is not the thing to ask from a lady, that a lady must not be scolded when she does wrong, or that a lady ought not to stay up late or go about late—all that is fiddlesticks and nonsense, as our good old nurses used to say. Ladies with such notions had better stay at home in their drawing-rooms and boudoirs. The great, rough, real, workaday world is no place for them. Many years ago I heard an editor say, when asked to place women upon his staff, 'A woman—never! Why, you can't say d—— to a woman!' and that settled it in his opinion. And although his mode of speech was rude and even profane, it embodied a great truth. Until it is a recognized thing that the women on a staff may be admonished as freely as their male comrades, the latter will have an unfair advantage in the profession. It is the sharp edge

of the employer's reproof that keeps the apprentice up to his work. To spare the rod, metaphorically, is to spoil the child, and women can bear spoiling quite as little as any child. But many women take it as their right. If a woman cannot be admonished as roundly as a man she had better keep outside a newspaper office. The drive is too great to permit of periphrastic circumlocutions in giving orders, in making criticisms, or in finding fault.

DON'T DEMAND A CHAPERONE.

"If a girl means to be a journalist she ought to be a journalist out and out, and not try to be a journalist up to nine o'clock and Miss Nancy after nine. I don't want her to be unladylike. The woman who is mannish and forward and generally aggressive simply throws away her chances and competes voluntarily at a disadvantage. For no editor in his senses wants either mannish women or womanish men on his staff. What he does want is a staff that will do whatever work turns up without making scenes, or consulting clocks, or standing upon its conventional dignities.

"A girl who has proper self-respect can go about her business at all hours in English-speaking countries without serious risk either of safety or of reputation.

DON'T EXPECT TO BE PAID AT FIRST.

"To young women as to young men I would say: Remember, journalism is not a Tom Tiddler's ground, where every stray passer-by can pick up silver and gold. To judge from many applications which I receive, many ladies imagine that whenever they want money the most obvious resource is to rush off to the nearest editor to ask him to pay for articles which are utterly worthless. If you go into journalism in order to make a living do not object to begin at the beginning and to learn the business before expecting that it will keep you. Learn shorthand, and, having learned it, keep it up, and don't forget it and lose speed. And whatever else you do or don't do, get to write a neat, legible hand, or if that is beyond your reach make yourself proficient on the typewriter. Remember that if your copy is difficult to be read it simply won't get read at all, but will go into the waste-paper basket.

DON'T FORGET TO READ THE PAPERS.

"Don't think that secretaryships grow on every gooseberry bush. There are very few secretaryships, and they are usually given to those who are known and proved to be faithful, and also to have general acquaintance with the business in which their chief is engaged. As for contributions to the papers, remember that articles are accepted much more because they are 'on the nail,' and bear directly upon the subject of the hour, than because of any exceptional literary merits which they possess. Hence, you never need be discouraged when your article is returned or basketed. It doesn't necessarily mean that you cannot write. It may only mean that it was a week late or a week too soon. Editors want not

what it may strike your fancy to write, but what they think their subscribers would like to read. The art of getting your contributions accepted is the art of discovering when the editor is wanting just the kind of article you can give him. If you ask, 'How can you find this out?' I can only answer that every day's paper shows you what the evening before the editor thought his readers wanted; put yourself in his place, and as you read your paper on Monday try to think if you were editor what you would want to insert on Tuesday and Wednesday. Then, if you can supply the same, do so. If not, do not try his patience and make him loathe your handwriting by sending him a 'Disquisition on the Virtues of Friendship' in the midst of a Ministerial crisis, or an essay on the next eclipse when he is in the throes of a general election."

THE NEW BIBLICAL VIEWS AND CHRISTIAN UNITY.

IN its continuation of the reports of the Grindelwald Conference, the *Review of the Churches* devotes a number of pages to an extremely interesting discussion of the inspiration of the Bible, the principal address having been given by Mr. R. F. Horton, who is an English Congregationalist of great learning and high standing. The prevailing view of the nature and inspiration of the Bible in England has changed far more radically within the past twenty-five years than among orthodox Protestant people in America. Mr. Horton represents those views known in this country as the conclusions of the "Higher Criticism." He was followed by the Rev. Hugh Price Hughes, of the Methodist Church, Canon Fremantle, of the Church of England, and several other prominent speakers, nearly all of whom fully concurred in his opinions. Having explained the new view and discussed the authorship of the Old and New Testaments, Mr. Horton proceeded to show how, to his mind, the real value of the Bible as a book of religious guidance is in nowise impaired by the processes of criticism. Mr. Horton proceeded to show that the newer views would make toward Christian unity. Upon this point he spoke as follows:

"No one has yet seen, and I fear no one has ever as yet attempted to state, what will be as clear and plain as possible ten years from now: that the whole gist of the new view of the Bible is spiritual, is toward a truer faith, toward a greater certainty, toward a religion which is not open to the carping criticism to which our religion at present is so pitifully subject.

"That will at once show you what I mean of the bearing of this truth upon unity: but before I point it out more explicitly, let me remind you of this: the Bible as it has been understood since the Reformation has not been a means of uniting Christians. Sad to say, it has had an opposite effect. Treated as a handbook of proof-texts, it has tended to divide us. We have seen in this conference that our divisions rest more or less in our own minds upon truths we believe are revealed in the Bible. Our dear friends

of the Church of England are firmly persuaded that their Three Orders are all there in the Bible; our Presbyterian friends are equally certain that their presbyteries are the Bible teaching; we Congregationalists are more modest: we don't suppose that the Bible authorizes our Church polity in the same sense as you do, but unhappily we are divided from you just because we believe our form of Church polity is not a definite revelation, and you do believe it; and what the Methodists find in the Bible they only know,

are always dividing and dividing again. If you find one set of brethren one time, you will find another set of brethren another time who will not eat bread with the others. How true it is, as was said at the Reformation—

Hic liber est in quo quaint sua dogmata quisque
Invenit et pariter dogmata quisque sua.

“But I venture to foretell that in future men will not think of going to found their systems on the Bible, because they will understand that the Bible expressly refuses to give them a system—we shall cease to go to the Bible to build up our mountainous theology when we make the discovery that the Bible did not intend to give us what we call a theology. If it had been the purpose of God to give us a scheme of Church government, He would have defined it as clearly as the Rubric of the Church of England. If it had been His purpose to give us a definite, compact and rounded creed, He could have given it us in the language of the Athanasian Creed. But He did not, and we shall learn gradually that the Bible will not answer questions which it does not encourage us to propound. Its inspiration lies in another direction.

HUGH PRICE HUGHES APPROVES THE EPISCOPATE.

IN an address at Grindelwald the Rev. Hugh Price Hughes, who is the foremost leader and orator of English Wesleyan Methodism, took grounds which would show clearly that if the majority of his fellow-Methodists were as conciliatory in their views as he is, and if the majority of the bishops and clergy of the Established Church of England were in like manner as conciliatory as were several prominent clergymen who attended the Grindelwald Conference, an early union of the Established Church and the Wesleyans might be expected with some confidence. Mr. Hughes' address is reported in the last number of the *Review of the Churches*, London. Mr. Hughes made a powerful argument for the union of the evangelical churches of Great Britain, regarded disunion and denominationalism as an unspeakable curse, emphasized the evils of disunion on the mission field, advocated general co-operation in all social and reformatory work, but also went further and declared his great desire for actual organic union of the denominations. One by one he discussed the difficulties that stand in the way, and showed how they might be solved. Finally, he came to the question of the historic episcopacy and proceeded as follows:

THE HISTORIC EPISCOPATE THE REAL DIFFICULTY.

“Now I come to the last difficulty—the historic episcopate, but the historic episcopate to be locally adapted. There may be a great deal more in that than may appear on the surface. Can we ever accept episcopacy? That is the only thing we are asked to accept. We believe in the Bible, the Apostles' Creed, in the two Sacraments; the one concession that the

MR. R. F. HORTON, AT GRINDELWALD.

but I am given to understand they find not only John Wesley, but about thirty-one volumes of his sermons.

“Therefore, the Bible has been the means of splitting us up into bodies that have to come to Grindelwald to be united. And, what is still more, there is a section of Christians unrepresented in our assembly altogether, because they are too Christian—so Christian they cannot come, whose whole faith rests on the Bible. The Plymouth Brother believes every word is inspired, and that his doctrine is drawn from the very lips of God in the Bible. And what is the fact? The Plymouth Brother parts from us all. And, what is still sadder, they part from themselves, and

evangelical Nonconformist Churches are asked to make is in the direction of some modified episcopacy. That is not very much to ask in my judgment, in view of the enormous concessions made to us and in return for the enormous advantage of securing some reasonable union of the Christian Church. Of course, we Nonconformists all reject apostolic succession in the sense in which it is believed by some here and by many more in the Church of England; but then we must not forget that the whole evangelical section of the Church also reject it in that sense. If, then, it is tolerable to our evangelical brethren inside the Church, the difficulty ought not to prove absolutely intolerable to us, if placed in a similar position.

FROM AN EVANGELICAL POINT OF VIEW.

“I am trying to look at it in the most favorable way possible. If on this basis any reunion were ultimately possible, the evangelical section would be so greatly strengthened by us, that, for the first time in the history of the English Church the evangelicals would be in a majority. I remember many years ago being condemned by an evangelical clergyman as being outside the Church. ‘You Nonconformists have no right to rebuke us evangelicals because we are in a minority; come inside and join us, and we shall be a majority, and the future destinies of the Church of England will be in Protestant evangelical hands.’ One of the calamities of the National Church is that the evangelical section is so very weak, and it is weak because the great mass of the evangelical section of British Christendom is outside.

NONCONFORMISTS AND ORDINATION.

“I do not know whether everybody appreciated how far Mr. Aitken went on the next point. He was prepared to accept the existing orders and Nonconformist ministers, and he simply suggested, with a view to some concession being made upon our part, that we should agree to the presence of a bishop at future ordinations. There is a great difficulty here, because, as far as I know, our Congregational and Baptist brethren do not believe in ordination in the sense in which Methodists and Presbyterians believe in it. The difficulty of these brethren was stated by Dr. Glover this afternoon. I am not in a position to say what they would do; but personally I feel that the presence of a bishop would not interfere with the validity of my orders, and if it would be a comfort or conciliation to those more susceptible than ourselves, in the spirit in which the Apostle Paul made concessions which his own conscience did not need, I should regard it as one of those points on which, without sacrifice of principles, we might agree.

MR. HUGHES APPROVES THE EPISCOPAL SYSTEM.

“I personally see no insuperable objection whatever to some such compromise as was suggested to us this morning; certainly there is no objection to the Litany, and I believe in the statement of episcopacy as found in Bishop Lightfoot’s famous essay. As far as I know episcopacy existed in the Christian Church

at least from the time of the Apostle John; and I have not the least doubt, from a careful study of this particular question, that the episcopal system is much more effectual for aggressive purposes than any other. The authority of some representative minister, duly and properly chosen, who has the right of initiative, is of immense advantage in carrying on a war into the enemy’s country, and I believe in the principle which was wittily expressed in the words: ‘If the

REV. HUGH PRICE HUGHES. IN ALPINE COSTUME.

ark had been built by a committee it would not have been finished yet.’ I believe in a committee to keep the individual in his place; but I also believe that all history teaches us that you must have individual initiative for the great aggressive works whether of Church or State. While stating all this I must beg permission to express my intense repudiation of the theory, which I do not suppose Mr. Aitken holds, but which many saintly and conscientious men hold, that the existence of bishops as such is necessary to the existence of the Church. I am bound to say that,

lest my position should be misunderstood. Having said that, I have no personal objection to episcopacy."

AN ENGLISH WESLEYAN SISTERHOOD.

AT a session of the Grindelwald Conference later than those reported in the last number of the *REVIEW OF REVIEWS*, Mrs. Hugh Price Hughes, whom many American Methodists will remember as having accompanied her distinguished husband to this country last year, read a very interesting paper upon the sisterhood of workers among the poor in London, of which Mrs. Hughes is herself the head. This Sisterhood was established four years ago in connection with Mr. Hughes' "West London Mission." Said Mrs. Hughes, as reported in the *Review of the Churches*:

"My husband and I both felt deeply that now in the latter half of the nineteenth century God was calling women to a service which had never been possible to them before, and that He was giving to them great and peculiar opportunities, such as had never previously been open to them, and we longed in some way to put within the reach of the cultured and enlightened women of our own and other evangelical churches a life of free and unfettered devotion to the cause of Christ and humanity."

"In the early days of Methodism, before it settled into a dignified and respectable Church, great freedom was allowed to women. They were made class leaders, and were encouraged to pray publicly and also to preach. We long to restore this original glory of Methodism, and to add to it and increase it."

"As soon as ever it was definitely settled that the West London Mission was to be established, we made up our minds that a sisterhood should be one of the foremost points in our organization. We chose the term "sisterhood" advisedly, not from any servile desire to copy the phraseology of the Roman Catholic and Anglican Churches, but because it expressed more correctly than any other term the idea that we were trying to embody. We wished the term "sister" to be taken in its human and democratic sense, and not at all with an ecclesiastical significance. We desired to form a company of true "Sisters of the People." We wanted women who would lay aside ideas of pride and social distinction, and who would realize that all men and women were their brothers and sisters, that we belong to one common human family, with one Father, even Almighty God, and that wherever we find misery, loneliness, oppression or sin, there we must go with the love and tenderness, and also with the strength and indignation, of true womanhood."

"In the autumn of 1888 the West London Mission was formally opened, and we began our work with three sisters, all of whom had been previously personal friends of our own. For a time they resided in our own house, but after a few weeks a house was taken in which we had room for twelve sisters. We have now, after four years of work, more than thirty sisters, and could soon have many more if only we

had room to accommodate them. God has abundantly blessed our efforts, and we humbly and gratefully offer up our thanks to Him for what He has enabled us to do; but we feel more strongly than ever that we are only on the threshold of woman's work, as a force that is to have an active part in the reorganization of human society upon the basis of the teaching of Jesus Christ."

Every candidate for membership in this sisterhood undergoes a term of probation. At the end of her

MRS. HUGH PRICE HUGHES.

probation, if all things are satisfactory, she is formally received into the sisterhood, wears its simple, appropriate uniform, and takes the name of Sister Katherine, Sister Mary, or whatever her Christian name may be. It has been desired that the members of this sisterhood should be women of the highest intelligence and practical ability that could be secured; and in fact the body of women now working together under Mrs. Hughes' direction are singularly capable. The following extract will show some of the work that these busy women undertake:

"Every probationer begins her work with a room to room visitation among the very poor. In the West

End of London rents are enormously high. The price of one decent room is 5s. per week. A very, very small room or an underground cellar can be obtained for 3s. 6d., and two rooms, or one large one, vary again in prices up to 9s. or 10s. per week. Hence we find a family living in every room. A ten-roomed house will often contain ten families. If my hearer pauses to consider, he will form some faint idea of what this means. Now the sister can do nothing really good for these people until she knows them thoroughly. The view of life, of morality and of religion taken by men and women who have lived in one room ever since they can remember is totally different from that taken by people who have never known anything else but a life of decent, healthy and comfortable surroundings. The sister has to get to know these people just as she knows the people in her own station of life. She must learn to approach them as their friend and true human sister. She must get in touch with them. She must understand their thoughts and feelings, and know their difficulties and temptations. She must study their characters, and learn to distinguish between actual deliberate sin and that fatal weakness and ignorance which is the result of their terrible conditions of life. The typical district visitor is generally supposed to go her rounds with a tract in one hand and a soup ticket in the other; but our ideas run on somewhat different lines. Our sisters talk politics with the men in the workshop; they interest themselves in their various trades and employments; they know what books and papers they read, and whether or not they belong to a trades union. They seek to interest and instruct the women in social and political questions that specially affect them and their children. They interest themselves in school-board elections and the county council, and the general election. They have actively assisted in the formation of trades unions among women. They seek work for the unemployed. They often and often, in cases of arrears of rent, mediate between landlord and tenant. They are in touch with the sanitary inspector, and with many societies that render aid to special forms of want and distress. Our trained nurses attend the sick and dying."

The results as summed up by Mrs. Hughes are very satisfactory. The work has a wide range, but we may quote a paragraph to show how the sisters get at the young women employed in the West End business houses:

"These girls come up by thousands from respectable Christian homes in the country to earn their living in London, and are often placed in circumstances of great loneliness and peril. Far away from home and friends, surrounded by difficulties and temptations of which ordinary Christian people have no idea, a business girl sorely needs a wise and loving friend to whom she can turn. She comes casually to one of our services, or is brought by a companion. A sister speaks to her, invites her to her class, and the girl is no longer alone. She feels then that she has a friend to whom she can come with all her troubles and difficulties. She can write to the sister when

she likes, and every week she is cheered and helped on her way by the sympathy and counsel given to her at the class. In this way we have hundreds of young women under our care and influence."

Mrs. Hughes took particular pains to say that while she and Sister Catherine—who followed her in an almost equally interesting address—would have to dwell exclusively upon their own branch of good work, their hearers must not for a moment imagine that there were not a great many other organizations doing as good work as they were themselves. She mentioned particularly the splendid work done by the Roman Catholic and Church of England sisterhoods.

MR. GLADSTONE'S VINDICATION OF HOME RULE.

THE leading article in the *North American Review* is by Mr. Gladstone, who contests at every point the criticisms passed upon his policy of Home Rule by the Duke of Argyll, in the August number. Mr. Gladstone does not find any close analogy, such as the Duke attempted to show, between the struggle of the American people to hold together the Union in 1861-65; and, in the Premier's own words, the present effort "to rivet upon the people of Ireland a form of government to which they have never constitutionally assented; which they were only compelled to obey by an armed force, in their small island, of more than 130,000 men, which the Duke himself knows that they dislike or abhor, and which they declare to be totally unsuitable for the supply of their practical wants in legislation." The Irish people supported these allegations, says Mr. Gladstone, "by returning five-sixths or four-fifths of their parliamentary representatives to uphold them, and the British government acknowledges their competency as citizens by allowing to them the wise household suffrage, with the protection of a most carefully constructed system of voting."

THE IRISH ARE NOT YAHOOES OR HOUYHNHNMS.

To the Duke's assumptions and assertions as to the unfitness of the Irish people to govern themselves, Mr. Gladstone replies in fine spirit of sarcasm: "Other men enter into political society for the sake of securing life and property and of promoting industry and the arts of life, but the Irish for the purpose of restraining or overturning them. We cannot frame a rational government for them, more than for Yahooes or Houyhnhnms. Either in the character of liars, or of knaves, or of dupes they are outside the pale of ordinary human dealing. Might not the scuttling of the island, ironically proposed by Swift, be the best and simplest mode of handling the Irish question? Assertions and consequences of assertions such as these, supply by their extravagance their own best confutation. But it may be well to bear in mind a few indisputable facts. We have had and we have a great body of Irish Nationalists in Parliament. Their ability is not denied. The testing efficacy of our parliamentary proceedings is well

known. Other men and other parties have charged on one another, in the late Parliament, breach of faith, which is falsehood. No such charge has been proven—nay, none such has ever been advanced against these men, whom the article so grossly reviles. To the charges of heated and dangerous language they may in other days, and in some cases, have been open; but since a prospect of reconciliation with Great Britain has been opened no more has been heard even of this serious, but, under the circumstances, probably inevitable evil. Moreover, the Irish nation had, between 1782 and 1785, the management of its own affairs. What was the effect on life and property, on industry and progress? It was confessed in the debates on the Union by both sides alike, and notably by Lord Clare, that the period of independence had been a period of unexampled material progress. ‘Yes,’ it will be said, ‘but this was under a Protestant Parliament;’ and truly said. But it is also true that this Protestant Parliament admitted Roman Catholics to the franchise in 1793, when the deplorable recall of Lord Fitzwilliam arrested the National movement and gave hope and life to faction. Nor is it less true that the Protestants of the North then declared, with much more appearance of unanimity than has recently been seen in the opposite sense, that the recent changes had both removed all ground of differences with England, and had ‘united the once distracted Irish people into one indissoluble mass.’ This was the declaration of forty-five corps of volunteers published at the time, and the Duke of Argyll cannot escape from the force of such original and weighty testimony by describing it as ‘inflated fable.’

HIS STATEMENT OF THE CASE FOR IRELAND.

“The anti-Irish imagination feasts itself upon the horrors which an Irish Parliament is to enact, and on the impotence of the Imperial legislature to prevent them. Let us consider the case presented to us. Thirty-five millions of Britons are to stand by with their arms folded while three millions of Irish Nationalists inflict on two other millions (such is the Unionist calculation) every kind of lawless wickedness—and this, while the thirty-five millions have the entire military force of the land and of the Empire in their hands, and while the two millions who, according to the same authorities, possess the main part of the property, the intelligence and the industry of the country patiently allow themselves to be led like lambs to the slaughter! How reason with prophets such as these, any more than with an infuriated crowd of other days who have seized an old woman for a witch and are carrying her to the place of burning?”

Mr. Gladstone states the case for Ireland as follows: “The general upshot is that Ireland generously agrees to undergo every restraint which is imposed upon the autonomous colonies, and many other restraints. They retain legislation upon trade, they deal with the question of their own defense, they contribute nothing to our charges. Ireland willingly abandons all these powers and consents to bear her

equal share of Imperial burdens; and, under these circumstances, such is the astounding force of prejudice, there are to be found men of rank, character and ability who denounce such a guarded gift of autonomy to Ireland as a thing monstrous and unheard of in its extent.”

THE HOME RULE BILL.

Mr. Redmond's Ultimatum.

IN the *Nineteenth Century* for October Mr. John Redmond, the leader of the Parnellite party, discusses Home Rule under the title, “The Readjustment of the Union: the Nationalist Plan.” In this paper he sets forth what he and his friends demand and expect.

NO INTERFERENCE.

What he expects first of all is a formal compact, embodied in a clause of the Home Rule bill, which while the Irish legislature continues in existence, it is not to be interfered with by the Imperial Parliament: “We would expect a clause in the Home Rule bill to specifically provide an undertaking that while the Irish Parliament continued in existence the powers of the Imperial Parliament to legislate for Ireland would never be used. So that in point of actual fact it comes to this—that while we do not deny that the Imperial Parliament, which has now the power to create an Irish legislature, would retain the power in strict constitutional theory to take it away again, we would require a formal compact with Ireland to the effect that while that legislature lasted it should be permitted to exercise free and unfettered control over the affairs committed to its charge.”

Mr. Redmond naturally does not like the retention of the Irish members in the House of Commons, as this involves a recognition of the right of the Imperial Parliament to interfere in the affairs of Ireland.

NO VETO.

He will have no right of veto to be exercised by the Crown, excepting on the advice of the Irish Cabinet. To allow the Imperial Ministers any right whatever through their Viceroy to veto any act passed by the Irish Parliament would, to use Mr. Redmond's own words, reduce the entire scheme to a useless and humiliating farce.

NO RESERVATION ON THESE POINTS.

We next come to Mr. Redmond's ideas as to the questions which must not be reserved, but must be handed over to be dealt with by the Irish legislature without any interference by the Imperial Parliament and without real veto by the representatives of the Crown. They are the police, the judiciary and the land. Mr. Redmond says: “Our position on the question of the police is plain and reasonable. The character of the present police force, constituting as they do a standing army of thirteen or fourteen thousand men, costing a million and a half every year, we believe, should be changed, and the statutory power of the Lord Lieutenant to raise, equip and maintain such a military force in the future re-

pealed. The ordinary civil police, who should take the place of the present armed force, must be put absolutely under the control of the Irish Executive.

“On the question of the Judiciary, speaking for myself, I find no fault with the provisions in the Act of 1886. No reasonable man can object to such safeguards as may be considered desirable to insure that no injustice be done to the present occupants of judicial positions in Ireland; but, on the other hand, no one could regard any measure of Home Rule as satisfactory which did not give control over future judicial appointments to the responsible Irish Government, and which did not provide that the judges should be removable only on a joint address from the two orders, or the two chambers, as the case might be, of the Irish Parliament.

“Of the Irish land question . . . it is a *sine qua non* of a satisfactory Home rule scheme that no reservation of this subject from the Irish Parliament should be made.”

Mr. Redmond does not trouble about the express enactment of provisions forbidding the establishment of religion or the imposition of religious disabilities for religious belief. He is also of the opinion that there should be a tribunal to decide the validity or invalidity of statutes passed under the Irish Constitution.

M. PAUL HAMELLE contributes, to the *Nouvelle Revue* for September 1, the last of three interesting papers on the Irish question, which are, on the whole, fair and decidedly sympathetic. He admits the good-will shown by recent governments in trying to heal the breach between the two nations—for such, in fact, they are—but thinks that in trying to fit English laws and methods to Irish conditions, they have added a blunder to the crime committed in past ages.

ENGLAND'S TRUE FOREIGN POLICY.

SIR M. GRANT DUFF resumes his rôle of public instructor on the subject of British, foreign and colonial affairs, contributing an article on “Indian and Foreign Policy” to the *United Service Magazine*. He thinks that Colonel Maurice is right in believing that England holds the balance-weight in the scale between the Triple Alliance on the one hand and France and Russia on the other; but he doubts the wisdom of following Colonel Maurice's advice that England should ally herself with the Triple Alliance, promising help in Europe on condition of their help in Asia. Sir M. Grant Duff thinks that India is quite strong enough to hold her own without asking leave of the Triple Alliance to exist. He deprecates further advances in Afghanistan, and declares that it would be a great disaster to the world if England were to drive Russia out of Central Asia.

“Seeing that every step we make toward Central Asia takes us further from our real base—the sea—is it not time to stop? It will be seen that I do not consider the danger from Russia a very serious one; but, even if I did, I should hesitate to pay for it the price

of binding ourselves by a formal treaty with the Triple Alliance or any one else. In all human probability, if war did break out, I should be one of those who pressed most strongly that we should join forces with it; but a formal alliance is another thing, and might perfectly well bring about that very breach of the peace in Europe which we all deprecate. If England were quite certain to join heart and soul with the Central Powers, might they not be induced to get out of the iron circle of armed peace by recreating Poland as against Russia, and finishing the work as against France which was left half finished in 1871? Both these things may one day come about; but I should think it unwise to take a step which might make either of them, and especially the latter, extremely tempting. My foreign policy for the moment would be summed up very briefly. Make no new entangling alliances; make none at all except for immediate and definite objects—rather get, when an opportunity occurs of doing so with honor, out of any treaty entanglements by which you are now bound; greatly increase the strength of your navy for the defense of your own shores, your commerce, your coigns of vantage dotted about the world and your colonies, taking care that these last, if they are anxious for your protection, should give you far more substantial aid than is to be found in mere speeches; make your home army and your Indian army capable of performing all the duties which can possibly fall upon them; perfect means of information through the Foreign Office, and then fall back on the *Alors comme alors* of Kaunitz.”

WHY AMERICANIZE THE BRITISH CONSTITUTION.

A Reply to Dr. Albert Shaw.

PROFESSOR T. RALEIGH, in the *Contemporary Review* for October, replies to Dr. Albert Shaw's trenchant article on “Home Rule from the American Standpoint,” which appeared in the September number. Professor Raleigh admits that Mr. Shaw's statement as to American opinion being in favor of Home Rule is substantially correct, but attributes this to misrepresentation and lack of information. Dr. Shaw supports Home Rule because Home Rule will tend to consolidate the Empire; Professor Raleigh denounces Home Rule because in Mr. Gladstone's hands, it means nothing of the kind. Unionists, he says, are not voting for or against Federalism; they are voting for or against Mr. Gladstone.

As for the advantage of Federalism and the superiority of the American Constitution, Mr. Raleigh endeavors to turn the tables on Dr. Shaw in the following passage: “Federalism has its dangers; it has also some very serious inconveniences; and here again American experience is of great value to us if we study it rightly. It is difficult for an outsider to see any extraordinary merit in a system which makes it necessary to have forty legislative bodies, forty criminal laws, forty marriage laws, forty bankruptcy laws, and so forth, within the compass of one commonwealth. America is the paradise of lawyers, but

the average lay citizen has reason to complain of the enormous bulk and hopeless complexity of the laws to which he is subject. As to the quality of the work turned out, it is hardly possible to make a general comparison; but I will mention some points in which we with our one legislature have done better, conspicuously better, than the Americans with forty. We have protected our civil service against corruption; American reformers are still laboring to emancipate themselves from the evil tradition of the spoil system. Our criminal law is well administered; homicide is extremely rare; courts of justice command the confidence of the people. Mr. Rutherford Hayes, addressing a society of lawyers, dwells with mournful emphasis on the American statistics of homicide. He attributes the prevalence of serious crime to the lax administration of the law. Our prisons are not perfect, but they are managed on uniform rational principles; of the American State prisons, some are managed on false principles, and some on no principle at all. Our Ballot act is a fair and business-like code of rules for secret voting; American newspapers inform us that the ballot laws of the States were defective and dishonestly worked, until reformers began to introduce better methods, borrowed from the legislation of a British colony. These examples (it would be easy to add to their number) may serve to illustrate some of the weaknesses of American Home Rule."

MR. LABOUCHERE'S ARRAIGNMENT OF ENGLAND'S FOREIGN POLICY.

IN the *North American Review* that recalcitrant Liberal, Mr. Henry Labouchere, proclaims his disbelief in England's foreign policy. The only benefits that England reaped in her attempts to extend and to maintain her power over other lands during the last century, says Mr. Labouchere, were "a huge national debt and the undisputed possession of some very worthless islands," and he does not find that since that time down to the overthrow of the Salisbury ministry her efforts at aggrandizement have proved to her advantage.

ADOPT THE POLICY OF THE UNITED STATES.

Mr. Labouchere does not pretend to know what the Liberal foreign policy will be. What it ought to be, he says, "is to follow the example of the United States; to leave the Continental powers to quarrel and fight as they please; to eschew further territorial aggrandizement; to regard with satisfaction the collapse of Turkey; to withdraw from Egypt; to live in peace and amity with all mankind, and to let it be known that so long as England is not attacked we shall attack no one."

"It is often urged by our Imperialists that England can never adopt the sound non-interference policy of the United States, because we have colonies all over the world, and the United States has none. Is it likely that Australia, Canada and our other great colonies would maintain their somewhat thin connection with us, were their commerce crippled because we prefer a Battenberg to the scion of some

other princely family as the ruler of Bulgaria; because we believe that our interests require that Christians should be misgoverned by Turks in Armenia or in Roumelia; because some thieving, piratical company wants a few hundred square miles as a basis for swindling investors out of their money; because Russia has laid hands on some obscure robbers' den in Central Asia, or because France may seek to reacquire Alsace and Lorraine? No. Radical Great Britain and Colonial Great Britain will have none of this measure, and as the Liberal party has become the Radical party, any 'superior' Liberal statesman who may wish to play such pernicious antics will find himself deserted by his followers.

DEFENSIVE POLICY, NOT AN AGGRESSIVE, THE RIGHT ONE.

"The Radical policy is to cut adrift from Continental jealousies and quarrels; to make all respect us by respecting all; to sympathize with the oppressed in all parts of the world, but to reserve our energies for the task of bettering the lot of the suffering millions within our own territories; to have an army and a navy sufficient for defense, but not for aggression; to be ready, if unfortunately we have a dispute with any foreign power, to refer it to arbitration; and never to allow ourselves to be diverted from domestic reforms by endeavors to maintain that most shifty of shifty things—the European equilibrium—or to remedy wrongs abroad in order that privilege may pass unperceived at home. Our home is large enough in all conscience. A British statesman has work enough to do within the limits of our empire without arrogating to himself the mission of a providence outside of it.

"The fault of our people is that they care so little for foreign politics that they pay no attention to them. In this way they have often allowed their pilots to let the vessel of state drift into war. Henceforward we must keep a closer watch on the man at the wheel, and if he shows the slightest tendency to carry the vessel into dangerous waters we must replace him. During the last two centuries we have had many wars. We are now paying interest on a huge debt which has been heaped up in order to defray the cost of this policy of war. In no single case were these wars the result of our being attacked. In every case we were either the aggressors or we were fighting for matters that did not concern us. With this experience before us, and with the cost of our past follies still bound like a millstone around our necks, weighing on our shoulders, there is little probability of our people, now that power is in their hands, allowing our statesmen to repeat the errors of the past."

In the *Treasury* appears the statement that Protestant foreign missions from the United States, Great Britain and the Continent maintain 8,048 stations and out-stations, with 5,594 missionaries and 35,343 native helpers. The communicants number 681,503. About \$11,429,500 was contributed to the support of these missions last year.

WHAT SHOULD THE TORIES DO ?

THIS question is discussed by Mr. Radcliffe and an "Old-School Tory" in the *National Review*. They take opposite sides. Mr. Radcliffe is a strong advocate of progressive legislation. He thinks that the educated middle class in England have now gone over to the Unionists, and a Centre Party could be formed if the Tories would but take this class into council. At present it has practically no voice in the management or shaping of the destinies of the party. They are the mainstay of the Unionist party, but as a practical power they count for absolutely nothing. There probably was never a time when the real power of the party was more in aristocratic, or rather plutocratic, hands. The leaders have no real sympathy with the middle class, and they were only able to do good work because they were driven on by the Liberal Unionists. Mr. Radcliffe asks himself what is the political creed of the educated middle class; and, after defining it to his own satisfaction, he proceeds to draw up a programme based upon this creed, which, if adopted by the Tory party, would, he thinks, enable them to regain the control of the Government:

"To deal by way of illustration with one group of social questions which affect us closely in London: I believe that most of them would be quite prepared to accept one municipality for the whole of London, if due provision were made for the maintenance of adequate state by the chief officer thereof, and for the rational expenditure of its funded revenues. I do not think that the principle of "betterment" would find many opponents among them, if they were assured that it would be skilfully and impartially administered. There are many of them who think (in common, I believe, with many Tory ecclesiastics) that, instead of our present rivalry of board and voluntary schools, it would be far more satisfactory to have exclusively secular popularly controlled education on week days, and that the energy and funds now devoted to the voluntary schools should be employed in the improvement of denominational Sunday schools. Disestablishment of the Church (if carried out on such a reasonable basis as not to cripple the work of the Church and impair her usefulness) would not meet with so much opposition as might be expected even, I believe, from prelates and high ecclesiastics. Leasehold enfranchisement, the throwing of all newly imposed rates upon the landlords, and even a progressive income tax, have many adherents among their ranks. On the other hand, the control of the police by the municipality, the payment of members, and any measure which would tend to diminish the security of life and property or to lower the standard of our public men, would, I believe, meet with the most uncompromising hostility."

So far, Mr. Radcliffe. An "Old-School Tory," to whom Mr. Radcliffe's article has been submitted, is naturally filled with horror. He says that to promote progress is not the function of the Tory party. The proper function of the Tory party is to see that the measures of progress promoted by the other party

shall as far as possible embody principles of true political science. He holds it to be ridiculous and false to every principle to buy place and power by accepting Mr. Radcliffe's programme, almost every item of which proposes to violate liberty or violate property. The suggestion about betterment disgusts the Old Tory, and he is filled with distress about Mr. Radcliffe's proposals for Church and school endowments. Progress, as Mr. Radcliffe would have it, is, according to this writer, an endeavor to out-Herod the Radicals, and is not progress, but retrogression. It would put back the clock of civilization, and would establish a new slavery in place of the old. The Old-School Tory is quite sure that the natural function of the Tory party, as being the party of negative force, is to prevent the Radical party—the party of initiative force—from using power wrongly. To adopt a progressive policy in order to vanquish Radicalism would really be an attempt to vanquish nature.

THE FIRST INDIAN M.P.

IN the *Eastern and Western Review* Mrs. M. D. Griffiths has an article on Mr. Naoroji, the new Member of Parliament from India. She quotes the following description from the *Gajarati Weekly*:

"He is the person who has endured poverty for the advancement of others, who has sacrificed his interests for founding large funds for benevolent purposes, who has sacrificed his own emoluments and income for the benefit and advancement of others.

"Mr. Naoroji is the son of a Parsi priest, and was born at Bombay on September 4, 1825. His father died when he was only four years of age, so his training devolved upon his mother, who was a noble-minded and intelligent woman. Aided by her brother, she devoted her life to her son, and at an early age he was entered as a student at the Elphinstone College School.* Small of stature, fair of face and of winning appearance, the young student speedily became a favorite with all the professors. In due course he entered the College and further distinguished himself in mathematics, natural philosophy, chemistry and political economy, gaining numerous prizes and scholarships. His ability and diligence attracted the notice of the late Sir Erskine Perry, then Chief Justice of the Supreme Court, and President of the Board of Education, and he proposed to send young Naoroji to England to study for the Bar, offering to contribute half the expenses, but the leading members of the Parsi community opposed the project, as they feared he might be converted to Christianity. Shortly after this he was appointed head native assistant-master of the school, and a little later was nominated to the assistant professorship, and two years after was made Professor of Mathematics and Natural Philosophy, having the honor of being the first Indian appointed to a professorial chair in any leading college of the country. In order to more fully carry out his idea of advancement, in 1851 he started and edited a weekly paper called the *Rast Goftar*, which has since become the leading organ of opinion among

the Parsi community, and has influenced moral, social and political reform in a marked degree. In grateful recognition of his mother's memory and her devotion to him, he labored hard in the cause of female education, and the women of India owe to his earnest advocacy and indefatigable efforts many of the social privileges which they now enjoy.

"As far back as 1845, Professor Orlebar called him the 'Promise of India,' and well has this 'promise' been realized.

"The next important period in Mr. Naoroji's life was when he came to England as a partner in the firm of Cama & Co., the first Indian house established in London and Liverpool, but he still found time to found and assist several societies and institutions for the benefit of his native land. It would be difficult to name half the progressive movements which owe their birth to Mr. Naoroji, but among them are the Students' Literary and Scientific Society, the Trane Fund, the Bombay Gymnasium, the Framgee Cowasji Institute and Native General Library, and the Victoria Museum, etc. He also agitated the question of the remarriage of Hindu widows, and exposed the evils of child marriage. In 1874 he became Prime Minister of Baroda, when that State was a perfect Augean stable of abuses and its affairs in a state of chaos, owing to the maladministration of the late Gaekwar Mulhar Rao. In municipal work he is also proficient, and gave valuable aid in the revision of the Municipal act of Bombay, as well as being a member of the corporation and town council. In 1855 he was appointed a member of the Bombay Legislative Council. The amount of work he manages to get through is stupendous. As an authority on Indian economical questions he has not an equal.

"Mr. Naoroji is a little man with a very large heart, a refined, thoughtful, pleasing face, and very brilliant eye; he is not darker than many a traveled Englishman; his voice is clear and penetrating, and he is a most eloquent speaker, a thorough master of every subject he speaks upon, and with the gift of making everything clear and interesting to his hearers. He has resided in England over thirty years."

THE *Missionary Review of the World* compiles from the 1892 year book of the Young Men's Christian Associations of North America the following statistics: There are 1140 Y. M. C. A. secretaries; 268 buildings, valued at \$11,902,520; 814 associations with a total membership of 1,763,950; 400 college associations (64 organized last year), 362 with a total membership of 24,819; 97 railroad branches with a membership of 20,530; 12 associations for Germans, membership 2,654; 34 for colored men, chiefly in educational institutions in the South, membership 2,137, and 22 associations for Indians. In the world are found 4,651 associations, of which 83 are in Canada, 627 in the United Kingdom, 898 in Germany, 641 in Holland, 86 in France, 112 in Denmark, 131 in Norway, 67 in Sweden, 43 in Italy and 381 in Switzerland.

SOME GERMAN STATESMEN.

IN the paper on "Statesmen of Europe," in *Leisure Hours*, there are descriptions of Chancellor Caprivi, Minister of Finance Miquel, the Socialist leaders Bebel and Liebknecht, Court Chaplain Stoecher and Professor Virchow. We quote from the writer's accounts of Miquel, Bebel, Virchow, and Liebknecht:

JOHANNES MIQUEL.

"New blood has also been introduced into the Ministry of Finance. For this post Johannes Miquel has been chosen by the Emperor—a choice that would have been impossible under the Bismarck régime, as Miquel has a marked character and views too pronounced to work in harness with an autocrat like the late Chancellor. For many decades Miquel was considered as one of the most influential men in modern

JOHANNES MIQUEL.

Germany. In whatever post he was placed he rendered himself remarkable by the eminently practical and efficient character of his services, and his nomination to the present high post was certainly a political event of first-class importance. Not untruly is he regarded by the nation as the Emperor's chosen right hand, as well as the soul of the present Ministry. Indeed, scarcely had William II. ascended the throne than Miquel was pointed out as the coming man, and rumor had it that the Emperor said to him shortly before his nomination to his post of Minister of Finance, 'You are my man,' and the name of 'the Emperor's man' has stuck to him. Together with Benningsen, one of the leaders of the National Liberal party, he veered with his party toward supporting the protectionist fiscal policy of Bismarck. If, notwithstanding all this, his nomination as Minister was hailed with satisfaction even by the Liberals, it proves how heavy was the pressure that has been hitherto exercised on the land in all economic ques-

tions. Men said and felt that though Miquel might perchance not fully express their views, his aims at least were more enlightened and progressive, and that in any case a certain measure of free discussion and ventilation of fiscal problems would be allowed under his *régime*.

“Social problems are Doctor Miquel’s hobby-horse, but he is by no means infallible either in their inception or execution. That the career reserved to his talents, which are eminent, notwithstanding that they have also their shady side, has not yet reached its apogee, about this all seems agreed. At one time it was whispered that Caprivi would retire in his favor. This is not likely; but what is probable and possible is that the project often talked about, of giving the Chancellor of the Empire an assistant in the shape of a vice-chancellor, may be realized in his person. As things stand in Germany and have stood for the past thirty years and more, it is not possible that the ship of State should be conducted by men quite free from reactionary prejudices; but Doctor Miquel is certainly a more liberal-minded man than has for many years held a portfolio in the land. But as Wilhelm von Humboldt acutely remarked: ‘A Liberal may be a minister, but on that account he is not necessarily a Liberal minister.’”

AUGUST BEBEL.

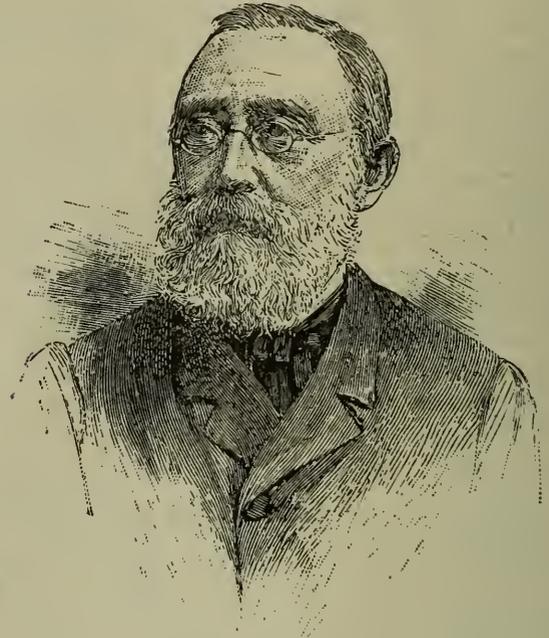

August Bebel, born in 1840 at Cologne, was a humble turner, who, as apprentice, traveled through the greater part of Austria and South Germany, thus enlarging his mental horizon. Curiously enough, he

AUGUST BEBEL.

was until 1866 an active opponent of social Democratic ideas, which he propagated just as actively after his conversion, so that in 1869 he was condemned to prison for divulging opinions judged dangerous to the weal of the State. In 1872 he was again committed to prison, this time on the charge of

high treason—a terrible sounding charge, but which in Germany may mean nothing more, as indeed in the case of Bebel it meant no more, than that he had used frank expressions with regard to royalty, such as would pass unobserved in England any day. But in Germany, to speak even slightly of the reigning

PROFESSOR VIRCHOW

sovereign, or until a short time ago of Bismarck, was to draw down on the speaker severe punishment quite disproportionate to the offense. On his release he was elected to the Reichstag by an overwhelming majority, and has sat there ever since. He is known even outside of Germany by his writings, most of which have been translated into English. ‘Our Aims,’ ‘Christianity and Socialism,’ and ‘Women in the Past, Present and Future’ are the most important.”

PROFESSOR VIRCHOW.

“Born at Schivelbein, in Pomerania, in 1821, Virchow studied medicine at Berlin. Drawn, like all generous-minded young men, into the movement of 1848, he lost the post he had then held under government; but he had already shown himself so eminent in science that he could not be long left out in the cold, and was soon after appointed Professor of Pathological Anatomy at Wurzburg, where he speedily became one of the foremost exponents of the so-called Wurzburg School. One of his most noted political speeches was that in which he urged a gradual European disarmament, and that Germany should help to set an example, pointing out how the present large armies annihilate and suffocate all progress, and lay so heavy a burden upon all nations that their proper commercial, industrial and intellectual development is checked. He pleaded eloquently that diplomatic action should take the place of these rude modes of argument and disputes between nations, which the French philosopher, Victor Cousin, has called ‘the exchange of ideas by means

of cannon balls.' The speech of Virchow was much misunderstood and misinterpreted, and has formed a favorite weapon for his enemies to employ against him. He does not speak often in the Reichstag, but when he does it is with weight, objectivity, clearness and judgment, and his hearers feel that the words uttered are the result of real and calm reflection. He is no orator; he does not carry away his audience by rhetorical display, but achieves effects at times by the spice of a biting irony. His enemies are ever desirous to impress upon the world that a vast distinction must be made between Virchow, the man of science, and Virchow, the political deputy. They cannot gainsay Virchow's eminence and authority as a man of science, but refuse to accord him honor as a patriot. They leave out of account, in making this distinction, Virchow the man. Virchow is a whole man; he does not belong to the compromise species of human kind so constantly denounced by Herbert Spencer in his 'Study of Sociology.' How much he was esteemed by the Emperor Frederick, and is esteemed by his widow, is well known."

WILHELM LIEBKNECHT.

"Wilhelm Liebknecht was born at Giessen in 1862, and is by profession a journalist. Involved in the revolutionary uprisings of 1848, and condemned to death, he fled to Switzerland and England, in which countries he lived a long time, learning in them true constitutional methods of government, and a wider conception of the word liberty than his country could or can afford. Returning to Germany without permission, he was duly imprisoned. When finally released, a seat was at once found for him in the Reichstag by his admirers. In company with Bebel, he was in 1872 condemned to a seclusion of two years in the fortress of Hubertsburg. As editor, pamphleteer and author, as well as lecturer and stump orator, he works incessantly for the cause he has at heart. The origin and mental development of these two men—the Dioscuri of the Social Democratic party—has been curiously diverse: the one has sprung entirely from the people, the other from the middle classes; the one never enjoyed an education but that he procured for himself, the other passed through the prescribed university curriculum. Both possess the faculty of appealing to the masses and the lower middle class, from which the Social Democrats are chiefly recruited, and this because they combine in a curious way a certain burgher practical good sense united to an ideal internationalism that greatly attracts the people, giving a species of poetic flavor and high aspirations to their aims. Both are excellent men of business, careful to preserve their gains and impressed with the truth of the proverb that 'every mickle makes a muckle.' It is an amusing and characteristic trait that the discontented faction of the Social Democratic party reproach the two leaders among other things with living in houses at a rental of five to six hundred thalers, while others again reproach the former turner that he is now comparatively well off, thanks to his savings and extended

means of earning. When they were both in prison Liebknecht stood to Bebel in the position of a friendly mentor. It was he who incited Bebel to study, giving him the benefit of his own academical learning and linguistic facility, so that not only Liebknecht, but Bebel the turner, can address the delegates from France, England and America in their own tongues."

THE POLITICAL CRISIS IN NORWAY.

As Viewed by Björnstjerne Björnson.

OF late the great Norwegian novelist has been much to the fore. Just as his "Heritage of the Kurts" is finding its way in translation into the hands of English readers, the author is adding to his reputation by his active defense of the rights of his country in the pending conflict with Sweden, and proving his influence to be as great politically as it is morally and socially. In the October number of the *Revue des Revues* (Paris), he takes a further opportunity to set out in his clear and precise manner the causes and the object of the struggle, at the same time giving expression again to his ardent faith in the cause of international peace and universal democracy.

ON WHICH SIDE IS THE RIGHT?

In the present conflict between two friendly nations, writes Björnson, the question is naturally asked, Which nation has right on its side? and, without hesitation, he answers that the right will be found, not with the people who have preserved their ancient love of conquest, but with the smaller nation, which by its habitual industry and prudence has risen to the secular rank of sovereign. The first article of the Norwegian Constitution proclaims Norway a free and independent State; it gives her a consular body and ambassadors, to be selected from her own citizens; and it allows her, moreover, to conclude treaties with foreign powers and receive ambassadors from them. It was in 1814, when Sweden would fain have reduced Norway to subjection and the latter country resented such interference, that the conquest was converted into a union, in which the two countries were to figure as equals. But Norway did not prove strong enough at first to maintain her rights against the King and his Swedish council, consequently those rights which had been made sacred on paper were soon violated by facts. To-day, however, Norway is in a position to demand redress for the wrongs done to her by her predecessors and the Swedes, and she denies that the methods adopted toward her are inspired by any solicitude for her and her rights. On the contrary, pretexts are sought to make the King offer opposition so as to prevent Norway from ever getting consular representatives of her own.

THE JUSTICE OF THE NORWEGIAN DEMANDS.

Why does Norway desire consular representation of her own? Because her mercantile marine, from the point of view of tonnage, ranks second in Europe and third in the world. It is only surpassed by England and America. Would any nation which has attained

such a high degree of progress care to be governed by another, especially when that other is considerably her inferior? The consuls of the two so-called equal countries are mostly Swedes appointed by the Swedish Minister of Foreign Affairs and directed by him. Now Sweden and Norway compete with each other in several exports, and no country which in politics is its own master in every point would accept even the appearance of living dependent on another any more than a man would have the same agents for himself and his rival.

And why does Norway wish the emblem of union to disappear from her flag? For the simple reason that a flag which symbolizes the union of more than one nation proclaims to the eyes of the world that those nations are all governed alike. Besides, Norway, with a merchant marine several times as important as that of Sweden, does not care to navigate under the Swedish flag.

THE PROPOSAL FOR A NEW COMPACT OF UNION.

The first proposal for a new compact of union was too liberal for the Swedes, and the second was not liberal enough for the Norwegians. Then various other schemes have been suggested for regulating the diplomatic interest of Norway, but they shared a like fate.

Will the next scheme be more happy, and will Norway accept it? If it should fail, one of two things would probably happen: Either the Norwegian Government, which will have the approval of the General Assembly, will be overthrown at the command of Sweden, or the government of a minority may be ordered to reconstitute itself so as to be able to formulate a scheme for the regulation of the Foreign Department, and that in such a way that the two nations may have equal rights; but neither alternative can be accepted. By "equal rights" is really meant that the Foreign Minister for Sweden must be a Swede, or, if he should be a Norwegian, that he would have to think as a Swede. And would he also be responsible to the Storting?

WHAT NORWAY ASKS.

What, then, does Norway want? What Norway wants she has been working to get for nearly eighty years—a defensive federation with Sweden, in which the King and the royal dynasty alone would be common to both. Norway must either have her independence, or there must be a disruption of the union. She will have her own Foreign Minister *and nothing else*. At present the Swedish Diet does not exercise, so to speak, control over foreign affairs; that is practically in the hands of the King.

According to Sweden, the only danger which threatens Scandinavia is on the side of Russia; but Norway has never had any reason to complain of Russia. One thing is certain: Norway desires peace, and will therefore never enter into a war alliance with any other nation. It is the only country whose National Assembly sends delegates *at the expense of the State* to the great annual peace conferences. The Storting, moreover, has expressed itself in favor of

international arbitration; but the Foreign Minister of Sweden, on the other hand, rejected America's offer in the name of the Norwegian people! Norway desires to maintain the best possible relations with Russia, and has already granted her a concession for a railway between the north of the Russian Empire and a Norwegian port.

THE SOLUTION OF THE QUESTION.

After showing how the two nations differ from each other in character, Sweden being under the yoke of an aristocracy, while Norway cannot even rejoice in a House of Lords, Björnson concludes by promising complete success to Norway. In the first place, every proposal voted three times in succession by the Storting becomes law, whether the King and the Swedes like it or no; so that this course, at any rate, is always open to Norway to get her own Foreign Minister and consular representatives. Hitherto Norway has always emerged from her national struggles victorious, and the present conflict will end as the others have done. If it is persisted in, it will even contribute to the formation of a Liberal party in Sweden to defend her threatened liberty. At present, though there are many Liberals in Sweden, there is no Liberal party. The two nations, however, desire a defensive federation. Norway particularly desires it in the interests of peace. On her is incumbent the sacred duty of giving the world an example of a defensive federation in which each nation preserves its independence—a model for other nations to copy. Arbitration and defensive alliances will cause war to disappear from the earth, and the spirit of vengeance will then gradually give place to ideas of justice and peace.

SOME REMARKABLE TREES.

COL. GEORGE CADELL has an interesting article in the *Gentleman's Magazine* upon "Trees." The Colonel says that it is to the Romans English people owe whatever skill they may possess in forestry. The tallest trees in the world are found in the gulleys of Victoria, one of which is 471 feet high. The beech trees of Hesse-Nassau contain nearly 8,000 cubic feet of timber per acre. The first larches grown in Scotland were planted at the end of the last century. Nearly every county in England has its favorite oak, the largest of which is the Cowthorpe of Yorkshire, which has a circumference of 80 feet. The Carnoch ash in Stirlingshire is 31 feet in circumference. The Tortworth chestnut in Gloucestershire was used to identify the boundary in the year 1135. It is said to have been the first tree that was ever planted in Great Britain by man. The largest cedars in England are at Clumber. They measure 27 feet in circumference. There is a yew tree at Crowhurst, in Sussex, 33 feet in circumference. The "Crawley Elm" is 61 feet in girth. The largest beech tree is to be found in Cornbury Park, Berkshire, and the largest sycamore is at Cobham Park, with a circumference of 26 feet.

CENSUS OF OUR FOREIGN ELEMENT.

HON. CARROLL D. WRIGHT, United States Commissioner of Labor, collects some tables and facts in the *Popular Science Monthly*, relating to "The Native and Foreign-Born Population." Out of our total population of 62,622,250 the foreign-born class number 9,249,547, or 14.8 per cent. The distribution of foreigners over the country can be roughly seen from the following table taken from Mr. Wright's more elaborate one :

States.	Total pop.	Foreign.	Per cent. of foreign of total pop.
North Atlantic.....	17,401,545	3,888,177	22.3
South Atlantic.....	8,857,920	208,525	2.4
North Central.....	22,362,279	4,060,114	18.2
South Central.....	10,972,893	321,821	2.9
Western.....	3,027,613	770,910	25.5

"The State having the greatest proportion of foreign born is North Dakota, where that element constitutes 44.6 per cent. of the total population. In 1880 the State having the highest percentage of foreign born was Nevada, it being then 41.2. Nevada has now 32.7 per cent. The State having the lowest percentage in 1880 was North Carolina, it being then 0.27 per cent., and North Carolina still has the lowest percentage of foreign born, it being but 0.2 of 1 per cent. in 1890."

The following table is interesting as deciding the question, often asked, whether the proportion of foreign element to native born is increasing or the contrary. Taking the census years from 1850 to 1860, Mr. Wright finds the percentages of native born and foreign born of the whole population respectively as follows :

Year.	Native....	90.32 per cent.	Foreign	9.68 per cent.
1850.	"	86.84	"	13.16
1860.	"	85.56	"	14.44
1870.	"	86.68	"	13.32
1880.	"	85.23	"	14.77
1890.	"		"	

Leaving out 1850, as emigration had just then begun to be felt strongly, and commencing with the decade of 1860, the percentages are very interesting. In that year the foreign born constituted 13.16 per cent. of the total population of the country. In 1890 it constituted 14.77 per cent., or an increase of 0.61 of 1 per cent. in the thirty years—certainly not a very alarming figure."

"A study of the nationalities represented in the immigration to this country shows that a little more than 50 per cent. of the whole number have come from Protestant countries, and if we should look closely into the matter we would find that the two great political parties in the United States absorb equal proportions of the total volume of immigration. In a theological and political sense, therefore, immigration has been quite equally divided."

This cannot be said of industrial conditions, however, as the figures show that foreigners tend to be absorbed in mechanical industries at the expense of agriculture. "This increases the supply of labor in comparison to the demand, and may in some localities tend to lower wages, and sometimes to cripple the consuming power of the whole body of the people."

THE FUTURE OF OUR NATIONAL BANKING SYSTEM.

IN the *Chautauquan* Mr. J. Lawrence Laughlin, who recently resigned his chair in Cornell University to take charge of the Department of Political Economy in the Chicago University, reviews and discusses the development of our national banking system. As to the future of this institution, he says : "It is very uncertain, and for reasons very discreditable to our American common sense. By the Sub-Treasury act of 1846, according to which the United States decided to keep the government money in its own vaults and not leave any on deposit with private banks, the national government withdrew from all connection with the money market. The emergencies of the Civil War caused some departure from this policy. Being in great need of money, and finding it hard to sell bonds, Secretary Chase presented the scheme for national banks, because they would require large amounts of government bonds as security for their note issues. The acts, in accordance with this recommendation, in a practical form, were not passed until June, 1864; and then our people were so much alarmed by the issue of the deprecation 'greenbacks,' or inconvertible paper money, that the National Bank act, which provided a highly satisfactory currency, safe in any part of the Union, and protected against possible deprecation, was rapidly passed under the title of an 'act to provide a national currency.' There is no doubt whatever that, at the end of the war, Congress expected to see the United States notes ('greenbacks') withdrawn, and the national bank notes the sole currency of the nation. To this extent had we departed from the policy of 1864.

"The new banking system far surpassed the expectations of its founders. So far as it was wanted as a means of marketing bonds it was a failure, because it came into successful operation too late; but, even as furnishing a currency, it is now ceasing to be useful, because the nation's bonds, by which the notes are secured, are fast disappearing. The public, therefore, after seeing one proposal after another for a new kind of security for the note issues thrown aside, assume that when the 4 per cent. bonds (due in 1907) are gone, no security for the notes will be devised, and that the system will disappear *in toto*.

"A serious movement, threatening the future of the national banking system, is connected with the competition of trust companies, organized under State laws. By virtue of their special charters, or by the indulgence of State laws, these trust companies are permitted to do business free from the requirements of publicity and reserves exacted of the national banks. While permitted to hold smaller reserves, or to keep these reserves on deposit at interest elsewhere, the trust companies earn more profit for shareholders, but are less safe for the general public. The tendency of banking capital to escape the rigors of our national system and to take refuge under the State systems is clearly apparent. This alone suffices to show that banks

profit little by the issue of national bank notes; and that the national system ought to be carefully guarded in the interest of the general public. The banks can and will look out for themselves; some one should look out for the public. A banking system of some kind is sure to exist; if we do not have a good one, we shall certainly have a poor one.

"These banks are obliged by law to furnish statements of their condition at any moment; to submit to examination; to keep on hand a reserve in cash, which for the banks in reserve cities is twenty-five per cent. of their deposits, and for banks outside of these cities (known as country banks) is fifteen per cent. These country banks may keep three-fifths of their reserves on deposit in some national bank in one of the reserve cities; and banks in a reserve city may keep one-half of their reserves in a bank in New York, Chicago or one of the central reserve cities. In this way the interests of the banks are strongly united, even though the reserves are not so large as they would otherwise be.

"Since the Resumption act was passed in 1875, we have had 'free banking;' that is, any number of banks can be established by any persons in any place if they conform to the requirements of the general banking laws of the United States. The system has now become well adapted to our wants and business habits. A foolish and ignorant prejudice against banks in general, based on a misconception of the office performed by banks for the community—and which is as legitimate and necessary as a grain store or an express company—ought not to prevent an examination of the merits of the national banking system and the adoption of adequate legislation for its permanent existence. Congress could do no better thing than establish a national commission of experts on banking to report on the subject."

The Weak Point in Our Sub-Treasury System.

"The great cause of mischief in the Sub-Treasury system," says Prof. David Kinley, of the University of Wisconsin, in the *Annals of the American Academy*, "is in the fact that while the receipts of the government are daily, its payments occur only at intervals. If these intervals could be shortened sufficiently, the harm done might be made to disappear. If, for instance, the Treasury could pay its bills weekly, or even monthly, its influence on the money market would be far less. The chief items in the irregularity of the Treasury action are pensions, interest and purchases of bonds for the sinking fund. With regard to pensions, a step has recently been taken in the right direction by paying part of them each month. But the great increase in the pension roll will neutralize, at least in part, the benefit that the change would otherwise produce. The interest payments are still made quarterly, and money must be gathered for the purpose, and also for the purchase of bonds." As in Professor Kinley's opinion it is not practicable for the government to pay its bills with sufficient frequency to prevent the locking up of considerable sums for periods long enough to affect the market,

and as this feature of temporary withdrawal of money is inherent in the "independent" system of government management of its own receipts, some method of keeping the public money should be sought, he concludes, which will do away with the evils which arise from contractions and expansions of the currency, independent of the state of trade.

THE UTILITY OF SPECULATION.

THE Utility of Speculation in Modern Commerce" is the subject of a paper by Albert Clark Stevens, editor of *Bradstreet's*, in the current number of the *Political Science Quarterly*. Mr. Stevens regards the selling for future delivery what one does not possess at the time of sale as an essential part of commercial life as carried on everywhere to-day, and denounces the projects embodied in the Hatch and Washburn Anti-Option bill as "an outgrowth of ignorance of the place and function of organized speculation; misinformation in respect to legitimate speculation and its operation, and demagogism pure and simple."

"The end of speculation, in the great staple crops, for instance, is he declares to furnish: (1) A continuous open market. (2) A measure (the best sense of the commercial world) as to the products from day to day; and, (3) The machinery for carrying surplus crops from prolific to lean seasons.

"By securing these ends, and by the creation of standard or contract grades, speculation renders the staple product a better security at lower rates of interest on which to obtain loans at all times; and by minimizing the cost of carrying surpluses from month to month or from season to season, it enables the producer to sell to the best advantage.

"Without organized speculation as it now exists at Chicago, New York, Minneapolis, St. Louis, Toledo and elsewhere (abroad as well as at home), we should have to return to the old-time practices by which the enterprising or "sharp" individual profited more relatively than he does to-day at the expense of one less experienced or well informed; the comparatively few millers and exporters would have the thousands upon thousands of producers or holders at their mercy; the price of wheat would become local instead of being based at all points on its value in the world's markets; in the absence of a continuous open market bankers would not lend on grain readily or at as reasonable rates as they now do, and the carrying over of surplus crops from one season to the next would result in undue profits and excessive losses.

"Organized speculation in grain (as in other agricultural products) is a part of the modern machinery of trade—as real and essential a part as is the locomotive, the steamship or the telegraph. When the time arrives that the output of a staple manufactured article is enormously in excess of demand in some countries and has to be carried over, to an extent, to meet foreign demand, organized speculation in manufactured products may become successful—but not until then. We have seen an illustration of this in

speculation in Scotch pig-iron warrants. As manufactured products may be produced practically irrespective of climate, droughts, rains, character of the soil, etc., and within certain limits, irrespective of the points where the raw materials are produced, it follows that demand for and supply of such products may ultimately be adjusted. There is thus a far greater need for the machinery of speculation in agricultural than in manufactured staples.

"Trading in futures has been evolved by the necessities of modern commerce, and if checked here will be carried on abroad. No one community can permanently prevent the employment of so essential a piece of commercial machinery, and the attempt to do so may be likened to efforts which have been made to check the use of labor-saving devices."

Mr. Stevens holds that speculating in "futures" is as legitimate as to buy goods at wholesale, which one really expects and hopes to be able to sell again at retail.

AN ENGLISH VIEW OF THE HOMESTEAD STRIKE.

IN *Blackwood* for October there is an article entitled "Mr. Andrew Carnegie, or the Typical American Employer," which is, to say the least, very readable. The keynote of the writer's article is that the workmen's organizations in the United States have carried lawlessness and tyranny to such an extent that the employers deserve commendation rather than censure. Between employer and employed in the United States there is war to the knife without quarter, and the masters have won. "At the present time the American workingman, taking him on the average, is much more oppressed and down-trodden, is more entirely at the mercy of his employer, and is altogether a more helpless and a more spiritless individual than the average workingman in this country."

The writer does not hold Mr. Carnegie up to censure, but simply represents him as the type of a good employer under the conditions which prevail in the United States. Although justifying the employers, he gives a description of the extent to which they carry their discipline which will do the employers probably more harm in the public estimation than the praise of *Blackwood* will do them good. The following is the description of the way in which Mr. Carnegie had prepared for the struggle at Homestead. The preparations certainly seem more significant of a state of war than of the piping times of peace: "A stout board fence, twelve feet high and three miles long, has been built upon a foundation of slag of three feet high, and completely surrounds the steel works. On the top of this fence are several strong strands of barbed wire, so connected that a current of electricity may be sent through the wires from the electric plant by simply turning a switch in the office. Of course such a wire would instantly kill any man who touched it. It is known as 'Carnegie's Live Wire Fence.' Port-holes, four inches in diameter, have been bored all along this fence at the height of a man's eye. Trenches have been dug all over the works to various

points along the fence, where hydrants are stationed, and through these hydrants either cold or boiling-hot water can be discharged. Hundreds of arc-lights have been mounted on high poles throughout the works, and along the fence and on the buildings search-lights have been placed. Around the office an additional fence has been built, and a bridge forty feet high connects the office with the inside of the works. An extra search-light has been placed upon this bridge, and also a sentry box. Cameras with flash-lights have been placed in different parts of the works, so that portraits of those who approach the premises may be taken instantaneously, and thus subsequently identified. Barracks have also been built for the accommodation of imported workmen. On the river in front of the works a steel steam launch has been fitted out as a small war ship, with swivel guns; and several other boats have been equipped with small howitzers and search-lights. There surely never were such elaborate and formidable preparations made before in order to guard against the incidents of a strike. All these preparations had been commenced some six weeks before the strike was declared, and, as we have seen, the Pinkerton detectives were also engaged beforehand."

Blackwood thinks that Mr. Carnegie had no option but to take this course. The strike and lock out caused Mr. Carnegie a loss of \$50,000 a day, and the maintenance of the military cost \$20,000. The issue had come to this: "Are we, the proprietors of these works, to have the control of them; or are they to pass out of our control into the hands of a trades union?" When matters get to that pass any employer who has a spark of manhood in him will spend his last breath and his last shilling before he will make an ignoble surrender to a set of agitators.

The whole article is vitiated by a spirit of fierce hostility to labor, and it constantly intimates that Tillet, Mann and Burns are trying to establish a similar terrorism in England as that which now prevails in America.

SUNDAY AT THE WORLD'S FAIR.

IN *Our Day* for September there is a full account of the great struggle that has taken place in Congress for the closing of the World's Fair on Sundays. A bill to close the exposition on this day has been carried, as is well known, both in the Senate and in the House of Representatives by large majorities. The Chicago managers are offered a government grant of \$500,000 and government recognition on condition that the whole of the fair is closed every Sunday. Unless they agree to this, the government will refuse to exhibit at the fair, the exhibition will be boycotted by the Federal authority, and no grant will be made on the part of the United States as a whole. The decisive vote in the House of Representatives was 147 for Sunday closing to 61 against it. In the Senate, 52 for closing against 14 for opening. The attempt to forbid the selling of liquor in the fair was defeated, although at the Philadelphia Exhibition no

drink was allowed to be sold on the grounds. Liquor is to be sold at Chicago at places of refreshment within the exhibition, it being understood that the management will only sell liquor with meals as at hotels. The struggle is, however, to be renewed over the drink question, for it seems that the laws of the State of Illinois forbid the sale of drink under such conditions. The managers, however, have let the privilege of selling drink for \$600,000, and are naturally reluctant to lose this sum.

BISHOP POTTER ON OPENING WORLD'S FAIR SUNDAYS.

THE question as to whether or not the Columbian Exposition should be open on Sunday, is discussed in the *Forum* by Bishop Henry C. Potter, of the Episcopal diocese of New York.

STOP THE MACHINERY AND OPEN THE GATES.

In the face of the sentiment of a majority of the American people, as expressed in the recent action of Congress, the Bishop comes out boldly for the admission of the public to the exposition on this day, believing that a course could be adopted consistently with the scrupulous observance of Sunday as a day of rest. He would in a word stop the machinery and throw open the gates.

After considering at length, the subject of the proper observance of Sunday, Bishop Potter says: "We shall get a good Sunday in America when men learn to recognize its meaning and its uses—not when we have closed all the doors which, if open, might help to teach them that lesson. It would seem as if the door of a library were one of those doors; the door of a well-arranged and well-equipped museum another; the door of a really worthy picture gallery still another. And for what do these exist? Is it not for their enlightening, refining and instructive influence? In all these temples one may read history. And the story of the world, and of the races that have lived in it is part of the nobler and worthier education of men. It is a part of that education which is closely allied to the highest education of all, which is his spiritual education. For in one aspect of it one cannot look at the humblest piece of human handiwork without seeing in it how patience and the painstaking study of methods and materials have marred themselves in some contrivance in which the happy issue of the perfected whole is nevertheless not so interesting as the courage and ingenuity—the hard fight with manifold obstacles—that produced it. And these qualities, though they are not the finest in human nature, are among them. Courage and patience and the steadfast purpose that will not be beaten; industry, the studious questioning of the forces of nature, or the clever harnessing of them to the harder tasks of life—all these are qualities that need, undoubtedly, still other and nobler qualities to inspire and direct them. But surely it can be no incongruous thing to teach men to think, to observe, to compare—in one word, in any inferior realm of knowl-

edge to know; even though they will still need supremely to be taught to know in the highest realm of all."

THE EXPOSITION A SCHOOL ROOM FOR THE PEOPLE.

Bishop Potter looks upon the great collection of human art and industry, such as will be displayed at the exposition, as a school room of the progress of civilization. "Let the Columbian Exposition proclaim by the hush of all its varied traffic and machinery—no wheel turning, no engine moving, no booth or counter open to buyer or seller, no sign or sound of business through all its long avenues, and, better still, by its doors closed till the morning hours of every Sunday are ended—that the American people believe in a day of rest. But if there be those who would later seek its precincts to look, it may be, more closely at the handiwork of man, to study the progress of the race in the story of its artistic and industrial and mechanical achievements, and to recognize thus, it may easily be, in the study of such achievements, with Job, that 'there is a spirit in man, and that the inspiration of the Almighty giveth him understanding'—that certainly can be no unworthy use of some hours of our America's rest day.

IT IS THE SALOON WHICH SHOULD BE CLOSED.

"There has been a very persistent effort to ridicule the idea that saloon keepers and their like, and worse, in Chicago, would be friendly to the closing of the exposition on Sunday, since it would force the crowds of idle strangers into their doors—either front or rear. But such ridicule is very ill-timed in view of facts that are abundantly well known as to the use that people shut out from the exposition made of their Sunday afternoons in Philadelphia. It may indeed be urged by those who are contending for the closing of the exposition throughout Sunday that they are not responsible for what people do with themselves so long as they keep them out of the exposition. But it would seem as if it might with some pertinency be retorted that if they are simply devoting themselves to a work of exclusion, it would be better worth while to shut up some other doors before they troubled themselves to close those of the exposition."

De Gids for August has an extremely interesting paper by Professor Quack (author of a valuable and exhaustive history of Socialistic experiments) on "The Zwijndrecht Brotherhood," which was a community of poor people, turf boatmen, day laborers, match makers and the like, founded in 1816 by one Stoffel Muller, in the marshy islands of the province of South Holland. They lived in the plainest manner, held all things in common. After Muller's death, of cholera, in 1832, a schism took place. They were gradually scattered and absorbed into other bodies. Some went to America and joined the Mormons, and since then all trace of them has been lost. The movement is remarkable, both as an experiment in Communism, and as a revolt, among simple and unlettered folk, against the hard and gloomy Calvinism of the Heidelberg Catechism.

EDUCATION IN THE WEST.

PRESIDENT CHARLES F. THWING, of the Western Reserve University and Adelbert College, at Cleveland, Ohio, makes under this title, in the October *Harper's*, quite a graphic statistical picture of what the West has accomplished in building unto itself an educational system. He shows that whereas the South Atlantic States give their male teachers an average monthly salary of \$28.11, and the North Atlantic States raise the pay to \$48.20, the extreme West shows an average monthly stipend of \$64.81; while in the case of women the proportional superiority of the West in liberality is even greater.

THE WEST'S GENEROSITY.

"A test more comprehensive of the generosity of the people of the West toward public education is seen in the entire cost of the education of each pupil. The last report of the Commissioner of Education, whence are drawn these facts, shows that the average daily cost of education for each pupil in the public schools in the United States is 12 cents 3 mills. Below this average are most of the Southern States, with an average of 7 cents 7 mills. Above it are all the remaining States. Next to it in order are found all the central States of the West, having an average of 13 cents and 1 mill, and following, the nine States of the North Atlantic, 13 cents 2 mills, and also above them each of the eleven States and Territories of the extreme West, with 21 cents 6 mills."

And the resources of the whole system—the immense grants of land, principally to the States of the West, for educational purposes make, in President Thwing's estimation, as solid and as perfect a basis as could be planned. These land grants aggregated, from the year 1785 to 1862, some 140,000,000 acres.

Nor is it in the cause of the "common" education alone that the West has pushed to the fore. There is a difference between the old and the new States here, in that the former "usually cease to give a formal education to the people with that afforded by the high school and the school for training teachers. The Western commonwealth regards its duty as not done till it has established the college and schools fitting for the law and medicine. The university is the crown of the system of public education of each State. The larger part of the annual revenue of the university is derived from the taxes which the people of the State annually assess on themselves."

In the differences of opinion which inevitably arise between the State University and the State Legislature as to the extent of this assessment—a difference sometimes reducing the president of the institution to the rank of lobbyist—President Thwing does not see serious or unmixed evil, and he thinks that the average outcome of the "demand and supply" is about equable.

He looks with favor on the broadening of the university curricula in the direction of the humanities; and, as to denominational and religious phases of the

educational problem, he contents himself with saying that the University should be as Christian as the State is Christian.

WAYS OF IMPROVEMENT.

He gives a sketch of the ideas and influence of the colleges founded by individuals which antedated and supplemented the State institutions, not forgetting to discuss and admire Mr. Rockefeller's and Mr. Stanford's noble enterprises, and closes by pointing out two or three directions in which there is still room for improvement in the worthy efforts of Western educators. He asks for more discrimination as to particular institutions, affirming that too many people do not know the difference between the first-class colleges and the fourth-rate. Salaries of professors

CHARLES F. THWING.

outside of the State universities are too small, though the demand created by the new Chicago institution is helping matters; and, finally, there is a want of good high schools and academies.

"To have the best is a characteristic of the West; and when this giant of the West arouses himself in his full strength, he will build the finest system of education in school and college, as he has built the longest railroads and the largest flour mills."

COMPULSORY EDUCATION IN THE UNITED STATES.

MR. WM. B. SHAW, of the State Library, Albany, N. Y., contributes to the *Educational Review*, the third and last paper in his series on "Compulsory Education in the United States." The results of the working of compulsory education in the 28 States which have added this feature to their respective school codes are summed up by Mr. Shaw as follows :

"In New York State, outside of the great cities, practically nothing has been done to make compulsion effective. In Massachusetts, Rhode Island and Connecticut, the towns and villages have been brought under the operation of the law to a very considerable extent. In Ohio, encouraging progress is being made under the law of 1889. Here and there through the country are isolated instances of enforcement ; but for the most part, in more than a score of States, these laws have apparently not only failed to affect school attendance to any appreciable degree, but have tended by their very inefficiency to weaken the public school system itself in public confidence. To what shall we ascribe the cause of this general failure? It was not that compulsory education was a foreign innovation, ill adapted to American conditions. It is true that foreign models were studied in the drafting of our State laws ; but the principle itself, as has been shown in the preceding papers of this series, had a very respectable American lineage. If it was un-American, it is difficult to see what feature of our modern school system is not open to the same charge. It must be admitted that too many States have tried to deal with this question (as with others) without reference to the state of public sentiment, and in this country such a course is always fatal to the success of any movement.

"In many localities, doubtless, compulsion is at present quite impracticable—for instance, in portions of the New West ; but practicability has been the last factor to be considered, usually, in framing compulsory legislation. Even in some of our Eastern cities there is an absurd demand being made in these days for the enforcement of attendance laws, which cannot be enforced, because the school accommodations are insufficient for the children who apply for admittance. But in country districts, in States where ample school facilities are provided, difficulties have not been wanting. It has been urged that a more centralized system is needed, placing the responsibility for enforcing the laws on State officers ; but in Connecticut, where centralization has all along been the order (and with apparently successful results), it is still acknowledged that without the co-operation of local authority little can be done ; and this co-operation is sought by compelling the towns and villages to appoint truant officers and establish truancy regulations, on penalty of forfeiting a portion of their respective shares in the school fund.

"The danger of an illiterate population of foreign birth is probably not everywhere so great as Rhode Island's experience would indicate. Recent investi-

gations in New York City among the children of the tenement districts are rather encouraging than otherwise. They seem to show that a very large proportion of the New York children of foreign parentage are not only willing but eager to receive instruction. The chief difficulty seems to lie in the disgracefully inadequate facilities afforded."

Mere legislation is not the end of the State's duty in the matter of compulsory attendance upon schools, Mr. Shaw concludes, but only the beginning. "Vigorous official administration is essential. Such administration, to be effective, must of necessity be expensive. No State should enter upon the compulsory policy without counting the cost, but no State should avoid such a policy because of the cost."

GAVROCHE AT SCHOOL.

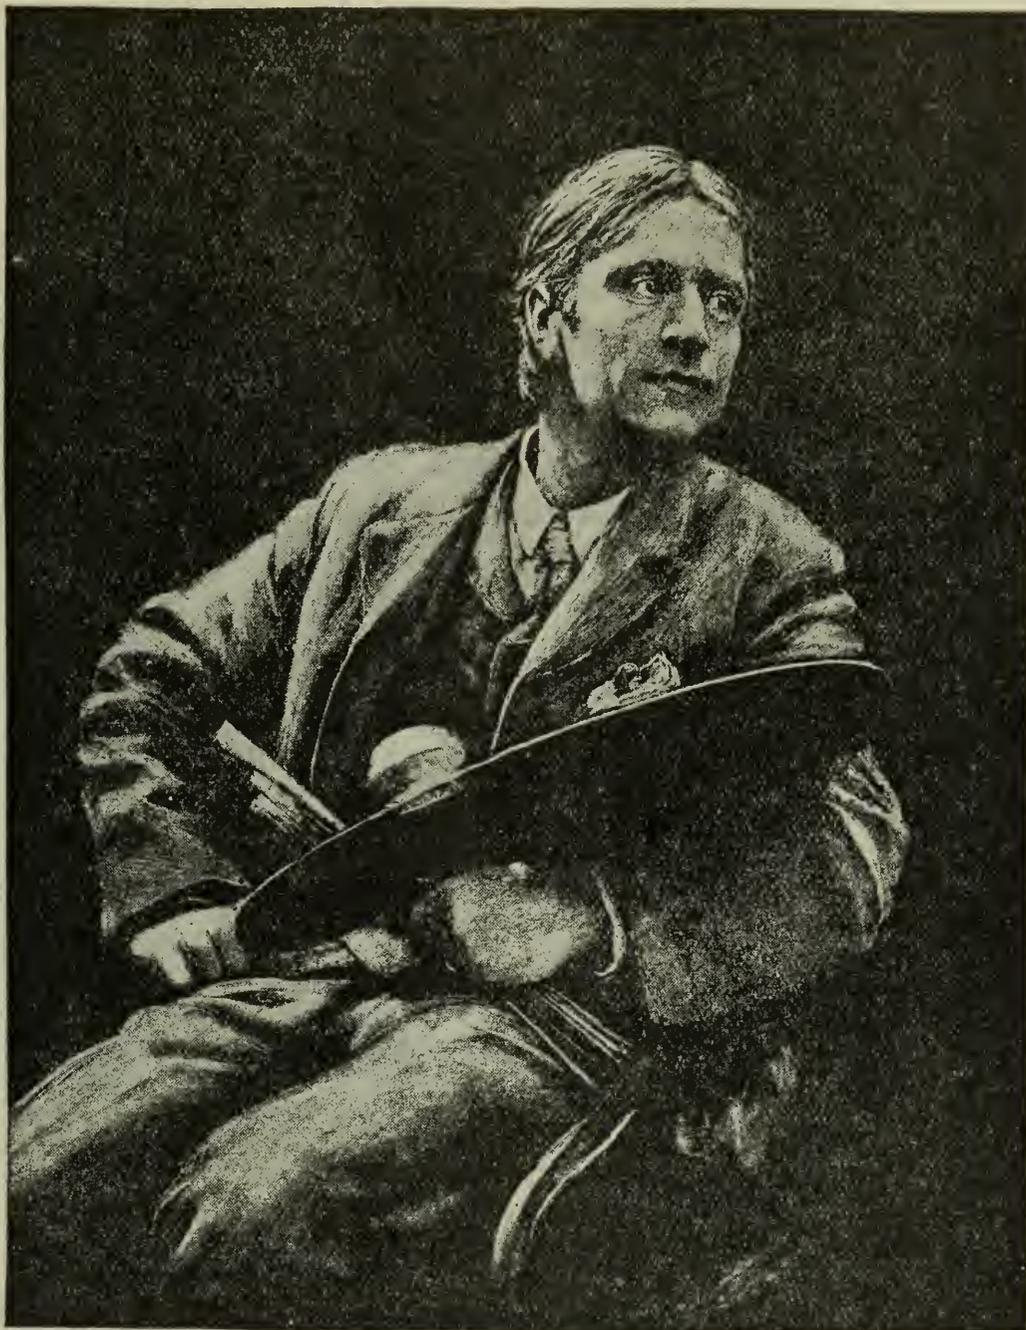

IN the October *Scribner's* Mr. Edmund R. Spearman describes "A School for Street Arabs"—the noted D'Alembert institution near Paris. In every respect except the class of its pupils, it is quite remarkably like the novel McDonagh School in Maryland, of which a sketch was given in the May REVIEW OF REVIEWS. For the D'Alembert School is confessedly for the morally abandoned street arabs of the French capital—the class of boys who are in the midst of vicious surroundings at home, and have not even a fair chance in the fight for an honest life.

The Artful Dodgers and Charley Bateses of Paris are transported fifteen miles out of the city into the beautiful Marne Valley and placed under a semi-military *régime*. They have good exercises and good food, good amusements and good work. Of the last Mr. Spearman speaks in the highest terms. It is hard to believe his assurances of the results accomplished by these boys in the departments of cabinet making and printing, in the latter of which they particularly excel.

"The work turned out by these young aspirants to 'the art preservative of art' will bear comparison with the best in any land, and is of the most varied and difficult description, including a great variety of ornamental and 'table-work.' Of course, excellent method and ample materials, in the shape of a full assortment of type and other necessities for a great printing-office, go a long way to help the young printers. But their tutor and the aptitude and interest taken by the pupils are the chief factors. On my visiting rounds I encountered one bright little lad who had only been four days in the school, yet had set up a short galley of type, the proof of which was better than some I have seen come from old printers. Of course he must have been exceptionally clever and have been carefully coached ; but all the pupils seem to be able to perform somewhat similar prodigies. An older pupil, of eighteen months' standing, was setting up a railway time-table, which not one compositor in five hundred would dare to undertake at first sight. The street arab as a printer is evidently a success. No printing-office in the world can show such a galaxy of choice and capable apprentices as can the D'Alembert School."

From the products of the printing-office and turning-shop, the school actually came out 40,000 francs ahead in 1889, only its seventh year; but certain materials of former years were utilized. "The product of 1890 included 30,000 francs for printing alone, and three times as much in the cabinet-making line."

stands a solitary, ancient-looking old round tower. Its bright, helmet-like roof, covered with yellow tiles, rises above the tops of the limes in the avenue leading to it. The style of this building is such as is often enough met with in the Middle Ages, the upper part projecting and resting on consoles, while smaller tow-

PROFESSOR HERKOMER.

BOYHOOD OF PROFESSOR HERKOMER.

WITH the September number *Velhagen and Klasing's Monatshefte* begins a new volume. An important feature of this volume is to be a series of special articles on famous artists and their work. A sketch of Professor Herkomer, by Herr Ludwig Pietsch, inaugurates the series.

THE HERKOMER "MOTHER TOWER."

On the left bank of the broad mountain stream called the Lech, and opposite Landsberg with its picturesquely grouped towers, churches and gables, there

ers, roofed with green tiles, grow as it were out of the sides and corners, and even the top. The entrance door stands in an arched niche, decorated with Herkomer sculpture. A few steps from this tower, and standing in its own garden, there is a very plain peasant's house, the later home of the professor's parents, from the door of which a well-beaten path runs into the road leading to the tower. If you ask the passer-by what that tower is on the banks of the stream, you will be told that is the "Mother Tower" of Professor Herkomer—the tower which the professor erected in memory of his mother. Indeed, the name of Hubert

Herkomer is closely connected with this green bank on the Bavarian stream, and it is one of the best known and most honored in the little town and neighborhood. In the autumn, when the London season is over and the artist seeks repose, the tower is his favorite retreat.

HIS PARENTS.

As unique as are the artistic personality and many-sided activity of the professor has been the entire development of his life. His birthplace is the village of Waal, near Landsberg. For many generations back this neighborhood has been the home of his forefathers, and for generations technical and artistic gifts have been hereditary in the family. The grandfather was an inventive genius, and a mason by trade. His four sons were also taught a trade, the artist's father learning carpentry. The extraordinary technical skill and mechanical inventiveness of the grandfather were inherited by the professor's father, and to this must be added an extraordinary idealism, which never failed to give him courage and strength to persevere in the hardest struggles for existence, and rise above the intellectual and moral standard of the average man in his position. He built his own house at Waal, where the artist was born, and there, with his garden and ground, led a peaceful life. His wife, who was the daughter of a schoolmaster, shared with him his poetic idealism, and in music was as well gifted and trained as her husband was technically and artistically. She played the violin and piano. In May, 1849, the artist, her only child, was born, and when the father held the infant in his arms he said: "This boy shall one day be my best friend, and he shall be an artist." Never was wish or prophecy ever more completely fulfilled.

AMERICA—SOUTHAMPTON—MUNICH.

When the boy was two years old the father, dissatisfied with the state of things in his own country after the great shipwreck of the revolution, decided to go to America. Here he worked at his trade, while his wife contributed to the maintenance of the little family by giving music lessons. After six years they went to Southampton, England, where they had most terrible trials and struggles with the most adverse circumstances. Meanwhile the boy's musical gifts were developing, and he took part in the singing and music lessons and played duets with the pupils. His attendance at a day school was soon cut short by illness. After his recovery he was sent to a drawing-school, and to this day he thinks, with scorn and bitter contempt, of the method of instruction there. Meanwhile his father received an order from America, and he decided to go to Munich to execute the work. The son was to accompany him in order to pursue his studies at the famous academy. Full of hope the two friends set out on their journey, and at Munich their domestic arrangements corresponded with their scanty means; the workshop had also to serve as kitchen, living-room and bed. The boy made good progress at the academy, but he had a passionate de-

sire to draw from the living model, and to help him out the father, in the early morning, in the pauses between cooking and other household duties, would stand as a model. A visit to the opera also reawakened in the boy the pressing desire to play the piano and compose.

EARLY STRUGGLES.

At that time the passes of naturalized English subjects were only available for six months, unless personally renewed. It was, therefore, necessary that they must return to Southampton in order to preserve their British citizenship. During the winter the young artist worked away, painting in water colors and oils the portraits of every one who would sit to him. The following year, 1866, he entered the South Kensington School, and the two friends here parted for the first time. After working hard during the summer months he returned to Southampton to open a school for drawing from life, and the seven or eight students opened an exhibition at a picture framer's. There Herkomer had the good fortune to sell his first picture, a landscape in water colors. A picture by Walker, at the Royal Academy, may be said to have made the most lasting impression on young Herkomer, but it was some time before he was able to sell any more of his work. At last a comic paper offered him \$10 for a weekly woodcut, but in six weeks that was at an end. After another long time the brothers Dalziel bought some of his work, but other publishers would have none of it. By this time the youth was in such sore distress that he applied to the Christy Minstrels for an engagement as zither player, but in vain. Then he executed carpet designs, but the work seemed so unworthy that he soon gave it up again. This miserable existence lasted till 1869, when the London *Graphic* was founded, and he resolved to do something for it. It was with a beating heart that he entered the office with his "Gipsies in Wimbledon," and with no little joy and surprise that he learned it was accepted, with the promise of further work. He received \$40 for this picture. His next one was hung in the Dudley Gallery, and sold for \$200. The hard times may now be said to have come to an end, and Professor Herkomer's later work is too well known to need further description here.

THE JUBILEE OF TWO GERMAN PATRIOTIC SONGS.

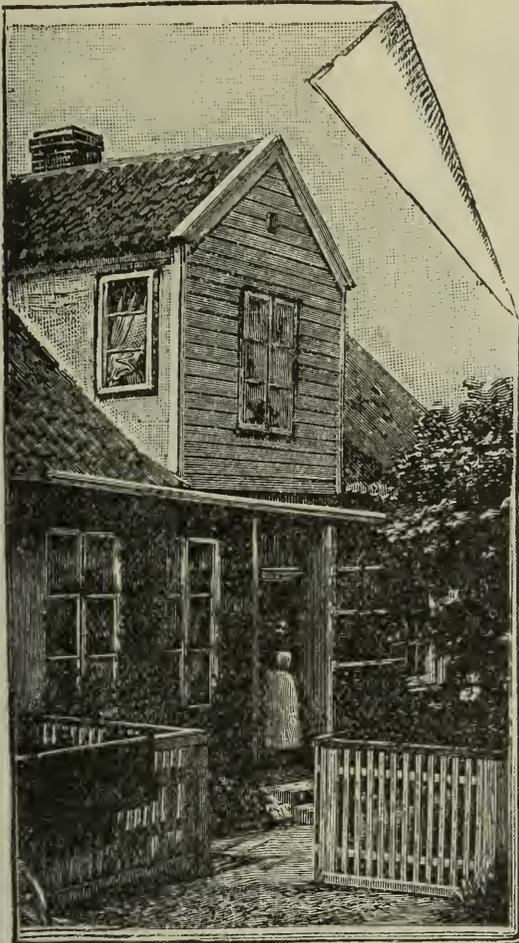

IN no country does the national song play so important a part as it does in Germany, nor can any country be said to owe so much to its patriotic songs. The fiftieth anniversary of two of the best known of these songs has recently been celebrated.

"DEUTSCHLAND, DEUTSCHLAND UEBER ALLES."

The song "Deutschland, Deutschland Ueber Alles," which no one who has heard it sung in Germany by a party of enthusiastic students can ever forget, was the conception of Hoffmann von Fallersleben, in Heligoland. August 26, 1841. In the *Daheim*, of

August 27, 1892, J. E. Freiherr von Grotthuss gives a sketch of the poet.

August Heinrich Hoffmann, who added to his surname the name of his birthplace, was born at Fallersleben in Lüneburg, in 1798. After school years at Helmstedt and Brunswick, we find him studying first at Göttingen, then at Bonn, with the view of taking up theology, but it was not long before he exchanged it for German literature. In 1830 he became librarian at the University of Breslau, and a few years later the same university appointed him Professor of

HOUSE OF HOFFMANN VON FALLERSLEBEN,
HELIGOLAND.

German Literature. Soon, however, dark political clouds rose over Germany; the storm year of 1848, known also as the "mad year" of the German Revolution, was in fact casting its shadows before. While the revolutionary mood of the people toward their ruler, Frederick William IV., was growing in intensity, Hoffmann made his *début* as a poet and rushed into the arena with his "Unpolitische Lieder" (1842), and the effect he produced was astounding. The deep longing for something new and better than was possible under existing circumstances, and the desire for a new birth of German unity, to say nothing of the irony and dry sarcasm leveled at certain institutions, all found expression in the volume, and the poems immediately became the common property of the people. The result to the poet, however, was the loss of his professorship, and henceforth he led a wandering life in Germany, France, Switzer-

land and Italy till 1860, when the Duke of Ratibor appointed him librarian at the castle of Corvey on the Weser, where he died in 1874.

To pass over his work as a philologist, and all the collections he made of hymns, and ancient German, political and social songs, special mention should be made of his children's songs, with music, an edition of which was published as a Christmas book shortly before his death. Another interesting undertaking was his autobiography in six volumes, entitled "Mein Leben." Almost his last wish was to see published a complete edition of his works; but no publisher, it seems, dare undertake him. Now, eighteen years after his death, Dr. Gerstenberg has performed the task.

Now, too, when his immortal song has attained its jubilee, and when, in fulfillment of his saying, Heligoland has really become German, does the author of the words come to be remembered. It was on August 26, 1891, exactly fifty years after the song was written, that Emil Rittershaus, of Barman, in consequence of the hearty response to his poetical appeal in the *Gartenlaube*, was enabled to lay the foundation stone of a monument to Hoffmann in the newly acquired island, marking the occasion by a poetical address, and concluding, "God knows what the future will bring us, therefore let the song that can touch every heart resound loud and clear—'Deutschland, Deutschland, Ueber Alles!'" On August 26 of the present year the completed monument by Fritz Schoper was unveiled.

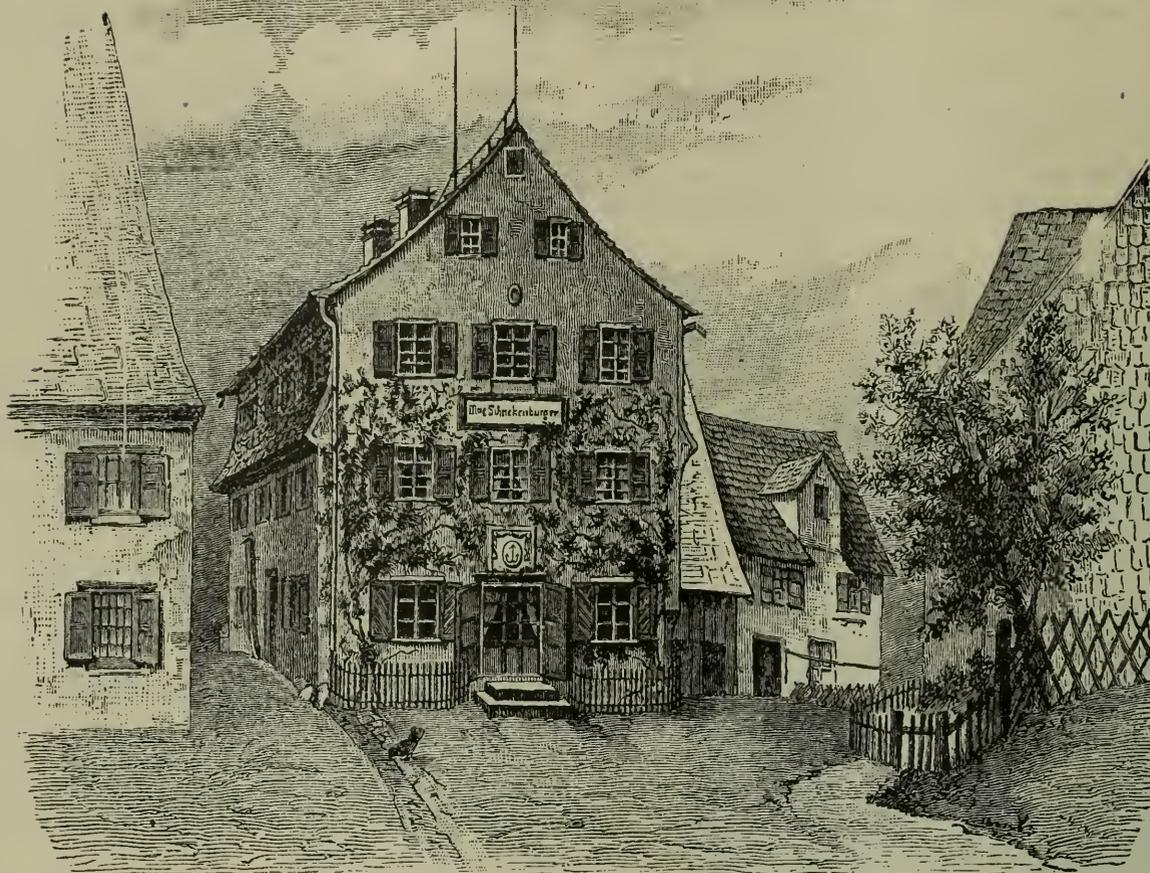

That Hoffmann's songs have taken deep hold of the German people is shown by their popularity, and the manner in which they are sung on every available occasion. They were also sung literally by the poet, for he was also the composer of the music for most of them. "Deutschland Ueber Alles," however, is sung to the strains of the Austrian Imperial hymn composed by Haydn, and introduced into one of his quartets.

"DIE WACHT AM RHEIN."

In Germany no one would hesitate to attribute the victories of 1870-71 to the enthusiasm aroused by Max Schneckenburger's song, "Die Wacht Am Rhein," written in 1840, yet the name of the poet was quite unknown till the song was heard as a battle-cry on French soil, and even then his kinsmen did not show their gratitude to the real winner of their victories. The poet would probably have remained forgotten but for the accidental discovery of the original manuscript, which dragged his name from obscurity.

The birthplace of Max Schneckenburger was Thalheim, near Tuttlingen in Würtemberg, and in a room at the top of his father's house he wrote his first poems. At fourteen he went to Berne to be a merchant, and latter made a commercial tour in France and England. Then he founded iron works at Burgdorf, in the canton of Berne, married the pastor's daughter, and settled down in a home of his own. Here he died in 1849 at the early age of thirty.

In 1886, thirty-seven years after the poet's death, the

BIRTHPLACE OF MAX SCHNECKENBURGER.

manuscript of the poem was suddenly brought to light at Burgdorf, and it is said the Emperor offered 40,000 francs for it. Be that as it may, the incident certainly troubled the German conscience. A committee was formed, and funds collected, with so gratifying a result that not only were Schneckenburger's remains removed to his native place and laid in a worthier tomb, but on June 19 of that year a monument to his memory was unveiled at Tuttlingen. The monument is an embodiment of the song. Germany is represented as wearing a coat of mail and a garment reaching to her feet, her flowing hair surmounted by a wreath of oak leaves; and, with knightly self-confidence, she is looking toward the western frontier of the newly created German Empire, her hand on her sword ready to draw it the instant danger threatens the Fatherland. This bronze figure rests on a granite pedestal, on one side of which there is a relief portrait of Schneckenburger, and on the opposite the words from the refrain of the song, "Lieb Vaterland, magst ruhig sein: fest steht und treu die Wacht am Rhein! Das dankbare Vaterland. 1892."

In the *Missionary Review of the World* for October there is an article by Mr. J. E. Budgett Meakin upon the "Greek Church and the Gospel" Mr. Meakin thinks that the Greek Church is a heathen despotism. The editor publishes the Centenary Sermon which he preached at Leicester, on June 1.

MITTENWALD AND ITS FIDDLE-MAKING INDUSTRY.

"MITTENWALD and Its Fiddle-Making Industry" is the title of an article by Herr Richard Schott in Heft I. of the new volume of *Vom Fels zum Meer*. While describing his visit to this famous centre of the violin industry, Herr Schott gives us glimpses of the life in the quaint Bavarian town.

PAST HISTORY.

Mittenwald, with its curious, frescoed houses, is picturesquely situated on the Isar river, and is overlooked by the Kurwandel and Wetterstein mountains. It is reached by train to Murnau, and thence by sledge or the post omnibus. In past ages it was a halting-place for the Romans on their way to the Danube, and in the Middle Ages it played a not unimportant part as a half-way station on the commercial highway between Augsburg and Bozen. The place flourished for about two centuries, and then prosperity threatened to forsake the old-fashioned little town.

MITTENWALD'S SAVIOR.

It was rescued by a native, Mattias Klotz, who in his boyhood was apprenticed to Nicolo Amati, the celebrated Cremona violin maker. Young Klotz seems to have had such aptitude for his craft, and in consequence to have aroused such jealousy in the hearts of his fellow-apprentices, that his life became intolerable. After eight years he quitted Cremona,

and during the next two years wandered about from place to place, still making it his business to perfect himself in his craft. When he returned to Mittenwald, at the age of nineteen, it was to found a school for violin-making. His first care, however, was to enter the church and ask for God's blessing on his enterprise, in witness whereof he carved his name on the side of the altar-stone: "Matthias Klotz, Geigen-Macher, im 20 Jahr, 1684."

SELECTING THE WOOD.

In the making of violins much depends on the wood for tone. In this respect Mittenwald is fortunate, for in its woods the pine and maple are not only abundant, but the grain and resonant qualities of the wood are admirably adapted for stringed musical instruments. Before Klotz's time Jacob Stainer, of Absom, near Innsbrück, another eminent maker, used to visit the place in search of wood, and he did not fail to excite the curiosity of the people when he would knock the trees with his hammer and then put his ear close to the trunk to hear the sound. It was now Klotz's turn to make known to the inhabitants that it was his wish to do for Mittenwald what Jacob Stainer, whom they had seen or heard of, had done for Absom, and the people must have listened eagerly to his story; for now on fine days one may see everywhere in the town rows of violins, guitars and zithers, newly varnished, hanging out to dry in the gardens.

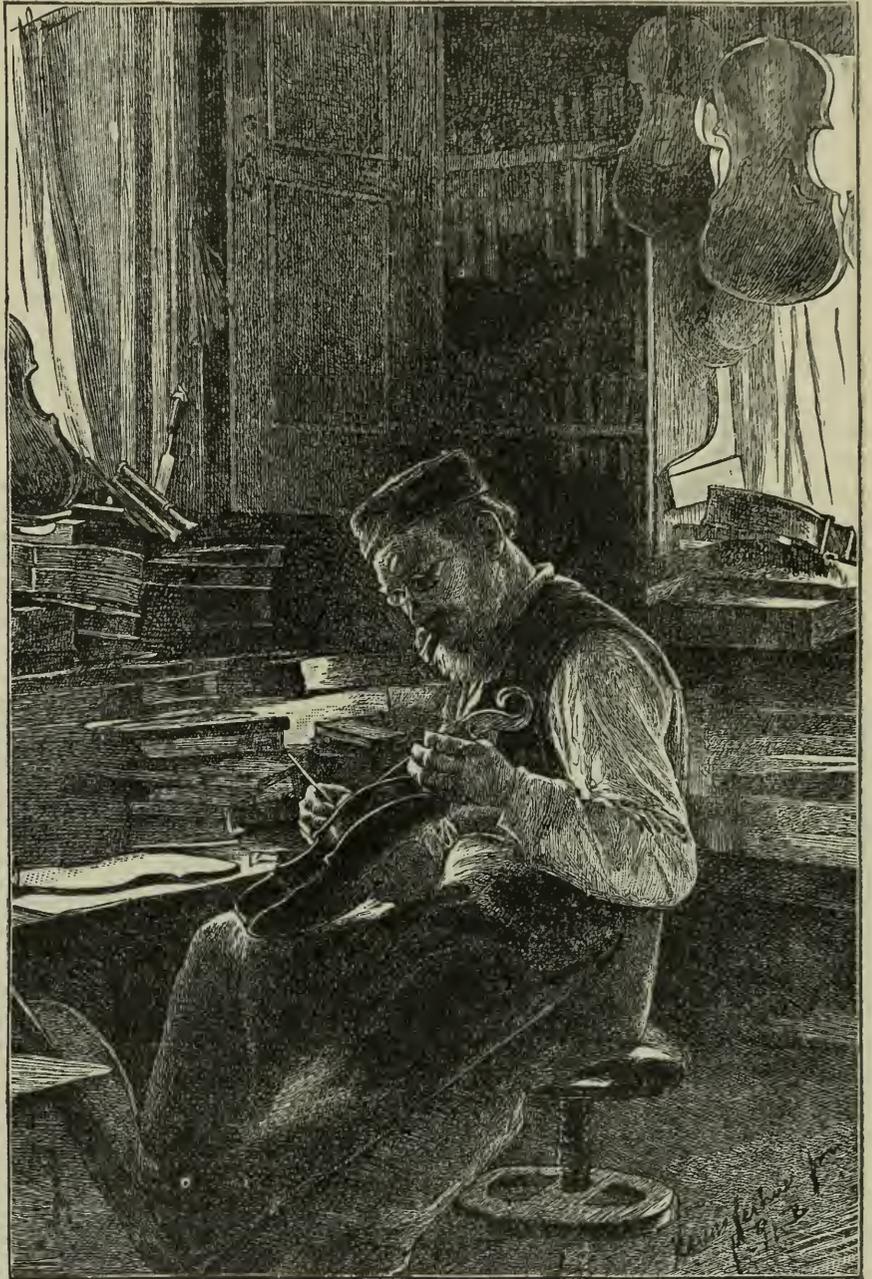

AN ARTIST, NOT A MANUFACTURER.

Herr Schott takes us first to Master Reiter, a well-known maker on his own account. To his interviewer's first question the master replies, somewhat hurt, that if it is Herr Schott's desire to learn something about the manufacture of violins, he had better betake himself to the school and the factory. The master did not manufacture violins; he alone it was who made them as his master, Johann Vauchel, of Würzburg, had taught him, and it was to him alone that Vauchel shortly before his death confided all the secrets of his craft. Master Reiter had received special recognition from artists like Spohr, Vieuxtemps, Joachim and Strauss, and also from the Bavarian Government. Then, as if to demonstrate that he was not a manufacturer but an artist, he took up an instrument that he had been repairing and played a movement from a Spohr concerto with great taste and spirit, and in vain sought to conceal a smile of satisfaction when the visitor applauded.

HOW A VIOLIN IS MADE.

By this time the master could forgive the unmeant insult to his skill, and he now proceeded to take up

the different parts of an instrument he had in hand, and in the most solemn tones told in outline how they were put together. The parts were, however, all ready for joining, so that Reiter did not go into detail about the wood; nor did he explain that the back and belly are each of two pieces generally, and are cut so that when the two are glued together the

MASTER REITER.

figure of the grain in each half shall match. Another point of interest is that the belly and back are not bent, but are "dug out" of the solid plank—a tedious operation, requiring infinite care. Altogether, it may be added, a violin usually consists of seventy different pieces (excluding the bow) and weighs under a pound.

"The belly of a violin, like that of the viola and 'cello," Herr Reiter explains, "is made of pine, while the back, sides and neck are of maple, which must have been seasoned from twelve to fifteen years at least. Having got ready the pattern and the mold round which to shape the violin, four blocks of wood

—one for the top, another for the bottom and two for the sides are glued to it. Then the six maple pieces for the sides or bouts are bent to the mold and glued together over the blocks, and thus a sort of framework is made in which other little blocks and linings may be inserted, so that the back and belly may be better supported when in position. The back is next glued on and made secure, but the belly is only fixed temporarily. The body of the violin is now complete, and the mold and movable blocks may be taken out. The bass bar is let in and the F-holes are cut; then the neck, finger board, nut, pegs, bridge or tongue (Mr. Haweis has called it the wife), soundpost etc., are added, and the instrument is ready to be strung and tested, and, if satisfactory, may be varnished. If unsatisfactory, however, the belly must be taken off and another bass bar may be tried; in any case the instrument must be corrected and corrected until the required quality of tone is attained. That is how I, Master Reiter, make my violins. I never let one go out of my hands that has not been thoroughly tested, and I have sent out into the world—to Russia, America, Athens and where not—some two hundred violins, twenty-five 'cellos, besides having repaired four hundred others."

THE SCHOOL AND FACTORY.

Herr Neuner, who is the director of the violin-making school and factory, learned his craft from Vuillaume, a famous Paris maker. Here fiddles are made for the trade, and are known as "trade violins." The school in connection with the factory was built by the Bavarian Government, and instruction in fiddle-making is given to about twenty boys. In the factory Herr Neuner has ten first-rate workmen, one of whom has been with him thirty-six years. But of the 1,800 inhabitants of Mittenwald three hundred, at least, are engaged in the manufacture of stringed instruments in their homes, Herr Neuner providing the material and giving out the work, besides undertaking to find a market for the fifteen to twenty thousand fiddles, 'cellos, zithers and guitars which the place yields annually. The making of strings and bows is a separate industry, and does not seem to be carried on at Mittenwald.

THE MAKING OF GUN FLINTS.

IT is rather startling to learn on the authority of Mr. P. A. Graham, in *Longman's Magazine* for October, that gun flints are still an article of commerce. So far from breechloaders and percussion caps having destroyed the industry, the flint-lock trade has revived, and is now more flourishing than it has been for some time. Flint used to be exported chiefly to Brazil and South America, but now they go for the most part to South Africa. There is a colony at Brandon of hereditary flint knappers. Each knapper makes about 3,000 gun flints in a day. As there are only a out thirty gun-flint makers in England, and not more than a dozen are in constant employment, their output is estimated at between four and eight millions per annum. A gun flint gets used up after being used about thirty or forty times.

HENRY IRVING'S CURIOSITY SHOP.

HENRY IRVING and his house form the subject of the illustrated interview in the *Strand Magazine* for September 16. In the drawing room and the reception room Mr. Irving has a great collection of curiosities. The interviewer says: "A small case contains the russet boots which Edmund Kean wore as Richard III. and the sword he used as Coriolanus. A companion cabinet is in the drawing room. One by one the treasures are taken out and talked about. Here is David Garrick's ring, which he gave to his brother on his deathbed. The Baroness Burdett-Coutts presented it to Mr. Irving. Two watches are here. One is the gold timekeeper of John Philip Kemble, the other a silver one, which formerly belonged to Edwin Forrest. As I held the latter in my hand, Mr. Irving said quietly:

"Do you notice the time by it?"

It was thirty-eight minutes past five.

"That watch stopped at the very moment Forrest breathed his last!" said Mr. Irving as he gently replaced it.

"But the treasures of the case are not exhausted. You can handle the silver dagger worn by Lord Byron, a pair of old sandals worn by Edmund Kean, a pin with a picture of Shakespeare, once the property of Garrick, an ivory tablet which belonged to Charles Mathews. Do not overlook this little purse of fine green silk and silver band. It was found in the pocket of Edmund Kean when he died. There was not a sixpence in it! It was given to Henry Irving by Robert Browning."

LITERARY TRAMPS.

THERE is an article under the title "Literary Tramps" in *Macmillan's Magazine* for October. The writer says that it is only within the last hundred years that literature has again found its feet since the time of the troubadours, and he strings together many instances of literary pedestrians. Shelley and Mary Godwin started to walk from Paris to Lausanne, but broke down. James and Harriet Martineau made a walking tour in Scotland, walking 500 miles in a month. Robert Browning and his sister were great walkers; so were the Wordsworths. William and Dorothy sometimes walked forty miles a day. Christopher North joined Wordsworth once in slippers, and walked miles with him, until not only the slippers but the socks as well were worn away. Wordsworth, when sixty-one years of age, ran twenty miles a day beside the carriage in which his daughter drove. Charles and Mary Lamb used to walk fifteen miles a day. William and Mary Howitt walked 500 miles one year among the Scotch mountains. That was when they were newly married, but when Mary was seventy-four and her husband eighty they climbed an alp in the Tyrol, slept two nights in a haybarn, and came down as fresh as larks. One day Professor Wilson walked seventy miles and fished for hours. On his way home he called at a farmhouse for refreshments. The mistress of the house brought him a full

bottle of whisky and a can of new milk. He poured half the whisky into half of the milk and drank it off at a breath. He then poured the other half of the whisky into the milk and finished it also. Mr. and Mrs. S. C. Hall used to walk a great deal, and Mary Russell Mitford used to do ten miles a day. George Eliot walked a good deal, but slowly, and did not cover much ground.

HOW "THE SHADOW OF A CRIME" WAS WRITTEN.

THE fifth paper on the First Book series in the *Idler* for October is devoted to Mr. Hall Caine's account of how he wrote "The Shadow of a Crime." It is an interesting story, in which we have the whole genesis of the legend from which the shadow sprang, and also with much detail the narrative of the way in which Mr. Hall Caine licked his idea into shape. He wrote it twice or thrice, and finally, to alter it from a tragedy to a pleasant conclusion. He also describes his difficulty with publishers and the trouble he had in getting them to publish it. He was lucky enough not to sell his copyright, and the book is now in its twelfth edition. Judging from the pictures which are given of Mr. Hall Caine's house in Keswick, his study and his grounds, he seems to find that novel-writing is not bad business. The difficulty lies in the start, and he proposes that the

Authors' Society should found a fund of \$5,000 in order to make advance payments on account of royalties to save young men from the horns of a dilemma upon which at present they are impaled. Fifty pounds in hand, with copyright secured, would often bring them in as much a year. Mr. Caine says he does not find novel-writing easy work; there is always a point in the story in which he feels as if it would kill him. He has written six novels, some of them several times over, and he has sworn many times that he would never write another. Three times he has thrown up commissions in sheer despair, but he is going on just the same.

THE QUEEN'S DOLLS.

IN the *Strand Magazine* for September 15 its editor, Mr. Newnes, had a royal opportunity, of which he has not made a royal use. The paper on the "Queen's Dolls" was an excellent subject, and her Majesty seems to have done what she could to help to make the article historically interesting and biographically useful. The great disappointment of the article is in the blurred way its illustrations are printed. While congratulating Mr. Newnes upon the happy chance which gave him the article, it is a pity that he cannot be congratulated upon the pains which he has taken to enable his readers to see and understand the way in which the Queen dressed her dolls

THE DUCHESS OF PARMA (115).

COUNTESS OF DERWENTWATER (120).

COUNT ALMAVIVA (25).

A GROUP OF THE QUEEN'S DOLLS.

sixty years ago. Miss Florence Low, the writer of the article, tells us that the Queen's dolls were little wooden Dutch monsters, from three to nine inches in height. The Queen had quite a Noah's Ark of dressed dolls, no fewer than one hundred and thirty-two being carefully stowed away when she put away childish things. The Queen dressed no fewer than thirty-two of these with her own fingers, dressing them according to pattern, and she found her patterns chiefly on the stage. The Queen did not select her dolls from any sympathy with their originals; she seems to have chosen them for the sake of their clothes rather than for the sake of the characters they were supposed to represent. This deprives the list of her dolls of any real historical interest.

"The dolls are of the most unpromising material," says Miss Low, "and would be regarded with scorn by the average board school child of to-day, whose toys, thanks to modern philanthropists, are of the most extravagant and expensive description. But if the pleasures of imagination mean anything; if planning and creating and achieving are in themselves delightful to a child, and the cutting out and making of "dolly's clothes" especially, a charm to a little girl only second to nursing a live baby, then there is no doubt that the Princess obtained many more hours of pure happiness from her extensive wooden family than if it had been launched upon her ready dressed by the most expensive of Parisian modistes. Whether expensive dolls were not obtainable at that period, or whether the Princess preferred these droll little wooden creatures as more suitable for the representation of historical and theatrical personages I know not; but the whole collection is made up of them, and they certainly make admirable little puppets, being articulated at the knees, thighs, joints, elbows and shoulders, and available for every kind of dramatic gesture and attitude.

"It must be admitted that they are not æsthetically beautiful, with their Dutch doll—not Dutch—type of face. Occasionally, owing to a chin being a little more pointed, or a nose a little blunter, there is a slight variation of expression; but, with the exception of height, which ranges from three inches to nine inches, they are precisely the same. There is the queerest mixture of infancy and matronliness in their little wooden faces, due to the combination of small, sharp noses and bright vermilion cheeks (consisting of a big dab of paint in one spot), with broad, placid brows, over which, neatly parted on each temple, are painted elaborate, elderly, grayish curls. The remainder of the hair is coal black, and is relieved by a tiny yellow comb perched upon the back of the head.

"The dolls dressed by Her Majesty are for the most part theatrical personages and court ladies, and include also three males (of whom there are only some seven or eight in the whole collection), and a few little babies, tiny creatures made of rags, with painted muslin faces. The workmanship in the frocks is simply exquisite; tiny ruffles are sewn with fairy stitches; wee pockets on aprons (it must be

borne in mind for dolls of five or six inches) are delicately finished off with minute bows—little handkerchiefs not more than half an inch square are embroidered with red silk initials and have drawn borders; and there are chatelaines of white and gold beads so small that they almost slip out of one's hands in handling, and one is struck afresh by the deftness of finger and the unwearied patience that must have been possessed by the youthful fashioner. Not nearly so much care has been, however, expended on the underclothing, which is of the most limited description, many court ladies having to be content with a single satin slip—the dancers alone, for obvious reasons, being provided (though not invariably) with silk pantaloons."

The article will, no doubt, find many readers, but it is a trifle monotonous, and not even the Queen's mantua-making can make the description of gussets and seams interesting to the male mind.

WHAT COLUMBUS DID NOT SEE.

THE *Century* for October brings the story of Columbus down to the return of the explorer to the Court of Spain, after his discovery of what he still thought was the end of the old Continent. Signor Castelar, in his dramatic fashion, describes the passing away of Boabdil, which preceded by eighteen months the return of Columbus. He says:

"Boabdil, setting out with the conquered warriors of the Koran for the Libyan sands, close to the ancient era, while Columbus, returning from the measureless ocean with the simple sons of the world, revealed by his mighty genius, inaugurated the modern era. Yet they who had wrought these marvels knew not their full scope or transcendency, and were even unaware that they had in fact found a new world in the ocean."

Ferdinand and Isabella prayed Columbus be seated and report what he pleased concerning his voyage: "The facts being set forth in orderly sequence, he gave due prominence to the more important features of his divine Odyssey, and to the emotions aroused in his mind by his sudden meeting with yonder virgin isles of beauty. Columbus spoke much of the gold he had obtained, and cast ardent eyes upon it as a promise of more to come. But, even as he was unaware of the true geographical position and immeasurable vastness of the archipelago he had found, so he divined not the potent factors he had added to interchange and trade. Had one set before his eyes the new productions so fraught with blessing to mankind, such as the febrifuge we call quinine, hidden on the main land he had not reached but was soon to discover, his genius, now blinded by the glitter of gold, would have foreseen other and incalculable advantages to flow from his achievement. He knew naught of the bread made from the rich ears of the maize, nor the worth of the food-bearing but unsightly potato, now so indispensable to man's life. Who could have foretold him the future of tobacco? He saw it first in Cuba. Certain Indians carried it,

rolled in dry leaves and lighted at one end, while they sucked the other end, and so regaled themselves with the smoke. How could he have forecast the part that leaf and its smoke were to play toward the enjoyment and the revenues of the civilized world in both hemispheres? With gaze reverted to the past, Columbus believed that all these lands had fallen under the dominion of our Spain to revive the crusades of the feudal ages, when they were in reality destined, in the plan of divine Providence and in the development of human progress, to renew society as they had renewed life. But the onlookers of his time shared not such fancies. Columbus yet believed that Cuba was a part of the Asiatic continent and that the second expedition to be sent to the shores of Cuba and Espanola, with more and better-equipped vessels than the first, would attain to the kingdom of Cathay, the golden city of Cipango and the realms of the Great Khan, all rich with priceless gems."

THE FOOTBALL MANIA IN GREAT BRITAIN.

MR. CHARLES EDWARDES, who discourses in the *Nineteenth Century* on the "New Football Mania," is a man who can write, and write well. His article is most amusing, and as true as it is amusing. No one has described the great craze of the day so faithfully and yet with so light a touch. Mr. Edwarde says: "In all our large towns and most of the small ones, north of Birmingham to the Tweed, from September to April, Saturday is consecrated to football. Saturday evenings are devoted to football symposia, and the newspapers issue special editions one after the other, with from three to four columns of reports and gossip about the results of the day's games and the players. There is no mistake about it; the exercise is a passion nowadays and not merely a recreation. It is much on a par with the bull fight in Spain or the ballet in France. A spirit of adamant intention pervades it. No matter what the weather, a league fixture must be fulfilled. And no matter what the weather, there will always be found a number of spectators enthusiastic enough to be present at the game. Thrice during the last season the writer witnessed matches in violent snowstorms.

THE PROFITS OF PROFESSIONALS.

It depends upon the vigor, craft and strength of the player whether he is worth £2, £3 or £4 a week during eight months of the year. In their respective neighborhoods they are the objects of the popular adoration. They go to the wars in saloon carriages. Their supporters attend them to the railway station to wish them "God-speed," and later in the evening meet them on their return, and either cheer them with affectionate heartiness or condole with them and solace them with as much beer as their principles—that is, their trainer—will allow them to accommodate. They are better known than the local members of Parliament. Their photographs are in several shops, individually and grouped. The newspaper gives woodcuts of them and brief appreciative biographical

sketches. Even in their workday dress they cannot move in their native streets without receiving ovations enough to turn the head of a prime minister. Whatever the professional may not be, he is bound to be thorough. The Club Committee who have bought him will stand no shilly-shallying, no trimming about the ball in merely dilettante fashion. As for the spectators, they would come within a hair's breadth of assassinating him if they got an inkling that he was playing them false. Modern football may not be an immaculate form of 'sport,' but, in spite of one or two rumors, it seems irreproachably 'straight.'"

THE PERILS OF RECRUITERS AND REFEREES.

It is the duty of the club secretary to recruit his team with new blood: "The club secretary makes expensive journeys to Scotland to 'smell out' promising players from the village greens and smaller football teams of the 'land o' cakes,' which is famous for endowing its sons with stout calves to their legs. A genius in football is, of course, nearly as rare as a unique orchid, but his removal is usually stoutly resisted by his friends and kinsfolk.

"An authority on this subject, after telling how at different times he was beaten, tarred and feathered, and pelted with mud and large stones, adds expressively: 'I have been chased for miles by the relatives of young men I have endeavored to persuade to leave their homes.' Uncommon qualities are therefore distinctly needful in the average secretary to the modern professional football team."

Even more dangerous are the duties of referees: "That the calling of referee in modern football is not wholly delightful. Here is the tale of a referee's experiences a few months ago during a Shropshire match 'He was hooted and cursed every time he gave a decision, and one of the spectators went as far as to threaten to throw him into a pond. Immediately after the match he was snowballed, in addition to which mud was thrown at him, and he had to seek protection from the violence of the spectators. He took refuge in the pavilion for some time, but when he went toward the public house where the teams dressed he found that there was a large crowd waiting for him, and he was again roughly handled, his hat being knocked off, and he received a blow on the back of the neck.' This was the penalty of doing his duty to the best of his ability."

A PERSIAN, writing in the *Cosmopolitan*, strongly presses the claims of the Arab apostle to the highest place in the calendar of the saints of Prohibition. He says:

"Mahomet gave to his people the following example, that they should abstain from liquor. He said: If a single drop of liquor should be dropped in a well or cistern that is one hundred yards deep; if afterward the cistern should be filled up with earth, and if the grass should grow on the top and be eaten by a lamb or sheep, then my followers must not touch that mutton. The great, absolute, total-abstinence Prohibitionist in the world was the prophet of Persia."

THE UNIVERSITY OF FEZ.

THE most interesting article in the *Fortnightly Review* is Mr. Bonsal's account of the University of Fez, the students of which spend the greater part of their time in love-making. Judging by the specimen which Mr. Bonsal gives of the kind of information which is imparted under the name of geographical science, they do not lose much learning by their diversion. The map of the world, as used by the University of Fez, is the most extraordinary production that any geographer ever sketched. England is represented as a small, unnamed island lying immediately to the south of Thibet; Spain lies on the other side of Egypt immediately to the south of the Mediterranean or White Sea. Bulgaria lies to the north of Russia, being sandwiched between the Russian Empire and Gog and Magog. Mr. Bonsal says that he does not believe that there is either a student or professor attached to the university who has any misgiving in his mind but that this map is a perfectly correct representation of the world. The map contains no allusion whatever to the existence of America, Australia or any European country, with the exception of Russia, Bulgaria and Spain. Among the other faculties of the university are astrology, divination and alchemy. The professors at Fez are firmly convinced of their immeasurable superiority to the rest of the world in every branch of knowledge. Other universities are, in their opinion, only struggling schools, where false knowledge and the black arts are taught; and they are quite convinced that there are no learned men outside Morocco.

A PLEA FOR HOUSEKEEPING SCHOOLS.

THERE is an admirable article in the *Nineteenth Century* by Mrs. Priestley, which should be read by all who have anything to do with the education of the young. Mrs. Priestley is an advocate for housekeeping schools everywhere, and in this paper she describes "How the teaching of domestic economy was taken up by the State in Belgium, and systematized with a view to ameliorating the condition of the poor man's dwelling, and how the State intrusted the organization of the scheme to a committee composed of some of the highest ladies in the land and a few practical women."

Mrs. Priestley describes also the result of her own observations in a Belgian housekeeping school. The lesson was given "In an apartment meant to represent the poorest workman's dwelling, where all the household work has to be conducted in the one chamber. It was fairly well lighted, but by no means gloomy, for the walls were alive with gayly colored pictures representing the carcasses of various animals in every stage of dissection, showing cheap joints and dear, those for boiling, those for roasting, tough fiber and tender, the relative prices marked on, all designed under the direction of one of the largest butchers in Brussels, and presented to the school. These festive

pictures were diversified by blackboards, on which were jotted the items and cost of everything to be cooked that day. So eloquent were the walls that you had only to look to right or left to learn all you wanted to know.

After contrasting the teaching in Belgium with that in England, Mrs. Priestley commends the Belgian example to those who are promoting technical education there. She says: "If we had certificated domestic servants as well as certificated nurses, governesses and plumbers, we should soon excite the desire for domestic service by elevating it into a 'finishing' or 'higher education' for women of the humbler class. What Girton and Newnham are to the intellectual minority, let the School of Housekeeping be to the practical majority."

PHYSICAL EXERCISE FOR WOMEN.

DR. RICHARDSON, in the *Young Woman* for October, says that no changes which have come over our social life in the last twenty years are more remarkable than the physical training and education of women. We have learned, he asserts, that women can with every advantage practice physical exercises as well as men. Croquet began the beneficent evolution, cycling followed, then lawn tennis, then cricket; afterward swimming became popular, and now there is hardly an athletic sport or exercise of any kind in which the young woman does not take her share as well as the young man. Of these amusements, Dr. Richardson thinks swimming is the best. There is no exercise whatever that brings into more regular and systematic play the muscles of the body in a regular order. It also gives the skin the taste and habit of cleanliness. Lawn tennis is also admirably adapted to women, as it allows periods of repose. Cycling is also good, and would be better if women only wore decent clothes. Dr. Richardson recommends young women to choose the bicycle rather than the tricycle. They seat a bicycle more gracefully; they work it with less labor, and run less risk. He does not know a woman who has tried it in moderation who has not been benefited by the exercise. He thinks that fifty miles a day is the maximum that even a practiced woman cyclist should attempt. Dancing under hygienic conditions is also useful. The net result has been beneficial beyond expectations:

"The health of woman generally is improving under the change; there is among women generally less bloodlessness, less of what the old fiction writers called swooning; less of lassitude, less of nervousness, less of hysteria, and much less of that general debility to which, for want of a better term, the words 'malaise' and 'languor' have been applied. Woman, in a word, is stronger than she was in olden time. With this increase of strength woman has gained in development of body and of limb. She has become less distorted. The curved back, the pigeon-shaped chest, the disproportioned limb, the narrow, feeble trunk, the small and often distorted eyeball,

the myopic eye, and puny, ill-shaped external ear—all these parts are becoming of better and more natural contour. The muscles are also becoming more equally and more fully developed, and with these improvements there are growing up, among women models who may, in due time, vie with the best models that old Greek culture has left for us to study in its undying art."

HOW CHEVALIER HERRMANN WAS BAFFLED.

IN *The North American Review* Chevalier Herrmann relates, among other of his remarkable experiences as a necromancer, how he was once fooled on the streets of Paris by a simple-minded day-laborer.

"I paid a visit to the Paris Bourse before the asphaltum pavement had been put down around the square upon which that great monetary institution stands. The square was then paved with a regular block pavement, which, owing to the great travel, was frequently out of repair. While inside the edifice I have seen the stockbrokers and heard them howl in their frenzy of speculation, and my mind had wandered off in altogether a different direction after I got out and stood on the broad granite stairs of the temple of Mammon with a few of the stockbrokers, friends of mine, who had gathered around me and asked me to 'do something.' A gang of workmen stood directly before us, and one of the stockbrokers said: 'Why don't you play a trick on them?' I thought I would. I walked down the broad stairs among the pavers and extracted from under one of the cobble-stones a 100-franc gold coin, which is about the size of one of our double eagles. Instead of being amazed, the paver simply looked at me and said, 'Moitié!' meaning half. There was a law, at least at that time, in France that the finder should have half of anything found. I, naturally, did not want to give up half, and I thought it would be a good thing to find another coin, so as at least to show the fellow that it was a trick, and straightway I put my hand down again and brought out a five-franc piece. The paver looked at me again, his face wreathed in smiles this time, and once more he said, 'Half,' which would be 52½ francs—rather a good day's earnings. Well, as I did not seem willing to give up half, as he wanted, he began to talk loud. I then changed my tactics, explaining to him that it was a trick; and to illustrate it I picked up a five-centime coin of the reign of Louis Philippe (an old pocket-piece I happened to have with me); but even this failed to satisfy the workman, and his wild gesticulations and loud talk having collected more than 500 or 600 people around us, I thought it best to compromise with him. But no, he would listen to no compromise; he hung to his rights tenaciously, and I was compelled to give him half, not alone of the 100-franc piece, but of the five-franc piece as well, and then he insisted upon having even half of the 10-sou piece. "It takes either a very stupid fool or an exceedingly clever man to get ahead of a prestidigitator, and of

the two I am inclined to believe that the fool is by far the more dangerous."

THE LOST SON OF DARWINISM.

SAMTIDEN'S best article this month is one from *Freie Bühne* by Wilhem Bölsche, entitled "The 'Lost Son' of Darwinism," for in Germany and Scandinavia they are so charitable as to forget the prodigality of the runaway son of the parable, and therefore the term, "The 'Lost Son' of Darwinism," is applicable enough to Alfred Russel Wallace, erstwhile the apostle of that doctrine, and now nearly, if not wholly, apostasized.

It is not only in the arts, says the writer, that *fin de siècle* beings are to be found. On all sides they spring up—a strange, defeated army, with not enough strength to move forward and not enough courage to turn back. There are sympathetic beings among them, who, with brilliant words on their bloodless lips, delude and cheat themselves as to their position and strength. And innocent victims they are, all of them, when it comes to the point; for in the crucial moments of life it is oftenest the most sensitive who is the first to be crushed.

The typical Darwinian *fin de siècle* figure is Alfred Russel Wallace, once the founder in part of the natural selection theory and now the critic of Darwinism, cutting into the most vital parts of the doctrine. That he has turned this somersault is due to the fact of his having turned spiritualist. While striving to retain his natural selection theory, he seeks to prove that the higher intelligences and deeper feelings of the mammalian species *Homo* have been brought into existence by the special interference, on his behalf, of some higher invisible powers, and that it is to this interference we owe those sentiments of reverence, patriotism, unselfishness, parental and filial love, etc., which constitute what is called the soul. This theory being naturally and completely antagonistic to the Darwinian doctrine, which acknowledges no special spiritual interference in the laws of nature since the first Divine breath of life, Wallace between his two stools comes to the ground, and lies there, a curious compromise between Darwinism and spiritualism.

Wilhelm Bölsche, as a thorough-going disciple of Darwin, criticises, with something of amusement, Wallace's new book on "Darwinism," of the fifteen chapters of which he declares fourteen only to be solid scientific work; in the fifteenth the author, so to speak, wrecks his ship in port. The article is comprehensive and sound, with a touch of sarcasm leveled between whites at Wallace. The sharpest is, perhaps, that with which it closes: "The tiny-brained bird who sacrifices herself for her young is merely the result of natural selection; but Wallace, the human being with the gigantic brain, who risks his health and strength in the fever miasmas of the Malay Archipelagoes for the sake of science—he is the result of spiritual interference in the laws of natural selection."

ORDEAL BY POISON ON THE CONGO.

IN the August number of *Die Katholischen Missionen*, Herr A. Koller, a missionary on the Congo, describes the ordeal by poison and the charmers of the Congo negroes.

One of the greatest social evils of the Congo negroes, he says, is the ordeal by poison (Nkassa). In the great Congo country it is this stupid superstition that does the most harm, and the fact that more negroes die a cruel death in consequence of this superstition than die in war or from disease should be sufficient proof. For years missionaries have tried to become acquainted with the religious views of the Congo negroes, but it has been most difficult; for it is just in this matter that the negroes are so close, partly from shame, as foreigners generally make fun of what they hear, and partly from fear lest the gods avenge themselves on the betrayers of their secrets. Still, the following facts are not far out:

All sickness, misfortune, adverse fate, and especially death, are not, in the eyes of the negroes, to be ascribed to Providence or the forces of nature, but to the hostile spirits of gods, or charmers, called "Ndotschi." When a negro is taken ill, a Ndotschi is working for his destruction. When any one dies it is a Ndotschi who has taken his life, or, as they say, who has eaten him.

A BELIEF IN IMMORTALITY.

All negroes believe in the immortality of the soul. "We are, it is true, less than the white man," they say; "but still we are not as the animals, having no soul at all." They believe the souls of the dead to remain in the neighborhood of the villages, in the woods, or in their graveyards, which generally adjoin a wood. The souls of the wicked or life-eaters are tortured in a place called "blunshi," whence there is no redemption. The souls of the good visit their own graves from time to time, and it is the custom to have placed on the graves figures, plates, jugs, and especially bottles, sometimes to the number of fifty and more, and these are filled with alcohol or palm-wine, that the departed spirits may refresh themselves. And no negro, however, much he may like brandy, will ever dare to steal it from the graves.

LIFE-EATERS.

While the Ndotschi are the life-eaters, the "banta ba Nsambi" are the men of God. The latter are good and kind, and their bodies are like those of normal men; the Ndotschi, on the other hand, are wicked and greedy, and have, besides a large stomach, a little magic sack (mankundu) in their breast, which is regarded as a sort of personality with the gift of a charmer. With the help of this charmer the Ndotschi conquers the life of his neighbor and eats him, not in a natural but in an invisible way, as befits a spirit. Hence his name life-eater, not soul-eater as some missionaries call him. The operation may last for years, so that the victim only loses his strength very gradually—gets slowly thinner and thinner till he dies. The power of the mankundu puts its possessor into an

ecstatic condition; with his help the Ndotschi sees and enters souls, and flits through space as fast as thought. The mankundu himself can break out in flames, and when he is hungry for men emits flames of fire. In this state he is specially to be feared, and to meet him is most dangerous.

FEAR AND FETISH.

As the Ndotschi practice their cruel business by night, the negro endeavors to be at home before sunset as much as possible; and as they can make themselves invisible, the negro protects himself by wearing amulets, in the form of little bells, tails of small animals, etc. Once the missionary entered the sleeping apartment of a Congo chief, and saw stationed on both sides of the door several idols with the most frightful faces, and armed with little knives. Herr Koller took up one of these fetishes in his hand to look at it more closely, when the chief flew at him, exclaiming, "Tschina, tschina (forbidden)! Oh, the white man!" A handsome present was then promised the chief if he would allow the fetish to be taken to Europe. "Never, at any price!" he replied; "for these idols have already protected me so long, and they have prevented the Ndotschi entering my abode in the night, and therefore I am safe from death." Another mode of protection from the Ndotschi is the painting of the body.

It is the duty of the priests (Ganga), with the help of the gods and medicines, to make the Ndotschi harmless, to snatch them away from their victims, or to find them out when they have been the cause of death, and to convict them of their crime by the ordeal by poison.

WEDDED TO THEIR SUPERSTITIONS.

Herr Koller gives many instances of the mischief wrought by the ordeal by poison. At one deathbed where he was present the Ganga, who was trying to discover the wicked Ndotschi who was the cause of the sickness, made the most terrible noise with his musical instruments, partly to prevent the Ndotschi entering the dwelling, and also to make himself important in the eyes of the negroes. When all was quiet again, a woman in the early hours of the morning went about the village for about half an hour, howling and crying and screaming and singing, "He is ill; his life (muntu) has been taken; Ndotschi, wicked man, bring it back; woe to him and to me if thou eat him!" Later, negroes came to weep about the hut. They were in holiday costume, including the red umbrellas. While they peeped through any little crevices into the hut they shouted to the dying man, "He is dead, *iai, iai, iai*; cursed be the Ndotschi who has eaten his life," etc. Meanwhile the Ganga declared to be the Ndotschi that negro who the night before had played the part of the "Tuta," that is, he with his mouth full of water had promised to restore life to the sick man. The Tuta denied the accusation, but as the sick man breathed his last the same evening, the accused took refuge in the woods, and a few days later went to the mission station to beg. Then he sought a priest to clear him of the sus-

picion of being the Ndotschi, but in vain; so in the presence of a number of negroes he drank the poison, and in three hours was dead.

It is useless for the missionaries to persuade the accused to fly. The suspected Ndotschi make it a matter of honor to drink the poison, believing God will interfere when they are innocent, and in any case glad to be assured that they have not the life of the dead in their stomach. To get rid of the guilty Ndotschi is ordered by the gods, and therefore a good work.

A NOTABLE SERMON.

THE *Leisure Hour* for October says that Canon Fleming's sermon, which he preached at Sandringham on the death of Prince Albert Victor, has had the most extraordinary sale of any sermon in recent times: "The profits during the short period of six months amounted to no less than \$6,500, of which the sum of \$3,250 was given, by the Princess of Wales, to the "Gordon Boys' Home," and \$3,250 to the "British Home for Incurables." Over 50,000 copies were sold in that time—a sale certainly unprecedented in the annals of profit from a single sermon of a few pages.

"The preacher has been heard to say that this sale was not due to his slender sermon, but to the touching anecdote told by the Princess, forming the prefatory note, and which she gave permission to be printed. The substance of the story is that in 1888 all the five children of the Princess were with her at Sandringham, and they all partook of the Holy Communion together. 'I gave Eddy a little book,' said the bereaved mother, 'and wrote in it:

'Nothing in my hand I bring
Simply to Thy cross I cling,

and also

'Just as I am, without one plea,
But that Thy blood was shed for me,
O Lamb of God, I come.'

'When he was gone, and lay like one sleeping,' continued the Princess, 'we laid a cross of flowers on his breast, and after we had done so I turned to the table at his bedside, and saw the little book in which were written these words; and I could not help feeling that he did cling to the cross, and that it had all come true.'

LIFE IN CORSICA.

MR. BASIL THOMPSON gives an account, in *Chambers' Journal*, of society in Corsica. In that God-forsaken island the vendetta reigns. The whole of society is dominated by a fierce spirit of clanship. The first three months of the year are devoted to elections in which the various clans try their strength, and for the remaining nine months of the year the dominant section persecutes and harasses its vanquished foes. The Mayors and officials consider that it is their first duty to help their own clan or party.

In addition to the functionaries who take this extreme view of their duties, the country is infested with another set of miscreants, who are only less

powerful than the officials: "Bandits are a hidden power in the country. They control the petty elections; they menace those who are hostile to their own friends. Thus, while the existence of six hundred of them is a real danger to public security, it is no small advantage to a Corsican to be related to a bandit. You support, pay, protect the bandit, and in return he places his gun at your disposal."

It is not surprising that in such an island threatened persons remain shut up for months, or even years, in their houses, built, as all Corsican houses are, like a fortress. Corsica is clearly not a place on which civilization has much hold.

MARKETING CALIFORNIA FRUITS.

MR. W. H. MILLS, writing on this topic in the *California Illustrated Magazine*, astonishes us by the figures he gives showing to what an enormous extent the Californian fruit industry has grown. He estimates that the total amount of green fruit shipped from California last year was 300,000 tons, and states that a single purchaser of dried fruit in San Francisco bought a million dollars worth in one month's business. "We are enjoying in the current year the highest prosperity the fruit growers have ever known, and yet the whole enterprise has made its way against continued predictions of over production and ultimate failure."

Mr. Mills argues in this article to show that the marketing arrangements, as at present managed, are far from perfect, and that the fruit grower loses the profits of a superfluous middleman in the reshipping which takes place from the great centers of the East. He asks that a commercial company be formed for the sale and distribution of the products. "The auction method having proved successful, it is practicable to send to every town or city in the United States, where a market for a single car might be found, a carload of fruit to be sold at auction, and this fruit should be sent directly from the centers of distribution in California, and regardless of centres of distribution at the East. As supplemental to this it is feasible, over Eastern lines, to distribute fruits in less than carload lots over short distances of distribution."

The writer looks to fruit growing for California's future great industry. He shows that general farming tends to consolidation of ownership and consequent depopulation of the country. On the contrary, the industries connected with the orchards, vineyards and gardens of California have an inherent tendency toward segregation.

"Ten acres of orchard, vineyard or garden will afford profitable employment equal to that required upon one thousand acres of ordinary wheat land in this State. The absence of a cheap coal, that reservoir of mechanical power, forbids the hope of the establishment here of great manufacturing enterprises with their attendant density of population,

"Horticulture, prosecuted under the unrivaled advantages which attend it here, leaves us without a competitor upon this substantial and enduring basis, the entire industrial structure will eventually arise."

THE PERIODICALS REVIEWED.

NORTH AMERICAN REVIEW.

IN another department will be found extended reviews of Mr. Gladstone's discussion of Home Rule, Mr. Henry Labouchere's criticism of the Foreign Policy of England, and of "Some Adventures of the Necromancer Chevalier Herrmann."

ISSUES OF THE CAMPAIGN.

The real issue of the pending campaign is held by Senator George G. Vest to be that of the tariff, which he points out as marking the dividing line between the Democratic party and its adversaries from Hamilton and Jefferson down to Harrison and Cleveland. Senator Vest is opposed to a protective tariff, the chief fault he has to find with the system being that under the guise of providing for the general welfare by levying import taxes it confiscates the proceeds of one citizen's life and liberty to promote the interests of others.

The Honorable Sylvester Pennoyer, Governor of Oregon, takes quite a different view of the question as to the issue of the pending campaign. "The one great issue," he says, "which transcends all others in importance, relates to the issuance of paper money. The most important questions, whether the Government itself shall issue the required paper currency of the nation or delegate such issue to private corporations; whether it shall keep its own surplus, which in a great nation like ours must always amount to millions, in its own sub-treasuries or shall parcel it out among national banks; and whether such governmental money shall be loaned by it direct to the people at a low rate of interest upon undoubted security, or be divided among such banks, without interest, to be loaned by them to the people at high rates for their enrichment, will be the paramount issues of the forthcoming Presidential contest."

ARBITRATION AND STRIKES.

Discussing the Buffalo strike, Mr. Theodore Voorhees, General Superintendent of the New York Central and Hudson River Railroad, gives in a paragraph his opinion of arbitration: "The plea for arbitration which was advocated by a portion of the press, and which is always heard at such a time, was equally chimerical. Arbitration with irresponsible bodies of men—men bound by no law to continue in their employment, and with whom no contract would be of any value—will never be successful. In the case of those trades unions whose members are skilled, who have a large body of intelligent and picked men, such as the Brotherhood of Locomotive Engineers, strikes are very rare, and arbitration can be safely resorted to, because their body is such that any agreement or contract entered into on behalf of the men by their own leaders can be depended upon to be carried out by the rank and file. Such organizations command respect, and difficulties with them are rare, and when they do occur are readily adjusted."

BUSINESS IN PRESIDENTIAL YEARS.

In considering the effect upon business of the recurrence every four years of a presidential election, Mr. Chas. Stewart Smith, president of the New York Chamber of Commerce, is led to the conclusion that the stability and tranquillity of the commercial operations of the

country would be greatly promoted by a lengthened term of office for the chief executive of the United States, to say nothing of the millions of dollars more or less unprofitably expended in a presidential canvass. The individual losses caused in an exciting campaign by the retarding of business relations are, he asserts, incalculable.

ASIATIC CHOLERA.

The number ends with a symposium of four papers on the cholera, by Surgeon-General Walter Wyman, President Chas. G. Wilson, of the New York Board of Health, Dr. Samuel W. Abbott, secretary of the Boston Board of Health, and Dr. Cyrus Edison, sanitary superintendent of the New York Board of Health. The safeguards against the introduction of this disease from without as suggested by Surgeon-General Wyman are the construction of a cordon around our coasts and along our borders, the enactment of laws suspending immigration under conditions like the present and the regulation of Mohammedan pilgrimages. The nature of cholera and the way it is spread are described by Dr. Cyrus Edison as follows: "To-day cholera affords us a most striking instance of the fact that science has relegated superstition to the past. In the light of to-day we see clearly the following well-proven realities: 1. Cholera is the result of introducing into our digestive systems the cholera bacillus. 2. No person can have cholera unless that bacillus is so introduced. 3. The bacillus reaches us mainly through the channels of drink and food. 4. The bacillus infects these channels from the excretions of persons sick with the disease. 5. The bacillus can be easily killed before or even after it reaches drink or food. 6. When the bacillus is so killed there is absolutely no danger to the person swallowing it."

THE FORUM.

WE have reviewed elsewhere "Venal Voting: Methods and Remedies," by Prof. J. J. McCook; "The Primary the Pivot of Reform," by Hon. David Dudley Field, and "Sunday and the Columbian Exposition," by Bishop Henry C. Potter.

The main point in Dr. Lewis A. Sayre's paper on the cholera, in the current number of *The Forum*, is that it is a disease which never generated on this continent, and can come here only by importation, and that it is always carried from place to place, and does not spread in any mysterious way.

Dr. J. M. Rice points out the defects in our public school system, taking the schools of Baltimore as typical of those in cities throughout the country. In Baltimore he finds that the Board of Education is a purely political organization, and the product of ward politicians; that the supervision of schools is thereby far too meagre, and that the schools are almost entirely in the hands of untrained teachers. His remedies for the evils, such as these which exist in the Baltimore schools, are simply stated: to take the schools out of the domain of politics, to employ only professionally trained teachers, and to enlarge the supervisory staff.

Two articles on the subject of Civil-Service Reform appear in this number: one by Lucius B. Swift, in which this writer reviews the progress made in this direction

during the last two administrations, and the other by John T. Doyle, who gives an account of a merit system of selecting government employes since it was first applied in 1883.

Senator N. W. Aldrich, of Rhode Island, argues to show that the McKinley tariff has not raised the cost of living in the United States, and Representative W. L. Wilson, of West Virginia, makes an attack upon "The Republican Policy of Reciprocity," of which he says in conclusion: "Enough has been said, I believe, to show that the only purpose of the Aldrich amendment was to get rid as easily as possible of the Blaine proposition, and at the same time to delude the people into the belief that something had been done to carry out Mr. Blaine's ideas. All that has been gained or may be gained under that amendment belongs to the *de minimis*, and shows how little informed the President was when, replying to Major McKinley's speech of notification, he declared that 'new markets abroad of large and increasing value, long obstinately closed to us, have been opened on favored terms to our meats and breadstuffs under the operation of these commercial treaties.'"

THE ARENA.

THE *Arena* gives its first pages to a sketch of E. H. Sothorn, by Mildred Aldrich, with half-tone illustrations of the brilliant young actor in some of his favorite rôles, the whole making a pleasant encroachment on the field of serious social import to which this periodical generally restricts itself. Though Mr. Sothorn inherited his volatile humor and much ability and reputation from his father, E. A. Sothorn, he was by no means born with a histrionic silver spoon in his mouth, but had to work his way to recognition through discouraging obstacles and setbacks. "It will not be difficult," concludes his biographer, "to predict the future of E. H. Sothorn. It will be to the end concerned with his personality. That fact limits, of course, his range of parts, but even then it leaves him more latitude than most actors take; for there is a long line of characters now waiting him, in which his personal charm may be found to stand well in the place, so far as the favor of the public is concerned, of naturalism or a mastery of Diderot's ethics."

The Hon. Thos. E. Watson, writing on "The Negro Question in the South," thinks that "the People's Party" will settle the race question: First, by enacting the Australian ballot system. Second, by offering to white and black a rallying-point which is free from the odium of former discords and strifes. Third, by presenting a platform immensely beneficial to both races and injurious to neither. Fourth, by making it to the interest of both races to act together for the success of the platform. Fifth, by making it to the interest of the colored man to have the same patriotic zeal for the welfare of the South that the whites possess.

The *Arena* presents a little symposium on woman's dress, in which Lady Harberton, Octavia W. Bates, Grace Greenwood and Em. King give their views. Lady Harberton chooses for her subject, "How It Is to Get on No Faster." She asserts that a large number of women are "intellectually convinced their method of dressing is wrong. But they excuse themselves from giving any assistance on the plea that any change in dress would be inartistic. The less these people talk about art the better. The fashion papers are the favorite reading of many of them, and there we see them in delighted contemplation of figures, which, if measured from scale, vary from nine to twelve feet in height, and if traced so as to leave out

the clothes present a deformity so monstrous that it would surely repel even them."

THE NINETEENTH CENTURY.

WE notice elsewhere three of the best articles: Mr. Redmond's "Plea for Home Rule," Mr. Edwardes' "Paper on the Football Mania," and Miss Priestley's "Plea for Housekeeping Schools." The number is above the average, and is the best of the English reviews this month.

ARE THE IRISH GOING MAD?

Mr. T. W. Russell, in his paper on a "Decade of Irish Progress," gives some alarming figures as to the rapidity with which insanity is increasing in Ireland.

The total number of lunatics and idiots returned on the census forms in 1851 amounted to 9,980; into 1861, to 14,098; in 1871, to 16,505; in 1881, to 18,413; and in 1891, to 21,188.

These are undoubtedly the most startling figures contained in the report, and they ought to give rise to searching inquiry. Probably whisky and politics will turn out to be the main factors in an increase which is phenomenal, and which demands the serious attention of the legislature. In Kerry a well-known doctor informed me that the increase is mainly among women whose sons had taken part and fallen, as the phrase goes, in land war. And in a petition which I lately presented to the Home Secretary for the release of one of the dynamite prisoners, I noticed the statement that the prisoner's mother went insane on hearing of her son's conviction. We shall never be able fully to realize all the trouble born of the "Ten Years' Conflict."

MR. IRVING ON THE WRITING OF PLAYS.

Mr. Irving, somewhat nettled at remarks made by novelists who have explained in the *Pall Mall Gazette* why they don't write plays, and at the criticisms of Mr. Barlow, writes an article to say that everything is for the best in the best of all possible worlds. Even the music halls do not disturb the equanimity of this imperturbable Pangles.

FEMALE CONVICTS IN NEW CALEDONIA.

Lady Jersey describes the first visit paid by the Australian Governor to the French convict settlement at New Caledonia. In the course of her paper she gives the following account of the way marriages are arranged by the authorities:

"If the Sisters find that one of the women committed to their care, whether *récidiviste* or, I believe, ordinary criminal, is a promising subject, they inform the authorities and ask them to look out for a suitable husband among the male convicts showing a tendency to reformation. The bridegroom selected is allowed to pay his addresses under the chaperonage of the worthy nuns, and, if his suit is successful, the hopeful pair are married, and generally provided with a little land as a start in life. The law, however, does not abandon its interest in their domestic concerns. If children appear in the household they are taken away from the parents when four or five years old and placed in institutions, where they receive due religious and social training. The parents are permitted to visit them, and after some years to remove them, if they repay to the State all the money expended meanwhile on their education. This condition renders the privilege of withdrawal practically nugatory. The children are said to turn out well. Women transported for infanticide are found to make the best mothers.

THE FORTNIGHTLY REVIEW.

THE *Fortnightly Review*, with the exception of Mr. Harrison's tilt with Professor Huxley, is hardly up to its ordinary strength.

THE TREND OF TRADES UNIONISM.

Mr. Massingham's article upon the "Trades Union Congress" is rather slight. Every one knows beforehand what is Mr. Massingham's trend, and Mr. Massingham is one of those amiable enthusiasts who always see things trending in the way in which they are going. Mr. Massingham's particular trend is Socialism, beginning with the Eight Hours bill and going on to lengths not yet particularly specified or precisely defined. The moral of the Congress of 1892, he thinks, is the extent to which it proves that the new unionism has permeated the old. The stock controversies between Trades Unionism and Socialism have practically ceased.

MR. SWINBURNE'S LATEST OUTBURST.

Writing on Victor Hugo's "Notes of Travel," Mr. Swinburne inveighs once more against the Home Rulers, who are his particular aversion. It must be admitted that he brings in his denunciations somewhat by the head and shoulders. He says that occasionally in Victor Hugo's pages one comes across a curious example of the quality known as Jingoism in the gutter slang, "of those reactionary disunionists whose version of a vulgar song would run as follows :

'We don't want to fight, but if you, by jingo! do,
Pray take our money, ships and men—but please don't
kick us too.'

The blindest and spitefulest childishness of poor old citizen Chauvin is respectable compared to the groveling abjection of Anglo-Saxon Anglophobia. Even among the basest of French reactionaries the French might be justified in boasting that such naked and shameless disloyalty would be scouted and scourged back into its sewer-holes. It is a less ignoble perversity or obliquity of prepossession which sees in the victory of Waterloo the triumph of mediocrity over genius. At this we may smile; our gorge rises at the other.

OTHER ARTICLES.

Mr. Walter Pater contributes the lecture delivered to the University Extension students at Oxford on "Raphael," dealing with his life rather than with his pictures. Mr. Samuel Montagu once more lifts up his voice in favor of silver from the point of view of Indian finance. Mr. W. E. Hodgson has a curious kind of paper on "Our Weekly Reviews," in which he says, although differing in many respects, nevertheless, they agree in being leisurely, philosophical and fastidious. So far from having lost their hold in the rush and growth of the daily press they have become more indispensable than ever, although in their manner and their temper they represent every mental, social and moral force which Democracy is supposed to loathe. Mr. Boyd Dawkins' paper on "The Settlement of Wales" does not deal with current questions, but with the history of the past, although he claims that the facts prove that the claim for separate legislation for Wales on the ground of race is a rotten one, without foundation. Mr. Ferdinand Brunetière, in an essay on "The Characteristic of French Literature," maintains that its distinctive note is the idea of a "universal man." "English literature," he says, "is individualistic, and German literature philosophical, whereas the French literature is pre-eminently social." It is this, the eminently social character of the literature itself, which accounts for its universality, and

also for the universality of the French language. Mr. W. B. Worsfold, writing on the "Barren Ground of Northern Canada," reviews and praises Mr. Pike's account of the two years which he spent in the land of the musk-ox.

THE NATIONAL REVIEW.

THE first two articles upon the "Future of the Tory Party" are noticed elsewhere.

SOCIETY IN ANCIENT VENICE.

Mr. Charles Edwardes describes life in ancient Venice in a paper that must have taken a great deal of trouble to write, but which is very easy reading. The most striking part of his paper is the account of the wholesale demoralization which set in in the fourteenth century and attained its height in the sixteenth. In 1509 there were nearly 12,000 courtesans in a population of 300,000. The council encouraged vice in order to divert their young men from politics.

THE RUIN OF ENGLISH AGRICULTURE.

Mr. P. Anderson Graham has a paper concerning the disastrous consequences which this season has brought upon British farming. English land, he maintains, will soon go out of cultivation altogether, unless an import duty is placed upon foreign flour. This would not only enable the farmer to grow wheat, but would encourage most of the people to go back to brown bread. Nothing will prevent the depopulation of the country districts of England except an increase in wages. Wages cannot go up while prices are going down. One of the most far-sighted agriculturists in England declares that we have entered upon a period of agricultural depression compared to which the depression of former times will be declared to be trivial. The fall in prices has been so heavy that the value of the live-stock of Great Britain is worth ten or twenty millions less than it was twelve months ago. Everywhere the condition of the laborer is growing worse, and must continue to grow worse as long as the profits to be made by the cultivation of land diminish. Unless, concludes Mr. Graham, some form of protective steps are taken at once English land is bound to pass out of cultivation.

THE RISE AND FALL OF WORDS.

Mr. Philip Kent has a short paper tracing how certain words have risen from disrepute into respectability, and how others have fallen into disgrace. A marshal was formerly a shoemaker, a chancellor a mere doorkeeper, Bible in Chaucer's day merely meant a book or scroll; now it has acquired an exclusively sacred meaning. Sophist began by being a wise man, and has become the equivalent for a misleading deceiver. A villain was once a respectable farm laborer, but has been degraded into the equivalent of roguery. Cunning used to mean honorable skill, but now it has sunk to its present low estate, and so forth and so forth. Words, like individuals, have their changes on the wheel of fortune. They are now up and then down, and no one can say what a word now in good repute may be used to mean a hundred years hence.

OTHER ARTICLES.

Mr. Andrew Lang compares the "Song of Roland" and "The Iliad." Mr. T. E. Keibel discourses pleasantly upon "Gamekeepers." Mr. H. de F. Montgomery discusses the organization of "Real Credit in France and Germany." Mr. Richard Davey gossips about the boyhood and youth of Columbus, and Mr. Shettle has an article on "Coming and Going." The correspondence is interesting reading and the last letter by a nervous man

discusses what is the best method of curing an intermittent drinker. He thinks that the best thing to do is to get a doctor in a quiet country village to take him in and board and lodge him for from \$10 to \$20 a week, taking care that he is not allowed to drink.

THE CONTEMPORARY REVIEW.

WE notice elsewhere Professor Raleigh's "Lessons from American History: A Reply to Dr. Shaw."

THE POLICY OF THE POPE.

The first place in the *Review* is given to an anonymous article which is bitterly hostile to the present Pope. The article is apparently written by a Hungarian or an Austrian Pole, and his point is that the Pope has betrayed the spiritual interests of the Poles, and has generally sacrificed the real interests of the Catholics throughout the whole world whenever they conflicted with his political designs. He says "we dare not trust ourselves to judge his policy by its visible and tangible aspect," which he suggests would lend a degree of credibility to the accusations of his enemies that he is a mere diplomatist who sides with the strong and abandons the weak. All Christendom is threatened with war for the sake of a few square miles of territory once known as the Papal States. The article is a powerful but a somewhat bitter presentation of the case against the Pope's policy.

MCKINLEYISM IN AMERICA.

Mr. Robert Donald has one of his laborious and well-informed articles concerning the result of the McKinley Tariff in America. Mr. Donald is a strong Free Trader, and he thinks that the revolt against high protection is growing in force and will decide the presidential election. He thinks that McKinley's Tariff has only temporarily damaged foreign industries, but it has done much more harm in the United States. It has checked the development of industry, and but for the enormous harvest last year the revolt against it would have been much more marked than it is. The attempt to acclimatize the tinplate industry has been, he says, a dismal failure. Mr. Donald thinks that McKinleyism has had a blighting and demoralizing effect all over America, and puts labor more and more at the mercy of organized wealth. The chances, he thinks, are distinctly in favor of Mr. Cleveland.

THE RECENT "HEAT-WAVE."

Sir Robert Ball has one of his interesting astronomical papers on the recent "heat-wave" which a short time ago passed over America and Europe. He frankly confesses that he can offer no solution of the problem why there should have been such a sudden increase of the temperature. He says that if we look at the heat in its proper perspective, we have only an increase of five per cent. upon the normal temperature. In New York the temperature went up to 100 deg. when the normal temperature was 80 deg. This is not an increase of twenty-five per cent., but only of five per cent., because the normal temperature of space is at least 300 deg. below zero. Before the thermometer can register 80 deg. the sun must raise the temperature 380 deg. When it rises to 100 deg. it has only to increase by an additional 20 deg. Thus, he says, a very trifling proportional variation in the intensity of the sun's radiation might produce great climatical changes. He thinks there may be a connection between climate and sun-spots, but nothing positive can be said. He gives an interesting account of the tide-predicting machine.

ARCHBISHOP MAGEE.

Archdeacon Farrar contributes some reminiscences of Archbishop Magee in a review of his published sermons. He deals faithfully with Magee's famous saying that he preferred to see England free than England sober, and this famous phrase led to a coldness between him and the Bishop, which fortunately was removed before his death. He says: "In a speech in the Clarendon Theatre at Oxford delivered in the Bishop's lifetime, I referred to this saying, without mentioning his name, as a glittering and dangerous sophism. The speech—though I alluded to him with entire courtesy and respect, and though, if he had at the time repudiated the sense I put on his words, I should instantly and with the most cordial apologies have accepted the correction—gave him deep and abiding offense, and caused on his part a silent but very unfriendly feeling toward me. The circumstances which restored me to a friendly footing with him are full of pathos, but may not here be alluded to. Suffice it to say that of late years his relations toward me were marked with entire cordiality.

The Bishop said that every week, and by almost every post, he continued to the last to receive letters of indignant complaint of his speech."

THE WESTMINSTER REVIEW.

THERE are not many articles in the *Westminster Review* calling for special notice. Mr. Laurence Irwell discusses whether Great Britain should return to Protection, and maintains that it would be suicide for that country if it were to increase the cost of its food or any necessity of life. Mr. E. K. Chambers has a good article on "Poetry and Pessimism," which is an analysis of the poems of Amy Levy. There is a sensible little paper which pleads for manual training as a pastime for boys. The writer holds that the present systems of manual instruction are of no use; he would simplify them and make them more natural. Mr. F. Y. Brown, in a paper on "Industrial Life Insurance," points out that while Government Life Insurance is a comparative failure, private experience has proved that the idea of an insurance on life is distinctly popular. He asks, if the Government fails when dealing with a popular side of the question, how will it succeed in carrying out old-age pensions, which from private experience is generally distinctly not popular? There is a literary article on "George Eliot as a Character Artist" by Mary B. Whiting. Robert Ewen urges that there should be as many National Banks in England as in America, where there are twenty-seven in Pittsburgh alone. Such banks should be formed under the Companies act, with \$25-shares. \$5 paid up. Mr. P. W. Roose has an article, somewhat sketchy, but not bad reading, upon "Fancies Concerning the Future World."

THE ENGLISH ILLUSTRATED.

THE *English Illustrated* continues to maintain its own line with success. It has a very good portrait of Sir Arthur Sullivan as a frontispiece, which is followed by an article on "Some Musical Conductors," by Mr. Bennett of the *Daily Telegraph*. Bret Harte begins a new serial entitled "Sally Dows." Mr. Cuthbert Hadden has a curious article on "Beards or No Beards," illustrated by sample chins of a great many notabilities in the past. Mr. Herbert Russell breaks new ground in a paper on "Clipper Ships." Mr. Alfred Watkins has an illustrated paper upon "A Summer Among the Dovecotes." Mr. Horace Hutchinson contributes a paper on "Golf and Golfing," illustrated with instantaneous photographs.

ATALANTA.

ATALANTA has been amalgamated with the *Victorian Magazine*, and Miss Meade will have the assistance of Mr. A. B. Semington, the editor of the *Victorian*, in producing the *Atalanta* for the future. The great feature of the new volume of *Atalanta* is to be Robert Louis Stevenson's "David Balfour," a sequel to "Kidnapped," which is, in Mr. Stevenson's own opinion, as good, or even better, than either "Treasure Island" or "Kidnapped." Another remarkable feature of the new volume is the "School of Fiction," which is to be the Reading Union of the *Atalanta*. For the next twelve months this paper will be devoted to articles on the art of writing novels for all those who wish to take up novel-writing for a profession. Half a dozen novelists, beginning with Mr. W. E. Morris, are to write papers on "The Mystery and Art of Writing Novels." A scholarship of \$100 a year, tenable for two years, together with other prizes are to be awarded to those who send in the best reply papers. This scheme will be worked on the same lines as the Reading Union, and full particulars for the guidance of members accompany this prospectus. The main idea of the school is to help to form style, and to correct that want of method and unity in the construction of plot which characterizes the work of most beginners.

There is to be a series of papers on "Social Life in London," beginning with "Literary London," and going on with "Journalistic London, and Artistic, Musical and Philanthropic London." In the October number Julia Cartwright describes, with copious illustrations, Alma Tadema's work.

THE CENTURY.

WE review at greater length the article by Prof. Jeremiah W. Jenks on "Money in Practical Politics."

Mr. Archibald Forbes begins a series of papers which he entitles "What I Saw of the Paris Commune." Mr. Forbes saw a great deal, as is apparent from this first batch of reminiscences, and the quality of his experience was quite as striking as the quantity; falling into the hands of the Versaillists he was only saved from being shot for a Communist by the welcome fact that his hands were not blackened with gunpowder—that accident confirming his associations of neutrality.

In an editorial headed, "What the Columbian Exhibition Will Do for America," one of the *Century's* staff writers says: "Cultivated Americans think well of their countrymen in many directions. But as a nation we have as yet too little faith in our artistic capabilities—too little respect for the American artist, too little belief that the nascent love of the public for art is genuine, vital and strong. The Columbian Exhibition will prove to the most doubting and critical spirit that American art exists, that it is capable of great things, and that it can do great things in a way distinctively its own. Had Chicago equaled Paris, it would be greatly to our credit; but it has surpassed Paris. Had it produced a beautiful exhibition in imitation of the Paris Exhibition, it would again be much; but it has conceived an entirely different ideal, and carried it out on entirely novel lines. We shall have an exhibition more dignified, beautiful and truly artistic than any the world has seen; and it will be entirely our own, in general idea and in every detail of its execution. It will convince all cultivated Americans, we repeat, of the vitality and vigor and independence of American art; and, we believe, its effect upon the vast public which will view it will convince them of the genuineness of the nascent American love of art."

HARPER'S.

WE review in another column President Charles F. Thwing's paper dealing with "Education in the West."

Mr. Theodore Child continues the valuable articles on French home subjects in a description of "Paris Along the Seine"—"the first of our rivers, the most civilizable and the most perfectible."

Another illustrated article describes some very *fin de siècle* tiger hunting in "the province of Mysore, for which the author, R. Caton Woodville, furnishes the sketches. Mr. Woodville was given the luxury of a royal tiger hunt as a reward and courtesy for painting the Maharajah's portrait. This tiger shooting, which is, perhaps, more sportsmanlike than it reads, is achieved by driving the royal beast into a net and then murdering him with express rifles and smooth bores.

The "Editor's Easy Chair" this month is given over to some words of comment on its lamented occupant, and next month we are promised the last contribution from Mr. Curtis' pen.

Two long contributions to the *Columbian* of the month and a characteristically charming story by Thomas Janvier are the remaining features of the number.

THE ATLANTIC MONTHLY.

THE best things in the *Atlantic* this month are its extended book reviews of Messrs. Kipling and Bales-tier's "The Naulahka," Stevenson and Osborne's "The Wrecker," Mr. Curzon's "Persia," and of Cavour's collected works, which are treated under the heading "Cavour as a Journalist."

Mr. James C. Carter, on the subject of "Mr. Tilden," is of course interesting. He credits Governor Tilden with "capacities for public usefulness superior to those of other men of his generation," with the qualification that "he could not have led, or rather guided, as Lincoln did, the storm of patriotic passion which the Southern insurrection aroused."

Mary A. Jordan writes of "The College for Women," to say that, while the experiment in the United States is, on the whole, a decided success, that the institution is, nevertheless, "in danger from its own success. Its growth has been unprecedented and unexpected—to a certain extent inexplicable. Among those who have been attracted is the social being. She would naturally find her proper place in the fashionable finishing school, it might be thought. But she chooses college, as likewise does her prototype, the business man. They are alike in many points. Both are admirably competent and limited. Because they are competent they succeed in passing examinations for entrance to college, and term examinations afterward; because they are limited the examinations are necessary; and because they worship their limitations they are a menace to scholarship. At present the entire relation is ill adjusted. The social being is perfectly certain of her ultimate aims, but is quite at sea as regards those of scholars. She does not appreciate the fact that her seventy-five per cent. ambitions are eternally different from intellectual aspirations—in short, that she is a drag; nor indeed has the college appreciated this until a comparatively recent date. . . . By honor divisions, by group systems, or by a compact course of essentials, the needs of one of these classes would be met, and free scope left for the other."

THE COSMOPOLITAN.

ELSEWHERE we review at greater length Col. John A. Cockerill's article on "Some Phases of Contemporary Journalism."

Mr. D. B. St. John Roosa has a good subject in "The Human Eye as Affected by Civilization." He tells of the great revolution in optics which the ophthalmoscope has wrought, and of the increased use that we can get out of our eyes by means of the discoveries modern science has brought about. And, in general, he concludes that civilization has not changed in any respect the anatomical characteristics or functions of the eye, but that the demands on that organ have been very much increased, so that we shall have to use, more and more, artificial methods of helping and adjusting the optical nerves.

The *Cosmopolitan* publishes the first of a series of papers on "The Great Railway Systems of the United States," this dealing with the Plaut system. It is by Mr. H. B. Plaut himself, who says :

"In seeking to outline the future destinies of the South Atlantic system, the possibilities which attend the awakening of new and valuable commercial relations with the West Indies and with Central and South America demand recognition. Here is one-half of a continent getting ready to trade with the other half. South of the Tropic of Cancer the Caribbean Sea encircles a thousand islands and washes the shores of Mexico, of Central America and the Spanish Main. The forces of nature have fitted this region for the production of the raw materials of commerce under conditions more favorable than exist elsewhere in the tropics, in Africa or in Asia. The wealth of Cuba in her iron ore is just beginning to be exploited, and all these treasures of nature, admirable now mainly for their potency of promise, lie spread out before the ports of the South Atlantic and Gulf States. These seaports are at the same or at a lesser railroad distance from the western centres of trade than are the commercial ports of the North Atlantic. They are now enjoying the first fruits of reciprocity with the Caribbean region. With the growth of manufacturing industries in the coal and iron districts of the South, which is the inevitable outcome of the great natural advantages they enjoy ; as the great cities of the West begin to appreciate that their true route to the trade of the tropics lies southward and not eastward ; as the older cotton-growing States learn to utilize their cheap negro labor for manufacturing coarse goods, the South Atlantic from Charleston to Florida will no longer seek for foreign trade across the Atlantic Ocean, but will face about to the South, and, by the exchange of manufactured goods for raw materials, lay the foundations of trade that neither Tyre nor Sidon, Venice nor Genoa ever enjoyed."

Murat Halstead descants this month on "Liberal Tendencies in Europe." While he sees a steady wave of liberalism advancing in both the Western and Eastern continents, he does not expect any sudden cataclysms.

"Glancing over the tendencies of the times to strengthen the people in public affairs, we do not anticipate speedily seeing transformation scenes that shall terminate monarchical institutions in Europe as in America. The greatest danger that affects the monarchs of the period is that, owing to deficiencies in education, they take themselves too seriously. If they could but understand that they are types and shadows, they might go on—we should not say forever, but for a long time. It is the sense of importance in the occupant of a throne that threatens its stability. A king must make very little use of divine right, or he will want human sympathy."

BELFORD'S.

IN *Belford's Monthly*, James Maitland has an extraordinary array of striking personalities to sketch among "The Men Who Made the West." Not the least so is George M. Pullman, who manufactured the city which bears his name quite as much out of the whole cloth as did in olden times Romulus and Remus. "Before a brick was laid for factory or residence, the whole site was thoroughly drained, and a perfect water, gas and sewer system put in, the streets macadamized and planted with trees, and the entire plan for a great manufacturing city mapped out. Churches, schools, a theatre and public halls, markets, a public library building, parks and public squares were provided. Side by side with the vast manufacturing buildings rose the comfortable and well-appointed brick dwellings designed for the employees, who number some 13,000 to 15,000 in all." And this is the work of a man who, not so many years ago, was working in a New York village store on a salary of \$40 per annum.

From California John T. Doyle writes at length to prove untrue the arguments which one of *Belford's* writers, Champion Bissell, has been using to prove that the California wines are of an inherently inferior quality to the European brands, because of certain qualities imparted and denied to the grape by the Pacific Slope soil. Mr. Doyle affirms that our native wines are fully the equal of the French, when quality and price are considered, and, further, that the so-called French clarets with which they are compared are themselves really California wines, with spurious labels—an imposture which is rendered necessary to the wine grower by the widely popular prejudice still extant.

LIPPINCOTT'S.

WE tell elsewhere of what Mr. James Cox has to say about "The Grand Carnival at St. Louis." George Alfred Townsend (Gath) continues the journalistic series with a recountal of some special correspondent experiences of his in North Carolina. The novelette of the month is "The Kirs of Gold," by Kate Jordan, and Richard Henry Stoddard writes on James Russell Lowell. Edwin Checkley, on the subject of "Muscle-Building," says: "My advice to those who wish to develop vitality is to attain a good circulation of the blood by persuading the organs of digestion, secretion and excretion to perform their proper functions ; not to shake up the body by special exercises, but to resist the crushing effects of gravity as much and as constantly as possible, whether seated or on foot. Don't jump ; don't loll. Hold the body from the top of the head to the joints of the hips, stretched out to its fullest extent, so as to give the organs encased within it all the room possible to perform their work, instead of retarding the involuntary peristaltic action of the stomach and intestines by letting the body sag down, as is so often done. Then fill your lungs with air by drawing it gently into them through the nose, and expel it through the same organ, as the horse does. Use the mouth as the chief organ to reach the stomach with, and not for breathing. During this process do not forget to relax the muscles of the arms, shoulders and chest."

THE *Sunday at Home* begins with a colored picture from Mr. W. H. Overend's painting, "My Father's at the Helm." The serials will be "Tales of a Housekeeper," by E. Everett Green ; "When the Bour Tree Blooms," by Leslie Keith. There are sketches of "Religious Life in Germany," "Foreigners in London," and "Our Lightships."

MUNSEY'S MAGAZINE.

"MUNSEY'S" for October is devoted chiefly to personal sketches. Among the persons sketched are Alphonse de Neuville, in the artist series; Isabella, ex-Queen of Spain; Sarah Bernhardt, by Morris Bacheller; Edward Everett Hale, by Sydney F. Cole; Lord Salisbury, by W. Freeman Day; Oliver Optic and Horatio Alger, by Frank A. Munsey, and General Lew Wallace, by Henry V. Clarke. Mr. Matthew White, Jr., chronicles the adventures, humorous and tragical, of a touring party of men and women cyclists in "A Romance on Wheels," a complete novel, and Warren Taylor talks about the all-too-few "Small Parks of New York."

THE NEW ENGLAND MAGAZINE.

IN the October *New England* the Venezuelan Minister at Washington, Don Nicanor Bolet-Paraza, tells some interesting things about his country, but does not touch on the great forces which are now convulsing the republic of Venezuela. He sets forth the climatic advantages of the country and its agricultural resources waiting to be developed—only about 100 square leagues are cultivated out of a possible area of nearly 4,500. To remedy this state of affairs a most liberal immigration law has just been passed by the Venezuelan Congress. The government offers immigrants the following inducements: "It pays their passage, expenses of landing, board and lodging during the first fifteen days after arrival, and allows the entrance free of duty of the immigrant's wardrobe, his domestic utensils, machines or tools or the instruments of his profession. It pays the expenses of his transportation to any one of the government's agricultural settlements; it gives each immigrant the title to one hectare of land out of the government waste lands, and also right to purchase, for one-half its market value, any amount of waste land he may desire. It is owing to this beneficent law that a current of immigration has now been established that is daily increasing in proportions."

Thomas Tonge describes between many illustrations the beautiful city of Denver, that has grown up in the last quarter century, and the remainder of the magazine is given over to fiction and descriptive articles.

THE CALIFORNIAN ILLUSTRATED.

THIS very bright magazine has several timely articles in it; one of them, on "Marketing California Fruits," we review on another page.

Rev. Frederic J. Masters, who has contributed to the *Californian* other striking papers on subjects connected with the Chinaman in America, writes this month under the question, "Can a Chinaman Become a Christian?" He quotes some recent very public utterances to the effect that the Celestial is cut off by his wholesale depravity from any hope of ever being a sincere follower of our Western religion, and then inquires into the truth of the theory.

He cites numerous individual instances of the complete conversion of Chinamen, some of them evidencing great self-sacrifice; he shows that in the short time of twenty-five years the missionaries in China itself have brought fifty thousand converts into their congregations, and he makes the rather striking assertion that the Chinese of the Congregational Mission on the Pacific Coast contributed last year six thousand two hundred dollars to the mission

treasury. In proportion to their means these converts show, if liberality be any test of sincerity, a willing spirit which is quite ahead of their Western brethren.

Jose Gonzales is very eulogistic of the President of Mexico in his paper entitled "The Rise of Diaz," and, from most accounts, he seems to be right in ascribing to that ruler an ability exceptional among the short-lived dignitaries of our Southern neighbors. He affirms that Diaz has, in the fifteen years of his *régime*, brought his country from a pitiable state—financially, socially and commercially—to a high place among the civilized nations of the earth. "Her broad lands are crossed in every direction by railroad and telegraph lines; her manufactures and commerce, her mining and agricultural industries, have been phenomenally developed. There exists to-day a friendly feeling to Americans as a nation and individuals. Peace has reigned supreme for fifteen years, and this wonderful prosperity is entirely due to the untiring and ceaseless efforts of the President."

POPULAR SCIENCE MONTHLY.

WE present on another page some extracts from Hon. Carroll D. Wright's paper, "Our Native and Foreign-Born Population."

Dr. Henry Ling Taylor writes on "American Childhood from a Medical Standpoint," and has much to say concerning our nerve-destroying methods of bringing up children into sedentary lives and the further demoralizing tendency of Americans to let children "get along" without the parents' immediate care and companionship. He deplors the custom of "smothering" young children in a superfluity of clothes, in giving them hot baths, and in general keeping them constantly at an abnormally warm temperature. He advocates, within decent limits, the Wellerian plan of allowing our boys to run in the streets and "markets," that they may see other boys and receive mental and physical stimulus, and train their powers of observation instead of enjoying the acquaintance of no one in the world, practically, except their half dozen adult home-folks.

Mr. Lee J. Vance takes for his subject "The Evolution of Dancing." He differs from Mr. Darwin in explaining the origin of dancing through the amatory instincts, as in the queer antics of the male bird when he desires to please the female in the mating season. "The relation between courtship and dancing is not a relation of cause and effect; the two are simultaneous results of the same cause—namely, overflow of animal spirits and vivacity of every kind. The spirit that moves men to shuffle their feet, kick up their heels, even to gambol madly until they swoon from exhaustion, may come from different feelings; now from youth, health or exuberant spirits, and now from joy or triumph, defiance and rage." Mr. Vance further tells us that uncivilized tribes spend half their time in dancing, and that in their mystic rites a dancer who makes a *faux pas* is punished with death.

Dr. T. D. Crothers names no names, but his essay on "Specifics for the Cure of Inebriety" very pointedly denies any originality or specific virtue in Mr. Keeley's much-talked of methods and medicine. Dr. Crothers attempts to show that the movement which we have lately witnessed is but one of a great number of like "crazes" which have arisen from time to time, but that it has a residual advantage in bringing the importance and prevalence of the disease before the public, and leading to the advance of legitimate remedies.

THE ROSARY.

THE *Rosary* is rather a pretty little monthly, published under Roman Catholic auspices at West Chester, N. Y. After the regular features it gives an illustrated "Children's Department," which adds to its attractiveness as a family magazine. In the October number John A. Mooney and Honor Walsh write on Columbus subjects; Thomas F. Galwey contributes a war story, "By the Massanutton Mountains," and the Very Rev. D. J. Kennedy argues to show that if the planet Mars should be found to have human inhabitants on it, the discovery could not in anywise interfere with our sacred history.

THE REPUBLICAN.

ELSEWHERE we notice the article entitled "Journalism's Tribute to Whitelaw Reid." The aims and field of this monthly are, of course, pretty thoroughly indicated by its title, and this month will naturally be an exciting and interesting one to it. The October number gives as frontispiece a portrait of Mrs. J. Ellen Foster, President of the National Republican Woman's Association. E. N. Cornay asks, "Shall Political Jugglery Cloud the Issue?" Frances H. Howard shows "Why Women Are Republicans," and Frank Herbert Waggoner writes on "The Boy in Politics," the author being confessedly "one of them."

THE FRENCH REVIEWS.

THE REVUE DES DEUX MONDES.

THE *Revue* for September is an exceedingly good one, though somewhat heavily weighed with M. Varagnac's second article on the "Conseil d'Etat." M. Berthélot's paper on the "History of Chemistry" is readable enough to excite the interest even of non-scientific people.

ACTORS AND THE CHURCH.

M. Victor du Bled's "Actors and Actresses of Former Times" is a retrospect of the disabilities under which the French stage labored before the Revolution of 1789, and places in a vivid light the disagreeable position of the unfortunate comedians. At one time no actor or actress could be legally married, all the sacraments of the Roman Church being refused to them unless they would sign an undertaking to quit their profession. Of course there were many ways of evading this chronic sentence of excommunication, of which M. du Bled mentions several. It was quite common for an actor to sign the required document, get married in due form, and then receive an order from the First Gentleman of the Chamber (the stage being under the direct control of the King) to appear immediately in such or such a piece. In fact he might be imprisoned for refusing to act, just as he incurred the sentence of excommunication for acting. Yet all these restrictions did not succeed in doing away with the stage.

WALLENSTEIN AND BISMARCK.

M. G. Volbert traces an ingenious historical parallel between Wallenstein and Bismarck, from which we have only space to quote the concluding paragraph: "Kepler, who not only found astrology a paying profession, but seriously believed in the action of the stars on our propensities and our destiny, had cast Wallenstein's horoscope. According to this horoscope, the young Bohemian nobleman, being born September 14, 1583, at 4 P.M., under the conjunction of Saturn and Jupiter, had a bilious and melancholic temperament: his mind would always be uneasy; he would add to an unbounded ambition a disdain for all laws, human and divine, and he would not have a tender heart. But, at a riper age, the propitious influence of Jupiter would convert some of these defects into virtues; eager for honors and power, his eternal restlessness would drive him to do great things by new methods; he would triumph over those who envied him, and leave a great name behind him. I do not know under what conjunction of planets Prince Bismarck can have been born. He, too, has come gloriously out of the most dangerous enterprises: he has borne, without flinching, re-

sponsibilities which would have crushed the strongest of his contemporaries; but at all times there has been something Saturnian in his conduct toward his enemies, as also in certain diplomatic proceedings of his which would have been repugnant to a more generous spirit. Like Wallenstein, he is one of those great men who have loved themselves too much; and whatever astrologers may say, it seems to me certain that Jupiter and Saturn, the planet which widens men's souls, and that which contracts them, have shared between them the direction of his life."

THE NOUVELLE REVUE.

THE September numbers contain several articles of interest. M. Henri Montecorboli contributes an enthusiastic, though somewhat disjointed, paper on Cialdini. M. Alfred Muteau, under the title of "La Lettre de Cachet au XIXme Siècle," brings forward a grave indictment against the French lunacy laws. A medical certificate signed by one doctor only is quite sufficient to consign a man to an asylum for the rest of his life. M. Paul Hamelle's Irish articles are noticed more fully elsewhere. M. A. Péritor, whose nationality is not to be gathered with any certainty from his name, but who seems thoroughly familiar with the heterogeneous cosmopolitan society of Constantinople, and the ways of the "transition Turk," has a somewhat striking serial, which has now reached its fourth installment, entitled "Nights on the Bosphorus." The story turns on the utter incompatibility of East and West—the central point being Yusouf Pacha's marriage with a pretty Parisian, and the unhappiness and final catastrophe resulting therefrom.

RABELAIS AT LYONS.

M. Alexis Bertrand is very readable, apropos of "Rabelais at Lyons." The genial author of "Gargantua," it seems, practiced for some time at the hospital of the Hôtel Dieu, and was, in spite of his convivial reputation, not only a skilled physician, but an extremely hard-working man. He translated and commented on Hippocrates, and compiled the Lyons almanac through a series of years. The industry of Lyonnais scholars has discovered fragments of these in various places, and, valueless as an old almanac is supposed to be, they form most curious and interesting documents for the period. His most famous work is full of local allusions to Lyons, then known all over France as the city of good cheer, whose burghers were "eternally dining," as well as of great printers and erudite scholars.

POETRY.

THE *New England Magazine* prints a sonnet to John Brown. It is William Herbert Carruth who sings the Hero of Harper's Ferry.

"Had he been made of such poor clay as we,
Who, when we feel a little fire aglow
'Gainst wrong within us, dare not let it grow,
But crouch and hide it, lest the scorner see
And sneer, yet bask our self-complacency
In that faint warmth,—had he been fashioned so,
The Nation ne'er had come to that birth-throe
That gave the world a new Humanity.

"He was no mere professor of the Word—
His life a mockery of his creed; he made
No discount on the Golden Rule, but heard
Above the senate's brawls and din of trade
Even the clank of chains, until he stirred
The Nation's heart by that immortal raid."

The *Atlantic Monthly* has for one of its full-page poems this month a very spirited ballad by Clinton Scollard, which tells the story of the famous exploit of Taillefer the Trouvere. The fourth stanza we reprint as a sample of the strong action that Mr. Scollard has achieved in these verses:

"In front of the foremost footman he spurs with a clarion cry,
And raises the song of Roland to the apse of the glowing sky.
A moment the autumn's glory is a joy to the singer's sight,
And the war-lay soars the stronger, like a falcon, up the height;
Then springs there a Saxon hus-carl, with thews like the forest oak,
And whirling a brand of battle, he launches a Titan stroke;
A sudden and awful shadow, a blot on the azure glare,
And dawn in a world unbordered for Taillefer the Trouvere."

Not even the infinite surfeit of Columbus literature of the last six months can deprive Father John B. Tabb's tribute in *Lippincott's* of its "sweetness and light."

"With faith unshadowed by the night,
Undazzled by the day,
With hope that plumed thee for the flight,
And courage to assay,
God sent thee from the crowded ark,
Christ-bearer, like the dove,
To find, o'er sundering waters dark,
New lands for conquering love."

In the *California Illustrated Magazine* Flora Macdonald Shearer makes an appeal in behalf of the inhabitants of the famine-stricken districts of Russia:

"Ill shall it be in time to come for those
Who, careless living 'neath a bounteous sky,
Calmly indifferent, can hear the cry
Of thousands helpless in the mortal throes
Of desolating hunger. If we chose,
What saving ships across the sea should fly,
Climbing th' uneasy wave, each day more nigh
To the sad northern land of steppes and snows.

"Almighty God! if by a miracle,
As in old days, thou now shouldst prove thy power
And show the exceeding brightness of thy face
So long withdrawn——! With love unspeakable
Touch thou men's hearts, and but for one short hour
Let mercy all the suffering world embrace."

Sir Theodore Martin's translation of Gustav Hartwig's poem on "The Rat Catcher of Hamelin" is published in the October number of *Blackwood*.

Gustav Hartwig is a young German poet who deals solely with the grave and pathetic side of the story. The description of the going of the children is a sample of his verses. The piper plays his wondrous music then :

"Wherever childhood's eye shone bright,
There did the magic use its might.
The witching music floating round,
Their souls within its meshes bound.
Hark! Hark! It strikes upon the ear.
They stretch their little necks to hear,
Within their eyes gleams such delight,
As though heaven opened to their sight,
And to the Piper, one by one,
Away the little creatures run.
The mother chides—no heed give they,
But one and all they rush away.
If little ones lay sick abed,
Away at once their sickness fled;
Out of their mother's arms they slip,
And shout and gambol, jump and skip."

Atalanta contains the following verses, entitled "At Set of Sun" :

"If we sit down at set of sun,
And count the things that we have done,
And counting find
One self-denying act, one word
That eased the heart of him who heard ;
One glance most kind,
That fell like sunshine where it went,
Then we may count that day well spent.

But if, through all the live-long day,
We've eased no heart by yea or nay ;
If through it all
We've done no thing that we can trace,
That brought the sunshine to a face ;
No act most small,
That helped some soul, and nothing cost,
Then count that day as worse than lost."

ART TOPICS.

THERE is a bright sketch of A. B. Frost in *Harper's* from the sympathetic pen of Mr. Bunner, who follows the work of the inimitable humorist from that occasion, 18 years ago, when Mr. Frost first made a departure from his mechanical lithographing work in the coarse woodcuts of the little volume "Out of the Hurly-Burly." "An artist," says Mr. Bunner, "would probably speak of the honesty of Mr. Frost's art as its principal characteristic. Thorough draughtsmanship is the foundation of his success. He is never obliged to resort to trick or device or to employ meretricious effects. He never has to 'puzzle' bad or doubtful drawing. He is never in the position of the painter of beclouded battle-pieces to whom a cruel friend said, 'Great Heavens, Pulner, what *will* become of you when smokeless powder comes into use?'"

"But it seems to me that its catholicity is the highest attribute of his art. The artistic tendency of the day is strongly toward specialism. An artist too often achieves fame because he paints snow well, or veined marble, or because he has brought out the unsuspected possibilities of the external treatment of sole leather. Mr. Frost's world is not thus one sided. It is not only that he draws all that he has to draw correctly and effectively. He draws all the elements that compose his picture with the same interest and sympathy. His attention to the figure does not dim his clear sight to the ground on which it stands, to the significance and character of its surroundings. This broad sympathy with all visible things is to be seen in every drawing—the most ambitious or the most modest."

In *Munsey's* series, "Famous Artists and Their Work," C. Stuart Johnson tells of Alphonse de Neuville and his battle-pictures. The half-tone reproductions of some of de Neuville's military scenes are unusually good. "His paintings are of real war," says Mr. Johnson. "They breathe what a writer has called 'the vast din, the shriek, the roar, the mad shout, the weird demoniac work of battle.'" They tell of the thousands who toil and fight and fall in nameless graves, rather than of the kings or generals comfortably posted out of the reach of bullets. They show the shock of the horsemen charging on the lines of bayonets, the house-to-house fighting through village streets, the ghastly heaps of dead and dying, the trampled fields and ruined vineyards, the burned and shattered homesteads of those on whom fall war's most cruel sufferings."

A FAMOUS ARTIST IN BLACK AND WHITE.

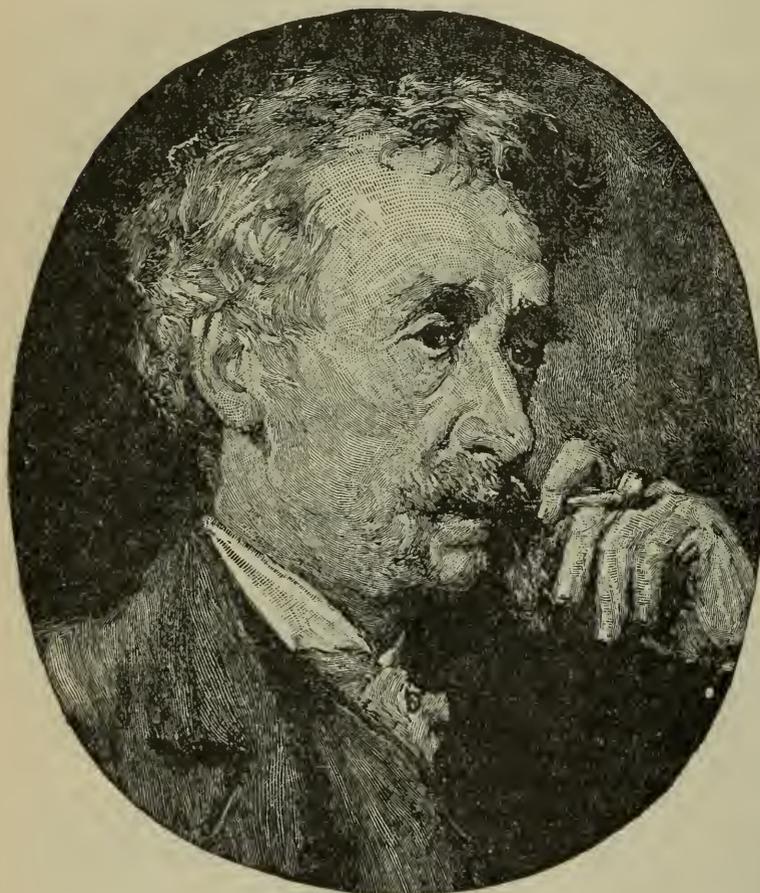

A SKETCH OF CHARLES SAMUEL KEENE.

IT may never have occurred to many of *Punch* readers to think, when they were chuckling over the "legends" of C. K.'s drawings, that they were looking at the work of a great artist. It was given only to the few to appreciate his wonderful power of black and white drawing, his marvelous technique, his gift of representing the hu-

skill. Among the documents for the study in future days of middle-class and of humble English life, none will be more weighty than the vivid sketches of this great humorist."

But if the amount of recognition which he won here in England was comparatively small, in France he was always thought very highly of, his work being compared with that of Degas, Menzel and Pizarro.

Charles Keene died on January 4, 1891; and here, in a bulky, buckram-covered volume, we have his "Life and Letters" by Mr. George Somes Layard,* which, if not the most important, is at all events one of the most interesting and readable books of the month. Not that the chronicle is in any sense of the word an eventful one—that it certainly is not. Keene's life was placid and undisturbed, and beset with but few difficulties. He was born in Hornsey, on August 10, 1823. His father, Samuel Browne Keene, was a solicitor; his mother, Mary Sparrow, came of an old Ipswich family of that name. In 1840, having been educated in London and at the Ipswich Grammar School, he was placed by his mother in the office of his father's partner that he might qualify for the legal profession. But, says Mr. Layard, he showed, even in his seventeenth year, "far more industry in the illustration of his blotting pad than in his study of legal precedents." Indeed, so evident was the direction in which his taste lay, that he was almost at once removed by his mother and placed in an architect's office, where, in his leisure hours and evenings, he spent all his time upon figure drawing and the execution of historical or nautical subjects in water colors. By these he set little store. Not so his mother, who, struck by their cleverness, boldly took them off to Paternoster Row, where she sold them for a small sum to a dealer, who requested that the youth's future work should be submitted to him. Keene continued to supply drawings of this class, until one day, when they were seen by a "stranger"—whom Mr. Layard does not identify—who introduced him to the Whympers. They proposed to him that he should throw up his architectural work and be bound to them as an apprentice. This was agreed to, and under them it was that Charles Keene, like Fred Walker, acquired his knowledge of the technique of wood engraving. His term of apprenticeship to the Whympers being over, he found it necessary to take a studio, and he hired the attic floor of an old house in the Strand, facing the top of Norfolk street, which is now "but the corpse of a house in a winding sheet of advertisements, only waiting its removal for the widening of the Strand." Here he worked steadily for the *Illustrated London News*, *Once a Week*, and other papers. In 1851 his work first found a place in the pages of *Punch*, but at first he refused to let himself be known as their author, drawing them for Mr. Henry Silver, a literary contributor, who passed them in as his own. This continued to 1854—when Charles Keene first initialed his sketches. During the next ten years he drew occasionally for *Punch*, but only as an outside contributor, working

CHARLES SAMUEL KEENE.

morous side of nature without absolutely caricaturing or exaggerating the peculiarities of his subjects. Charles Keene was a great artist, in spite of the apparent "easiness" and "coarseness" of his work. It was his own fault, perhaps, that he was never officially recognized as such by his brother artists, for, although it was proposed that he should be put up for election to the Royal Society of Painters in Water Colors, he never took advantage of the offer: and never, although it was suggested to him by a person in very high authority, exhibited at the Royal Academy in order to give its members an opportunity of officially recognizing his eminence as an artist. However, at the Royal Academy banquet, 1891, Sir Frederic Leighton feelingly referred to his death and to his work:

"I cannot pass by in silence the loss which has recently befallen us through the death of that delightful artist and unsurpassed student of character, Charles Keene. Never have the humors of the life of certain classes of Englishmen been seized with such unerring grasp as in his works; never have they been arrested with a more masterly artistic

* "Life and Letters of Charles Keene, of *Punch*." By George Somes Layard. (Macmillan & Co., New York.)

mainly for *Once a Week*, which belonged to the same proprietors, Messrs. Bradbury and Agnew. Here he illustrated poems, short stories, and serials—Mr. George Meredith's "Evan Harrington" *inter alia*.

In 1860 Keene received his first invitation to a *Punch* dinner, "to which, tradition says, though slightly in error, no stranger is ever admitted on any pretext whatever.

"Henceforth he was entitled—although, by the way, he would never avail himself of the privilege—to append to his name the honorable appellation 'of *Punch*.' It should, however, here be stated that Keene never became a member of the staff. Frequently pressed to do so at a fixed and liberal salary, he preferred not to be tied down to the production of so many drawings every week, and always insisted upon being paid by the piece. If he drew an initial letter he was paid so much, and if a 'social' or a cartoon so much."

For the first two or three years Keene was a regular attendant at the dinner, but "afterward came increasingly to look on what most consider an inestimable privilege as somewhat tiresome." He was of little use, too, in suggesting subjects for the weekly political cartoon.

"He spoke very little, and was apt to throw cold water on projects under decision. If specially appealed to for his opinion, he would, as likely as not, pass upon them a short and comprehensive criticism, such as 'D—d bad,' and relapse, with a twinkle in his eye, into smoke and silence. It was characteristic of the man not to care for those gatherings, just because it was considered a great privilege to be invited. He found them irksome and of

little use to him in his work. In August, 1887, we find him writing to Mr. Edwards: 'I'm very much obliged for the books—a godsend to a derelict stranded in London; everybody away and the club shut up!—*obliged to go to the Punch dinner for company.*'"

It will come as a revelation to most readers of this volume that it was very seldom that Keene provided the jokes for his own pictures. The majority of them were regularly sent him by his friends—Mr. Joseph Crawhall and Mr. Andrew W. Tuer, the publisher. They used to make a rough sketch (we have reproduced one such example) to accompany the joke, upon which Keene would improve.

Beyond the fact that Keene was an enthusiastic musician, an expert in bagpipe playing, and a collector of everything from arrow-heads to cookery-books, there is very little more to be said. He was a singularly happy letter-writer, as the reader can judge from the number reprinted in the volume, but his life was so absolutely uneventful that they are more noticeable for their grace of style than for the subjects of which they treat. In one respect the volume is disappointing. Mr. Layard gives the public, always eager for gossip about journalistic life, too little information about Keene's work on *Punch* and his connection with his colleagues, but this is the only fault we can find with a work which in every other respect is admirable. It contains a large number of Keene's *Punch* studies and unprinted sketches—all reproduced in a way which is best calculated to show off their many qualities.

THE NEW BOOKS.

[The December number of the REVIEW will give especial attention to the new books of the season, and numerous works which would otherwise have been listed this month have been held over for notice in the more elaborate book department of next month.]

HISTORY AND TRAVELS.

The Memorial Story of America. The Record of Four Hundred Years from 1492 to 1892. By Hamilton W. Mabie and Marshall H. Bright. Quarto, pp. 878. Philadelphia: John C. Winston & Co. Sold by subscription.

Thanks to the happy conception and practical skill of the editors, Mr. Hamilton W. Mabie of the *Christian Union*, and Mr. Marshall H. Bright of the *Christian at Work*, this Memorial Story of America has a scope, a freshness and a value that will both surprise and delight its readers. It tells the story of the past and present of life on the American continent in fifty chapters. The editors themselves did much of the writing, but also called in numerous specialists to prepare particular chapters. The discovery and settlement of America, the old colonial life, our cutting loose from Europe, our early wars, our Western pathfinders and pioneers, the extension of our boundaries, the Indian as we found him and the Indian as we now have him on our hands, the negro and the civil war, our flag at sea, our relations with foreign powers, our arctic adventurers, religion, social life, education, industry, invention, literature, journalism, railroads, great fairs, our principal cities—all these and many others topic are brilliantly and lucidly treated. Hon. W. C. P. Breckenridge, of Kentucky, contributes a chapter on the old South and the new, Hon. John Sherman writes of American finances, Miss Willard tells the story of women in America, Bishop Vincent writes of the American church, Albert Shaw has a chapter on the Northwest, Senator Dawes, of Massachusetts, tells of the Indian of the nineteenth century, and A. K. McClure, of the Philadelphia *Times*, writes some forgotten lessons of the war. Mr. Mabie sums up and gives us the outlook in a strong concluding chapter.

Quakers in Pennsylvania. By Albert C. Applegarth, Ph.D. Paper, 8vo, pp. 84. Baltimore: The Johns Hopkins Press. 75 cents.

In the series of Johns Hopkins Studies in Historical and Political Science, Albert C. Applegarth, Ph.D., has a monograph upon the Quakers in Pennsylvania which fully deserves its place in this wonderfully rich series of historical studies. Mr. Applegarth's monograph is in three chapters: I. The Customs and Laws of the Pennsylvania Quakers; II. The Attitude of the Quakers toward Indians; III. The Attitude of the Quakers toward Slavery. The study will have a standard place and value.

Early Bibles of America. By Rev. John Wright, D.D. 12mo, pp. 177. New York: Thomas Whittaker & Co. \$1.50.

The Rev. Dr. John Wright, of St. Paul's Church, St. Paul, Minnesota, has made a recondite and somewhat curious study of the early Bibles printed in America. The Eliot Indian Bible, of course, has the first place. The number and interest of the various editions of the Sacred Scriptures issued from our colonial printing presses will surprise most readers.

The Cradle of the Columbus. By Rev. Hugh Flattery. Paper, 12mo, pp. 46. New York: United States Book Company.

This brochure is described by its author as an effort to unfold the pedigree of a distinguished name. It discusses the origin and etymology of the patronymic Columbus, and the Columbian geographical nomenclature.

Old South Leaflets. General Series. Boston: D. C. Heath & Co. Each 5 cents.

Apropos of the interest in the discovery of America and the exploits of the early voyagers, one cannot too highly recommend the "Old South Leaflets," General Series, from number 29 to number 37 inclusive.

American History Leaflets, Colonial and Constitutional. Edited by Albert Bushnell Hart and Edward Channing. Published bi-monthly. New York: A. Lovell & Co. Annual subscription, 30 cents.

Similar in scope to the "Old South Leaflets" are the "American History Leaflets," edited by Professors A. B. Hart and Edward Channing, of Harvard University. Number one is a Columbus number, number two is devoted to the Ostend Manifesto of 1854, number three to extracts from the Sagas describing the Vinland voyages, and number four treats of the Monroe Doctrine.

Guatemala. Bulletin No. 32 of the Bureau of the American Republics. Washington, D. C. January, 1892.

In the valuable series of works issued by the Bureau of the American Republics in connection with the State Department at Washington, we are in receipt of Bulletin No. 32, which is devoted to a full description of Guatemala, together with much interesting statistical and commercial information.

Some Strange Corners of Our Country: The Wonderland of the Southwest. By Charles F. Lummis. 12mo, pp. 270. New York: The Century Company. \$1.50.

This is a volume for young people describing in chapters of convenient length and with numerous excellent illustrations the scenery and the ancient architectural remains of New Mexico and Arizona, but giving far more space to the strange, and to young people always interesting, customs of the Pueblo and Navajo Indians now living in that corner of our country. The descriptions are given in the style of a true story teller, nevertheless the book gives the impression of being highly instructive as well as fascinating. It is the fruit of careful investigations made by Mr. Lummis and his wife among the tribes and in the regions described.

A Picnic in Palestine. By Rev. H. M. Wharton, D.D. Octavo, pp. 380. Baltimore: The Wharton & Barron Company.

Books of travel in the Orient, greatly unequal in merit as they are, never are devoid of some power to entertain or to instruct. Dr. Wharton's running account of a journey made with a pleasant American party through Palestine and the contiguous East is not pretentious, yet it is pleasant and brightly reading.

How We Went and What We Saw: A Flying Trip through Egypt, Syria and the Ægean Islands. By Charles McCormick Reeve. Octavo, pp. 404. New York: G. P. Putnam's Sons.

Mr. Reeve is a well-known Minneapolis miller and business man, who has been a wide traveler and whose trained power of observation is as marked as is his flow of wit. His handsome volume describing a "flying trip through Egypt, Syria and the Ægean Islands" is intentionally very light and sketchy, but it is a far better book than many of the more ambitious and more stupid volumes of travel in the Orient.

Paddles and Politics Down the Danube. By Poultney Bigelow. 16mo, pp. 253. New York: Charles L. Webster & Co. 75 cents.

Mr. Poultney Bigelow collects in an attractive little volume in Mr. Arthur Gilman's "Fiction, Fact and Fancy" series some very charming bits of description of life and scenery down the Danube. Mr. Bigelow is much at home in Southeastern Europe, and this little volume throws pleasant side lights upon social conditions in that romantic region.

Play in Provence. Being a Series of Sketches Written and Drawn by Joseph Pennell and Elizabeth Robins Pennell. 12mo, pp. 202. New York: The Century Company. \$1.50.

Joseph Pennell and his wife, Elizabeth Robins Pennell, are an American couple who in these recent years have placed the world under much obligation to them by the aid they have given the world to know itself better. Mr. Pennell's inimitable pencil has helped us to see and appreciate

many things in the life of many lands, from the Scotch Highlands to Hungary and Southern Russia; and the sprightly and industrious pen of his wife has, in its own way, contributed to our pleasure and our information. This particular volume, full of charming word sketches and line drawings, is the joint work of Mr. and Mrs. Pennell, part of the chapters being written by the husband and part by the wife, while the drawings are all presumably Mr. Pennell's.

BIOGRAPHY AND MEMOIRS.

The German Emperor and His Eastern Neighbors. By Poultney Bigelow. 16mo, pp. 179. New York: Charles L. Webster & Co. 75 cents.

Mr. Poultney Bigelow, who has already given us one interesting biography of the young German Emperor, now collects in a timely little volume, with some additions to make a rounded whole, his numerous recent magazine articles upon phases of the life and reign of Emperor William, together with studies of certain conditions in the regions contiguous to the German Empire's dominions on the east and south.

Writings of Christopher Columbus. Descriptive of the Discovery and Occupation of the New World. Edited by Paul Leicester Ford. 16mo, pp. 255. New York: Charles L. Webster & Co. 75 cents.

Mr. Paul Leicester Ford, to whose great knowledge of historical documents we are already beginning to feel a considerable indebtedness, has edited one of the most valuable of the Columbus books of the year. He brings together in a handy little volume those writings by Christopher Columbus that are descriptive of the discovery and occupation of the New World. It contains his letters to Ferdinand and Isabella and several other personages of his day, together with his deed of entail, his will and other documents.

Autobiographia, or the Story of a Life. By Walt Whitman. 16mo, pp. 205. New York: Charles L. Webster & Co. 75 cents.

Mr. Arthur Stedman, who is the general editor of Messrs. Charles L. Webster & Co.'s "Fiction, Fact and Fancy" series, has himself, in virtue of a plan which had been approved by Mr. Walt Whitman before his death, culled out from the late poet's writings and letters the material which has now been skillfully arranged under the title "Autobiographia, or the Story of a Life." This volume will be a permanent addition to the Whitman literature.

Itinerary of General Washington from June 15, 1775, to December 23, 1783. By William S. Baker. Octavo, pp. 334. Philadelphia: J. B. Lippincott Company. \$2.50.

Students who would like to make the acquaintance of the real George Washington will find Mr. William S. Baker's book singularly well conceived and interesting. It begins with George Washington on Thursday, June 15, 1775, and follows him until December 23, 1783, when he retired from the command of the Continental Army. It quotes from his journals and letters, and supplies in smaller type the historical and biographical data necessary to give the story a continuous thread. One is enabled, with the help of this book, to accompany George Washington in his daily itinerary throughout the entire Revolutionary War.

Famous Types of Wemanhood. By Sarah Knowles Bolton. 12mo, pp. 350. New York: Thomas Y. Crowell & Co. \$1.50.

Mrs. Bolton is the author of many books that have instructed and inspired American young people, and this new volume is one of her very best. It treats in very readable essays of Queen Louise of Prussia, Madame Recamier, Susannah Wesley, Harriet Martineau, Jenny Lind, Dorothy L. Dix, the Judson sisters, and Amelia B. Edwards.

ECONOMICS AND SOCIOLOGY.

The Tariff Controversy in the United States, 1789-1833. By Orrin Leslie Elliott, Ph.D. Paper, 8vo, pp. 272. Palo Alto, Cal.: Published by the University. \$1.

The first publication which has come to us from the press of the new Leland Stanford University, California, is a worthy and a timely contribution to its department of knowledge. O. L. Elliott, Ph.D., gives in this monograph what would seem to us, upon somewhat hasty examination, to be the most thorough and impartial review that has yet been made of the history of the tariff question in the United States up to the year 1833. There is an introductory essay upon the

tariff systems of the colonial period, a valuable chapter upon the tariff of 1789 and Hamilton's report on manufactures, with full reviews of the course of our tariff history and discussion up to the time of Jackson's administration and Calhoun's nullification, which, as a special concluding topic, is treated with great ability by Dr. Elliott. The Leland Stanford University is to be congratulated upon the character and appearance of the initial volume in its proposed series of scientific publications.

The Farmers' Tariff Manual, by a Farmer. By Daniel Strange. 12mo, pp. 377. New York: G. P. Putnam's Sons. \$1.25.

In the "Questions of the Day" series Mr. Daniel Strange is the author of a new book upon the tariff. In his preface he explains that he has tried to present a greater amount of information relating to the theories, the facts and the effects of tariff legislation than is to be found elsewhere in the same compass or for many times the same expense. Mr. Strange has certainly made a very compact book, in which the reader will find an extraordinary amount of tariff information massed in such a way as to amount to a formidable attack upon the protection system.

Taxation and Work. A Series of Treaties on the Tariff and the Currency. By Edward Atkinson, LL.D., Ph.D. 12mo, pp. 300. New York: G. P. Putnam's Sons. \$1.25.

Mr. Atkinson has lately contributed some important series of articles to prominent newspapers, dealing with practical and theoretical phases of the tariff question. He has collected these into a volume under the title of "Taxation and Work." The revision has been so careful that the book is an organic entity. It endeavors to tell who the people are who earn the nation's wealth, how it is distributed, what sums of money are collected for taxation, how the taxation bears upon men in different occupations, how protection works, what in the author's opinion would be the beneficial effects of a progressive reduction of duties, how free commerce would develop the country, what relationship exists between high wages and the low cost of production, and other topics so grouped and discussed as to lead cumulatively up to the writer's conclusion that the country needs above all things a very radical reform of the present national revenue system.

The Crisis of a Party. By Augustus Jacobson. Paper, 12mo, pp. 171. Chicago: F. J. Schulte & Co. 25 cents.

Mr. Jacobson returns to his favorite theme, elucidated by him in former books, viz.—the desirability of a graduated succession tax, the proceeds to be used for a wide system of manual training schools. He discusses the history, character and possibilities of the Republican party, and declares that it may enjoy a new lease of life and a brilliant future if it will but espouse these new and, as he believes, fundamental and timely measures.

Buchanan's Conspiracy, the Nicaragua Canal, and Reciprocity. By P. Cudmore. Paper, 12mo, pp. 125. Faribault, Minn.: Published by the Author. 25 cents.

In this closely printed volume Mr. P. Cudmore of Faribault, Minnesota, advocates the development of the reciprocity policy and the completion of the Nicaragua canal, and conveys a large amount of information concerning the Latin-American republics and the desirability of increased traffic with our southern neighbors.

Annual Report of the Secretary of Internal Affairs of the Commonwealth of Pennsylvania. Part III. Industrial Statistics. Vol. XIX., 1891. Harrisburg: Edwin K. Meyers; State printer.

The report made by Mr. Albert S. Bolles, chief of the Bureau of Industrial Statistics of Pennsylvania, for the year ending with last November, is an exceptionally interesting one on account of the fact that a large part of the volume is given up to a profusely illustrated historical, descriptive and statistical account of shipbuilding on the Delaware. There is good reason now to believe that the great shipyards at Philadelphia and in that general vicinity will in no distant future become as famous for their marine output as the shipyards of the Clyde. Already they have built a number of magnificent vessels for our new navy, not to mention the mercantile vessels of modern construction that they have turned out. Other parts of this report give statistics and laws upon the subject of the liability of employers, a report of the Pennsylvania Factory Inspector, and a report upon strikes and lockouts in Pennsylvania.

ESSAYS, CRITICISM AND BELLES-LETTRES.

Field-Farings: A Vagrant Chronicle of Earth and Sky. By Martha McCulloch Williams. 16mo, pp. 248. New York: Harper & Brothers. \$1.

All lovers of nature, all who are interested in the growth of American literature and culture are sure to read with pleasure such a book as this. There are many new books of the class—there can scarcely be too many, so long as they are worthy. This book draws us pictures of trees in blossom, and trees groaning beneath the axe, of young ducks learning to swim, of bees and birds and moods of the sky; of fox hunting, harvest times and many other like pleasant things—pictures drawn by one who has evidently had perfect and happy familiarity with the scenes and habits she describes. The style is simple, unflinchingly artistic and fascinating—the style which makes us forget we are reading a book, and removes us to the beautiful and absorbing realm of nature herself.

The Every Day of Life. By J. R. Miller, D.D. 16mo, pp. 283. New York: Thomas Y. Crowell & Co. \$2.50.

This is a wise, helpful book of thoughtful—conferences, we might say with those "who want to grow better." It is a satisfaction to find a book which is not afraid of treating the familiar life experiences of every day in a healthy and happy way, and which helps us to realize that these common days are, after all, the substance and test of life. The book does more than that; it helps us to purify and elevate them. The author has previously published several books of like character which have had a wide success.

Amor in Society: A Study from Life. By Julia Duhring. 12mo, pp. 320. Philadelphia: J. B. Lippincott Company. \$1.50.

In her first chapter the author says: "I should wish you to look me over only in an hour of leisure, when the whirl and din of the world have temporarily ceased." In such hours many will read with pleasure the somewhat cynical, but masterly and perfectly frank views here given of marriage, flirtation, celibacy, love stories, etc., as they are now seen in American society.

The Love of the World: A Book of Religious Meditation. By Mary Emily Case. 16mo, pp. 92. New York: The Century Company. \$1.

Is an appropriately bound volume of religious meditations by the professor of Latin and Greek at Wells College. Though written with classic simplicity, there is no trace of antiquity or mediævalism in the strong, tender and liberal Christian spirit which they show. The author is in full sympathy with the best thought of our day, and the book breathes a healthy and mature optimism.

Our Birthdays. Toward Sunset: Seventy-one to One Hundred. By A. C. Thompson. 12mo, pp. 271. New York: Thomas Y. Crowell & Co. \$1.

Dr. Thompson, now senior pastor of the Eliot Congregational Church, Roxbury, Mass., and a man who has left his three score and ten a decade behind him, has gathered in this volume the substance of a series of his letters to elderly friends, written upon their birthdays—from the seventy-first to the one hundredth. Cheerful and kindly, giving many anecdotes of those who were strong and efficient in old age, these pages ought to be well appreciated by reflective age, and by youth which needs a good example of "happy old age."

RELIGION, THEOLOGY AND PHILOSOPHY.

Faith-Healing, Christian Science and Kindred Phenomena. By Rev. J. M. Buckley, D.D. 12mo, pp. 319. New York: The Century Company. \$1.25.

The title of this book is a perfect one, for it tells exactly what the book is about. When it is further said that Dr. Buckley totally denies the claims and the pretensions that are made by those who practice the so-called faith-healing, Christian science and mind cure, as well as the pretensions of astrologers and clairvoyants, his point of view in dealing with these subjects becomes also sufficiently well understood. But the trenchant vigor and the great knowledge with which Dr. Buckley makes his assaults can only be appreciated by a reading of the book itself. Most of the material has already appeared at one time or another in the course of the past five years in the pages of the *Century Magazine*; but Dr. Buckley's articles were not casual and unconnected contributions,

but were the parts of a systematic and progressive study of a class of phenomena, which he undertakes to explain upon ordinary and natural grounds. The wealth of anecdote with which Dr. Buckley enlivens the pages of this beautifully printed and bound volume makes it the more easy and interesting to read.

The Central Teaching of Jesus Christ. By Thomas Dehany Bernard, M.A. 12mo, pp. 426. New York: Macmillan & Co. \$1.50.

The Rev. Canon Bernard, of Wells, has for fully three decades enjoyed a high reputation for his studies of New Testament doctrine; and this new volume, which comprises an orderly and complete inquiry into the central teachings of Jesus Christ, based upon the five chapters of the Gospel according to St. John, XIII. to XVII., inclusive, will be widely appreciated by the Christian public of America, as well as of England. The spirit and method of this inquiry accords with the dominant feeling in the religious circles of the present decade.

The Miracles of Our Lord: Expository and Homiletic. By John Laidlaw, D.D. Octavo, pp. 384. New York: Funk & Wagnalls Company. \$1.75.

Rev. John Laidlaw, D.D., professor of theology at Edinburgh, is the author of a new book on the miracles which is expository and didactic in its character and which does not involve any discussion of their nature or historical authenticity. It is a volume of such freshness and such value as to appeal strongly, to all clergymen particularly, for a place in the working library.

The Resultant Greek Testament. By Richard Francis Weymouth, D.Lit. Octavo, pp. 644. New York: Funk & Wagnalls Company. \$3.

All students of New Testament Greek and all ministers who consult the Greek original will find this text, which shows at a glance the different readings in the leading editions of the Greek Testament, an indispensable handbook. It is superior for present day purposes to anything else that is obtainable.

The Genesis and Growth of Religion. By Rev. S. H. Kellogg, D.D. 12mo, pp. 288. New York: Macmillan & Co. \$1.50.

This volume contains a series of lectures delivered at Princeton Theological Seminary by the Rev. Dr. Kellogg, of Toronto. It is a philosophical and critical discussion of the origin of religions from the standpoint of Christian orthodoxy.

The Human and Its Relation to the Divine. By Theodore F. Wright, Ph.D. 12mo, pp. 271. Philadelphia: J. B. Lippincott Company. \$1.

An essay which attempts to expound philosophically the relationship between humanity and the Divine, written in the spirit of the works of Swedenborg.

SCIENCE, EDUCATION AND TEXT-BOOKS.

Experimental Evolution. By Henry de Varigny, D.Sc. 12mo, pp. 271. New York: Macmillan & Co. \$1.50.

Dr. Henry de Varigny is one of the most industrious and talented of the modern school of French scientific investigators. Last year he investigated the University Extension movement in England for the French Government, and while across the channel gave a course of lectures on evolution for Professor Geddes' summer school of art and science at Edinburgh. Although he apologizes for his English, it is clear and good; and this volume, in which his Edinburgh lectures are published, is one of the most interesting and stimulating of recent additions to scientific literature. It deals not so much with evolution as a theory or a doctrine as with practical experiments with plant and animal life by which evolution may be studied and tested. He strongly advocates the establishment of a great institute devoted to these experimental methods in the study of the evolution of species.

A Natural Method of Physical Training, Making Muscle and Reducing Flesh, without Dieting or Apparatus. By Edwin Checkley. 12mo, pp. 188. Brooklyn: William C. Bryant & Co. \$1.50.

The first edition of this work, two years ago, met with a great success and appreciation. This new edition is revised and somewhat enlarged. It is not a book written for the pur-

pose of developing athletes, nor is it a doctor's book for sick people, but simply what its title purports—a natural system of physical training for all, which requires no dieting or apparatus beyond what nature has furnished. There are a number of helpful illustrations.

Lightning Conductors and Lightning Guards. By Oliver J. Lodge. 12mo, pp. 556. New York: Macmillan & Co. \$4.

Professor O. J. Lodge, of University College, Liverpool, has developed from his long study of the subject a very elaborate work upon conductors and guards for protection against lightning. The book is a technical one, but not too abstruse for the intelligent practical student of such subjects, and it is not only a valuable contribution to applied electrical science, but also a work which fire and marine insurance companies, and others charged financially with the protection of property against loss by lightning, will find to have great value from a commercial point of view.

Transformers: Their Theory, Construction and Application Simplified. By Caryl D. Haskins. 16mo, pp. 150. Lynn, Mass.: Bubier Publishing Company. \$1.25.

The practical applications of electricity are becoming so enormously extended and important that many bright scientific minds are at work introducing improvements of method and system. Mr. Caryl D. Haskins, who is one of these ingenious and intelligent electrical engineers, is the author of a very useful little work upon transformers.

The Place of the Story in Early Education, and Other Essays. By Sara E. Wiltse. 12mo, pp. 132. 60 cents.

This little volume contains a group of essays by a brilliantly successful teacher of children, and it tells most entertainingly what is the place that story telling may be made to occupy in early education, and many other good and practical things based upon the psychological study of children and their development.

Addison's Criticisms on Paradise Lost. Edited by Albert S. Cook. 12mo, pp. 200. Boston: Ginn & Co. \$1.10.

Addison in his day wrote some elaborate literary criticisms upon Milton's *Paradise Lost*, although most general readers in our time are not familiar with them or even aware of their existence. Professor Albert S. Cook, of Yale, has reproduced these criticisms with a most adequate introduction, and with voluminous and scholarly notes. The little book will be of much use to advanced students of literature, whether from the point of view of Milton, of Addison, or of poetry and criticism in general.

Wordsworth's Prefaces and Essays on Poetry, with Letter to Lady Beaumont. Edited by A. J. George, A.M. 12mo, pp. 134. Boston: D. C. Heath & Co. 55 cents.

Mr. A. J. George, of Brookline, Mass., is the editor of a little volume which brings together accessibly and usefully certain prefaces and prose writings of Wordsworth, which show us well his quality and method as a literary critic.

The Bible and English Prose Style. Selections and Comments. Edited by Albert S. Cook. 12mo, pp. 131. Boston: D. C. Heath & Co. 55 cents.

Another of Professor Cook's valuable little compilations is entitled "The Bible in Prose Style." Following Dr. Cook's introduction are illustrative comments selected from various eminent writers, while the body of the book is made up of selections from the Bible as fitting illustrations of its character as literature.

Observations on the Platform at Persepolis. By Morton W. Easton, Ph.D. Octavo, pp. 18. Boston: Ginn & Co. 25 cents.

In the publications of the Philology, Literature and Archaeology series of the Pennsylvania University, Professor Morton W. Easton of that University publishes a valuable monograph containing his observations on the Platform at Persepolis. This archaeological study is not only worthy of praise for its scholarly character, but is of more than usual popular interest.

Short Stories in Botany for Children. By Mrs. Harriet C. Cooper. 12mo, pp. 194. New York: Thomas Y. Crowell & Co. \$1.

Children like really instructive books, if sensibly prepared, even better than they like nonsense books; and such a book as this little volume of elementary botany might well impart tastes and inclinations which would lead on to much scientific knowledge.

The Beginner's Greek Book. By John Williams White, Ph.D. 12mo, pp. 550. Boston: Ginn & Co. \$1.30.

The books that young students of classical languages now find ready for their aid make one wish that he were young and might go to school again under these improved modern auspices. Professor White's Beginner's Greek Book seems to be everything that could be desired.

Syllabus on the History of Classical Philology. By Dr. Alfred Gudeman. Paper, 8vo, pp. 50. Boston: Ginn & Co. 55 cents.

Dr. Gudeman's syllabus will be found a very valuable aid by professors and students of the philology of the classical languages.

School Savings Banks. By Sara Louisa Oberholtzer. Paper, 8vo, pp. 29. Philadelphia: American Academy of Political and Social Science. 25 cents.

Sara Louisa Oberholtzer's very useful and suggestive essay on school savings banks has been issued as a separate pamphlet by the American Academy of Social and Political Science.

Outlines of English Grammar. With Continuous Selections for Practice. By Harriet Mathews. 12mo, pp. 250. Boston: D. C. Heath & Co. 80 cents.

An attractive text-book, prepared in conformity to new and successful methods for the teaching of the proper use and construction of the vernacular.

Exercises in French Composition. By A. C. Kimball. Based on La Belle-Nivernaise. For pupils in their third or fourth year's study of French. 16mo, pp. 24. Boston: D. C. Heath & Co. 12 cents.

Materials for French Composition. By C. H. Grandgent. Part V. Exercises based on Super's French Reader. For pupils in their first year's study of French. 12mo, pp. 18. Boston: D. C. Heath & Co. 12 cents.

The Pupils' Series of Arithmetics. Primary Book. By W. S. Sutton and W. H. Kimbrough. 12mo, pp. 80. Boston: D. C. Heath & Co. 80 cents.

The Children's First Reader. By Ellen M. Cyr. 12mo, pp. 101. Boston: Ginn & Co. 35 cents.

POETRY.

Sulamith: A Metrical Romance. By Samuel McClurg Osmond, D.D. 12mo, pp. 212. Philadelphia: Jas. B. Rodgers Printing Company.

The author mused on the strange fact that such a passionate yet pure and elevated poem as the Biblical "Song of Songs" could spring from the heart of such an immoral king as Solomon. "Sulamith" is the pure woman whose love previous to the great king's moral fall made him capable of writing such a song, and the story of whose beauty, character and life are here told with a poetic yet philosophical insight and with true oriental richness of color. The strength and progress of the prevailing blank verse give way occasionally to beautiful rhymed songs. It is hardly necessary to say that the conception of the poem is highly original and interesting. The author is now living in Maryland, but from his long residence in Iowa that State will claim him among the growing group of her truly artistic and powerful writers.

After-Hours: A Collection of Ballads, Lyrics and Sonnets. By Thomas J. MacMurray, LL.B. 12mo, pp. 84. Chicago: American Publishers' Association.

Mr. MacMurray has already published "The Legend of Delaware Valley and Other Poems" and "In Danger and Out of It." The author is a Scotchman, and his simple, earnest verses reveal the national strong moral sense and fondness for songs of real and genuine experiences of common life. Nearly all of the poems are of a moral nature. There are a few directly religious, and also a few poems of nature.

Souvenirs of Occasions. By Sara Louisa Oberholtzer. 16mo, pp. 152. Philadelphia: J. B. Lippincott Company. \$1.

This is a delicately apparelled little volume. Most of the "occasions" are such as will be in themselves interesting to all American readers. Those of a more limited nature are generally treated in that true artistic way which makes all occasions proper subjects for poetry. There are humorous verses sprinkled among the others, but the poems inspired by nature in such places as the Banks of Newfoundland and Mount Rigi are to our mind the most poetic in conception and treatment. The metre of the poets is varied, and is in some cases remarkably graceful and rhythmical. The author has read many of her productions in public.

Mountain Melodies. By Cy Warman. Paper, 16mo, pp. 63. Denver, Col.: Cy Warman. 50 cents.

These melodies, which according to the preface were "inspired largely by Nature and Nature's God," consist of some fifty bits of verse varying from seven to forty-eight lines. We fear it is a little unjust to Nature to impute to her inspiration such expressions as "monkey with my motto," and such rhymes as

"I've been so ill at ease.

* * * *

This surely were hades."

But there are some delicately conceived and musically executed bits; not all of which refer directly to mountain scenery or experience.

The Rose of the Alleghanies. Anonymous. Paper, 16mo, pp. 60. Pittsburg: The Pittsburg News Company.

THE REVIEW OF REVIEWS for December will contain a character sketch of the Late Lord Tennyson, by Mr. W. T. Stead, and many other attractive literary features. In view of the holiday season, the December number will be considerably larger than usual, and profusely illustrated.

THE REVIEW OF REVIEWS, AMERICAN EDITION, EDITED BY ALBERT SHAW

The Review of Reviews is published each month in New York and London, the two editions differing in many features, but publishing numerous articles in common. The English Edition is edited by W. T. Stead, Mowbray House, Norfolk St., Strand, London.

CONTENTS FOR DECEMBER, 1892.

THE REVIEW OF REVIEWS.

VOL. VI.

NEW YORK, DECEMBER, 1892.

No. 35.

THE PROGRESS OF THE WORLD.

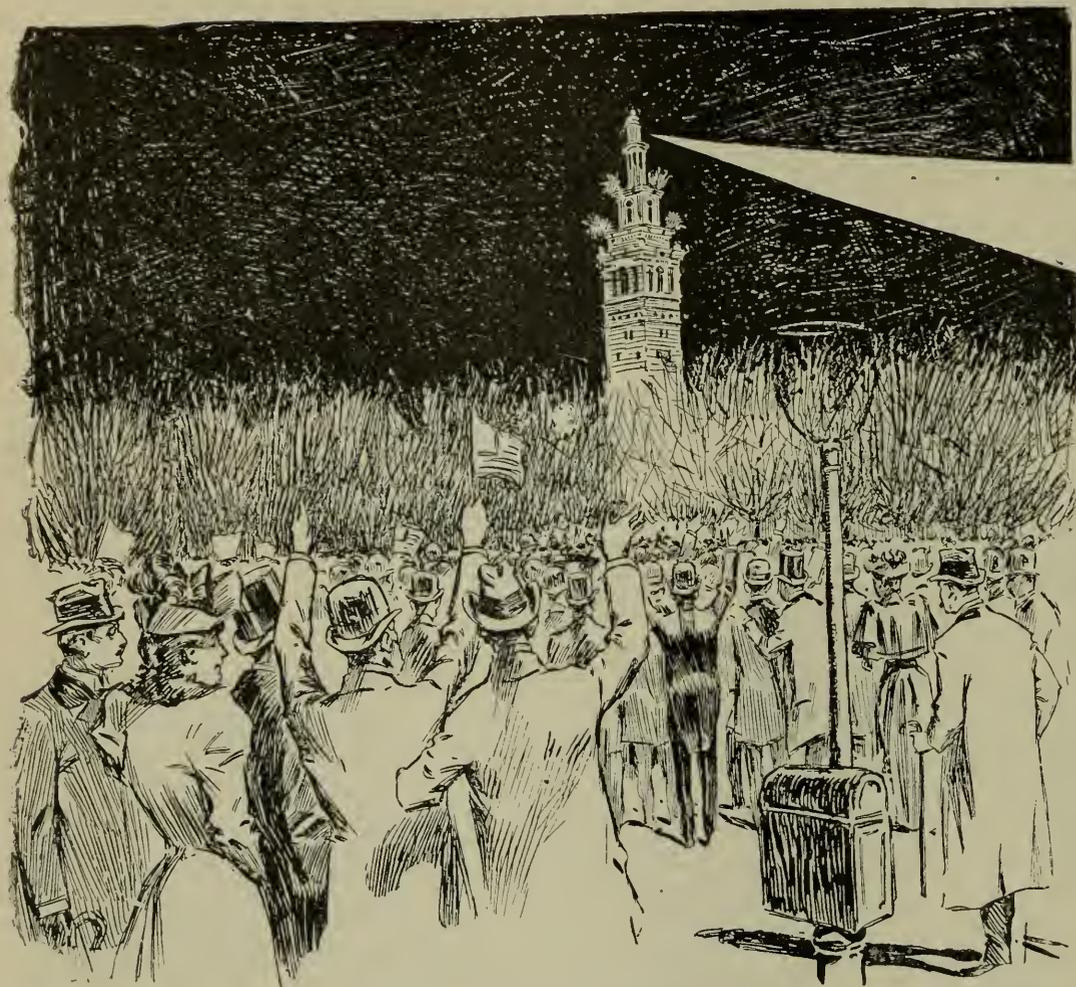

*Our
Quadrennial
Elections.*

In the past month America has surprised itself and given the world a great object lesson. It has chosen 444 Presidential Electors, of whom 267 are Democrats, 118 Republicans and 27 Populists, with the 32 votes of Ohio and California in doubt as yet; and these electors will on the day appointed by law assemble in their respective States and ballot for President and Vice-President of the United States, with the well-assured result that all the Democratic electors will vote for Grover Cleveland and Adlai E. Stevenson. Thus, as a result of the battle of the ballots, Mr. Cleveland will succeed Mr. Harrison as President, and the vast executive machinery of the greatest government on earth will pass from the hands of one political party to the hands of its opponents, involving changes of *personnel* in thousands of important public offices. Besides the Presidential Electors, an entirely new House of Representatives has been chosen, the number of members being 356, of whom the Democrats will have about 220, the Republicans 130, and the Populists 6. Some thirty-three States have also elected State legislatures, in a majority of which the Democrats will have a preponderance. Nearly all of these legislatures will each have to choose a United States Senator to replace men whose terms expire on March 4; and the most of the legislatures will choose Democrats. At present the Republicans have a small majority in the Senate; but after March 4 that chamber will be under Democratic control, with the Hon. Adlai E. Stevenson presiding over it. Moreover, twenty-five States have elected new Governors and other State executive officers. There have been many hundreds of judges chosen to sit on State Supreme benches, or to officiate in State circuit or district courts or county courts. A great number of cities, including New York, have elected mayor, councillors and other officers. It may be safely estimated that more than half a million county and township officials—such as sheriffs, coroners, auditors, treasurers, recorders of deeds, supervisors, township trustees, guardians of the poor,

highway commissioners, assessors, members of school boards, and so forth—were also elected with the more conspicuous functionaries on November 8. In various States, important Constitutional amendments were voted upon by the people. Thus, some twelve or thirteen million voters were authorized to assemble at perhaps nearly a hundred thousand separate polling places to record their preferences for their executive rulers from the township selectmen or trustees to the President of the United States; for their judicial officers from the local justice of the peace to the Chief Justice of the State Supreme Court; and for their law-making functionaries from village alderman to member of Congress. Viewed apart from distracting incidents and from too intimate contact with merely local phases, there is an unspeakable majesty about this silent but determined contest of the ballots. When or where has this world ever seen anything else that could compare in impressiveness with this spectacle of sixty-five millions of people, represented by all their fathers, husbands and grown-up sons and brothers, engaged on one designated day in the choice of all their agents of government?

*Telegraph,
Flash-light
and Kodak.*

At night the country waited, with eager expectancy, to learn the results. Crowds were gathered wherever it was known that telegraphic bulletins would be displayed. Every modern appliance was called into service that could be adapted to the dissemination of intelligence. The national press news associations and the great newspapers had devised systems for the collection and transmission of returns from scores of thousands of polling places scattered from ocean to ocean and from Lake Superior to the Gulf of Mexico, compared with which news-gathering methods in Europe are as a donkey-cart is to a locomotive. The telegraph companies, besides facilitating the plans of the press, were also collecting the news, and were distributing bulletin announcements to every country village and to every city club-room. The calcium lights behind a thousand magic lanterns from Maine to Texas were

THE "HERALD'S" FLASH-LIGHT, ELECTION NIGHT, MADISON SQUARE GARDEN.

throwing the bulletins, minute by minute, upon great screens for the benefit of the thousands who crowded the streets. In New York, the *Herald*, besides the calcium and the screens at each of its three or four branch offices, had placed a powerful electric search light upon the top of the sky-scraping tower of the "Madison Square Garden." The public had been informed for days in advance what to understand by flashes northward, southward, eastward and westward, by flashes intermittent, by flashes protracted, etc. The luminous ray stretching across the black sky was visible to three millions or more people in the vicinity of the metropolis. Southward flashes meant reports favorable to the Democrats in New York State, and eastward flashes meant reports favorable to Mr. Cleveland in the country at large. Northward and westward flashes meant reports favorable to the Republicans. Early in the evening the southward flashes prevailed, for it was soon evident that New York was going to the Democrats by decisive majorities. Later in the night the eastward flashes grew numerous as returns came in from more distant States; and at length as the magnitude of the Democratic victory became manifest to the editors of the *Herald*, their flash-light ceased its intermittent performances and concentrated its power in one clear, steady stream of light pointing due east, but high enough toward the zenith to be visible for many miles. The huge dome of the mammoth *World*

building, also, was ablaze with electric lights, as a pre-announced signal of the Democratic victory. Of course the streets were full of newsboys until long after midnight, selling the extra editions which succeeded one another about every quarter of an hour. Apropos of these modern methods for obtaining and communicating election news, it should be remarked that it was seriously proposed by the Republican national committee to use the "Kodak" systematically at all the polling places where Tammany Hall was expected to use a small army of lodging house "colonists" as "repeaters." The thing was not actually done; but it is obvious that instantaneous photography can be used in such a way as to make illegal voting a very perilous business. A few small cameras, in the

hands of zealous members of a Campaign Photography Club who would press the button on every suspect that came to the polls, might frighten illegal voters into a lifetime of good behavior; for the camera would be an infallible detective.

*The
Results
Accepted.*

But to return to the result of the election. The Republicans had been confident; but they went home in the small hours of the morning aware that they had sustained a general and decisive defeat. They were somewhat stunned with surprise for twenty-four hours, but on the second day they had recovered their wits, had accustomed their minds to the unwelcome facts, and had acquiesced in the results with good grace and good humor. The eventual transfer of vast power from one party to the other, seriously affecting the private fortunes of hundreds of thousands of people, will have been accomplished without turmoil or friction. There is not a Republican in the country who would not instantly resent and resist any attempt to prevent Mr. Cleveland's peaceful inauguration next March. Such a remark sounds like a platitude; and yet this unanimous and perfectly sincere acquiescence in such a momentous political change is a very wonderful thing when one considers it in the light of history, and in comparison with the political unrest of our South American neighbors and some of the

European States. Nor does there seem to be any sullenness in the acceptance of the verdict. The Republicans began at once to talk of better organization for the next campaign, but they took their loss this year as the country's deliberate and clearly pronounced decision, and they have shown no bitterness. Both leading candidates came out of the contest highly respected by supporters and opponents alike. Mr. Harrison will leave the White House with as high a prestige as any retiring President since Washington. Mr. Cleveland will enter it under more favorable circumstances of public confidence and general well-wishing than have fallen to the lot of any new President since the early days of the Republic.

*The Verdict
and its
Meaning.*

It is fortunate on many accounts that the verdict was given in terms so emphatic. Very close elections always invite troublesome, if not dangerous, disputes over the counting and the other electoral details; make it easy to prefer charges of fraud; intensify partisan feeling, and weaken the moral force of the result. In the present instance the country has made its will sufficiently apparent as to several matters. Let it be said plainly that no popular election can ever be interpreted as pronouncing upon tariff schedules in detail. Inasmuch as not one campaign speaker in ten on either side knew anything about the McKinley tariff worth mentioning, it is too much to suppose that the average voter understood it. Yet in a broad sense the verdict was against the McKinley tariff. The Republican party was condemned because the voters believed that its policies had come to be too favorable toward the concentration of wealth. It was felt to be growing plutocratic. Its campaign funds were thought to be the offerings of rich protected manufacturers; and it was believed that these classes of men were combining to use money to a dangerous extent in carrying elections, and then to use it dangerously to secure legislation promotive of their private interests. In the West, the Republicans were accounted more closely connected than the Democrats with corporate wealth in railroads, banks and capitalistic undertakings in general, and the Republican party suffered accordingly. Mr. Carnegie was regarded as the typical beneficiary of the protection system; and the troubles at Homestead created a widespread feeling among workingmen that the Republican party was not sincere in urging protection as a means of maintaining American wages. Mr. Reid, the vice-presidential candidate, was, moreover, accounted a representative of the plutocracy and a long-time enemy of organized labor. It is not for us to say that these views were just; but that they prevailed very extensively is true. And they carried the election. They underlay the People's party movement in the West and South, and they accelerated the Democratic movement in both East and West. There are plenty of millionaire Democrats, of course, and a long list of names enter the mind at once; but it

remains true, nevertheless, that this campaign involved to some extent a movement of the poor against the rich, and that the Republican party was more generally thought to stand for the rich.

*Difficulties
of the
Tariff Question.*

As to the tariff specifically, the verdict is equivalent to a mandate to revise the McKinley bill. This will be a difficult and perilous task, and Democrats of experience and cool heads will permit no "smashing." What is now demanded is an examination of the schedules and rates of the tariff law, not so much from the point of view of the protected interests themselves, as from that of the national prosperity at large. The present moment would seem opportune for taking the tariff largely out of politics. The fact is that men's real convictions on this question do not follow present lines of party cleavage. There are many protectionist Democrats and almost as many low-tariff Republicans. A standing tariff commission might be constituted that would make reports from time to time based upon sound and impartial investigation. The problems to be solved are so delicate and difficult that they must be approached in the best of temper and with perfect frankness if they are to be solved wisely. This country has prospered so magnificently under the system which has enabled it to create its own great manufacturing interests, that no readjustments of that system should be made without a careful weighing of every consideration. Since the election, we do not hear Democrats saying, in the language of their Chicago platform, that "protection is a fraud." To them are now to be confided all the varied interests of this great Republic, and the responsibility may well make them anxious. Meanwhile the country need have no serious apprehension of disaster through a too abrupt reversal of policy, for all the Democratic leaders are enjoining one another not to be precipitate. Unquestionably the joy of Europe has been too vociferous. American Democrats surely do not propose to join hands with foreign manufacturers to crush out promising industries that have taken root on our own soil. It is to be hoped that the forthcoming tariff debates in Congress will not be acrimonious, and above all that the subject may be handled in a scientific and statesmanlike way, without too much lobby interference on the one hand or too much destructive partisan zeal on the other.

*The "Force
Bill" as an
Issue.*

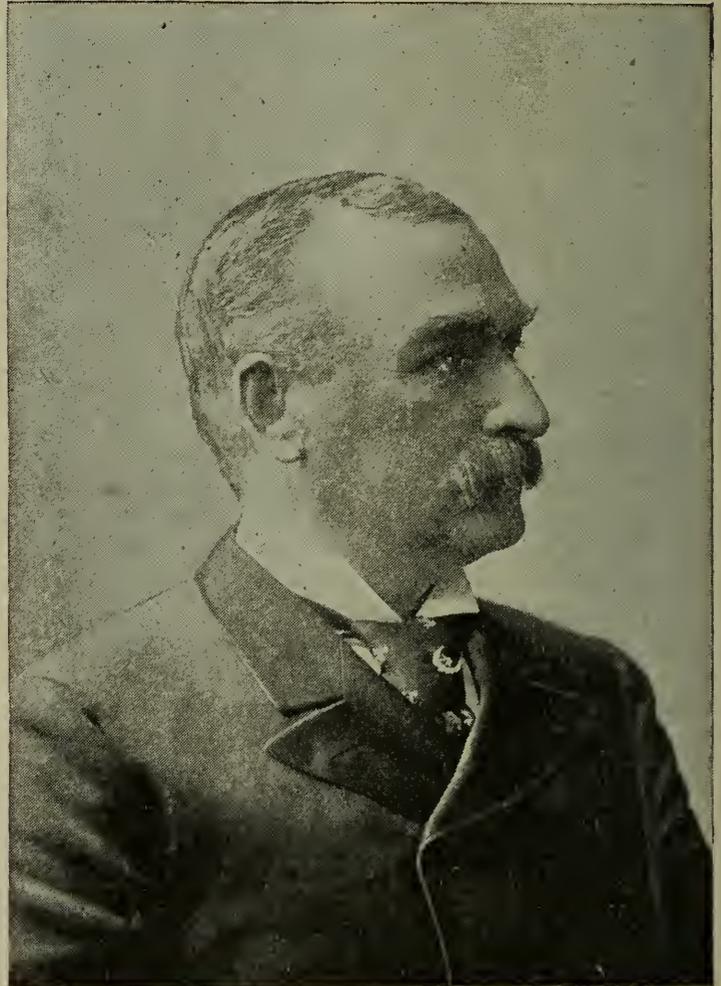

The question of Federal control of elections proved to be an issue of the highest order of influence. The Republicans had decided to go through the entire campaign ignoring that issue, and they have their reward. Two years ago it was one of their leading doctrines that presidential and congressional elections should be brought under a more or less elastic system of federal supervision. Their Minneapolis platform omitted the question altogether, and through the whole campaign, from June to November, their only answer to the Democratic argument that Republican

victory meant a "Force bill" was a silence so evidently concerted that it became painfully conspicuous and irritating. This silence, far from helping to keep the issue out of the campaign, gave weight to all that the Democrats charged, and justified that party in ringing the changes on it. The South was upon the point of "breaking up" politically. Several of the border Southern States were ripe for Republican success, and several of those further south were easily the conquest of the People's party. But the Force bill issue changed everything. "No Force bill, no negro domination!" was a cry that stirred the South like a clarion blast from the Potomac to the Rio Grande, and languishing Bourbonism revived once more, and Populists and Republicans experienced a cyclone. The South has gained its point this time, and its people may now join as many new parties as they like. The principle of State and local control of all elections is established—at least for many years to come. The South need fear no Northern legislation to enforce the negro's suffrage rights. Each Southern State must deal with its own problems of the franchise in its own way, subject only to the Constitution of the United States, including the post-bellum amendments. Any State that wishes to adopt the Mississippi plan is at liberty to do so so, with the understanding that the illiteracy disqualifications must be applied without unfair discrimination on account of color. Yet even if such discrimination were to some extent practiced, it would not primarily concern citizens of other States. This election has laid the ghost of Southern reconstruction by Northern interference. Races in the South must work out their destinies themselves, and the North may observe with friendliness and sympathy, but must keep its hands off.

*The Cities in
Politics.*

The immense part played by the great cities in this last election has impressed the public mind deeply. New York City's Democratic majority of 75,000, reinforced by Brooklyn's large majority, sufficed to overwhelm a Republican majority of 60,000 that had accumulated in the counties of the great State of New York above the Harlem river—that is, above the metropolitan and island populations about the mouth of the Hudson. Chicago's great growth and its decided alliance with the Democracy has even given the once impregnable Republican State of Illinois to the Democrats—a transformation from the politics of the late John A. Logan to the politics of Adlai E. Stevenson that is almost startling. Illinois gave a plurality of 25,000 for its Republican leader, Logan, on the ticket with Blaine in 1884, and now it has given 25,000 for its esteemed Democratic citizen, Stevenson, on the ticket with Cleveland. And the change is very largely due to Chicago. The Democracy of Boston has practically made a doubtful State out of Republican Massachusetts; and the "alliance of Harvard College and the slums" is becoming the dominant force in the old Bay State. But it is to be noted that in St. Louis, where Democracy rather than Republicanism is the

regular politics of the larger part of the well-to-do and "highly respectable" classes, the Republicans this year swept the town. Many good people view with deep apprehension what seems to them the political perversity of "the masses" in our large cities. This monthly chronicle is not the place to argue the subject at length. But, at least, there are two sides to the debate. If, for instance, "the slums" are destined to rule Massachusetts, they are distinctly felicitous in their selection of so bright and winsome a young Harvard man as Governor Russell

MAYOR-ELECT THOMAS F. GILROY.

to hold the chief office. And in New York, where they have given Tammany so rousing a victory, it must be admitted that in Mr. Gilroy, the Mayor-elect, they have promoted from the commissionership of public works a man whose personal character and official ability have won respectful treatment and frank acknowledgment from Tammany's bitterest enemies. In Illinois the personage whom the Chicago slums have chosen to honor above others is John P. Altgeld, the Governor-elect. Judge Altgeld has at least been an outspoken man, of great intellectual vigor and advanced social ideas, who has written and spoken much, and has made his way in public life not as a plutocrat or a machine party boss, but as a thinker and a man of courageous ideas. It is not long ago that Henry George came near carrying New York against Tammany on one side and

“respectability” on the other, simply because in the minds of the workingmen he stood for progressive social ideas. “The masses” in American cities are not so depraved or so hopeless after all. And it is just possible that the professed friends of “good government,” who fear the slum vote, would accomplish most in the end by throwing in their lot with the masses, even with “the publicans and sinners,” studying their interests and aiming to lead them in the direction of real social and political progress.

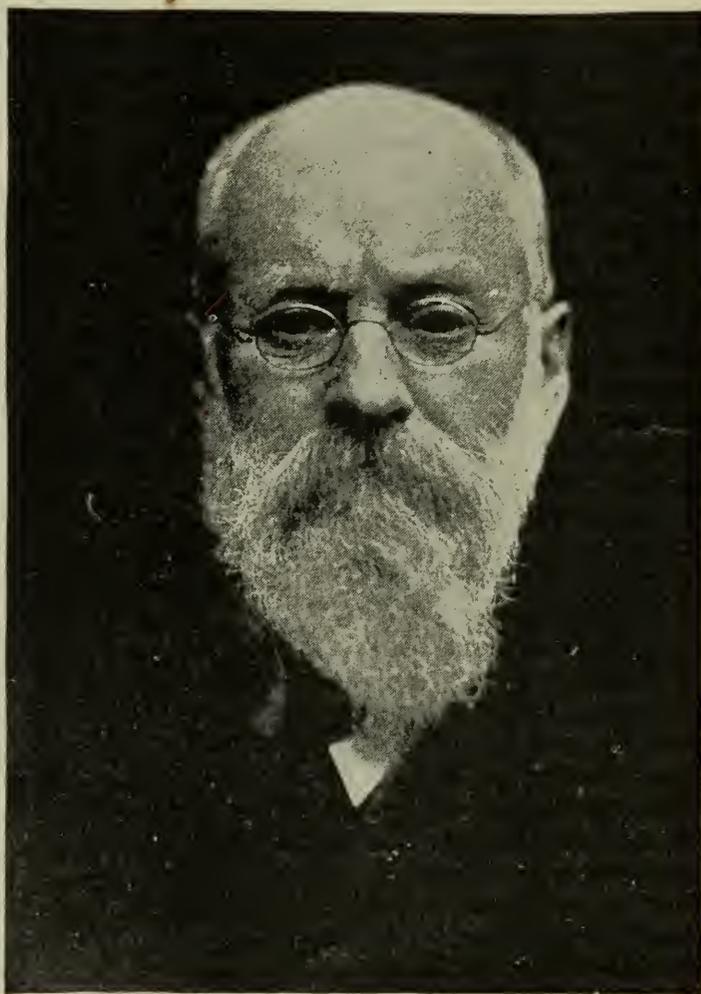

*Ideas
Versus
“Machines.”*

And this leads us to observe that, although even in the glaring light of this November result the politicians as a rule cannot see it, political victories are won by ideas rather than by machinery. In a limited range, much can be done by good party organization toward getting out the full vote and holding the wavering ones in line. But the two party machines with headquarters in Fifth avenue, New York, are not responsible for Republican defeat or Democratic success. The voters as a mass acted upon their own judgment and convictions. They were swayed by ideas. Nothing could well be more favorable to the cause of civil service reform than the experiences of the last eight years. Mr. Cleveland began his first term as a civil service reformer. He ended it as the most lavish dispenser of party spoils the country had ever seen, thereby secured his renomination in the face of his previous avowal of one-term principles; and he was defeated at the polls with all the vast machinery of federal officialdom working strenuously for his success. Mr. Harrison came in less pronounced as a civil service reformer. The party spoils were thereupon distributed more frankly, though no more generally, than under Mr. Cleveland. Mr. Harrison's renomination was secured by the active participation of federal office-holders, and the federal machinery was used for his re-election without stint. Yet the possession of this supposedly vast advantage did not avail anything more to Mr. Harrison in 1892 than to Mr. Cleveland in 1888. The people thought well of both men, but thought ill of their perpetuation in power through the influence of public patronage. The people are getting tired of “machines” and spoils methods. When the right moment comes they will rise in New York City and obliterate Tammany, in spite of its marvelous hold through its use of patronage upon hundreds of thousands of people. The best thing that Mr. Cleveland can do for the Democratic party will be to resist its greedy importunity for the spoils of office.

*Newspapers
in the
Campaign.*

The campaign committees will say, on this score of the dominance of ideas over mere machinery in the elections, that they contributed hugely to the making of the result by their great output of campaign literature. There is of course much truth in this claim. But nowadays it is the newspapers rather than speeches in pamphlet form and “campaign documents” as such, that reach

and influence the voters. In so far as the committees utilized the newspapers—which they did to an unprecedented extent—they found their way to the people. But most newspapers do not take their tone from politicians and campaign committees. In England the politician makes public opinion, and the party editor is his humble and obedient servant. In this country the situation is exactly the reverse. The editor leads and the politician follows. The field for a few great editors who can perceive, think, proclaim, and hold their ground, is particularly open just now, especially on the Republican side. The Democratic papers have of late years been much more influential with the people, much more enterprising, and much more widely read—speaking in the general way—than the Republican papers.

CHARLES A. DANA.

*Especially
the
New York “Sun.”*

Of course, the one newspaper that comes out of this year's campaign covered with glory is the New York *Sun*. The impartial student of the campaign must admit that the *Sun* dictated its plan, and contributed more than any other single factor to the result. Its distinguished editor, Charles A. Dana, was strongly opposed to Mr. Cleveland's nomination. He was equally opposed to the tariff plank adopted at Chicago. To support Mr. Cleveland upon the ground of his great personal superiority for the Presidency would have been stultification for the *Sun* in view of its previous

treatment of him ; and to have supported him upon the merits and urgency of the Democratic tariff plank would have been equally impossible. Mr. Dana took up the Democratic opposition to a " Force bill," and declared this issue to be the one important feature of the campaign. He stood absolutely alone at first. He reiterated his position every day, ingeniously, humorously, persistently. At first people thought it a joke. Gradually they took it seriously. Mr. Hill and Tammany, the anti-Cleveland Democrats everywhere, the anti-free-trade Democrats everywhere, and the old-line Southern Democrats, began to rally strongly around Mr. Cleveland on the ground that at least he was dead against the Force bill. Mr. Harrity, Mr. Whitney and the Fifth avenue machine fell in line. They plastered the whole South with great yellow cartoons illustrating the horrors that would follow a Force bill. We reproduced one of these in our cartoon department last month. The *Atlanta Constitution* and other Southern Democratic papers took up Mr. Dana's daily cry of " No Force bill, no negro domination ! " The South was saved to the Democratic party, and even in New York and the North the issue was used with great effect. Many Democrats do not like the *Sun* and do not think it sincere. But it has achieved an overwhelming influence through the dominant personality of a great editor, supported by a brilliant and loyal staff. Mr. Dana combines the old with the new traditions in journalism. He appreciates modern news gathering, but he also believes in editorials and brilliancy and literary excellence. He was trained at Harvard and at Brook Farm, was for a long time with Greeley on the *Tribune*, and is something of an idealist. He is an American patriot, believes in the new navy, favors American industries as Samuel Randall did, stands by our own foreign policy in moments of emergency, appreciates the ability and character of great Republicans like Blaine, Harrison, Reed and McKinley, and supports Hill's machine and Tammany Hall in a spirit that seems paradoxical to many readers. The *New York World* and the *Herald* distinguished themselves in the campaign by the fullness and impartiality of their reports of political news. The *World* pushed a Western Democratic propaganda. The *Tribune* was dignified and able through the campaign, but candor compels the statement that its influence was much diminished by the candidacy of its editor and chief owner, Mr. Whitelaw Reid. It could not have been otherwise. The rapid rise of the *Recorder* and the *Advertiser*, and the pluck, energy and great circulation of the *Press*, were the noteworthy things in New-York morning Republican journalism.

The Death
of
Mrs. Harrison.

While the political aspects of the campaign were perhaps not affected in any way, its tone and manner were distinctly modified by the sad death of Mrs. Harrison. The President's devotion to his wife was that of a man whose home circle and domestic life have been to him always the sweetest and happiest part of his existence. His marriage was a very early one, and he

MRS. BENJAMIN HARRISON.

has never been a man who has had much time or taste for club life, fashionable society or public amusements. His bereavement has not been obtruded upon the country for sympathy or effect ; but the death of a President's wife cannot be otherwise than a matter of wide note and deep concern. Mrs. Harrison was universally regarded as a type of all that is best and most beloved in American womanhood. Her intelligence and capacity were very great, and she was fully equal, as long as her health lasted, to any social or semi-public duty that was imposed upon her by the fact that she was mistress of the White House. Mrs. Harrison grew to young woman-

hood and was educated in the President's own college town, Oxford, Ohio; and after her marriage went with her husband to Indianapolis, which was destined to be her life residence, excepting for the years spent in Washington with General Harrison as Senator and afterward as President. The Atlantic seaboard has not quite learned to appreciate the culture and refinement of two such Western home towns as Oxford and Indianapolis. But the fact that such women as Mrs. Harrison and such men as the President come from those towns must greatly enhance that appreciation.

The Statesmen and the Children. Undoubtedly domestic affections and ties afford the statesman his safest and best relief from the cares of public life or the reverses of practical politics. Mr. Gladstone has met with many a heavy knock-down; but he has gone off home to Hawarden for a few days, chopped down trees and romped with his beloved grandchildren, and turned up again in public life serene and refreshed. Garfield in the short but stormy period of his occupancy of the White House, found immense relief in his romps and games with his small sons in their bedroom at night. Lincoln's weariness, at the darkest moments of the war period, was forgotten in the company of his son "Tad." In like manner everybody knows and sympathizes with President Harrison's great affection for his little grandson, Benjamin Harrison McKee, and likes his warm devotion to the members of his family, whether grown up or children.

Our Composite Photographs of the British Cabinet. The composite photograph of Mr. Gladstone's Cabinet which formed our frontispiece last month has attracted wide notice and excited much interesting comment. The result of this blending of the faces of seventeen statesmen was certainly very different from anything that a portrait artist would have been likely to draw as a type, an average, or an idealization of the English Liberal politician of to-day. The strange countenance obtained by the process of photographic blending would seem to have been more

PRESIDENT HARRISON AND HIS LITTLE GRANDSON.

favorably regarded in this country than in England. Thus, the *Christian Union* commented upon it as follows:

"The current number of the *REVIEW OF REVIEWS* contains a very interesting feature in the form of a composite photograph of Mr. Gladstone's Cabinet. This photograph may perhaps be regarded as revealing the typical quality of the new Liberal Ministry, and, if so, it shows culture, refinement of taste and habit, and a meditative quality almost inclining to dreaminess. It is a type which belongs rather to the man of letters, the artist or enthusiast than to the practical politician; but Mr. Gladstone's Cabinet, it must be remembered, contains men of a very unusual intellectual quality."

And this expression of opinion is fairly representative of the comments of our American newspapers. In England the critics were much less complimentary.

They were disposed to regard the features of the composite gentleman as simply expressive of a benevolent imbecility. In both countries, however, the interest in the picture and in the manner of its making was evidently so general that we can respond to it in no more appreciative way than to print reproductions of the composite photographs of each of the four groups described last month. As stated then, the photographer began by dividing Mr. Gladstone's sixteen colleagues into batches of four, each with its own head man. The head man in each group of four was the last to be photographed. In making up the fours, regard was necessarily paid to the similarity of visage. For instance, the first group was made up of Lord Rosebery, Mr. Asquith, Mr. Acland and Mr. Arnold Morley—

four members of the Cabinet who are clean shaven. Lord Rosebery was naturally the captain of this beardless four. Sir William Harcourt was the captain of the big-headed men, and he had as his colleagues Mr. Fowler, Mr. Mundella and Mr. Campbell-Bannerman. The third group, with Mr. Morley at its head, consisted of Lord Herschell, Mr. Shaw-Lefevre and Lord Ripon. The fourth, or Lord Spencer's group, included Mr. Bryce, Lord Kimberley and Sir George Trevelyan. Having got these four composite groups, they were all combined, and then Mr. Gladstone's portrait was photographed upon the whole. For purposes of comparison, we have thought well to use again, in smaller space, the final resulting portrait as published last month. This, with the four group pictures, has

been submitted to a noted London physiognomist, Miss Oppenheim, whose judgments are at least amusing. Of the Gladstone composite Miss Oppenheim says :

The chief characteristic in this face is economy and acquisitiveness, as seen in the breadth of the bridge of the nose and the development of the organs of calculation, order, and precision over the outer corner of the eye. The forehead is square and practical, and there is a total absence of imagination, poetry, ideality or veneration, the head being flat on top. The lips are thin and lacking in sympathy. There is more permanency than intensity in the facial bones. The smallness of the nostrils denotes a lack of physical courage. The depth of the eyes in their sockets means shrewdness and policy."

Of the four initial groups the first, Lord Spencer's, comes out rather the handsomest. By calling it Lord Spencer's group we mean that he was photographed last upon the images of his three colleagues, Lord Kimberly, Professor James Bryce and Sir George Trevelyan. The result is very curious, being what may be called a glorified Bryce. Lord Spencer's whiskers are almost the only trait of the chief of this group, who, as being last photographed upon the portrait, ought to have been more conspicuous than his colleagues. Miss Oppenheim gives the following delineation of the character of this group :

The deep setting of the eyes denotes shrewdness, and the manner in which the brows lower over them, that there is more perception of things present than of things to come. The shortness of the eyebrows de-

MR. GLADSTONE AND HIS LITTLE GRAND-DAUGHTER.

notes a lack of order, calculation and figures, yet the width of the nose at the bridge is indicative of excessive economy and closeness over small matters. The downward projection of the eyebrow at the outer corner means contest, and the fullness under the eyes eloquence and speech. The several perpendicular lines between the eyes denote conscientiousness, the transverse wrinkles over the bridge of the nose authority and command. There is a fair development of the organ of benevolence, but there is a want of width across causality or reasoning power.

The second group is Mr. John Morley's, and consists of Lord Herschell, Mr. Mundella and Mr. Shaw-Lefevre. Mr. Shaw-Lefevre disappears as completely as Sir George Trevelyan does in the first group. We have here Mr. Morley's forehead, Lord Herschell's nose, and Mr. Mundella's beard. Miss Oppenheim's diagnosis of this portrait is as follows :

The squareness of the forehead denotes practical common sense, and that the perceptive and reflective faculties are equally balanced. The manner in which the ears stand out from the head is indicative of physical energy and executive power. The length of the throat suggests independence of spirit. The downward projection of the septum of the nose shows a love of analysis, invention and discovery. The width of the chin indicates fidelity and permanency. The two perpendicular lines between the eyes are caused by a love of justice and equity. There is a lack of sympathy in the thinness of the lips, but the nose is thinner at the bridge, thus less acquisitive.

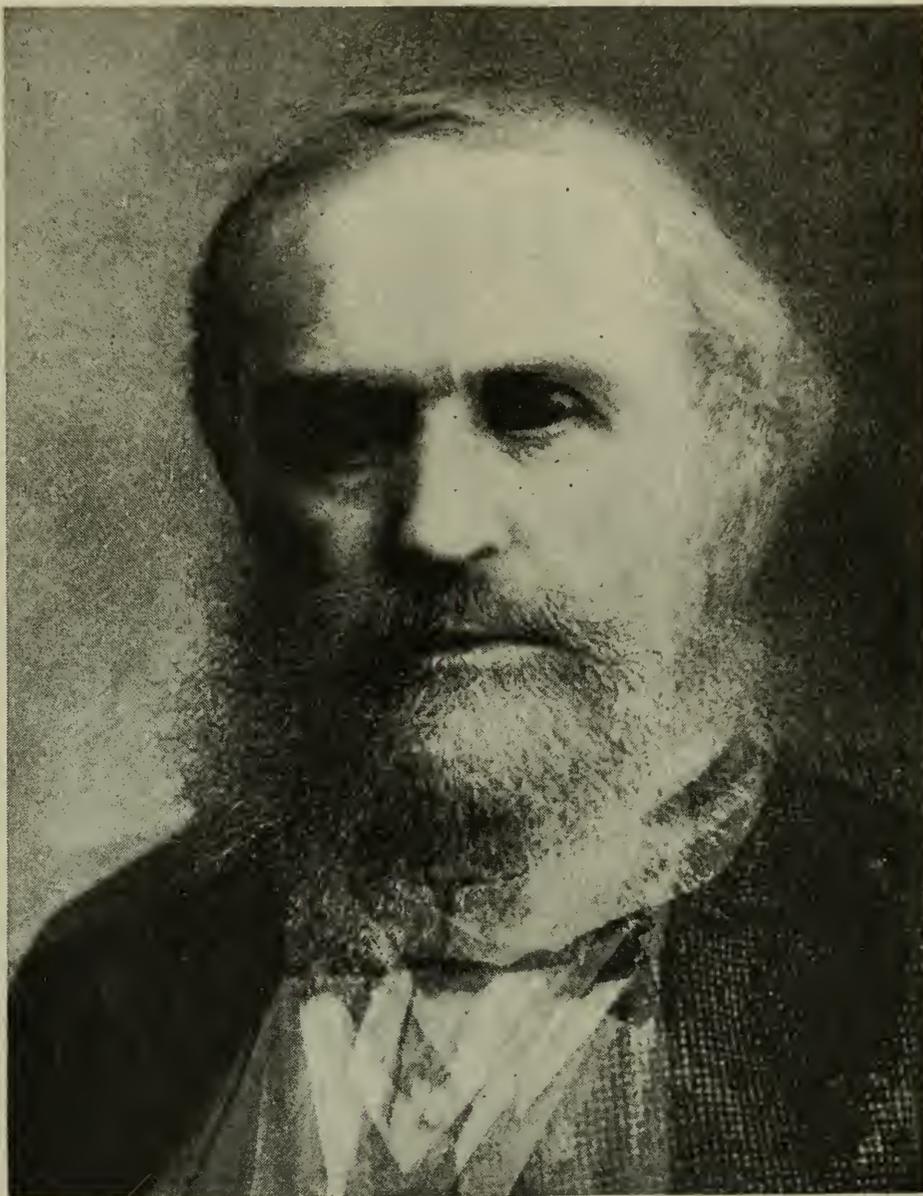

The third group is that of Sir William Harcourt, and is composed of the large-headed men of the cabinet—namely : Lord Ripon, Mr. Fowler and Mr. Campbell-Bannerman. The curious thing about this is the disappearance of Sir William Harcourt, the type resulting from the combination of the four being predominantly that of Mr. Fowler, although the general result somewhat modifies the appearance of the president of the Local Government Board. Of this group Miss Oppenheim says :

Shows more reflection than perception of individual things, the top part of the forehead being widest. The line from the nose to the mouth means ambition and a love of distinction. The wavy lines in the forehead denote hope and enthusiasm. The fullness under the eyes is due to the development of the organ of language or eloquence, giving its possessor great power of verbal expression. The fullness of the under lip means sympathy and philanthropy ; the width of the indented chin, fidelity and a desire for affection.

The last and most remarkable of the groups is that of Lord Rosebery. It is formed from the beardless men of the Cabinet—namely Lord Rosebery, Mr.

Asquith, Mr. Acland and Mr. Arnold Morley. The net result is a combination between Mr. Arnold Morley and Lord Rosebery, the latter, however, being much the most prominent. Miss Oppenheim's delineation of this group is as follows :

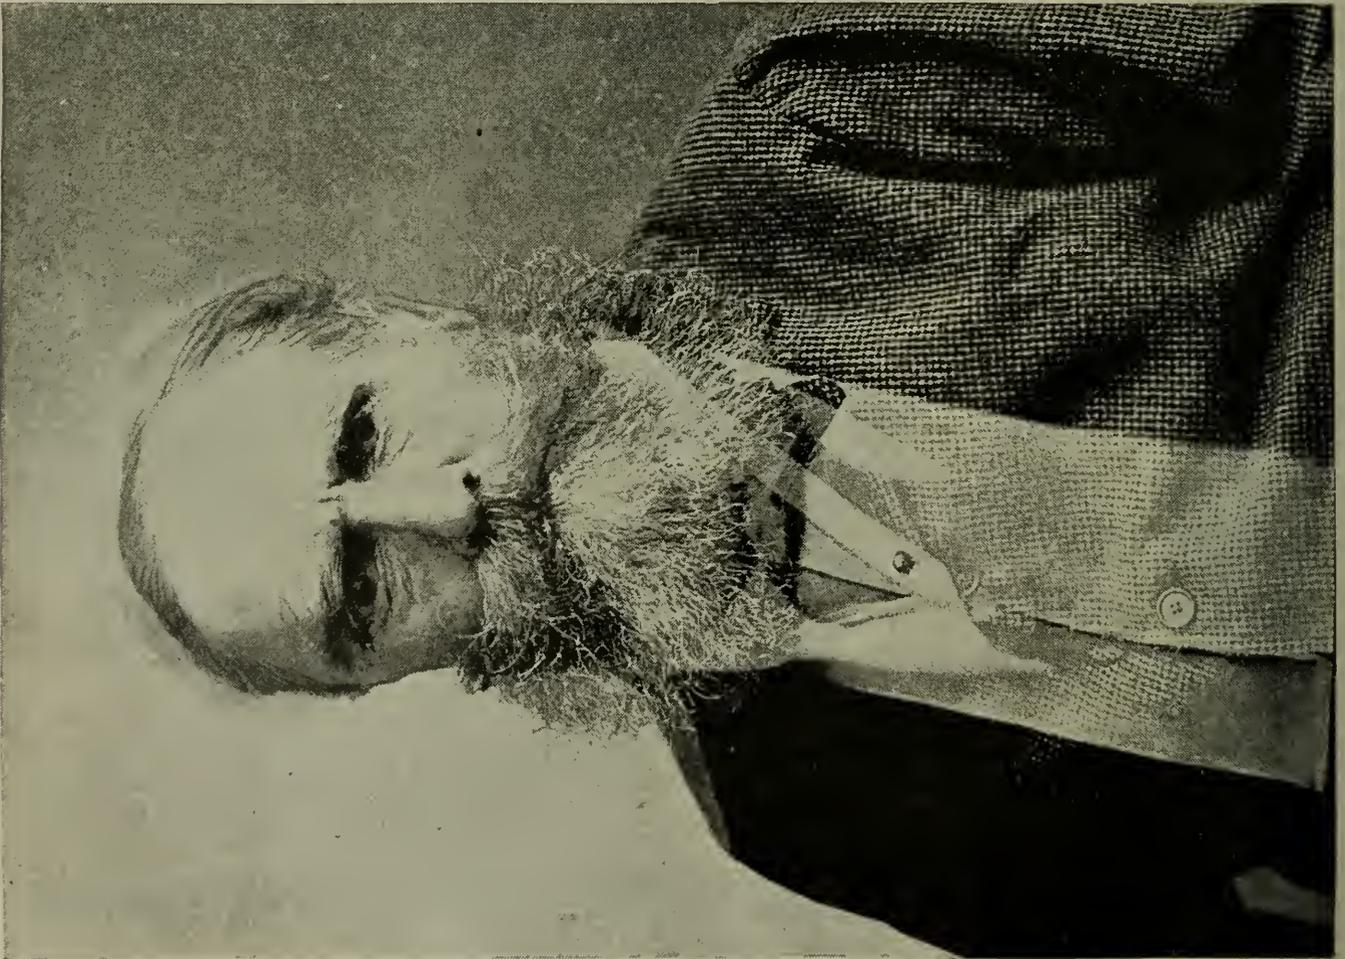

The chief characteristic of this composition is self-esteem, as seen by the remarkable height of the back

A COMPOSITE OF MR. GLADSTONE AND HIS CABINET.

of the head. The other qualities are fairly evenly balanced. The length of the eye-sockets denotes mathematical accuracy and calculation, the width of the bridge of the nose acquisitiveness and economy. The manner in which the lips fit into one another indicates concentrativeness of ideas and fixity of purpose. The smallness of the nostrils means a lack of pugilistic courage, and that their possessor would sooner settle matters civilly than physically. The mental capacities are well developed. The whole face denotes excessive vitality and executive power.

We hope to be able next spring to give our readers a composite photograph of Mr. Cleveland and his new Cabinet. Just now there is much gossip afloat as to its probable membership.

*Will There
be an
Extra Session?*

Ever since election day the question whether or not the new Congress would be called by Mr. Cleveland to sit in extra session, has been eagerly discussed. The old Congress, elected in 1890, will assemble for its second and closing session on December 5. It will continue in session until March 4, when the present House expires. In the natural order of things the new Congress, elected this year, will not assemble for its first session until next December, just thirteen months after its election. If Mr. Cleveland chooses to do so he may assemble the next Congress at any time after March 4. Thus he may call an extra spring session, or he may if he chooses assemble Congress a month or two in advance of the regular December session in order that the tariff question may be brought under preliminary consideration. There are always many practical objections in the way of calling extra sessions, and it is well known that President Cleveland will be reluctant to assume this responsibility, and will avoid it unless he deems the necessity very clear. But if the new President's inauguration and the opening session of the new Congress could take place within one or two months after election day, there would be many points of advantage gained and very few, if any, points of advantage sacrificed.

*This
Winter's
Session.*

The country will watch somewhat curiously the conduct of the existing Congress, which resumes its sittings this month, to see how its sense of its duty may have been affected by the recent elections. The House of Representatives in its first session passed several tariff measures touching separate items of the complicated schedules; but these bills found no consideration from the Republican Senate. It is possible that the Senate may now be disposed to give some attention to tariff questions, although it is much more likely that all such bills will be allowed to await the next Congress, which will have a Democratic majority in the Senate chamber as well as in the House. The first order of business in the Senate this month will be the Washburn-Hatch Anti-option bill, which, having passed the House, failed to reach a vote in the Senate at the last session, and was given the order of precedence for the December sitting. It would seem likely, upon the whole, that the strength shown by the Farmers' Alliance and the anti-monopoly movement in the elections may affect rather favorably than otherwise the fortunes of this pending measure for the prohibition of that form of gambling known as "future trading" or "dealing in options."

*The
State
Legislatures.*

In a few weeks, not far from thirty State and Territorial legislatures will be in session, and matters of even more concern to the every-day existence and happiness of the average citizen will be dealt with by these bodies than by the national Congress at Washington. Until recently, there has been a deplorable lack of knowledge among the law-makers of any given state con-

cerning the recent legislative experiments of the other States of the Union. Yet it is obvious that the experience of sister commonwealths might, touching a very great number of subjects of legislation, be of the utmost value. This is coming to be more clearly perceived, with the result of a constantly increasing interchange of suggestion and experience. A number of States have created official commissions for the promotion of uniform legislation. These commissions met in New York in November. Various State functionaries, such as superintendents of public instruction, commissioners of labor statistics, members of boards of railway commissioners, and so on, have fallen into the habit of regular or occasional gatherings for mutual consultation and benefit, and all these methods result in placing at the disposal of one State the accumulated wisdom and knowledge of all the rest. The Library of the State of New York has undertaken, for the guidance primarily of the legislators of its own commonwealth, the annual publication of an extensive comparative summary and index of the legislation of all the States whose law-making bodies have been in session within the year. This particular task falls to the lot of Mr. W. B. Shaw, who is Mr. Melvil Dewey's legislative sub-librarian. Mr. Shaw is in position to know very promptly and accurately of the new laws enacted by all the different States. There will be found elsewhere in this number of the REVIEW OF REVIEWS a brief but highly suggestive summing-up by Mr. Shaw of the principal State legislation of the year 1892. It will be remembered that he has, in former numbers of this magazine, presented a summary of the legislation of 1890 and 1891. The year 1893 bids fair to be a very interesting and important one in the history of American State legislation.

*Desirable
Constitutional
Changes.*

In the National Republican Convention at Minneapolis, ex-Gov. John S. Pillsbury, of the Minnesota delegation, proposed the following resolution:

Resolved, That the Republican party, in National Convention assembled, most earnestly and emphatically urge the adoption of an amendment to the National Constitution, extending the term of office of the President of the United States to six years, and providing that no person who has been President of the United States shall thereafter be eligible to the same office. We therefore respectfully request the Congress now in session to propose an amendment to the National Constitution that will speedily accomplish this end.

This resolution, though publicly read before the convention, was not debated nor brought to the test of a vote. But it expresses a sentiment which is so prevalent among thoughtful men that one can seldom find in private conversation a member of any political party who does not entertain it. The resolution was duly published as an appendix to the volume of proceedings of the Tenth Republican National Convention that Col. Charles W. Johnson, who was secretary of the gathering at Minneapolis, has very accurately edited. It is to be hoped that the present

or the next Congress may act upon this one-term question, and set in motion the tedious process of amending the Federal Constitution. While they are about it, there are several other changes relating to the method of nominating and electing Presidents, and to the apportionment and choice of members of Congress, that might well be improved. The gerrymander of congressional districts by the State Legislatures has come to be a political abuse and a public scandal of the gravest character. It is possible that some slight addition to the clauses of the Constitution relating to the method of electing members of the House of Representatives might do away with the evil. In this connection, Professor Commons' very thoughtful and suggestive article on the abolition of gerrymandering, contributed to this number of the REVIEW OF REVIEWS, deserves to have particular attention called to it. Among the minor features of our framework of government which would seem susceptible of improvement is the one fixing the date of the expiration of a presidential term and a congressional period on March 4, and the one providing for the assembling of regular sessions of Congress in the first week of December. Under the existing plan, the President continues in full charge of the executive government for four months after the choice of the electoral college that is to name his successor. There was some reason for this in the minds of the framers of the Constitution, who supposed that the electoral college would really exercise an independent choice of its own, who made a liberal estimate of time required for traveling and for the transmission of returns in the days before the advent of railroads, and who also wished to allow an abundance of time to meet the contingency of no choice by a full majority of the electoral college and the consequent precipitation of the presidential election into the halls of Congress. A revision of the electoral system, by the way, should provide for the election of the President by a plurality of the electoral college.

*End of the
Homestead
Strike.*

The Homestead strike was terminated on Saturday, November 19. Its duration of several months had been a terribly losing game all around. Some twenty lives, it is reported, were sacrificed directly or indirectly; and the money loss, which can only be estimated, is placed at \$10,000,000 or more. Millions were sacrificed on both sides, although the bulk of the loss will have been sustained by the company. The taxpayers of Pennsylvania will have to meet a bill of from a half million to a million dollars for various charges growing out of the employment of the militia, cost of prosecutions, etc. With the great sum that this wicked quarrel has wasted, there could have been built and endowed a series of technical and practical trades' schools that would have become the glory and pride of Pennsylvania, and would have rendered incalculable benefits to workmen and capitalists alike. Against the plea that the State should protect society by establishing compulsory arbitration to meet such

conflicts as the Homestead deadlock, one finds many glib and tripping phrases used, the sum and substance of which are that it would all be quite, quite impossible, and would be quite objectionable even if it were possible, because certain supposed metaphysical rights might be infringed upon. Men evidently have different views as to the order and priority in which rights should be asserted. In our opinion, it is the right of the State, which created the corporation at Homestead, to see that a peaceful and regular way is provided for settling labor disputes.

*The French
Government
and Strikes.*

The chief interest in Continental news grows out of the new expansion which has suddenly been given to the functions of Prime Minister of the French Republic. The miners of a village named Carmaux some time ago quarreled with the colliery company. The miners selected one of their number, by name Calvignac, to be mayor of the commune. His employers dismissed him, alleging that he had not put in his attendance at the mines as often as he ought to have done. The miners protested that he put in an appearance as often as was possible for him to do, subject as he was to the responsibilities of his position of mayor of the commune, and also to attacks of bronchitis, from which he was suffering. They demanded his reinstatement; the employers refused, and the men turned out on strike. There was a prolonged agitation, the Government filled the village with gendarmes, kept the mines free from water, prosecuted the rioters whenever they waxed turbulent, and secured the conviction of several of the men before the regular tribunals. Thereupon the discussion was transferred to the Chamber of Deputies. The Radicals, headed by M. Clémenceau, declared that it was necessary to protect universal suffrage against employers depriving a duly-elected mayor from the means of his livelihood. The strike had lasted several weeks. In order to avoid defeat M. Loubet, the Prime Minister, had to consent to act as arbitrator between the two parties. His decision, which was arrived at after considerable negotiation with both sides, was of the nature of a compromise. M. Cavignac was to be reinstated and the workmen on strike were to be taken on again, with the exception of those in jail for breaches of the common law. The manager of the company, for whose dismissal the strikers had clamored, was to remain at his post. No sooner was this award announced than the workmen repudiated it and M. Clémenceau started for the district in wrath, declaring he had been duped by the Prime Minister. After his arrival there a compromise was arranged. The company agreed to remove the objectionable manager to another mine and the the Government promised to release the imprisoned workmen, and if they were not reinstated by the company work was to be found for them elsewhere. And so the strike was at an end. But the subsequent outbreak of dynamiters and extreme socialists was made a ground for reproaching the Government in

Conservative quarters as having been too weak and yielding at Carmaux; while the Government's attempt to curb the license of the Socialist and Radical press was naturally so bitterly resented as to place M. Loubet between two fires, with the result of the recent ministerial crisis that almost overthrew his Cabinet.

English Strikes and Arbitration. There is good reason to believe that sooner or later the British Government will be compelled to follow the example of the French. The functions of arbitrator should not be undertaken, it is true, by a political partisan, even although that partisan happens to be the Prime Minister at the time being. The natural arbitrator of all such disputes would be the Archbishop of Canterbury. But unfortunately such a suggestion would be scouted by all practical men in the country, so entirely has the Archbishop ceased to represent the great agency for peace-making which the world possessed when Christendom was one. The Prime Minister is the only substitute for a Pope in a democratic and secular State; and the English will find themselves driven to sanction the interference of the Prime Minister or of the Prime Minister's arbitrator in all disputes of the first magnitude. A quarrel has now broken out between the masters and the men of the Lancashire cotton trade. The workmen refused the offer of mediation made by the Mayors of Manchester and Liverpool; but the crisis that impends is too great to be dealt with on merely municipal lines. The danger of allowing disputes to be decided by the ruler of the nation for the time being is, that he will be tempted, especially on the eve of a general election, to give unjust judgments in order to catch the votes of one side or another. At the same time any judge is better than none, and if it came to be regarded as a more notable achievement for a Prime Minister to settle grave industrial disputes during his term of office than to successfully conduct a foreign war, there would not be very much reason to regret such an evolution.

The Broken Hill Strike. The prosecution of the rioters at the Broken Hill mines in Australia has resulted in a conviction and a sentence of two years' imprisonment for the two leading rioters. The Broken Hill strike, which has been fought with great determination, arose from the resolution of the company to substitute piece work for day labor. The miners resisted this, and "blackleg" labor was employed, which the miners resented by violence. The government, caring for nothing except the maintenance of order, enforced the law, and the miners have been worsted. King Working Man, as his satirists at the antipodes call him, does not seem to be carrying everything before him as was anticipated at one time by those who merely looked at the fact that he was in a majority everywhere, and therefore could secure everything that he made up his mind that he wanted. The sentence of the strikers at

Broken Hill, however, will have to be revised. Two years' hard labor is a direct challenge for continued agitation until the prison doors are opened.

The Labor Movement in England. The attention of labor in England is chiefly concerned at present in providing for the lack of employment which is beginning to be seriously felt in many industries. The municipalities and local governing bodies will probably lend a much more sympathetic ear to the proposals to provide work for the out-of-work than they have done in previous years. The Durham miners, by seven to three on a mass vote, have declared against a legal eight hours' day. The Railway Amalgamated Association, by more than two to one, have rejected an eight hours' proposal and declared in favor of a ten hours' day and a six days' week. The Church Congress discussed the Labor Question, but no Church, Established or non-Established, has responded to the challenge of the president of the Trades Congress on the subject of unnecessary Sunday labor. The hopes of the workmen are turning more and more toward the municipalization of everything that pays. The London County Council, by a decisive majority, has voted in favor of taking over nineteen and a half miles of street railway, which at present pays 8½ per cent. They intend not merely to own but to operate the line; and Mr. Burns calmly announced that they hoped to establish before long a universal penny fare, and at the same time secure their employees humane conditions of labor. It will be a great experiment—this of carrying passengers as the post office carries letters, for a penny a piece regardless of distance.

Municipalizing Everything. Meanwhile the work of ameliorating the conditions of life in the great English cities goes on apace. Lord Rosebery last month opened a new Free Library in the East of London, which had been largely provided by the liberality of Mr. Passmore Edwards, of the *Echo*; and almost at the same time Mr. Burns secured for the people of Battersea the Albert Palace as a Winter Garden by a munificent donation of £10,000 from the same public-spirited benefactor. As Mr. Edwards gave £10,000, the Vestry decided to raise £5,000 and the County Council will probably find the rest of the needed amount. Lord Battersea has not yet commemorated his assumption of his new title by a subscription. Unless he does something of the kind, people will begin to think that there was some point in the joke that he ought to have left the title for John Burns. Title or no title, Burns is much more Lord of Battersea than Mr. Cyril Flower is ever likely to be, his wealth and his peerage notwithstanding.

Trafalgar Square. The London masses are once more in possession of their old-time place of out-door assembly. Mr. Asquith has done as anticipated about Trafalgar Square, but he has not taken the bold course of declaring the Square open for all

meetings subject to due notice. He has limited the days on which the Square can be used for meetings to Sundays, Saturday afternoons and bank holidays. Had he simply relied upon four days' notice and the prohibition of the excessive prolongation of meetings, he would probably have gained all that was necessary in the cause of order. As it is he has exposed the Liberal party to the accusation that it has robbed the people permanently of five-sevenths of their right

of meeting in the square. The British public is, however, not very logical; and inasmuch as most meetings would be held on Saturday or Sunday, and very few meetings are held in the Square at all except when they are prohibited, the difficulty of Trafalgar Square may be considered as ended. Its creation by the ineptitude of Mr. Matthews and Mr. Plunkett was one of the few wanton blunders of the late Government. It is some consolation to think that they had to pay for it heavily. Trafalgar Square did more to win London for Home Rule than Mitchelstown, although it was regarded as rank heresy at the time to hint such a thing to Mr. Gladstone.

"BATTERSEA" (JOHN BURNS).
(From a Cartoon by "Spy" in *Vanity Fair*.)

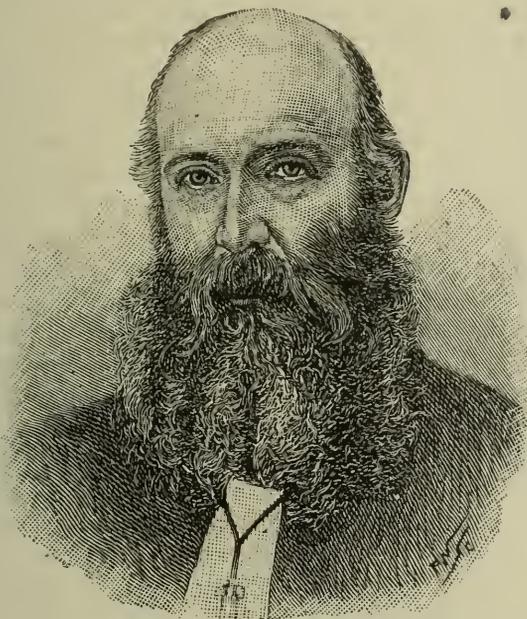

Mr. Morley and the Evicted Tenants. Mr. Morley has succeeded in getting together a fairly strong and respectable committee to look into the grievances of the evicted tenants. He made somewhat of an innovation by appointing Sir J. Mathew as chairman of the committee, and there is no doubt that he will conduct its inquiry impartially. It is to be feared, however, that it will pass the wit of man to devise any expedient by which the 6,000 evicts can be restored to their farms without displacing several thousands of tenants now in possession. Of course, in cases where the farms are derelict or are worked by the landlord, this difficulty does not appear. Mr. Morley will have good reason to rejoice if he can tide over this winter by referring the tenants to the commission. Should the fall in prices continue, he will have a much more difficult question to deal with than these unfortunate 6,000 evicts. The Irishman who declared that a penny rise or fall in the price of beef had more effect on the tranquillity of Ireland than all the legislative schemes ever prepared at Westminster, exaggerated somewhat, but there was a solid substratum of truth in the remark.

Working at Home Rule. The November meetings of the British Cabinet have settled the general lines of the Home Rule bill, and have also drawn up a kind of plan of campaign for next session. The first question to be settled was whether the Home Rule bill should attempt to do more than establish a subordinate Parliament in Dublin. In 1886 Mr. Gladstone, under the fatal prompting of those who imagined that it was necessary to bribe the English by offering to exclude the Irish from Westminster, linked the mutilation of the House of Commons indissolubly with the erection of a new parliament on College Green. There was a disposition in certain quarters to repeat that blunder. This time they did not venture to propose to exclude the Irish altogether. They only proposed to reduce their number to thirty. That, of course, would raise the whole question, which it is indispensable to avoid raising. It was understood that there was a strong party in the Cabinet in favor of limiting the scope of the proposed bill to the establishment of the new Parliament, leaving the *status quo* at Westminster absolutely unchanged. When Home Rule is established and working well—

but not till then—need the point be discussed whether there should be any change made in the constitution of the Imperial Parliament.

The Uganda Question.

There was for a time some doubt as to whether the Cabinet as a cabinet could hold together long enough to introduce a Home Rule bill. Lord Rosebery's speech to the Anti-Slavery Society deputations about Uganda shows distinctly that he attaches great importance to the British outpost on the Nyanza. It is believed that he stood almost alone in the Cabinet in desiring to keep the flag flying over the grave of Mr. Mackay. Mr. Labouchere, who regards Lord Rosebery's presence in the Cabinet as only one degree less baneful to Liberal progress than the Premiership of Mr. Glad-

THE BISHOP OF SOUTH AFRICA.

stone, makes no secret of his desire to force the evacuation of Uganda, with the express object of entailing the resignation of Lord Rosebery. It is tolerably well understood that if England hauls down the flag on the Nyanza she must be prepared to find a new Foreign Secretary. It is not so much the intrinsic importance of Uganda that is at stake as the importance of advertising to the world that, contrary to the almost universal belief, a Gladstone Ministry does not mean "cut and run all 'round." There is no place in which England can so cheaply and impressively demonstrate that the moral continuity of her foreign policy is not a mere phrase; and to create that impression in foreign capitals is doubtless worth much more than the annual subsidy which is needed for the administration of Uganda. On the other hand, if the first great object lesson provided by the new Liberal Cabinet for the edification of Europe is the British lion, with his tail between his legs, slinking out of Central Africa, the post of Foreign Minister will become simply intolerable. Every power in turn would probably try to see how far the "sacred principle of universal slink" would be acted upon,

and the English might have to spend millions to hold their own in Egypt and elsewhere because they grudged the thousands necessary for retaining Uganda.

France and Dahomey.

During almost the whole autumn France was in a state of considerable anxiety concerning the fate of the expedition to Dahomey. The French force pushed forward until it came almost within striking distance of Abomey; then it had to stop for reinforcements. As time is the worst enemy in such malarial swamps, there was a good deal of uneasiness in Paris, and the report stating that the reinforcements had arrived was received with great relief. A forward movement was resumed, and news of the victory of the French column was published in Europe and America nearly a month ago.

The German Armaments.

While France, England and Australia are confronted by more or less destructive civil broils in the shape of strikes and lock-outs, Germany is somewhat grimly preparing for the international conflict which we are constantly told is inevitable, but which somehow or other has not yet come off. In order to bring the German army up to the numerical strength of the French, the Government has proposed to increase the annual draft by 70,000 men a year and to reduce the term of service from three years to two. They also propose to add \$20,000,000 a year to the army estimates, which already amount to \$100,000,000 per annum. There is a great hubbub in Germany over this increase of the burdens of the Fatherland. Already German industry suffers to an extent almost inconceivable in countries which are not plagued with conscription. The prospect of increased taxation on beer, tobacco, etc., fills the common man with dismay. Bismarck also has lost no time in letting it be understood that he is as much as ever opposed to reducing the number of years of military service, and a bye-election in Bavaria, in which an anti-Government Catholic nearly defeated a Ministerial supporter of the Centre, has caused grave uneasiness in Berlin. Negotiations are going on with the Pope, who, curiously enough, seems likely to have the commanding voice in fixing the quota of soldiers in the army of the first Protestant power on the Continent—the Luther Celebration notwithstanding.

Sale of the "Pall Mall Gazette."

The ups and downs of great newspapers, whether in this country or abroad, are matters of interest and importance that are quite as worthy of public attention as the ups and downs of great political leaders. The *Pall Mall Gazette*, of London, has been the pioneer of independent and advanced political journalism in England, and its transfer from Radical Liberalism and Home-Rule doctrines to the Unionism of the anti-Gladstonian coalition, is an event in the political world

that means a great deal. The "*Pall Mall*" has been a paper whose social and political influence has been immeasurably greater than its rank as a piece of newspaper property. Its late owner was tempted by the offer of a check for £50,000, and this was accounted so large a price for the paper that he sold it forthwith. Mr. Stead, who was its editor through the period of its highest influence, and who left it to found the REVIEW OF REVIEWS, naturally moralizes at some length upon the paper's career and upon present-day London journalism in general. The observations on that subject, which follow herewith (as in each number of the REVIEW most of the comments upon English and European affairs) come from London as his contribution to our review of "The Progress of the World." The *Pall Mall Gazette* is a journal which has made more history since it was

MR. KINLOCH COOKE,

The New Editor of the *Pall Mall Gazette*.

started than any other paper printed in the English language. That influence has sometimes been cast on one side and sometimes on the other, but it was always felt to be one of the few original forces in British politics. Without going so far as Mr. Harold Frederic, who once gravely assured the American public that the editor of the *Pall Mall Gazette* had for a period of years come nearer ruling the British Empire than any other living man, it may safely be asserted that Downing Street, no matter which party was in power, was more susceptible to Northumberland Street, whether for banning or for blessing, than to any other newspaper office, of course excepting the *Times*, which has a distinct position of its own. Under Mr. Greenwood the *Pall Mall Gazette* was the pioneer of unconventional independent journalism; it gave the first great impetus to Workhouse Reform; and it was the *Pall Mall Gazette* to which England owed the purchase of the Suez Canal Shares. After Mr. Greenwood left, it was the *Pall Mall Ge-*

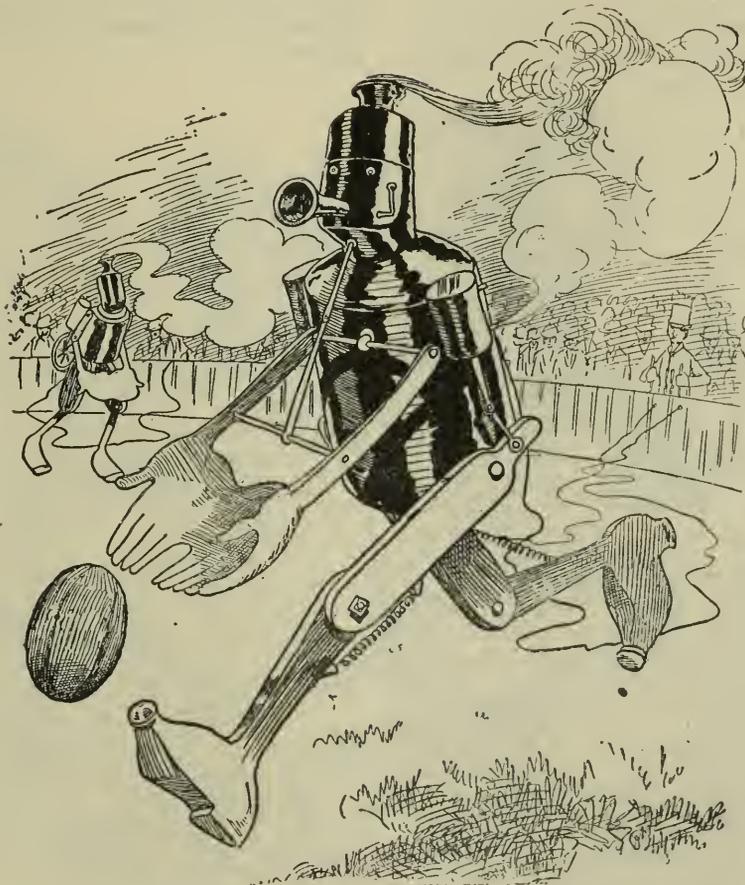

zette that upset Mr. Forster, that dispatched Gordon to Khartoum, that renewed the Navy, that began the campaign in favor of Municipal Socialism, that strengthened both the law and the public sentiment in favor of morality and justice between man and woman; it was the *Pall Mall Gazette* which first pioneered Mr. Gladstone into Home Rule, and then smote and slew his administration because he insisted upon coupling the action of a subordinate Parliament at Dublin with the dismemberment of the Imperial Parliament at Westminster. Politically, socially, morally, the influence of the *Pall Mall Gazette* can be discerned in every department of English life. Successive Ministers have blamed it for their worst misfortunes, and have counted upon it with fear and trembling as their most puissant ally. Yet the sudden transfer of such a doughty warrior from the Liberal to the Conservative side has passed without a hundredth part of the comment that would be lavished on the poisoning of a racehorse or the winning of a bye-election. The cause for this silliness on the part of most of the English journals is the affectation of a conceit so absurd as to be almost inconceivable. It is the unwritten law of most London newspapers that no other paper exists but themselves; and if by any chance another newspaper should be recognized as existing, it must never be the *Pall Mall Gazette*. To such an extreme is this childish principle carried, that because the *Pall Mall Gazette* was the first paper in London to obtain and publish the fact that Lord Tennyson had asked for Shakespeare and turned to "Cymbeline" when nearing death, most of the other papers ignored the incident. The *Pall Mall Gazette*—"Oh, no, we never mention it; its name is never heard," has been the rule for years in most London newspaper offices. The humdrum purveyors of stereo and flimsy can never quite forgive the journal which as long ago as 1878 had established "a quite unfair monopoly of brains," and which through all its mutations has been an entity distinct, powerful and often dangerous, which has scoffed at the journalistic conventions which they worship, and has boldly asserted principles, both moral and political, from which they have recoiled in horror. Here was Samson sold as bond slave to the Philistines, in good sooth, and yet the lords of the Philistines had not even the heart to laugh aloud when the purchaser proceeded to put out the eyes of his thrall. Yet a sense of fraternity might well have evoked an expression of sympathy, if not of protest, at so sorry a spectacle as the sale of an organ of public opinion in the open market place. Mr. Thompson had, of course, a perfect legal right to do as he liked with his own. But if the Czar were to sell St. Isaac's Cathedral to the Mohammedans he might be within his strict legal rights, but his action would probably cost him his crown. There has seldom been a more cynical and unashamed exercise of the money power in journalism, and in the interests of the profession it is sincerely to be hoped that it will prove an unprofitable investment.

The New "Pall Mall," The *Pall Mall Gazette* is unlike all the other daily papers in London. It breeds. It begot the *St. James' Gazette* in 1880.

It is now bringing into life a new *P.M.G.* as the result of the financial investment of Mr. Keighley and his principal. Mr. E. T. Cook, and his assistant, Mr. Spender, together with Mr. Hill, the news editor, refused to serve with the new proprietary, and Mr. Newnes came to the rescue. Long ago Mr. Newnes said that there were two kinds of journalism. "The journalism of the *Pall Mall*," he said, "upsets ministries, makes wars or prevents them, rebuilds navies and initiates new policies. It is very magnificent, but it does not pay. There is another kind of journalism, the journalism of *Tit Bits*. It does none of those magnificent things, but," he added, "it gathers in the shekels!" The shekel-gatherer has now an opportunity of proving that he can aspire to a more magnificent style of journalism than that which he has hitherto sedulously practiced. Rumor says that he has placed £60,000 at the disposal of Mr. Cook, who expects at the opening of Parliament to be in a position to bring out the new *P.M.G.* with all the old staff of the *Pall Mall* transferred from Northumberland street to a new and more convenient office. Meanwhile Mr. Kinloch Cooke unites the editorship of the *Pall Mall* with the editorship of the *Observer* and of the *English Illustrated Magazine*.

The Rise of the London "Chronicle."

The purchase of the *Pall Mall* silences the one Liberal organ in London which looked at politics from an Imperial standpoint. As long as it existed it was impossible for the most obtuse Liberal ministry to ignore the fact that there were some Liberals who cared for the navy, who were proud of the colonies and who would rather extend the Empire than diminish it. Now the "Little Englanders" have it all their own way. This being the case it is more than ever a matter for rejoicing that the *Daily Chronicle* should be rapidly rising to a position of leading rank and influence in the London press. It is the only Liberal paper of any kind that ventures to lead, and it may be destined to give the new Imperial Home Rule leadership for which one may search in vain in the House of Commons. The *Daily Telegraph* is not holding its own in the competition, the *Standard* is conservative and stereotyped, and the *Daily News*, which has never done anything since its Bulgarian atrocities, has waxed emphatic last month in favor of the skedaddle from Central Africa. The field is open to the *Chronicle*, and the gradual transformation of that paper into a Liberal Imperialistic advocate of Home Rule is another of those important factors in the making of contemporaneous history, of which little or no account is taken by the journalists of London.

THE MECHANICAL FOOTBALLER.

Some time ago the English papers announced the invention of a "Mechanical Bowler." We pursue the idea still further. Why not have Mechanical Football Players, managed from the reserve, as torpedoes are from shore? They wouldn't use bad language, or "plug" the umpire. Let some of our brilliant young inventors carry this idea out (and bury it.—Ed. P.) From the *Melbourne Punch*.

RECORD OF CURRENT EVENTS.

October 21.—Columbus Day celebrated throughout the United States; in Chicago the World's Fair buildings are dedicated; prayer is offered by Bishop Fowler and Cardinal Gibbons, and orations are made by Mr. Chauncey Depew and Mr. Henry Watterson; a military parade with fifteen thousand men in line, and at night a magnificent display of fireworks; the Auxiliary Congress also opened; Archbishop Ireland delivering the oration.... Minneapolis chosen as the meeting place of the next Episcopal General Convention.

October 22.—A number of State buildings at the World's Fair dedicated.... The infant daughter of Emperor William christened in Berlin, and four hundred women convicts pardoned *in memento* of the occasion.

October 23.—Bishop McDonnell dedicates the new Church of the Transfiguration, Brooklyn, in the presence of many clergymen.... Hundreds of lives lost and thousands of dollars worth of property destroyed by floods in Sardinia.... Five villages destroyed by an earthquake in Trans-Caucasia.

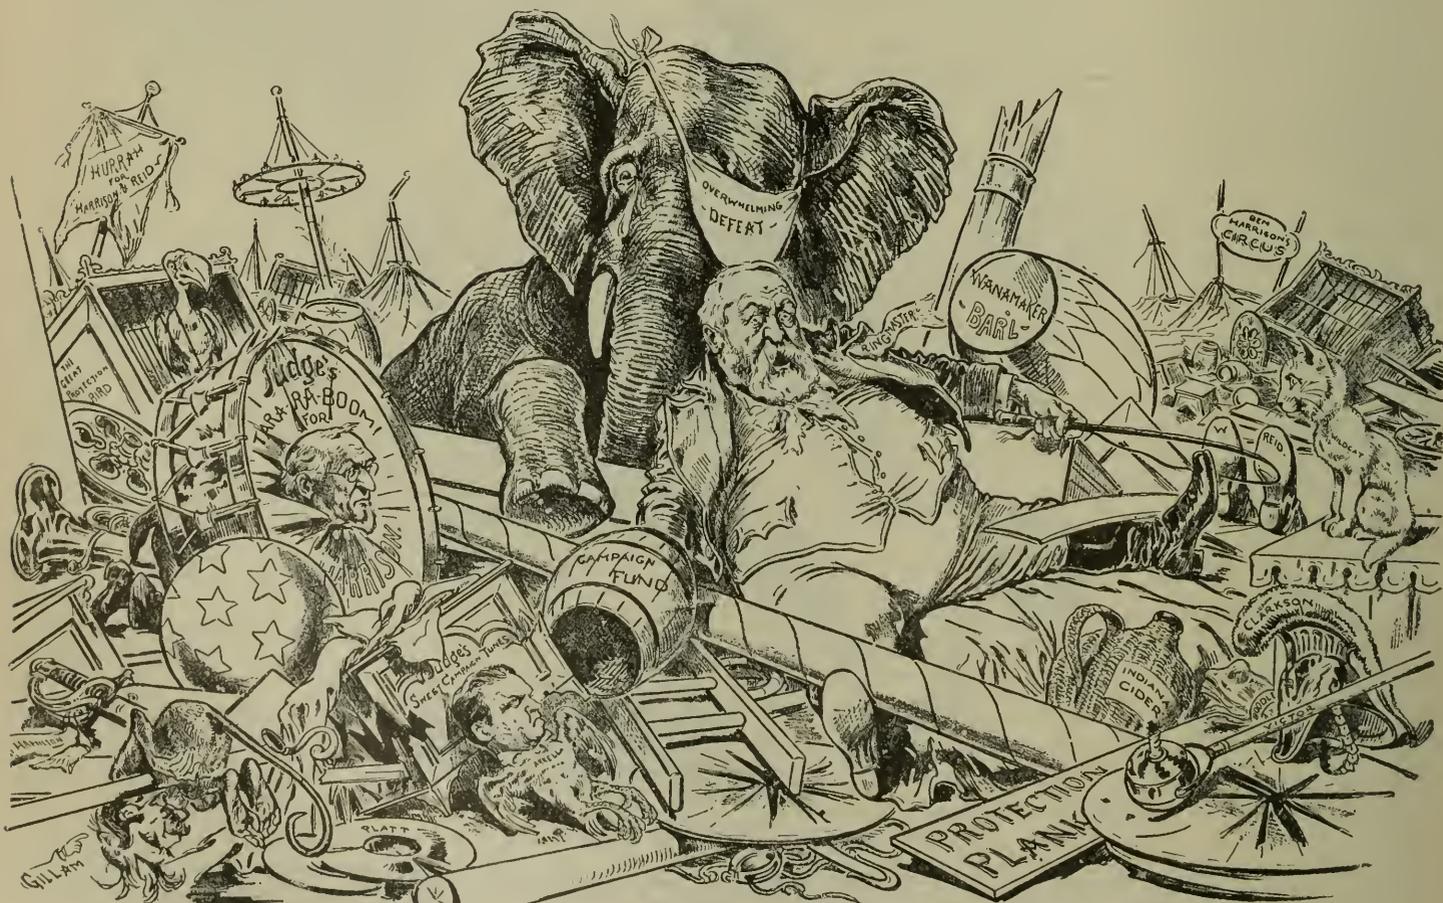

October 24.—Seven persons killed and many injured in a collision on the Reading Railroad, near Philadelphia.... The cholera appears in Vienna, Marseilles and Calais.... Official details of the new German Army bill made public: the peace effective of the army fixed at 492,068, and its war strength reorganized at 4,400,000.... Marquis di Rudini of Italy publishes his political and financial programme; he favors friendly relations with Russia and France.... Defeat of the Indians in the rising at Temochise, Mexico.... Miss Kate Marsden decorated by the Queen of England.

October 25.—Death of Mrs. Harrison.... Train on the St. Louis and San Francisco Railroad wrecked near Phillipsburg, Mo.; several persons killed and fourteen injured.

.... The Episcopal General Convention in Baltimore adjourns *sine die*.... The Norwegian steamer *Norman* lost in the China Sea.... The Rothschilds have secured \$7,500,000 worth of bullion for Russia, without applying to the Bank of England.... Durham miners in England vote against the legal eight hours' day.... Conference at Birmingham, England, on the emancipation of women.... Rev. Drs. John Hall and Robert Russell Booth resign from the Directory of the Union Theological Seminary, New York.

October 26.—M. Loubet, President of the French Chamber of Deputies, who had been appointed arbiter of the Carmaux labor troubles, decides that M. Calvignac, Mayor of Carmaux, whose discharge by the mining company was the cause of all the trouble, shall be taken back as a workman, but that leave of absence shall be granted to him throughout the term of his mayoralty; he also decides that the company shall reinstate all the striking miners, except those who were convicted of rioting.... The trial of Mercier and Pacud on charges of misappropriating the public funds is begun in Quebec.... Philadelphia and Reading Railroad Company and the Boston and Maine Railroad Company form an alliance.

October 27.—Mrs. Harrison's funeral held in the East Room of the White House; after the ceremony the funeral train starts for Indianapolis.... The strikers at Homestead continue their assaults upon non-unionists, and one hundred armed deputies have been ordered to the scene.... The French Chamber of Deputies rejects the motion to grant amnesty to the Carmaux rioters.... The King and Queen of Greece celebrate their silver wedding.... A village of Aztec Indians attacked by Mexicans and all the inhabitants massacred.... Opening of the Bulgarian parliament.

BENJAMIN: "Where am I At?" From *Judge*, November 21.

October 28.—Mrs. Harrison was buried at Crown Hill, Indianapolis... Fire sweeps the business portion of Milwaukee, destroying many blocks of buildings... The National Convention of Women's Christian Temperance Union meets in Denver... The Anchor Line steamer *Roumania* wrecked off the Portuguese coast; only nine of the one hundred and twenty-two persons on board saved.

October 29.—The loss entailed by the Milwaukee fire is estimated at between five million and six million dollars... The Turtle Indians cede all rights to land in the Devil's Land district, with certain reservations, for one million dollars in twenty annual payments... Because of the French Government's refusal to release the riotous strikers at Carmaux, the miners declare they will continue the strike... The British Government gives \$720,000 for the relief of the sufferers in the great fire at St. John, Newfoundland.

October 30.—It is announced that Great Britain will retire from Uganda... Destructive floods in Mexico; thousands of acres of coffee and cane lands inundated; two thousand head of cattle swept away and about fifty persons lose their lives.

October 31.—President Harrison issues a proclamation extending the benefits of the Copyright law to the citizens of Italy... Wurtemberg honors Luther's memory by the rededication of the Schlosskirche; the Emperor and Empress of Germany present... The Carmaux miners finally decide to end the strike.

November 1.—Mr. Gladstone and five other members of the British Cabinet decline to attend the banquet of Lord Mayor Knill... Secretary Foster notifies the British Government that President Harrison has assented to the plan for the suppression of the liquor and fire-arm traffic with the Pacific Islanders... The number of deaths from cholera at Chung King, China, estimated at from 30,000 to 40,000.

November 2.—Universal suffrage rejected by the Belgium Chamber of Deputies Committee on Revision of the Constitution... Hamburg is finally declared to be free from

THE REPUBLICAN ELEPHANT'S AGITATION OVER THE RESULT.

From *Nast's Weekly*, November 19.

cholera... Ten people killed and many injured in a railway wreck in Yorkshire, England; and three killed and fifty injured by a collision near Liverpool... Ten of the Carmaux rioters pardoned.

November 3.—The long strike at Carmaux ended; the miners return to work and the rioters are released from prison... Mr. Gladstone sends a congratulatory letter to Lord Mayor Knill, of London.

November 4.—President Harrison issues proclamation naming Thursday, November 24, as Thanksgiving Day... The Department of State receives official notice that the Gilbert Islands, in the Pacific, have been placed under the protection of Great Britain by an edict promulgated on May 27, 1892... The trial of M. Mercier, ex-Premier of Quebec, ends in acquittal... The British Board of Agriculture suspends the privilege of free importation of Canadian cattle... General Crespo issues a proclamation declaring the principal adherents of the usurping government in Venezuela traitors, and confiscating their property.

November 5.—A strike among the cotton operatives in England is begun; 50,000 men idle... The Amalgamated Council of New Orleans orders a general strike to secure recognition of unionism; cause of strike, reduction of wages... The Austrian Reichsrath considers a plan to join the Oder and Danube rivers by a canal... The University of Pennsylvania defeats Princeton at football in Philadelphia; score, 6-4.

November 6.—A monument to the anarchists, Spies, Parsons, Fischer, Engel and Lingg dedicated in Waldheim Cemetery, near Chicago... Emperor Francis Joseph refuses the request of the Hungarian Premier for permission to introduce a compulsory civil marriage bill.

November 7.—The Presidential campaign ends... Assistant Secretary Nettleton of the United States Treasury Department tenders his resignation, to take effect December 1, 1892... Election returns in Italy show an increased majority for the Government.

November 8.—Elections for President, Congressmen and State officers held throughout the Union.

PREPARE TO DELIVER.

TAMMANY: "Now Grover, How About Those Promises?"
From *Judge*, November 21.

The following table shows, so far as is yet definitely known, the number of electoral votes each of the principal presidential candidates received in the recent election; also the number of electoral votes cast for Harrison and Cleveland, respectively, in 1888:

	1888		1892

Totals.....	401	223	168	444	267	118
Necessary to a choice	201			223		

The composition of the House of Representatives for the Fifty-third Congress compares with that of the Fifty-second as follows:

Fifty-second.		Fifty-third.	
Democrats.....	235	Democrats (round numbers)	220
Republicans.....	88	Republicans	130
Farmers' Alliance.....	9	Populists and Independent	6
Total.....	332	Total.....	356

The composition of the Senate for the Fifty-third Congress is still uncertain, but latest figures attainable indicate that of the total 88 Senators the Democrats will have 43, possibly 45; Republicans, 39; Populists, 4, possibly 6.

The following governors were elected: Of Connecticut, Luzon B. Morris (Dem.); of Florida, H. L. Mitchell (Dem.); of Idaho, W. J. McConnell (Rep.); of Illinois, John B. Altgeld (Dem.); of Indiana, Claude Matthews (Dem.); of Kansas, Abraham W. Smith (Rep.); of Massachusetts, William Eustis Russell (Dem.); of Michigan, John T. Rich (Rep.); of Minnesota, Knute Nelson (Rep.); of Missouri, William J. Stone (Dem.); of Montana, J. E. Rickards (Rep.); of Nebraska, Lorenzo Crouse (Rep.); of New Hampshire, John Butler Smith (Rep.); of New Jersey, George T. Werts (Dem.); of North Carolina, Elias Carr (Dem.); of North Dakota, E. C. D. Shortridge (Populist); of South Carolina, Benjamin Ryan Tillman (Farmers' Alliance); of South Dakota, Chas. H. Sheldon (Rep.); of Tennessee, Peter Turney (Dem.); of Texas, James Stephen Hogg (Dem.); of Washington, John H. McGraw (Rep.); of West Virginia, William A. McCorkle

(Dem.); of Wisconsin, George W. Peck (Dem.) The election for governors of Colorado and Wyoming is still doubtful.

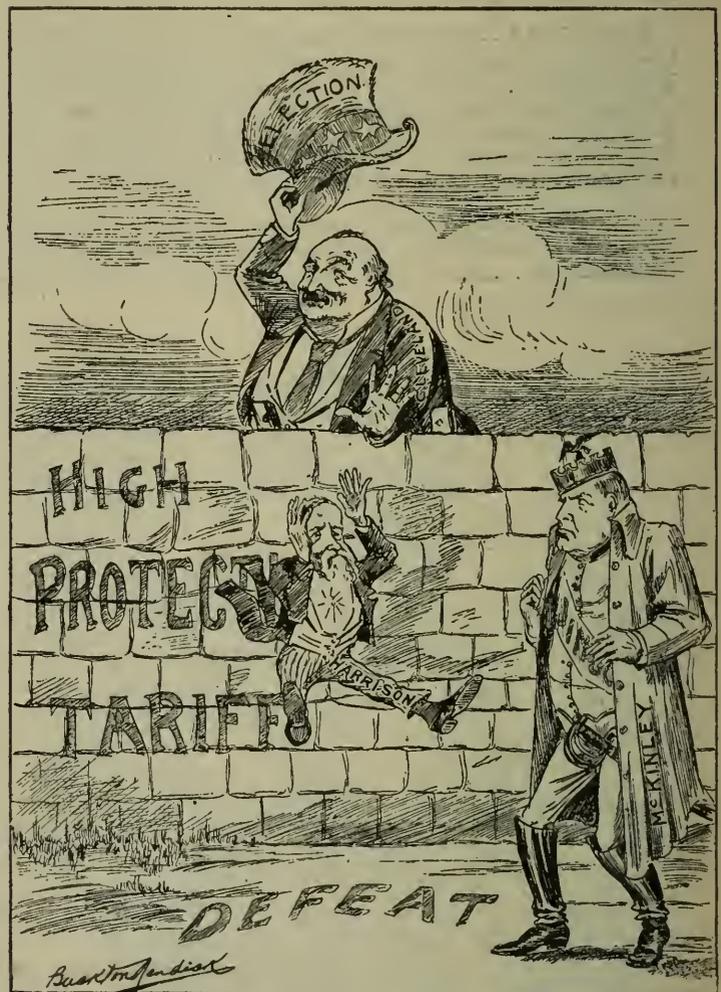

November 9.—The Lord Mayor pageant held in London; Mr. Gladstone and other leading Cabinet ministers absent from the banquet. The general committee on missions of the Methodist Episcopal Church begins in Baltimore its annual meeting... The case of Rev. Dr. Charles A. Briggs, charged with heresy, comes up for trial before the Presbytery of New York; the case continued until November 28, in order to give Dr. Briggs time to reply. Stamboul lowers the world's stallion record to 2.08 on the Stockton, Cal., track.

November 10.—The cruiser *Cincinnati* launched at the Brooklyn Navy Yard.

November 11.—Prof. Jacob Gould Schurman inaugurated as president of Cornell University at Ithaca, N. Y.... Twenty-five thousand strikers at New Orleans return to work without having accomplished their object.

November 12.—The president of the British Local Government Board recommends the construction of public works to relieve the distress among the English unemployed workmen... Yale defeats the University of Pennsylvania at football; score, 28-0.

November 13.—London workingmen and socialists hold a peaceful meeting in Trafalgar Square to commemorate "Bloody Sunday"... Dr. Koch says Chicago need have no fear of catching the cholera from the German exhibit.

Convention of the National Farmers' Alliance opens in Memphis; and the Knights of Labor Convention in St. Louis...The Methodist General Missionary Committee in session at Baltimore adjourns; more than \$100,000 appropriated by the Committee for various missions...The annual dinner of the Chamber of Commerce of New York takes place; speeches by Attorney-General Miller, Secretary Charles Foster, Dr. John Hall, Mr. Grover Cleveland, Mr. Chauncey Depew and others...King Behanzin, of Dahomey, offers to negotiate for peace.

November 16.—The Catholic Archbishops of the United States hold in New York their annual conference...Grand Master Workman Powderly in his annual address to the Knights of Labor Convention favors the exclusion of foreigners of a certain class for a period of ten years...A new Hawaiian cabinet formed.

November 17.—The Socialistic Congress in session in Berlin rejects the resolution binding all socialists to suspend work on May Day...300 mechanics and day laborers at Homestead leave the ranks of the strikers and are taken back by the Carnegie Company...Four persons killed and fifteen injured by a powder explosion in Arkansas.

November 18.—More than 1,000 of the strikers at Homestead make application for re-instatement in the Carnegie Works...The Pinkerton investigation begun before the Senate Committee in Chicago...Dr. McCune and supporters leave the Alliance organization...The Socialistic Conference at Berlin refuse to recognize the proposed Labor Congress in London.

November 19.—Heavy storms throughout the country...Yale defeats Harvard at foot-ball by a score of six to nothing.

November 20.—Secretary Rusk, of the Department of Agriculture, makes public his annual report...The strike

at the Carnegie Homestead Steel Works is officially declared off by the Amalgamated Association of Iron and Steel Workers...The Knights of Labor send to the President a vigorous protest against the lax enforcement of the laws prohibiting the importation of foreign laborers under contract.

OBITUARY.

October 21.—Mr. Denis T. Hanks, the early tutor and life-long friend of President Abraham Lincoln.

October 22.—Mr. Ralph Smith Taintor, a prominent citizen of Connecticut...Albert Millaud, French journalist...Chas. L. Harris, the well-known American actor.

October 23.—Rev. Isaac Worcester, of Vermont, prominent in missionary work...The Duke of Roxburghe, M.P.

October 24.—Robert Franz, the well-known German composer.

October 25.—Mrs. Benjamin Harrison...Gen. J. M. Tuttle, one of the most prominent of Iowa's veteran officers.

October 26.—Father Joseph Faber, of England...Rev. James Jackson Wry, of England.

October 27.—De Witt C. Littlejohn, five times Speaker of the Assembly of the New York Legislature...Mr. Thomas M. Howell, one of the best known public characters of Western New York.

October 28.—Alfred Michels, Librarian of the Paris School of Art.

October 30.—Dowager Queen Olga of Wurtemberg.

October 31.—Colonel William Henry Stracham, of Massachusetts, a veteran of the Civil War...Mr. Choate Burnham, one of the oldest and best known citizens of Boston.

November 2.—Lieutenant Schwatka, the Arctic explorer...Dr. Archibald McClay, the leader of the movement which led to the establishment of the Bible House in New York City...John Wilson Forbes, at one time editor of the *Freemen's Journal*.

November 3.—Mrs. A. Jacobs, of Denver, Colo., prominent in charity work.

November 4.—Howard Lockwood, of New York, founder of the *Paper Trade Journal*...Bradish Johnson, well-known Louisiana planter...Marquis de Saint Denys, the Orientalist...Hon. M. McBayne, president of the Legislative Council of Victoria, Australia.—N. Gordon Biglow, Queen's Counsel and member of the Ontario Legislature.

November 5.—General Ferdinand Vandevere, of Hamilton, Ohio, veteran of the Mexican and Civil wars.

November 6.—Dr. Mauren Brecher, the German historian...Prof. Charles A. Seeley, of New York, prominent in scientific work.

November 9.—Duke of Marlborough... Ex-Congressman Geo. W. Eddes, of Mansfield, Ohio.

November 12.—Dr. A. Reeves Jackson, of Chicago, the original of Mark Twain's character, "My Friend, the Doctor," in "Innocence Abroad."

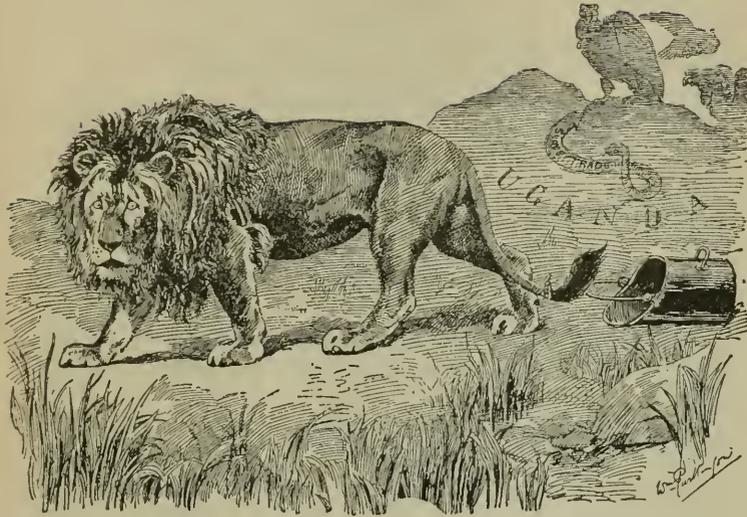

November 13.—Judge D. W. Cooley, of Dubuque, Iowa...Mrs. Ralph Waldo Emerson, widow of the poet and philosopher.

November 14.—Augustus D. Merrimon, Chief-Justice of the Supreme Court of North Carolina...John Hoey, ex-president of the Adams Express Company...General Yamada, a member of the Japanese Privy Council.

November 17.—Edward McCrady, one of the oldest members of the South Carolina Bar...Donald W. Bayne, State Treasurer-elect of North Carolina.

November 18.—Ex-Congressman Milton Sayler, of Ohio.

November 19.—Col. Alfred Spates, ex-president of the Chesapeake and Ohio Canal, and one of the most prominent men in Maryland... Mrs. Alexander Ross, well-known writer.

AMERICAN STATE LEGISLATION IN 1892.

BY WILLIAM B. SHAW, OF THE NEW YORK STATE LIBRARY.

ONLY five States now hold annual legislative sessions. These are Massachusetts, New Jersey, New York, Rhode Island and South Carolina. Ohio, however, in practice, though not in theory, assembles her legislature every year by means of "special" sessions. Of the remaining group of States and Territories holding biennial sessions, only eight—Iowa, Kentucky, Louisiana, Maryland, Mississippi, Utah, Vermont and Virginia—would regularly have sessions this year, all the other legislatures having met in 1891; but extraordinary sessions in Connecticut, Michigan, Missouri, North Dakota, Ohio, Texas and Wisconsin bring the total number for the year to at least twenty. All but two of the regular sessions took place during the first half of the year. The legislatures of South Carolina and Vermont, however, meet too late to be reviewed in this number of the REVIEW. This is also true of the extra session in Connecticut. If a reason should be sought why so large a proportion of the biennial legislatures met in 1891, while so few are meeting in 1892, it would be found in the fact that in most of the States legislatures are chosen in the even years, when Congressmen are elected, and naturally the legislative sessions are set for the winter immediately following the fall election. Thus most of the legislatures elected in November of this year (at the same time with members of Congress and presidential electors) will meet in January, 1893.

In this article only a brief *résumé* can be given of the legislation of the past year along certain important lines.

LABOR.

It is in our State legislatures, and not in the halls of our National Congress, that most of the measures are proposed and enacted which directly concern the welfare of the masses of our people, employers and employed. Much of this class of legislation, it must be confessed, is the work of demagogues, but as public attention is more and more turned to social and economic questions, while publicists and students are alike incited to rational and scientific discussion, it is yearly becoming more difficult for the demagogue to have his way in the making of our "labor laws." Just in proportion as the intelligent part of each class in the community becomes truly interested in these problems, the ideals of legislation are elevated, more sensible efforts are made to redress grievances, and the sham remedies are relegated to the background. Perhaps the criticism that applies with greatest force to most of the recently made laws under this head, is the old and rather trite one of inefficiency. New Jersey, for example, closely follows the model set by New York in the creation of

a system for the arbitration of labor disputes, with a permanent State board having its headquarters at the capital. As in New York's case, however, the application to the local or State boards for the adjustment of differences is entirely optional with the parties in conflict, and without such application the power of the State board is practically *nil*, as was shown at Buffalo last summer. Whatever view may be taken of the feasibility of any form of State interference in labor difficulties, it must be admitted that the scheme cannot be fairly tested under such laws as those of New York and New Jersey. Massachusetts provides for the employment of expert assistants to her Board of Arbitration.

In Iowa, Maryland and New Jersey, additional protection is afforded to labor unions in the use of trademarks and labels. In Massachusetts a penalty is provided for the coercion of persons to enter into any form of agreement not to join labor organizations as a condition of employment.

Massachusetts also forbids the employment of women and minors in factories, legal status being given to the Saturday half-holiday. The New York ten-hour law, as applied to railroad conductors, engineers, firemen and trainmen, has attracted much attention. Besides requiring that ten hours of labor performed within twelve consecutive hours shall constitute a day's labor, it contains the further provision that train employees who have worked twenty-four hours shall not be permitted to go on duty again until they have had eight hours' rest.

Another New York law was aimed at the "sweating system," forbidding the manufacture of clothing in rooms used for eating or sleeping purposes, except by members of families living therein. The sale of goods thus illegally made is prohibited, and a system of inspection of workshops instituted which is designed to break up the tenement-house clothing business in New York City.

ELECTIONS.

The adoption of the Australian ballot by Iowa gives to her neighbor, Kansas, the distinction of being the only Northern State that still refuses to modify her election laws in the interest of fairness and secrecy. Mississippi has incorporated the secret ballot system in her new code, the constitution of 1890 prescribing an intelligence qualification for the suffrage. Maryland has extended the operation of her secret ballot law of two years ago from the city of Baltimore to the entire State.

The "corrupt practices" statute of Massachusetts is probably the best enactment of the kind yet adopted in this country. Its distinctive feature is the

requirement that statements of campaign expenses be filed by committees. Such a provision is essential to the efficacy of all legislation to secure the purity of the ballot in this country, and should have been added to the law passed two years ago in New York.

Several extra sessions of legislatures have been required this year to make legislative reapportionments. In Wisconsin and Michigan the "gerrymanders" of 1891 were held unconstitutional by the courts of last resort. After a second attempt by the Wisconsin legislature to redistrict the State had been declared void by the Supreme Court, another session was called by the Governor, and a final scheme agreed on barely in time for the November election. In New York the apportionment made by the legislature at its extra session in April was decided by the Court of Appeals to be constitutional and valid.

Massachusetts is the first State, we believe, to establish a so-called ballot law commission, with power to decide questions arising in connection with the nominations of State officers.

Some measure of legislative sanction has at last been reluctantly granted in New York to an innovation in electoral methods which is even more at variance with the old order of things than the Australian ballot was. This new device is nothing less than an automatic voting and registering machine. It may be used in town elections if preferred by a majority of the qualified voters. Its advocates hope that the area of its operation may be rapidly extended to State and national elections as it makes its way into popular favor.

EDUCATION.

The University of Utah, designed to be the "highest branch of the public system of education" in that Territory, starts on its career with liberal appropriations and with careful provision for the disposition of the lands given by the general government for its endowment. The entire school code of the Territory has also been revised. The compulsory attendance clause has been amended by lowering the age for entrance from ten to eight years.

The new "university law" of New York deals with the manifold interests of higher education in that State. Perhaps its most interesting and novel sections are those relating to public libraries, over which the regents of the university are to exercise supervision. Authority is given to the regents to send out traveling libraries which will carry at frequent intervals 100 selected volumes to public libraries of the State

and to communities about to establish them. The regents are also authorized to give instruction on organizing or administering a library, either through the State library staff or otherwise, and to aid localities by selecting or buying books and arranging exchanges and loans. The legislature makes an annual appropriation (this year \$25,000) to be apportioned by the regents for the benefit of free libraries. The old appropriation of \$55,000 is to be continued, but applied to strictly school libraries, under the supervision of the State Department of Public Instruction.

Another important New York library law is that authorizing the creation of trusts for the management of bequests like that of Mr. Tilden for New York City.

In Massachusetts a board of commissioners occupies a similar position in relation to libraries to that of the university regents in New York. They are authorized to buy books for towns not provided with libraries.

LEGISLATION ON OTHER SUBJECTS.

Massachusetts has thought it necessary to prohibit the issuing of railroad passes to the governor, lieutenant-governor, members of the council, judges, commissioners and members of the legislature. Railroad companies in that State are required to have on sale mileage tickets good on every road in the State.

The territorial legislature of Utah (overwhelmingly Mormon in its complexion) has adopted as a part of the local law of the Territory the Federal statute of 1882, known as the Edmunds law, with the amendments subsequently passed by Congress, providing penalties for the practice of polygamy.

Maryland, Virginia and Utah have adopted more stringent rules for the regulation of the practice of medicine. Maryland provides for both of the leading schools by establishing separate boards of examiners.

Few laws of importance were passed affecting the liquor traffic. New York made a codification of her excise statutes. A curious Virginia law prohibits the sale of liquors within three miles of any meeting held for the promotion of the cause of temperance.

A large part of the time of the Mississippi legislature was occupied in revising the code of general laws for that State. The same kind of work was necessary in Kentucky also. In New York, many important general laws, as prepared by the commission of statutory revision, were passed by the legislature.

HOW TO ABOLISH THE GERRYMANDER.

PROPORTIONAL REPRESENTATION AS TRIED IN SWITZERLAND, AND AS APPLICABLE IN AMERICAN STATES AND CITIES.

BY PROFESSOR JOHN R. COMMONS, OF THE INDIANA STATE UNIVERSITY.

THE question, What to do with the "gerrymander?" is now prominently before the American people. After lying dormant for many years on account of the apparent hopelessness of an answer, it has come forward in a new shape. For the first time it has come before the courts. The Supreme Courts of Wisconsin and Michigan have declared unconstitutional the latest apportionment legislation of those States for the election of members to the State legislatures; an inferior court of New York declared the New York law unconstitutional, and the decision was reversed by the Superior Court; an inferior court of Indiana has rendered a similar decision regarding the apportionment laws for 1891 and 1885, and directed that elections be held under the apportionment of 1879. In all of these cases the ultimate basis of the decision was the inequality of representation. Small counties and districts were given larger representation than other counties and districts whose population was much larger.

Whatever may be held regarding the power of the courts to interfere in these apportionments, it is a question whether they can accomplish anything further than to substitute for a vicious gerrymander another equally vicious. At any rate, the whole system which makes the gerrymander possible must come up for close examination and perhaps revision. Our own country has not yet met the worst evils of the district system of electing representatives as have certain other countries. This is especially true of the Italian Canton of Ticino in Switzerland, where three years ago the minority party was almost entirely deprived of representation in the Cantonal assembly. As a result there was an armed rebellion, and only the advent of the federal troops restored order. Having experienced such extreme peril from their system of representation, the Ticinese assembly provided for a commission to investigate plans for the reform of electoral representation. This commission reported a plan for proportional representation to be applied to all representative bodies from the municipalities to the Cantonal legislature. The plan was adopted by popular vote in 1891 and is now in successful operation. It has done away so completely with all the

evils which our legislative bodies are suffering from that it will be profitable for Americans to examine it and note its possible applications to our conditions.

Through the kindness of Dr. John M. Vincent, professor of History at Johns Hopkins University, the following outline of the law of Ticino is here presented:

Proportional representation in Switzerland is largely a matter of possibilities, only Ticino having adopted the system in fact. In Neuchatel the constitution permits the adoption of the system whenever a statute on the subject shall be enacted. In Luzerne there is a pious wish in the constitution that there be "just consideration" for minorities; in Solothurn "the greatest possible consideration of all parties;" in St. Gallen the legislative power has the right to introduce a proportional elective system, but has not yet done so.

In Ticino the amendment to the constitution was adopted March 8, 1891, by a very even vote—11,291 for and 10,764 against. The text is chiefly devoted to the new division of the country into districts, etc., and simply states that hereafter deputies to the Grand Council (legislative), constituent assemblies and municipal councils shall be elected by the proportional system, in which electors have the right to vote for candidates of various groups.

An act applying the system to municipalities went into effect about June 30, 1891.

An act regulating elections of members of the legislature was published January 2, 1892. The thirty days allowed for petition for the referendum have passed without opposition, so it will go into effect. The legislature must be entirely renewed within a year after the passage of the act.

An article quoted from a Ticinese paper expresses great satisfaction with the result of the system as exemplified in the elections of municipal and community councils a few weeks ago. The elections were calm, community authorities were no longer the booty of State politics, parties did not exert themselves to crush the minority out of sight, corruption tended to disappear because invest-

ment is not so certain, and it had even gone so far that parties previously passionately hateful have made out combined lists of candidates before election instead of waiting for the result of the vote. It is a great thing for an election to be calm in Ticino. The hot-blooded Italians have been anything but that for many years.

The texts of these laws lie before me in Italian. As I have but a single copy of each I will send you a translation of the principal points in the election law for the legislature. Election tickets I could not get, but they will be easily understood from the description.

Law regulating elections to the Grand Council and Constituent Assemblies according to the system of proportional representation.

Ballot is secret, in an official envelope (according to previous law, December 3, 1888). Every group of voters has the right to be represented in the legislature in proportion to the number of votes in the respective districts.

Each group establishes a list of its own candidates. To be valid the list requires the signature of at least ten voters, and must contain more than one candidate. The same voters are not to sign more than one list. The list is to be presented to the commissary of the district at least ten days before the election, and the commissary (prefect, chief executive officer) is to give receipt therefor.

No candidate can be named on more than one list. If placed on more he must choose between them. If the candidate fails to choose his place is determined by lot in the presence of a representative of each group. A candidate cannot be kept on the list against his will. In case of refusal his name is to be replaced within four days of the election by the same body of men who offered the name before.

Each group establishes its own party name, which becomes its property and cannot be assumed by another group unless the first renounces the use of it. If two groups offer the same name the *commissario* invites them to choose again. A refusal throws out both.

The *commissario* prints all the lists and transmits them to all municipalities or communities at least two weeks before election, in sufficient quantity, with the official envelopes, schedules, etc.

Two days before the election the authorities send to each elector a copy of all the lists, a blank ballot of each group and an official envelope. There is a penalty for non-performance.

Tickets are white in color, to be headed with the name of the group. They can be written or printed. Scratching is permissible.

Each group has one delegate to watch the count. Votes are to be taken out one by one and announced in a loud voice.

Every elector has as many votes as there are members to be chosen from the district. He can vote for candidates on different tickets. If an elector votes for a less number of candidates than there are representatives to be

elected, unused votes are to be counted in favor of the group in general. The voter cannot cumulate votes upon one name. If tickets contain more than one vote to the same name, but one is to be counted, and the other is to be considered as not voted, but is to be counted in favor of the group.

(Rules for the count are here given, not peculiar to proportional representation.)

Judges are to establish the following points:

1. Number of votes for each candidate.
2. Number of votes not used on each ticket.
3. Number of votes for each group, including those not used as above.

The sum of all the votes received by all groups (including those which count for the group when the voter does not put on as many names as there are delegates to be elected, as above) is divided by the number of deputies to be elected. And this gives the "electoral quotient." Fractions are not counted. Each group has a right to as many deputies as the electoral quotient is contained times in the number of votes received by the group. The deputies who remain to be chosen after this division (owing to fractions and insufficiency of votes for any group) are to be attributed to the group having the greatest number of votes. Groups having a less number of votes than the electoral quotient do not participate in the division.

The last two rules do not apply when only two deputies are to be supplied. Then the deputies are to be attributed one to the greatest group, the other to the one having the greatest fraction when divided by the electoral quotient.

Votes for each candidate are also to be established. No one is considered elected who does not receive as many votes as the number of valid tickets divided by the number of delegates to be elected in the respective districts, plus one (*i.e.*, quotient plus one).

Deputies are assigned to each group from those having the highest number of votes. In case of tie the choice is decided by lot, unless all decline in favor of one. Vacancy by death, etc., is to be filled by the candidate who had the next highest number of votes. If list is exhausted, a new election is to be held, but when a single deputy is to be elected voting is to be by majority in the old way.

The law relating to municipal councils is essentially similar to this.

From this outline of this novel legislation in the little Swiss democracy it will be a simple matter to apply the principle of Proportional Representation to all American representative bodies. For the election of State representatives and senators, the State could be divided into districts, each district electing some odd number of representatives, preferably five, seven or nine. Let us suppose we have a district to which are allotted nine representatives. Each political party in the district would then nominate for representatives, say, six or seven candidates—*i.e.*, as many as the party could possibly hope to elect. The party

ticket would be printed according to the Australian plan of the secret ballot. Let us suppose, first, that there are two parties in the field. All that the canvassers would do in this case would be to find the total number of votes cast in the district and divide this number by nine—the number of the representatives to be elected. The “electoral quotient” thus obtained would be used to find the number of representatives to which each party was entitled, by dividing the total vote of the party by this quotient. In case there are only enough full quotients in the vote of both parties to provide for the election of but eight out of the nine representatives, the additional representative will go to the party having the highest remainder short of a full quotient. In this way could be easily ascertained the number of representatives to which each party in the district is entitled. To ascertain which individuals in its list of candidates are to be ascribed to each party as its successful candidates is also very simple if there has been no scratching at the polls. In that case the successful candidates would be selected in the order in which they are printed on the party ticket. But if voters have substituted new names or changed the order of the names on the ticket, it would be necessary, as provided for in the Ticinese law, to ascertain the number of votes received by each candidate, and then to determine the successful candidates on the ticket of each party by the order in which they stand on their individual vote. In no case, however, would a candidate be elected who did not receive a full quotient of the popular vote.

By this method, although a State would be divided into districts, yet each district would include usually nine of the present districts, and the parties within the districts would be represented almost exactly in proportion to their popular vote. Thus all opportunity and temptation for “gerrymandering” would be done away with, and, taking the State as a whole, the representation would be substantially proportionate to the popular strength of all parties.

In the election for Congressmen each State would be considered as a single district, electing its entire quota of representatives on a general ticket. Every voter, then, instead of voting for one Congressman would vote for the entire list of his party for his State. The canvassing of the vote would be done exactly as in the State district elections for the State legislature.

The significance of a reform which would make the National Congress a truly representative body may be partially inferred from a few facts regarding recent Congresses. There were fifteen Congressional redistricting acts in 1890-91, only seven of which were necessitated by a change in the number of representatives allotted to the State by the new census. Ohio has gone through seven gerrymanders since 1878. The House of Representatives of the Fifty-first Congress, which passed the McKinley bill, numbered 164 Republicans and 161 Democrats. Had representation been proportional to the popular vote

of all parties for President, the vote in the House would have stood 163 Democrats, 154 Republicans, five Prohibitionists and two Union Labor. The Fifty-second Congress has ninety-nine Republicans, 227 Democrats and nine Independent and Farmers' Alliance men, giving the Democrats a majority of 119 over all. If the popular strength were truly represented the Republicans would have 141 members, and the Democratic majority would be only thirty-nine. As it is, 168 Democratic votes, giving a majority, are elected by fifteen Southern States and the gerrymandered States of New York, New Jersey, Ohio and Indiana, where representation is as follows: In New York, 500,395 Democrats send twenty-three representatives and 421,403 Republicans send eleven representatives. In New Jersey 128,417 Democrats send five representatives and 114,808 Republicans only two. In Ohio a minority of 350,528 Democrats send fourteen representatives, and a majority of 360,624 Republicans send only half as many, while Indiana, with a Congressional vote of 239,858 Democrats and 216,766 Republicans, sends eleven Democrats and only two Republicans. Consequently in this State one Democratic vote at the polls is equal to five Republicans. If representation were proportional, according to the Ticinese system, New York would send eighteen Democrats and sixteen Republicans, New Jersey four Democrats and three Republicans, Ohio ten Democrats and eleven Republicans, and Indiana seven Democrats and six Republicans. What confidence can the people have in a body of representatives so unjustly chosen?

The application of the plan to city governments would seem to strike at one of the main difficulties in this important American problem.

It is generally admitted that the weak point in American municipal government is the legislative branch. While the mayoralty and administrative departments and the judiciary often enlist the ablest and purest men of a city, common councils and boards of aldermen are notorious for men who are weak, insignificant and corrupt. As a consequence there is a universal dread of city legislatures. In recent years they have been shorn of power in many cities, and this again cuts off inducements for able men to enter their halls.

The plans which have been proposed for improving common councils and boards of aldermen are either impossible of execution under existing American ideas, or they do not strike at the root of the difficulty. The recommendation that public spirited men should enter into politics is futile, because they cannot secure election; and even if they could they would have no responsibilities worth seeking. Compulsory voting would accomplish nothing unless the compulsion extended to the primaries, and it is well known that in most cities the primaries are close corporations containing only 2 per cent. to 10 per cent. of the party voters. A property qualification is out of the question. Yet this is a prominent reason why European cities are so far ahead of us in

the matter of government. In Berlin, the best governed city in the world, 3 per cent. of the voters elect one-third of the municipal assembly, and 10 per cent. elect two-thirds, leaving to the great mass of the voters a representation of only one third. Even in England and Scotland household suffrage cuts off the lowest semi-criminal and pauper classes. In America the problem of city government must be solved with our electorate just as it stands at present—largely composed of foreign, ignorant and poor voters.

Recent reforms in city government throw some light upon the problem. The extension of the power of the mayor at the expense of councils and boards has met with notable success.

The reason for the success of government by mayors is this: the mayor is elected by the votes of the entire city. The failure of government by common councils is due to the ward or district system. The mayor stands before the city as a whole. He must be a man well known for ability and probity. He must command the confidence of all classes of electors. Where this system prevails, heavier votes are called out at the elections for mayor than at those for President of the United States. On the other hand, councilmen are simply ward politicians. They are almost unknown outside their districts. They have no reputation to lose, nothing is at stake, and everything is gain for them. Very likely they are the tools of a more central party boss.

If councilmen and aldermen could be elected on a general ticket, it could be shown that this evil would be done away. To do this it is only necessary to adopt some simple form of proportional representation. The Swiss plan could be modified somewhat as follows: The entire municipal assembly could be elected on a single ticket. Each political party could nominate a general ticket, containing names not for all the places to be filled, but only the names of as many candidates as it seemed probable could be elected, adding three or four names for favorable contingencies. Independent parties could also make nominations in accordance with the provisions of the Australian ballot. Electors would vote not for individuals but for the ticket, but each elector could designate as in the Swiss plan the candidate who is his first choice. The votes would be canvassed by a central board in the manner already described. Councilmen would thus be distributed among the different political parties as nearly as possible in proportion to the total votes cast by such parties, and each party would be represented by those candidates receiving the highest number of votes on its ticket.

The results which would probably follow from the adoption of this plan in municipal elections may be stated as follows:

Better men would be nominated on all tickets. At present, primaries nominate the worst man who stands a chance of being elected in his limited district. He is generally unknown to the city at large. Under the plan proposed, the area of choice would be enlarged, and candidates would be men known to all the citizens. Such men could not repeatedly be elected unless they were also known to be men of ability and integrity.

At the same time, sections of the city would not be unrepresented, because a party convention, with only moderate sense, would endeavor to distribute its candidates as much as possible, consistent with their popularity, over the entire city.

Independent movements could be represented. Candidates who could be sure of only a scattered following could, by this method, concentrate their votes and secure a quota of the whole. The best elements of the city could thereby be sure of representation, even though they failed of a majority of the councilmen. Their presence in the municipal assembly, and the influence they could exert by an appeal to the public, would prove a decided check upon the evil elements. City politics would thus be helped out of national politics. Public confidence in the representative bodies of the city would be increased. Ultimately this would make it possible to confide greater powers in their keeping, instead of having them distributed among boards or heaped upon the mayor. This one-man power of the mayor marks almost as surely a failure of popular government in its sphere as did that of the first and third Napoleons. If the mayor were subordinate to the council, as is the case of European city governments, there would follow needed harmony of the legislative and executive branches of government under the direct control of the representatives of the people.

This plan, on the face of it, is the fairest of all plans for representative government. The municipal assembly would be an exact mirror of municipal sentiment. Machines would be powerless, and government by cliques and minorities would be impossible. City legislation would be simplified. The whole people could understand it, and aldermen, who have now no power except for mischief, would be lifted out of obscurity and placed before the city in a manner worthy of their public importance.

Many other details and probable workings of the Swiss system of representation might be pointed out, but enough has been said to show its wide application to the worst evils of our political machinery. That some reform must be brought about in American systems of representation is almost unquestioned. Perhaps this little rural Italian canton has made the most important improvement in practical politics since the introduction of the representative system itself.

PHYSICAL CULTURE AT WELLESLEY.

BY ALBERT SHAW.

ONE of the stock arguments of a decade ago against the collegiate education of young women was the contention that they were physically disqualified for the severe nervous and mental strain entailed by the ordeal of a four years' devotion to the kind of studies that their brothers could pursue with impunity. The argument has perhaps been sufficiently disproved; at least, it is no longer so boldly and strenuously advanced. Yet, although it was not a very well-founded contention, it should be confessed that the women's colleges themselves (including the institutions which admit young women on the co-educational plan) deserved to suffer more keenly than ever fell to their lot for giving any justification whatsoever to those who held that the most advanced and most protracted courses of study might not be pursued as healthfully by young women as by young men.

The mistake of the colleges simply lay in their failure to appreciate the fact that it was quite as much their prerogative and their duty to improve the physique and the general health of their students as to promote their intellectual development. All

MISS LUCILE EATON HILL,
Director of Wellesley College Gymnasium.

MISS M. ANNA WOOD,
Physical Examiner of Wellesley College Gymnasium.

the colleges were employing very rigid systems of examination to ascertain the proficiency of their students in languages, mathematics, the sciences, and other prescribed branches of study. Progress from term to term and from year to year was tested by constant re-examinations of the most searching character. Twenty-five years hence it will seem incredible that even in the period from 1880 to 1890 the colleges which were keeping such amazing and voluminous records—by a daily marking on the character of recitations, and by frequent oral and written examinations—of the progress made by each pupil along the upward pathway of learning kept no vital statistics whatsoever of their hosts of students, and gave no manner of scientific attention to the care and the improvement of the physical health of students, whether in individual cases or upon the average.

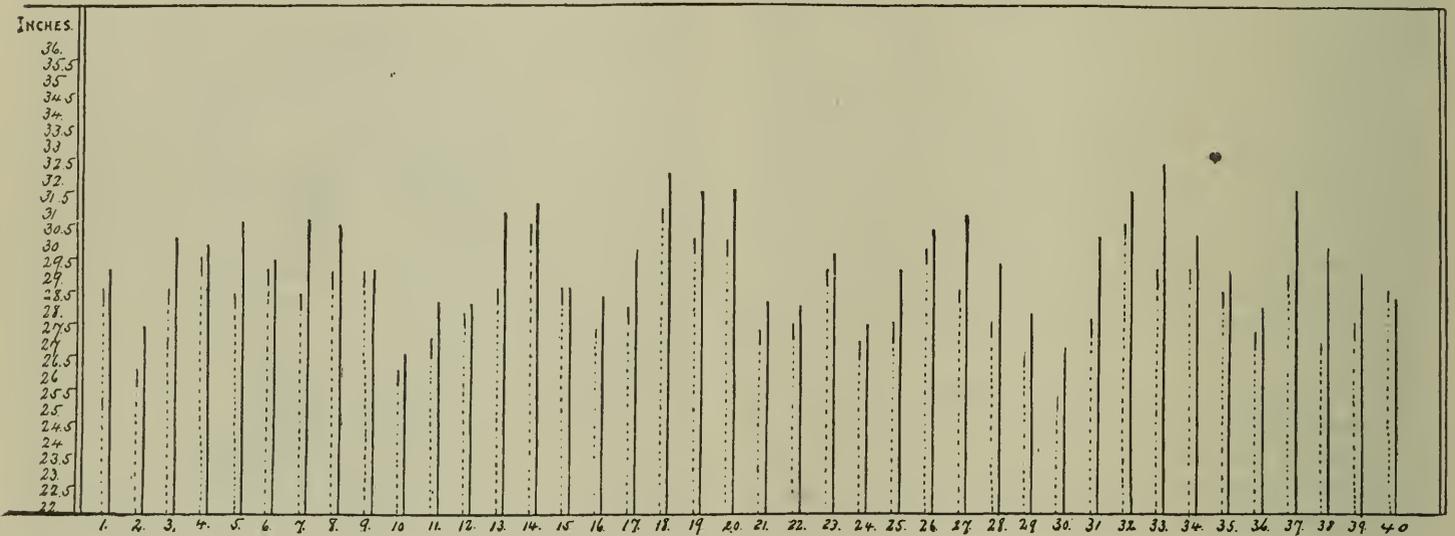

The whole answer to the question, Is the health of the average young woman equal to the successful prosecution of the work of a college course? may be given in the briefest terms as follows: The first duty of the college authorities is to give just as careful a physical examination for original entrance as their

examination into the applicant's scholarly proficiency; and their next duty, the applicant having been admitted, is to see that her advancement is symmetrical, and that she is led across the threshold of mature womanhood, as well equipped by reason of bodily strength and development as by that of intellectual and moral development, for the full enjoyment of life's pleasures, tasks, and various wholesome activities.

In the future the question whether or not a young

vision of gymnasium facilities, and there come most encouraging reports from several of them as to the remarkably beneficial results shown by the use of such means of physical culture as are available.

In future issues of the REVIEW OF REVIEWS attention will be called to the provisions for physical culture and health preservation in still other women's colleges; but this month we wish to make more particular note of the new departure at Wellesley College. It would not be easy to find anywhere in the world

MEASUREMENTS OF FORTY WELLESLEY COLLEGE FRESHMEN. TABLE I. GIRTH OF CHEST.

The dotted lines represent the measurements of the students in November, 1891. The continuous lines, the same students in May, 1892.

woman's health is quite safe at college will be absurd upon its face. It will be absurd because one of the definitions of a woman's college will be: A place where the health of young women is sedulously and scientifically guarded, and where her physical strength and well-being are systematically developed.

Tangible progress toward this ideal has been made within a very few years, but as yet we have only a beginning. The colleges for young men have quite generally provided gymnasium facilities, and the larger ones have appointed competent instructors in physical culture. None of them have as yet had sufficient enlightenment and plain common sense to make the acquisition and maintenance of good health a cardinal and compulsory part of the college course. But our educational men will come to this point in due season. Meanwhile, the colleges for women are beginning to emulate the men's colleges in their pro-

an institution more charmingly situated than Wellesley. Its grounds are very extensive and diversified. It has a beautiful lake of its own close to the group of college buildings, and the whole environment tempts the young women students to walking, boating and tennis in the summer, and to skating, tobogganing and other out-of-door winter amusements when the Massachusetts frosts set in after Thanksgiving. But the mere existence of such opportunities for out-of-door recreation never makes it certain that young women will improve their advantages. The class that graduated at Wellesley in June, 1891, had 104 members. From the elaborate statistical tables compiled by the physical examiner, Miss M. Anna Wood, we learn that of these 104 young women only two had been in the habit of taking as much as two hours' daily out-of-door exercise, only eight as much as an average of one and a half hours daily, forty-five

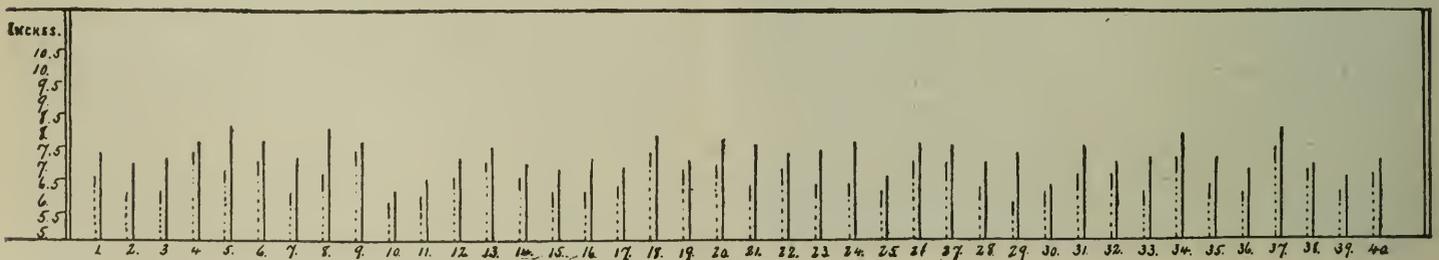

TABLE II. DEPTH OF CHEST.

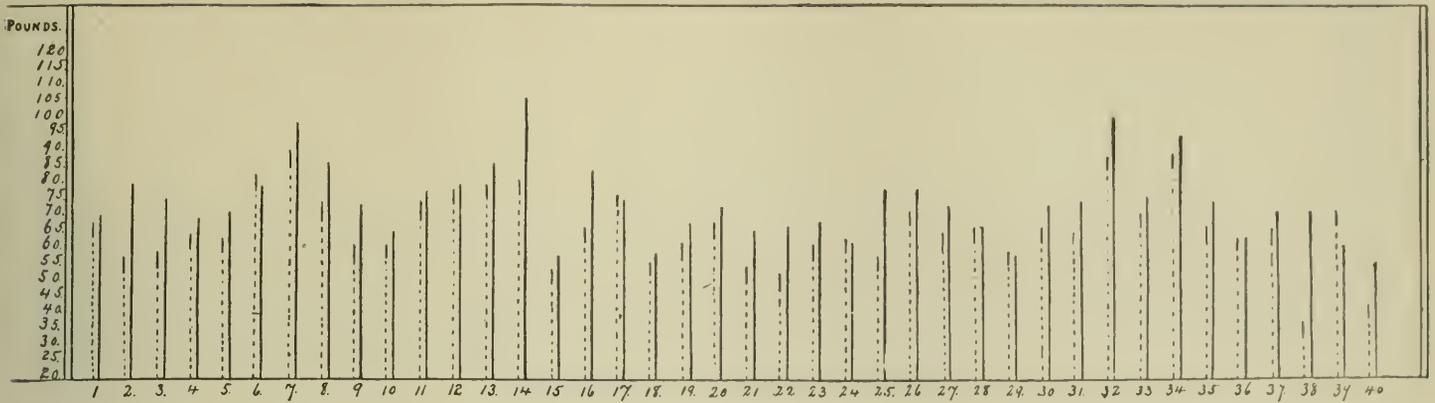

TABLE III. STRENGTH OF CHEST.

an estimated average of about one hour a day out of doors, and the remaining forty-nine less than one hour.

No one can well place too high a value upon opportunities for outdoor recreation, in ample grounds, with the purest of air and the most charming of prospects. But a certain amount of a much more scientific and specific physical culture is requisite for the best development of most young women. No keener appreciation of this fact could possibly be desired than is shown at Wellesley by the two accomplished and zealous ladies who have charge of this paramount department of instruction. The department of physical training at Wellesley is in charge of Miss Lucile Eaton Hill as director of the gymnasium, and Miss M. Anna Wood as physical examiner. The new interest and the bright outlook for physical culture at Wellesley have a foundation in

required of every member of the Freshman class. It is authoritatively reported to us that after nearly a year and a half of this experiment the results have proved very satisfactory, not only in the development of physique and the improvement in the carriage and the vigor of the young women, but also in increased capacity for mental application as recognized by the president and faculty. At present the smallness of the gymnasium precludes the three upper classes from the benefit of regular gymnasium training. The students recognize the value of the work, and the discontent of the classes deprived of the use of the gymnasium is increasing every day. The first attempt at a training of the young women's crews that row on the lake was made last year with marked success. This winter all the class boating crews go into the gymnasium for regular training after having had scientific instruction in oarsmanship on the lake through

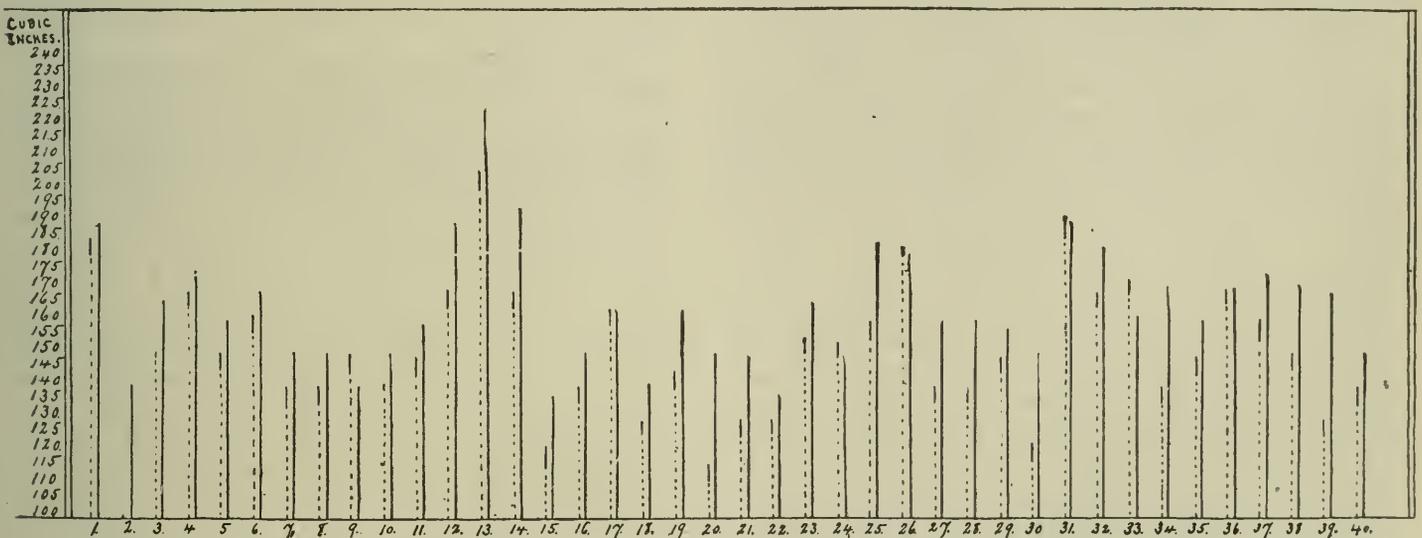

TABLE IV. CAPACITY OF LUNGS.

years of faithful work performed by these instructors when the means placed at their disposal were small and the importance of their department only dimly comprehended by many who should have come to its help and support.

It was not until the fall of 1891 that physical training was erected into a full and regular department of the college. Beginning at that time, three hours per week of instruction in the gymnasium were

the autumn. Miss Hill's work as director of the gymnasium is exceedingly popular with the students, and is of the best and most scientific character.

Particularly interesting at Wellesley is the thorough attention that is bestowed upon the collecting and recording of vital statistics, and upon anthropometrical details. Miss M. Anna Wood is a distinguished member of several important statistical societies, and in scientific circles both at home and in Europe the value

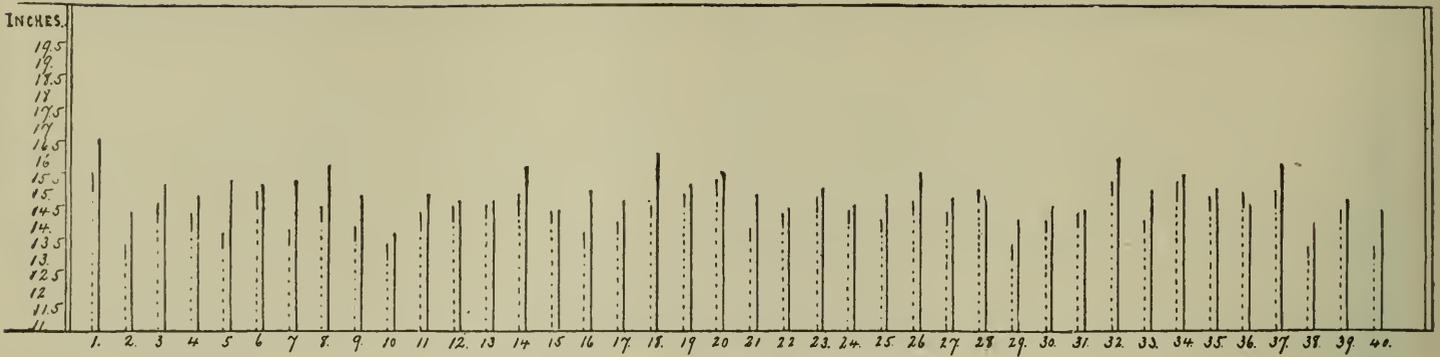

TABLE V. BREADTH OF SHOULDERS.

and interest of her work are fully recognized. In no other woman's college is there so large and important a collection of valuable statistical data touching this important line of investigation and record. Perhaps no other woman anywhere has made such valuable additions as Miss Wood to the modern science of anthropometry. These collections of data can obviously only be acquired slowly. Every freshman who comes to Wellesley receives a thorough physical examination, including measurements and strength tests, and Miss Wood gives to each one a table of the averages of fifteen hundred students upon which her individual measurements are platted. The table will show at a glance in what respects, and to what extent the individual student varies from the average of students of her own age in each one of more than fifty particulars, involving weight, strength and physical measurements.

Miss Wood also collects and preserves a wide range of statistics concerning the general health and vital condition of the students. Parental nativity; parental health; marked hereditary tendency; father's occupation; resemblance to parents; nervousness; increase or diminution of nervousness after entering college; sleeplessness; hours of sleep; hours of study; college worry and its causes; amount of extra study

carried on; hours of exercise before entering college; hours of exercise after entering college; time lost from college on account of illness; amount of time spent in the gymnasium; average age of students as compared with general health; parental nativity as compared with general health, and finally in turn the health of parents, resemblance to parents, hereditary tendency, father's occupation, nervousness, sleeplessness, hours of sleep, college study, college worry, hours of exercise and use of gymnasium, all as compared with general health,—such are some of the headings under which Miss Wood collates most elaborate statistical data regarding all the students who enter Wellesley College.

Even the reader who has never known anything of the uses of vital statistics must be able to see, on a moment's reflection, how cumulatively valuable all this information becomes when wisely and intelligently used. Various reforms of college method will come from the convincing tales that these statistics can be made to tell through the irresistible law of averages.

Nothing could better exhibit the nature and the results of the work Miss Hill and Miss Wood are doing than the series of tables which we reproduce, as illustrations for this article, showing the records of forty

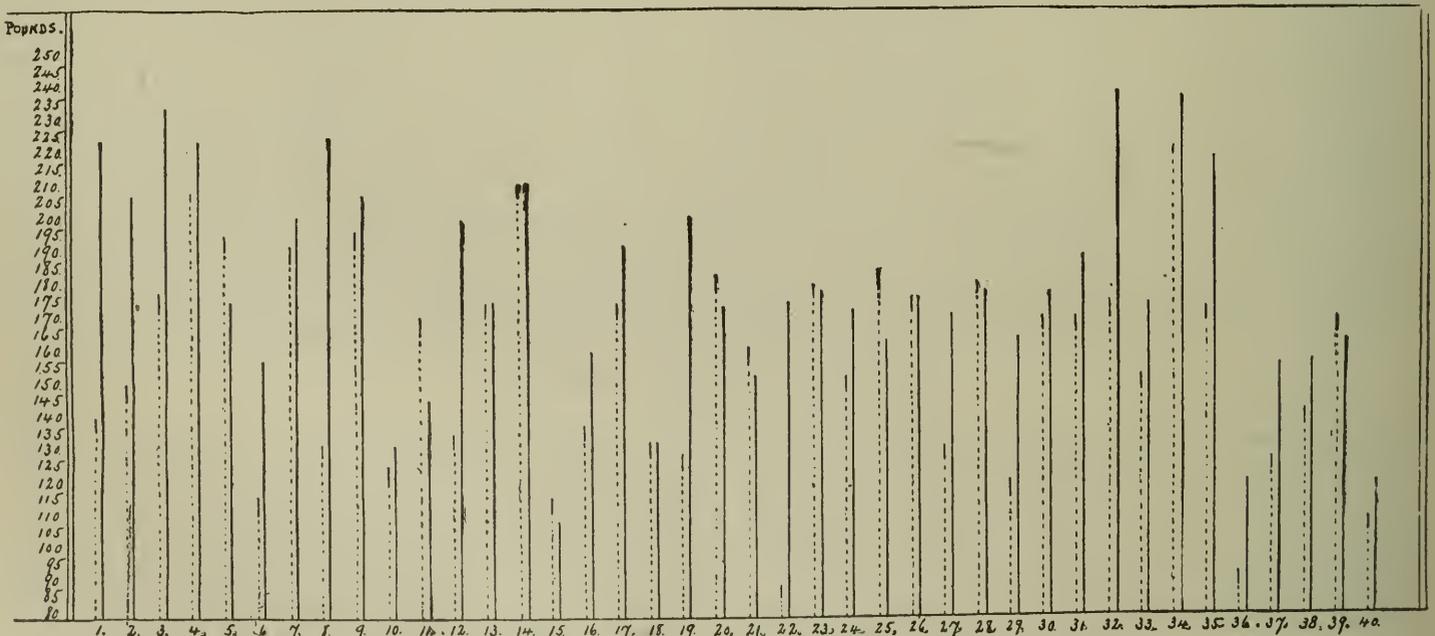

TABLE VI. STRENGTH OF BACK.

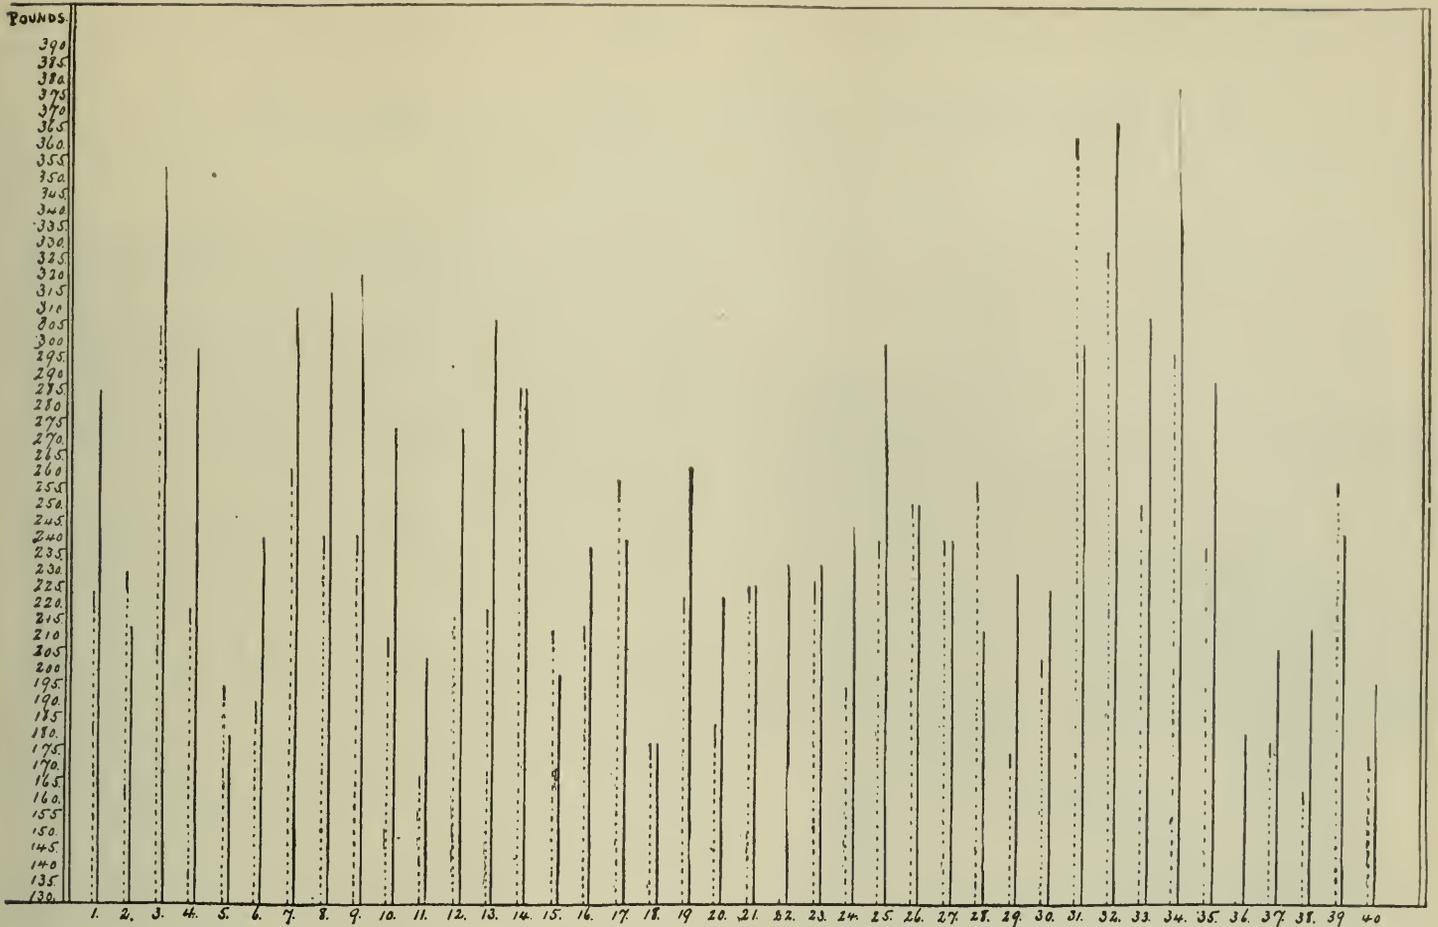

TABLE VII. STRENGTH OF LEGS.

freshmen who used the gymnasium forty-five minutes in the day time three times per week for six months during the fall and winter of 1891-92. Miss Hill instructed these freshmen under the Swedish system of educational gymnastics. Miss Wood made the measurements at the beginning and at the end of the six-months' period, and arranged the tables as we give them herewith in reduced form.

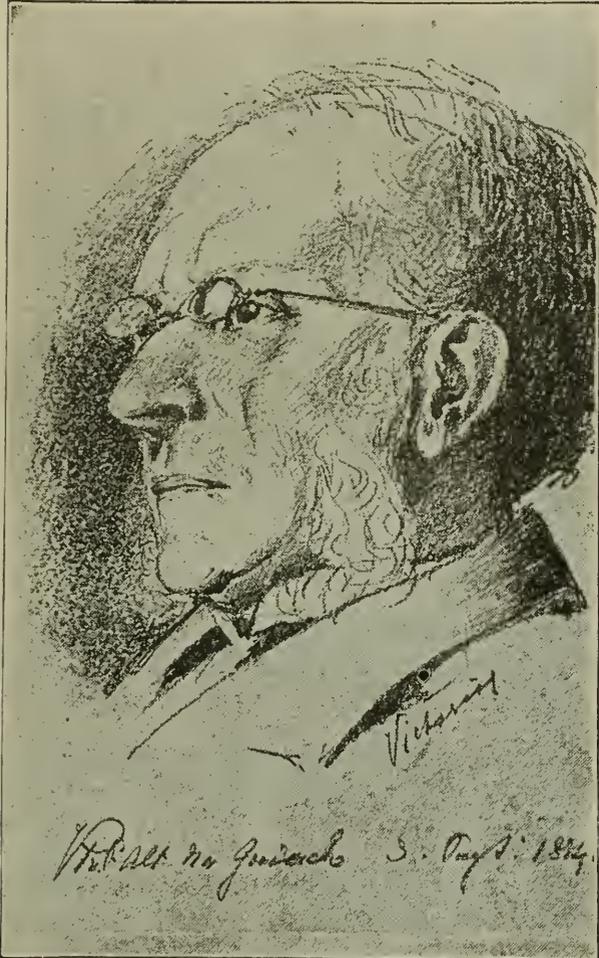

In each table the dotted lines represent the measurements of the students as taken in November, 1891. The continuous lines represent the same students in May, 1892. Otherwise the tables are self-explanatory, the figures at the bottom merely referring to the students as taken numerically from one to forty. Thus, beginning with the first table on the "Girth of Chest," a glance shows that Number Three's measurement, which was 28.5 inches in November, was 30.5 in May—almost every one of the forty having made a very appreciable increase. The second table, showing the "Depth of Chest," marks a decided increase in every case without exception. The third table, denoting in pounds the "Strength of Chest," also shows marked gains in nearly every instance. The fourth table ("Capacity of Lungs" in cubic inches) indicates some remarkable gains. The fifth, recording the "Breadth of Shoulders," also shows in an extremely interesting way what a little well-directed physical training can accomplish; while the sixth one, giving in pounds the "Strength of Back," is very noteworthy. For instance, Number One is a young lady whose strength has increased in six months from 140 pounds to 225; Number Two has gone from 150

pounds to nearly 210; Number Three from about 175 to about 235; Number Eight from 130 to nearly 230, and so on. The last table, recording "Strength of Legs," shows a very considerable average gain, although by no means one that is without exceptions; for while some of the young ladies would seem to have risen to the point of fitness for admission to a football team, several others show decline rather than gain. It is not unlikely that in these cases the diminution of strength may be due to the fact that these particular young ladies, whom it should be remembered are freshmen, were accustomed to more walking before entering college than after, so that their moderate amount of gymnasium exercise has not been sufficient to neutralize the loss of strength due to lessened use of the locomotive members.

It is much to be regretted that Miss Hill is unable to give a systematic course to sophomores on account of insufficient gymnasium facilities. It would seem that a new and very large gymnasium has become a crying necessity at Wellesley College. To speak without a thought of imputing blame to anybody in particular, we must be permitted to say that it is a distinct blot upon the vaunted civilization of what another indignant person at once stigmatized as "this so-called nineteenth century"—it is in fact a disgrace and an outrage—that all the students of all the classes at Wellesley College and all the other colleges are not required from the date of their entrance to the date of their graduation to do some regular work under the direction of the department of physical training, with adequate appliances and facilities provided.

A HEIDELBERG HOME AND ITS MASTER.

BY RICHARD JONES.

PROFESSOR IHNE, OF HEIDELBERG.

(From a pencil portrait drawn by Victoria, the Empress Frederick of Germany.)

Alt Heidelberg, du Feine,
Du Stadt an Ehren reich,
Am Neckar und am Rheine
Kein' andre kommt dir gleich.

—Scheffel.

FROM the four corners of the earth come strangers to view fair Heidelberg, famous for the beauty of its situation and for its castle, which is called the most magnificent ruin in Germany, and which vies with the Alhambra in Spain in architectural grandeur and historic interest. From the courts of Europe and the prairies of the Mississippi valley come the visitors by the hundreds daily, attracted by the charms of the climate, the scenery and the history of this little city, which, hardly more than a village in size, is yet one of the famous cities of Europe. One may meet here friends from every quarter of the globe. Most travelers include this city in their route. Here the Prince of Wales was betrothed to the Princess of Denmark. Here a short time ago was the Queen of Holland. Here is soon to come Prince George of

Wales, heir to the British throne, who will spend some months in the same home where his elder brother, the late Duke of Clarence, for a time lived and was instructed, and where he was greatly beloved, as was manifest from the emotion with which the announcement of his death was made by his former host, the professor of English Literature in the University of Heidelberg.

In not many homes may be seen the portrait of the master drawn by an empress. In this Heidelberg home is such a portrait, "a princess wrought it me," and in addition the "counterfeit presentment" of several members of the royal family of England presented to the distinguished master of this modest home. Here, where the Prince of Wales has been a guest, is a photograph of Queen Victoria with her autograph, and a presentation copy of the "Life of the Prince Consort" by Sir Theodore Martin from the Queen, with an autograph dedication to :

Dem Herrn Professor Ihne
von Victoria, R. I.

Balmoral, October, 1884.

Upon the wall of the drawing-room hangs a photograph of the Princess of Wales surrounded by her family, a beautiful woman as all the world knows, and a pencil portrait of the Professor drawn at a picnic party, by a daughter of Queen Victoria, the Empress Frederick of Germany.

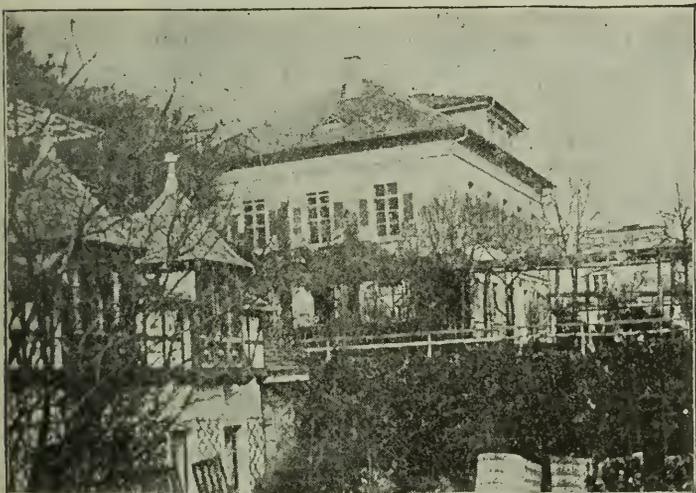

A son of this house is architect to the Emperor of Germany, and is now directing the construction of the new palace for the Empress Frederick, near Frankfort-on-the-Main. He is also commissioned to plan the architectural portion of the national monument to the Emperor William I which is to be erected by Germany in front of the Royal Palace in Berlin. The monument will be an equestrian statue (by Reinhold Begas) in the midst of a semicircular colonnade resembling in general character the colonnade before St. Peter's in Rome. He is also remodeling a portion of the Royal Palace in Berlin, the wing which contains the White Throne Room in which the great ceremonies of state take place.

The distinguished occupant of this Heidelberg home, personally a most genial and approachable man, is honored as well in the world of learning. A letter from Professor Herbert B. Adams, of Johns Hopkins University, to the librarian of the University of Heidelberg, asks for "a photograph of Professor Ihne, the Heidelberg historian of Rome. I propose to have a large crayon portrait made from the photograph and to place Professor Ihne upon our seminary walls by the side of his great rival, Mommsen." Said the great English historian, the late Professor Edward

A. Freeman, to me: "So you are going to Heidelberg? I have a dear friend there. I will give you an introduction to him."

Professor Ihne is the scholar who first vindicated the character of the Roman Emperor Tiberius in a book which he, a German, wrote in English, and which has recently been translated by another into his native German. In addition to his large "History of Rome" in eight volumes, and his shorter history of "Early Rome," which is largely used in the schools of England and the United States, he has done much other literary work. Notwithstanding the innuendoes of Englishmen, not all American publishers were pirates even before the passage of the copyright law, for Professor Ihne speaks warmly of the voluntary generosity of Charles Scribner's Sons, publishers of the American reprint of his "Early Rome," who have for many years sent him a handsome sum in lieu of copyright.

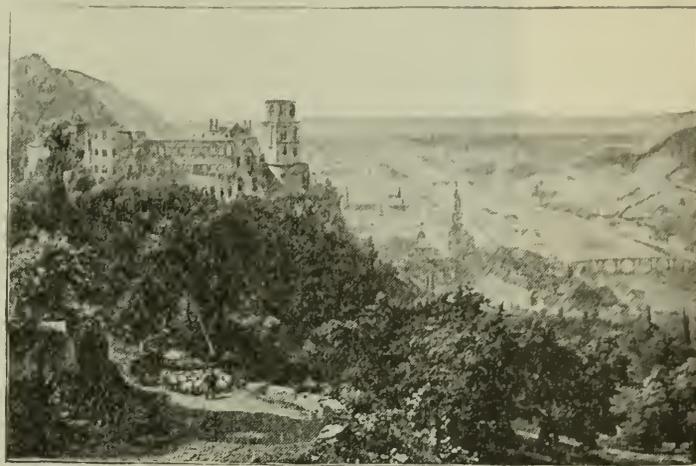

It is a fact of interest that this house, "Villa Felseck," was built by the celebrated Shakespearean commentator, Gervinus, whose lectures on Shakespeare were delivered here in Heidelberg and whose widow still lives here. Gervinus, when a student in the University, was so charmed by this site that he thus early selected it as the site for his future home. The house is built upon the massive vaulted foundation of an old fort which, in 1622, in the days when Heidelberg was a fortified city, Tilly stormed and captured and then took the city. To the rear of the house was for

VILLA FELSECK, PROFESSOR IHNE'S HOME.

many centuries a stone quarry. There is thus on one side a boundary wall of perpendicular red sandstone, which adds to the effectiveness of the spacious grounds laid out with fine effect, and the vineyard which extends up the mountain side.

One can hardly recline under these huge trees with heart unstirred when one recalls the events which have transpired within the circle of vision. It is a beautiful spot and a historic spot. Across the Neckar is the famous castle, the pride of Germany, which once was the home of the English princess, daughter of James I, the ancestress of the present royal house of England. An illumination of this castle with red

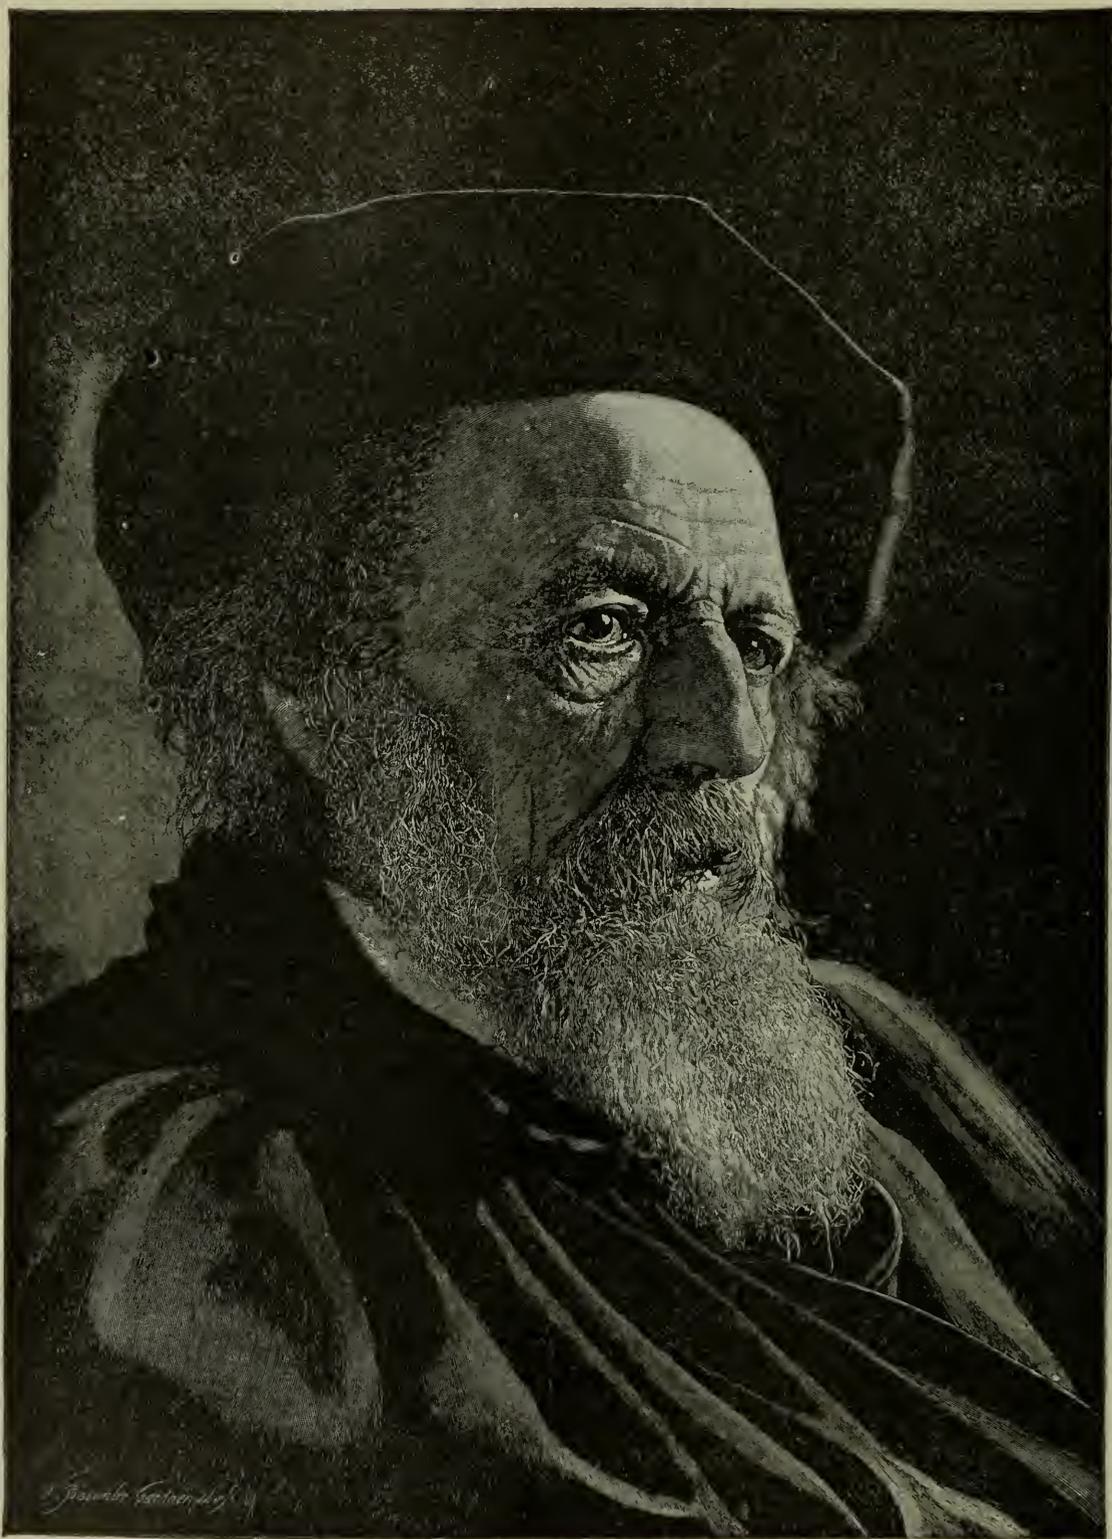

A VIEW OF HEIDELBERG.

(Professor Ihne's house is on the right bank of the Neckar.)

fire, when hot flames seem bursting through the windows from the seething interior, gives the fortunate spectator a vivid impression of the scene in 1689, when the churches and homes of Heidelberg were destroyed and the beautiful castle was burnt and partly blown out by the French General Melac, whose royal master—who called himself "the most Christian King"—had a medal struck to celebrate the event. On one side of this medal was the inscription "Heidelberg deleta," on the other a representation of the burning city. It is beyond the power of words to give any adequate conception of the beauty of such an illumination. What a sight is this seen from the terrace in front of this historic house, standing upon the spot which as a fort for many years protected the city from similar devastation! Just across the Neckar is the oldest university in Germany and the University square, where it is said Luther once spoke to the people. Around is one of the most beautiful views in Europe and a historic city which, a Roman settlement on the Neckar in the early centuries of the Christian era, has been ever since a center of activity, sanguinary and intellectual, the battle ground of the struggle for freedom of thought, the scene of the "Heidelberg confession" of faith.

To live in such a house is a privilege; to visit it, an inspiration.

[Professor Richard Jones, who wrote of Lowell's influence in the public schools for readers of this REVIEW last year, was at that time on the eve of sailing for Europe to spend two or three years in the Universities. He was at Oxford for some months and has since been in Germany. This little sketch from Heidelberg gives us a glimpse of his surroundings and associates in that famous University town.]

ALFRED, LORD TENNYSON

[This portrait of the poet is produced by the photographic "half-tone" process from our fine engraving of Tennyson, advertised on the second page of the cover. The engraving is nearly ten times as large as this reduced *fac-simile*.]

THE INFLUENCE OF TENNYSON IN AMERICA.

ITS SOURCES AND EXTENT.

BY HAMILTON W. MABIE.

THERE is something in every great artist which appeals, and there is something in those who listen which responds, and this response is indicated and measured by influence; influence is, indeed, its expression. Sometimes this appeal is made directly and with definite aim, and the response is swift and decisive. Sometimes it is made by suggestion and with a range so wide that it betrays no conscious direction, and the response comes slowly, silently, imperceptibly. A writer like Rousseau, touching the most sensitive chords of prevailing feeling, becomes at once a revolutionary force in society; one can almost lay his finger on the currents which "Emile" and the "Contrat Social" set in motion. His influence was direct, immediate and tangible. He was so close to the pressing need or longing of his time that when he spoke it seemed as if he were giving voice to a universal passion. A writer like Tennyson, on the other hand, dwelling habitually on the fundamental themes, and the relation of his age to them, becomes a great force, operating so quietly that one looks in vain for any exact registry of its reach and depth. Rousseau's influence was, so to speak, concrete and tangible; Tennyson's influence has been diffusive, pervasive, atmospheric. His voice has had at times a note as contemporaneous as Rousseau's had for his time, but it has not risen in the highways, amid the throngs, and with the thrill of the moment's passion in it; it has come from seclusion, from a distance, with that harmony of tones which seems remote because of its very perfection. His own consciousness of the diffusive quality of his influence is betrayed in the little parable of "The Flower," written long ago in a mood of impatience with the reaction which was itself a confirmation of his continued supremacy:

Once in a golden hour
I cast to earth a seed,
Up then came a flower,
The people said, a weed.
To and fro they went
Thro' my garden bower,
And muttering discontent
Cursed me and my flower.
Then it grew so tall,
It wore a crown of light;
But thieves from o'er the wall
Stole the seed by night.
Sow'd it far and wide,
By every town and tower,
Till all the people cried,
"Splendid is the flower!"

Read my little fable,
He that runs may read:
Most can raise the flowers now,
For all have got the seed.

The scattering of the seed broadcast was the most conclusive evidence of the universal love of the flower.

Tennyson's influence has been threefold. In the first place, his attitude toward his art deeply impressed his contemporaries. It is idle to attempt to identify the highest excellence with particular tastes and habits of life; there is endless variety in these personal adjustments to one's time and environment, as there is endless variety in gift, aptitude, training and nature. Shakespeare thrived so mightily in London that he will nourish the world out of his own life to the end of time; Wordsworth learned some things in solitude which we are all the richer for possessing; Browning loved cities, men and talk, preserving always for himself an independence of insight and a clearness of perception into the mysteries and sanctities of the soul not surpassed in English poetry. Each bore fruit after his manner, and the fruit remains the final evidence that in each case the conditions were fit and fertile. Tennyson's habit of life was no sounder or sweeter than the others', but it matched his position and his work with an obvious fitness which even the dullest felt. The official head of English Letters, he lived in a retirement which detached him from the rush and strife of his time. In a commercial age and a commercial country he held his place with the higher and greater aims and ends of life; he was apparently untouched by the golden temptations of his time. When he spoke his voice was free from the passion of party and the metallic ring of materialism. He was as remote from the tumult of manufacturing and trading England as is the song of the lark from the fens over which it is sometimes heard.

In this aloofness there was something which satisfied the ideal of a great career, consecrated to art; and it was so long and so consistently maintained that it became typical and remained a silent demonstration of the reality of the aims and achievements to which it was devoted. Tennyson lived in and for art, and so made art a reality to the multitude who learn only by concrete illustration. He gave himself to the truth as it is revealed in beauty; he subjected himself loyally to the laws of his craft; he mastered it by patient fidelity; he used it with supreme conscientiousness. He was a trained man to the very end of his capacity. He had a passion for perfection, and he gave himself to its pursuit as the anchorites gave

themselves to the pursuit of righteousness. He loved one thing supremely, gave himself to it with absolute sincerity, lived in its atmosphere and died in its faith. The last words which he read in the fading light were the words of Shakespeare! Such a career clears the vision and confirms the faith of those less strong or mature. It is in itself a source of influence of the most fruitful kind.

To the poet's attitude toward life and art as a source of influence must be added, as another source, his thought about life and art. In every great poet the intellectual quality is an element of prime importance. No poet can produce work of high excellence during a period of more than sixty years unless his work discloses a noble substance of thought. Tennyson was a thinker almost from the beginning of his career. The volume of 1832 was prelusive, light in tone, a delicate touching of the keys; but the volume of 1842, containing, among other notable pieces, "Ulysses," "The Two Voices" and "The Vision of Sin," showed meditative insight and speculative genius of a high order. The intellectual promise of this volume was more than fulfilled eight years later in "In Memoriam." This elegy is a lyrical record of the moods and thoughts of many years, and, although built up lyric by lyric during a period of ten years, discloses a consistent and coherent structure or framework of thought. No contemporary document will be of greater importance to the future student of the English mind during the last half of the present century than this elegy, so adequately does it preserve and reflect the spiritual experience of the generation among whom it was written. It is the work of a very sensitive mind, responsive to all the moods of the time, sharing its perplexed and complex life and interpreting that life with marvelous subtlety and delicacy. In no other English poem of our time are the fundamental questions considered from so many points of view and the temper of the time indicated in the provisional answers and in the final answer which forms the climax and culmination of the work.

It follows from this statement of the range and method of "In Memoriam," that Tennyson was not so much a leader as a representative of his time. There have been prophets who were also artists, but Tennyson was primarily an artist. Harmony was a necessity to him, and his view of life bears its impress. He looks for a wide and orderly progression of society, conserving the best of the old but slowly taking on new conditions; he discerns character as the gradual creation of discipline, obedience and loyalty; he sees in scientific advance a widening of the old conceptions of the universe, and he anticipates the appropriation of these new territories of knowledge by the imagination; he discovers in religion a capacity for growth which will perennially renew its living relation with human experience and social expansion; finally, meditating on the vast range of life as he finds it revealed in history, nature and the human soul, he believes in the supremacy of good, the progression to

a supreme end, the reality of spiritual intimations, the existence of God. These are very noble ideas and they constitute a very noble conception of life. If they lack the assurance, the swiftness and the definiteness of the prophetic insight they are of wider helpfulness because they speak to the experience of a larger multitude. Tennyson builds his faith on, or very strongly confirms it, by contemplation of a wide range of knowledge and observation; it is an achievement, an inference from a survey of life, rather than a direct and unquestioning insight. It betrays intimate knowledge of the spiritual and intellectual mood of the time, and it expresses and interprets that mood. This conception Tennyson has put again and again into brief and beautiful phrases which have been sown broadcast in the memory of all English-speaking peoples and have clarified the common vision and confirmed the common faith. Rarely has profound meditation made its conclusions so portable as in such lines as these:

There lives more faith in honest doubt,
Believe me, than in half the creeds.

* * *

The old order changeth, giving place to new,
And God fulfills himself in many ways
Lest one good custom should corrupt the world.

* * *

Our little systems have their day—
They have their day and cease to be;
They are but broken lights of thee,
And thou, O Lord; art more than they.

* * *

The woman's cause is man's; they rise or sink
Together, dwarf'd or godlike, bond or free.

It is not improbable, however, that in spite of Tennyson's sound and faithful devotion to his art, and of his noble interpretation of the thought of his time, his widest and most enduring influence will grow out of his art. It is not difficult to mark his limitations: he was idyllic and pastoral, not dramatic; he was finished and elaborate, not impassioned and spontaneous; he lacked the directness of Burns and the imaginative impetus of Byron; he had not the beautiful and elemental simplicity of Wordsworth at his best, and he did not strike home to the very heart of faith like Browning. When we come to his art, however, there is no longer any question; here he is supreme. His art is vital and organic; it is the living form of his thought. The completeness of his mastery of all the elements of poetic structure and of all the resources of language becomes evident only after the closest study. It is not surprising that he sometimes smoked eleven pipes over one line! Rhythm, metre, rhyme, accent, melody, harmony—with what unerring skill these elements of musical speech are combined by this patient and tireless hand. Nothing is insignificant to an artistic instinct at once so profound and so thoroughly trained. Vowels and consonants are as carefully marshaled and set in sequence as if they were parts of the thought, and in an art so real and vital as Tennyson's they are of the very sub-

LORD TENNYSON AND HIS NURSE.

A WALK ON FRESHWATER DOWNS, ISLE OF WIGHT.

stance of the creative work. Such art is the final refutation of the superficial idea that art is craftsmanship and nothing more, and from such an art there flows a contagious influence of the most pervasive sort. Tennyson has continued the tradition of Keats, but he has immensely deepened and broadened it; he has, in fact, made it his own tradition. One must go a long way back in English literary history to find another poet whose art has appealed so irresistibly to his contemporaries and impressed itself so widely on verse writing.

This analysis of the sources of Tennyson's influence is, in effect, a statement of the character and extent of that influence in this country, for Americans are more generally sensitive to popular influences of a literary kind than their kinsmen beyond seas. If they do not number so many persons trained to appreciate the very highest qualities of literary art, they include a greater number to whom literature is both a resource and a recreation. Tennyson has been more widely read in this country than in England, and the knowledge of his work is more widely diffused. It has percolated through all classes of society, and much of it has been for many years a possession of the common memory. The poet more than once recognized the fact that he had more admirers in America than in England, and he had more admirers because he had more readers. He was earlier recognized here, as were Carlyle and Browning. Whether his influence has been deeper here than in England is another question, but the area of its operation has been wider. His lyrics and shorter idyls have been a part of our school literature for several decades, and "The May Queen" and other pieces of its class have been heard in every school-house on the continent.

Tennyson has been contemporaneous with what is often called popular culture in this country; the period, that is, of almost universal reading by great numbers, of all classes, in every part of the country. During the last forty years a process of intellectual assimilation has been going on among us; we have been, so to speak, "catching up" with Europe. There has been a widespread curiosity to know the best the world has known and to share in the intellectual inheritance of the race. We have had our own interpreters of this craving for contact with European culture—men who, like Longfellow and Irving, have found in it their inspiration and their opportunity.

To this craving, both intellectual and spiritual, Tennyson spoke for many years. He met the longing for a riper and a richer life by the beauty of his art, the depth and vitality of his culture and the tranquil and harmonizing force of his thought. Speaking out of an older civilization, which a more flute-like and mellow note than that to which our own poets had accustomed us, he fed the imagination and nourished the aspirations of a people in whom, despite their apparent devotion to material ends, there is a very deep vein of idealism. As a force in the

popular culture of the country Tennyson's influence has been greater than that of any other English poet. During the period in which this influence has been felt there has been a very marked widening of interest in the things of the mind, a notable deepening of the common desire to secure with material prosperity the nobler prosperity of thought and art. Much of this increased activity has been superficial, but that was inevitable, and to sneer at it is to make the mistake of betraying ignorance of the universal laws of growth. How much of this increased intellectual impetus, this broadened craving for the tools and food of thought, has been due to Tennyson it would be idle to speculate about. It is enough to emphasize the fact that he has been one of its inspirers and guides, confirming by his attitude and achievements a struggling faith in the reality and necessity of art, and liberating and clarifying minds breaking away from old provincialisms of thought and feeling, and longing for vital contact with the richer and more inclusive intellectual movement of the time.

But however difficult it may be to indicate with definiteness the extent of Tennyson's popular influence in this country, there is no such difficulty in discovering his influence on later American poets. On the poets of his own generation—Emerson, Holmes, Longfellow, Bryant, Whittier and Lowell—his impression was stimulating, but it was in no sense directive or controlling. They were independent of him; but their successors are revealing the force of his artistic impulse even more than their English fellow-craftsmen. In his lecture on "The Poetic Principle," published after his death in the year made memorable by the appearance of "In Memoriam," Poe says of Tennyson: "In perfect sincerity I regard him as the noblest poet that ever lived." Mr. Stedman is more critical and discriminating, but no one has done more to bring out clearly the supremacy of Tennyson among the poets of his time or to indicate the basis of that supremacy in the art quality of his work. Mr. Aldrich has hailed him as master, and the exquisite art of his own verse, while in no sense imitative, bears witness to the presence of this magical influence beguiling the artist away from all nearer aims and making perfection the only worthy end of skill.

He who runs may read in the care and finish which characterize the work of the younger poets the impress of an art which has made crudity, laxity or indifference to details well-nigh impossible in English verse. The defect of recent verse in this country is the presence of skill in excess of thought or emotion; the craftsmanship is out of proportion to the material. The promise for the future would be greater if there were more of the crudity which is often part of the first outgoing of power. The influence of Tennyson on the men of his craft in this country is too directly and powerfully felt at this moment; but even in excess it has great redeeming qualities, for it carries with it a noble fidelity to art and a noble conscientiousness in its practice.

TENNYSON THE MAN: A CHARACTER SKETCH.

BY WILLIAM T. STEAD.

ALFRED TENNYSON AS A
YOUNG MAN.

THE passing of Tennyson was the theme upon which almost every English writer of prose or verse was busy during the whole of October. It is seldom that so ideal a life has been crowned by so ideal a death. The scene which the *Pall Mall Gazette* was privileged to place on record for all time of the poet of the Victorian era slowly turning over the pages of the poet of the Elizabethan age, while

the moonlight flooded the room at Aldworth, is one which has fixed itself on the memory and the imagination of our race:

The morning yesterday rose in almost unearthly splendor over the hills and valleys on which the windows of Aldworth House, where Lord Tennyson was dying, look out. From the mullioned window of the room where the poet lay he could look down upon the peaceful fields, the silent hills beyond them and the sky above, which was a blue so deep and pure as is rarely seen in this country.

Lord Tennyson woke ever and again out of the painless, dreamy state into which he had fallen, and looked out into the silence and the sunlight.

In the afternoon, in one of his waking moments, during which he was always perfectly conscious, he asked for his Shakespeare, and with his own hands turned the leaves till he had found "Cymbeline." His eyes were fixed on the pages, but whether and how much he read no one will ever know, for again he lay in dream or slumber, or let his eyes rest on the scene outside.

As the day advanced a change came over the scene—a change almost awful to those who watched the death bed. Slowly the sun went down, the blue died out of the sky, and upon the valley below there fell a perfectly white mist. The hills, as our representative was told, put on their purple garments to watch this strange, white stillness; there was not a sound in the air, and high above, the clear, cloudless sky shone like a pale glittering dome. All nature seemed to be watching, waiting.

Then the stars came out and looked in at the big mullioned window, and those within saw them grow brighter and brighter, till at last a moon—a harvest moon for splendor, though it was an October moon—sailed slowly up and flooded the room with golden light. The bed on which Lord Tennyson lay, now very near to the gate of death, and with his left hand still resting on his Shakespeare, was in deep darkness; the rest of the room lit up with the glory of the night, which poured in through the uncurtained windows. And thus, without pain, without a struggle, the greatest of England's poets passed away.

According to Mr. Hallam Tennyson, the passage which his father turned to in "Cymbeline" was the last scene of all, where Imogen, loveliest of Shakespeare's women, is restored to her husband. Writing to Stratford-on-Avon on October 14, Mr. Hallam Tennyson said:

"My father was reading 'Lear,' 'Troilus and Cressida,' and 'Cymbeline,' through the last days of his life. On Wednesday he asked for his Shakespeare; I gave him the book, but said, 'You must not try to read.' He answered, 'I have opened the book.' I looked at the book at midnight, when I was sitting by him lying dead on the Thursday, and I found that he had opened it on one of those passages which he called the tenderest of Shakespeare—

'Hang there, like fruit, my soul,
Till the tree die.'

It was probably an answer to a message that I had given him from my mother."

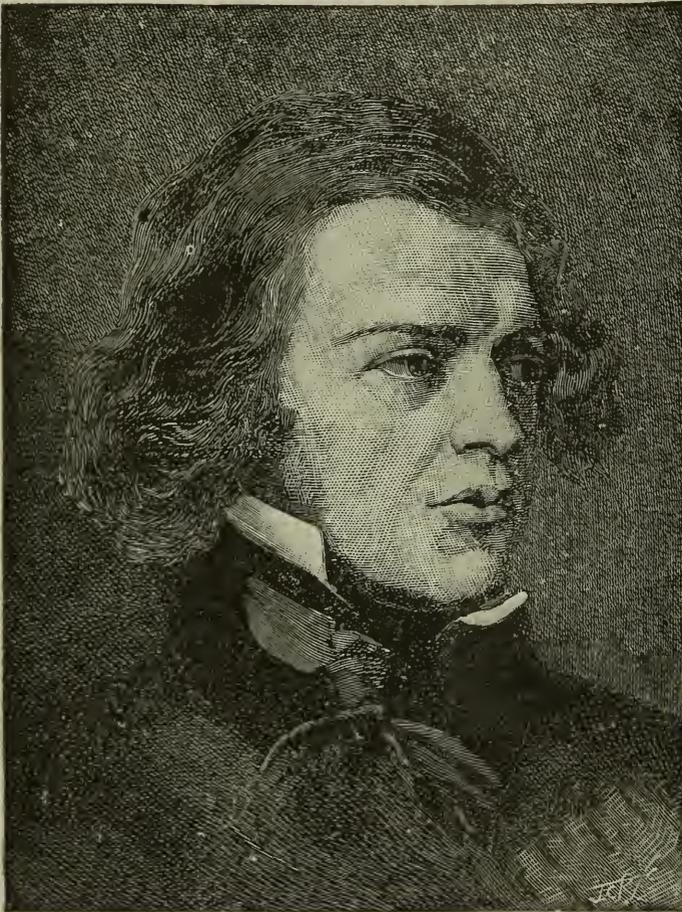

The burial in the Abbey, that great temple of reconciliation and of peace, was as ideal as the scene in the death chamber at Aldworth. The parting of the soul and the reverent laying away of the body were both worthy of the poet, and the latter was not unworthy of England. October has been beautified, and in some degree consecrated, by this serene and stately exit of the sweetest singer of our time. And while the incident has added poetry to our lives, it has in no way saddened our hearts. The long and noble life has been nobly ended, and the sense of the fitness of things has attained for once complete satisfaction. It is one advantage of living to an extreme old age that the parting brings with it no sense of shock, no bitterness of revolt against the loosing of the silver cord. "Not dirge, but proud farewell," accompanied Tennyson to the verge of the river of death, across which he, more than any man of our time, taught the eye to discern, amid the gloom of the valley of the dark shadow, the far-off gleam of the dawn of the new life of immortal love:

When the dumb hour clothed in black
Brings the dreams about my bed,
Call me not so often back,
Silent voices of the dead,
Toward the lowland ways behind me,
And the sunshine that is gone.
Call me rather, silent voices,
Forward to the starry track
Glimmering up the heights beyond me,
On, and ever on!

When every newspaper for weeks past has been filled with printed matter of every degree of excellence concerning him whose name and fame are the imperishable possession of the Victorian era, it would be as absurd as it is unnecessary to attempt here anything like a critical estimate of Tennyson's poetry, or to tell once more the very uneventful story of his

life. There are, however, one or two points upon which it may be possible to say something that has not been already said.

The first of these is that Tennyson was not, and to this hour is not, a poet of the English common people. He may be a popular poet in America. He is not a popular poet in Great Britain. Popular, that is, in the sense of being read and loved by the common people. And this, in great measure, for a very simple cause: for the nation, as John Bright aptly

TENNYSON AT TWENTY-TWO.

said, lives in the cottage, and Tennyson is too dear for the cottager. A German journalist, commenting on the death of the Laureate, ventured the somewhat cynical remark that he was the first poet who had a genius for finance. Tennyson as a financier is a somewhat incongruous conception, but what the German meant was that Tennyson was almost the only bard who found a gold mine in Parnassus. It is much to be regretted that when Tennyson condescended to become a peer he did not gild his coronet by ordering the publication of a shilling edition of his poems. No such edition has yet been issued.

TOO DEAR FOR DEMOS.

I am not speaking without book when I say that the high price at which Tennyson published his poems has practically placed them out of the reach of the million. I had the good fortune to be born in the household of a Nonconformist minister in a Tyneside village, whose stipend at my birth was £80 per annum. My father had his library, to which additions were made from time to time when the scanty shilling

could be spared for such books as must be read. Tennyson was out of my reach. We simply could not afford to pay six shillings each for all the volumes that he wrote. The older poets were already on our shelves. I remember buying Shakespeare's plays at two and sometimes three for a penny, and often finding it difficult to get the penny. I had attained manhood before I had a Tennyson of my own. As a consequence, Tennyson has never been to me what he might have been; and what was true in my case is at this moment true of millions in these islands. In the United States the poor man could have had Tennyson's poems on his shelf. In the United Kingdom he cannot even to this day. He can buy Shakespeare, Scott, Burns, Milton, Byron, Longfellow, at a shilling each, and he will pay for the complete works of all these poets no more than what he would pay for the cheapest collected edition of the poems of Tennyson. As a consequence, the poor man does not read Tennyson. The poems of the wealthiest singer of this or of almost any other time are out of his reach. And not until they can be bought for a shilling need we expect to find that he will directly influence the lives and mold the thoughts of the Sovereign Democracy.

NOT A MAN OF THE PEOPLE.

That Tennyson should not have felt the hardship of thus depriving seven out of every ten of his brother Englishmen of all opportunity of hearing his message to his generation is characteristic. He was never of the people as Burns was of the people. In his veins ran the blood of a dozen kings. He was descended from the aristocracy, and to the day of his death he lived apart from the commonalty. He lived with nature rather than with man. "I detest folks," he is said to have declared on one occasion, "and I wish they would reciprocate the feeling and leave me alone." He was not unsociable; no one was better company to his friends. But he lived in his own circle. He was as strict as the most particular Baptist in the closeness of his communion, which was fenced and guarded so as to admit none but the elect of the elect. He was a man of culture, refined, delicate, comfortable and well-to-do. "People bore me beyond endurance," he said, and he did not suffer bores gladly. He would have been a greater man if he had but lived in a wider world. He was always the poet of the library, of the drawing-room and of the boudoir. He was fastidious and almost finicky; sensitive to a degree almost absurd in a man of such splendid physique.

FOR "THE UNTUTORED HEART!"

It may be objected that even if Tennyson's poems were published at a shilling, or if, like those of another and less popular poet, they were published at a farthing, they would never appeal to the ordinary artisan and agricultural laborer. This is no doubt true of many of his poems. Nearly the whole of the "Idylls," much of "In Memoriam," "The Princess," and all of his plays would probably find no popularity among the toiling myriads of our native land. Here and there, no doubt, they would come upon an ear attuned to melody and to the spirit that vibrates in

Tennyson's verse. But even when these are deducted much of Tennyson's poetry appeals to the universal man sufficiently to be welcomed even in a common lodging house. Lowell's well-known lines in his poem on "An Incident in a Railway Car" describe the effect of reading Burns to men whose faces, brown and hard, were capable of being irradiated with the sunlight of the poet's presence :

LADY TENNYSON.

To write some sonnet verse, or line
Which, seeking not the praise of Art,
Shall make a clearer faith and manhood shine
In the untutored heart.

WANTED, A SHILLING EDITION.

The "untutored heart" turned loose upon Tennyson's poems would find many a line that would thrill it with a new sense of power and beauty. I venture to hope that even if the poet's family and Messrs. Macmillan cannot be induced to try the experiment of publishing the whole of Tennyson's works at a shilling, they will produce a volume at that figure which will contain all the more popular poems of the Laureate. It is interesting, looking over the index of the contents of his works, to endeavor to put together the pieces which ought to go into the popular edition. If the selection were to be made by popular ballot, and the poems were to be classified according to the number of readers, say, in an ordinary north-country factory, who had heard even as much as their titles, it would be made up pretty much as follows :

First, the "Charge of the Light Brigade," then some passages from "In Memoriam," including the opening stanzas, which are sung as a hymn in many conventicles ; and "Ring Out, Wild Bells ;" after that would come "Enoch Arden," "Locksley Hall," the "Ode on the Death of the Duke of Wellington," and possibly the dedications to the Queen and Prince Albert. It is doubtful whether any of the others are known by name even. Most of the short pieces would be very popular if they were generally accessible. Not only were the poems weighed down by a prohibitive price, but permission

to quote them in books of recitation and in other ways has been very grudgingly granted. The attempt on the part of a north-country board schoolmistress to popularize the "Idylls of the King" among her pupils was rudely nipped in the bud by the terrors of copyright. No one who believes in the genuine inspiration and upspring of Tennyson's verse can feel otherwise than dismayed at the thought that a whole generation of voters have grown up practically shut out by a golden barrier from a source of stimulus and of strength which has been practically the monopoly of the middle and well-to-do classes.

Never did Poesy appear
So full of heaven to me, as when
I saw how it would pierce through pride and fear
To the lives of coarsest men.

Tennyson, in many of his poems, preferred an audience select though few, but there are some of his pieces which show that he also shared the American's conviction when he sang :

But better far it is to speak
One simple word which now and then
Shall waken their free nature in the weak
And friendless sons of men.

THE POET AS A POLITICIAN.

Disqualified as I am by this and other circumstances from being able to form a judgment on Tennyson, which arises naturally in the minds of those who have been saturated with Tennyson from childhood, I may be pardoned if I confine any observations which I have to make to what may be called the mere political and journalistic value of Tennyson.

Tennyson could hardly be taken as a safe guide to the politician. He was from first to last deplorably smitten with Russophobia. He did his best to hound

Englishmen that they had all "hearts in a cause," and that they were "noble still." Like others, who had less excuse, he dreamed that the war in defense of the Turk was a kind of knight-errantry on behalf of liberty, and he wrote in that sense. Therein he did according to his lights, as hundreds of thousands did according to theirs, who did evil meaning it for good.

THE CHARGE OF THE LIGHT BRIGADE.

But, unlike others, Tennyson at least saved something out of the general wreck. Already the siege of

SOMERSBY RECTORY, WHERE TENNYSON WAS BORN.

England into that criminal war which he commemorated with such eloquent enthusiasm in "Maud." It is a curious instance of the fallacy of human judgment and the irony of fate that looking back over the Crimean war, with the uselessly slaughtered hecatombs of dead, and reflecting over the hundreds of millions of pounds sterling that we threw into the sea, where—

By the side of the Black and the Baltic deep,
And the dreadful-grinning mouths of the fortress, flames
The blood-red blossom of war with a heart of fire—

we should have nothing to show for it beyond the poet's own "Charge of the Light Brigade." After the lapse of forty years we can see how hideous was the mistake that was made when England was entangled in a war to suit the purposes of the man of the Coup d'État, Napoleon. But Tennyson did not care, as he expressed it pretty frankly in "Maud," so much about the cause as long as the war proved to all

Sebastopol and the fiasco of the Baltic expedition are fading away into the past like other battles of kites and crows, to which Milton might scornfully have relegated them. But out of the horrible welter of blood and crime there stands out clear and conspicuous before the eyes of the whole world that supreme instance of heroic valor—the charge of the Light Brigade at Balaklava. As the poet said of it, that, though it was a mistake, "For one thing England should be grateful, having learned thereby that her soldiers are the bravest and most obedient under the sun." It was, perhaps, an exaggeration that made one enthusiast declare that it was worth while having the Crimean war merely to place on record that supreme test of the quality of six hundred country yokels and town-bred riff-raff, who were suddenly summoned to show that they knew how to die under circumstances that well might have daunted the bravest. The yokel and the riff-raff stood their test splendidly. However cheap military valor may

be held, no one can deny that Tennyson did what genius could do to drive home the higher and better side of that memorable charge into the hearts of his countrymen. That was a gain, no doubt, but it is not an adequate setoff for the fact that England's most melodious singer should have been a very Tyræus of war and bloodshed whenever his country was confronted by her besetting sin. It should, however, be remembered in mitigation of this judgment that when the Duchess of Edinburgh was married Tennyson, writing as laureate, although his use of the word Alexandrovna sends Russians into fits of laughter, struck some worthier notes than those which spoiled his earlier muse. The Tzar is no longer "The icy-hearted Muscovite, that o'ergrown barbarian in the East," but he is the sovereign

Who made the serf a man, and burst his chain,
and in the place of fiery invectives and appeals to carnage we have the prayer that,

Howsoever this wild world may roll,

truth and manful peace may remain between England and Russia. His prayer has come partly true, although it must be admitted that, in his letter to the Russo-Jewish Committee in 1891, there is the same quick readiness to resume hostilities with his ancient foe.

HIS HOSTILITY TO HOME RULE.

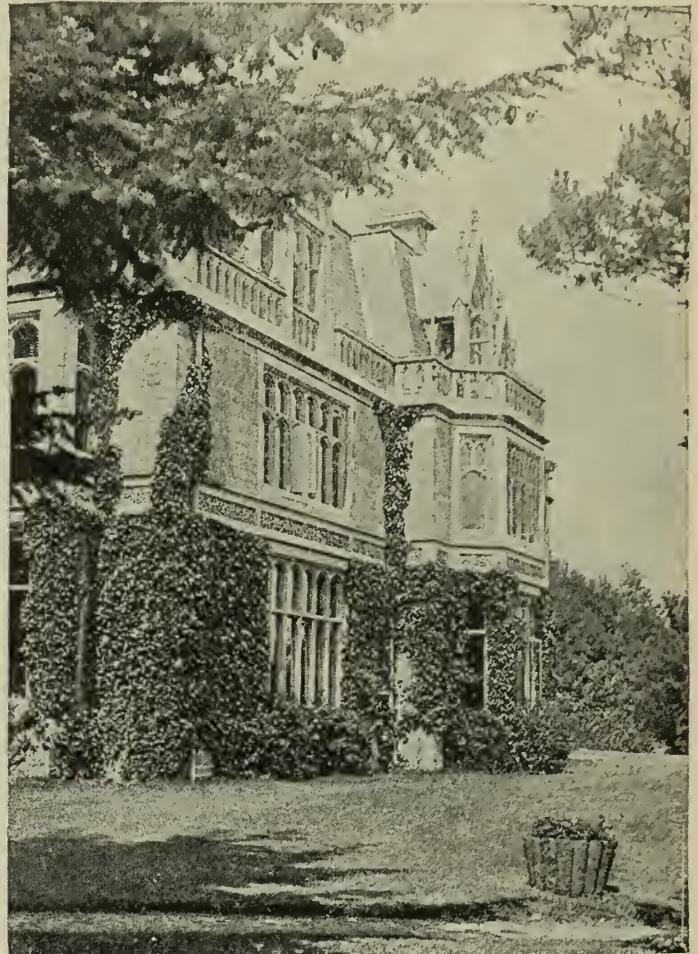

Another great question which has divided the nation was one in which Lord Tennyson took the wrong side. Although he selected as the hero of his greatest work the Celtic sovereign of the Round Table, one may search his verses through without finding a single adequate reference to Ireland. He remained to the last a steady opponent to the concession of her claims for local self-government. He was, he said in one of his last published letters, a friend of Mr. Gladstone, but opposed to Mr. Gladstone's policy. The following stanza from one of his latest publications can hardly be regarded as an adequate treatment of the great tragedy which has been enacted in Ireland during the time that he was melodiously singing of better days to come :

Kill your enemy, for you hate him ; still your enemy was
a man ;
Have we sunk below them ? Peasants maim the helpless
horse and drive
Innocent cattle under thatch, and burn the kindlier
brutes alive.
Brutes, the brutes are not your wrongers—burnt at mid-
night, found at morn,
Twisted hard in mortal agony with their offspring born
unborn.

AN IMPERIAL PATRIOT.

Ireland and Russia are great exceptions, which impair so far as they go the value of Tennyson as a prophet of our time. But even when full allowance is made for his shortcomings under these heads, his influence has been, on the whole, steadily on the right side. He has always struck the patriotic chord with firm and unfaltering hand. He was never a "little Englander." The craven fear of being great which appalled the minds of so many of his countrymen

when he hurled his eloquent anathemas against the Manchester School are not so generally entertained as when he rejoiced "we were not cotton spinners all." But the same craven spirit lingers here and there ; in the present administration, even, there are men who think that Belgium without the Congo is the best ideal toward which we can strive. Against these unworthy changelings rather than nurselings of their mighty mother the poet's protest was uniform and constant. He was an Imperial Englishman, if ever such an Englishman lived, and he was suffi-

ALDWORTH, SURREY, TENNYSON'S SUMMER PLACE.

ciently Imperial to recognize the justice of the American revolt against the Third George. In one of his earlier poems he conjures "England, strong mother of the lion line," to be proud of these her strong sons, "who wrenched their rights from thee."

What wonder, if in noble heart
Those men thine arms withstood,
Retaught the lesson thou had'st taught,
And in thy spirit with thee fought—
Who sprang from English blood !

HIS LIBERALISM.

"The single note from that deep chord which Hampden smote" has never since ceased to vibrate through the world. He believed, as he said, in progress, but at the same time he would conserve the hopes of mankind. For the "red fool fury of the Seine" he ever had the greatest detestation. It would

be difficult to find a better type, both in his shortcomings and his qualities, of a cultured English upper-class man than could be found in Tennyson. There was a certain democratic flavor, as evidenced by such a reference as that to "The grand old gardener and his wife." He was ever in sympathy with the cause of Liberal reform. His only vote in the House of Lords was given in favor of the enfranchisement of the agricultural laborer, and he paired in favor of the Marriage of the Deceased Wife's Sister. In his poems there is abundant evidence that he constantly alternated between the two notes of confidence in steady progress and recoil from headlong plunges in the dark.

THE AMERICAN CONSTITUTION.

It is interesting to note that he also shared the strong leaning which is apparent in so many directions in this country toward the American constitution as affording better security for ordered freedom than our own. Writing to Walt Whitman in 1887 on the eve of the Centenary of the Declaration of Independence, he said :

The coming year should give new life to every American who has breathed a breath of that soul which inspired the great founders of the American constitution whose work you are to celebrate. Truly the mother country, pondering on this, may feel that how much soever the daughter owes to her, she, the mother, has nevertheless something to learn from the daughter. Especially I would note the care taken to guard a noble constitution from rash and unwise innovators.

The same note was sounded two years earlier in a letter which he wrote to Mr. Bosworth Smith on the subject of disestablishment :

With you, I believe that the disestablishment and disendowment of the Church would prelude the downfall of much that is greatest and best in England. Abuses there are, no doubt, in the Church as elsewhere; but these are not past remedy. As to any "vital changes in our Constitution," I could wish that some of our prominent politicians who look to America as their ideal might borrow from her an equivalent to that conservatively restrictive provision under the fifth article of her constitution. I believe that it would be a great safeguard to our own in these days of ignorant and reckless theorists.

THE CROWN.

It is perhaps natural for the Laureate to be loyal, but there is no doubt that the sincere tributes which he paid to the Queen and to her consort contributed materially to the steadying of the foundation of the British throne. He, almost alone among the poets, gave expression to the inarticulate loyalty of the ordinary Englishman, and he did it without being either servile or sycophantic. If it were only for his dedication to the Queen and Prince Albert he would have repaid a thousand times over the value of all the butts of sherry and the annual stipends the poet laureates have received since the days of Ben Jonson. He praised the crown, not because of its jewels, but because of the character of its wearer, and the support which it gave to our crowned republic's crowning common sense in preventing a cataclysm and securing a peaceful passing of those august decrees

Which keep the throne unshaken still,
Broad-based upon her people's will,
And compassed by the inviolate sea.

THE NAVY.

The reference to the sea leads to the one occasion on which I was privileged to suggest a subject for Tennyson's muse. In the summer of 1884 I wrote a series of articles entitled the "Truth About the Navy," in which I put forth with chapter and verse, as plainly as pen and ink could put them together, the facts concerning the state of the navy, which at that time had been allowed to fall shamefully below the minimum standard of efficiency compatible with national security. As was invariably my wont in those days, when I had anything on hand which had to be put through, I sent copies of the paper with letters to all those who might by hook or by crook be induced to help the good cause. Among others I wrote to Lord Tennyson, and received a brief reply to the following effect: "Lord Tennyson thanks the editor of the *Pall Mall Gazette* for calling his attention to the article referred to. He has no doubt the navy is much below its proper strength."

Shortly afterward Lord Tennyson sent to the *Times* the following very plain-spoken address to the Lords of the Admiralty and Mr. Gladstone :

THE FLEET.

ON ITS REPORTED INSUFFICIENCY.

You—you—if you have fail'd to understand—
The Fleet of England is her all in all—
On you will come the curse of all the land,
If that Old England fall,
Which Nelson left so great.

This isle, the mightiest naval power on earth,
This one small isle, the lord of every sea—
Poor England, what would all these votes be worth,
And what avail thine ancient fame of "Free,"
Wert thou a fallen State ?

You—you—who had the ordering of her Fleet,
If you have only compass'd her disgrace,
When all men starve, the wild mob's million feet
Will kick you from your place—
But then—too late ! too late !

The poetry is not up to Tennyson's level, but that can be forgiven on account of the admirable vigor and the soundness of its politics.

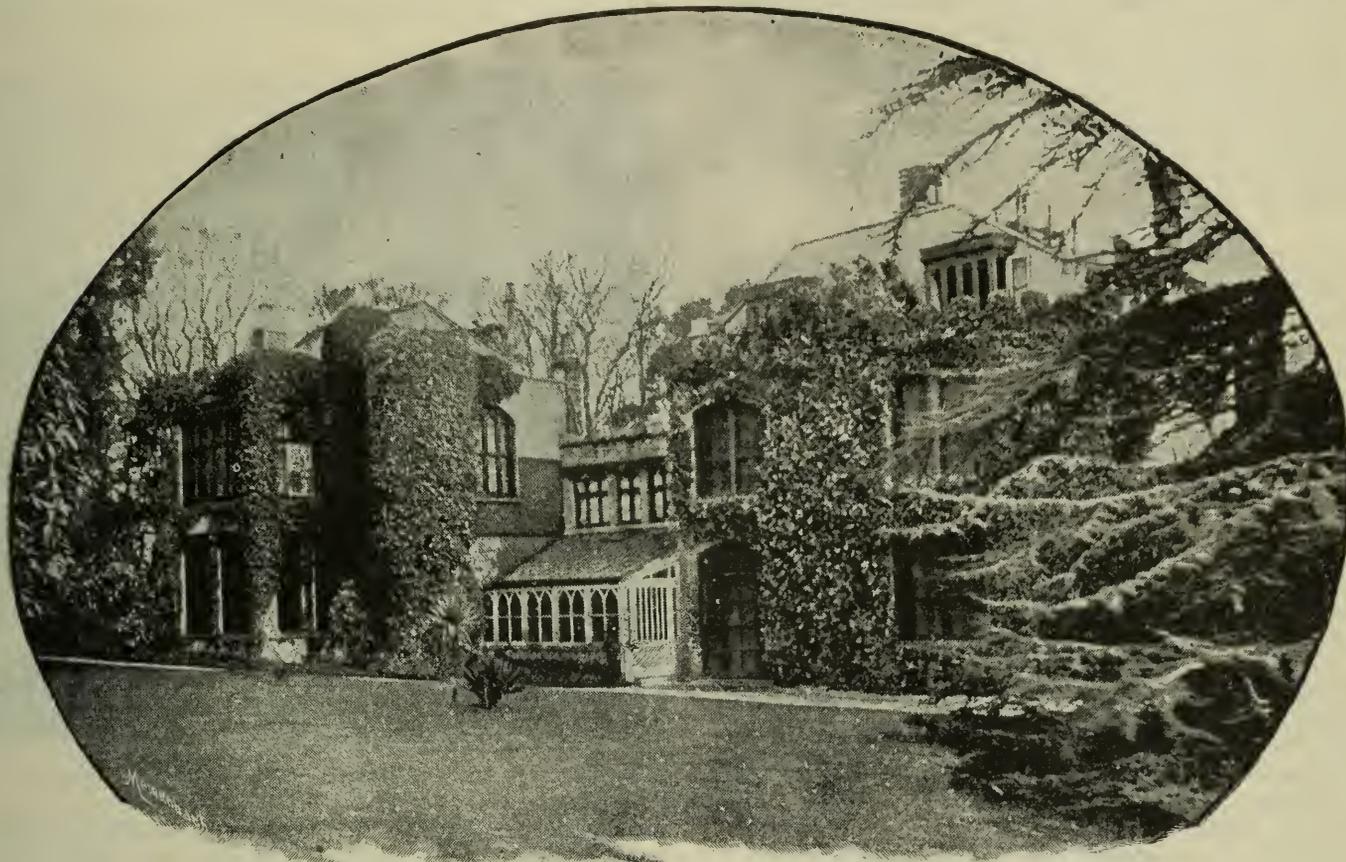

MORALITY IN POLITICS.

The political poems which have on the whole been the most appreciated, and whose influence has been most felt in the turmoil of our political warfare, are the "Ode on the Death of the Duke of Wellington," and the admirable verses entitled the "Third of February, 1852." It reads somewhat oddly now, in the face of the fact of the powerful and united German nation which dominates the Continent, to say: "No little German State are we, but the one voice in Europe." Although there are many voices in Europe besides ours to-day, few ring with more vigorous and generous passion than that in which Tennyson asked :

What ! have we fought for Freedom from our prime,
 At last to dodge and palter with a public crime ?
 Shall we fear *him*? our own we never fear'd.
 From our First Charles by force we rung our claims.
 Prick'd by the Papal spur we rear'd,
 We flung the burthen of the Second James.
 I say, we never feared ! and as for these
 We broke them on the land, we drove them on the seas.

The "Ode on the Death of the Duke of Wellington" is admirable for its eloquent assertion of the loftiest

doubt he was a power, no doubt he served his country loyally while he penned the epitaphs of men like Franklin and Gordon and sung the praise of Nelson and Wellington. His verse enshrined many of the heroic deeds of daring in the history of our race: the 'Story of the Revenge,' the 'Relief of Lucknow,' together with the 'Charge of the Light Brigade' will always be gratefully appreciated by those who know how much we need to be reminded from time to time of the brave deeds of old, and of the services which

FARRINGFORD, TENNYSON'S HOME.

moral principle, and the praise it bestowed upon those who

Never concealed the truth to serve the hour,
 Nor paltered with Eternal God for power.

Welcome indeed was that great voice, heard even in times of storm and stress of our latter days, rebuking all self-seekers, and teaching eager wire-pullers and politicians that

Not once or twice in our rough island story,
 The path of duty was the way to glory.

All this is good—permanently good. Tennyson must be counted as one of the forces which have made for righteousness pretty constantly for the last forty years.

HIS SERVICES TO ENGLAND.

On repeating the substance of these observations to one who may certainly be regarded as a much more accurate exponent of Tennyson's own views of the value of his message to mankind than what I can pretend to be, I was met with the response :

"No, it is a mistake to place Tennyson's political services or his influence on politics in the front. No

were rendered to us by the heroes dead and gone. But these things are comparatively evanescent. What is of real value in a poet's work is not any journalistic or even patriotic service which he may render from day to day, but it is rather the eternal elements in his verse which time cannot stale nor age wither."

THE POSITION OF WOMEN.

"You would not, then," I asked, "confound under the same censure that great poet's prophecy of the evolution of a perfected womanhood which forms the crown and glory of the 'Princess?' There are two pages in that medley which seem to me to contain the root and vitals of the Woman's Rights Question. You understand how much we owe to Tennyson's mother. His assertion that woman's cause is man's

They rise or sink together
 Bond or free.

If she be small, slight-natured, miserable.
 How shall men grow ?

contains one side of the truth, while equally important is his declaration that notwithstanding the difference of the sexes

Yet in the long years liker must they grow :
The man be more of woman, she of man.

Equally excellent is his ideal of marriage :

In true marriage lies, nor equal, nor unequal,
Each fulfills defect in each.

You can hardly regard that great doctrine as temporary and evanescent?"

"It is not so temporary or so evanescent," was the reply, "as the poems which have England and patriotism for their theme. England passes, but nature endures. The struggle toward the truth embodied in the 'Princess' is also temporary. Woman is as man, and man as woman. The change is working itself out, and will ere long be complete; then the 'Princess' will be out of date almost as much as the politics of 'Maud.'"

THE KEY-NOTE OF HIS POETRY.

"What, then," I asked, "constitutes the permanent element upon which Tennyson's fame as a poet will finally rest?"

"Upon the only three things which endure: God, Man and Nature."

"And what do you regard as the key-note, the moral undertone which runs through all his poems?"

"I should say," was the reply, "the awful aimlessness of the world without God. That was the starting point of 'In Memoriam' and the chief aim of the 'Idylls,' to show how the world without God rushes down to red ruin and the breaking up of laws. That was the note of the somber but powerful, although not very poetical, diatribe which Tennyson gave to the world in his closing years:

Bring the old dark ages back, without the faith, without
the hope;

Break the State, the Church, the Throne, and roll their
ruins down the slope.

Authors—atheist, essayist, novelist, realist, rhymster,
play your part,

Paint the mortal shame of nature with the living hues of
Art.

Rip your brother's vices open, strip your own foul pas-
sions bare;

Down with Reticence, down with Reverence, forward,
naked, let them stare.

Feed the budding rose of boyhood with the drainage of
your sewer;

Send the drain into the fountain, lest the stream should
issue pure.

Set the maiden fancies wallowing in the troughs of
Zolaism;

Forward, forward, ay, and backward, downward to, into
the abysm.

HIS MESSAGE TO THE WORLD.

"What," I continued, "do you consider as the most useful, therefore the most truthful, element in his poems, looked at as a whole?"

"Leaving out the question what may be called the more or less mechanical arts of rhythm and melody, and referring only to the significance of the message which Tennyson gave to his generation and age, I should say he was pre-eminently the Prophet of Faith. His message exhorted all to have faith in Man and

faith in God. He held that when men believed in Man they found ground for belief in God. That was his first great message. Belief, first in Man, then in God who created Man. That was the first message. The second related not to Man, but to Nature. He taught in every line he wrote the lesson of reverence which we owe to the world of nature. He studied nature with the love of a lover to his mistress. He was born in the country, and through all his long life he studied nature more than he studied man. He studied her in all her forms. She was his great

CLEVEDON CHURCH.

lesson book, wherein he read with reverent care what his Creator had inscribed. His poems take their color from Nature's page."

"BELIEVE, STUDY, SING!"

"That is as a prophet; but what would you regard his distinctive feature as a poet?"

"As a poet Tennyson's claim to the regard of posterity is the skill and success with which he has taught the English what they have not noted sufficiently—the melody of their own language. So much importance did he attach to this, and so carefully and constantly labor in the forming of the melody of his song that his poetic message may almost rank along with the other two. If I had to translate the burden of Tennyson's life's work, I should say, BELIEVE, STUDY, SING."

A MASTER OF MELODY.

The immense importance which Tennyson attached to the melody of his verses was shown in nothing so much as the delight which he had in reading his own poetry. As Sir Edwin Arnold says:

Reading, is it? One can hardly describe it. It is a sort of mystical incantation or chant, in which every note rises and falls and reverberates again. As we sit round the twilight room, with its great oriel window looking to the garden, and across the fields of hyacinth and daffodil to the sea, where the waves wash against the rock, we seem

carried by a tide not unlike the ocean's own, which fills the room and ebbs and flows away, and when we leave sings with strange music in our ears.

Tennyson's reading of his poems, as Mrs. Richmond Ritchie has lately told us, is something quite apart from all ordinary reading. As he takes up one of his books and opening it begins to repeat the words upon the printed page, tapping with his finger meanwhile to mark the cadence of the flowing lines, you seem to be listening to some strange chant, an incantation to the spell of which you instantly succumb. The familiar lines assume a new shape, flash forth all manner of hidden meanings, and have a music of which you never dreamt before. Everybody knows of his delight in reading his own verse.

If we hardly can speak of him, as he spoke of Milton, as "the God-gifted organ voice of England," he may still be regarded as having made his organ discourse excellent music of hitherto unequalled sweetness and beauty. There is an absence in his poetry of the great drum and the glare of color.

THE POET'S LIFE.

There must also be recognized in dealing with the message of the poet's verses the influence of the poet's life. Wordsworth, Browning and Tennyson have done something between them to redeem the character of the poet as a family man from the disrepute into which he was brought by Byron and Shelley. Tennyson did not marry until the age at which Shakespeare was a grandfather. For Shakespeare wedded Ann Hathaway when he was a boy of 18, and had had three children before he was 21. Tennyson did not marry until he was 41. But alike in his bachelor days and in his later life, his conduct in all human relations seems to have been perfectly ideal. A loving son of an angel mother, the filial son of a pious father, he was equally admirable as a brother, and few tributes have ever been written to human being more hearty than those which he has received from his brothers. Again to quote Sir Edwin Arnold: "It was beautiful to see the tenderness of the poet's care for the woman he loved and his anxiety lest any chance harm might befall her through an open door, or over-exertion in walking, or fatigue of any kind. No outsider has the right to dwell upon such a subject; but it is at least something to know that Tennyson's wedded life was one of no common brightness and sunshine, and that, like not a few of our greatest men, he was indebted to his wife for those long years of freedom from personal care and trouble, which he devoted to the service of mankind. In his immortal verse he has paid the noblest of all tributes to her love and devotion. It was no small part—perhaps, indeed, it formed the larger part of his life for half a century.

It is to be hoped that the good tradition established by these three great masters of English song will not be broken or smirched by the new Laureate.

A VISIT TO TENNYSON.

Miss E. R. Chapman, whose book, "A Companion to In Memoriam," was published in 1888 by Messrs. Macmillan as a companion volume to Tennyson's chief poem, has kindly written me the following ac-

count of the visit which she paid to the Laureate at Haslemere:

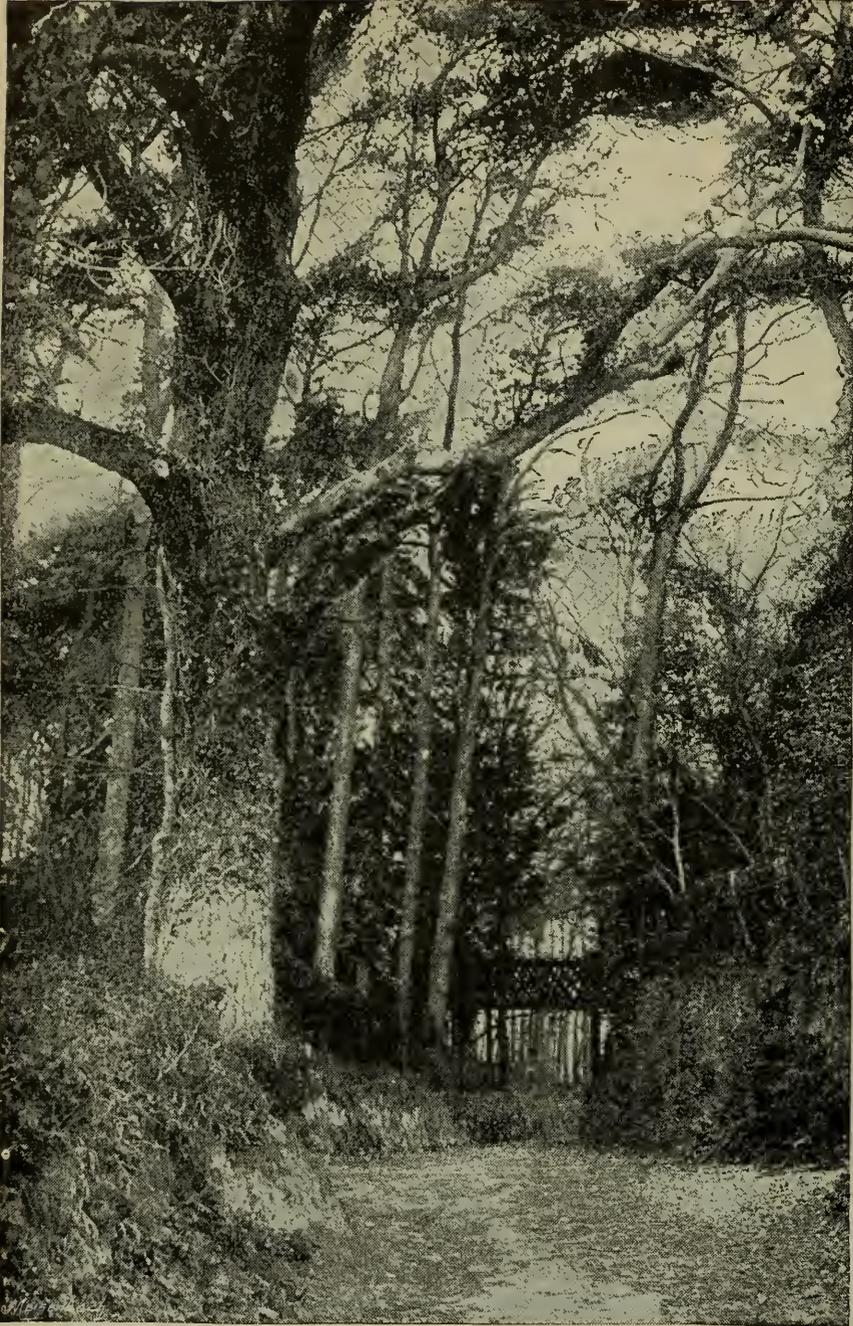

It is with some reluctance that I comply with your request for some recollections of the Master, and join in the printed Babel for which the death of a great man gives the signal nowadays. There is something in this which is always jarring, like chatter in a death-chamber, and one could wish for an appointed period of reverent silence before even the truest appreciations, the most heart-warm tributes, were written. And then my own claim to speak of him at any time is not great. I saw him but a few times, and I feel that I still know him best through his works—through one of them especially. For to me he always has been and always will be primarily the singer of "In Memoriam," and his inspired elegy the type of what our age understands by poetry—our self-conscious, analytic, questioning age, which must needs see herself and not another mirrored in her poets, yet which still, when all is said, delights in beauty—in that symmetry of form, that lucidity of expression, that music of rhythm and rhyme which is the note of the immortals.

I sent him some years ago a volume of miscellanies containing an analysis of "In Memoriam," when I was unknown to him, and so much under the prevalent impression of his hermit-like inaccessibility that I did not look for even a formal reply to the formal message which accompanied the book from the publishers. I was in Italy at the time, and had dismissed the matter from my thoughts when, on one memorable morning, a pet retriever belonging to the house burst into the room with a letter in its mouth, and brought me the wholly joyful yet half-bewildering sense of the establishment of a personal relation between master and disciple. Before he had been dear and sacred, as Spenser and Milton and Wordsworth are, but hardly as an actual personality, as a living man. It was not, however, till nearly two years later that I saw him at Aldworth, and was able to thank him personally for his goodness, and tell him how happy it had made me to know that my study of his poem had pleased him. "It's all right," he said, "all except the last section:

'O living will that shall endure
When all that seems shall suffer shock,
Rise in the spiritual rock,
Flow thro' our deeds and make them pure.'

I did not mean the divine will, as you say. I meant *will in man*—free will. You know *there is* free will. It is limited, of course. We are like birds in a cage, but we can hop from perch to perch—till the roof is taken off."

I shall not forget his kindness that day, giving up some two hours, I think, to our entertainment; taking pleasure—so it seemed—in showing us his favorite shrubs and trees and points of view, and talking on all manner of subjects, grave and gay, as they occurred to him, with the friendliest unreserve and an entire absence of *pose* or self-consciousness. This childlike veracity of temperament, resulting in a singular plainness and even *brusquerie* of speech, was doubtless, as Mr. Theodore Watts has well pointed out, the secret of his charm. Certainly it was the characteristic which was most noticeable—I had almost said most startling—at first sight. He would give utterance, as only a child or a rarely endowed genius does, to the thought that was running in his mind at the moment, with nothing, apparently, of that too scrupulous regard to his surroundings, that over-nice weighing of his interlocutor's capacities and sympathies which destroys naturalness and waters down individuality to the dead

TENNYSON BRIDGE, FARRINGFORD.

level of drawing-room convention. How was it possible that the "revered, beloved" of the whole English-speaking world, the unquestioned and crowned king of poesy of the later century, should bewail to the first comer his wrongs at the hands of the critics, his tortures under the personalities of the press, his terrors about "what they will say of me after I am dead!" "But what is the gadfly of irresponsible criticism to *you*? How should *you* mind?" said my puzzled companion that afternoon. "But I *do* mind!" was the quick rejoinder, as of an inconsolable child. He knew that people's blunders and curiosities and misunderstandings and tasteless ineptitudes stung him. He did *not* know, so it seemed, that they could not injure him; that an artist so consummate, a seer so profound, a singer so melodious, had been well out of reach of the criticasters for half a century or so, whatever the precise niche in the Temple of Fame hereafter to be assigned him. I remember thanking him after the publication of "Demeter" for "Parnassus," with its grand iteration of the lesson of "In Memoriam" that the thing of real moment is not the sum of more or less perishable

work done or of renown achieved, but the survival of the aspiring, energizing personality after death, the immortality of the

"Force that would have forged a name."

The closing stanza seemed to me as fine as anything he had written :

"If the lips were touch'd with fire from off
a pure Pierian altar,
Tho' their music here be mortal, need
the singer greatly care?
Other songs for other worlds! the fire
within him would not falter;
Let the golden 'Iliad' vanish; Homer
here is Homer there."

"Did any of the critics *understand*?" I asked. The emphatic answer embraced much more than the question. "*Nobody understands.* As to the critics, how can they know what they are writing about, when they all tumble over one another to get their reviews out the next day? I think," he added, "the only person who wrote to me about 'Parnassus' was Gladstone. He liked it, but he said he should be very disappointed not to find the 'Iliad' in the next world."

Perhaps next to his transparent sincerity and single-heartedness, his strong sense of humor was the trait that would strike a new-comer most. In spite of the "Northern Farmer" and its fellows, one was not quite prepared for the prominence of this element, but it was very marked. I should imagine that no one could be quicker in seizing the humorous aspects of things and persons than he was, and I think that he enjoyed and appreciated the quality in others. He took evident delight in poking good-humored fun at his friends. "A capital woman—stands any amount of chaff!" was intended for a highly complimentary description of one who was a favorite. One day, when he had failed to catch the attention of a distinguished writer and intimate friend, after twice repeating a remark to her, he retaliated with: "The

woman's written so many books she can't understand common English!"

His manner, on a first introduction to him, was certainly a little formidable; but if you had fun enough in you to laugh with him, and faith enough in him to know that behind the bluntness and *sans façons* ways there beat the sweet, tender, humble heart of one of God's elect—of the poet who would not have been so great if he had not been greatly loving—you quickly felt at ease.

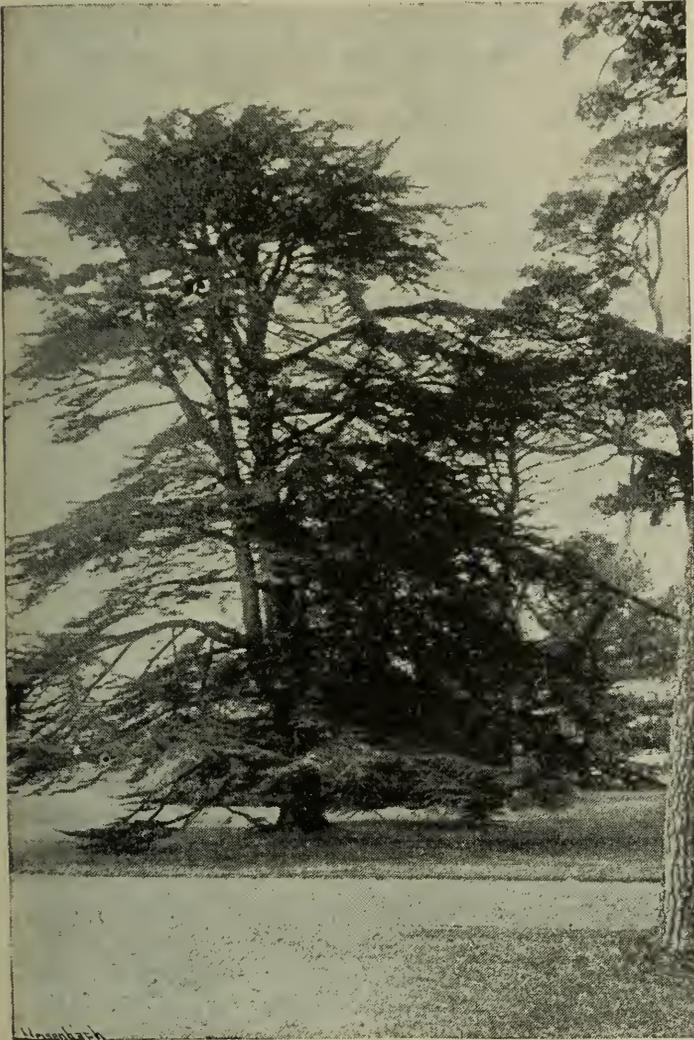

I never had the opportunity—I do not know that I sought it—of talking to him about women—content, I suppose, with the glorious confession of faith which he has put into the mouth of Ida's lover, and knowing in my heart that he whose teaching has so enriched "the blood of the world" must be, and forever remain, a power on the side of right and justice and the nobler ordering of society and of human life.

So far Miss Chapman, whose analysis of "In Memoriam" Tennyson repeatedly declared to be that which he preferred to all others. It is interesting to

know that in the opinion of the poet it was a woman who understood the soul of his masterpiece better than any one else. Miss Chapman, it is true, is a poet as well as a woman, but she succeeded where many male poets failed.

TRIBUTES TO TENNYSON.

Of Tennysonianism the papers, of course, have been full. I shudder at the versified tributes which other poets have paid to the memory of their great master. Some of them are not bad; of others we can only say that they make us regret that the ancient custom which prevailed when Spenser was buried was not

CEDAR UNDER WHICH "MAUD" WAS WRITTEN.

followed, when the poets who wrote odes in honor of the deceased threw the odes and the pens with which they were written into the grave in the Abbey. The general outburst of enthusiastic praise which followed the passing of Tennyson is a remarkable tribute at once to the ascendancy of his genius and to the decay of the bitter atrabilious temper which used to prevail, especially on the lower slopes of Parnassus. Perhaps the praise with which the newspapers have rung may lead many, if a cheap edition of Tennyson's poems is brought out, to make the acquaintance of this fountain of melodious verse. At present it is to be feared that there are not a few, if they were to be asked what Tennyson had done, would be unable to explain, as was the heroine of the following story,

which appeared in the *Philadelphia Call* at the time when Tennyson received his peerage:

"Mamma," said a fashionable New York lady to her mother, "the papers are making a great fuss over a Mr. Tennyson, of England." "Yes," responded the mother, "he has been raised to the dear, delightful peerage." "He has been made a baron, I see," said the daughter. "Yes, and his wife will be a baroness, I suppose," reflected the old lady. "How exquisitely beautiful it must be to be a baroness!" "What has he been a-doing of to be a baron?" asked the cultured young lady. "What has he been a-doing of?" repeated the mother. "Why, he is the sole survivor of the noble six hundred, who made the famous charge at Balaclava."

A PROPHET'S HONOR IN HIS OWN COUNTRY.

It would be unfair to print that American tale without capping it with its English counterparts:

A lady in the Isle of Wight asked a Freshwater boy who was driving her if he knew Mr. Tennyson. "He makes poets for the Queen," said the boy. "What do you mean?" asked the lady. "I don't know what they means," answered the boy, "but p'liceman often see him walking about a-making of 'em under the stars."

An even more characteristic anecdote is recorded in the diary of Bishop Wilberforce:

A stranger meeting a resident at Haslemere asked if Mr. Tennyson lived there. "Yes," he was told, "he does." "He is a great man, is he not?" "Well," rejoined the resident, "I don't well know what you call great, but he only keeps one man servant, and *he* don't sleep in the house."

There have been exceedingly few good original anecdotes told in the multitudinous columns of the press that have been devoted to his memory. One which, although rather interesting, is slight, tells how Tennyson proved to a farmer at Haslemere that he could make a restive pony stand perfectly still. The discovery was very simple, for Tennyson had found out that by placing his watch to the pony's ear the animal would never attempt to move.

HIS TABLE TALK.

Of Tennyson's table talk the following is one of the most curious and least characteristic specimens. It is taken from one of Miss Cameron's letters:

He was very violent with the girls on the subject of the rage for autographs. He said he believed every crime and every vice in the world were connected with the passion for autographs and anecdotes and records; that the desiring anecdotes and acquaintance with the lives of great men was treating them like pigs to be ripped open for the public; that he knew he himself should be ripped open like a pig; that he thanked God Almighty with his whole heart and soul that he knew nothing, and that he would know nothing of Shakespeare but his writings; and that he thanked God Almighty he knew nothing of Jane Austen; and that there were no letters preserved, either of Shakespeare's or of Jane Austen's; that they had not been ripped open like pigs. Then he said that the post for two days had brought him no letters, and that he thought there was a sort of syncope in the world as to him and his fame.

HOW HE TALKED.

Sir Edwin Arnold, describing his conversation, says:

His words are spoken with the "burr" of the fen coun-

try, and though none can mistake the provincialism of his dialect for lack of culture, it is there nevertheless, and strikes strangely upon the ear of any one who has been accustomed to the exquisite refinement of his poems. After a little while his visitor begins to realize two facts, both unforeseen. One is that the poet is the master of a singularly rich and graphic style in conversation, that he talks with a directness and force, the secret of which has long ago been lost in the polite world of Belgravia and Pall Mall, and that as a consequence what he says, even though it may not be new in itself, comes home with surprising freshness as though heard for the first time. The other is that there is a great gift of humor in this man who has so carefully kept the humorous in check in all his writings. He sees the comic side of any question at a glance, and calls attention to it with a burst of genuine laughter which does much to set his worshiper at his ease.

Of what does he talk? Well, of what would you have this greatest of living men of letters speak but of himself and of his work? If you have other business with him he will deal with it, nor stint the time that he gives to it. He can show a keen interest in his friends and their affairs, and will chat with you delightfully of some old companion who has joined the majority, all his talk being flavored by that sense of humor of which I have spoken, and expressed in language the Saxon simplicity of which gives it an altogether unexpected weight. But when, by and by, you venture to turn the conversation to himself, he will show no indisposition to speak freely. Infinitely above all suggestion of the mock modesty which is the surest evidence of vanity in man, he will make no secret of his own interest in his work, or of the pleasure he takes in learning how it strikes an outsider.

SOME OF HIS SAYINGS.

Almost the only expression used by him in conversation that stands out vividly is that related by the Bishop of Carlisle:

It was perceived that Tennyson had lagged behind. He had paused by the side of the brook, brought his eyes as near to the surface of the water as he could, and was examining with intense interest the subaqueous life which the little stream contained. After a time he rejoined his companions, and this was his utterance as he joined them: "What an imagination God has!"

From Fitzgerald's reminiscences of Tennyson I quote two samples:

I dare say I may have told you (he writes apropos of Raphael's "Sistine Madonna" at Dresden) what Tennyson said of the "Sistine Child," which he then knew only by an engraving. He first thought the expression of his face (as also the attitude) almost too solemn even for the Christ within. But some time after, when A. T. was married and had a son, he told me that Raphael was all right, that no man's face was so solemn as a child's—full of wonder. He said one morning that he watched his babe "worshipping the sunbeam on the bed post and the curtain."

Tennyson and I were stopping before a shop in Regent's street, where were two figures of Dante and Goethe. I said, "What is there in old Dante's face that is missing in Goethe's? And Tennyson (whose profile then had certainly a remarkable likeness to Dante's) said, "The Divine."

A DEVOTEE OF THE PIPE.

All who had the privilege of visiting him spoke of the childlike simplicity with which he talked of his likes and dislikes of the world and things in general. Most of them refer to the occasionally morose and somewhat nervously unhappy temper which seems to have been the natural result of smoking strong black tobacco nine hours a day. It is surprising that he had any nerves left at all, for seldom does there seem to have been a more devoted devotee of the pipe than Tennyson. One of the chroniclers tell us that he did not like Venice at all. We were prepared to find that Oscar Wilde was disappointed in the Atlantic, but it was a cruel blow to learn that Tennyson did not like Venice until the cause was explained. He did not like Venice, he said, because he found it impossible to get any English tobacco there.

CARLYLE'S PEN PICTURE.

Of Tennyson's personal appearance there have been endless descriptions, but none to surpass Carlyle's vivid portraiture:

Tennyson is one of the finest looking men in the world. A great shock of rough, dusty-dark hair; bright, laughing, hazel eyes; massive aquiline face, most massive yet most delicate; of sallow-brown complexion, almost Indian-looking; clothes cynically loose, free and easy; smokes infinite tobacco. His voice is musical metallic—fit for loud laughter and piercing wail, and all that may lie between speech and speculation free and plenteous; I do not meet in these late decades such company over a pipe! We shall see what he will grow to. He is often unwell; very chaotic—his way is through Chaos and the Bottomless and Pathless; not handy for making out many miles upon.

TENNYSON AND SPIRITISM.

There is one feature of Tennyson's poetry which I have specially reserved for the conclusion of this very imperfect and inadequate sketch. That is the fact that he was habitually conscious of communion with spirits or intelligence not of this world. Whether these intelligences were disembodied spirits of mortals who had put on immortality, or whether they were intelligences never incarnate on this earth, Tennyson knows more to-day than he knew when he was still with us. But no one can read "In Memoriam" without recognizing that the poet was conscious of spirit communion which, if it had been suspected in a less eminent man, would have led to his ostracism as a lunatic or a spiritualist. Tennyson was a very Broad Churchman, and if he had a pastor in the spiritual sense it was Mr. Maurice. That distinguished man held very strong and decided opinions as to the reality of conscious spirit communion between the living and the dead.

MR. MAURICE ON SPIRIT COMMUNION.

Writing to Mrs. Butler when she was sore stricken by the cruel death of her only daughter, Mr. Maurice said:

You cannot think that your child is really severed from you. The yearning you feel for her is the pledge and

assurance that it is not so. What would her bodily presence have been to you if that love had been away? You cannot think that she feels your love or responds to it less than heretofore merely because the outward signs of it are withdrawn. If you ask me whether I can say that it seems reasonable to me that this love on both sides should be immortal, and that hereafter it should have all possible freedom for its expression and enjoyment, I can answer honestly, "No *other* opinion seems to me reasonable." I cannot present the opposite notion to myself so that it shall not clash with the belief that Jesus has died and risen again; that He has overcome separation and binds all in one, and that all shall be gathered up in Him. The renewal or rather the preservation of every human tie, freed from the mortal accidents which have not strengthened but enfeebled it, appears to me implied in Christ's victory over death and the grave.

There is in that passage the germ of much that is to be found poetically presented in "In Memoriam."

HIS INSPIRATION.

But Tennyson went much further than this. It is understood that he believed that he wrote many of the best and truest things he ever published under the direct influence of higher intelligences, of whose presence he was distinctly conscious. He felt them near him, and his mind was impressed by their ideas. He was, to use the technical term, a clairaudient and inspirational medium. He was not clairvoyant. These mystic influences came to him in the night season. They were heard in the voices of the wind. They made him write what he sometimes imperfectly understood when in a state of mind that was perhaps not always distinguishable from trance.

HIS WAKING TRANCE PROSE VERSION.

There was naturally much reticence on his part on this subject, but both in his poetry and in his correspondence he distinctly refers to this trance experience. Writing March 7, 1874, to a gentleman who had communicated to him some strange experiences which he had under anæsthetics, Tennyson said:

I have never had any revelations through anæsthetics; but a kind of waking trance (this for lack of a better name) I have frequently had, quite up from boyhood, when I have been all alone. This has often come upon me through repeating my own name to myself silently till, all at once, as it were, out of the intensity of the consciousness of individuality, the individuality itself seemed to dissolve and fade away into boundless being; and this not a confused state, but the clearest of the clearest, the surest of the surest, utterly beyond words, where death was an almost laughable impossibility, the loss of personality (if so it were) seeming no extinction, but the only true life.

As if conscious of the incredible significance of the statement thus compacted, he adds: "I am ashamed of my feeble description. Have I not said the state is utterly beyond words?"

VERSIFIED.

This letter is a prose explanation by the poet of one of the most remarkable although somewhat myste-

rious passages in the ninety-fifth section of "In Memoriam."

So word by word, and line by line,
The dead man touched me from the past,
And all at once it seemed at last
The living soul was flashed on mine.

And mine in this was wound and whirl'd
About empyreal heights of thought,
And came on that which is and caught
The deep pulsations of the world.

Æolian music measuring out
The steps of Time—the shocks of Chance—
The blows of Death. At length my trance
Was cancel'd, stricken thro' with doubt.

Vague words! but ah! how hard to frame
In matter-moulded forms of speech,
Or ev'n for intellect to reach
Thro' memory that which I became.

HIS VISIONS.

In the "Idylls of the King" there is another allusion to the same trance experiences—an allusion which the *Spectator* assures us was more or less a transcript of Tennyson's own experience. The King excuses himself from following the Holy Grail on the ground that he has his work to do, which must not be interfered with. But his work being done—

Let Visions of the night, or of the day
Come as they will; and many a time they come
Until this earth he walks on seems not earth,
This light that strikes his eyeball is not light,
This air that smites his forehead is not air,
But vision—yea his very hand and foot—
In moments when he feels he cannot die,
And knows himself no vision to himself,
Nor the high God a vision, nor that One
Who rose again; ye have seen what ye have seen.

THE POET OF IMMORTALITY.

The poet is a seer, and in all his seeing he ever saw the promise of life and immortality which enabled him to answer in the negative his own indignant question:

And he, shall he,
Man, her last work, who seem'd so fair,
Such splendid purpose in his eyes,
Who roll'd the psalm to wintry skies,
Who built him lanes of fruitless prayer,
Who loved, who suffer'd countless ills,
Who battled for the true, the just,
Be blown about the desert dust
Or seal'd within the iron hills?

Let me end these jottings with three of the many verses sent me by my friendly contributors. They are, to say the least, not below the standard of many elegiac tributes from better-known pens:

Thou wast no singer of an idle hour,
Charming our ears whilst we in dalliance lay,
But with clear notes of deep, prophetic power
Didst point us for forward to the coming day.

Oh, poet-prophet! In the roll of those
 Who as God's heralds spake, sent from the throne,
 Spirits anointed ere on earth they rose
 To utter one great truth with varying tone.

Poet of immortality thou art !
 Thy life, thy death, thy golden words all tell
 That, though the mournful sound half break the heart,
 Heaven's joy bells peal before earth's funeral knell.

LORD TENNYSON AS A RELIGIOUS TEACHER.

BY ARCHDEACON F. W. FARRAR.

THE poets are great moral and spiritual teachers. "They are," said Shelley, "the hierophants of an unapprehended revelation." "Poetry," said Lord Bacon, "was ever thought to have some participation with divineness." Poets have many a time been the strong champions of truth, of freedom, of righteousness, when the pulpits and so-called Church organs have been silent or adverse, or have only uttered the words of moral see-saw or torpid conventionality. The best poets have ever taught, as none other can, "The great in conduct and the pure in thought."

Milton said that he dared to be known to think our sage and serious poet, Edmund Spenser, a better teacher than Scotus or Aquinas, and I dare to say that I have learnt more of high and holy teaching from Dante and Shakespeare, Milton, Wordsworth, Browning and Tennyson than I have learnt from many of the professed divines. The poets have given me more consolation in sorrow, more passion for righteousness, more faith in the divine goodness, more courage to strive after the attainment of the divine ideal, more insight into the sacred charities which save us from despairing over the littleness of men than I have derived from other men.

The great source of all wisdom and holiness is the Light of the Holy Spirit sent to us from the Father by our Lord and Saviour, Jesus Christ. Next to the immediate teachings of the Spirit of Christ come the teachings of the great Hebrew prophets and the Apostles and Evangelists of the New Testament.

Next to these of all human teachers I should place the illumined souls of the few supreme Christian poets of the world, who, sweeping aside the sham and rubbish of Pharisaism, lead us to realities and to the Living Christ.

A poet is not a poet at all unless he soars above meanness and commonplace into serener and more eternal atmosphere. Dante tells us how his divine comedy is, in fact, a history of the human soul as it sinks into the hell of vileness or climbs, by prayer and penitence, into the celestial rose, and Spenser, that his aim was "to fash on a gentleman or noble person in virtuous and gentle discipline," and Milton, "that the life of a true poet ought itself to be a true poem; that is, a composition and pattern of the best and honor-

ablest things." Of Cowper it was truly sung by Mrs. Browning :

"He shall be strong to sanctify the poet's high vocation,
 And bow the meekest Christian down in meeker adoration."

Wordsworth, of whom Tennyson sung that he had received "this laurel greener from the brow of him who uttered nothing base," knew that his poems would "co-operate with the benign tendencies of human nature wherever found, and that they would in their degree be efficacious in making men wiser and better. Browning described the poet as living amid the half-contemptuous ignorance of sordid money getters, in noble and simple poverty, but

"Doing the King's work all the dim day long."

as "seeing the Infinite in things;" as "impelled to embody the thing he perceives, not so much with reference to the many below, as to the One above him;" as the author of

"Mighty works, which tell some spirit there
 Hath sat, regardless of neglect and scorn,
 Till, its long task completed, it hath risen
 And left us, never to return; and all
 Rush in to peer and praise, when all is vain."

The great poet who has just been taken from us had no less lofty a conception than these had of the grandeur of his mission. He condemned the fantastic beauty of poets who "wrote without a conscience or an aim." He felt, as Wordsworth felt, that even in early youth there had been laid upon his brow the hands of invisible consecration, which had poured the silent influences of the morning upon his soul.

How deeply thankful we should be that, in the narrow limits of our own generation, we should have been blessed with the gift of two such poets as Robert Browning and Alfred Tennyson! To have known, to have loved, to have understood them, is a liberal education. The first gave us not a book, but a literature; a training in the finest principles of divinity, of metaphysics, of music and of art. The second, who has been called so soon after his shining brother, has touched, in language of unrivaled melody, on almost every loveliness of nature, on almost every emotion of man.

Carlyle, who praised so few, yet said years ago of

Tennyson, that he was "a true human soul, carrying a bit of chaos about him, which he is manufacturing into cosmos." It was a true testimony. From the chaos of man's turbid passions, dim hopes and surging doubts Tennyson tried to educe and brighten for us the elements of that beauty, nobleness and order into which we have a sure and certain hope that his own great and loyal soul has passed.

(1.) I think we may thank God, first, for the prosperity, the peacefulness, the quiet inherent dignity, the austere and noble retirement of the life itself. We thank God for the man as well as for the poet. The lives of many poets have been troubled and miserable. Some, like Dante and Milton, have been drawn into the stormy gulf of politics, "its dreariness, its bitterness, its foam, its storms, its everlasting noise and commotion;" and consequently Dante, for long years of heartache, knew how salt is the bread of an exile, and how weary it is to tread a patron's stairs; and Milton,

"Fallen on evil days and evil tongues,
In darkness and with dangers compass'd round
And solitude,"

died, in the execrable era of the Stuart Restoration, like his own Samson, among the Philistines,

"Eyeless, at Gaza, in a mill with slaves."

The lot of Shakespeare threw him among the low surroundings of the Tudor stage, and forced him to write:

"Thence comes it that my name receives a brand,
And almost thence my nature is subdued
To what it works in, like the dyer's hand;"

and it was not given him wholly to escape the fermenting taint of the passions of the Renaissance. Spenser died in destitution, and Phineas Fletcher wrote of him:

"Yet all his hopes were crossed, all suits denied,
Discouraged, scorned, his writings vilified;
Poorly poor man he lived, poorly poor man he died."

Ethereal as were the aspirations of Shelley, as of "a luminous angel, beating in the void his ineffectual wings," his passionate and wayward temperament flung him into conditions full of shame and squalor. Byron not only paraded about Europe "the pageant of his bleeding heart," but also the turbulence of his spleen, his pride, his unruly passions. We think with deep sorrow of the weaknesses and the remorse of Burns and Hartley Coleridge; but Wordsworth, and Browning, and Tennyson lived in the quiet dignity of their richly gifted manhood, in beautiful places, afar from the vulgar glare of publicity, not mingling with the world's vain strifes, content to be poets as the one object of high lives.

(2.) Next, we should thank God that his poetry has been absolutely, stainlessly and most nobly pure. Many a great poet, like Chaucer or like Burns, has had to wail because some of his words would live after him, to stain the stream of life; or, like Moore, has had to weep for years,

"Of counsel mocked, of talents made,
Haply, for high and pure designs,
But oft, like Israel's incense, laid
Upon unhallowed worldly shrines."

Many, like Byron, have polluted with strange fires the vestal altar of genius.

Let fools and sensualists say what they will, it is the glory of Browning and Tennyson that in an age which so much prurient literature has defiled with the empoisoned honey of French realism, they did not grope in the foul abysses of human degradation, but ever lifted their eyes to the true grandeur of humanity crowned with spiritual fire.

The poets have made life brighter, happier, more hopeful to us by teaching us to see, and what to see, and how to see; by opening our minds to the true, our eyes to the beautiful; by opening our ears to the voices of the mountain and the sea; by quickening our sensibility to the sweet influences of the fields and of the ocean. A thousand things which we should have never noticed, in which we should never have read God's autographs of beauty and of blessing, Tennyson has now taught us to observe with delight and love—the black ashbuds in spring: the rosy plumelets which tuft the larch; the pure green streaks on the white leaves of the snowdrop; the gummy chestnut buds which glisten in the April blue; the seawind singing shrill, chill with flakes of foam; the liquid azure bloom of the sea; the Pleiades glittering like fire-flies in a silver braid; the little pink, five-beaded baby soles; the light feet which treading on the daisies makes the meadows rosy; the dragonfly's sapphire flash of living light; the river sloping to plunge in cataract, shattering on black blocks its breath of thunder;

"Myriads of rivulets hurrying through the land,
The moan of doves in immemorial elms,
And murmur of innumerable bees."

(3.) Once more we thank God for the deeper and kindlier insight which the poet has given us into the human heart. Like Robert Browning, Lord Tennyson, though he had his moods of sorrow and perplexity, was an optimist who had achieved his right to optimism by the manful fighting down of despair and doubt. For this reason, in all his many volumes, he has scarcely written one rancorous or malignant verse. If once or twice he was kindled into sudden flame of anger by base criticism, he at once withdrew the verses in which it was expressed, and made amendment for them. Hating, as he says, the spites and the follies, he sang after receiving a letter from an envious rival:

"O little bard, is your lot so hard,
If men neglect your pages?
I think not much of yours or of mine
I hear the roll of the ages."

"Greater than I? is that your cry
And men will live to see it;
Well, if it be so, so it is, you know,
And if it be so, so be it!"

And again:

“ Ah God ! the petty fools of rhyme
Who shriek and sweat in pigmy wars
Before the stony face of Time,
And looked at by the silent stars,
When one small touch of Charity
Would raise them nearer godlike state
Than if the crowded orb should cry,
As those who cried Diana Great.”

And to the question of the bitter husband: “ How like you this old satire ? ” he makes the gentle wife reply:

“ ‘ Nay, ’ she said,
‘ I loathe it ; he had never kindly heart,
Nor ever cared to better his own kind,
Who first wrote satire with no pity in it. ’ ”

Hence, though he gives us (as one has said) almost every human mood—“ the maddened wail of disappointment, the wild cry of revenge, the heart sob of the mother, the garrulous retrospect of the old grandmother, the fair girl’s delight in the May morning, the gloomy doubter, the rollicking carouser, the tender hospital nurse, the passionate loneliness of the forsaken wife, the spectre of lust, haunting a heart worn out and gray with dying fires ; ” the stainless chastity of Arthur, the hollow lightness of Gawain, the marred chivalry of Sir Lancelot, the vitriolic malignity of Vivien—he suffers the dignity of life as well as its pathos to shine through them all.

Whether his hero be taken from mythology, like Tithonus or Tiresias, or from classic paganism, like Ulysses or Lucretius, or from mediæval legend, like Godiva or the Arturian idyls, or from modern life, like the gardener’s daughter or the poor fisherman Enoch Arden or the poor city clerk in “ Sea Dreams, ” or from modern heroism, like Sir Richard Grenville or the siege of Lucknow or the charge of the Light Brigade—in all and every mood, even when his thoughts, like “ the clouds that cradle round the setting sun, ”

“ Take a soberer coloring from the eye
That hath kept watch o’er man’s mortality. ”

he is always still “ the poet, soaring in the high reason of his fancies with his garland and singing robes about him, ” and he never forgets that “ God made man in His own image, after His’ likeness ; in the image of God created He him, male and female created He them. ”

(4.) Lastly, we thank God with all our hearts that,

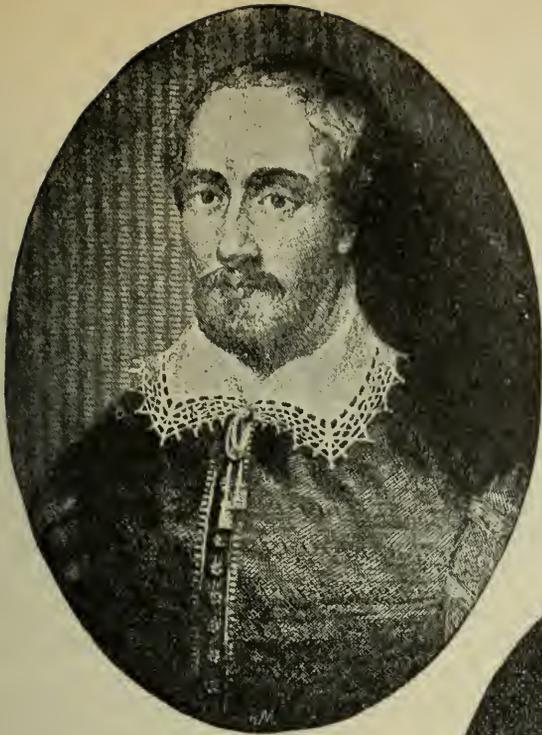

as his poems were all meant “ to add ardor to virtue and confidence to truth, ” so they all promote the cause of religion pure and undefiled. There is nothing sectarian, nothing ecclesiastical about the religion of the greatest poets. Dante is the Voice of Catholicism, yet there is no mere popery in the mighty words of St. Peter in the “ Paradiso, ” which make the heavenly spirits flush and bicker into wrathful flame as he denounces the corrupt, usurping popes and churchmen of his day. Milton was the “ God-gifted, organ voice of England, ” but in no line of his do we find the sugary, namby-pamby, lackadaisical religiosity of many modern hymns. Tennyson and Browning were in the highest sense religiously and devoutly disposed, but they did not value at a straw the pettiness of a formalism which is always most deeply stirred by the infinitely little. To the subordinate minutiae of organization and ritual these great poets were disdainfully indifferent ; but to the great eternal verities of religion—to allegiance to God, and to His Christ, and to His spirit, to the everlasting sanctions of the moral law—they were supremely loyal. They belonged not to the self-styled church whose fences bristle with razors and anathemas, but to the true Church, over whose portals are inscribed Christ’s two great commandments of love to God and love to man. Tennyson, like Browning, clung absolutely fast to the larger hope.

“ That good should fall
At last, far off, at last, to all,
And every winter change to spring ;
That nothing walks with aimless feet,
That not one life could be destroyed,
Or cast as rubbish in the void
When God has made the pile complete. ”

Yes, all the greatest poets and thinkers are of that religion which has nothing to do with the little passions of the sects and the parties ; of that religion wherein the meek, the pious, the devout are all one. He ends his great “ In Memoriam ” with the words :

“ That God, who ever lives and moves,
One God, one law, one element,
And one far-off divine event
To which the whole creation moves. ”

To this religion their poems were utterly faithful, and this—which is the true Catholic faith of the Apostles’ Creed and the Lord’s Prayer and the Sermon on the Mount—this faith they kept whole and undefiled.

LEADING ARTICLES OF THE MONTH.

THE LATE POET LAUREATE.

AS might be expected, all the more journalistic of the English reviews have their due quota of articles on Tennyson. The *New Review* gives the first place to a brightly written but somewhat paradoxical and affected paper by Mr. Edmund Gosse, which is followed by another by Mr. Paul, of the *Daily News*. Mr. Gosse thinks that the genuine lovers of verse are extremely few, and that the splendid position of poetry at the summit of the civil ornaments of the Empire is built on ice, and it is kept there by bluff on the part of a small influential class. The great gathering in the Abbey strikes Mr. Gosse as a sinister exhibition. Democracy doth protest too much. The poet is held to be better than is poetry, and the artist than the art: "Tennyson had grown to be by far the most mysterious, august and singular figure in English society. He represented poetry, and the world now expects its poets to be as picturesque, as aged and as individual as he was, or else it will pay poetry no attention. I fear, to be brief, that the personal, as distinguished from the purely literary, distinction of Tennyson may strike, for the time being, a serious blow at the vitality of poetry in this country."

The excitement about Tennyson's death, he thinks, has been far too universal. All fine literature is for the few, and it is a vain illusion to imagine that the multitude has been suddenly converted to a taste for fine literature. Speaking of the reputation of Mr. Walter Pater, Herbert Spencer and George Meredith, Mr. Gosse says: "These reputations are like beautiful churches, into which people turn to cross themselves with holy water, bow to the altar, and then hurry out again to spend the rest of the morning in some snug tavern. Among these churches of living fame the noblest, the most exquisite was that sublime cathedral of song which we called Tennyson; and there, it is true, drawn by fashion and by a choral service of extreme beauty, the public had formed the habit of congregating. But at length, after a final ceremony of incomparable dignity, this minster has been closed. Where will the people who attended there go now? The other churches stand around, honored and empty."

What Mr. Gosse has long dreaded is the irruption of a sort of communism in literature. But he believes that living poets present a variety and amplitude of talent, a fullness of tone, an accomplishment in art such as few other generations in England, and still fewer elsewhere, have been in a position to exult in. The moral of the whole matter is that Mr. Gosse and his friends must be allowed to fence the tables by excluding from the communicants at the table of Apollo all those who have no other mark of his service but their pass-books.

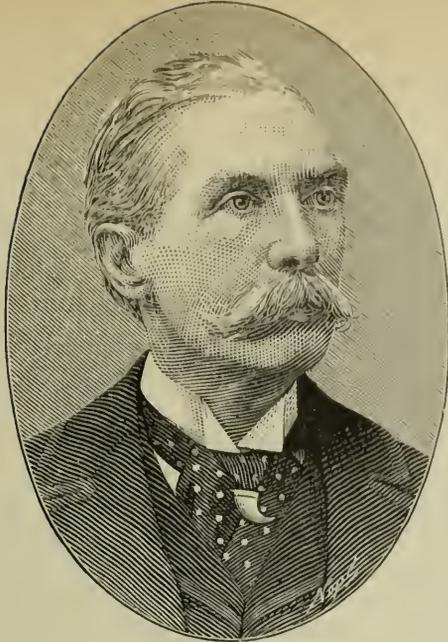

Traits of Character and Personality.

In the *Magazin für Literatur* of October 15, Mr. G. Duncan writes of the dead poet. "Only a few knew him," says Mr. Duncan. Liberal though he was and with all his understanding for the great questions of his age, Tennyson was never a man for the masses, for popularity or for great publicity. In that he differed from his friend Browning. He did not seek recognition, and when it came to him, even more abundantly than to any other English poet of the day, it was only owing to circumstances over which he had no control.

The predominant trait of the man Tennyson was indeed his love of solitude, and after solitude he loved flowers, and then tobacco. Criticism was what he hated most. Critics and intruders were to him the most terrible things in the world, and he found little to choose between them.

Mr. Duncan goes on to quote from the letter of a lady: "Tennyson, she says, was terrible to young ladies suffering from the autograph mania. He once said he believed all the crimes and vices of this world were connected with the passion for autographs, anecdotes and *personalia*; that the search for and collection of anecdotes and all sorts of personal details of the lives of great men was like the public cutting up of a pig, and that he knew people would like to rip him open publicly. He thanked Almighty God with his whole heart and soul that he knew nothing and wished to know nothing about Shakespeare but his writings, and he was thankful he knew nothing of Jane Austen; neither had left any letters behind them. Then he said that for two days he had had no letters, and it looked as if he and his name were forgotten by the world."

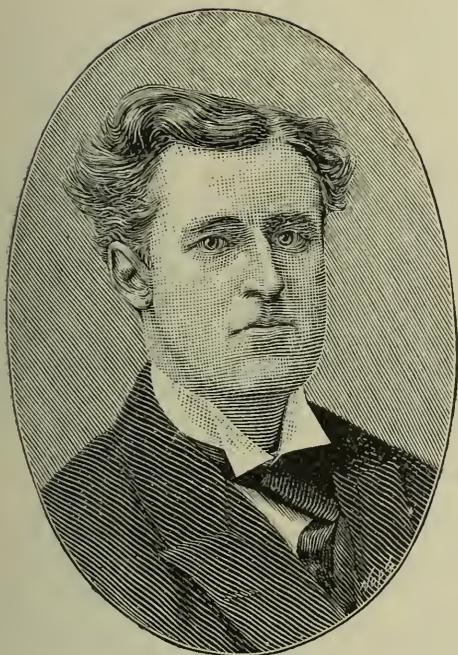

Mr. Duncan also quotes from a letter in his possession from Carlyle to Emerson, dated August 5, 1844, in which Carlyle describes in his original style the personality of the poet in his prime, but before he had become a celebrity: "Alfred is one of the few English, or not English, human figures I have seen who for me are and remain beautiful—a true human soul, or a trustworthy approach to what one's own soul may address as 'Brother!' Yet I fear he will not come; he often cuts me when on his short visits to town, cuts everybody in fact, for he is lonely and sad, as are many men who live in an element of gloom. . . . He is, I believe, not yet forty, but certainly not much under that age. He is one of the handsomest men on this earth: an enormous head of straight, dark-brown hair; merry, laughing nut-brown eyes; a massive, yet most delicate, eagle-like profile; yellow-brown, almost Indian complexion; and loose clothes, despising all fashion; and he smokes an enormous quantity of tobacco. His voice has a metallic ring, and is adapted to loud laughter, to

convulsive lamentation, and to everything that lies between; he speaks and thinks freely and much; I have not had such company over a pipe for this last decade. We shall see what becomes of him. He is often ailing; very chaotic—his way is through chaos and the groundless and pathless; he is not made to advance rapidly."

His Simplicity.

Mr. Herbert Paul, in his paper, says of Tennyson: "He was a voracious consumer of books, especially of novels, with a wonderful memory for the classics and for the great English poets. As an illustration of his delightful simplicity, it may be recorded that when the conversation turned upon the House of Lords, he suddenly exclaimed: 'I was just going to say what I would do if I were a lord, and then I remembered I was one.' He was eager for new facts, delighting in converse with travelers and men of science. Metaphysical speculation fascinated him, and like Dr. Johnson he looked in strange places for evidence of a future life. Even psychical research interested him, and it was, perhaps, with the same side of his mind that he cared for riddles. He enjoyed his port and his tobacco, as everybody knows."

Dollars and Cents.

The *Bookworm* devotes its November number to Tennyson, calling it the "Tennyson Memoriam Number." It contains a portrait of Tennyson's mother, and a fac-simile of a page in the "Idylls of the King." In the number there is a memorial poem by George Augustus Simcox, and four letters from four distinguished but anonymous poets, discussing the question of the new laureate. They all advocate the appointment of Swinburne. The most interesting paper is a short one upon "Tennyson and His Publishers," from which we learn that Tennyson's contract with Strahan & Co. after he left Moxon & Son was that for five years Tennyson should receive \$25,000 per annum for the right to publish the poems that had already appeared, and that Strahan should in addition have the right to issue any new works at ten per cent. commission. During these five years Tennyson published two new books, one "The Holy Grail," and the other "The Window; or, the Song of the Wrens." Of "The Holy Grail," which was published at \$1.75, they sold 40,000 copies almost immediately after its appearance. For this small volume Tennyson received not less than \$30,000.

American Tributes.

As to the American magazines, the *Catholic World* has really done the best, in Tennysonianity. In comes out for November with an excellent critical article by Maurice F. Egan, preceded by the frontispiece portrait of the poet. Mr. Egan's estimate is pretty nearly contained in his concluding lines: "No poet ever wrote fewer weak verses, though he wrote a few; no English poet was at once so much of an artist and so correct. He had the best of Keats and the best of Coleridge; the best of Shelley, and the simplicity without the simpleness of Wordsworth. He

was as clear as Shakespeare and sometimes as strong as Milton; he was the true Pre-Raphaelite, and with him legitimate Pre-Raphaelitism stopped. To Newman and to him we owe the preservation of the purest traditions of English expression. If a poet, like a creed, may be judged by its exaltation of true womanhood, Tennyson may pass unchallenged into that rank in which stands first the poet of the most Immaculate Virgin and of Beatrice."

The December *Cosmopolitan* makes a feature of a charmingly illustrated article on Tennyson by George Stewart, a Canadian *littérateur* of considerable repute. Mr. Stewart takes up much of his text in a description of his visit to the poet at Haslemere. It is notable that among the many American men of letters whom Mr. Stewart discussed with his famous host, Walt Whitman was particularly praised as an "original genius" by the poet whose work "Old Walt" had stigmatized as frills and furbelows. "It was by the sheer force of his genius, and nothing else," says Mr. Stewart, "that Tennyson achieved his place in literature." His "supremest effort may safely be set down as the 'Idylls of the King,' beginning with the 'Coming of Arthur' and closing with the 'Passing of Arthur, touchingly and sympathetically dedicated to the memory of Albert the Good—one of the finest tributes in our language."

The *Canadian Illustrated* also manages to get its Tennyson feature in the November number. It is by John Reade, who calls attention to the poet's "spirit of generous sympathy with progress and freedom and religious toleration, and the caution with which at the same time he deprecates the danger of

'That which knows not ruling that which knows
To its own harm.'

"Take him for all in all, Tennyson is the safest of all poets for the household, and although he eschews the pulpit and the desk of his 'musty Christopher,' few poets have taught a loftier morality. No poet of our century has been oftener quoted in sermons by theologians of all schools."

An Italian Tribute.

Signor Enrico Nencioni contributes to the *Nuova Antologia* for October 16 an interesting and sympathetic paper on the dead Laureate. Speaking of the last hours at Aldworth, he says: "I know of no more beautiful, touching and solemn poet's death since that of Walter Scott." In estimating the poet's position in English literature, he points out how he came to the front at the time of the anti-Byronic reaction of 1830 (when, however, Byron worship was still prevalent on the continent of Europe), and considers the shaping influences of his poetry to be Keats and Wordsworth, not Byron, in spite of his strong admiration of the latter. After noticing, with copious quotations, "Locksley Hall," "In Memoriam," "Maud" and the "Idylls of the King" (Morte Arthur and Guinevere" being specially singled out), he dwells on the poet's "simple and patriarchal" life at Farringford.

"A notable event in Tennyson's quiet and monoto-

nous life was the visits paid to him by General Garibaldi in 1864. The great captain and the great poet were made to understand one another. Both were sincere and primitive sons of nature—two living realities, two leaders, two heroes, not phantoms, not gilt images of false greatness. Garibaldi planted a tree with his own hands in Tennyson's garden—a touching record and poetic symbol of their common love for nature."

As an illustration of Tennyson's love for children, Signor Nencioni has translated nearly the whole of "In the Children's Hospital," a poem for which, as well as for "Rizpah," he has the greatest admiration. We quote from his concluding paragraph: "'Crossing the Bar' seems to me, next to 'Demeter,' the most significant and admirable poem of the volume in which it occurs. The poet contemplates and depicts the soul quietly yielding itself to the great ocean of eternity, trusting its celestial Pilot. There is in this poem a wide and deep serenity as of the blue waters of mid-ocean."

Tributes in Verse.

One of the best verse tributes to Lord Tennyson is that by the Rev. E. H. Dewart, D.D., editor of a prominent religious weekly paper of Canada, in the *Toronto Daily Globe*:

The brightest star in Britain's sky of fame
Has passed beyond the range of mortal sight;
But on the hearts of men a deathless name
Is graved in characters of golden light.

The Bard whose peerless songs of life and love
Have charmed the ills of hearts by care opprest,
Has "crossed the bar"—is havened safe above,
Where life is love and service joyous rest.

We render thanks, not tears or mournful lays,
For him who, with a manly, stainless life,
Filled up the circle of his lengthened days,
And nerved his fellows in their fateful strife.

Beauty and truth unseen by other eyes
His touch unveiled and clothed in living fire;
Nature's unuttered music found a voice
In the sweet tones of his melodious lyre.

He loved Old England: of her glory proud,
Her weal and woe were of his life a part;
Oft as his bugle blast rang clear and loud,
It stirred the blood in every patriot heart.

His ashes rest with England's kings of song,
But his freed spirit chants a loftier strain,
And his great thoughts and scorn of selfish wrong—
His truer self—shall evermore remain.

Though the wide ocean spreads its stormy sway
Between us and the land he held so dear,
These maple leaves in grateful love I lay
With English roses on his honored bier.

Mr. James Knowles, in the *Nineteenth Century*, musters six poets to sing praises to the memory of Lord Tennyson. The first place is given to Professor Huxley; and then, in all humility, the editor brings up the rear, piously rejoicing that he will feel more at home in heaven now Tennyson has gone there be-

fore him. The best stanza in Professor Huxley's poem, "Westminster Abbey," is this:

Lay him gently down among
The men of State, the men of song;
The men that would not suffer wrong;
The thought-worn chieftains of the mind,
Head servants of the human kind.

Mr. Myers sings "The Height and the Deep." He leads up to the following assurance of the resurrection:

But thou, true heart, for aye shall keep
Thy loyal faith, thine ancient flame.
Be stilled an hour, and stir from sleep
Reborn, risen, and yet the same.

The Hon. Roden Noel declares "the last of all our mighty bards is low," and mourns "the master singer and the friend."

Mr. F. T. Palgrave's "In Pace" contains many quotable lines.

Now, where the imperial speech from land to land
Broadens, the death shock thrills,

is one notable passage. "Our happier Virgil," "The sovran singer from her England ta'en," "High teacher of mankind," are phrases that will be remembered.

Mr. Aubrey de Vere contributes three sonnets. The second begins thus:

'Tis well! Not always nations are ingrate!
He gave his country of his best; and she
Gave to her bard, in glorious rivalry,
Her whole great heart.

In the *Nineteenth Century* Mr. Theodore Watts has a sonnet "In Westminster Abbey," but the gem of the collection is Mr. Knowles' "Apotheosis: an Allegory." Mr. Knowles was unfortunately shut out from the Abbey, but he describes what took place there unseen by other eyes than his. "The deathless gods descended to this fane from high Olympus—Diana, Demeter Persephone and Pallas." The last four lines are so inimitable that they must be given intact:

Great Bard! dear Friend! thy welcome by the gods
Is our sole comfort for the loss of thee;
They will be happier in their golden clime,
And Heaven, when we reach it, more like Home.

In the *Library Review* Mr. J. J. Britton has a sonnet, entitled "Ave atque Vale," the last three lines of which are as follows:

Friend and confessor dear—about thy page
Glad memories hover, as the incense clings
About a shrine when home the priest has gone.

In the *Month* F. M. Capes invokes prayers for the poet's soul. The following are the first and last verses:

Gone!—with a nation's love:
Pray for the poet! Pray!
Gone!—to his Judge above:
Where is his soul to-day!

Great was the singer's place,
Blinding the world's display:
Hope, for his Pilot's grace;
Pray for the poet! Pray!

M. RÉNAN.

Some Critical Estimates of His Work.

MR. R. H. HUTTON writes so seldom in reviews and magazines other than the *Spectator* that we are very glad to be able to notice his article on "Rénan and Christianity" in the *National Review*. The subject is one on which he has peculiar qualifications for writing, and although he is, as might be expected, somewhat unsympathetic in his treatment of the Voltaire *sucre*, he has set forth what he finds wanting in M. Rénan's philosophy with much skill. Mr. Hutton says that Rénan sought to substitute a romance of the infinite of the most nebulous kind compatible with the most objectionable morality for the Christian faith; that the purpose of his "Life of Jesus" was not to uphold, but to cast down to the ground the figure of Christ, whom he delineated as an enthusiast who voluntarily participated in fraud in order to reinforce the popular faith in his mission: "His 'divine idea' was a very fluid and indeterminate power in the world. It was not in any proper sense an *authority* at all. It was a tendency, an aspiration, a shifting sentiment. It was a sort of spiritual chivalry, often as much mixed up with earthly passion as the chivalry of the age of the Troubadours. To M. Rénan, Jesus Christ was one of those spiritual Troubadours."

M. Rénan was delighted with his own picture of Our Lord, a miniature which Mr. Hutton says was: "A Frenchified countenance with manifold signs of weakness as well as tenderness in it, with a genius for self-deception written in the wavering expression of the eyes, and inability to resist the pressure of others betraying itself in all the lines about the mouth."

Mr. Hutton's conclusion of the whole matter is stated as follows: "The astonishing thing to me is that French culture should find in M. Rénan's criticisms anything that could by any stretch of imagination be called even a remnant or vestige of the Christian faith. It tried to reduce Christianity from a revelation to an inspiration, from that which controls and binds and rescues man to the vain sigh of an overburdened heart. In the place of a Saviour it places one who himself needed to be saved from illusions, from insincerities, from his own weakness. I cannot help thinking that even a Christianity against which the nations rage and the people imagine a vain thing is more likely to conquer those who denounce it than a Christianity which has become the subject of sentimental patronage and scientific condescension."

His Personality and Characteristics.

In the *Contemporary Review*, M. Gabriel Monod has a very eulogistic article upon Rénan. Of his personality and his characteristics M. Monod writes:

"To those who have known him, he leaves an ineffaceable memory. There was nothing in his personal appearance to suggest that irresistible charm. Short of stature, with an enormous head set deep between wide shoulders, afflicted all too early with an excessive stoutness which made his gait heavy, and was the cause—or the symptom—of his mortal malady, he seemed, to those who saw him only in

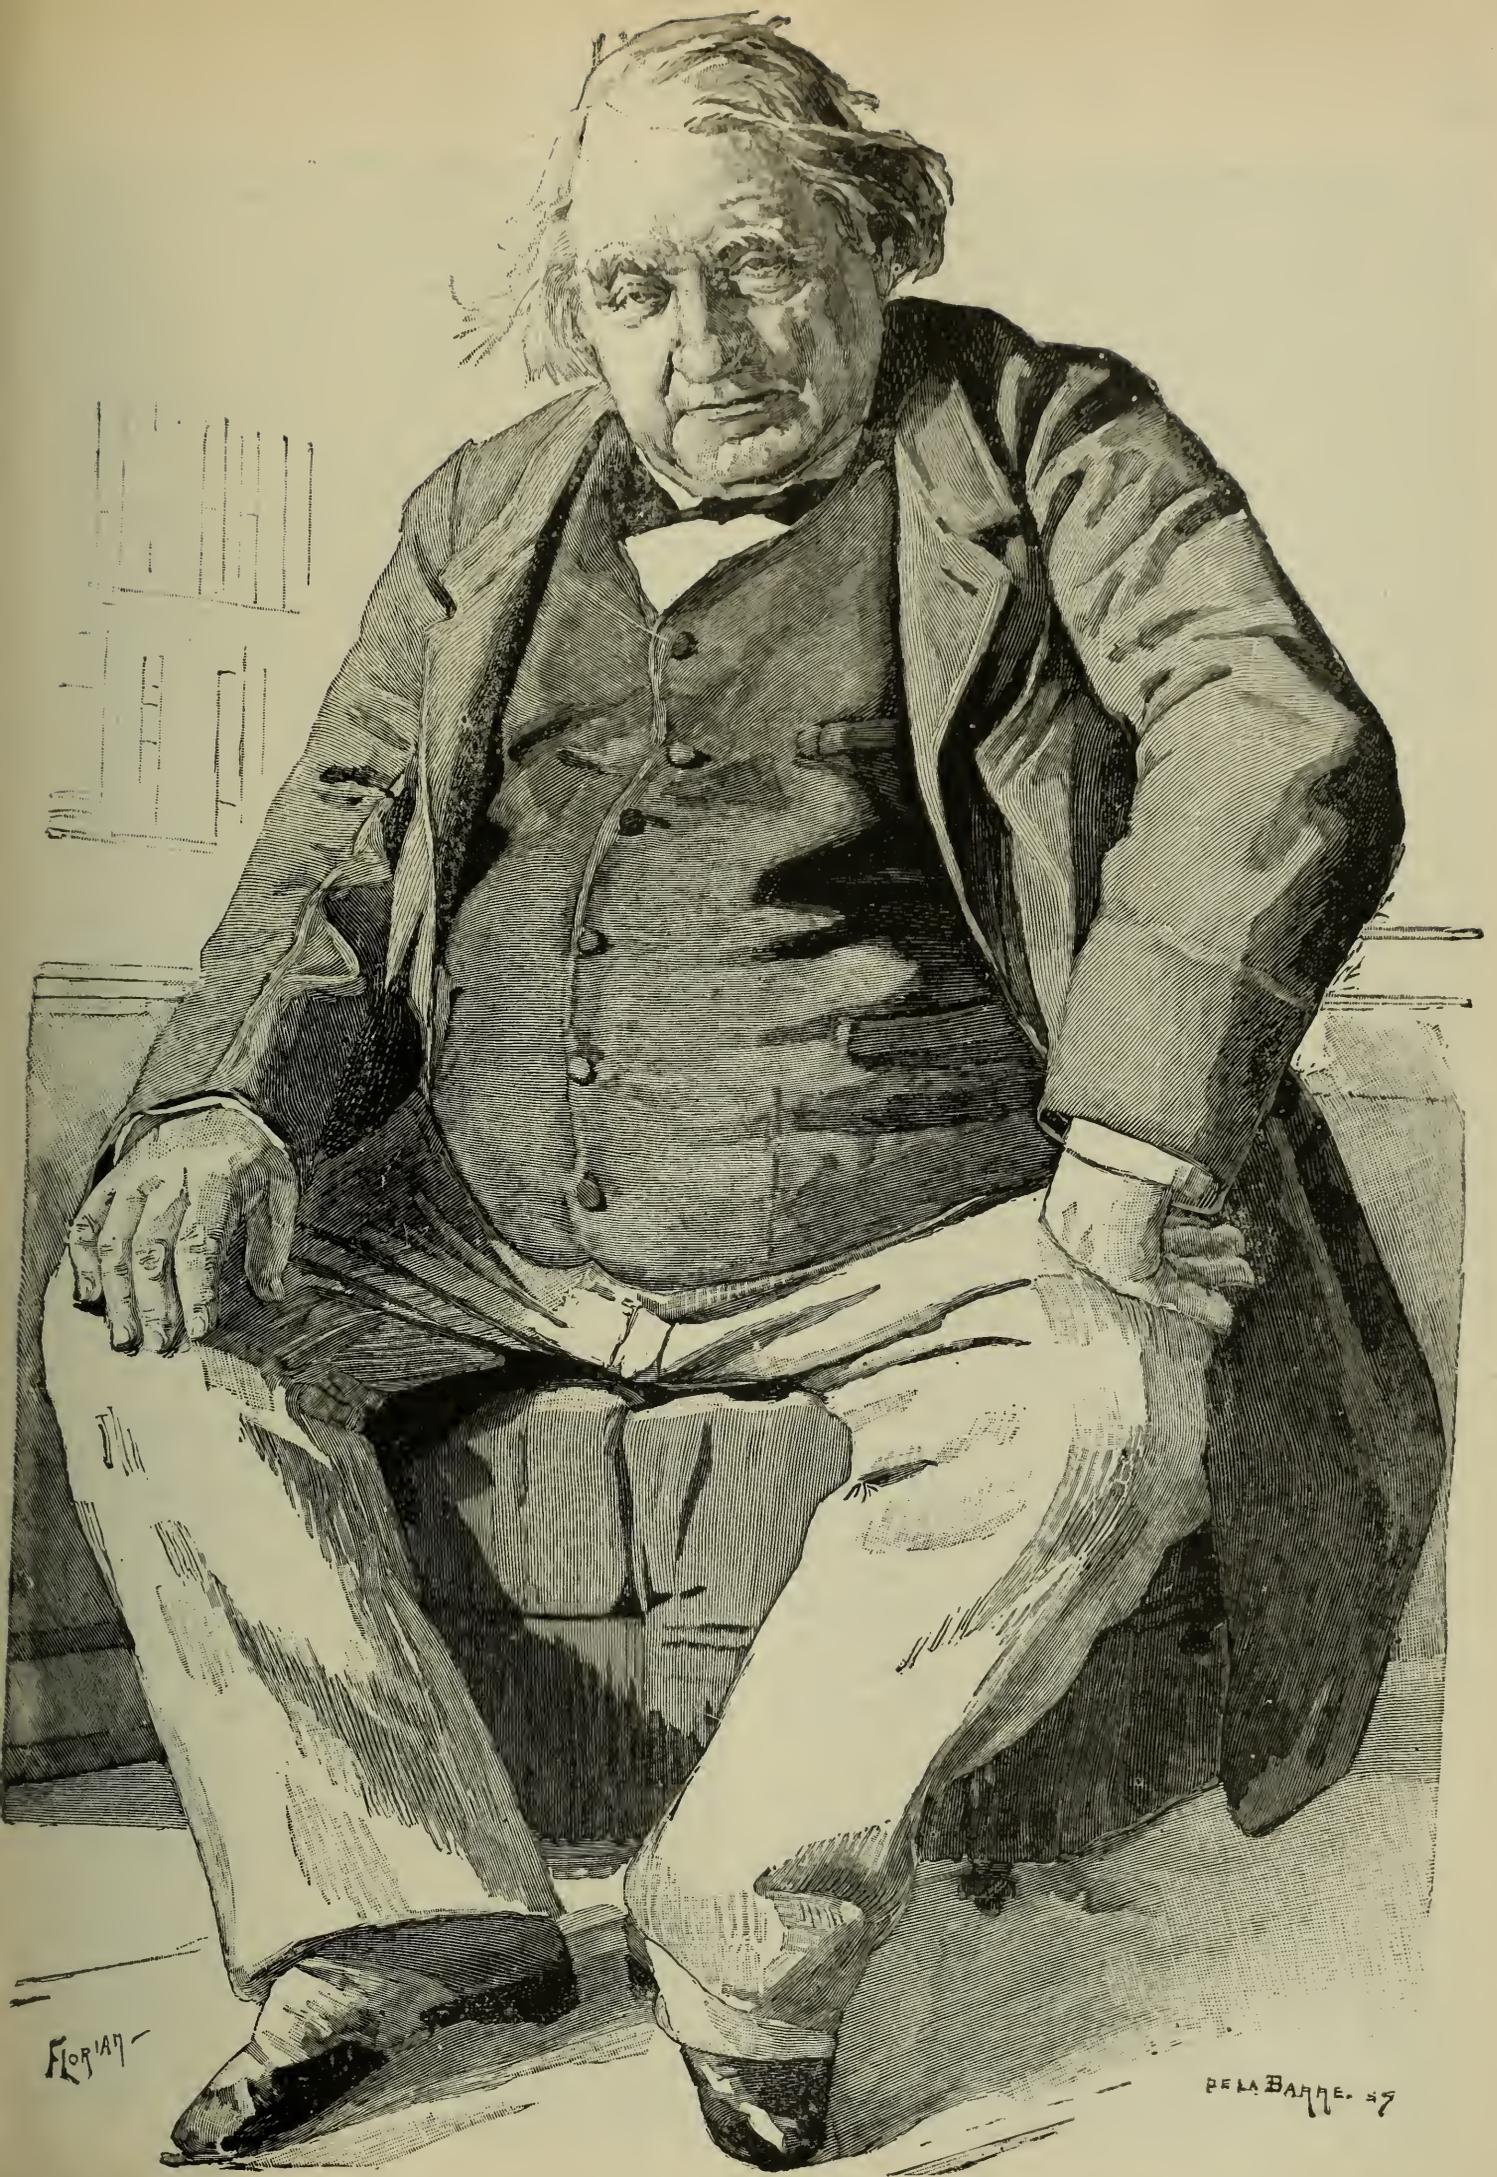

passing, an ugly man. But you had to speak with him but a moment, and all that was forgotten. You noticed at once the broad and powerful forehead, the eyes sparkling with life and wit, and yet with such a caressing sweetness, and, above all, the smile which opened to you all the goodness of his heart. His manner, which had retained something of the paternal affability of the priest, the benedictory gesture of his plump and dimpled hands, and the approving motion of the head, were indications of an urbanity which never deceived, and in which one felt the nobility of his nature and his race. But the indescribable thing was the charm of his speech. Always simple, often even careless, but nevertheless incisive and original, it seemed at once to penetrate and to embrace. His portentous memory kept him supplied with new facts to contribute on every subject, while his splendid imagination and the originality and distinctness of ideas enriched his often paradoxical conversation with flights of poetry, with illustrations and comparisons the most unexpected, and now and then with prophetic glimpses into the future. He was an incomparable story teller. The Breton legends passing through his lips acquired an exquisite flavor. Never was there a talker, save only Michelet, whose talk was such a combination of wit and poetry. One merit he had which no one dreams of disputing. He was beyond comparison the greatest writer of his time, and he is one of the greatest French writers of all time.

"And now, if we are to ask what is the special characteristic by which Rénan must take rank among the great writers and great thinkers of the world, we shall find that his supremacy resides in his peculiar gift of seeing Nature and History in their infinite variety. He has been compared to Voltaire, because Voltaire, like him, was the mouthpiece of a century; but Voltaire lacked his learning, his real originality of thought, his charm of expression. He has been compared to Goethe; but Goethe was above all things a creative artist: and, besides, Goethe's intellectual horizon, vast as it was, could not have the extension of Rénan's. Never has there been a more comprehensive, a more universal mind. China, India, classic antiquity, the Middle Ages, modern times, with the infinite perspective of the future—all the religions, all the philosophies, all civilization—he knew and understood it all. He recreated the universe in his own brain; he thought it out again, so to speak, and that in a variety of versions. The spectacle that he thus inwardly conceived and contemplated it was given him to communicate to others by a sort of enchantment of persuasive speech. This power of creative contemplation was the main source of the continual gladness which illumined his life, and of the serenity with which he accepted the approach of death."

A Writer and Artist of the First Rank.

M. Antoine Albalat contributes to the *Nouvelle Revue* for October 15 a paper on M. Rénan, from which we make the following extracts:

"Whatever opinions one may have of him from a religious or philosophic point of view, the author of

THE LATE M. RÉNAN.

the "Origines des Christianisme" is certainly one of the most original thinkers and greatest writers of our century. I am far from sharing his ideas; I am even convinced that the mysterious problems he wished to solve are still open questions; he has put them in a new light, but not furnished an answer. His dilettanteism and his skepticism to a certain extent unfitted him for seeking this answer. What we may be certain of is that Rénan was an artist and a writer of the first rank. These words explain the bent of his mind, the kind of knowledge he possessed, the mysticism of his incredulity, his strength, his limits, the reason of his ideas and of his work. Scholar, believer, historian and philosopher, Ernest Rénan remained an artist all through, and that at a level where all qualities of mind combine and cease to be distinguishable.

"It has been said of him that he was a renegade—a very unjust reproach to level at a man who never had any faith at all. The author of "Vie de Jésus" was no more of a believer inside the seminary than out of it. Faith is an intellectual adhesion—a reasoned submission of the mind. This mind of faith Rénan never knew, never suspected its existence—either at St. Sulpice or in his professorial chair at the Collège de France. His faith was a faith of the heart—of the sensibility—of the imagination—an artist's faith. And this artistic and sensitive faith which he had when young he never lost. It is this which has rendered him so dangerous to those who, like himself, believed themselves to have an intellectual faith, when they had nothing but imaginative conviction. It would be a curious experiment to distinguish all the Christianity left in Rénan's works. It would be possible to extract from them an orthodox book of devotion, which would satisfy the most exacting of Catholics.

From a literary point of view, M. Albalat thinks Rénan never did anything better than the first volume of the "History of Israel." History is an art, like painting:

"There are historians who are colorists, thinkers, draughtsmen; there are half-tints and twilight shadows in history, as in landscape, and it is in these that Rénan excels. . . . It is by his novel artistic qualities that he has made history accessible and attractive to a wider public. I am speaking of him merely as a historian, apart from the dogmatic side of his work, and I am convinced that everything of real value in it would survive the elimination of the entire exegetical part."

Rénan and Germany.

Herr Gustav Karpeles, writing in the *Magazin für Literatur* of October 22, draws attention to M. Rénan's attitude to Germany: "M. Rénan," he says, "was a disciple of Auguste Comte, and one of the most radical, but he did not follow his master blindly through thick and thin. He was one of the few Frenchmen who have made themselves acquainted with German philosophy. Hegel and Feuerbach exercised great influence over him, as he himself has admitted. Only in the cult of humanity and the ne-

gation of all metaphysics was he an unconditional follower of Comte. For the rest, he had his own system as a philosopher of religion. He has expressed his reverence for Spinoza in glowing terms. A compound of Spinoza and Voltaire, that is M. Rénan's philosophy. His was a most religious nature; he longed for religion, he thirsted for truth. Even his political views had a religious coloring. He was also a Frenchman with a burning love for his country, which sometimes brought him into conflict even with his cosmopolitan ideal of humanity."

Down to the year 1870 M. Rénan was reckoned the most important representative of German intellectual life in France; but the change in his views may be said to date from that year, for when David Strauss sent his book on Voltaire to M. Rénan, and there ensued a correspondence in which Strauss opened a discussion of the recent war between the two countries, M. Rénan answered, under date September 13, 1870: "Your sublime and philosophical words, coming as they do at a time when all the powers of hell seem to be let loose, are consoling, especially to me, who owe to Germany what I most highly prize, my philosophy, I can almost say, my religion. . . . The great misfortune is that France does not understand Germany, and Germany does not understand France; and this misunderstanding will only get worse now. One fights fanaticism on the one side by the same fanaticism on the other; after the war we shall find ourselves face to face with dispositions narrowed by passion, and ruined for all breadth and freedom of range of vision."

And only two years later, says Herr Karpeles, M. Rénan was himself one of those natures narrowed by passion to whom he alluded in his letter. His patriotism was in fact greater than his love of truth, and it led him astray, so that eventually his irony was directed both against Germany and against the Republic.

View of Three Writers in the "Fortnightly."

There are three articles upon Rénan in the *Fortnightly Review*. Mrs. Crawford tells of his early life, Mr. Vandam gossips pleasantly about him, while M. Hugues Le Roux gives some specimens of his table-talk. Mrs. Crawford's chatty article is pleasant reading, like everything else that she writes. She says very little of Rénan's later life: "The sister died at Aschin. This was a trial hard to bear. But he found intimate companionship, help and sympathy in the wife from whose mouth nobody ever heard, I believe, a harsh word about any human being. To her unceasing care we owe it that Rénan survived, in spite of physical weakness, to a good old age. His life, too, was blamelessly pure, and vowed to acts of charity and kindness. May we not say of him, now that he is dead, what was said of him when a young man—'Rénan thinks like a man, feels like a woman, and acts like a child?' To me his Christian virtues seem as remarkable as his wisdom; and I am glad to think that the constant happiness of his life was chiefly due to the love and tenderness shown him by his sister and by his wife."

Mr. Vandam lays great stress upon the extreme ugliness of M. Rénan: "Short, squat, with a gait which reminded one unconsciously of that of the hippopotamus, or, to put it mildly, of a bear, and a face the angles of which almost disappeared beneath layers of flesh, while the nose looked, not like an integral part of the whole, but like an excrescence on it, a contemptuously lavish afterthought of its Creator, as some one said."

Mr. Vandam quotes the saying about M. Rénan, that it was the misfortune of him to preserve the chastity of the priest and not the faith. The table-talk is poor, the only saying that is worth noting being the following: "One day in Brittany an old woman who had lost her only son, cried to him through her tears:

"O Monsieur Rénan, if God is good, why does He allow such things to happen?"

"With a sigh Rénan extended his hands, palms outward, in deprecation.

"He would like to prevent them, but He is not able to yet."

"For Rénan believed that God Himself is in process of development—that He is in truth but the growing consciousness of the mission which humanity is in course of fulfilling. It seemed to him that the growth of man's faculties and the progress of science aided the evolution of the Divine Ideal."

A Catholic's Estimate of Rénan.

Mr. J. G. Colclough, writing in the *Month* upon M. Rénan, approaches the subject from a Catholic point of view. To most Christians, says the writer, M. Rénan is nothing but a blasphemer; but for his part, while indorsing much that may be said against his poisonous teaching, he cannot help believing that there was a sort of sincerity at the bottom of his insincerity. He rejoices to think that Rénan's influence was by no means so great as some people might believe. He was too unreliable and too unscientific, too often a mocker at everything and everybody, beginning with himself, to exercise a lasting impression even on the minds of his contemporaries. Mr. Colclough then tells the story of Rénan's life from his boyhood, which can be read with advantage side by side with Mrs. Crawford's account in the *Fortnightly*. Then follows the process of disintegration which afterward culminated in disbelief. Before being a heretic in theology he was a heretic in philosophy, and it is rather odd to discover that the real cause of his aberration from the true faith was the evil influence of the Scotch School of philosophy. His professors told him that Scotland gives peace of mind, and leads to Christianity; but this was not Rénan's experience. Turning his back on Scottish he betook himself to German philosophy, and from this he went on to the *exegis* of the Germans, his philosophy and the Celt within him having prepared him for their teaching. Finding that he was losing his hold on faith he opened his mind to his director, who told him that doubts against the faith were temptations, and that he should not allow his mind to rest upon them, but

to pray. Even Mr. Colclough remarks that it is not surprising that this was not enough for young Rénan. No sop was thrown to his faculty for criticism, but he was bidden to bow his head in prayer. There would have been a far better chance of his making an act of submission if some competent adviser had listened to his difficulties and given a reasonable answer to them. Prayer will help him who has a good will, but it is of no avail to one whose will is astray. He went back to Brittany, and there in the midst of the scenes of his youth the last battle was fought and lost. For two years he became a Protestant, and longed to found a rational and critical religion. He then returned to St. Sulpice to take leave of his professors and colleagues, and broke from the Church. Vanity and ambition now joined hands with pride and self-sufficiency, and as there were now no religious principles to control them, they did their worst.

Colonel Ingersoll's Tribute.

In the *North American Review* Col. Robert G. Ingersoll gives, as follows, his estimate of the late French writer: "Undoubtedly Rénan gave an honest transcript of his mind, the road his thought had followed, the reasons in their order that had occurred to him, the criticisms born of thought and the qualifications, softening phrases, children of old sentiments and of emotions that had not entirely passed away. He started, one might say, from the altar, and, during a considerable part of the journey, carried the incense with him. The further he got away the greater was his clearness of vision and the more thoroughly he was convinced that Christ was merely a man, an idealist. But, remembering the altar, he excused exaggeration in the 'inspired' book, not because it was from heaven, not because it was in harmony with our ideas of veracity, but because the writers of the Gospel were imbued with the Oriental spirit of exaggeration—a spirit perfectly understood by the people who first read the Gospels, because the readers knew the habits of the writers.

"It had been contended for many years that no one could pass judgment on the veracity of the Scriptures who did not understand Hebrew. This position was perfectly absurd. No man needs to be a student of Hebrew to know that the shadow on the dial did not go back several degrees to convince a petty king that a boil was not to be fatal. Rénan, however, filled the requirement. He was an excellent Hebrew scholar. This was a fortunate circumstance, because it answered a very old objection.

"No matter whether Rénan came to a correct conclusion or not, his work did a vast deal of good. He convinced many that implicit reliance could not be placed upon the Gospels—that the Gospels themselves are of unequal worth; that they are deformed by ignorance and falsehood, or, at least, by mistake; that if they wished to save the reputation of Christ they must not rely wholly on the Gospels, or on what is found in the New Testament, but they must go further and examine all legends touching Him. Not only so, but they must throw away the miraculous, the impossible and the absurd."

MADAME MODJESKA'S OPINION OF THE AMERICAN STAGE.

IN the *Forum* Madame Modjeska gives in very plain language her opinion of the American stage. The chief fault she has to find is that there is in America no dramatic art for dramatic art's sake; no place where the principal talent of the country may, without regard to the future, be devoted exclusively to artistic pursuits. Pastime on the one hand and

MADAME MODJESKA.

speculation on the other are the objects for which the theatre in America exists.

A PLEA FOR ENDOWED THEATRES.

As a means of elevating the stage, Madame Modjeska urges the establishment of endowed theatres. She points out that the endowed theatres of Europe, like the Théâtre Français in Paris and the Burg Theatre in Vienna, have exerted an exceedingly salutary influence, not only on the improvement of dramatic art, but equally on the development of literature, the refinement of public taste and manners, and in a great measure on the preservation of the purity and elegance of the language.

"An endowed theatre is conducted on the basis of a stock company selected from the foremost talent of the country. The actor remains there for the greatest part of his life; at the end of his services, when old age or infirmity disables him for further work, he is

granted a pension. The manager is not a speculator, but a responsible employee, chosen on account of fitness for his duties. In many of those institutions the plays are accepted or refused by a committee composed of the most prominent members of the company, sometimes in conjunction with a few select literary advisers. 'Runs' of plays night after night are practically unknown. A successful piece is played in the permanent repertory, to be repeated several times weekly or monthly. The rule is a continual change of bill. The companies are numerous; therefore there is no necessity for an actor to play every night. The regulations of the endowment usually prescribe the production of standard works at certain intervals. There is, for instance, no week in the Théâtre Français without a performance of Racine, Corneille, or Molière, no week in the Burg Theatre without Schiller, Goethe, Lessing or Shakespeare. Besides the endowed theatres, there exist in the larger cities, mainly in the capitals, many private ones that have to support themselves, and are therefore conducted more on a business basis. But such is the prestige of the endowed theatres that the others are compelled to follow the example set by them, and thus avoid the complete anarchy which is the result of our American system.

THE THEATRE'S INFLUENCE FOR GOOD.

"There can be no doubt that dramatic art is in its influence very important, and is worthy of a better fate than falls to it in this country. It speaks more keenly to the human heart and mind than any of the other arts; its means are the most direct of all, appealing as they do to both our ears and eyes. Partaking thus of the advantages of music and the plastic arts, it penetrates the deepest recesses of the human soul, whose innermost chords it puts into vibration; however short may be its action, the impressions which it leaves are often very durable. By rendering some of the highest works of genius, this art makes more accessible to us the great inspiration of the master minds of humanity, and stirs in us the love of the ideal slumbering in every soul, and which, when awakened, raises man above the level of the brute. I have heard two of the most eminent divines of this age declare that next to the pulpit the stage can have the greatest influence for good. And yet there is no art which is so much abused. Controlled by sordid influences, it descends slowly but surely to a degraded position. Its influence certainly grows, but not for good. Instead of being itself a guide in matters of refinement and art, the stage of to-day is guided merely by the question of attractiveness, and knows no higher aim than the receipts of the box office; instead of trying to improve the public taste, it panders to the tastes of the majority. And who can deny that the lower the taste is the more general it is? I do not speak here of the great public, but of that portion of it which is most eager in its search for excitement. Is there anything more noticeable than the increasing vulgarity, falsely called realism, of the plays that nowadays achieve the greatest success?"

THE CHURCH AND THE THEATRE.

THE following extract from an interview with the Rev. R. F. Horton, published in the *Young Man*, may be read with interest and profit :

"I notice that you say in *The Home Messenger*, 'the French and Germans usually have amusing things for amusement,' and that 'we in England eschew them.' In what way is it so ?

"In France the difference is very noticeable. The whole life there seems to be so much more animated. In the daily routine of social duties there is more *esprit*. Our social life is harder than our labor. If you go into the public gardens in France you find the men with their wives on their arms, and their children, and there is a real sense of festivity in their life which I entirely miss in England. If you compare a French holiday with one on Hampstead Heath, the contrast is appalling. Here it is buffoonery and extravagance, generally ending in over-drinking. In France they amuse themselves, and are bright without going to these excesses. Of course, the French temperament is different from our own. There is something in the English character which is earnest for good or evil. I fancy the prevalent tone of amusement is due to the national character. In Germany, also, music and the theatre do so minister to the recreation of the citizens that they really promote their welfare.

"The condition of our theatres is so bad, their hours so late, they are so surrounded by the means of debauchery of different kinds, that the purity which Christians would bring to the theatre would get very much besmirched before it began to tell. I should never recommend Christian men to work on those lines; it has been attempted and failed. Men have come down to the present level without being able to raise the tone of the theatre.

"Do you think it possible to have an ideal theatre ?

"I think an ideal theatre would be a very genuine amusement and recreation. As I have already said, the theatre in Germany is a real recreation or amusement. It is open at reasonable hours, is surrounded by no unpleasant associations, and is really the kind of refreshment that pure art gives to the mind. It is not only legitimate, but healthful in every way. Then as I regard the study of a great writer as a true recreation, I also regard the presentation of such a writer's productions upon the stage as a legitimate recreation.

"What part do you think the Church should take in promoting such a theatre ?

"If by the Church you mean the organization for instruction in the spiritual life, I am not sure it has anything to do with the subject. But if you mean Christian men in the broadest sense, I think nothing could be more wholesome than that they should set themselves to provide an ideal theatre for London. I should think that, if only there were money behind it sufficient to carry it out, it would be very valuable. I do not believe it would pay—it would necessarily be run at a loss."

PHYSICS IN THE BIBLE.

THE November *Century* gives place to a full paper by Professor Charles W. Shields, of Princeton, in answer to the title question, "Does the Bible Contain Biblical Errors?" Professor Shields denies any essential importance to the fact that the Bible contains historiographical and textual errors, of which he gives many striking examples, for many well-known works of far more recent date show statements and statistics distorted beyond reason by typographical lapses. Nor is he willing to admit the skeptical conjectures of modern criticism as to the authorship of the sacred writings. Such conjectures are not sustained by the literary precedents and analogies. "The title of a famous author like Homer or Shakespeare represents the judgment of his nearest contemporaries and successors, and grows with the lapse of time until it becomes too certain to be easily set aside. Such claims for Moses and Isaiah were not even questioned during more than twenty centuries. It would seem rather late now to overthrow all this external testimony by mere internal criticism of their accepted writings. Any traces of compilation in the sacred books need conflict as little with their received authorship as the like use of documents and fragments in acknowledged works of genius. It is as easy to conceive that Moses could compose or compile the Elohist and Jehovistic records of 'Genesis' with their different names of God, as that Shakspeare composed or compiled both 'King Lear' and 'Richard III.,' though the former, quite consistently, has only the pagan names of Jupiter, while the latter is full of the Christian names of our Lord."

To the direct accusation that the minds of the Biblical writers were dominated by the scientific errors of their age, and that their utterances were, hence, of necessity naught, as far as physical truth is concerned, Professor Shields replies : "There is a show of truth in such statements. Certainly it would be very absurd to treat the sacred writers as mere amanuenses without thought or individuality ; and quite impossible to take them out of their proper setting in the unscientific ages when they lived, and from among the uncultured peoples whom they taught. It is not even necessary to suppose their own personal knowledge greater than that of their contemporaries, outside of the divine communications. But neither is it necessary to suppose them acquainted with the entire purport of those communications. They may have spoken better than they knew. They may not have been fully conscious of their messages as applicable in other eras and stages of culture. Even in Pagan literature the great poets, sages and philosophers, though writing solely for their own time, have unconsciously written for all after time. So Homer sang in ancient Greece, and the ages have been listening every since. So Euclid, 2000 years ago, sketched lines and angles which to-day save the sailor from shipwreck and regulate the commerce of nations."

THE CATHOLIC CHURCH VERSUS THE PUBLIC SCHOOLS.

ANTICIPATING the meeting of the Roman Catholic Archbishops in New York during November, the *North American Review* publishes a paper by the Rt. Rev. Mgr. Bernard O'Reilly on "How to Solve the School Question." Mgr. O'Reilly believes that the controversy between the Catholic Church and the public school system might be easily and satisfactorily settled if the representatives of the various religious denominations in the country would assemble in a congress and discuss honestly, fearlessly and without prejudice the questions which arise among them; and suggests that the Columbian Exposition will afford a most favorable opportunity for such a meeting.

"It is high time," says Mgr. O'Reilly, "that the great body of the American people should clearly understand on what principles the Catholic Church advocates a religious education for our youth. Hitherto our bishops and archbishops have abstained, as a body, from taking sides publicly in the school controversy. In the last National Council of Baltimore, held in November, 1884, admirable decrees and instructions were promulgated, and afterward sanctioned by the Holy See, urging everywhere the erection and equipment of parish schools, dependent on their respective churches in each diocese. But, most generously though the Catholic congregations all over the land have responded to the call of their bishops, it is none the less true, as all fair-minded Protestants have more than once acknowledged, that it is an intolerable hardship and a grievous injustice to tax Catholic parents for the erection and maintenance of our common schools. The primary school, according to orthodox Catholic principle and practice, carries on for the child the work of instruction and education begun in the home; the whole atmosphere of the school must, therefore, be Christian, Catholic.

"Religion openly, thoroughly taught, freely and heartily practiced, is the basis of all true education, whether given within the bosom of the family or given in the school." This is a central principle from which the Catholic Church never can, never will depart. The school only carries on the work begun at the family hearth. The teachers derive their authority from the parents, whose place they hold and whose work they do. It is the duty of the State to encourage and assist their labor of education, respecting and protecting while so doing the divinely given and indefeasible rights of the parent."

Holding the view that religious instruction should not be separated in the schools from the imparting of secular knowledge, Mgr. O'Reilly is led to this conclusion: "Since, in a community divided into numerous religious denominations, denominational schools are a practical necessity, let the State bestow with impartial justice the moneys of the school fund derived from taxation on the schools which do their work thoroughly, and let every school receive such further encouragement as the State shall judge fit in

proportion to the way the work of instruction is performed."

This is the principle, he informs us, on which the honors and pecuniary rewards of the Board of Intermediate Education in Ireland are distributed. "No question is asked by this board about the religious teaching given in the school or about the denomination to which teacher and pupil belong. The work done by both, as evidenced in the result of the written and oral examinations submitted to the board, is what is passed upon by both examiners and commissioners. It is the excellence and thoroughness of the work done in the school which is proclaimed to the world every year and rewarded by the prizes bestowed on the pupils and the money remuneration awarded to the teacher. These awards are strictly in proportion to the results achieved; that is, the public moneys and the public honors are given to those who do the best work, and in proportion to its degree of excellence."

Mgr. O'Reilly concludes that sooner or later we shall have to adopt this principle in the matter of public education; that we shall be compelled by the very force of circumstances to allow both Protestants and Catholics to have schools of their own, and to give them for the erection and maintenance of these a just share of the school fund for which they have been taxed.

A Protestant's Views on the Subject.

Writing in the *Presbyterian Quarterly* on the same subject, Rev. Robert T. Sample, D.D., maintains that any plan for distributing State funds between public and parochial schools, such as is proposed by Catholics, would, if adopted, place more power in their hands, and eventually overthrow the public-school system. Having succeeded in securing aid from the State for the support of parochial schools, he declares that the Catholics would multiply their schools throughout the country and would greatly augment their church. Dr. Sample sums up his papers as follows:

"1. The public-school system should be maintained as a necessity of our national life.

"2. Christianity being the religion of this country, our public schools should be maintained in harmony with it. Therefore,

"3. Public education should include, with physical and intellectual culture, that system of morals which is grounded on the authority and Word of God.

"4. While it is the privilege of any religious denomination to establish parochial schools, the genius of our institutions forbids the support by the State of sectarian schools.

"5. In the present status of the public-school question, our choice is apparently confined to the following things: 1. A purely secular, atheistic education for the majority of our youth, who receive no moral training from any other source. 2. The establishment of parochial schools by the numerous religious denominations and the emasculation or overthrow of our present school system. 3. Unsectarian moral

training as an element of education, securing thereby, in connection with the religious instruction given in Christian homes and by the Evangelical Church, the preservation of our country from the secularism, materialism and general corruption, which are a reproach to any people, and would ultimately issue in despotism, anarchy or national extinction."

NORMAL TRAINING IN WOMEN'S COLLEGES.

CONSIDERING the demand for trained teachers, which every year is far greater than our normal schools can supply, and the further fact that the profession of teacher is coming by general consent to be more and more relinquished to women, the suggestion advanced by General Francis S. Walker in the *Educational Review*, that the courses in our women's colleges should be enlarged so as to include normal instruction, would seem to be a highly practical one. General Walker believes that the introduction into women's colleges of the studies and exercises proper to fit the student for teaching would improve and exalt, rather than impair, the educational work of these institutions. He outlines as follows the normal course which he thinks should be adopted by women's colleges:

"I would not have the colleges for women teach the mere arts of the pedagogue, which may, without offense, be called the knacks of the trade, or undertake to anticipate the necessary work of experience. But I would have the history and the philosophy of education made prime subjects of study. I would have the psychology of teaching taught. I would have the mind, in its powers of perception, observation, reflection and expression, studied as objectively and as scientifically as specimens in natural history are studied in the classroom and the laboratory. The order of development of the human faculties, the child's way of observing, the child's way of thinking when untaught and untrained, the ways in which the child may be interested and drawn out of himself—these should be the matter of eager, interested investigation. Surely, they are as well worthy to be the subjects of study as are the processes of vegetable or animal growth, as the order in which the leaves are set upon the stem or as the mechanism of the human body.

"The art of the teacher, the art of simple exposition and familiar illustration, the art of putting questions and stimulating thought—this art should be both studied and practiced, practiced and studied year by year. I would have the pupils frequently called to assume, for a brief space, the responsibilities of instruction. I would have small classes formed to investigate problems in education, starting questions, starting propositions, adducing facts, discussing principles, consulting authorities, answering objections, under the guidance of teachers who should have their own minds directed upon the end of training their scholars—not merely to communicate thought, but to create it."

THE PUBLIC SCHOOLS OF BUFFALO AND CINCINNATI.

IN the *Forum*, Dr. J. M. Rice continues his criticism of the public school system of the United States, begun in the October number, dealing this month with the schools of Buffalo and Cincinnati. He finds the causes of evils in the Buffalo schools to be identical with those which were last month shown to exist in Baltimore, namely: politics, untrained teachers and scanty supervision. "To rid the schools of politics nothing but a complete reorganization of the whole school system will suffice, for the reason that at Buffalo they enter into every branch of the system. And to remedy the evils arising from incompetent teachers, I know of but one thing that can be relied upon, namely: thorough supervision; that is, supervision the object of which is to raise the standard of the teachers by instructing them in the theory of education and in practical teaching. For this purpose a supervisory staff of five or six educational experts, who would direct all their time and energies toward giving the teachers their much-needed training, would be essential. The present superintendent, as I learned during a conversation with him, favors efficient supervision; and if he receives the support of the citizens in carrying out his plans in this direction, there is no doubt that before many years elapse the schools of Buffalo will have scored a material advance."

The schools of Cincinnati are not so involved in politics as are those of Baltimore and Buffalo. The flagrant evils in the schools of that city Dr. Rice finds to be due to the incompetency of the teachers, the chief remedy for which lies, he suggests, in giving them a professional education. "The most striking peculiarity of the Cincinnati schools exists, in my opinion, in the fact that so much time is devoted to concert recitations—a form of instruction than which there is none so pre-eminently fitted to deaden the soul and to convert human beings into automatons. These recitations are heard, as a rule, as soon as a District (Primary) School building is entered, and in tones so loud that the uninitiated might readily mistake them for signals of distress."

GREATER BRITAIN for October 15 is entirely devoted to setting forth the editor's idea of what he calls "A Pan-Britannic and Anglo-Saxon Olympiad." The Athletic Union of the United States has written to suggest to Mr. Astley Cooper that it would be desirable to embody all his theories into a grand tournament for the championship of the world, which is to take place at Chicago. Mr. Cooper accepts the suggestion, and he welcomes the tournament if it is conducted under rules which receive the approbation of English leading amateur associations. Professor Hudson Beare, an Australian, suggests that one hundred Britannic scholarships should be founded of \$1,000 a year, each tenable for four years for colonists, and two years traveling scholarships for Englishmen.

ONE THOUSAND MILES BY TELEPHONE.

PROMINENT among the great achievements of the nineteenth century must be recorded the successful operation of the long distance telephone line between New York and Chicago. On October 18 it was practically demonstrated that conversation could be carried on between these two points, nearly one thousand miles apart, with as much ease as over local lines.

A full account of the opening of this line, together with portraits of Professor Graham Bell and the principal officers of the telephone company and a map showing the route, appear in the *Electrical Review* for October 29. The line seems to have worked satisfactorily from the very start. To "clear the wires," a cornet solo was played in the transmitter at the New York end. "Each note," says the writer in the *Electrical Review*, "was distinctly heard by some forty persons at the Chicago end, who were supplied with receivers connected in circuit at a central table and distributed around the room. The induction was considerably less than on local lines in New York City; no external noise was heard, and the tone of the cornet sounded clear and mellow." Communications sent over the line from each end were distinctly heard at the other; even answers were received to questions whispered into the transmitter.

ROUTE AND METHOD OF OPERATION.

The new line is about twice the length of any other in use. It extends from New York City through Easton, Harrisburg, Pittsburgh and Newcastle, Pa.; Youngstown, Cuyahoga Falls and Maumee, Ohio, and thence through South Bend, Ind., to Chicago, with branch lines to Cleveland, Akron and Toledo. The line is practically an extension of the Long Distance Telephone Company's system, which operates between the principal cities on the Atlantic sea-board from Portland, Maine, to Washington, D. C.

"At the present moment, as a result of this wonderful achievement, we are now enabled to converse over a circuit 950 miles in length. The New York-Chicago line is constructed in a most substantial manner. The wire used is hard-drawn copper, No. 8 B. W. G., weighing 435 pounds to the mile, and the entire circuit contains about 826,500 pounds of copper. Heretofore No. 12 N. B. S. wire has been employed

in the construction of the Company's circuits, but were this wire used on this line the weight of the total amount would be reduced to 200,000 pounds.

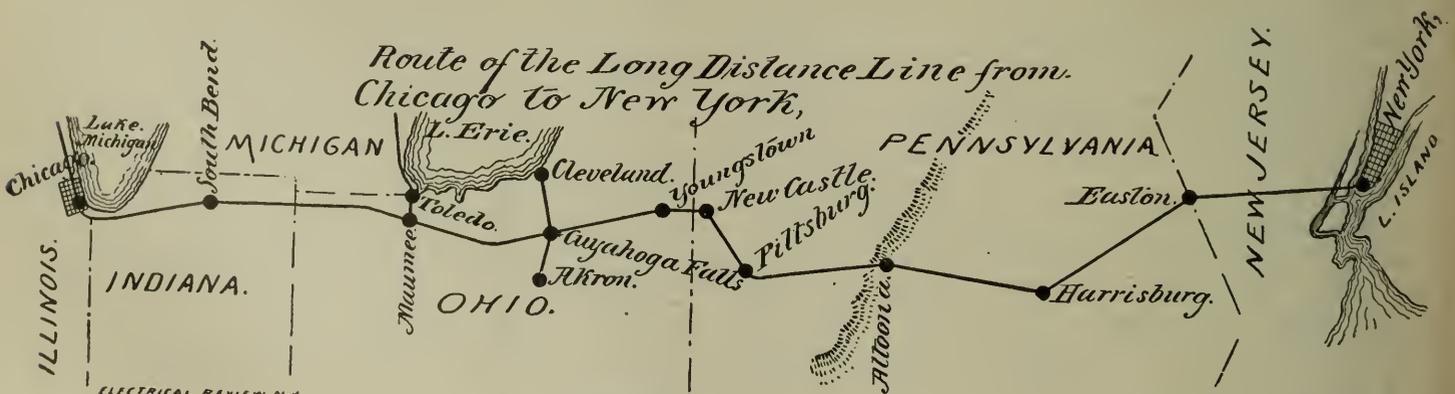

"The use of cables, which are exceedingly detrimental to long-distance telephone transmission, has been almost entirely avoided in this line, for in the entire circuit of 950 miles there are but five-eighths of a mile of cables; approximately, 1,600 feet in New York and the same number of feet in Chicago. Prior to the construction of this line it was impossible to converse over a distance of more than 500 miles, which was the length of the longest known line in this country. In 1890 a circuit was completed between Paris and Brussels, which was about 450 miles in length. The circuit proved satisfactory, and in the next year a line 280 miles long joined London and Paris. But in this circuit there are some 20 miles of submarine cable, so that the construction and successful working of this line was considered of greater importance than that between Paris and Brussels, though the latter was 170 miles longer. In local work great numbers of cables and considerable underground work are required and desired, while in long-distance telephony the avoidance of cables is of the utmost consideration, and almost any means will be employed in order to substitute aerial wires in the construction of metallic circuits.

COST AND CONSTRUCTION OF THE LINE.

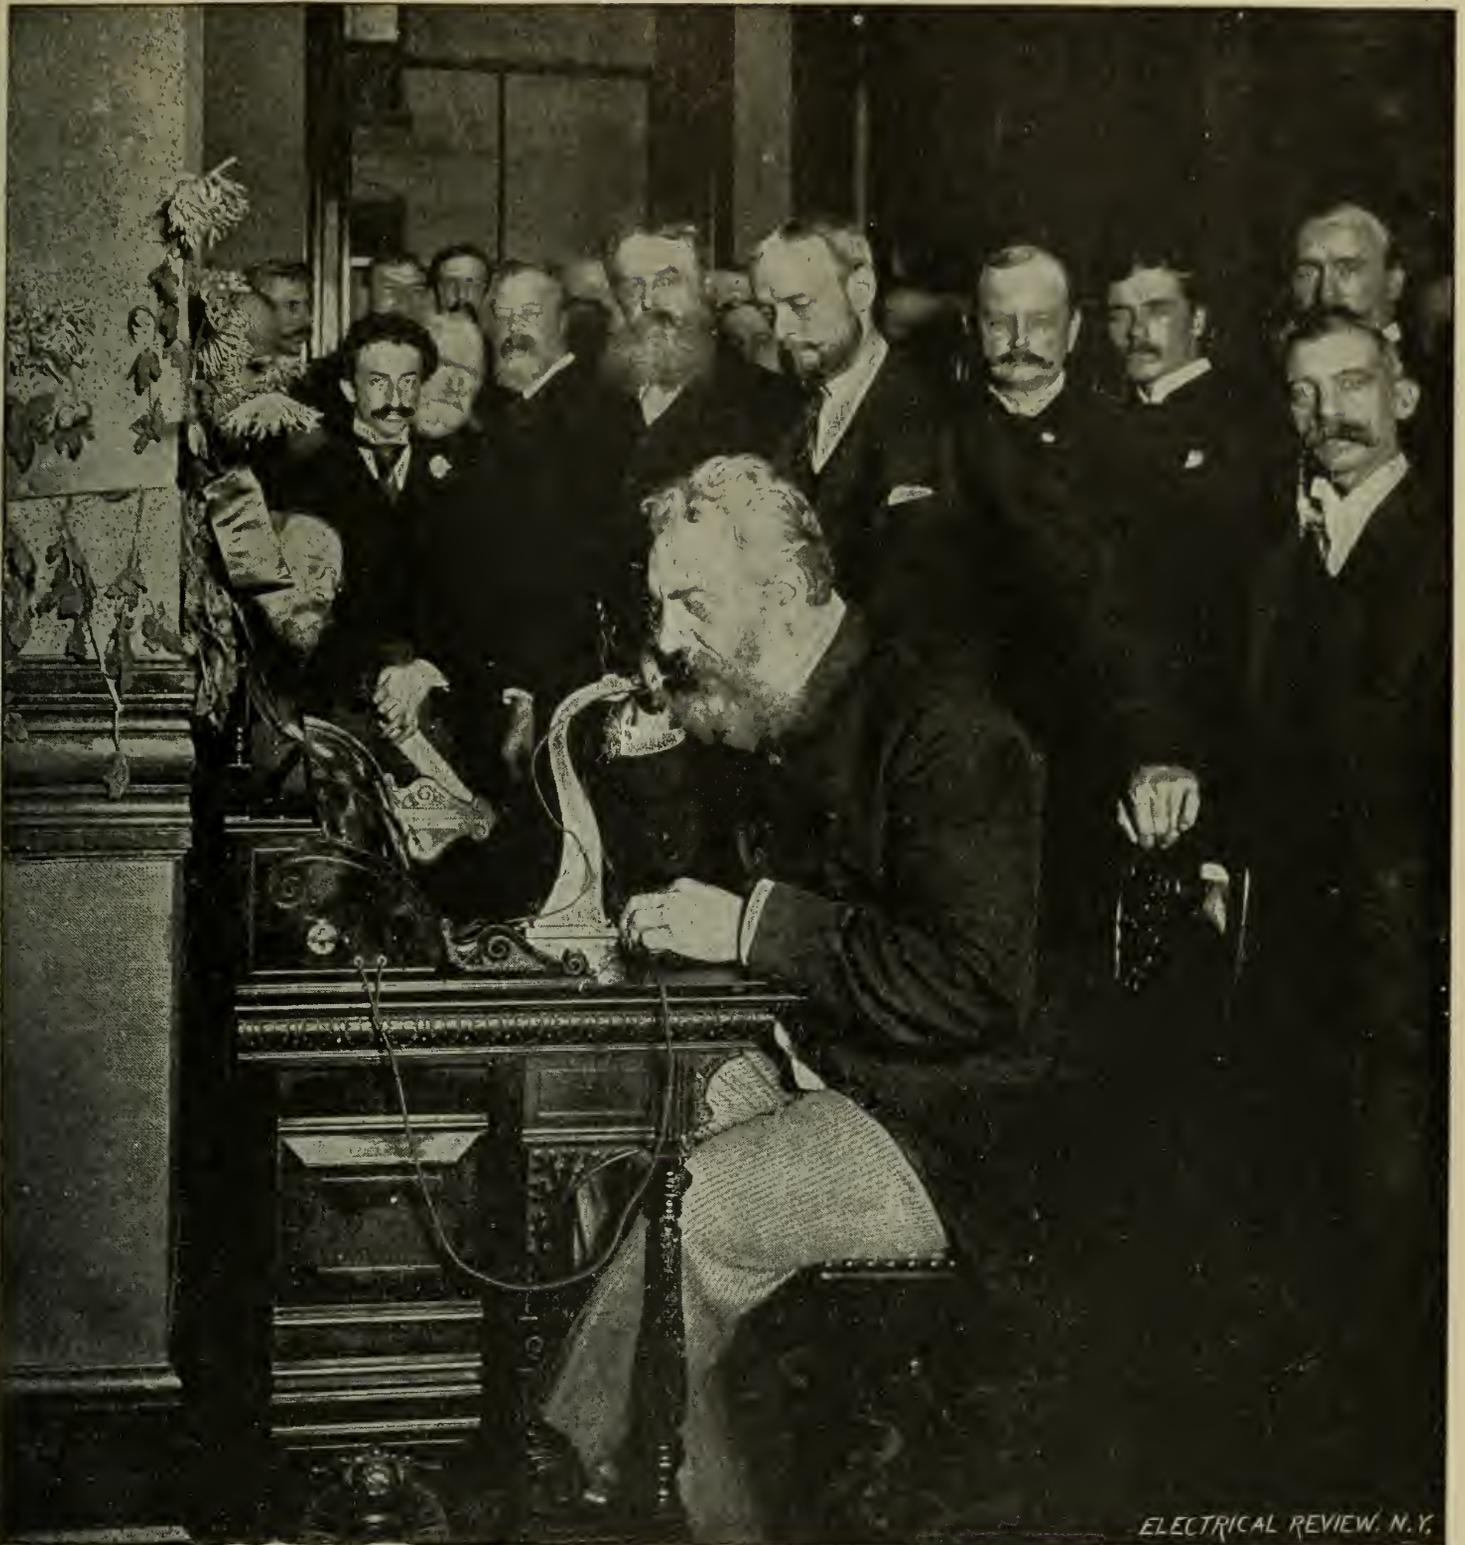

"There is no doubt that this line will be a financial as well as a scientific success. It is stated by the chief electrician, Mr. F. A. Pickernell, that at present the extension of the lines is only limited by the size of the wire, and also, that if any one would be bright enough to invent a system whereby the current could be carried successfully over a wire of small diameter, that lucky individual would make an independent fortune as a result of his invention.

"There are three facts to be taken into consideration in the construction of a plant, viz: 1. The expenditure of money must be as small as possible; 2. The commerce and street traffic must be interrupted as little as possible. 3. As little of the line as possible must be below the street surface.

"The cost of the line to Chicago has been something enormous. The wire alone, at 15 cents a pound, for 826,500 pounds, would cost \$123,975; to this we

SCENE IN THE NEW YORK OFFICE OF THE AMERICAN TELEPHONE AND TELEGRAPH COMPANY ON THE OCCASION OF THE OPENING OF ITS NEW LINE—PROFESSOR GRAHAM BELL SEATED AT THE TELEPHONE.

must add the cost of 42,750 cedar and chestnut poles, wages and service, which would make the cost of the entire circuit amount to about \$380,000, roughly estimated. This line must be kept in constant repair, and the running expenses are not to be overlooked, so that the cost of five minutes' conversation, which has been fixed at \$9, must not be regarded as excessive, for it must be remembered that while the person is conversing he practically has the loan of \$380,000 for

five minutes, and that an answer may be obtained immediately to each question."

A Significant Incident of Nineteenth Century Progress

A writer in the *Electrical Review* for November tells the following interesting incident which happened at the Chicago end of the line during the opening ceremonies, when Mr. William Berri, proprietor

of the Brooklyn *Standard-Union*, was talking over the wire: "Mr. Berri dictated from Chicago an article to his stenographer, who was in the editorial rooms in Brooklyn, and then called up Managing Editor John A. Halton, with whom he conversed a few minutes. Editor Murat Halstead then talked with Mr. Berri, and after this a few other people used the line. Mr. Berri then came back to the phone and called up Mr. Halton again. While talking with him Mr. Berri heard a peculiar noise on the wire and asked what it was. The reply was that the presses had just started up to run off the first edition of the paper. The noise came through several rooms before reaching the editorial rooms, where the telephone was located, and then traveled along the wire 1,000 miles to Chicago. In this brief time Mr. Berri's article had been written out in long hand, set in type, stereotyped, put on the press and the presses started."

THE PRESENT POSITION OF CANADA.

MR. LAWRENCE IRWELL, of Toronto, who writes in the *Asiatic Quarterly* on "The Present Position of Canada," has not too much to say in praise of her, and is, in fact, a rather gloomy observer altogether. In the first place he mentions the disappointing census returns, showing an increase of less than 600,000 in ten years. During the last forty years nearly seventy per cent. of British emigrants have gone to the United States, and not over ten to Canada. The matter needs, he thinks, careful attention on the English side of the water. He finds in the mismanagement of genuine, and the floating of bogus, companies the reason why English capital is not as largely invested in Canadian enterprises as might have been expected. "With the credit of Great Britain at her back, with a small but industrious population, and an area of three and a half million square miles, it must be admitted that the Dominion ought to have made a better showing. Her lumber trade is the finest in the world, her fisheries are certainly good; yet her total trade is only upon the scale of a single Australian colony, although the population is larger than that of all the Australian colonies combined. The public revenue and debt are small compared with other colonies, the debt being one-third of that of Australasia, although the territorial area is about the same. The national policy (a highly protective tariff) has, it is claimed, assisted manufacturers; but the home market is small, and the products of the factories do not appear to be exported to any large extent.

Abortive legislation (which he says abounds), the recent scandals, and the vulnerability of Canada from the side of the United States are other points discussed by the writer.

TOM BROWN, in the *Leisure Hour*, has an interesting paper on the "Dialect of the Black Country." He says that in many instances their language and construction is the exact counterpart of the English to be found in the works of Chaucer, that "well of English undefiled."

THE MALTHUSIAN THEORY IN THE LIGHT OF RECENT STATISTICS.

"ARE There Too Many of Us?" is the subject of a paper in the *North American Review*, by President E. Benjamin Andrews, of Brown University, who discusses in the light of present-day statistics the famous theory of the growth of population advanced by Thomas Malthus in 1798. Mr. Malthus maintained, as is well known, that human beings tend to multiply faster than food can be provided for them, representing population as increasing at a geometrical ratio and the food supply at an arithmetical ratio. While Mr. Malthus did not allege that population in fact increases in this proportion to food, he held that in spite of all preventive checks it tends to outrun subsistence. Mr. Andrews does not deny that this general conclusion is true, but holds that Mr. Malthus did not allow enough for the check, "barrenness," and made the age of possible maternity too long. He gives statistics to show that the maternity period does not average over twenty-two years, and that about one-seventh of the married women are without children. On the basis of these revised statistics, supposing every mother to have four children in every twenty-two years, he finds that the increase of population per thousand would be an average of twenty-seven per year, and that if over against this is set the rate of mortality, which under the most favorable circumstances, he asserts, is about twenty per thousand, it would take nearly a century and a half for the population to double instead of once ever twenty-five years, as Mr. Malthus claimed. "It was obvious that Malthus was far astray, at least regarding the form of his law. From our better statistics we can correct him. The natural rate of multiplication, if we admit such a notion, could not even by Malthus' own principles have been greater in his time than in the years covered by our best recent statistics, because material prosperity has been improving meanwhile. If the rate assigned by him is now too great it certainly was then. Yet Malthus is correct in urging that men tend to multiply with decided rapidity. It is universally recognized that a stationary population is abnormal, a sign of disease. The rule is advanced."

Mr. Andrews shows that, including immigration, population has increased in the United States at the average rate per cent. of 32.70 per decade since 1790, and that if it should continue to increase at this rate we should have in the United States by 1990 nearly 1,000,000,000 inhabitants. He further estimates that the minimum normal rate of annual increase for Europe during the last century was one-half of one per cent., which if continued would give Europe in 280 years a population of 1,300,000,000.

"Malthus' assumption as to the relatively slow and difficult manner in which men's food supply has to be increased was a good deal nearer the truth than what he wrote about the growth of population, but he did not see with any clearness the real nature of the law which he was approaching. The law according to which production in general advances is: The more

capital and labor applied to nature, the more product. In agriculture, however, and with certain modifications in mining, another law evidently prevails, which has been denominated the law of diminishing return, to the effect that in the long run increased application of labor and capital fails to command a proportionate increase of return. It is this law of diminishing return in agriculture which forms the stern significance of the Malthusian doctrine. Its operation may be postponed, and the reverse law of increasing return be set in action for a time. Addition to population will have this tendency up to a certain limit by making possible a fuller division of labor. Improved agricultural machines and methods will work in the same way, as it will also to bring, in a new country, more fertile land under cultivation. To have demonstrated this point is the great merit of the late Henry C. Carey. But the operation of these causes cannot continue forever. The general law under which soil is tilled is the one named, the law of diminishing return.

“So that, while Malthus did not hit the truth with any exactness, the principle for which he was so vaguely feeling is, when found, a true one, over which it were far more seemly to look sober than to laugh.

“Malthus’ recommendations are in substance still needed. Though, perhaps, no country can yet be said to be saturated with population, many localities, great cities especially, are so. It boots nothing to know that none die from the niggardliness of nature in the strict sense, which is true if you take large areas, so as not to light on famine spots, because the maladjustments of society are, even in Malthus’ own discussion, conceived as practically part of nature. The exhortation should, however, be modified, to the effect that the able, intelligent, well-to-do, especially such as can instruct and lead, may even have a duty to propagate. There is nothing in Malthusianism, or in the fact of life, to render appropriate a crusade in favor of universal celibacy.

“A Malthusian law there is, which cannot be set aside, though it may offer, except in limited localities, nowise the present threat which many have seemed to see in it. Sometime it must take effect, the result being, not of course that humanity will starve, or even any part of it, but that either additional restraint must be applied, or a lessening per capita plenty will induce vices and diseases to which enough will succumb to let the others continue. The picture of a world starved to death is no legitimate suggestion of Malthusianism.”

“On the other hand,” says Mr. Andrews, “we have to comfort us the observations that about only one-sixth of the cultivable land of the world is as yet occupied; that infinitely greater saving is possible than has ever been exercised thus far, and though food getting will become harder and harder, the getting of other things, and especially such as minister to our higher life, is to be easier and easier as the aeons pass. Bread winning, he continues, may become 100 times as difficult as now; if manufacturing becomes the

same degree easier, humanity will get its whole living with no greater difficulty than now. Yet three hard facts confront us. One is that the earth’s stock of substances capable of sustaining human life is, after all, limited; another, that many of these are passing hopelessly beyond man’s reach; and the third is that such utilizing of plant nutrition as is intrinsically possible must forever increase in cost.”

This is Mr. Andrews’ conclusion: “Let the masses remain ignorant and brutish, and human life will forever continue in threatening disproportion to food, progress and poverty side by side, the comfort of a few shadowed by wars and want and sicknesses on the part of multitudes. Only as character shall prevail can coming generations fill the ideal of an earthy society; human beings numerous enough to work the great cosmic field to the best advantage, yet voluntarily few enough to admit of a reasonable and decent subsistence for all. For man’s body as for his soul, for time as for eternity, his only hope lies in spiritual elevation.”

The Distribution of Population.

In the *Edinburgh Review* appears an article on the same subject, which deals more especially with the distribution of the population of the globe and the “tidal movements of humanity” in connection therewith. In Malthus’ opinion the globe would have been already overstocked if the progress of population had been continuous from antiquity. But for some mysterious cause many of the populous countries of antiquity have become depopulated and apparently unable to support life: “It is uncertain whether, at the present moment, the population of the globe is greater than it was two or three thousand years ago. There is congestion in Europe, in India and in China; there are innumerable tribes in Central Africa on whom even the slave trade makes no perceptible impression. But the vast plains of Asia, which swarmed with men under the Assyrian, Babylonian and Persian Empires, are deserted.”

Philosophers and other people ought, the reviewer thinks, to give these matters more attention: “Our attention is now peculiarly called to them because the nineteenth century, now drawing to a close, is pre-eminent for the two leading phenomena of population—namely, the rapid increase of births in most of the States of Christendom, and, we may add, in India, and the enormous migration of Europeans to settlements in the North and South American continents and in other parts of the world.”

THE MOVING PEOPLES.

The French, as most people know, are the least migratory of European nations. They do not suffer from the pressure of population at home, which is declining, nor are they assisted by the adventurous spirit. In the seventeenth century France had the largest transmarine territorial empire in the world: “The colonies of France have always been created and maintained by the State, never by the people; and at the present day, when an attempt is made to

revive the colonial spirit, there is but little emigration, and the colonies are supported by the mother-country at a cost, we believe, of a hundred million francs a year."

On the other hand, instead of their population declining like the French, England and Wales alone add 1,000 a day to the population of the world. The United Kingdom, Germany and Italy send out every year a larger number of emigrants than the rest of the world together. "The annual average of emigrants who leave the shores of the United Kingdom was 248,000, and rose to 334,452 in 1891. The emigrants from Germany are estimated at 130,000; from Scandinavia, 62,000; from Italy, 32,000. During the thirty-seven years from 1853 to 1889, 3,439,138 English, 689,705 Scotch and 2,775,007 Irish have emigrated, principally to America. Austria-Hungary sends out a yearly average of 45,000, and the number is steadily increasing; France contributes under 5,000; Portugal, some 16,000; Norway, 15,500; Sweden, 28,000; Denmark, 6,000; Switzerland, 10,000; Holland, a number which varies greatly from year to year, but which may be put at an average of 5,000, and Russia and Spain large contingents, of which no statistics are available. Belgium alone, of European countries, has a larger influx than efflux of population—a fact the more remarkable when we bear in mind the density with which it is peopled already.

WHERE THEY GO.

"The attractions which the United States offer outweigh all others. Of a total of 334,452 emigrants from the United Kingdom in 1891, there went to British North America 33,791; to Australasia 19,714, and to the United States 252,171. The Irish go mainly to the United States; the Scotch, largely to Canada. Of Germans 96 per cent. go to the United States, and large numbers to Brazil, but almost none to the colonies which their government has planted and tended with so much care in Africa. The Swiss make for North and South America, the Italians for the countries bordering on the River Plate and Brazil, but one-third of the whole for the United States. Frenchmen do not any longer settle in Canada, and their coming is said to be discouraged from fear lest the turbulent spirit of innovation which they bring with them should work havoc in Church and State, but they shape their course for South America instead. From Austria-Hungary the stream flows into the United States and Argentina. The former of these draws from the three Scandinavian countries, and attracts Russians, Poles and Jews from the Czar's dominions."

BRITAIN AND THE STATES.

Naturally the United States population is rushing upward at a great rate. The reviewer gives some interesting figures: "In 1790 the figure was close upon 4,000,000; in 1840 it had reached 17,000,000; in 1890 it was 62,622,250. Whereas in 1850 the United States stood seventh in the list of the great powers in the matter of population, by 1880 it had reached the

second place, Russia being still the first. Every year this total is increased by 1,000,000, representing the excess of births over deaths, and by yet another 500,000 of immigrants—every day sees an increase of some 3,400."

The writer blushes to say that the largest proportion of natives of Great Britain is found in Utah. In the Mormon State 17.5 per cent. of the population are natives of Great Britain, whereas the proportion for the country as a whole was but 1.8. The highest total of British, however, is found in New York and Pennsylvania.

ENGLISH, SCOTCH, WELSH AND IRISH.

"The coal and iron works of Pennsylvania are naturally chosen by the Welsh settlers, who leave the same industries at home. The States to the north and west, where agriculture is the principal employment, contain large numbers (of British), and in Colorado they form a high percentage, but, on the whole, it may be said that they are more or less evenly distributed over the length and breadth of the land. They intermarry freely with the native-born Americans, and are soon absorbed into the native population—far sooner than some other nationalities. The English are to the Scotch as four to one, to the Welsh as eight to one, and the average number of settlers from Great Britain is about 81,000 yearly. The movements of the Irish are very different. Of an average total of 63,000 who land every year in the United States, the great majority never go far from the coast. In Rhode Island they form 12.8 per cent. of the population; in Massachusetts, 12.7; in Connecticut, 11.3; in New York, 9; while in New York City they amount to as much as one-fourth of the whole number of citizens, and if we add those who are the children of one Irish parent, to one-third.

The writer points out that in the United States the preponderance of English settlers is growing smaller every year.

SOUTH AFRICA AND AUSTRALASIA.

In the chief British colonies there is rather a different tale to tell: "In South Africa the English number 88.5 per cent. of the immigrants, the Scotch 9.2, the Irish but 2.3, and the net emigration from 1882 to 1888 amounted to no more than 8,973. In Australasia the increase of population has been great and rapid—from 36,263 in 1821 to 2,740,127 in 1881. The annual increase by excess of births over deaths is put at 65,000; by immigration at 66,000. The population is derived to the extent of 95 per cent. from British stock, there being of Australasian parentage 49.2 per cent., of English and Welsh 24.7, of Scotch 10.8, and of Irish 10.11.

England is overpopulated, says the writer, with non-producers, who are crowding out the valuable element of her population. "We are face to face with the fact that every year sees a heavy drain on our most industrious workers, while the lazy, the aimless and the vicious are left to increase and multiply."

How They Hold Down the Population in Tibet.

A writer in the *Scottish Geographical Magazine* describes the way in which the Tibetans manage their over-population question: "It must not be forgotten that this Northern Buddhism, which enjoins monastic life, and usually celibacy along with it, on 11,000 out of a total population of 120,000, further restrains the increase of population within the limits of sustenance by the system of polyandry, which permits marriage only to the eldest son, the heir of the land, the bride accepting all his brothers as inferior or subordinate husbands, thus attaching the whole family to the soil and family root-tree."

A WORLD'S SUPREME COURT.

IN his article "How to Abolish War," in the *American Journal of Politics*, Mr. W. H. Jeffrey declares that international arbitration is not feasible, and that some other means of settling disputes between nations must be sought. His reason for this belief is that it is practically impossible to find arbiters who have not formed an opinion before the case is finally submitted to them for decision, and that those who have nothing to gain and perhaps something to lose by this mode of settlement will hesitate before they will give consent to place their interests in the hands of another. He favors the establishment of a World's Supreme Court, to which disputes between nations might be finally referred, just as our interstate difficulties are now submitted to a National Supreme Court. In order to bring about this result he suggests that our government invite the nations of the world to appoint commissioners to meet and formulate the plan.

"This having been done the commissioners would doubtless recommend in their respective governments the appointment of its most eminent jurist as an associate justice of the court. Treaty relations would be recommended, binding all nations to the most rigid observance of the decisions of the court.

"To prevent the same difficulty which I have mentioned regarding nations refusing to arbitrate, a provision would be placed in the treaty that any nation bound by this great code of international law would do all in its power to force a rebellious nation to abide by the decisions of the court. To do this it would only be necessary for the nations bound by the international treaty to declare the rebellious power no longer a member of the international union. This decision should carry with it the closing of all the ports of the union against the offender until such time as she should see fit to accept the decision of the court.

"Should the question involved be one of damages, the nations under the jurisdiction of the court should seize all public property belonging to the offender that should come within its jurisdiction until the judgment of the court should be satisfied."

MUNICIPAL INSTITUTIONS IN AMERICA AND ENGLAND.

IN the *Forum* the Rt. Hon. Joseph Chamberlain compares the expenditures of municipal institutions in England with those of our own cities, reaching the startling conclusion that we pay for less efficient service in our large towns nearly five times as much as is paid in the well-managed English municipalities. He attributes the greater cost of municipal administration in the United States—first, to the higher wages paid; second, to the misappropriation of municipal funds for corrupt purposes; and, third, to the multiplication of sinecure offices for the purpose of securing patronage.

Mr. Chamberlain is well qualified to speak on the subject of English municipal corporations, having served as mayor of Birmingham for the three years, 1873-76, and having through the reforms which he instituted placed his city in the first rank in point of administration. His account of the way in which English municipalities are governed is for this reason especially valuable.

"In English municipalities no property qualification is required for members of the council, and in that of Birmingham several workingmen have seats, and attend to its duties without giving up their ordinary daily avocations. The aldermen, who constitute one-third of the council, are elected by the remaining members. They sit and vote with the rest of the council, and have no other privileges than that of being elected for six instead of for three years, and of escaping the cost and labor of popular election. The ordinary councilors retire every three years—one-third going out each year. This system of renewing the council by sections has the advantage of preserving some continuity in its policy and of retaining the experience of the older members, while at the same time it allows the general drift of public opinion to be made immediately manifest. The council have the power of electing aldermen from the general body of citizens; but this right is very seldom exercised, and the office is generally considered as a distinction to be earned by long and efficient service as an ordinary councilor. The only outside aid accepted by the council is in the case of free libraries and museums, which, under a special act, are managed by a committee of fourteen, consisting of eight Councilors and six citizens chosen by the council from outside. This provision enables the council to avail itself of special knowledge and taste in a matter which is not connected with its ordinary work, and has been found valuable in the development and management of these popular institutions."

Mr. Chamberlain is not so sure that the separation of municipal from national politics is absolutely necessary to efficient administration. "In the selection of candidates for the council the practice of different localities varies greatly. In some it is conducted as a matter wholly apart from ordinary politics; but in the majority party considerations have a preponder-

ating weight in determining the choice. This is defended on two grounds: first, it is pointed out that a much better class of candidates is to be found in contesting a seat when the great issues of national policy are even indirectly involved: whereas petty local and personal interests would prevail if the contest were strictly limited to parochial questions; and, secondly, it is urged that in every party there are many good men well fitted for municipal honors who have no chance of representing a constituency in the House of Commons, and who would lose all interest in the party organization if its operations were confined exclusively to parliamentary elections. Whatever may be thought of these arguments, it is certain that the efficiency of local institutions in Great Britain has not suffered, owing to the prevailing influence of party motives. It should, however, be borne in mind that in this country the members of all our local governing bodies are unpaid and their office is purely honorary, except in the case of the mayor, who, in a small minority of boroughs, is voted a salary to enable him to maintain the dignity of his office."

"Although, as has been stated, political considerations exercise great weight in determining the composition of the council, they ought never to be allowed—and as a matter of fact they very seldom are allowed—to have the slightest force in the election of the permanent officials or the day workmen employed by the corporation. For nearly sixty years the great majority of the town council of Birmingham have been Liberals and Radicals, and yet during the greater part of that time the majority of the high officials have been members of the Conservative party. All the higher officials are appointed by the council itself. The minor officials are appointed by the councilors of the several departments and confirmed by the council; and the day workmen either by the councilors, or more generally by the permanent heads of the departments. When a new official has to be elected no questions are asked as to his political opinions, and no interference would afterward be tolerated with his exercise of electoral privileges. It is an unwritten law that no paid official shall take an active part in political contests. He is expected to refrain from the platform and the press in relation to such controversial matters, but his private opinions and his votes are matters exclusively for his own discretion. Once chosen, if he discharges his duties well and faithfully, he remains in office for life, or till his resignation; with the probability that if he is disqualified by age or infirmities he will receive a pension proportioned to his salary and the length of his service."

Miss Clementina Black, writing in the *Contemporary Review* under the title of "Coercion of Trades Unions," defends them against their critics, explains in what way they use coercion, and maintains that it is justifiable. She says that, taken as a whole, the trades unions have got for their members shorter hours and higher pay, and maintains that England, where the unions are the strongest, is the most prosperous country in Europe.

LONDON'S BUSY RAILWAYS.

AN article bristling with figures gives the readers of the *Quarterly Review* some idea of the immense volumes of traffic that roll over the train and tram lines of London. The writer, whose paper is headed "Rapid Transit in London," lays to the Englishman's soul the flattering unction that he has designed and carried out for himself in London the best and most highly developed arrangement of urban rapid transit in the world. Within a six-mile radius of Charing Cross there are 270 miles of line, and 255 stations; and within a twelve-mile radius over 400 miles of line and 391 stations—not taking into account the use of lines and stations by more than one company.

LONDON TRAFFIC.

The following gross totals are arrived at by methods which necessarily render them—well, very gross:

Railway passengers.....	327 millions.
Omnibus "	200 "
Tramway "	200 "
Cab and steamer passengers. . .	50 "

Total..... 777 millions.

On an ordinary week day the public conveyances of London carry about two and a half million passengers, of which numbers the railway companies carry about a million. The railway companies all taken together run something like six thousand suburban and metropolitan trains per day. The city census showed that the number of persons entering the city between 7 and 8 a.m. was 57,000; between 8 and 9 a.m. it rose to 132,000; then fell slowly to 125,000 between 9 and 10 a.m.; rapidly to 81,000 between 10 and 11 a.m.; while finally between 11 o'clock and noon it dropped again to 67,000, which is about the normal figure for the daylight hours.

FROM CITY TO SUBURBS.

Although the population per acre of London is small as compared with that of other large cities like Berlin, it is decreasing rapidly in the central districts. The central area of the Registrar-General, with a population now of about a million, shows a decrease of 7 per cent. in 1891 on the top of one of over 4 per cent. in the preceding decade. The outer ring, on the other hand—the urban area outside the limits of the county of London—shows at the same date an increase in population of 49 per cent. on the top of a 50 per cent. increase from 1871 to 1881. Certain points in the outer ring show a rate of increase even more remarkable. Willesden and Leighton had each of them in 1881 a population of 27,000; they both have over 60,000 to-day. Tottenham has grown from 36,000 to 71,000, all but double; West Ham from 129,000 to 205,000. Even Croydon, which was 78,000 ten years ago, is 102,000 to-day.

The reviewer thinks overhead railways like those of New York wholly impracticable in London. The only overhead lines possible in London would be made by "double-decking" existing lines.

The writer states that there are "two railways in

the world at this moment earning \$150,000 a mile—the one, the Manhattan Elevated, of New York, which has, as it cannot be too often repeated, a minimum fare of 5 cents; the other, the North London. This latter company is set down in the Board of Trade reports as earning the enormous sum of \$215,000 per mile. But then it has not two lines, but four.”

WORKMEN'S TRAINS.

The writer's object is to deter the London County Council from hampering the new lines with subways, workmen's trains, and so on, and frightening the timid investor by talking about running free trams to compete with the trains. Talking of workmen's fares, he says they are unheard of in America; but then they have the zone or uniform fare system in operation. "For, having a 5-cent fare as the minimum, the American local lines can afford to make it also the maximum, so that 5 cents franks a man for the entire distance that the trains go. The result of this, which may be called the adoption of the postal principle in urban communications, is obvious. A man gains nothing in money (though of course he gains a little in time) by living two miles instead of ten miles from his work. In other words, the premium on overcrowding in the central districts is abolished. American cities, therefore—and Chicago and Boston are still more striking instances of this than New York—are rapidly decentralizing and spreading themselves over constantly increasing areas, to the great advantage of their population, both morally and physically.”

WHAT THE HOUSE OF LORDS WILL DO.

IN the *National Review* the Marquis of Salisbury, writing on "Constitutional Revision," takes occasion to set forth in his customary precise and lucid way not only what the House of Lords will do with the Home Rule bill, should it ever come before them, but also that they are absolutely masters of the situation. What the Lords will do is to throw the bill out, and to insist that, before the bill is carried, a general election shall be taken, at which the question of Home Rule or No Home Rule shall be voted upon directly by the whole of the electorate.

REFUSE TO ADMIT THE BLACK PEERS.

Mr. Frederic Harrison, in an earlier article, gave many tempting openings to Lord Salisbury, of which his opponent has taken advantage. "You threaten," says Lord Salisbury, "to inject five hundred sweeps into the House of Lords, in order to compel them to carry Home Rule. But do you think your black peers would be admitted? The House of Lords has on several occasions refused to allow new peers to take their seats if there was any circumstance attending their creation which indicated an intention on the part of the Crown to encroach upon the independence of the House. Scotch peers who were created peers of Great Britain were forbidden to sit and vote from 1711 to 1882. Life peers are forbidden to sit. The House of Commons in 1711 impeached Harley for

advising the creation of twelve peers." With this somewhat small array of precedents behind him, Lord Salisbury asserts that the sweeps would never be allowed to take their seats, and even if they did they would in time probably have to be swamped by new sweeps.

DEMAND REAL ENGLISH "THUNDER."

As for Mr. Harrison's declaration that the Lords would accept the bill if Mr. Gladstone and the nation were thundering at the doors: "No doubt," replies Lord Salisbury, "even if the nation were thundering alone. But it must be real thunder and a real nation." He reminds Mr. Harrison that but for the votes given by Archbishop Walsh's pocket constituencies, the nation, if it had thundered at all, would have thundered the other way. England and Scotland gave a majority of forty-two votes against Home Rule. Wales and Ireland converted this majority into a minority of forty. With an ingenuity that Mr. Gladstone himself might envy, Lord Salisbury produces a table showing that in twenty-one constituencies a change in the distribution of 765 votes would have given a majority of two against Home Rule. He asks whether the House of Lords could be threatened with extinction because 765 electors out of an electorate of 6,400,000 should have given their votes for Mr. Gladstone rather than for Mr. Balfour. At the last general election it is notorious that thousands of electors voted in many constituencies upon any issue excepting that of Home Rule, and Lord Salisbury asks whether it is reasonable to allow an issue so momentous to be decided by a majority so narrow as that which has placed Mr. Gladstone in office.

AMERICANIZE THE CONSTITUTION.

This brings Lord Salisbury to his favorite plea, the introduction of additional stability into the British constitution. He passes under review the constitutions of the democratic countries, and points out that in every one of them the framers of the constitution found it indispensable to place some check upon the caprices of the people. "The United States constitution requires the assent of two-thirds of the Senate and the House before the change is entered upon, and that of three-fourths of the States after the draft is settled. In Belgium the final assent of two-thirds of each of the Chambers specially summoned is necessary. The same rule prevails in Holland and in Norway. In Greece the assent of a three-fourths majority is required."

In England alone there is no check of any kind. The constitution can be remodeled by the vote of a majority of one-half, plus one, and the only check which exists is that of the House of Lords.

This veto Lord Salisbury seems to be quite prepared to modify by making it subject to a *referendum ad hoc* whenever any question arose between the two houses. He meets very fairly, and most people will think conclusively, the objection of those who say that the House of Lords, being an aristocratic survival, has no business to veto the decisions arrived at by the majority of the representatives of the nation.

Admitted, he says, that this may be illogical, it is not, however, the only illogical thing in the constitution. It is quite as illogical that 765 votes scattered over twenty-one constituencies should decide in favor of cutting the country in two and setting up a separate legislature in Dublin, as that 500 peers should have a right to say that before this great change is accomplished the will of the English and Scotch people should be clearly expressed in favor of the change. Grant, if you please, that the House of Lords is illogical, it is the English constitution as a whole which has succeeded. The illogical provisions of the one part have balanced the illogical provisions of the other. What Mr. Harrison and his friends would like to do is to clear out what is illogical when it is opposed to their views, while retaining all that is illogical that is in their favor. No, no, says Lord Salisbury, this will not do; if we are to work according to logic, let us apply logic all round, and if the House of Lords will not do it, it should at least be replaced by something better. While it lasts the House of Lords must do its duty according to its lights.

APPLY LOGIC ALL ROUND.

“Even if, for the sake of argument, it be admitted that the House of Lords is an illogical institution, it would still remain true that our method of obtaining, by random inferences from selected election addresses, the decision of the nation upon a question of fundamental change is also, in a high degree, illogical. At worst the House of Lords is the anomalous corrective of an anomalous system of constitutional revision, for the part which they fill in the process of constitutional revision is one which cannot be supplied. They alone possess the power of securing that in a great project of fundamental change—a change in the framework of the Empire—the nation shall be honestly consulted, and that its voice shall be faithfully obeyed.” Such is Lord Salisbury’s declaration.

M. G. VALBERT, in the *Revue des Deux Mondes* for October 1, gives a lucid and able summary of the views held by Dr. Nietzsche, the mystical and eccentric author of “Also Sprach Zarathustra” and other works. We have space for only his concluding comment:

“Nietzsche’s is a keen and vigorous, but abstract, mind; he sees the world through an ideologist’s spectacles. No; there is no such thing as a caste of strong men who do just as they please. The strongest have their failings and weaknesses, and there is often a great deal of strength in the weak. No one can succeed without having the latter on his side, and, if the absolute equality of rights is a chimera, the belief in their inherent inequality is also an error, and a less generous one. The infinite need which we have of each other establishes a close union between us, and brings the various classes of men near enough together to preserve us from the excessive exaltation of the *ego*, and prevent our believing in two moralities—one for the owner and one for the flock.”

“HOME RULE FIRST.”

THE *Contemporary* publishes a short article by Mr. W. T. Stead under the title of “The *Sine Quâ Non* of Home Rule.” After pointing out that there is no possibility of Home Rule being carried out by this Parliament, owing to the position of the House of Lords, which cannot be overcome by any means that Mr. Gladstone can command, Mr. Stead calls attention to the fact that it is by no means certain that the bill will get through the House of Commons. It can do so, but only on one condition: “The *conditio sine quâ non* of the present position is that when Mr. Gladstone brings in his bill establishing a subordinate statutory Parliament at Dublin, he shall not complicate the consideration of the central principle of the measure by any proposal to deal simultaneously with the constitution of the Imperial Parliament. That question can safely be relegated to more mature consideration in some future session. It is a sufficiently great and arduous task to bring into being a Parliament on College Green, without aggravating every difficulty and increasing every obstacle by proposing at the same time to tamper with the composition of the Parliament at Westminster.

“One thing at a time. To try to do two will result in hopeless failure. Mr. Gladstone, in dealing with Home Rule, will have to fall back upon excellent precedents of his own making. When he enfranchised the county householder he refused to deal simultaneously with the Franchise and the Redistribution of Seats. He and the whole Liberal party then said, Franchise first! If he is as much in earnest about Home Rule as he was about Reform he will have to say, Home Rule first! The Parliament on College Green must first be established; the question of the future composition of the House of Commons can be safely relegated to some future session, to be dealt with after some progress has been made with English and Scotch and Welsh reforms.”

NO MAJORITY BUT FOR HOME RULE.

Other reasons apart, the one conclusive argument in favor of this scheme is that there is a majority in the House in favor of Home Rule, but there is not a majority in favor of the dismemberment of the Imperial Parliament: “In the House of Commons there stand arrayed in opposition to each other two parties, one of which is composite, the other homogeneous; the composite party outnumbering the other by a majority of thirty-eight in a House of 670 members. The Ministerialists, however divided upon other questions, are united as one man upon one point, viz., that there shall be an Irish Parliament established at Dublin.”

There is a majority of thirty-eight in favor of Home Rule, but there is no majority of any kind in favor of interfering with the authority of the Imperial Parliament at Westminster. The nominal Liberal majority when approaching that question splits up into three sections—the Right, which would exclude the Irish members altogether; the Centre, which would re-

duce them to thirty ; and the Left, which would leave the *status quo* exactly as it is.

WHY LOP OR CLIP THE HOUSE OF COMMONS?

But not one of these three sections has a majority in the House : " Any one of the three—Right, Centre or Left—can, when it pleases, throw out the Government by accepting the always proffered assistance of Mr. Balfour and his men. None of the three can force its own views as to the right way of dealing with the question of lopping, clipping or reconstructing the House of Commons upon the House, because it is itself in a minority of the House. What, then, is more simple, more obvious, more natural, more necessary than that Mr. Gladstone should confine his attempt to legislate to matters on which he has a majority, and leave over the question on which he has no majority till a more convenient season ?

" Lord Melbourne's question, ' Why can't you leave it alone?' naturally rises to the mind when ministers discuss the difficulties that arise when they attempt to deal with the question of the Irish members at St. Stephen's. What necessity is there for dealing with this question *pari passu* with the other enormous question, which in itself is sufficient to occupy the legislative capacity of the present Parliament."

A PLEA FOR POSTPONEMENT.

After replying to the various objections which may be raised to this proposal to postpone the consideration of the future relations of the Irish members and the Imperial Parliament after Home Rule has been established, Mr. Stead concludes as follows : " This postponement of the consideration of the question is not equivalent to a decision that the subject shall never be raised. It merely asserts that during the initial stages of a most difficult and delicate experiment in constitution building, the supreme power which creates should be at hand to control, to amend, to extend, and if need be to curtail the action of the new creation. If it passes the wit of man to devise a scheme for the retention of Irish members, it is still more impossible to conceive the drafting of any bill which will not for many years to come require to be overhauled and amended by the Imperial Parliament. The moment one single Irish representative is removed from the House of Commons, excepting on principles of redistribution applied impartially to the three kingdoms, the moral authority of Parliament is *pro tanto* weakened whenever a decision has to be pronounced in Irish affairs. If Home Rule works admirably, the Imperial Parliament will interfere only ' to make the bounds of freedom broader yet.' If it works badly, it will be convenient to have ready to hand for its improvement or its repeal the same supreme power which called it into being.

THE CONCLUSION OF THE WHOLE MATTER.

" All these considerations point to one and the same conclusion. If the whole question of the future position of Irish members in the Imperial Parliament be not relegated to the future, there is little chance of getting the Home Rule bill through the House of

Commons. It is to be hoped, therefore, that the November cabinets will take as their starting point—Home Rule First. If they insist upon binding up the creation of the new Parliament in Dublin indissolubly with the mutilation of the old Parliament in Westminster, they will practically have decided that we shall not get Home Rule at all. The separation of these two questions is the *sine qua non* of success."

AN IRISH-AMERICAN ON HOME RULE.

IN the current number of the *American Catholic Quarterly Review*, Mr. Bryan J. Clinch states with remarkable clearness the case of Ireland versus England. He regards the present time as the most critical period of history for Ireland's rights. He believes Mr. Gladstone to be sincere in the wish to secure to the Irish people complete control of their own country, subject only to an Imperial connection ; but he is fearful that the Home Rule majority in the House of Commons will be reduced by some sudden anti-Irish outburst, such as that caused by the dynamite explosions in London a few years ago. Mr. Clinch asserts that the bill introduced by Mr. Gladstone in 1886, with certain changes in the matter of Irish contributions to Imperial taxation and in the control of the police force, coupled with the retention of the Irish members in the British Parliament, embodies substantially the form of Irish Parliament which will be now proposed. The Home Rule bill of 1886 is described by Mr. Clinch as follows :

" In 1886 Mr. Gladstone proposed to place the government of Ireland in all domestic affairs in the hands of an Irish Legislature. That body was to have no share in the administration of the Empire at large, in the army or navy, in foreign relations of the Empire, or in control of its colonies. It was to pay a fixed contribution to the Imperial revenue, for general purposes, differing therein from Canada or Australia. The post-office, the mint and coinage, and the regulation of trade and navigation were also to be reserved to the Imperial Parliament, but on those points the author of the bill professed his readiness to accept changes if deemed desirable. The establishment of a State religion was also forbidden, and finally the constabulary force was to remain for a certain time subject to the English administration. The Viceroy was to be continued, but not as now, as the representative of each dominant party in Great Britain, but simply as a representative of the sovereign appointed for a term of years, independently of English party changes.

" The Irish ministry was to be responsible to the Irish Parliament in the same manner as the Imperial ministry is to the British Parliament at present, and the functions of the Viceroy would be similar to those performed by the sovereign in the English Government. The Lord-Lieutenant might veto the measures of the Irish Parliament, but his ministers would be practically unable to carry on the administration of an unpopular policy against the will of the legislature. Finally, the presence of the Irish mem-

bers in the Parliament at Westminster was to cease, and the members themselves, with an equal number of elected colleagues, were to constitute the first Irish House of Commons. The twenty-eight peers who now represent the Irish peerage in the English House of Lords were to be left to choose between seats in either house, and seventy-five additional members of the Upper Chamber were to be elected by a constituency more limited than the general body of voters.

“The kind of self-government which Mr. Gladstone proposes to secure to Ireland has been made sufficiently clear. It remains to consider whether it is sufficient for the needs of Ireland and the national aspirations of Irishmen. If fairly carried into effect we believe it will be found so. It would make Irish interests the interests of government in Ireland. It would put the laws and their administration in harmony with the sober judgment of the nation, in place of being, as they now too often are, in direct opposition both to the popular conscience and the true interests of the country. It would put the legislation and development of public education and of all public works under control of the Irish people, and would give a fair chance of arresting the ruin of all interests in Ireland which has now continued uninterruptedly for forty-five years. It would meet the national sentiment by the restoration of an Irish self-governed nationality, which could well afford to dispense with direct relations with other countries if left undisturbed in the management of its own. The fact that Gladstone's original bill of 1886 was accepted by the entire body of the Irish National representatives, including their then leader, Mr. Parnell, as a fair substitute for Grattan's Parliament is the strongest practical evidence that the Home Rule which it proposed is a genuine restoration of Irish National government.”

A GERMAN IDEAL EMPLOYER OF LABOR.

INDUSTRIAL conciliation is the order of the day. Employers of labor are waking up to the necessity and advantages of letting the most complete harmony possible reign among the great factors of production, and have instituted councils of arbitration to settle such little disputes as arise from time to time in large establishments, but which, when neglected or ignored, place social peace in peril.

Under a variety of names, these councils all make it their business to allow the working *personnel* of an industrial establishment to take part in the administration of the enterprise. Delegates are nominated by the workmen, and though their co-operation is more extensive in some factories than in others, they have generally a voice in such questions as hours of labor, wages and supervision of apprentices, while the technical and commercial guidance of the enterprise rests with the employers alone.

A recent number of the *Réforme Sociale* gave an account of the economic and social institutions of M. Brandts at München-Gladbach, and in a still later number M. Julien Weiler explained his ideas of in-

dustrial conciliation and the results obtained at Mariemont-Bascoup.

In the *Réforme Sociale* of October 16, Dr. Ernest Dubois describes the window-blind factory of Herr H. Freese at Berlin, with branch works at Hamburg, Leipsig, and Breslau, there being about 200 workmen engaged in the four establishments. Here the Council of Conciliation or the representation of the workmen (*Arbeitervertretung*) has been in existence since 1884, but it was reorganized in 1890. It consists of 15 members, four of whom are nominated by the director and the others by the workmen. All the workmen are electors, and they are eligible after six months' service in the factory. The elections take place at the beginning of every year. Last year the chief nominated a woman worker to sit on the council, and this year the workmen followed up the new departure by electing members from both sexes.

The council meets compulsorily once a quarter, and at other times at the summons of the chief or the workmen, to discuss the general interests of the factory and the concerns of the workmen, to settle disputes between workers, inflict fines, give advice in cases of complaint, discuss wages and the hours of labor. At the close of each meeting any workman may be admitted to make known his grievances—in a word, the thousands of little incidents which concern him and his life in the factory never have the chance of engendering revolts and other serious difficulties, for the frank explanation and the prompt solution dispel them at the outset.

The general regulations of the factory have been drafted by the employer and the representatives of the workmen. The working day is fixed at nine hours—six to five in summer and seven to half past six in winter, with two hours and a half for rest, except in rare cases provided for in the constitution. The workmen have rejected the eight hours' day. As soon as a change is proposed either by the manager or the workmen, it must receive common consent before it can become law.

Most of the work is piece-work. A very curious point is the wage tariff, which is fixed for two years in each department—always, of course, by common consent. During that period the contracting parties can make no change, and if no other proposition is accepted in the six weeks before the end of the term, the tariff continues in force for another period of two years.

“It was after full consideration of the matter that I decided on the two years,” says Herr Freese: “it is running some risk, but if I give up my right of reducing wages for two years, my workmen, on the other hand, understand that they can ask for no increase during the same period, and we have thus a certain term of tranquillity assured us. I have never had a strike, and that is worth a good deal. The tariffs, moreover, are arranged on terms extremely clear and fair for both parties, and I have not yet had occasion to repent my decision.”

Herr Freese, it should be added, is a firm believer in the principle of profit-sharing, which he has also

introduced into his establishments. Last year two per cent. of the net profits was distributed among all the workmen, no matter how long or how short a time they had been in his employ, and the sum paid to each was in proportion to the wages he was receiving. The institution of Herr Freese has found imitators in Germany, notably in the Brod-Fabrik (bread bakery) of Berlin. He is also one of the German champions of land nationalization.

THE REBIRTH OF THE TRADE GUILD.

A Hint From the British Labor Commission.

THERE are some who believe that there will be no diminution of the difficulties between labor and capital until the trades union has been transformed into the trades guild, and the employer, instead of dealing with the individual workman, will deal with the guild to which he belongs. Mr. John Rae, in the (English) *Economic Journal* for September, summarizes the evidence given by Mr. Wright, of the British Boiler Makers' Iron and Steel Shipbuilders' Association, in which we see, as it were, the beneficent transformation of the trades unions into something very much like the trades guilds. Mr. Rae says:

"This union was established in 1834, and has a membership of thirty-seven thousand three hundred, constituting 95 per cent. of the boilermakers and iron and steel shipbuilders of the United Kingdom. As it has increased in strength its relations with the employers have continually improved, and for the last eleven years it has spent only $3\frac{3}{4}$ per cent. of its income in dispute benefit, and even that has not been occasioned by real ruptures, but merely by delays in settling the new prices for piecework, which are rendered necessary by the technical changes that are constantly taking place. These delays, moreover, might be avoided entirely, and are already avoided entirely in some districts, by both parties agreeing to allow the work to go on pending settlement, so that the vessel is sometimes at sea before the price is fixed for plating her. The society is governed by an executive council of seven, who must all be members of ten years' standing and past officers either of the society or one of its branches, and who are elected, somewhat strangely, not by the whole body, but by the branches of the Tyne and Wear districts alone, in which also they live.

"Not a penny of the society's money can be spent in any dispute in any part of the United Kingdom without the sanction of the council, and its sanction is never given till it has first made efforts to compose the dispute. The society has a paid local agent in every district, and the first effort at arrangement is made by him, and is successful in nineteen cases out of twenty; but when he fails, the matter is referred to a conference between the council and the employers' representatives, at which nothing takes place but a simple interchange of views. If the first conference does not bring about a settlement they adjourn for a second and even a third, and they have

always hitherto come to an understanding in the end. They have never gone to arbitration, because they never required it, and the settlement has always been faithfully carried out, because the conference enabled both parties to see that no better terms were possible under the circumstances. Individuals, however, are sometimes prone to violate it, and to meet that difficulty this society has taken the unique step of undertaking a pecuniary responsibility for the good faith of its individual members.

"Other societies fine or expel disobedient members, but the society compensates the employer for breach of engagement by its members. Thus lately at Hartlepool ten men working on a vessel that was required in a hurry struck, contrary to agreement, for 2s. advance, and the firm wired to the Council of the Trades Union, who immediately wired back, "Pay the difference." This was done, and then, when the vessel was finished, the council compelled the members who had struck to refund the money, and sent the firm a cheque for the amount. Then, if any members of the society contract for work and leave it in an unfinished state, or make a bad job of it, or one not according to contract, the council undertakes to compensate the employers for the loss they have sustained. Three members left a contract unfinished recently, which cost the firm £10 to finish, and the council paid the £10, and then compelled the three members to make it good. Another member made a bad job of two boilers for an Isle of Wight firm, who complained to the council. The council sent an inspector to examine the work, and as he found the complaint just, and assessed the damage at £5, the council sent a cheque for that amount to the firm. Mr. Knight said the society was led to undertake this pecuniary responsibility for the good faith of its members, because they believed it would produce—as it had produced—more confidence in the society in the minds of the employers, and they were enabled to do it through the great strength of the society—numbering as it did 95 per cent. of the trade—and through the remarkable and willing acquiescence of the members in the autocratic authority of the executive. It need hardly be said that, with this experience of the efficiency of trades union agency, Mr. Knight was no believer in State interference with trade quarrels, with hours of labor, or anything else. 'I speak,' he says, 'from long experience of the organization I represent here, and I say that we can settle all our differences without any interference on the part of Parliament or anybody else.'"

In *Lucifer* an Indian writer gives an extraordinary account of a Yogi who, by constant practice, continued for twelve years, accustomed himself to sit in the midst of a flaming fire for two hours at a time, bearing an amount of heat that would have burned to ashes any other human being. He did this in order to be trained to be one of the leaders of mankind at the beginning of the new 5,000 years cycle. By these practices he would learn "to fly in the solar sphere," whatever that may mean.

WOMAN AS A SOCIAL WORKER.

IN the *Atlantic Monthly*, Rev. W. Dike, D.D., goes rather deep into the philosophy of education in the course of his essay on "Sociology in the Higher Education of Women," and comes out with the opinion that what may—with more or less propriety—be called the new science is of the utmost importance in the higher training of our women. Mr. Dike calls attention to the great good that has been accomplished by the banding together for social work of both women and men in our cities and towns. "What is called evangelistic work is in danger of being narrow, short-sighted and ephemeral, unless it be led to vitalize the whole social life of these communities. So strongly am I impressed with this conviction that I often think that it would be a great religious gain if one-fourth of all the ministers of three such States as Maine, New Hampshire and Vermont could be dismissed, and half as many devoted Christian women, highly educated and specially trained in social problems, could take their places." Not to preach sermons from the pulpit is Mr. Dike's idea; but to become leaders in the plans of the village community, to do university extension work, to lecture—perhaps in the leisure hours left by the demands of their homes.

The writer examines the curricula of our woman's colleges, and does not find that there is sufficient specific training for this sort of work. To remedy this he advises the introduction of a course in sociology, running through a year, of three or four hours a week, even though other subjects may have to suffer. "At least one course on the family should be required. The family in its present and past constitutions and relations; its relations to the individual, to man, to woman and to children; its great function in religion, industry, education and the State, is of the greatest practical importance. We should include the house and homestead, going over the entire range of domestic science."

A WORKMAN ON WORKINGMEN.

THE *Century* prints some "Plain Words to Workingmen," by Fred Woodrow, who subscribes himself "One of Them." It is anything rather than blatant complaints and accusations that Mr. Woodrow has to give us; indeed, he prefaces his article by a very plain statement of the faults and follies of his colleagues. Passing over these, which are rather apparent, let us hear what the workingman has to say on the subject of co-operation and profit-sharing: "We are grumbling, and very rightly, too, about the way the money runs; most of it, like the rain on a roof, into a few big tubs and sparing only some chance pailfuls for the rest of us. By co-operation we can change this system of big water pipes and do some good plumbing on our own account. There are some men in the world who would persuade us that the inequalities of wealth can be removed by anarchy and revolution—by upsetting the farmer's wagon and having a general good time in eating his watermelons. They teach us the doctrine of a forcible divis-

ion of all things, so that no man's share of gold and silver, beef, mutton, cake and pie shall be more than any other's. It never was, never can and never will be done. A given amount of work or investment has its legitimate results. We may not get it in every case; but when we do no man has the right to the eggs so long as we own the hens, or the crop so long as we paid for the seed and did our own plowing. What we want is not a division, but a system of co-operation and profit-sharing that is distributive without being unjust. To bring about such a system is one of our aims, and, like all other things worth having, it will be on the line of hard work, common sense and fair play. The principle of co-operation goes to show that the wrongs of industrial life at which we kick are most of them removable by judicious methods, and not by any other means that we know of.

"The idea of profit-sharing is in the same direction, though not so far advanced, as co-operation. It is not a move from the labor side, but from that of capital toward labor, by giving it a share in the profits of its investment. It is a step upstairs, and its application and benefits depend on ourselves. It is a matter of much promise to us workers, as recognizing faithful service, energy and well-doing. It meets us in our want of capital by giving us a share of investments toward which we could not spare a dollar, and it is adaptable to our present condition of ignorance (most of us with no knowledge or tact whatever) in the manipulation of money and the management of business. We look upon profit-sharing as a step on the line of progress, and as indicating on the part of employers a wise and manly intent to make our lot better than it is."

THE PLAYTHINGS OF FAMOUS SOVEREIGNS.

A PROPOS of the recent discovery of the Queen's dolls at Buckingham Palace, the *Revue de Famille* of October 15 has a note on the favorite playthings of some other monarchs, suggesting also that a curious and interesting monograph, with the Queen's dolls as a starting point, might be written under the title of "The Playthings of Sovereigns."

THE QUEEN'S DOLLS.

The writer imagines that did etiquette but permit it the Queen must have longed to be alone again with her old playthings, for which she had still a deep affection, and that it must have been touching to see the woman of seventy-three, in all her glory as Queen and Empress, examine the old dolls in their faded blue and pink ribbons. Doubtless, too, she was unable to restrain a tear at the sight of them, for the little incident must have reminded her of the frailty of existence and recalled to her memory those she has had around her and those who have been taken since the happy days of her youth, when she made the dresses for the somewhat grotesque little personages just rescued and made famous.

NICHOLAS' SOLDIERS.

Like many other sovereigns, the writer tells us, Nicholas I., of Russia, liked to play at soldiers; but he did not content himself with making the squadrons of his guard pass before him; he played at soldiers with dolls. About 1836 it occurred to him that he would have new uniforms for the whole Russian army. Accordingly he got the most skillful painters to design costumes while he corrected the colors. Then he got the best sculptors to execute forty figures, about 20 inches in height; some of foot soldiers carrying their arms on their shoulders, and others of soldiers on horseback, with their sabres in their hands. Each figure, admirably modeled and colored, was then dressed in uniforms of the patterns corrected and selected by the Emperor, and the effect was so good that the uniforms were ordered to be adopted by the different corps of the army; while in his work-room at Krasnoïé-Selo, he erected a large cupboard with glass doors in which to store his models of the various types of Russian soldiers of 1840.

NAPOLEON'S MILITARY STATUETTES.

Napoleon III. also had a collection of military dolls, some of which, being made of bronze, have survived. Frémiet, of the Institut, was the author of them. One night, when passing the Tuileries, where a ball was being given, Frémiet was attracted by the way the mounted guard stood motionless at the doors of the palace in the square covered with snow.

Next day he made a little sketch of the soldier. M. de Nieuwerkerke saw it, spoke of it to the Emperor, and eventually asked the sculptor to make a series of similar statuettes to represent all the types in the French army. Frémiet did so well that the Emperor, struck with the scrupulous accuracy of the dress and harness of the little models, asked the artist if they could not also be colored. To say that Frémiet was delighted with the idea and found it artistic would perhaps be presumptuous; but request from such a high quarter had to be granted, and so he set to work. He was not satisfied with merely painting the blue coats and red trousers on the plaster. As still-life deception was wanted, he was anxious that it should be as perfect as possible, and that the cloth, like the metal for the weapons, should have the appearance of reality.

He imitated the cloth by sprinkling a powder over the plaster similar to that used for making velvet paper, and the stripes were represented by silk threads, so that the whole should be quite correct. Kid gloves were utilized for the harness of the horses. The arms, which were all of metal, required the greatest care, but every item was identical with the original. Even on the buttons, which were only a millimetre in diameter, the Imperial Eagle was discernible. Moreover, the artist had the patience to mould 362 pieces of metal for one battery. In ten years, 1855-1865, he had completed seventy such figures, and they were placed in glass cases in the Palace of the Tuileries.

One day when the Prince Imperial was playing with young Fleury, he came across the little soldiers,

and, thinking they were playthings intended for him, asked for them. His tutor granted the request, and the son of the Emperor and the son of the General played at battles with them; and it may be easily guessed what, in such terrible hands, was the end of the delicate little figures. Frémiet repaired them, but they seemed destined to destruction, only one escaping in the fire of the Tuileries, and that only because it happened to be at the house of General Fleury at the time. A few others, made of bronze, also survive, and one of them, colored and draped by Baron Desnoyers de Noirmont as a hussar of the fourth regiment, is still in his possession.

Such is the history of the playthings of Napoleon III, which were swept away in the same storm which overturned the throne and the dynasty.

A UNIVERSAL LANGUAGE.

IN the November *Cosmopolitan* Maltus Questell Holyoake reviews the past history and present possibilities of the efforts toward "A Cosmopolitan Language," which the astonishingly rapid advance toward internationalism makes almost imminent. Mr. Holyoake himself is well known, especially across the water, as the originator and agitator of a plan for holding a great conference of the "Ministers of Education of all nations, who should agree upon one language to be taught (in addition to the native language of each country) in all schools, such selected additional language to be the same in all countries." Such men as Matthew Arnold, Max Müller, Mr. Gladstone and John Bright were much and actively interested in the idea. Mr. Holyoake evidently inclines to the view that English is the language to be selected, though he admits the objection of illogicality in construction. English is already spoken by over 100,000,000 of people, and we have Mr. Gladstone's prophecy that 100 years will see the number increased to 1,000,000,000. Mr. Holyoake's enumeration of the advantages we might derive from a universal tongue is worth quoting:

"Books printed in an accepted international language would be read by the universe. It could be truly said of such publications that 'their lines are gone out into all the earth, and their words to the end of the world.' Publishers could fairly hope to reap profits when authors had the world for readers. Newspapers and magazines, printed in a truly universal language, would contain advertisements which would be read by the entire globe. Placards printed in the universal language could be exhibited in every city in the world, and read and understood by people of every nation. The necessity for learning many of the European and Asiatic languages spoken would cease. Everyone knowing a universal language, people could travel round the world with the knowledge and certainty that if they could not speak the native languages of the countries through which they passed they could speak a language which all the inhabitants understood. The subjects to be studied are so numerous in these days of examinations that any action tending to reduce the number of languages to be

learned would be a boon. Few people can learn and retain many languages which require to be spoken only occasionally; but one language, daily and universally spoken, would be easy to recollect, and it would not take this generation of adults long to learn.

“Travel is a potent and pleasant educational influence; it brightens the faculties and expands the ideas. The ‘grand tour’ of the past has become the ‘personally conducted’ excursion to everywhere of the present. There are, however, many thousands of people who would travel, but who never have traveled and never will travel if they have to be driven, like sheep, in the charge of a linguistic shepherd.

“The relief of congested districts and the condition of the industrial classes from time to time engages the attention of statesmen in all civilized countries. It is not difficult to see the many benefits that would accrue to the world of labor by the establishment of an international language.

“It would be perfectly possible, were a common tongue established, for the inhabitants of twenty different countries to converse. A universal language need not necessarily lead to the suppression of any language, and would not imperil the individuality of any nation. It would merely be a supplementary means of lingual communication throughout the world, an additional language to be learned in one country.”

LETTERS OF TWO BROTHERS.

A VERY pleasant and valuable feature of the November *Century* is the collection of certain letters passing between General Sherman and his brother John, edited by Rachel Ewing Sherman. They are entirely free, in the form presented to us, of the objections so common to such magazine attractions, of being taken up with undue personal and family subjects; and in addition to the new and clear insight which they afford into the lives and characters of those strong and noble men they are interesting in the true conception they give of the political and social atmosphere in those very electric years of '59 to '61. The correspondence opens between John Sherman in the North, busy with national politics, and William T. Sherman in Louisiana, at the head of the State military school in Alexandria. We find the soldier writing to his brother from Dixie with frequent exhortations to moderation in his attitude and utterances on the questions which were then brewing the Civil War. “Each State,” writes the soldier in 1859, “has a perfect right to its own local policy, and a majority in Congress has an absolute right to govern the whole country; but the North, being so strong in every sense of the term, can well afford to be generous, even to making reasonable concessions to the weakness and prejudices of the South. If Southern representatives will thrust slavery into every local question, they must expect the consequences and be outvoted; but the union of States, and the general union of sentiment throughout all our nation, are so important to the honor and glory of

the Confederacy that I should like to see your position yet more moderate.” And immediately afterward we have William Sherman writing a strong condemnation of his brother's action in signing the *Helper* book, a tract arguing for abolition. “Now I hoped you would be theoretical and not practical, for practical abolition is disunion, civil war and anarchy universal on this continent.” John Sherman's reply acknowledges the error, stating that it was much through inadvertence that his signature was obtained.

But when the crash came, and there was no longer possibility for the exercise of tact and indulgence or neutrality, William Sherman promptly tendered his resignation to the Governor of Louisiana—accepted in a note full of admiration and esteem—and repaired to the North to eventually obtain a colonelcy in the regular army and begin his famous military career.

Both brothers had for some time foreseen the crisis; indeed, their clear prophetic vision of the “course of things” is one of the charms of these letters, seen in retrospect. In the spring of '61, John Sherman says: “I look for preliminary defeats, for the rebels have arms, organization, unity; but this advantage will not last long. The government will maintain itself, or our Northern people are the veriest poltroons that ever disgraced humanity. For me, I am for a war that will either establish or overthrow the government and will purify the atmosphere of political life.”

And in another letter: “Let me now record a prediction. Whatever you may think of the signs of the times, the government will rise from this strife greater, stronger and more prosperous than ever. It will display energy and military power. The men who have confidence in it, and do their full duty by it, may reap whatever there is of honor or profit in public life, while those who look on merely as spectators in the storm will fail to discharge the highest duty of a citizen.”

FICTION FOR YOUNG FOLK.

An Improved Brand Wanted.

WHEN we get beyond the stage of “Jack and the Beanstalk,” “Sinbad the Sailor,” “Bluebeard” and “Dick Whittington,” and again beyond the stage of “Robinson Crusoe” and “The Pilgrim's Progress,” we enter a realm of fiction which, like all the other realms, seems amply wide enough. According to a slashing writer in the current number of the *Church Quarterly*, there is in this particular realm of literature much more quantity than quality. Books abound, he says, the drift of which often is to produce precocious moralizing and to do more harm than good. Perhaps the writer is sometimes extreme in his assertions, but there is so much of good sense and so little of cant in the article that everybody may read it with advantage.

THE BAD NOVEL.

Remarking that the young folk nowadays are allowed to plunge headlong into the world's follies and

frauds and falsehoods, and can never, it seems, too early get a glimpse of the seamy side of life, the writer proceeds: "It is said, on good authority, that about eight hundred novels are published every year in England; most of them within the reach of young readers, and mainly depending—for interest—on vicious plots. A *vicious* plot is where some crime or violation of the moral law is the chief incident of the story, on which the whole turns, and in which the hero or heroine plays a vital part—though it be wrapped in mystery to the end. This central idea may be murder, bigamy, theft, burglary, abduction, embezzlement or forgery; elopement, ending in the divorce court; or a sudden disappearance, ending at the Old Bailey."

SUPPLY AND DEMAND.

Another class of novels, in which untrained writers plunge into the deepest problems of life, the reviewer censures in scathing terms. And yet, says he: "If we are to believe one of the most facile and popular of such authors, the whole question is simply one of supply and demand. The publisher, we are told, orders such and such a book, staid or sentimental, skeptical or orthodox, just according to the prevailing fashion or craze, and the writer of fiction obeys. He is told not to tread too hard on the favorite corns of the public; the thing must be cunningly wrought, amusing—bloody, if you like—sensational and exciting; to go with the age and follow the popular demand. He might, of course, do otherwise and better, but he would find no readers, and so the thing would not pay. If the matter stands really thus (and the author speaks after considerable experience in the manufacture of such books), no wonder that volume after volume of poisonous trash appears, and is devoured by thousands of hungry readers with an appetite that grows coarser by what it feeds on."

OLD AND NEW.

We must all agree with the reviewer in looking back with regret from such sickly trash as this to "Robinson Crusoe," "Evenings at Home," and the fairy stories of the children of other days: "There is still a good supply of healthy fiction from writers who have done their best in the cause of sound teaching, beauty, grace and truth to purify the taste, delight the imagination and charm the fancy. There is hardly need to mention the names of such writers as Oliphant, Yonge, Christie Murray, Black, Jean Ingelow, Besant and Barrie; or such books as "Tom Browne," "Jan of the Mill," "Lorna Doone," or "Alice in Wonderland." Their name is legion, their praise in every mouth."

A WORD TO THE SOCIETIES.

In respect of providing sound, healthy, high-toned and religious reading for young folk, the reviewer has weighed and found wanting the Society for Promoting Christian Knowledge and the Religious Tract Society. Their output, he thinks, is very meagre and unsatisfactory.

"But the Society for Promoting Christian Knowledge is a Church society, richly endowed, conducted

by able men, and, apart from all its direct religious teaching, ought to provide an ample and magnificent supply of sound, wholesome and high-class fiction for young people. For doctrine, science, and as pure literature, their juvenile books should take the highest rank. They who know them best cannot bestow any such commendation, but are sometimes driven to use such descriptive words as twaddle or wishy-washy, no salt, not a spark of fire, no flame of living truth. One result of this is that thousands of young readers, yawning over the Society for Promoting Christian Knowledge, seek for food and amusement elsewhere."

THE EMPTY EASY CHAIR.

THE November *Harper's* contains the last of those perfect little essays that used to bring us face to face in kindly chat with that fine thinker and noble man, George William Curtis. This final utterance of the "Easy Chair" is a word concerning our observance of Christmas. Mr. Curtis speaks of the inevitable degradation of the New Year celebration as towns grew into great cities, and its merited discontinuance. "Christmas has a deeper hold and a humaner significance than the old Dutch New Year. But how much of its charm as we feel it in English literature and tradition, how much of the sweet and hallowed association with which it is invested, are we retaining, and what are we substituting for it?"

"Christmas is made miserable to the Timminses because they feel that they must spend lavishly to buy gifts like their richer neighbors. They thank God with warmth that Christmas comes but once a year. It is becoming a vulgar day—a day not of domestic pleasure, but of ruinous rivalry in extravagance; a day to be deprecated rather than welcomed. Are not the Timminses legion? Is there not reason in their dread of Christmas because of the sordid and mercenary standards by which it is measured? The same good sense that sees the folly of Timminses' little dinner and avoids it can stay the abuse and regenerate Christmas. It is essentially a day of human good-will. It commemorates the spirit of the brotherhood of men. You cannot buy Christmas at the shops, and a sign of friendly sympathy costs little. If the extravagance of funerals is such that a great society is organized to withstand it, should not the extravagance of Christmas cause every honest man and woman practically to protest by refusing to yield to the extravagance?"

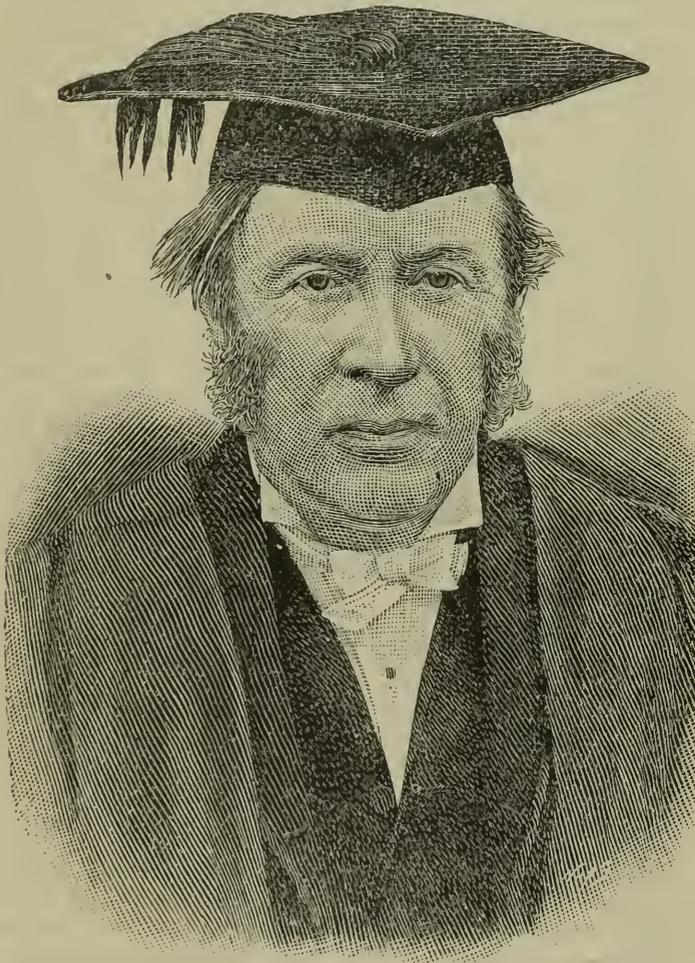

HARPERS' TRIBUTE TO MR. CURTIS.

Following these words of the "Easy Chair," some one of his associates has penned an eloquent tribute beside lines of mourning. "His love of goodness and beauty was a passion. He would fain have seen that all was fair and good, and he strove to find it so; finding it otherwise, he strove to make it so. Thus, with no heart for satire, yet the discord that fell upon his sensitive ear made itself felt in his dauntless comment upon social shams and falsehoods, and through his whole career as a writer he was often compelled to don the habit he was most loth to wear. Not thus

unwilling did he take up arms against the dragon wrongs which assailed the nation's heart—for he was the best knight of our time, a genuine crusader. Unwaveringly he met the bitter scoff of the discomfited foe whose disguises he had penetrated, and the jeers of the censorious partisan. There was no uncertain sound in the clarion notes of his challenge to battle. But he was a lover of peace, and the retirement of his library and of his Ashfield home was dearer to him than the applause of the Senate Chamber or the triumphs of diplomacy to the most stately of European courts."

A PROTESTANT PILGRIMAGE TO ROME.

THE great success which has attended the pious picnic to Grindelwald has inspired Dr. Lunn with an even more ambitious undertaking. Rome did not go to Grindelwald, the gathering there being exclusively composed of members of Protestant Churches. As Rome did not go to Grindelwald, Grindelwald must go to Rome; and Dr. Lunn, in the *Review of the Churches*, announces that early in the spring of next year a pilgrim party of pious picnickers will leave for the City of the Popes in order that they may have the opportunity of celebrating Easter in St. Peter's. The cost of the trip, including traveling and first-class hotel expenses, from March 21st to April 8th, will be \$100. The party will arrive in Rome on the Saturday before Palm Sunday, and remain there until Easter Tuesday. In order that the pilgrims

PROFESSOR MAHAFFY.

REV. H. R. HAWEIS.

may understand the true inwardness of the sights they will see, they will be accompanied by Dr. Mahaffy, professor of Ancient History in the University of Dublin, and the Rev. H. R. Haweis, who, for the last 30 years, has taken a close personal interest in the fortunes of the Italian people. He was a friend of Garibaldi, and can talk by the hour concerning Pio Nono, Victor Emmanuel, Cavour, and all the celebrities who took part in the great drama of Italian regeneration. The trip will be made *via* Lucerne, where the party will rest for one day. They will then proceed by Milan to Rome, returning by Genoa and Strasburg. Arrangements have not yet been perfected for receiving the pilgrims in audience at the Vatican, but it is understood that Dr. Lunn does not despair of conducting his pious picnickers to the foot of the Pontifical throne. The arrangements for this tour are in the hands of Mr. J. T. Woolryche Perowne, the son of the Bishop of Worcester. Dr. Lunn has also arranged for a pilgrimage to Chautauqua in connection with Mr. Robert Mitchell's Polytechnic excursion.

THE Rev. James Macdonald, writing in *Folk Lore* on "Bantu Customs and Legends," says the Africans' ways often reminded him in the most unexpected manner of the legends of ancient Greece and Rome. If the Bantu and the Greek and Roman legends had not a common origin, it is at any rate clear that the civilizations of the East and West grew from certain primitive ideas common to the human race.

THE PERIODICALS REVIEWED.

THE FORUM.

IN our department "Leading Articles of the Month" will be found reviews of the three papers, "Municipal Institutions in America," by the Rt. Hon. Joseph Chamberlain; "The Schools of Buffalo and Cincinnati," by Dr. J. M. Rice, and "Endowed Theatres and the American Stage," by Madame Modjeska.

HULL HOUSE AS A SOCIAL FACTOR.

"A New Impulse to an Old Gospel" is the subject of a paper by Miss Jane Addams, who treats of the necessity in cities for such social organizations as Hull House, Chicago, of which she was one of the founders. Hull House, she explains, is not a University Settlement, but is distinctly a Social Settlement, which aims to "make social intercourse express the growing sense of the economic unity of society. It is an attempt to add the social function to democracy. It was opened on the theory that the dependence of classes on each other is reciprocal; and that as the social relation is essentially a reciprocal relation, it gave a form of expression that has peculiar value."

THE PLANET MARS.

Professor Edward S. Holden, director of the Lick Observatory, contributes a paper on "What We Really Know About Mars," which he sums up as follows: "The three views which have just been given are representative; all of them are based on serious study, and at least two of them may be taken as authoritative. M. Flammarion regards it as very probable that the dark areas of Mars are water and the bright ones land. Professor Schaeberle's observations with the greatest telescope in the world, under the best possible conditions, lead him to precisely opposite conclusions. Mr. Brett doubts if land and water exist on Mars at all, and gives good reasons for deciding that the planet is in a heated state—as we suppose Jupiter to be, for example. Telescopic observations show that the planet Venus appears to a distant observer far more nearly like the earth than does Mars. When we come to an examination of the particularities of Mars' surface we find dissimilarity and not likeness to details of the earth's. Under these circumstances and so long as such widely divergent views can be advocated by competent observers, it appears to me that the wise course is to reserve judgment and to strive for more light. I feel certain that when a satisfactory explanation is finally reached, the Lick Observatory will be found to have contributed its share to the solution."

THE SMALL FARMER.

Professor R. Means Davis, in his article "The Matter with the Small Farmer," seeks to show that many of the most serious burdens resting on this class are imposed by natural causes, such as the exhaustion of farm lands and the competition of the large farms of the West. He suggests as a remedy "that the small farmer should more and more endeavor to leave the production of the staple crops to large planters and devote himself to 'small farming' indeed. He has muscle and he has land in plenty. He greatly needs capital to utilize them to the best advan-

tage. Denunciation of railroads, factories and banks will hardly make him more prosperous."

THE LIBRARY OF THE UNITED STATES.

Librarian Ainsworth R. Spofford has an article stocked with information on the Library of the United States. The new library building at Washington, he tells us, covers almost three acres of ground, and will provide room for the nation's books for nearly two centuries to come. The library contains at present 650,000 volumes, besides hundreds of thousands of manuscripts, maps, pamphlets and newspapers. The number of publications registered for copyright in each year has increased from 5,600 in 1870 to 48,908 in 1891. He is of the opinion that through the new International Copyright Law the receipts of publications of all kinds at the Congressional Library will be largely increased.

THE NORTH AMERICAN REVIEW.

WE have reviewed in another department President E. Benjamin Andrews' article, "Are There Too Many of Us?" and Mgr. O'Reilly's on "How to Solve the School Question."

SCANDINAVIANS IN THE UNITED STATES.

Professor Hjalmar Hjorth Boyesen writes of the Scandinavians in the United States. He asserts that there is no other class of immigrants which is so easily assimilated. Trained to industry, frugality and self-reliance by the free institutions and the scant resources of their native lands, the immigrants from Norway and Sweden adapt themselves with great ease to American institutions. "They come here with no millennial expectations, doomed to bitter disappointment, but with the hope of gaining, by hard and unremitting toil, a modest competency. They demand less of life than Continental immigrants of the corresponding class, and they usually, for this very reason, attain more. The instinct to save is strong in the majority of them; and save they do, when their neighbors of less frugal habits are running behind. The poor soil of the old land and the hardships incident upon a rough climate have accustomed them to a struggle for existence scarcely less severe than that of the Western pioneer, and unilluminated by any hope of improved conditions in the future. The qualities of perseverance, thrift and a sturdy sense of independence which this struggle from generation to generation has developed are the very ones which must form the corner stone of an enduring republic."

Mr. Boyesen explains that the chief reason why Scandinavians in the United States are so largely Republican is that a large majority of the old settlers served in the Federal Army during the Civil War. He estimates the total Scandinavian population of the country (counting only actual immigrants) at about 750,000.

CHOLERA AND COMMERCE.

Mr. Erastus Wiman estimates the effect which would be produced on American commerce in the event of an epidemic of cholera in this country. "If the receipts of transportation were to be cut down twenty-five per cent., a financial disaster would occur of the first magnitude.

As a rule the surplus over operating expenses of average transportation facilities do not exceed twenty-five per cent., and it is with this surplus that interest, fixed charges and dividends are paid. If these were to stop, the extent of the calamity would be next to universal. Following this, however, would be the result that the entire monetary circles of the country would be most seriously affected. Not only would speculation be paralyzed and all new enterprises be checked, but even for the legitimate wants of business the monetary accommodations would be wanting. The loss of confidence would restrict loans, lessen deposits, and generally contract the policy of every financial institution in the country. The result would be an almost total cessation of new purchases; and credit, that blessed hand-maid of commerce, would receive so severe a shock as to be for the moment almost beyond recovery. The results of this would be that the earning power of banking institutions throughout the land would almost cease, and in connection with the investments in railroads and steamboat lines there would be a cessation of revenue almost universal among the class dependent upon dividend returns. The income of capitalists would thus largely sink out of sight, and with this also the ability to buy and pay for the articles, the sale of which yields the profit for the great rank and file of retailers, who supply the wants of those whose incomes are steady and liberal. These retailers, in their turn, would be unable to pay their obligations, much less to make new purchases, and would be seriously embarrassed, their employees and their families all sharing in the general disaster."

QUARANTINE AT NEW YORK.

Dr. W. T. Jenkins, Health Officer of the port of New York, gives an account of his work during the recent invasion of cholera, and points out some of the defects in the equipment of the health department of New York which should be at once remedied. The needs are not very many. There should be a cholera station between Hoffman and Swinburne Islands having an area of ten acres. It should be equipped with a pavilion large enough to hold 100,000 persons, and supplied with necessary disinfecting apparatus. There should be purchased by the State a fast tug for the use of the health officer, one boarding tug for his assistants, one large transfer boat in which to move immigrants, and one large boat for the sick and suspects. Besides, there should be an emergency fund of \$50,000, aside from the regular quarantine fund.

RUSSIA AND GERMANY AT THE WORLD'S FAIR.

The American Consuls-General at Berlin and St. Petersburg forecast the part Germany and Russia will take in the coming World's Fair at Chicago. One of the most notable features of the German display will be, we are told, the department of women's work, which will show the work of German women in art and domestic work, social and verein work, in the work of charity, and in children's care and education; and will also show the working of the Kindergarten system and the Fresh Air Fund as they are carried on in Germany.

POLITICS AND THE PULPIT.

Bishop Cyrus D. Foss, of the Methodist Episcopal Church, gives his opinion as to the proper relations of Christian ministers to political questions. He holds that it is one of the chief functions of the Church to denounce sin wherever it may be found intrenched behind political barricades. "Pre-eminently it is the function of the Church and of the pulpit in this age to mediate between capital and labor, and with ceaseless assiduity to fill the awful chasm between wealth and poverty."

THE NEW REVIEW.

MR. McCARTHY praises Mr. Morley, and Mr. T. W. Russell puts the other side of the case. Mr. McCarthy calls upon Mr. Morley to clear out the castle, and applauds him for appointing the Evicted Tenants' Commission, especially praising him for making Mr. Justice Mathew president. He urges him to pack the magisterial bench with Nationalist J. P.'s. He finishes up by saying that he knows Mr. Morley means well, and he is glad to see that so far he has done well. Mr. Russell dwells upon Mr. Morley's position as the factotum of Archbishop Walsh.

THE PETRIE PAPYRI.

Mr. Mahaffy describes the papers which have been rescued from the mummies in the Fayum. In the third century wood was scarce in Egypt, and the coffins were constructed from masses of waste paper, which was glued together in layers and was then coated within and without with clay. The papers from which these coffins were made were torn into pieces of moderate size. The writing is spoiled in many places by the clay coating, and the whole seems to have been mixed with deliberate intention. But Mr. Petrie and a company of learned scholars, of whom Mr. Mahaffy is one, have been employed during the last two years in cleaning, deciphering, guessing and combining, until it is now possible to form some idea of what has been recovered from the past. There was the whole concluding scene of a lost play of Euripides and some remains of thirty-five lines of the "Iliad." This is the oldest copy of the "Iliad" that has been found. There were three pages of the "Phædo" of Plato, but the bulk of the documents are papers which throw light upon the social condition of the Fayum. Mr. Mahaffy is an interesting writer, and his paper is a very readable account of an extraordinary recovery of the records of bygone times.

THE GOLF MANIA.

Mr. L. F. Austin has a pleasantly written paper in which he discusses the question of the degeneracy of the British oarsman, taking as his text, of course, the recent defeat by the French. His paper takes the form, to some extent, of a plea for rowing as against golf. After referring to the dangers of cycling to the constitution, he thus retorts on the golfers:

"Is not more to be feared from the absorbing pursuit that has converted our country commons into sieves and covered them with the red flags of danger? The bicycle chest may be dreadful, but I think the golf straddle, the golf waggle and the golf twist are at least as alarming. Whenever I meet a friend coming along Pall Mall with his legs wide apart, his head and shoulders twisted around backward, and his hands aimlessly swaying his umbrella, I know at once what has happened to him. The golf bacillus has got him. Henceforth, though he may be a good husband, an indulgent father, a kind friend and a sound man of business, he is lost—hopelessly, irretrievably lost. The beautiful sights and sounds of nature have for him no sweetness (unless, indeed, that sweetness be linked and drawn out over eighteen holes). He who in happier days was content to argue on foreign policy or the latest literary marvel now discusses with a fatal zest the last attempt of the Royal and Ancient Golf Club to codify its rules and bring them down to the level of the Southern understanding; his dreams are disturbed by nightmare visions of bunkers; his days are made hateful to him by stimies, and he would think nothing of losing the world if only he could manage not to miss the globe. Truly, a terrible picture!"

THE CONTEMPORARY REVIEW.

WE notice elsewhere the papers by Mr. Mather on the "Eight Hours Question," Gabriel Monod on "M. Rénan," and Mr. Stead's article on "The Sine Quâ Non of Home Rule." The other articles are of more general interest.

AN EPILEPTIC COLONY.

The most useful is the paper by Edith Sellers describing the epileptic colony at Bielefeld. It was established twenty-seven years ago, and has done exceedingly good work ever since. It began in a small way, but now the colony has 1,100 inmates and its value is estimated at \$665,000. There is a deficiency of \$75,000 a year in the working of the colony. The average cost per inmate is about \$125 a year, of which they pay about \$60 a year each. The women are much more unmanageable than the men, and the epileptic children curiously enough are said to be much more merry and light-hearted than other children.

GOETHE AS A MINISTER OF STATE.

Mr. Henry W. Nevins discusses the question as to whether or not Goethe was wise in spending so much of his time in administering the petty affairs of Weimar. He inclines to think that he did right, not because he did any good to Weimar, but because the work of looking after the affairs of the State tended to educate him and make him a more useful man of letters.

"To the open activity of his public life may be attributed his unfaltering sanity, and the sense of proportion which made him so indifferent to the opinion of others. No labor, no adventure, not even drudgery came amiss. We find him directing the mines at Ilmenau, relieving the destitute weavers of Apolda, converting the barbaric university of Jena into the true home of German thought, prescribing for the cattle plague, choosing recruits for the little army, repairing roads, traveling with unwearied rapidity up and down the State, riding out night after night to the scene of some distant conflagration among the wooden cottages of the peasants. And it was all done without a trace of philanthropic unction, but simply with that high stoicism which we have been told is characteristic of a naturally aristocratic mind. Patience and long endurance among the complexities and compromises of actual life gave him a close sympathy with all classes, and an intimate knowledge of the poor, such as the eager democrat, though much occupied with discussing schemes for their amelioration, is often too busy or too fastidious to obtain. 'What admiration I feel,' he writes from among the miners of the Harz, 'for that class of men which is called the lower, but which in God's sight is certainly the highest. Among them we find all the virtues together—moderation, content, uprightness, good faith, joy over the smallest blessing, harmlessness, patience; but I must not lose myself in exclamations.'"

HOW THE HIGH CHURCH PARTY STANDS NOW.

Mr. Gilbert Child points out that the High Church party have practically confessed that their favorite doctrine as to the essentially clerical and Catholic character of the so-called reformation is not true. He complains, however, that they continue to trade upon the falsehood which they have now discovered. He uses with great force Mr. Palmer's account of his mission to Russia, where he went to see if he could procure from the Russian Church some recognition of the essentially Catholic character of Anglicanism. The Russians simply laughed him to scorn, and told him to make peace with the Pope first before he came to talk of reunion with them.

OTHER ARTICLES.

Mary Darmesteter has a charming description of her "Impression of Provence." Phil Robinson describes "Bird Life in an Orchard in the Autumn," and Vernon Lee publishes a dialogue concerning the "Spiritual Life," which, we fear, is somewhat too subtle to impress the mind of the general reader.

THE FORTNIGHTLY REVIEW.

THE *Fortnightly* is a good, readable number. We notice elsewhere the articles by Professor Huxley and J. B. Bury, as well as those on M. Rénan.

OUR MOLTEN GLOBE.

Mr. A. R. Wallace gives a popular account of the work of the Rev. Osborn Fisher, who has demonstrated to the satisfaction of Mr. Wallace the fact that the world, instead of having a crust of a thousand miles thick and a core of fire, is in reality a great molten globe, skinned over by a crust of earth only eighteen miles thick. An ordinary india-rubber ball with which a child plays has a larger proportion of crust to the internal air than what our earth has to the molten interior. Mr. Wallace points out the various arguments upon which this calculation is based, giving the first place naturally to the fact that every fifty feet you go down into the earth you get one degree hotter—a rule which prevails even in the coldest parts of Siberia, where the ground is frozen to a depth of sixty feet. According to this theory, mountains float upon the molten interior as icebergs in the water. This is ascertained by the pendulum and also the plumb line. Mr. Wallace concludes his article with the consolatory reflection that the near proximity of such an immense amount of heat renders it possible that we might be able to tap it and use it for the service of man.

HOME RULERS AND THE VETO.

Mr. William O'Brien has an article on Mr. Morley's task in Ireland, in which he says a good many things fairly well. His most important point is that in which he belittles the importance of the veto by the Imperial Government.

"The veto is a question rich in pedantic controversies and obstructive possibilities, but of little practical moment to two nations honestly determined upon reconciliation. The Colonial Secretary's power of overhauling the affairs of Canadian and Australian colonies at will is the veto in the most objectionable form it could well assume; yet what Colonial Secretary's office would be worth a week's purchase if he proceeded to play Cæsar over the elected representatives of Victoria or the Dominion? Supremacy, yes; meddlesomeness, no. What we are entitled to have substantially ensured is that so long as it acts within the range of its delegated or exempted powers, the Irish Parliament shall be free from meddlesomeness or malicious interposition from Westminster by a majority which, for all we know, might be a majority led by Mr. Balfour. That is obviously a requirement as necessary to the comfort of the Imperial Parliament as to the dignity of the Irish Parliament, and is the first condition of the successful working of any Home Rule scheme at all. We do not believe statesmanship will have more difficulty in devising a sensible plan by which the Imperial and Irish Parliaments will move harmoniously together, each in its own circle, than has been found in grouping the forty-four American States around Washington, or in keeping twenty parliaments in healthy activity within the British Empire."

OTHER ARTICLES.

There is a pleasant, gossipy article concerning "Barmese Traits," by H. C. Moore. A Frenchwoman describes a Woman's Art Exhibition in Paris. Mr. Arthur F. Leach claims for the Grammar School of St. Peter's at York the right of being recognized as the oldest school in England. It was founded in the year 730. Mr. William Roberts cautions English colonists against thinking that fruit growing in California is as short a cut to fortune as some authorities pretend. "While we do not think favorably of fruit growing at present, we think more than well of California. For any young man with a few hundred pounds, energy and a fair share of natural shrewdness, there is no better opening than that State. The violent fluctuations to which we have referred, while ruinous to a man without experience, are the opportunity for one who has it. Living is cheap with the exception of clothing, and work of some sort is always to be had."

THE NATIONAL REVIEW.

THE articles by Mr. Hutton and Lord Salisbury are reviewed in another department.

FREE TRADE A VARIABLE EXPEDIENT.

Mr. Greenwood discusses the phenomena of the revolt against free trade in England which are visible in certain directions. He points out that uncircumscribed free trade is now bringing forth results from which even its own friends are recoiling. The farmers are being ruined, land is going out of cultivation. England's more and more fed from abroad, and the temptation increases for foreign nations to stave off the threatened general war in order to divide up her possessions. Mr. Greenwood points out that notwithstanding the general praise of cheapness as the justification of free trade, even the free traders rejoice when there is a recovery in prices. He suggests that the middleman reaps the chief benefit, as his prices do not fall in anything like the large proportion of the drop in the wholesale market. Mr. Greenwood therefore concludes that free trade is a variable expedient, and the time has now come for England to consider without further delay what is the amount of expediency in free trade.

THE JESUITS AND THEIR GENERAL.

Mr. Robert Beauclerk has an article containing much interesting information not generally accessible concerning the General Chapter of the Jesuits. It is, of course, prompted by the election of the new General, who is a Spaniard. The late General was a Swiss, his two predecessors were Belgians, and the General before them was a Pole. The General is appointed for life, and when infirm may appoint a vicar. He has five assistants, who can, if they choose, summon a General Chapter against the General's wish, and this Chapter has power to depose him if convicted of unworthiness and misrule. Mr. Beauclerk gives an interesting account of Father John Jones, professor of Moral Theology in the Jesuitical College of Buno in the north of Wales. He says that Father Jones has trained all the Jesuits in England for many years. He is one of the best lawyers in England, and if he were on the bench would be one of the chief luminaries of the English judiciary.

HOW TO ABOLISH FOG.

Mr. Thwaite dwells upon the enormous advantage that would accrue to the metropolis if the London County Council were to get a bill giving them compulsory powers

to compel London householders to use gas for cooking, laundry work and heating. He calculates that it would cost \$120,000,000 to buy up the gas companies, and the cost of the new plant to enable the whole of the nine million tons of coal now burned in London to be consumed as gas would be \$55,000,000 more. Gas would be cheapened, smoke would disappear, \$20,000,000 would be saved outright per annum, and London life would be lived in sunlight by day and in the lovely glow of electricity by night: "In the poorer parts of the town gas could be supplied by the penny-payment-meter system. Unfortunate and shivering creatures would drop pennies into a slot, and a cheerful fire would be warming them immediately.

OTHER ARTICLES.

Mr. Hodgson discourses upon the controversy between Mr. Harrison and Professor Huxley, and declares that Mr. Huxley knows nothing whatever about logic. Lord Stanley remonstrates with Mr. Jesse Collings upon his heresies about small holdings and allotments. Mr. Lewis Latimer gives a very interesting account of a French abbé of the seventeenth century and his mémoires. Mr. Justice Conde Williams urges that England should swap Mauritius for Madagascar with France. He maintains that the great bulk of the Mauritians would much rather be under the tricolor than under the union jack. They do more trade with France than with England, and he holds that Madagascar would be quite as useful from a naval point of view and infinitely more valuable for commerce.

THE NINETEENTH CENTURY.

IN another department will be found reviews of the articles by Mr. Chamberlain on the Labor Question, and Sir Frederick Pollock on M. Rénan, and the poetical tributes to Tennyson.

The rest of the articles call for little notice. Mr. Marcus B. Huish discusses what he regards as the excessive output of painters in England, which he attributes to the disinclination of the majority to trouble about design. He thinks there is a better time to come, and says: "The workingman will insist upon his children being taught something which may be of use in after life, rather than letting them misuse their time in producing pretty landscapes in water-colors, huge black-and-whites of ladies in a state of nudity, or ghastly oil studies of heads of Italian organ-grinders.

"When that day comes his action will most assuredly benefit the classes equally with the masses, and will increase the quality, not only of the art of which there will be less, but also of that of which there will be more."

Mr. William Maitland seeks to show that the American farmer suffers great hardships under the present system of protection. The farmer, he says, practically has to pay for the protection of all the other classes of the community. Unless Free Trade is established, Mr. Maitland thinks that the American farmer will be swept into such a catastrophe as has never been seen in any other country. Mrs. Bagot has a short paper on a "North Country Election." Mr. Edward Dicey pleads for the canceling of the railway concession which has been granted by the Rajah of Cashmere. Col. A. Kenney-Herbert discourses upon "The Art of Cooking." Mrs. Lynn Linton sets out once more a Picture of the Past. There is something pathetic about these articles. There is never anything new in them.

THE EDINBURGH REVIEW.

FROM the *Edinburgh Review* we have quoted elsewhere portions of two articles dealing with "Population" and "British Criticism of the Old Testament." Three political papers in this number are also worthy of note.

A SCREED ABOUT PERSIA.

The writer who reviews Mr. Curzon's book on Persia is smitten with Russophobia so far as to think that: "If Persia is left to stand alone, Khorasan is doomed to share, before many years, the fate of the Turcoman country and Merv; and there are some who think that the too tardy efforts we have made to regain our lost influence at Teheran will precipitate Russia's action and Persia's fall."

The fate of other railway projects, whether in Asia or in Africa, does not deter the reviewer from indorsing Mr. Curzon's suggestion of a railway to the Seistan Lake through territory subject to British authority and outside the Ameer's dominions. He admits the prosperity of the present Shah's reign, and thinks England should seek to inspire his government with fresh hope, the value of Persia as an ally to the government of India being beyond question.

MEDDLING IN THE MEDITERRANEAN.

Russia in the Black Sea, England in Egypt, the French meditating the crushing of the Italian fleet and the conversion of the Mediterranean into a French lake—such are the alarming (?) facts brought before us by a reviewer who thinks the old phrase, "balance of power in Europe" must be revived as "balance of power in the Mediterranean." He suggests to France that her true naval policy in the Mediterranean should be, not an aggressive, but a conservative one, but thinks there are not many signs that she will pursue a cautious line. As for England:

"Pre-eminence at sea is so manifestly essential to the British Empire that the French, in all probability, are not really jealous of it any more than we are jealous of their immense strength on land. As far as fighting power goes, France is unquestionably the most powerful nation in the world at this moment. Her army is equal to, if not stronger than, that of her great neighbor and late antagonist; and she has a navy which far surpasses in numbers and in every phase of efficiency that of any other Continental State. We have already intimated that it is extremely improbable that France can ever succeed in her expressed desire of making the western basin of the Mediterranean a French lake. There is one event which, if it should happen, will effectually destroy all chance of that result and at the same time prevent her from retaining the respectable eminence which she now enjoys in the Levant. That event is the appearance of a Russian fleet in the Mediterranean proper. Our own position will not be materially affected thereby; at all events, it will not be affected so far that it cannot be restored with ease."

THAT HOME RULE BILL.

From the point of view that "the establishment of Home Rule *does* involve the making of a new Constitution," the *Edinburgh* asks the British elector to look the Home Rule problem "fairly and squarely in the face," although he recently showed that he had done it, and has been doing it for some time. The writer contends that Home Rule means the setting up of a government in Ireland independent of control by the Government of Westminster, and argues thereon. He warns the Government that "One consequence that will certainly follow the an-

nouncement by the Government of their Home Rule bill is the discrediting of the existing House of Commons for all purposes other than the passing of that bill."

Further, he thinks that: "The Government have probably hardly yet realized the strength of public feeling which will be evolved in Great Britain by the proposal to retain Irish members at Westminster, after a separate parliament had been established in Dublin. Whether there are to be a dozen of them or only one does not affect the principle. It is in truth utterly preposterous and intolerable that the Irish should choose their executive and make their laws independently of the British, but that the British are not to be allowed similar freedom from Irish interference."

THE DUBLIN REVIEW.

ARTICLES on "The Authorship of the Hexateuch," "Modern Stellar Astronomy," "The Spanish Monarchy," "Lux Mundi" and the religious problem, "Faith," "Shibboleths," and "Charles Langdale's Biography" furnish forth the *Dublin Review*. The most interesting to the general reader is a review in popular language of Miss Clerke's book, "The System of the Stars."

PROGRESS AMONG THE STARS.

The writer mentions, among other things, that whereas, in our climate, the sharpest eyes can probably never fairly see more than 2,000 or 3,000 stars at one time, the number visible in the great Lick telescope of three feet diameter is probably nearly 100,000,000. The telescope has also revealed to us that many of these bodies, which appear to the unassisted eye as single bright points, are really double stars, two suns revolving in an orbit round their common center of gravity; and in some cases triple and quadruple stars. But it is to the spectrum and the spectroscope that we are indebted for the flood of light thrown during the last thirty years on stellar and solar astronomy. Miss Clerke thinks the sun is more likely to become hotter than cooler, for a time at any rate. One celestial body, which Mr. Anderson observed at Edinburgh last February and announced as a new and temporary star, is supposed to be in fact two stars, one approaching us and one going the opposite way, leaving each other at the rate of 720 miles a second! Among interesting conclusions drawn from modern discoveries, one is that the double stars move in ellipses, and therefore that the same law of gravitation prevails in those distant regions as in our system. Thus we are enabled to "weigh the stars." Another conclusion is that we are all—sun, earth and planets—moving in space at the rate of about fifteen miles a second, in a direction away from the Milky Way.

WHERE WE ARE IN RELIGION.

The article on the Hexateuch (*i. e.* the Pentateuch and the Book of Joshua, added by modern critics as forming one complete history), by C. Vanden Biesen, discusses the authorship and composition of these Books of the Old Testament from a Catholic point of view. The writer seems to favor, in this first part of his article, the theory that the Hexateuch in its present form was written after Moses' time, and that Moses himself wrote only the first collection of laws, the so-called "Book of the Covenant," contained in the section Exodus xx., 23, 23, 33. With this may be classified section Exodus xxiv., 10-23, which has all the appearance of a short repetition of the Book of the Covenant, and chapter Exodus xiii., which contains an historical explanation of the feast of unleavened bread, and of Jehovah's right to the first-born of man and of beast.

IS THE BIBLE APOCHRYPHAL?

According to Mr. Aubrey De Vere, who reviews "Lux Mundi," the tendency of much Biblical criticism in England seems not so much to exclude particular books from the canon as to change the whole canon into "one large Apochrypha." Mr. De Vere's view is that the Church (*i. e.* the Roman Catholic), and not "individuals at war with each other," is alone competent to sit in judgment on the Bible, and that inquirers should hold to the Church though the heavens fall.

LONDON QUARTERLY.

THE *London Quarterly* has been raking out its pigeon-holes. A review of Lord Rosebery's "Pitt" seems belated enough, but we are back in quite ancient history in the article on "The Methodist Agitation of 1835," which deals with books, the latest of which was issued twenty-eight years ago, and refers the reader to "a previous article" that appeared in 1884! The editor has not been asleep all this time, however, since he gives us other articles dealing with "The Verney Memoirs," the Bishop of Salisbury on "The Holy Communion," and the much-talked-of "Englishman in Paris," who "remembered" so many things that took place before he was born. An article on "The Social Horizon" deals in a rather gingerly, supercilious fashion with the author of the "Life in our Villages" series of letters in the *London Daily News*. While very doubtful as to "What next? Where are you going to stop?" and so on, the reviewer is fain to recognize that—"The only vital and effective popular force, so far as we can see, is that which is urging both the great political parties in the direction of Socialistic experiments in legislation, and of a considerable extension of local and central governmental control. . . . The State is now the nation organized. State action is simply the action of the people in their corporate capacity."

The reviewer feels inclined to join the Jeremiahs, but comforts himself with the reflection that "there will be a tremendous reaction when the people once begin to feel the yoke" of the tyranny of majorities.

The article on "The Verney Memoirs" is perhaps the most interesting. Sir Ralph Verney's notes in Parliament show the House "busy with schemes for 'the advancement of lerninge; encouragement of students; grammer scholes to be maintayned by every Cathedral church; local statutes to appoint sermons *almost every day*,' proposing to reform Church music, which was 'not edifying, being soe full of art,' but should be 'solome musicke.'"

THE SCOTTISH REVIEW.

THE *Scottish Review* contains several articles of considerable and out-of-the-way interest. Annie Armit's story of Mary Shelley is the only literary article which it contains. A county historian writes pleasantly about Forfarshire. The Lyon King-at-Arms discourses about Scottish heraldry. Author Grant maintains that Merlin, instead of being the son of the devil and a Welsh-woman, was really a Scotchman of exceptionally excellent character. Messrs. Conder and Beddoe contribute very learned articles upon the "Natural Basis of Speech" and the "Anthropological History of Europe." Mr. Karl Blind sets forth, in an article entitled "Kossuth and Kiapka," the reasons which lead him to regard Kossuth with anything but admiration. He accuses him of having once offered to put Hungary under a Russian grand duke, and at another time under a Bonapartist prince, which

shows that the idealist and republican Kossuth was capable of going a very long way in the direction of opportunism.

THE ASIATIC QUARTERLY.

MR. ROBERT MICHELL, in an article on "Bam-i-Dunia; or, the Roof of the World," gives some interesting geographical information regarding the Pamirs. He begins by remarking that the public has not sufficiently noted the many geographical and other discoveries of Russian explorers in Central Asia since 1871; and this, he says, "is the more to be regretted because England's own boasted discoveries have mostly been sealed up in secrecy by the Indian government." The "roof of the world" is cold, as we might expect, but it is not all snow by any means, and though Mr. Michell would not oppose the absorption of the Pamirs by Russia up to certain limits, he thinks England should take more pains to know what Russia thereby could acquire.

WHERE THERE IS GOLD.

"It may be that the Russians are actuated in their present pursuit on the Pamirs, as in Tibet and Mongolia, mainly by a greater knowledge than we possess of the mineral wealth of that part of the world. It would appear that they have discovered in the mountains of northern Tibet sources of immense riches in badly worked gold diggings. We know that nearly all the Pamir waters bring down gold dust. M. Dauvergne informs us that there is a *Zirafshan* or gold-bearing tributary of the Yarkand river, and alludes to beds of copper. The Russians are touching now on the jade quarries of China, and such places as Marjanai, between the Alichur and Murghab, suggest in name similar storehouses of precious stones."

ENGLAND AND INDIA.

Lord Salisbury's friend, M. Dadabhai Naoroji, M.P., admits that it goes without saying that England has done great good to India, but quotes a formidable list of unfulfilled pledges of the last sixty years. He concludes: "Here, then, is the true remedy and the principal one of all India's evils, excepting that of representatives in the Indian Legislative Councils and in the Imperial Parliament. Simultaneous examinations, both in England and India, for all the services for which examinations are held in England, is the chief means of England's true honor, greatness and glory—of India's satisfaction with the British rule—of the removal of India's "extreme poverty," and not only of promoting India's material and moral prosperity, but of the far more increasing prosperity of *England herself*."

Surgeon-General Moore writes an article to show that there is much call for the extension of the hospital system in India.

THE ASCELEPIAD.

EVEN the layman may read with pleasure and profit the *Aselepiad's* article on "Sir Thomas Browne, M.D., and the Religio Medici." The writer is especially fond of the "Religio" among Browne's works: "Since 1864 this book has been a bedside companion, one of the chosen companions I kept by my couch and read in early morning once yearly, in order to remain well up in them."

In "Opuscula Practica" the layman will also extend his cheerful sympathy to the sensible note on the surgeon's need of regard for Christ's grand maxim: "If there was ever one occasion more than another in which the old

Jewish precept, 'Do unto others that which you would others should do unto you,' should be acted on, it is when the occasion arises for the physician or surgeon to treat a fellow-being for the alleviation or cure of disease."

How many amputations poor patients might have escaped had the experimenting surgeon borne that precept in mind

From a medical point of view the article on the cause and prevention of death from chloroform is the most important. A writer on recent cholera literature strongly commends the "thirteen simple rules" published by the London *Daily Graphic* of September 3.

THE CENTURY.

WE quote elsewhere from Dr. Shield's essay on Biblical criticism, from Mr. Fred Woodson's "Plain Words to Workingmen" and from the Sherman brothers' letters.

Something novel in magazine literature is given in the illustrated article on "Road-Coaching Up to Date," by T. Siffert Tailler, whom readers of the *New York Herald*, at least, will recognize as one of the most enthusiastic members of the coaching parties in and about Paris during the past year. The uninitiate will be dumfounded to find from Mr. Tailler's careful exposition to what a refinement the art of having and driving a coach has come, and no doubt Mr. Weller, *père*, himself and his inscrutable skill would be put to shame.

In the specimen trip from Paris to Trouville, taken by Mr. Tailler, driver, Mr. James Gordon Bennett, Mr. W. G. Tiffany and others, the 140 miles was traversed by the great coach in 10 hours and 50 minutes, including changes, which means that the four noble horses were kept going at an average pace of more than twelve miles per hour. Somewhat curiously, the very best type of coach for this rapid traveling is the counterpart of the old English mail coach.

Bishop Potter has a short article which he heads "Some Exposition Uses of Sunday." "If it is to be," says he, "a question between the complete closing of the Exposition, and such surrender of it to secular uses on Sunday as makes no discrimination between Sundays and week days, then, for one, I should be in favor of the most rigorous closing of every door. But the question which I have ventured elsewhere to raise is the question whether there might not be some uses of it which are not incongruous with our American traditions of the essential sanctity of Sunday, and whether these uses are impossible in Chicago."

"If when Sunday came to the Exposition in Chicago, it could be assumed that in some great hall in the midst of it there would be some worthy and impressive presentation of these—if the nation should summon its ablest and most eloquent teachers and bid them do for us the prophet's work amid such profoundly interesting and suggestive surroundings, it would hardly summon them in vain. And if, then, in connection with such occasions, or as included in the scheme of which they were a part, it could be so ordered that the mighty forces of music could be evoked,—if on Sunday afternoons or evenings the multitudes assembled in Chicago from hamlet and village and prairie that rarely or never hear the great works of the great masters, Mozart and Beethoven, Handel, Haydn, Bach, Wagner, and their compeers, could be lifted for a little on the mighty wings of grand and majestic harmonies, and made conscious of that subtle transfusion of the sensible into the spiritual, which, in some aspects of it, seems to be the sole province of music,—surely that,

too, would be no unworthy use of a day consecrated to lofty visions and unuttered aspirations.

"Reminiscences of Brook Farm," contributed by "a member of the community," is another pleasant feature of a very excellent number.

HARPER'S.

WE speak elsewhere about Mr. George William Curtis and his last contribution to the "Easy Chair." Mr. Julian Ralph has "The New Growth of St. Louis" for his text this month, and his article on the "Capital of the Mississippi Valley" is replete with arithmetical evidences of her importance and prosperity. He predicts that St. Louis will soon reach the million mark in population. "What is accomplished there is performed without trumpeting or bluster, by natural causes, and with the advantages of conservatism and great wealth. More remarkable yet, and still more admirable, the new growth of the city is superimposed upon an old foundation. It is an age, as this world goes, since this proud city could be called new and crude. The greater St. Louis of the near future will be a fine, dignified, solid city, with a firmly-established and polished society, cultivated tastes, and the monuments, ornaments and atmosphere of an old capital."

Mr. Theodore Child, "Along the Parisian Boulevards," is all the more delightful because, not long since, we saw the same subject handled in the "Great Street" series of another magazine by that typical Frenchman, Francisque Sarcey. Mr. Child sees more of it because M. Sarcey has been in it all his life and has lost the perspective possible to a visitor. Of the ultra refinements with which the French capital graces itself, not the least striking is the extraordinary importance of the *coiffeur*—the hairdresser of the Parisiennes. He is an artist; the hair which he deigns to dally with emerges a work of genius. "Above all things, the coiffure of a woman is a matter of taste and sentiment rather than of mere fashion. The rank and file, the mere operators, the eternal copyists, may be content to dress a woman's hair according to the models decreed by fashion and published in the special journals. The artist, on the other hand, every time he dresses the hair of one of the princesses of fashion, makes an effort at composition and seeks a happy inspiration, the suggestions of which he will control and correct with reference to the character and expression of the subject's face, the natural silhouette of the head, the general lines of the features, and the style of the toilet worn.

"A *coiffeur* like Auguste Petit, we might say, has coach houses and stables, but no shop. His days are spent in an elegant *coupé*, which transports the artist and his genius from dressing-room to dressing-room. In the evening he drops in at the Opéra to see how the coiffure of Madame la Marquise compares with that of *la petite Baronne Zabulon*. From time to time, on the occasion of some great ball, he makes a journey to London, Madrid or Vienna, for his reputation is European and his talent is in request wherever there are manifestations of supreme elegance."

Mr. Howells' novel, "The World of Chance," ends in this number. It is the story of a young man who comes from an inland town to New York with a manuscript novel under his arm, which story finally succeeds after varying and shifting scenes of fortune. "A World of Chance" will scarcely be popular—more's the pity—save in the degree that all the products of Mr. Howells' pen have a certain assured audience.

THE COSMOPOLITAN.

WE review in another department M. Q. Holyoake's paper on "A Cosmopolitan Language." The feature of the number is, of course, the contribution of Mr. W. D. Howells, who writes under the happy title, "A Traveller from Altruria." We find him relating his conversations on topics social, ethical and economic, with this stranger guest from that supposititious land. The idea is a striking one, and opens up a field of social criticism and reform toward which our novelist has long been tending; a review of his schemes for setting the world to rights will be more possible when he has finished his say.

The essay on Aërial Navigation, which has taken second prize in the *Cosmopolitan* competition, appears this month. The writer, Mr. John P. Halland, considers that there will be no trouble at all in getting a motor sufficiently light per horse-power, affirming that there are many such already in use on torpedo boats, and he has carefully worked out the mathematics of the flying problem, with full allowance for breakdowns and accidents.

Lewis M. Haupt has a short essay on the "Growth of Great Cities," in which he shows how much such growth is dependent on transportation facilities, and *en passant*, gets in a good word for a ship canal from Raritan Bay to the Delaware river, which he argues, will insure New York City's command of Eastern traffic, not to speak of the value of the canal as a means of national defense. Baltimore, and the country at large, have the same interests in the proposed Delaware peninsular canal, which would save 380 miles of round trip up Chesapeake Bay.

ATLANTIC MONTHLY.

THE *Atlantic* contains an article on sociological training for women, by Samuel W. Dike, that we have reviewed among our leading articles. Naturally there are tributes to Mr. Whittier, and they are very happy ones—a critical essay by George Edward Woodberry and a characteristically charming set of verses *in memoriam*, by Mr. Holmes.

In his estimate, Mr. Woodberry asserts that Whittier was distinctly a "local poet, a New Englander," but does not deny him the merit of a larger recognition; and while dwelling on the dominant moral strain of the dead singer, sees in him more of the poet than of the reformer. "Lovers of New England will cherish his memory as that of a man in whom the virtues of this soil, both for public and private life, shine most purely. On the roll of American poets we know not how he may be ranked hereafter, but among the honored names of the New England past his place is secure."

There is a long political editorial this month criticising the respective platforms of the two great parties on the ground of buncombe and insincere issues. The twenty-one distinct planks of the Republicans, and the twenty-five of the Democrats, are, thinks this writer, absurdly and mischievously superfluous, he agreeing with Mr. Blaine that three issues are enough for any campaign. Cutting away blatant declarations and promises made to secure certain classes of voters, and also the smaller real issues, the *Atlantic* finds the great issue of 1892 in the question as to "whether the changes in the tariff which are certain to be made in the future shall be in the direction of a 'tariff for revenue only,' or be only a fluctuating adjustment of the measure of protection accorded to every American producer of something which foreigners also produce, and produce cheaply enough for exportation into this country."

Margaret Deland continues her serial "The Story of a Child," and Marion Crawford reaches a *dénouement* in his novel "Don Orsino."

THE CHAUTAUQUAN.

THERE is a longer article than those usually found in the *Chautauquan* on "Immigration," by Noble Canby. "Granting," says he, "that immigration as now conducted is not advantageous to our side, the question may be asked, Does this country perform the Samaritan act in receiving it? Suppose we drain off every festered spot of overpopulation in Europe for one generation, conditions remaining the same there as they have for centuries, would not a single generation fill up the vacancies, and wretchedness survive as triumphant as ever?"

Frank C. Williams publishes under the title "To the Rescue!" a startling arraignment of the traffic in Chinese girls going on along the Pacific Coast. He affirms that "there exists to-day at San Francisco as true a slave market as any that could have been found in the cities of the South before the late war. The difference is that formerly the transfers were made by white men trading away those of negro blood, while the traffic in San Francisco consists of Chinese girls being sold by those of their own nation." Mr. Canby tells of the good work of the Presbyterian Mission on Sacramento street in alleviating the condition of these unfortunate girls.

LIPPINCOTT'S.

THE "Journalist Series" which is running in *Lippincott's*, brings this month an essay on "The Sporting Editor," by J. B. McCormick ("Macon"). "Now even the most conservative of the great dailies," he says, "employs a corps of trained specialists to describe and write up sporting events, and places them under the direction of a capable sporting editor. The New York *Tribune* has a deservedly high reputation for its racing reports. The *Evening Post* finds it profitable to devote a good deal of its space to comments on racing and field games; while the *Mail and Express*, the most religious of metropolitan dailies, makes a great feature of tipping would-be winners on the leading race-tracks. . . . It is no unusual thing for the New York *Sun* or the *Herald* to give up a page or more to reports of sporting events. Twenty-five years ago no paper except the *Herald* would publish as much in a week."

George S. Patterson continues the sportive flavor of the number by a good article on "Cricket in the United States," and C. Davis English, in "Form in Driving," tells how one can do the correct thing in equestrianism for nine thousand dollars a year. Marion Harland contributes the novelette of the number, "More than Kin."

OVERLAND MONTHLY.

THE best thing in the November *Overland* is the description of the Lick Observatory and the history of the bequest that founded it, by Millicent W. Shinn, editor of the magazine. Miss Shinn explains the reason that the results attained on Mount Hamilton have not been of the sensationally important character that some people seemed to expect, and shows that in proportion to the size of its income and staff, which are absurdly small as compared with other establishments of the sort, it is doing great things. The Lick Observatory has especially developed the photographic aids to observation, and has also done more in the way of co-operating with kindred institutions than was usual in scientific work.

The *Overland* uses this month fine paper to further the excellence of its half-tone illustrations with good result, especially in reproduction of the photographs of Lick Observatory subjects, and those accompanying the travel sketch "Over the Santa Lucia," by Mary L. White. There is the usual amount of fiction, and Dr. Edward Hall answers in a popular article the question "What is a 'Mortal Wound?'"

POPULAR SCIENCE MONTHLY.

THE *Popular Science Monthly* for November contains several readable papers, one of the most remarkable of which is a description by M. Alfred Binet of a wonderful arithmetical prodigy who has recently come into prominence in French scientific circles, one M. Inandi. The "prodigy" is now a young man of twenty-three. He extracts square and even cube roots rapidly and accurately "in his head," multiplies five and even more figures by the same number of them, etc. Prof. Joseph Jastrow writes on the Problems of Comparative Psychology and Sara Jeannette Duncan opens the number with an entertaining and lengthy paper on Eurasia.

SEWANEE REVIEW.

A SURPRISINGLY good magazine hails from Sewanee, Tenn.—*The Sewanee Review*. It is to be a quarterly, and this November number is its first appearance. Published under the auspices of the University of the South, it promises to "be devoted to such topics of general theology, philosophy, history and literature as require fuller treatment than they usually receive in the popular magazines, and less technical treatment than they receive in specialist publications." This worthy purpose is finely carried out in the initial number, with a noticeable lack of philistinism. The magazine opens with an excellent careful review of "The Novels of Thomas Hardy," while among the contributions which follow it are essays on "Modern Spanish Fiction," and "The Education of Memory," with a further extended review of Thomas Nelson Page's "The Old South." The new quarterly is of a goodly size and well printed, and is a most praiseworthy venture in Southern periodical literature—so much so that it is quite worth the while to criticise the anonymity of its contributions.

INTERNATIONAL JOURNAL OF ETHICS.

LEONARD H. WEST has an article in the *International Journal of Ethics* on "International Quarrels and their Settlement." He shows how signally the methods of warfare have been humanized during the past two hundred and fifty years, by the forbidding, in international agreements, of such modes as poisoning wells, using explosive bullets, loading cannon with glass and iron scraps and rubbish, etc. Mr. West thinks the use of torpedoes might also be the subject of condemnation, and looks forward to the near restriction of bombarding towns. On the other hand, very illogically, is the increased deadliness of improved modern weapons and the constantly growing huge armies and sums of money spent in their maintenance. Notwithstanding this counter tendency he concludes that "there is throughout the civilized world a growing feeling against recourse to war as a means of settling international disputes: the practice is growing of inserting in treaties precautionary clauses for reference to arbitration of disputes which may arise; even in default of any such provision, where disputes have actually arisen, their settlement by arbitration is becoming com-

moner; quarrels to which arbitration cannot be applied, may be and are being controlled by the peace-preserving influence of allied nations, and that although we may not look for immediate disarmament . . . still progress is for peace."

Father James O. S. Huntingdon argues under the title "Philanthropy and Morality" against the shams which disgrace many of our philanthropic enterprises under religious auspices. "While I acknowledge," says he, "that voluntary philanthropic institutions for children often have many advantages over public institutions for the same purpose, it seems to me they labor under one almost fatal difficulty; they are supported entirely by those whose interest it is that the existing social and industrial maladjustment should continue; they are, therefore, on the side of the very system that makes orphan asylums necessary."

ANDOVER REVIEW.

THE October *Review* begins with two long articles on University Settlements, by Mr. Robert A. Woods and Miss Vida D. Scudder, respectively. Miss Scudder cites her practical experience to show what a powerful advantage in dealing with slum problems is given by the settlement atmosphere. Mr. Woods thinks that "A university settlement ought to be a stronghold of that rising municipal loyalty which is in some respects as noble as patriotism among the civic virtues. The method and trend of city government ought to be watched until it is thoroughly known, and then patient and constant efforts made to improve the type of officials, and the methods of legislation and administration. Toynbee Hall now has its representative on the London County Council, and two representatives on the London School Board; and every settlement ought to strive to follow this example."

Gamaliel Bradford, Jr., has a literary and critical discussion of "The Poetry of Donne," and Rev. E. Blakeslee discusses the best form for Sunday school lessons.

THE CHARITIES REVIEW.

The November number of the *Charities Review* begins the second year of that valuable sociological journal. This issue is devoted to Charity Organization problems, concerning which we have interesting opinion from a dozen and a half specialists, such as Mr. Chas. D. Kellogg, of New York; Prof. H. J. Warner, Ph. D., of Leland Stanford, Jr., University; Mr. Chas. Glenn, of Baltimore; Mr. Geo. Buzell, of Brooklyn, N. Y., and Mr. Alexander Johnson, of Indianapolis, Ind. The last of these authorities writes on the necessity of co-operation in the work of charity, and shows how much the advantages of the centralized organization overbalance the objections which many people find in it. All the papers in this number were read at the National Conference of Charities and Corrections in Denver, Col., last June.

MEDICO-LEGAL JOURNAL.

THE *Medico-Legal Journal* is a well-conducted monthly published in New York by Mr. Clark Bell. It has both contributed articles and a full editorial department, dealing, as its title indicates, with questions pertinent to the science of medicine, and especially with medicine in its relation to the criminal law. Its leading feature this month is a symposium on the subject of blood corpuscles. Regarding the value of microscopic examinations of red blood corpuscles as evidence in criminal cases, Mr. Clark Bell, the author of the first paper, says: "Since the researches of Dr. Richardson great advances have

been made by able observers, and it is now generally believed that, with a careful and skilled microscopist and a good instrument of high powers, it will generally be possible to diagnosticate a human blood stain from that of

any of the lower animals, with the possible exception of the guinea pig and the opossum. This, however, has not yet been conceded by some very high authorities, both American and European."

THE FRENCH REVIEWS.

THE REVUE DES DEUX MONDES.

THE number for October 1 leads off with a second installment of M. Edouard Rod's novel, followed by the first of a series of articles by M. Henry Houssaye, on "France Under the First Restoration." The opening paper, "The Beginning of the Reign of Louis XVIII.," offers a vivid picture of a most unsatisfactory state of society. The restoration of the Bourbons seems to have been thoroughly satisfactory to no one but the returned *émigrés*, and the pretensions of the latter were so exorbitant that it was exceedingly difficult to satisfy them. One gentleman asked for promotion on the ground that he had *attempted* to conspire for the restoration of the Royal family, adducing in proof the fact that, for the space of a year, he had "received one shilling a day from Mr. W——, an English agent." Another went further, representing that he had *intended* to conspire. "It was my wish," he writes, in the petition sent in to Government, "to raise some men in Brittany, who, *if they had been raised*, would not have failed to render signal service to the Royal cause."

The nation was nearly bankrupt, and both army and navy were greatly reduced by way of retrenchment. Besides this, numbers of really efficient officers had to be cashiered in order to find places for loyal conspirators. Some of the new nominations were perfectly scandalous. Ex-subalterns of the Royal Navy, who had not been at sea for years—who had emigrated in the days of the *Constituante*, had been *vendéens*, or *chouans* under the Republic, and teachers of English or tax collectors under the Empire—were appointed to the command of vessels, and immediately ordered off on active service. It was one of these men who was responsible for the famous wreck of the frigate *La Miduse*, in 1816. A certain count, whose name is not given in full, asked for and obtained the Cross of St. Louis, with the grade of major, for having, in December, 1813, put Count Lynch into communication with the brothers Polignac, and having, at the same time, plotted the assassination of Napoleon.

HORSEMANSHIP IN FRANCE.

M. F. Musany, who some time ago published a paper on the French breeds of horses, laments the want of a rational and uniform system of training in riding. Various theories are current, while others, again, assert that there is no such thing as theory—riding is learned by instinct. Humane people will agree with M. Musany in disapproving of the use of the whip when it can possibly be avoided, whatever they may think of his reason—viz., that a horse is utterly incapable of understanding anything, and will only be made vicious and obstinate by punishment, instead of comprehending that it has done something which must not be repeated.

M. Franz Funck-Brentano writes in the mid-September number on "Lettres de Cachet." It would appear that so far from being execrated as an engine of oppression, this institution was looked upon under the *ancien régime* as an invaluable convenience. Parents of fast young men who threatened to prove a disgrace to their families, though they had not done anything to bring themselves within reach of the law, were able to get their prodigals safely stowed away under lock and key for as long as they

pleased. Frequently these young people were locked up, not for anything they were alleged to have done, but on account of what it was thought probable they might do. A still odder instance was that adopted by M. Brunek de Fraudenell, who had one of his sons imprisoned at Fer L'Eveque, in order to insure proper attention to his studies. The youth had come up to Paris to join the Engineers, and had ample leisure to prepare for the necessary examination in jail. The fullest directions are given—he was to have a well lighted room, with a large table convenient for drawing plans, and to be visited every day by his "coaches" in drawing and geometry.

THE STRONGHOLD OF FRENCH CONSERVATISM.

The Vicomte de Vogue continues his interesting "Notes sur le Bas-Vivarais," analyzing the reasons why this district, as a whole, is opposed to the Republic. He sees in this opposition a legacy of the religious wars of the sixteenth and seventeenth centuries. The Catholics of the mixed cantons are against the Republic simply because the Protestants are for it. The kind of spirit that animates them may be seen in the fact that the small local papers constantly label their adversaries *Huguenots*, an epithet occasionally varied by that of *Freemasons*—the two being, in fact, interchangeable in the minds of the local editors.

THE NOUVELLE REVUE.

THE most attractive article in the October numbers (apart from M. Antoine Albalat's paper on Renan) is a biographical sketch of Madame Blavatsky, from the pen of her sister, Madame Vera P. Jelihovsky. Madame Jelihovsky, though full of admiring affection for and sympathy with her sister, is not a member of the Theosophical Society, and does not appear fully to share her views. Her testimony is therefore all the more interesting. With regard to the Mahatmas, for instance, she says:—"Nevertheless, for my part, I have never seen them, and though I have no right to doubt their existence—affirmed, as it is, by persons whose honor cannot be called in question—yet these apparitions have always seemed problematical to me. I never hesitated to speak to my sister on this point, and she would always reply, 'As you like, my dear . . . à bon entendeur, salut!'"

OTHER ARTICLES.

Commandant Grandin completes his study of Marshal MacMahon in the mid-October number. In the same number appears the first installment of the hitherto unpublished memoirs of Billaud Varenne, the Revolutionary leader of 1789, written during his exile at Ceuffenne. So far they contain nothing remarkable—consisting chiefly of his reflections on marriage and the position of women—perfectly unexceptionable, but somewhat trite at this time of day, and couched in the pompous language of the days when all the Virtues rejoiced in capital letters. We are promised, however (by M. Alfred Bégis, who writes the introduction), a description of Billaud's life in Guiana later on, and also his version of those events in the Revolution in which he was personally concerned. Of other articles, we need only note the Comte de Moüy's on Cardinal Chigi's mission to the court of Louis XIV., in 1664.

POETRY AND ART.

POETRY.

IN the *Atlantic Monthly*, Oliver Wendell Holmes and Elizabeth Stuart Phelps both publish memorial verses on Whittier. The following are the last four stanzas of Dr. Holmes' poem :

In the brave records of our earlier time
A hero's deed thy generous soul inspired,
And many a legend, told in ringing rhyme,
And youthful soul with high resolve has fired.

Not thine to lead on priesthood's broken reed ;
No barriers caged thee in a bigot's fold ;
Did zealots ask to syllable thy creed,
Thou saidst "Our Father," and thy creed was told.

Best loved and saintliest of our singing train,
Earth's noblest tributes to thy name belong.
A lifelong record closed without a stain,
A blameless memory shrined in deathless song.

Lift from its quarried ledge of flawless stone ;
Smooth the green turf and bid the tablet rise,
And on its snow-white surface carve alone
These words—he needs no more—HERE WHITTIER LIES.

Miss Phelps concludes her poem as follows :

Sacred the passion-flower of thy fame.
To thee, obedient, "Write," the Angel saith.
Proudly life's holiest hopes preserve thy name,
Thou poet of the people's Christian faith.
Master of song ! Our idler verse shall burn
With shame before thee, Beauty dedicate !
Prophet of God ! We write upon thine urn,
Who, being Genius, held it consecrate :

To starving spirits, needing heavenly bread—
The bond or free, with wrong or right at strife ;
To quiet tears of mourners comforted
By music set unto eternal life.
These are thine ushers at the Silent Gate ;
To these appealing, thee we give in trust.
Glad heart ! Forgive unto us, desolate,
The sob with which we leave thy sacred dust !

Miss Anna M. Williams, in *Outing*, thus holds up the "barbarous" concomitants of football to ridicule :

His cheeks are etched in Harvard stripes,
His eyes are dyed Yale blue ;
His nose is warped, his front teeth gone,
His skull is fractured, both ears torn,
His arms are bandaged, too.
A crutch supports his crippled weight,
And his anatomy
Subtracts now, from the maximum
Two broken ribs, a jointless thumb,
And fingers—all but three.
But, oh ! he wears a laurel crown,
His pedestal's near Heaven !
They stamp and shout, when he comes out,
He's pride of men, and pet of ten,
The King of his Eleven.

The poem, "At Set of Sun," which we quoted from *Atalanta* in this department last month was written by Mrs. Ella Wheeler Wilcox when she was sixteen years old.

In the *Century*, Rudyard Kipling has a short poem entitled "The Answer." It is a quaint conceit, touched with the spirit of the East, which Mr. Kipling loves to affect. A rose falling upon the garden path called out to God and murmured against his wrath :

Then softly as the rain-mist on the sward
Came to the Rose the answer of the Lord:
"Sister, before I smote the dark in twain.
Or yet the stars saw one another plain,
Time, tide and space I bound unto the task
That thou shouldst fall, and such an one should ask."

Whereat the withered flower, all content,
Died as they die whose days are innocent;
While he who questioned why the flower fell
Caught hold of God, and saved his soul from hell.

ART TOPICS.

SO MANY young Americans, and especially American women, study in the art institutes and salons of Paris, that there is a national interest in Lucy M. Hooper's short article on "The Art Schools of Paris," in the November *Cosmopolitan*. She describes with particular detail the great academy which Julian founded twenty-four years ago, and in which over a thousand students—some three or four hundred of them women—are now studying.

"The latest development in the realms of art tuition in Paris is the question of admitting female students to study at the Ecole des Beaux Arts. The question, mooted and persistently pressed by Madame Berthaux, the president of the Woman's Fine Art Society of Paris, has received due consideration from the present Ministry. The lady's plea was that, while female pupils were admitted to the law and medical schools of Paris, their exclusion from the Academy of Fine Arts was unjust and indefensible, and the more so as Rosa Bonheur and Madeleine Lemaire were numbered among the artistic celebrities of the nation. So far, the petition has remained ungranted. A barrier, found as yet unsurmountable, exists against a favorable solution of the question. The French authorities will not for a moment admit the possibility of suffering women, and especially young girls, to study in classes with men. Propriety and decency, they declare, forbid the measure. Women, therefore, will not be admitted to study at the Beaux Arts till a separate set of studios shall be provided for their use, with the entrance so arranged that under no circumstances shall the male and female pupils so much as pass each other on entering and departing. Therefore, till the funds are found for the erection of the new buildings women cannot enjoy the privilege of studying painting and sculpture gratuitously in Paris; for the Ecole des Beaux Arts is the only establishment of the kind in that city in which tuition is free."

Belford's series of articles on "The Men Who Made the West" brings us this month to the artists and art patrons of Chicago, who are treated of by William Armstrong. He tells of the great interest in the art institute of the city, and its well-attended and well-filled annual exhibitions. The Art School had last year 841 students, and now a new home for the æsthetic is being erected on the lake front, a magnificent building costing half a million. Mr. Armstrong emphasizes the strong need and strong desire for American subjects for American art, and exhorts our painters to stay at home and paint what they see there. He sketches the lives and work of such patrons as Charles L. Hutchinson, Charles T. Yerke and the Armours, and of such Western artists as Oliver Dennett Grover, John H. Vanderpoel, Leonard W. Volk and Lorado Taft.

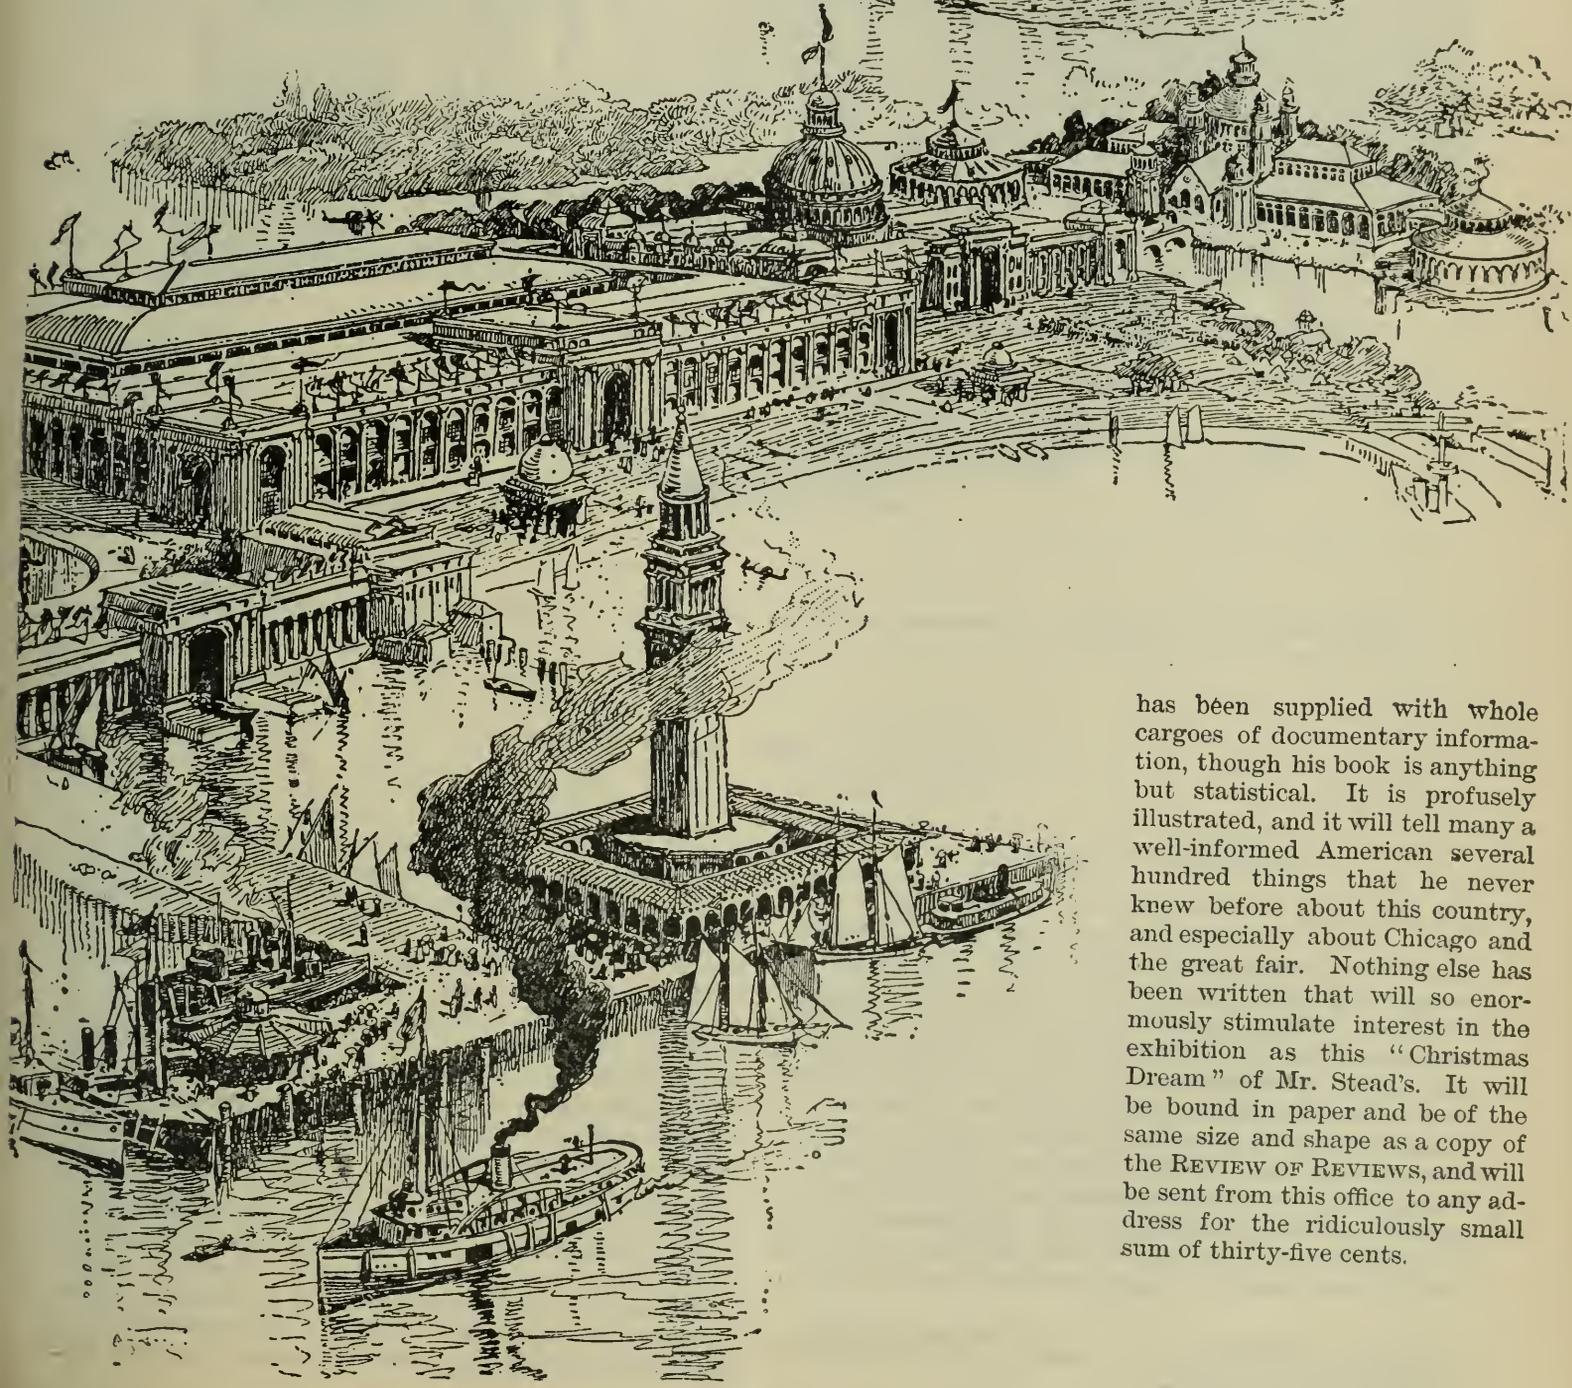

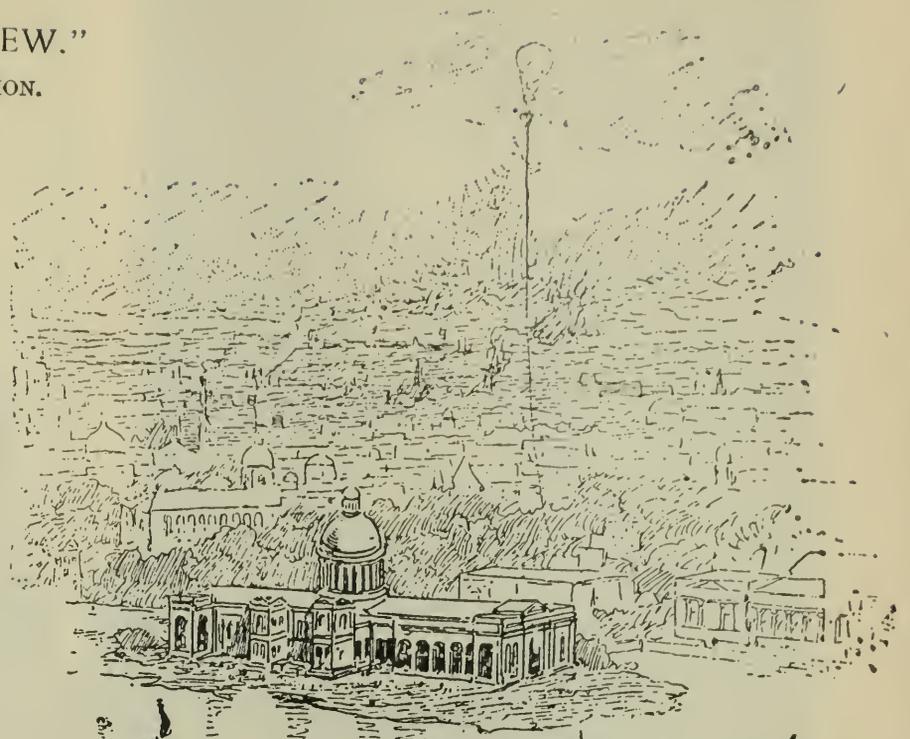

The Duke of Marlborough, writing in the *Fortnightly* on "A Future School of English Art," says that in his opinion sacred art of the Christian variety is played out, and that we have got to find something to take the place of the Christian inspiration. He expresses his idea as follows: "I know very little of the Eddas or Norse tales, very little of the Niebelungen and Märchen tales, still less of the Morte d'Arthur; but whenever I do get a glimpse of this fascinating history of romance I feel that there is here a field for art which can take the place of the earlier Christian inspirations. It is sufficiently humanitarian to replace religion, or rather dogma, while it is sufficiently vague, so that we shall neither have a Rénan or a Huxley destroying its charm for us. There is neither plenary inspiration nor divine revelation about any of it. It is healthily masculine and feminine in all it tells us, while it is never dull, owing to the charm of mystery which surrounds its stories.

"And, in fact, we are not without an interpreter of its spirit. The greatest living painter of this school, and perhaps of any other in this field of romance, is undoubtedly Mr. Burne Jones. The public may not be aware of the quiet, retiring prophet who is living in their midst, and who can reproduce on canvas this field of conception."

"FROM THE OLD WORLD TO THE NEW."

MR. STEAD'S NOVEL ON THE CHICAGO EXHIBITION.

ALL American readers of the REVIEW OF REVIEWS will be interested in the Christmas volume, which will be issued about December 15, and which will be nothing less than a complete novel, written by Mr. Stead in anticipation of the World's Fair. Mr. Stead's characters begin as a house party in England, and the love story which runs through the book ends on the World's Fair Grounds in Chicago. The story is made a convenient vehicle for the trenchant discussion of all sorts of topics of the day in Mr. Stead's well-known style; and the somewhat clairvoyant views about America of this versatile London journalist, who has never yet seen America, though he has always been enthusiastic in his regard for our country, will naturally find hosts of amused if not edified readers on this side of the ocean. Mr. Stead

has been supplied with whole cargoes of documentary information, though his book is anything but statistical. It is profusely illustrated, and it will tell many a well-informed American several hundred things that he never knew before about this country, and especially about Chicago and the great fair. Nothing else has been written that will so enormously stimulate interest in the exhibition as this "Christmas Dream" of Mr. Stead's. It will be bound in paper and be of the same size and shape as a copy of the REVIEW OF REVIEWS, and will be sent from this office to any address for the ridiculously small sum of thirty-five cents.

(Copyright by the Century Co.)

SOUTH SIDE OF CANTERBURY CATHEDRAL. (From Mrs. Van Rensselaer's "English Cathedrals.")

THE NEW BOOKS.

"ENGLISH CATHEDRALS."

WE MAY, as Americans, regret that "Old South" and "Old Swedes" churches are not of any great architectural value; we can but be thankful for the inheritance of history and beauty built into the English cathedrals, which belongs to us as members of an English-speaking people and as human beings. The Century Company has gathered into a very beautiful volume the articles of Mrs. Van Rensselaer, which have been appearing for some years in the *Century* magazine, together with Mr. Joseph Pennell's masterly illustrations.* His 154 illustrations in this book have the twofold power to help us understand the structure and beauty of the cathedrals and to help us appreciate them. They include diagrams of ground plans, views of windows, naves, doorways, towers, etc., and,

* English Cathedrals. By Mrs. Schuyler Van Rensselaer. Illustrated by Joseph Pennell. Quarto, pp. 395. New York: The Century Company. \$6.

of especial note, views of the great buildings as a whole, showing the relation of the cathedral to its environment, be it stirring city or quiet English landscape. Naturally Mrs. Van Rensselaer found it difficult to select a limited number of cathedrals from the rich store at her command (some may be glad to note her explanation in the carefully written introduction, that the term "cathedral" is not necessarily applicable to "the most important church in an important town," but to a "church large or small which holds a bishop's chair"). But guided by her desire to make a series of essays of historic as well as æsthetic value, she has selected the following twelve—a list which the late Professor Freeman declared could not be made better: Canterbury, Peterborough, Durham, Salisbury, Lichfield, Lincoln, Ely, Wells, Winchester, Gloucester, York and London (St. Paul's). The first chapter treats clearly of the general types of architecture which developed in the English cathedral; their relation to civic life, and particularly of their affinities and contrasts with

the French developments. Following that chapter we have the course of religious, æsthetic and ecclesiastical history of England in so far as it centers about and abides in the semonuments of "frozen music," from the time when St. Augustine baptized the first English convert to Roman faith—King Ethelbert—to the great creation of the mind of Wren. St. Paul's Cathedral is the last worthy of finding a place in such a series as the present, and its incarnation in visible form was completed by the laying of the top stone upon the dome in 1710.

The average reader must approach such a book as this with the spirit of serious study, but that study ought to be of a very fascinating kind. Mrs. Van Rensselaer's clear, harmonious style is no less charming than her sense of historical perspective and value is true. Her æsthetic judgment is well known to be the result of natural inclination, matured by long and loving study. She has not written this book for architectural specialists, but for the rank and file of American readers, who are interested in what is important, what is instructive, and what is beautiful in the cathedrals of the motherland. She has the advantage of being able to look upon English architecture with the philosophical calm of true criticism, while yet retaining a full and natural sympathy with its aims and achievements. There are references given to the standard works of information upon many of the individual cathedrals.

"OLD ITALIAN MASTERS."

Engraver, historian and publisher have conspired to make it difficult for the reviewer to speak in terms of dispassionate criticism of Timothy Cole's "Old Italian Masters."* To those who have been so happy as to view the original paintings here reproduced, Mr. Cole's art will bring back the pleasures and inspirations of the rich days spent in the galleries of Florence and other Italian cities. The book, however, appeals to a far larger circle than is composed of Continental travelers or of those professionally interested in art. Every believer in the ideal finds increasing need in these days for an influence which shall elevate life above the commonplace and hold in balance the preponderance of the scientific spirit. Such books as this before us bring that influence and result in an inspiration and an education as well as a pleasure. Mr. W. J. Stillman contributes valuable historic notes upon each of the thirty-seven artists whose work is treated, from Duccio, born in 1260, to Correggio, born in 1494, with introductory remarks upon the Byzantines and Cimabue. He writes a preface also, from which we take a few remarks to show his general attitude toward art and his particular view of the Italian masters. "Art is the expression of all the spiritual faculties of man—passion for beauty, aspiration of the imagination, the manifestation of the individual in his inmost nature. . . . The Italian Renaissance was in nowise a return to nature as a model, but a re-awakening of the spiritual activity of the race after a torpor of ages, and which demanded the means of the expression of itself. . . . It was the poet, not the scientist, that appeared."

In this preface also Mr. Stillman describes the delicate, complicated and interesting process by which the painting upon the canvas has become for us the engraving upon the page. The photographic plate having been prepared, Mr. Cole has engraved directly from the original pictures, for the first time attempting this process of re-

* Old Italian Masters. Engraved by Timothy Cole. With Historical Notes by W. J. Stillman. Quarto, pp. 303. New York: The Century Company. \$10.

MR. TIMOTHY COLE.

(Reproduced by permission from a copyright engraving belonging to the Century Company.)

production. Mr. Cole's own preface further explains the mystery and range of the engraver's art, and the engravings themselves reveal that mystery and range—the effect not only of chiaroscuro, but even of color having been achieved. It is hardly necessary to say anything of fidelity to the originals when speaking of Mr. Cole's work. No one can fail to understand, from the reproduction of Michael Angelo's Delphian and Cumæan Sibyls, the familiar statement that Angelo excelled in form, and Mr. Stillman's affirmation that his highest power was in sculpture, rather than in painting or architecture. Likewise, no one can fail to feel the force of the phrase, "a great colorist," as applied to Titian, if he will examine Mr. Cole's reproduction of "The Entombment." Mr. Cole is a master of literary style as well as of the engraver's tools, and he has fascinating and discriminating notes upon the original works whose spirit he has so faithfully imparted to us. The fact that the volume is the product of American mind and of the De Vinne Press will add much to its interest.

"INNS OF COURT."

The great cathedrals alone excepted, there are no architectural monuments in the mother country that possess more of interest and charm for the well-read American visitor than the venerable Inns of Court in the City of London, including the group of ancient and famous buildings in the ward of "Farringdon Without," which date from the settlement of the Knights Templar. These ancient structures go back, in part, as far as the twelfth century. Besides the chapels connected with them, we have the Inner Temple, the Middle Temple, Lincoln's Inn,

Gray's Inn, and the Inns of Chancery described by Mr. W. J. Loftie in a sumptuous volume illustrated with many drawings by Herbert Railton.* No one else is so well qualified as Mr. Loftie to tell us of the origin, the architecture, the mediæval history, and the more modern associations and reminiscences of these noble old homes of the legal profession. The Inns of Court are so intimately wrought into the whole course of English literature that general readers, no less than cultivated lawyers feel the spell of their wealth of historical association. The Messrs. Macmillan & Co. have given us in this volume a magnificent specimen of the bookmaker's art. The pages are fourteen inches long by ten inches wide, and many of the full-page plates have a high independent value of their own. A more pre-eminently satisfactory gift-book than this could not be found for a recipient who, as student or practitioner of the common law, is imbued with the traditions of the Inns of Court, or for a person of literary tastes who has at some time made his pilgrimage to the shrines of the old Templars, and to whose mind and vision this beautiful book will bring back pleasant memories.

A BEAUTIFUL ART VOLUME.

The *Magazine of Art*, published by Cassell & Company, is always welcome in its monthly numbers for the value and variety of its articles and for the rare beauty and interest of its illustrations. But a bound volume of the *Magazine of Art*† has a cumulative effect upon the person who turns its leaves, so that the value of each part seems to be enhanced by the immense range and variety shown in the twelve parts as brought together between the handsome covers of the volume. Another compliment can truthfully be paid to Cassell's *Magazine of Art*. It is to a less extent than almost any other monthly publication temporary and transient in the character and value of its contents. Its literary as well as artistic contributors are men of such recognized standing, and their contributions are of such complete and mature character, that the yearly volume is a work which, both for entertainment and for reference, cannot diminish in value.

NATURE AND ELEMENTS OF POETRY.

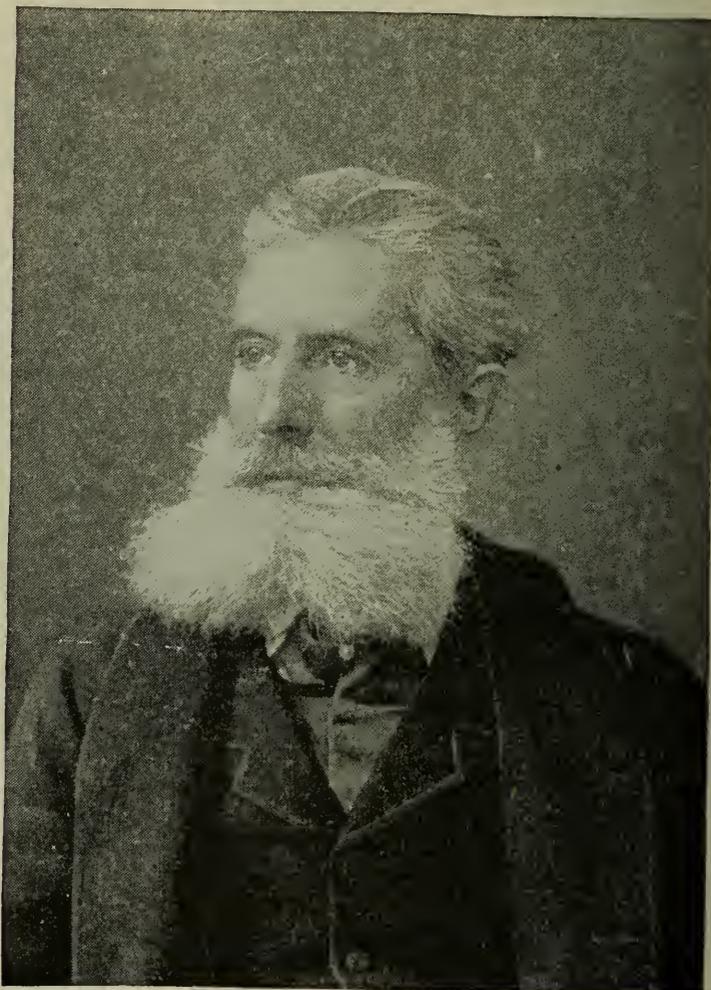

Mr. Stedman's volume‡ is really a contribution to the science of æsthetics, and as such it is one of the most important books which this century has produced. We think it none too strong a statement to say that it marks the beginning of a new epoch of thought concerning the inner essence of poetry. Perhaps the modern man who should be named in connection with Mr. Stedman as a profound, sensitive and systematic thinker upon art is Schopenhauer. Though the author is of course discussing in fullness only the single art of poetry, the deeper laws of all true art are revealed before his search. The volume is a series of lectures, first delivered as the introductory course of the "Percy Turnbull Memorial Lectureship of Poetry," at Johns Hopkins University. So far as Mr. Stedman knows, he tells us, there is but one other such

* The Inns of Court and Chancery. By W. J. Loftie, B.A., F.S.A. With illustrations by Herbert Railton. Imperial 4to, pp. 97. New York: Macmillan & Co. \$7.50.

† The *Magazine of Art*. 1892. Folio, pp. 484. New York: Cassell Publishing Company. \$5.

‡ The *Nature and Elements of Poetry*. By Edmund Clarence Stedman. 12mo, pp. 338. Boston: Houghton, Mifflin & Co. \$1.50.

foundation for instruction in poetry in English or American universities—the one at Oxford, recently so highly honored by Matthew Arnold's incumbency. Mr. Stedman believes the true antithesis to be *not* poetry and prose, but poetry and science. It is in the growing demands which scientific ideas and training lay upon every province of human life that art finds now its keenest opponent. But in that very opponent poetry is soon to find a powerful and obedient ally.

MR. EDMUND CLARENCE STEDMAN.

(Photograph by Gutekunst, Phila.)

Mr. Stedman concerns himself comparatively little with the technical features of poetry—not because he underestimates them, but because he believes the individual bard finds his own education in them and his true use of them. The chapters after the first, which treats of the science-art antithesis and the most important earlier thought upon poetry (in Plato, Aristotle, Horace, Sidney, Goethe, etc.), discuss respectively "What is Poetry?" "Creation and Self-Expression," "Melancholia" (the muse of the Anglo-Saxon race), "Beauty," "Truth," "Imagination," and "The Faculty Divine: Passion, Insight, Genius, Faith." Mr. Stedman's position may be perhaps correctly said to be that of a rational but sympathetic idealist—one to whose mind the words "beauty" and "genius" yet convey the thought of noble and dominating realities. His keen, logical and beautiful development of the subject makes the book itself a work of art as well as of criticism. There is given as a frontispiece a fine reproduction of Dürer's "Melancholia"—the "muse of Christendom."

A GROUP OF BOOKS ABOUT NATURE.

Long ago Thoreau wrote something to the effect that books about nature make the best winter reading. It is, indeed, for most of us more delightful to sit by a cosy January fire and listen to the reports which the poet-naturalists bring us of the mysterious ways of bird and plant and sky than it is to wander out in balmy May ourselves. "Autumn, from the Journal of Henry D. Thoreau,"* follows the volumes of the same series, entitled "Early Spring in Massachusetts" and "Summer," which Mr. H. G. O. Blake has so satisfactorily edited. The editor has done his work—so he states in the preface—for an "eager and earnest company of readers"; we believe him wrong when he says that it is not probably a large company. The extracts making up the present volume date from about 1840 to 1860, and are arranged according to the progress of the season. In an entry for October, 1853, we find that oft-quoted saying of Thoreau's about the unsold volumes of his "Week" which came back to him: "I have now a library of nearly 900 volumes, over 700 of which I wrote myself." Lovers of the Walden philosopher are exceedingly thankful that he wrote so cheerily a few lines below: "Nevertheless, in spite of this result, sitting beside the inert mass of my works, I take up my pen to-night to record what thought or experience I may have had with as much satisfaction as ever." A very thoroughly prepared index of subjects is added to the volume.

In "The Foot-Path Way"† Mr. Torrey gives us another book of exhilarating out-door essays (eleven in number), worthy of the author of "Birds in the Bush," etc. Mr. Torrey sees with well-trained and loving eyes the beauties of trees and flowers and mountains, but it is in the observation of bird ways that he charms us most. The volume before us contains "The Passing of the Birds," "Robin Roosts," etc., and devotes two of its best chapters to studies made of our little ruby-throated humming bird. Mr. Torrey's observations have been made in New England, the first love of our poet-naturalists, which illustrates the spirit of White of Selborne's remark: "It is, I find, in zoology as in botany: all nature is so full that that district produces the greatest variety which is the most examined."

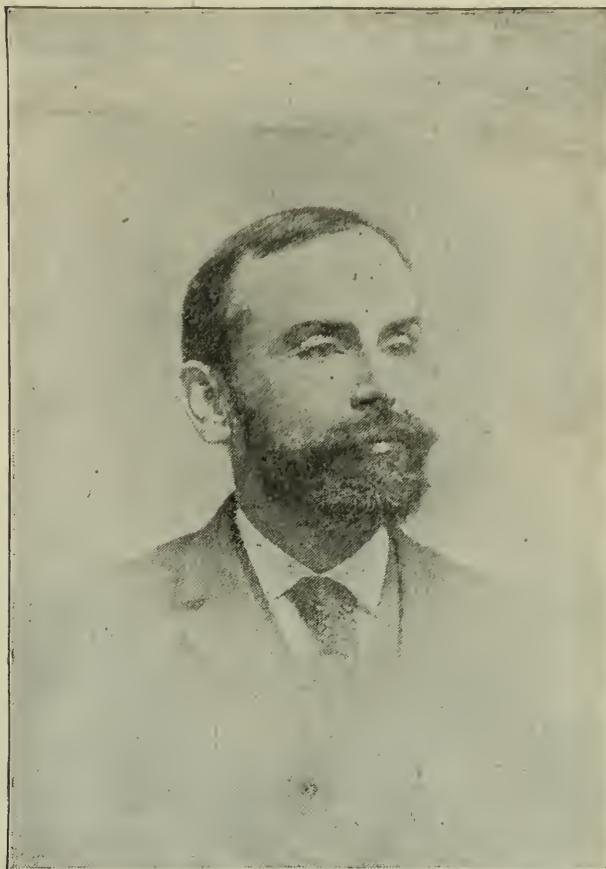

So we turn to another volume inspired by New England—Mr. Prime's "Along New England Roads."‡ The author of "I Go a-Fishing" first contributed these twenty sketches to the pages of the *New York Journal of Commerce*, during a period of more than forty years. Although he has, of course, revised and corrected them, they still give a good proof that the "journalism" of some of our daily and weekly papers produces material that may well take its place among the best literary creations we have. Dr. Prime has driven a great deal over the roads of New England, and writes his observations of natural beauties and of phases of human character and local coloring out of a wide experience and with a very fine and masterly literary style. A few of the sketches are really short stories, and throughout it is human life which most attracts him. We have pictures of country auctions, "store debates," fishing days, old churches and "graveyards"—all full of a strong sense of the pathetic, the humorous and the charming.

* Autumn: From the Journal of Henry D. Thoreau. Edited by H. G. O. Blake. 12mo, pp. 476. Boston: Houghton, Mifflin & Co. \$1.50.

† The Foot-Path Way. By Bradford Torrey. 16mo, pp. 245. Boston: Houghton, Mifflin & Co. \$1.25.

‡ Along New England Roads. By W. C. Prime. 16mo, pp. 208. New York: Harper & Brothers. \$1.

Dr. Prime has driven, but Dr. Abbott, well known as the author of "A Naturalist's Rambles About Home" and other books of like nature, has, with equal success, walked. He is a Rambler with a very hearty and keen appreciation of out-of-door-dom, and a very pleasant power in telling us about that kingdom. In his new volume, con-

MR. BRADFORD TORREY.

sisting of short essays,* Dr. Abbott writes a "Defense of Idleness," and gives very tempting reports of various aspects of the idle man's views of river, tree and mountain. The larger part of his sightseeing has been along the lower Delaware (he has also several essays based on the historical and antiquarian features of that region), but his rambles have carried him as far as the mining districts of Arizona, and he has been equally "in touch with nature" wherever he has found her, knowing the secret of becoming *pro tempore* a primæval child of the forest. A number of excellent full-page illustrations add to the beauty of binding, paper and subject matter.

Our next book † carries us across the Atlantic to England and the Continent. Though Sir John Lubbock is widely known to Americans through the ethical and literary value of "The Pleasures of Life," and through his political and educational writings, his fame rests principally upon the popularity of his scientific writing. He has his own way of looking upon natural phenomena, and it is a way which many, old and young, learned and unlearned, understand and appreciate. Standing firmly on the foundations of modern science and needing no recourse to classical mythology or mediæval mysticism, he yet brings back to us the old beauty, mystery and human interest in nature, which we were in danger of losing.

* Recent Rambles; or, In Touch with Nature. By Charles C. Abbott, M.D. 12mo, pp. 330. Philadelphia: J. B. Lippincott Co. \$2.

† The Beauties of Nature and the Wonders of the World We Live In. By Sir John Lubbock. 12mo, pp. 443. New York: Macmillan & Co. \$1.50.

Many full-page and lesser illustrations adorn and explain the text, which is divided into chapters on "Animal Life," "Plant Life," "Woods and Fields," "Mountains," "Water," "Rivers and Lakes," "The Sea," and "The Starry Heavens."

Prof. Henry Drummond in one of his books, writing of the productive activity of Nature used the phrase: "The Great World's Farm."* Miss Selina Gaye, author of "The World's Lumber-Room," etc., has followed out Drum-

From HARPER'S WEEKLY

Copyright, 1892, by Harper & Brothers.

THE LATE THEODORE CHILD

mond's hint and told in detail the agency of rock-decomposition, rivers, burrowing animals, leaves, seeds, man, etc., in the growth and protection of the vegetable life which constitutes earth's crop. Science-lore told with such skill and spirit helps to make popular the investigation of biology, without in any way detracting from its dignity. "The Great World's Farm" is well illustrated, and contains a very fitting preface by G. S. Boulger, F. L. S., F. G. S., the professor of botany and geology in the City of London College. The book will be especially valuable to young people with an appetite for natural history.

THREE BOOKS ON CITIES.

Three beautiful books about the past and present life and charms of the three greatest of modern cities come to us from the Messrs. Harper & Brothers. All of these are finely printed and magnificently illustrated. It is needless to say that they have to do with Paris, London and New York. The attention is quickly and strongly drawn to the volume of essays entitled "The Praise of

* The World's Great Farm. Some Account of Nature's Crops and How They Are Grown. By Selina Gaye. 12mo, pp. 376. New York: Macmillan & Co. \$1.50.

Paris,"* because of the author's name that appears upon the title page. It will give many a reader of *Harper's Magazine* a painful shock to realize that these are the last of the graceful and scholarly papers upon life and art and current movements in Paris that can ever come to us from the pen of Theodore Child. The cable has brought word of his untimely death on the eastern frontier of Persia, whither he had gone to write for publication in *Harper's Magazine* a series of papers upon India and the mooted questions that threaten the world's peace upon the highlands of Asia, where Russian and British authority tends to conflict. The papers in this volume on Paris are not formally consecutive, yet they are harmonious as to their point of view, and give us in refined and charming sketches much information about the people, the place, and the manners of Parisians of to-day and yesterday.

The book on London is Mr. Walter Besant's.† It is composed of chapters which Messrs. Harpers have already published in their magazine. It will stand as a workhouse of information to those who delight in the London of antiquity and the middle ages. We are told of the London of the Roman, of the Saxon and Norman period, of the time of the Plantagenets and Tudors, of the epoch of Charles the Second, and of the days of George the Second. Mr. Besant has studied London with zeal and enthusiasm, and with a strong bent for antiquarian law. Yet his fondness for old architecture and old localities does not surpass his fondness for the people of the olden times and their ways of working and playing. Altogether it is a charming book.

New York is not so old as London by any means, but yet even New York may be treated in that same spirit of antiquarian research and leisurely reminiscence. The writings of Mr. Felix Oldboy have been well known to the readers of the *Evening Post* and the *Commercial Advertiser*. Felix Oldboy was John Flavel Mines. Colonel Mines died last year, but his papers on New York have been carefully and faithfully edited by James E. Learned.‡ We have twenty-seven chapters under the general heading "Around New York," and fourteen chapters under the title "My Summer Acre." The essays originally appeared in the years from 1886 to 1891. They tell in the most charming fashion just what one would most like to know about early and later New York, as to historical localities, interesting buildings, amusements a generation or two ago, and so on. Felix Oldboy's "Summer Acre" was on the East River facing Hell Gate. The old house was built as a summer mansion seventy-five years ago. These "Summer Acre" chapters tell us much of localities in the immediate suburban vicinity of New York. The volume is profusely illustrated in a manner that adds to its historical value. It is much more than a book of entertaining descriptions, for Felix Oldboy was evidently a most diligent and exact student of all sorts of developments in and about Manhattan Island.

DESCRIPTION, EXPLORATION AND TRAVEL.

"The Danube, From the Black Forest to the Black Sea," § is a charming book from the pen of F. D. Millet. Mr. Millet, Mr. Alfred Parsons and Mr. Poultney Bigelow last summer made an adventurous voyage in Ameri-

† London. By Walter Besant. Octavo, pp. 524. New York: Harper & Brothers. \$3.

‡ A Tour Around New York, and My Summer Acre. Being the Recreations of Felix Oldboy. By John Flavel Mines, LL.D. Octavo, pp. 586. New York: Harper & Brothers. \$3.

§ The Danube, From the Black Forest to the Black Sea. By F. D. Millet. Octavo, pp. 343. New York: Harper & Brothers. \$2.50.

can canoes all the way from the upper stretches of the Danube in the Black Forest to its mouth, at the other end of Europe in the Black Sea. Mr. Millet writes a charming and spirited description of the voyage and its scenes, and the book is illustrated with more than 300 artistic drawings from his pencil and that of Mr. Parsons. The description of places and people along the lower Danube in Hungary, Servia and Bulgaria is, of course, light and superficial. Nevertheless, this volume is pleasant and profitable reading, besides being most artistic in its illustrations and attractive in its manufacture.

One of the most beautiful works of travel ever issued from the American press is the new edition, illustrated with numerous delicate photogravures of Mr. Charles Dudley Warner's "In the Levant,"* which was first published in 1876. Mr. Warner is of course always sprightly, witty and agreeable, and these notes of Oriental travel are pleasant reading.

Mrs. Harriet Cornelia Hayward has made her journey to the Orient from a somewhat unusual starting point. Her volume is entitled "From Finland to Greece; or, Three Seasons in Eastern Europe."† She tells of what she saw in crossing Russia and Poland, gives us a glimpse of Vienna, hastily inspects Budapest, and then crosses Hungary, Servia and Bulgaria by the Oriental Express to Constantinople. There is some description of Constantinople and of a brief trip to Greece.

Mr. Clinton Scollard has also visited the Orient and tells us of it in a volume of very easy and slight running comment.‡ His range of observation and inquiry was by no means exhaustive, but his fancy is graceful, and the publishers have put his scant chapters into the form of a very pretty book.

The question whether or not the British government shall abandon Uganda beyond Lake Nyassa in Central Africa, or whether it shall maintain the British flag over a region in which British missionaries have shown great heroism, and have accomplished encouraging results—a region also which has important future political and commercial significance—is the question that has most agitated the British Cabinet during the past six weeks. That fact gives particular timeliness to the Rev. James Johnston's volume entitled "Missionary Landscapes in the Dark Continent."§ We have presented to us in thirteen papers a series of informational sketches of the condition of exploration, political conquest and missionary enterprise, in all parts of Africa. The volume has of course its special interest for the world of Protestant missionary propaganda; but its chief importance, to our mind, is in its character as a contribution to our present-day knowledge of a great continent that begins to absorb so much of the attention of the civilized world.

In a somewhat similar way the Rev. Dr. Gordon's book, "An American Missionary in Japan,"|| is to be commended for its timeliness. Dr. Gordon tells us very

‡Under Summer Skies. By Clinton Scollard. 12mo, pp. 290. New York: Charles L. Webster & Co. \$1.

§Missionary Landscapes in the Dark Continent. By Rev. James Johnston, A.T.S. 12mo, pp. 264. New York: Anson D. F. Randolph & Co. \$1.25.

||An American Missionary in Japan. By Rev. M. L. Gordon, M.D. 16mo, pp. 300. Boston: Houghton, Mifflin & Co. \$1.25.

much more than we have known before of the conditions and methods of American missionary work in the Japanese empire. But his view is so broad and his power of observation so well trained that he gives us much more than a sketch of missionary effort, and adds a worthy volume to our stock of literature upon the new Japan.

Another missionary to Japan, the Rev. John Batchelor, has devoted his efforts to the "Ainu," the hairy aborigines of Japan,* and he has written a very valuable book upon the characteristics of these interesting people. Although presented in simple narrative form, his volume is a valuable contribution to ethnology.

Every one who knows anything of Egyptian exploration has followed with interest the enthusiastic work of Mr. W. M. F. Petrie, who has dug so indefatigably in the sands of the desert, and who has made so many important discoveries in Egyptology. In his small volume, "Ten Years' Digging in Egypt, 1881-1891,"† he covers in a general and popular way the results of recent exploration in his chosen field.

BIOGRAPHY AND MEMOIRS.

Two new volumes come to us from Messrs. Dodd, Mead & Co., in the "Makers of America" series. One is from the pen of Professor William G. Sumner, of Yale University, and its subject is Robert Morris.‡ Professor Sumner says in his few lines of preface that he has reduced into a current narrative the most essential information about the life of Robert Morris, which is contained in his larger work entitled "The Financier and the Finances of the American Revolution," published last year. It is needless to add that Professor Sumner is a high authority in American financial history; and perhaps nobody else could so justly estimate the career and services of Robert Morris. The other of these biographical sketches is devoted to Sieur de Bienville (Jean Baptiste le Moyne, § who was the first governor of the French province of Louisiana. Le Moyne was the son of Canadian French parents, his father having gone from France to Canada as a lad of fifteen in 1641. Our hero was born in 1680, subsequently went to France, and in early manhood was one of the French pioneers who settled at the mouth of the Mississippi. How he came to great influences at New Orleans and played an honorable and important part in his day and generation, Miss Grace King tells us in a very attractive and accurate volume. She has derived her information from the best French sources, largely from the monumental documentary collections of Pierre Margry.

It might well be within bounds to declare that the most entertaining book that the past month has brought us is Mr. Fitzgerald Molloy's biography of Peg Woffington.||

§Jean Baptiste le Moyne, Sieur de Bienville. By Grace King. "Makers of America" series. 12mo, pp. 330. New York: Dodd, Mead & Co. \$1.

||The Life and Adventures of Peg Woffington, with Pictures of the Period in which She Lived. By J. Fitzgerald Molloy. 2 vols., 12mo, pp. 255-248. New York: Dodd, Mead & Co. \$3.50.

Strange to say, this brilliant and gifted actress—of checked career and not wholly blameless life, but of true genius and a thousand charming and noble qualities—finds her first biographer in Mr. Molloy, after more than one hundred and thirty years in her grave. Peg was born in Dublin in 1820, was the daughter of a washerwoman, was found on the streets at the age of eight by Madam Violante, a French rope dancer, and was at once introduced to the public in dancing parts on the Dublin variety stage. Her advancement was rapid, and at eighteen she was an Ophelia. Two or three years later

loy's two volumes on the life and times of the actress Peg Woffington to the two autobiographical volumes which tell us of the career of Rev. John G. Paton, Scotch Presbyterian missionary to the New Hebrides;* yet any reader of broad and healthy tastes would find the story of Mr. Paton's marvelous and self-sacrificing adventures in his apostolic zeal for the spread of the Gospel almost as fascinating, and much more absorbing and thrilling, than the annals of the Irish actress. Mr. Paton began life in Glasgow, and for some years was a city missionary in the slums of that crowded and dingy city. From this work at home he entered upon a wider missionary field in the Southern seas. The whole of Australasia is John G. Paton's familiar parish. His style is simple but eloquent; and his volumes, apart from their biographical and religious interest and value, will hold a permanent place in the literature of adventure and exploration. The volumes first appeared two or three years ago in England, but Dr. Paton's very recent visit to the United States has created a sale for a large American edition.

Lovers of music and the opera and of stage life and reminiscences will find some entertainment in Charles Santley's volume,† in which in a gossipy and somewhat minutely trivial fashion he records the story of his life. His career on the English operatic and concert stage was a long one; his student experiences on the Continent were interesting; his acquaintances were many; his familiarity with the musical and dramatic life of England was very intimate indeed—and Mr. Santley takes his readers entirely into his confidence.

SOME HISTORICAL WORKS.

The "Story of the Nations" series, so admirably conceived and so persistently and successfully prosecuted by Mr. George Haven Putnam, of Messrs. G. P. Putnam's Sons, has already given us a shelf full of books at once accurate and scientific, and thoroughly convenient and readable. The latest is one of the most noteworthy of them all. It is the story of Sicily‡ in the Phœnician, Greek and Roman periods, from the pen of the late Edward A. Freeman. It was the promise secured from Mr. Freeman to write this small history which led him into such researches as to result in the production of the large work on Sicily which closed Mr. Freeman's career as an historical author. He had often said that "in order to write a small history you must first write a large one." For the general reader, or even for the historical specialist who does not care to delve minutely into the records of this wonderful island, which never was the home of any nation, but has been the meeting-place of many, the story of Sicily, as told in the Putnam series, is a most satisfactory substitute for the large three volume work.

Mr. James Breck Perkins has already commended himself to serious historical students by his work upon "France Under Richelieu and Mazarin." His new volume, "France Under the Regency, with a Review of the Administration of Louis XIV.," § will be found even more acceptable and useful. It covers a period whose important

§ France Under the Regency. With a Review of the Administration of Louis XIV. By James Breck Perkins. 12mo, pp. 619. Boston: Houghton, Mifflin & Co. \$2.

AN ILLUSTRATION FROM MR. MOLLOY'S BIOGRAPHY.

we find her playing in Covent Garden, London, and with all the wits and gallants of the day at her feet. In these fascinating volumes of Mr. Molloy's, beautifully printed and most interestingly illustrated, we live in the company of Johnson, Garrick, Savage, Sheridan, Goldsmith, Richardson, Foote, and scores of other celebrities of the stage, of literature, and of society. Peg, as portrayed by Mr. Molloy, is much the same creature who figures as the heroine of one of Charles Reade's most popular novels; but Mr. Molloy in his biography has given us even a more fascinating tale than Charles Reade's piece of fiction.

A more yawning contrast could hardly be imagined than that which presents itself when one turns from Mr. Mol-

phases it is necessary to understand if one would have any intelligent appreciation whatever of the conditions that led to the French Revolution, and of the modern shifts and turns of European politics. This volume is conceived and written in just the spirit which would make it the guide that thoughtful American students ought to have for this great French period, extending from 1660 to 1723. Mr. Perkins has made a thorough use of historical sources in Paris, and his work is accurate without being pedantic or tediously minute. It is written in a good literary style, and it shows strong philosophic grasp. The chapters on Colbert, on John Law and his system, and on the Mississippi Company and its failure will be highly appreciated by students of the history of political economy. The chapter on the revocation of the Edict of Nantes will appeal to students of modern religious history, and the final chapter on the morals of the Regency, together with the general chapter on Louis the Great, and the opening chapter on France in the eighteenth century, form an important *résumé* of the moral and social conditions of France in that famous epoch.

There lies upon our desk another book which might most profitably be read after Mr. Perkins' review of French history and court life in the days of Louis XIV. and the youth of Louis XV. is read to its concluding pages. Just at the end of the reign of Louis XIV. at Paris, Frederick William I. began to reign at Berlin. He it was who laid the foundation of the military prowess of Prussia. He created a power which Frederick the Great, who succeeded him, knew how to use in such a way as to insure the future of the Prussian kingdom. This volume is a History of the Youth of Frederick the Great by Professor Lavissee, of the Sorbonne, Paris.* It is not a very bulky volume, but it is a masterly study of the rise of the most imperious figure of the eighteenth century sovereigns. The pictures it portrays of life and manners, of education and training, at the Prussian capital, form a most entertaining and instructive contrast with the pictures drawn by Mr. Perkins of contemporary conditions in the brilliant but extravagant and dissolute court of Louis XIV. and the Regency. The study is the more interesting because it is made by a modern French professor, who is attempting to analyze the sources of that tremendous expansion of German power which made France herself bow in cruel defeat.

Another important period in the development of Prussia as one of the great powers of Europe is covered in a personal and gossipy, but nevertheless in very important and significant manner, in the two handsome volumes which contain the diplomatic reminiscences of Lord Augustus Loftus.† Lord Loftus received his first appointment in the British diplomatic service on the day of the accession to the throne of Queen Victoria in 1837. His diplomatic career continued unbroken for nearly fifty years. The two volumes contain no reminiscences, however, more recent than 1862. Thirty years of discreet silence have made it possible for him to give to the public frankly and with very little reserve his great store of inside knowledge of the larger political and international life of Europe for the period extending from the accession of Queen Victoria down to 1862. Lord Loftus was first sent to Berlin as an *attaché*, and although his career as a diplo-

matist brought to him successively important duties at various European courts from Brussels and Paris all the way to Constantinople, the larger part of his experience was in Germany. Students of the European history of our own century will find much in these reminiscences of a trusted and distinguished British diplomatist that will shed an illuminating sidelight upon many disputed points.

Mr. Henry Boynton has written an historical volume upon the United States and Europe during the first decade of the present century.* Mr. Boynton's style is blunt and direct, but his statements are well digested and his opinions are independent and mature. It is extremely unfortunate that a book which might have become very useful is rendered almost worthless by its utter lack of any table of contents whatsoever, its defective index and its generally unskillful arrangement. Mr. Boynton began his work with a marvelously clear cross-sectional view of simultaneous events and conditions in all parts of the old world and the new, during the administrations of Thomas Jefferson and the imperial triumphs of the great Napoleon.

We have in Prof. J. H. Patton's "Four Hundred Years of American History"† a work which cannot truthfully be called either one of critical importance or of original delving; but the two well-made volumes contain a faithful, spirited and well-presented record of the most significant public and social aspects of the development of the English-speaking people in North America. The work in its main bulk is not new, having been first issued as a Centennial publication in 1876; but successive chapters have from time to time been added, and this latest edition brings us well into President Harrison's administration. The work is a very useful one to have at hand for ready reference.

A HISTORY OF PHILOSOPHY.

Students of the systems and the logical development of modern philosophy will find a valuable assistance in Mr. Burt's last work.‡ Its general arrangement is chronological, and while it may be used as a book of reference it can be read continuously to advantage. The materials are drawn principally from such authorities as Zeller, Erdman, Ueberweg, and the *Journal of Speculative Philosophy*. The mind is greatly aided by the division of the text into numbered sections and into paragraphs beginning with italics, and by a thoroughly prepared table of contents. An analysis of the philosophy of every important thinker is made and summed up in a paragraph which shows its historical position and tendency. The analysis is preceded by a brief and well-written biographical notice. The principal philosophers treated previous to Descartes are Melanchthon, Hobbes and Hooker; in the entire work Kant is given most space, and Herbert Spencer has the next place. Mr. Burt has been lecturer on the history of philosophy at Clark University, and is the author of several philosophical works and translations. He characterizes the present period of modern thought as one of "originality and constructive effort."

ESSAYS AND BELLES LETTRES.

The critical work of Mr. Hamilton W. Mabie is of that high and inspiring quality which recalls Matthew Arnold's saying that "criticism" and "creation" are not exclusive terms in literature. Mr. Mabie's new volume is entitled "Essays in Literary Interpretation,"* and contains studies of Dante Gabriel Rossetti, Browning, Keats and Dante, besides essays upon the principles underlying modern criticism and literature. No one has a deeper, truer or more sympathetic sense of the close relation of literature to life than Mr. Mabie, and he is in full touch with the spirit of our day, without being a slave to it. His own books, we believe, like those of which he loves to write, "are born not in the intellect, but in experience."

Mr. J. M. Barrie, whose reputation has grown so mightily within a twelvemonth, is now thirty-two years old. He graduated from a small Scotch university in 1882, having done a little newspaper writing while in the University;

MR. J. M. BARRIE.

succeeded in obtaining a position on a news paper in Nottingham; began to send articles to the London papers, Mr. W. T. Stead, then editing the *Pall Mall Gazette*, being the first to accept such articles and to recognize his ability. Now that his various sketches and papers and tales have been gathered together, their high literary quality has been universally recognized. "The Little Minister,"

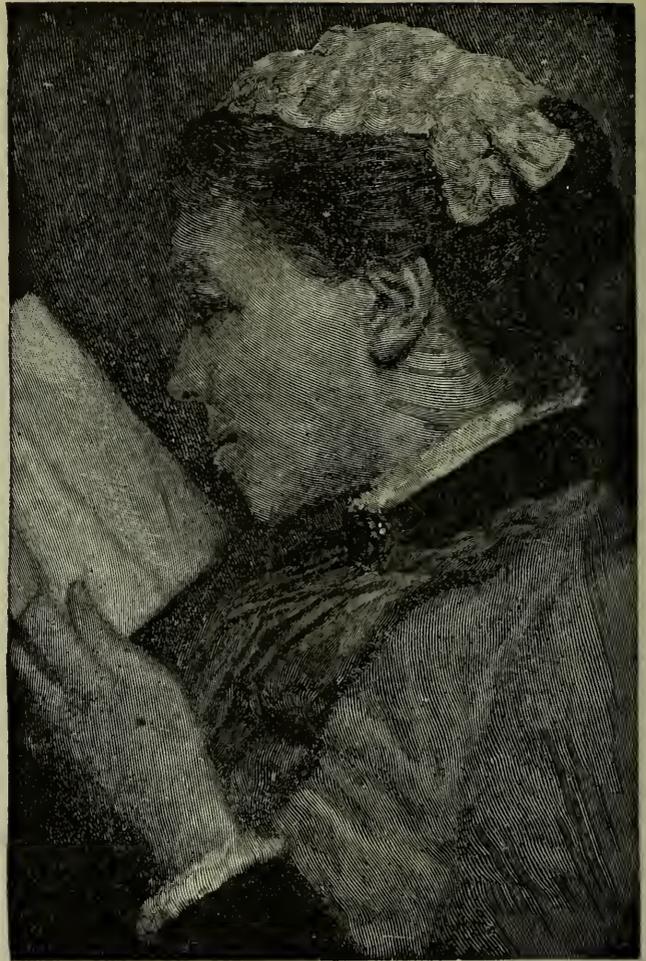

which appeared last year, is regarded as his best book, although "A Window in Thrums," which was brought out in 1889, is perhaps as good. The present volume † is a collection of rather slight sketches, which, however, give a fair insight into the characteristic of the author.

"Essays in Miniature" ‡ is the title of a collection of fifteen of Miss Agnes Repplier's best essays, making a member of Charles L. Webster's "Fiction, Fact and Fancy Series," of which Mr. Arthur Stedman is editor. Miss Repplier's position among living American essayists is very high, and deservedly so, for she represents just that delightful spirit of enjoyment in literature—wise, discerning, but hearty enjoyment—which gives an immortality to the essays of Montaigne and Irving. Miss Repplier is a lover of literature and of life even more than she is a student of them, and she convinces us without argument that her view is correct—that a zest for living is better than a zeal for learning. These essays are mostly drawn out of that wide range of reading which she has assimilated. Among those which deal more directly with life are the "Comedy of the Court House," and one which is perhaps the best essay she has written, "The Charm of the Familiar."

‡ *Essays in Miniature*. By Agnes Repplier. 12mo, pp. 217. New York: Charles L. Webster & Co. 75 cents.

From Harper's Magazine.—Copyright, 1888, by Harper & Brothers.

MRS. ANNIE THACKERAY RITCHIE.

New interest is added to Mrs. Annie Ritchie's work, "Records of Tennyson, Ruskin, Browning,"* by the death of the poet laureate; but under any circumstances the book would be well appreciated by lovers of Tennyson, Ruskin and Mr. and Mrs. Browning. Mrs. Ritchie, it is hardly necessary to state, is the daughter of Thackeray, and her own reminiscences have given us this series of *personalia*. So we do not have a book of formal criticism, but rather of loving though no less authoritative appreciation. Mrs. Ritchie has written in a delicate and charming way of the home life and the personal habits and relations of those who have been her acquaintances. Among the numerous beautiful illustrations, two of the most interesting are a sketch of Tennyson reading "Maud," made by Dante Gabriel Rossetti in 1855, and one (never before published) by Thackeray of Clevedon Court, where Arthur Hallam lies buried, underneath the epitaph which Tennyson himself wrote. There are fac-simile letters and excellent portraits of the four writers.

Mr. Austin Dobson's temper of mind guarantees a particular felicity in treating the essayists and poets of the last century—that quiet period which preceded the law-breaking of the romanticists and was unshaded by that "dread metaphysic cloud" which Lowell declares to sadden our own literary day. We therefore greet with pleasure Mr. Dobson's new volume. These scholarly and delightful essays † are inscribed to Mr. Hamilton W. Mabie. It was at his suggestion that the series was begun, and it

* *Records of Tennyson, Ruskin, Browning*. By Annie Ritchie. Octavo, pp. 198. New York: Harper & Brothers. \$2.

† *Eighteenth Century Vignettes*. By Austin Dobson. 12mo, pp. 261. New York: Dodd, Mead & Co. \$2.

was in the *Christian Union* that fifteen out of the twenty first appeared. Mr. Dobson has upon the title-page the quotation: "Faute d'archanges, il faut aimer des créatures imparfaites." Of many of these imperfect but lovable men the book gives us engraved portraits. Kindly Richard Steele looks out from the frontispiece, and following him among others, come Pope, Captain Coram, Dr. Johnson, Hogarth, Goldsmith, Cowper. The last illustration giving us a view of the "Old Vauxhall Gardens." We are sure the public will so delight in the present volume as to make an evident demand for the second, which Mr. Dobson half promises in his preface.

In Barry Pain's "Playthings and Parodies"* we have some entertaining parodies upon the style of Ruskin, Tolstoi and several of the poets, humorous and well-timed observations upon "Girls, Boys," and various sketchy odds and ends. In the series of "Sketches in London," which the book includes, we note the keenness with which Mr. Pain has looked upon phases of street life in a great metropolis. In general he has chosen to emphasize the humorous side in a semi-satirical way, but he has room left for pathos and for genuine flights of the imagination. There is throughout that ready touch with current sentiments which seems to mark the trained journalist.

A. C. McClurg & Co. are publishing a series of "Laurel-Crowned Letters," of which the present number † is the last issued and perhaps the one of widest interest. Mr. Shirley Carter Hughson, who edits the letters, does not claim to give a memorial volume of the poet, but nevertheless the recent centenary celebration of his birth gives an added interest to all Shelley material. Mr. Hughson has contributed a short, but in every way admirable introduction, in which he truly says that "aside from the literary value of these letters, nothing can be more delightful than the glimpse of the life led by that strange band of literary Englishmen with whom Shelley was associated in Italy"—a band including Byron, Trelawny, Keats and Leigh Hunt. These letters, which are "the best" of Shelley's, constitute a literary rather than a biographical volume, and almost incline us to Matthew Arnold's view that this poet's letters and essays will finally come to stand higher than his poetry. They are written mostly from Italy, to Mary Shelley, Peacock, the Gisbornes, etc., and the last is dated July 4, 1822, only four days before the fatal storm stilled forever the beating of the "heart of hearts."

Thomas Y. Crowell & Co. have just added "The Vicar of Wakefield" ‡ to their convenient and praiseworthy series of "Handy Volume Classics." Mr. Austin Dobson, who is particularly at home among the later 18th century English authors, has an interesting prefatory essay upon the history of the illustrations which have been given of Goldsmith's story in the principal French, German and English editions. The present edition is abundantly and very happily illustrated.

Rev. Alfred J. Church, late Professor of Latin in University College, London, gives us in lucid English prose (some portions, as the songs, etc., are translated into

* *Playthings and Parodies*. By Barry Pain. 12mo, pp. 310. New York: Cassell Publishing Company. \$1.

† *The Best Letters of Percy B. Shelley*. Edited by Shirley Carter Hughson. 16mo, pp. 328. Chicago: A. C. McClurg & Co. \$1.

‡ *The Vicar of Wakefield*. By Oliver Goldsmith. With a preface by Austin Dobson. 16mo, pp. 299. New York: Thomas Y. Crowell & Co.

verse) fifteen "Stories from the Greek Comedians."* Mr. Church has dealt freely with the originals, but not in such a manner as to infringe upon the continuity or spirit of the play. The nine stories from the "Old Comedy" (the first Greek School of Comedy) are from the plays of Aristophanes, and include the familiar "Frogs," "Birds," "Clouds," etc. The six other plays belong to the "New Comedy" of Philemon, Menander, etc. We think the book of especial value to teachers of English literature who wish to give their pupils some insight into the Greek comic drama. It will be appreciated by all who love the classic spirit. There is a brief introduction to each of the stories, and we are helped to catch their spirit by 17 full-page colored illustrations from the antique.

Charles Morris has already given to the public his convenient and famous "Half-Hours with the Best Humorous Authors," "Half-Hours with American History," etc. His new volumes, "Tales from the Dramatists," † were suggested by the "Tales from Shakespeare," which Charles and Mary Lamb wrote, as everybody knows. Mr. Morris has chosen about thirty of the best English dramas outside of Shakespeare, and told their story in such a pleasant, successful way that both lovers of literature and lovers of the stage will be delighted. He has written them in such a way that older readers will find full satisfaction, but he has considered also the "tastes and demands of the young." There are good, full-page portraits of most of the dramatists, and a brief biographical notice of each. Among the selected dramas are such masterpieces as "Every Man in His Humor," "Still Waters Run Deep," "She Stoops to Conquer," and "The School for Scandal." (One play is French, Hugo's "Ruy Blas," and one American, "Cynopia.")

Mr. Harrison S. Morris has previously gathered together a series of Christmas tales which he called "In the Yule-Log Glow," and a collection of sea songs and pastoral melodies called "Where Meadows Meet the Sea." In three new volumes ‡ he has now told in simple prose narrative the story of twelve great poems from the Victorian writers. His purpose has not been to lure us away from the poems themselves, but to introduce us to them, and to reveal how much the poetic art lies beyond the mere weaving of an interesting tale. He keeps as nearly as may be to the original in spirit and in matter—*i.e.*, he does not write about the story; he gives the story itself. The thought strikes us that teachers who carefully read these may learn some secrets about explaining the scope of a long poem to their pupils and about the method of interesting them. We will read with clear comprehension and appreciation "The Ring and the Book," "The Princess," "Tristram of Lyonesse," "Sohrab and Rustum," etc., after having perused Mr. Harrison's versions. There is an excellent full-page portrait of each of the ten poets represented.

Miss Rose Porter has selected for each day of the year a passage from the Bible, whose theme is love, and followed there by one or more selections from the spiritual writings of the poets, or by an explanatory illustrative quotation from such religious prose writers as Faber,

* *Stories from the Greek Comedians, Aristophanes, Philemon, Diphilus, Menander, Apollodorus*. By the Rev. Alfred J. Church, M.A. 12mo, pp. 344. New York: Macmillan & Co. \$1.

† *Tales from the Dramatists*. By Charles Morris. 4 vols., 16mo. Philadelphia: J. B. Lippincott Company. \$4.

‡ *Tales from Ten Poets*. By Harrison S. Morris. In three books. 16mo. Philadelphia: J. B. Lippincott Co. \$3.

Beecher, Ruskin, etc.* Miss Porter's work has been carefully and ably done, and will prove helpful to the higher life of many during the coming year.

NEW BOOKS OF POETRY.

Miss Harriet Monroe, of Chicago, has the good fortune, well merited, of being brought to public notice through her "Commemoration Ode," which was read and sung at the dedicatory ceremonies of the World's Columbian Ex-

MISS HARRIET MONROE, OF CHICAGO.

position, at Chicago in October. She also wrote the cantata which was sung at the dedication of that wonderful building, the Chicago Auditorium. The present volume contains both of these poems, but even if they were omitted it would still be one of the most notable books of poetry which has recently appeared. "Valeria," † which opens the volume, is a tragedy strongly written, but probably Miss Monroe's truest poetic spirit appears in the shorter songs and sonnets; the music and sentiment of some of them can scarcely be excelled.

The last words which the poet-laureate used in the poem dedicating this last little volume ‡ to a friend, if slightly changed, might have been written of Tennyson himself :

"This, and my love together,
To you that are seventy-seven,
With a faith as clear as the heights of the pure-blue
heaven,
And a fancy as summer-new
As the green of the bracken amid the gloom of the
heather."

In these pages are gathered some twenty-five of the latest poems of the laureate, through many of which runs

* A Gift of Love. By Rose Porter. 18mo, pp. 234. New York. Fleming H. Revell Company. \$1.25.

† Valeria, and Other Poems. By Harriet Monroe. 16mo, pp. 301. Chicago : A. C. McClurg & Co, \$1.50.

‡ The Death of CEnone, Akbar's Dream, and Other Poems. By Alfred Lord Tennyson. 12mo, pp. 119. New York : Macmillan & Co. \$1.25.

the sense of the coming change, with evidence of the poet's faith and hope. It is, perhaps, fitting that the last piece should be the one written "To the Mourners," upon the death of the Duke of Clarence. Who has heart or power to write now to the countless mourners? Three of the longer poems, viz. : "The Death of CEnone," "Telemachus" (the monk who by his noble death in the arena won his purpose of putting a stop to the gladiatorial cruelties), and "Charity," are especially noticeable for their dramatic quality. In the poem, "Church Warden and Curate," Tennyson gave an amusing picture of an English rural type, "in the dialect which was current in my youth at Spilsby."

Macmillan & Co. have given us heretofore in the Golden Treasury series some of the choicest poetry of classical and modern times. "Lyric Love,"* a beautiful anthology edited by a rising English poet, William Watson, will take its place beside "La Lyre Française," "Deutsche Lyric," "Lyrical Poems of Lord Tennyson," etc. In his preface Mr. Watson states that his object has been "the bringing together, so far as was practical under the conditions the editor has imposed upon himself, of all the best English poetry having love as its personal inspiration or its objective theme." This gives us a larger list of authors and works, and some poems of dramatic or narrative form, but all unified by the fact that they are "essentially lyrical in feeling." The names most often reflected belong to the Caroline group, or to the Romanticists of our own century. The 206 selections are thrown into natural groups: "Love's Tragedies," "Romance of Love," "Love and Nature," etc. No better book could be chosen for a Christmas gift.

A small edition of "At Sundown," † Mr. Whittier states in the preface, was privately printed some two years ago. A few poems written since then have been inserted, the last one having been written August 31, 1892, only a week prior to the poet's death. Every lover of American poetry will read with tears near his eyes the poem written to Dr. Holmes on occasion of his birthday this year. This also was written only a few days before Whittier's passing away and ends with the lines :

"The hour draws near, how'er delayed and late
When at the eternal gate,
We leave the words and works we call our own
And lift void hands alone

For love to fill. Our nakedness of soul
Brings to that gate no toll.
Giftless we come to Him who all things gives,
And live because He lives."

Miss Lucy Larcom has gathered into a volume, at the suggestion of friends, such of her lyrics as "are of a specially serious and devotional character." ‡ Some appear for the first time in print, and about one-third have been written since the Household Edition of her poems was published, some ten years ago. The sweet and tender words of the poet have found their way to a great many hearts. There is something of pathos about this volume, for it is the first which Miss Larcom has published which has not had the "personal word of benediction" from Whittier ; and the last poem, "Withdrawal," is a touching lament upon his death.

* Lyric Love. An Anthology. Edited by William Watson. 16mo, pp. 260. New York : Macmillan & Co. \$1.

† At Sundown. By John Greenleaf Whittier. 16mo, pp. 70. Boston : Houghton, Mifflin & Co.

‡ At the Beautiful Gate, and Other Songs of Faith. By Lucy Larcom. 16mo, pp. 128. Boston : Houghton, Mifflin & Co. \$1.

We have a new volume from Oliver Wendell Holmes. Dorothy Quincy,* the subject of the first poem of the book, was Dr. Holmes' great-grandmother, and her fair picture is given us as a frontispiece. "A Ballad of the Boston Tea Party" and "Grandmother's Story of Bunker Hill Battle" complete the volume, to which Howard Pyle has given a perfect wealth of happily conceived illustration. The air of the quaint and heroic old Revolutionary times breathes through every page. If every ballad-writer could be a Dr. Holmes as well as a poet, few would dispute the statement that poetry is not only more fascinating, but also more true, than history.

There is a witchery, remoteness and tenderness about "A. R. G.'s" short poems which prove the title "Night Etchings" † to be an appropriate one. They are poems of passion and imaginative reverie, and the musical quality of some of them is very marked. Two of the best are "Whitman's Last Testimony" and "On the Caribbean." Whoever "A. R. G." may be, certainly he or she has the soul of a poet.

"Gleams and Echoes" ‡ reinforces the good opinion which we formed through an examination of "Night Etchings." It is certainly evidence of the poetic gift when fancy creates her own world—in this case a world of half-hidden pathos—and dreams of it in musical metres. Each of the six poems in "Gleams and Echoes" is accompanied by a beautiful engraving by the artists—C. H. Reed, G. P. Williams, from drawings by C. Y. Turner, H. Bolton Jones, F. B. Scheel and others. The volume makes a rich gift-book.

Mr. Creedmore Fleenor does not, like many newly appearing poets, give the world but a taste of his wares. This considerable volume § comprises all "of his attempts at verse composition, so far as he has gone, and he hopes to add very little in the future." Much of his poetry is conceived in a classical spirit, noticeably the drama "Halcyone," but "Conemaugh" records the terrible Johnstown disaster. Mr. Fleenor has used a very wide range of metres and some of them with marked success.

There seems to be something akin to Riley in the rhymes of "Ironquill of Kansas," || though it might be difficult to say what. We welcome every volume of genuine verse from beyond the Missouri, especially when it is a true outgrowth of local conditions, as this one can be said to be. In "John Brown," "The Pre-emptor," "A Kansas Idyl" and other poems, we have the spirit and the facts of life in the "Sunflower State" very characteristically given.

An exceedingly attractive set of illustrated holiday books come to us from Messrs. Charles Brown & Co., of Boston. They are entitled, "The Favorite Folk Ballads." ¶ Each favorite lyric is illustrated with attractive designs and drawings, which expand into a little book. The series

¶ The Favorite Folk Ballads. Quarto. Boston: Charles E. Brown & Co. 75 cents each.

includes "The Old Folks at Home," "I Wish I Was in Dixie's Land," "Old Uncle Ned," "Darling Nelly Gray," "Sally in Our Alley," "Black Eyed Susan," "Shandon Bells," "Blue Bells of Scotland," and "The Watch on the Rhine." In the opening pages the song is in each case set to music. The illustrations of six of them are by G. W. Brenneman, while "Shandon Bells" and "Sally in Our Alley" are illustrated by Joseph Lauber, and the drawings for the "Blue Bells of Scotland" are by F. M. Gregory. The entire nine books are illustrated most skillfully and attractively.

Mr. A. W. Habersham, of Baltimore, sends us a volume dedicated to Grover Cleveland, which contains some political and other poems, and some short prose sketches.*

"The Lyric of Life" † is an effort to explain in verse the physical and metaphysical construction of the universe.

NOVELS OF THE SEASON.

Dr. Weir Mitchell's "Characteristics" ‡ is issued as a beautiful volume by the Century Company. It is hardly necessary to state that this is a reprint of the serial recently published in the *Century* magazine. The author's strong personality, his wide experience in a long life, his interest in psychological character analysis, and his works in fiction and poetry are well known. This volume will undoubtedly sustain his reputation among former readers, and gain him many new ones.

Mrs. Barr has added another to her list of strong and popular works of fiction. The scene of "The Preacher's Daughter" § is laid in a Yorkshire milling town, some thirty years ago. The preacher's daughter marries, from selfish motives, a rich young miller, whose early married happiness soon gives place to a misery greatly increased by financial depression, caused by the effect of our civil war upon the cotton supply. Through it all the husband remains unselfish and efficient; and finally his wife, through his example and the purifying effects of a dangerous fever, becomes a regenerated woman, fit to be his companion. Though not a moralizing novel, it is decidedly religious and decidedly healthy and helpful.

Mrs. Alexander, author of "Which Shall It Be?" etc., writes a story of great interest in "The Snare of the Fowler." || The scene is laid in London. The heroine is a noble-hearted girl, supposed by the artist-friend who falls in love with her to have been an illegitimate child, although she is ignorant of such suspicion. Those relatives who should have been her helpers hide the truth, and plot against her in a dastardly way in order to win her inheritance. The development of the involved plot and the strength and life-likeness of the characters, good and bad, hold our attention to the happy end. The novel has no false sensationalism in it.

* The Two Sisters, a Political Poem, and Other Short Prose and Poetic Sketches. By Alex. Wyll Habersham. Paper, 12mo, pp. 145. Baltimore: A. W. Habersham. 50 cents.

† The Lyric of Life. By Laura A. Sunderlin Nourse. 16mo, pp. 172. Buffalo: Charles Wells Moulton.

‡ Characteristics. By S. Weir Mitchell, M.D., LL.D. 12mo, pp. 307. New York: The Century Company. \$1.25.

§ The Preacher's Daughter. A Domestic Romance. By Amelia E. Barr. 12mo, pp. 297. Boston: Bradley & Woodruff. \$1.25.

|| The Snare of the Fowler. By Mrs. Alexander. 12mo, pp. 349. New York: Cassell Publishing Company. \$1.

The pages of Mr. Roy's book "Helen Trevelyan,"* carry us from England to India and back again, and relate the "unsmooth" course of love midst the stirring events of military life. We have given us a narrative of the desperate war in Afghanistan fought late in the seventies. The author has so told the story of the cruel necessities of war, and has made so real the English middle-class people with whom he deals, that he has insured himself many readers and admirers.

Count Alexis Tolstói was born at St. Petersburg in 1817 and died in 1875. "Prince Serebryani," † an historical novel, the first of his longer works—was published in 1863, and it deals with Russian history and social conditions during the times of Ivan the Terrible and the wresting of Siberia from the Tartars in the sixteenth century. Of this period the author has made a careful and extended study. It was a time of tragic events and of deep significance for modern Russia. Mr. Curtin, the translator, has written an introduction which makes clear the background upon which this historical novel is thrown.

SOME one has called "Roland Graeme: Knight" ‡ "a story of cheer." Miss Machar, author of "Stories of New France," etc., has a prominent place among the Canadian writers of our day. The scene of the present tale is laid in a small manufacturing town of the United States, and the needs, miseries and longings of the laboring classes of our time are pictured by a deft and sympathetic hand. The hero is a young journalist, whose heart is strong and helpful toward those who suffer industrial wrong. His career and the conversion of a coldly æsthetic clergyman to a vital, brotherly Christianity give a clue to the author's solution of the problem of employer and employed. The story in itself will delight and influence many hearts. The dedication is to Dr. Lyman Abbott, "one of the first voices in America to enforce the relation of Christianity to the labor problem."

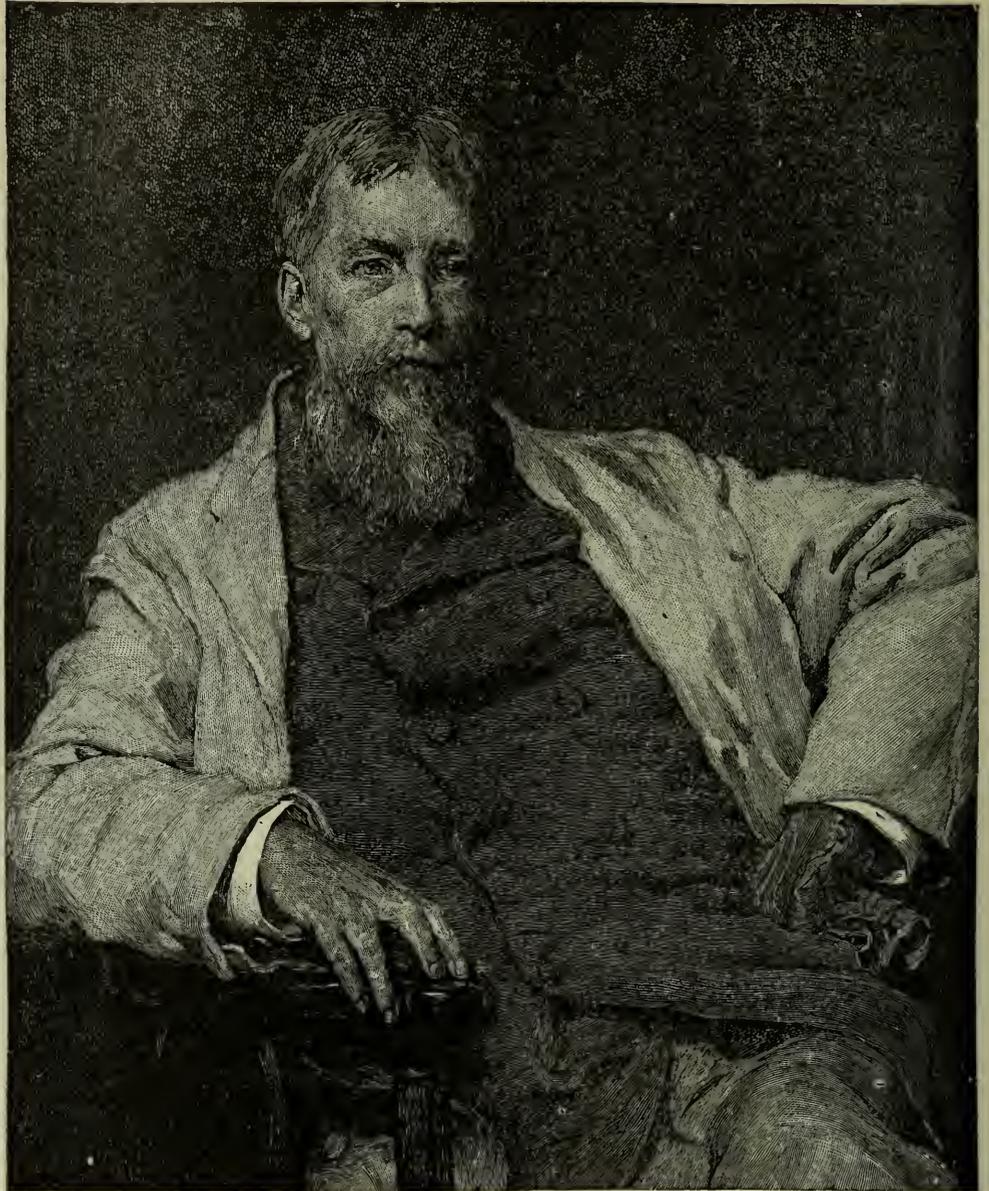

Ursula Gestefeld's heroine in "The Woman Who Dares" § wages a crusade as a wife for the equal rights of man and woman in the marriage relation, especially in

DR. S. WEIR MITCHELL.
(By Permission from the Century Co.)

its physical aspects. Her insistence upon the principle leads to a divorce, but finally through the wife's noble-mindedness and her good work among her fallen sisters the husband comes back to her feet, redeemed from his sensuality and ready to recognize the higher and spiritual meanings of marriage. It is an unusual story, but written for a high and definite purpose, and has a value for mature minds.

In her dedication to Mr. F. Marion Crawford the Marchesa Theodoli calls her novel ("Under Pressure")* her "first attempt to describe some of the customs, prejudices and virtues still subsisting in a portion of Roman society to which she belongs by marriage and earliest associations." It is, perhaps, as a sociological study of the struggle of inherited narrow aristocratic conservatism against the irresistible tendency of modern democracy that the work has highest value. The story is clearly defined, dramatic and in the best sense realistic.

Mr. Habberton long ago, in "Helen's Babies," endeared himself to a very wide circle of readers. His newest

* Under Pressure. By the Marchesa Theodoli. 12mo, pp. 307. New York: Macmillan & Co. \$1.

story, "A Lucky Lover,"* is avowedly a love story—a love story, too, which ends in a happy marriage, and, thanks to a wise sister's admonitions, in a bridegroom far less selfish than when he began his wooing. It is a simple story of common (not commonplace) people, who belong to our day, and who at once win our best wishes and our affection. The scenes are laid in New York City and in North Carolina, and the story is told with Mr. Haberton's characteristic humor, clearness and geniality. It will make a good book to place in the hands of a young girl who has been reading Olive Schreiner a little too much.

Ernest Redwood has not lost in his translation the transparency and charm of French prose.† The heroine of De la Brète's story is an impulsive and thoroughly natural young girl, who looks out upon life at sixteen as a very fascinating thing, and resents all restraints upon its freedom. She soon finds herself in love with a young man who is apparently destined to make another woman happy. The gentle, loving curé, who has been a sympathetic but wise helper in her enthusiasm, is a kind friend in her trouble, and we are glad when the good man's face brightens at the final happy outcome. It is well to remember such pure and healthy books as this when we accuse French fiction of being morbid and unclean. The paper, printing and a number of full-page illustrations fitly accompany the charms of the style and the story.

The story of Sherwood Forest, so recently made the theme of the now dead poet laureate's pen, never grows tiresome to Anglo-Saxon hearts. Mr. Murdock, author of "Stories Weird and Wonderful," etc., has in "Maid Marian and Robin Hood"‡ woven into a fascinating romance the tale of Robin Hood, Maid Marian, Friar Tuck, Little John and other wearers of the "Lincoln green," and by language and style carried us back to that time. Young people from 14 to 40 will enjoy the book and appreciate the 12 spirited illustrations of Mr. Stanley L. Woods. The cover gives us a satisfying picture of Friar Tuck performing the ceremony of marriage between Robin Hood and Maid Marian, with the sturdy band of the foresters in the background.

Jane G. Austin, who has written so many delightful stories of the early Colonial life at Plymouth, Mass., discovered that field for fiction several years ago. Her newly published "David Alden's Daughter and Other Stories of Colonial Times"§ collects some of her earlier work in this direction, which first appeared in the various monthly magazines. They have, therefore, the inspiration of a new "find" in them, being written (as Miss Austin puts it in the preface to the book) when "the author was in the first flush of delight and surprise at discovering the wealthy romance imbedded in forefathers' rock."

The "Old Dominion" is probably more closely associated in the American mind with romance and pleasant,

* A Lucky Lover. By John Haberton. 12mo, pp. 306. Boston: Bradley & Woodruff. \$1.25.

leisurely living than any other section North or South. When the sixties came, nowhere else was the contrast sharper between the old days of peace and the new days of war. It is into this land and into this period that the skilled and genial pen of Mrs. Harrison leads us in her

MRS. BURTON HARRISON.

volume of short stories.* "Belhaven" is an early name for Alexandria, Virginia, the hiding place of many an old-time relic and romantic episode. The main elements of the stories are the inherited aristocratic characteristics of the Virginians, their fidelity to the loved cause at the cost of loss of happiness; the faithfulness and local attachment of the negroes, and the love of Northern soldiers for Southern beauties. The first story belongs to the opening years of the century, and grew out of a bundle of old letters of that time which came to Mrs. Harrison's hand out of the forgotten dust of a garret. Five full-page illustrations increase the attractiveness of the book.

"Old Ways and New"† is the first collection in book form of the writings of Miss Viola Roseboro, who has been for several years a frequent contributor of short stories to our magazines. The volume contains ten sketches of character—characters typical, but so strongly individualized that we must believe the author was personally acquainted with them. The scene is frequently laid in a rural district of Tennessee, and we are given insight into the characteristics of nature and of community feeling there. Miss Roseboro sees the pathetic in life very clearly, but no less sees the cheerful and humorous.

Mr. Bynner is known as the author of "Penelope's Suitors," etc., as well as of several historical novels, of which "Zachary Phips"‡ is the latest. The hero's life leads us to an acquaintanceship with Aaron Burr and his daughter Theodosia and with Blennerhasset and the conspiracy connected with his name. Phips is on the deck of the *Constitution* in its famous fight with the *Guerrière*; is aboard the *Chesapeake* when Lawrence gained immortality by the words, "Don't give up the ship," and with Jackson fighting the Indians in Florida during the "first Seminole war." Young people will find this stirring period of our history very interestingly woven into Mr. Bynner's story, which is itself bale and well told.

We welcome a new addition to "The Columbian Historical Novels," which Jno. R. Musick is writing and which are published by the Funk & Wagnalls Company. "St. Augustine,"§ the third of the series, belongs to the historical division which the author aptly calls "bigotry" and deals with the Huguenots, who, following the plan-

* Belhaven Tales, Crow's Nest, and Una and King David. By Mrs. Burton Harrison. 12mo, pp. 211. New York: The Century Company. \$1.25.

† Old Ways and New. Stories by Viola Roseboro. 12mo, pp. 216. New York: The Century Company. \$1.25.

ning of Coligni, settled in Florida about the middle of the sixteenth century. Mr. Musick has written—with the authority of research and with the impartiality of historic method—of an obscure period, marked by terrible religious hatred (history justifies the paradox), by the human slaughter of the Florida Protestants by the Spaniard Melendéz, and the retribution by the French hand of De Gourges. The romance element of the book is the story of the love—at first troubled, but finally peaceful and happy—of a prominent Spanish Catholic for a Huguenot maiden.

“Cousin Phillis: a Story of English Love,”* by Mrs. Gaskell, belongs to the series of “Tales from Foreign Lands,” published by A. C. McClurg & Co. Its insertion in that series is a sufficient guarantee of its readability and value. There is a wholesomeness about the book which perhaps comes from the English rural scenes among which the course of the story runs. Another volume of the same series just appearing is “Marianela: a Story of Spanish Love,”† translated from the Spanish of B. Perez Galdos by Helen W. Lester.

The heroine of Miss Amanda M. Douglas’ novel “Sherburne House,”‡ is a young girl who was adopted and brought up by a good-hearted Irish family, living in New York City. She is found to be heiress of an old Virginian estate, and is removed there while quite young, to the great distress of herself and her old friends. Full of frolicsome life, she is subjected to the critical unsympathy of an old-maid relative, whose unkindness brings the girl finally to actual sickness. But through all she is faithful to her old New York friends, makes helpful new friends and conquers herself and her dislikes. All in all, the book is one which young people will read with interest and profit.

In “My Flirtations”§ Miss Margaret Wynman gives a genuinely and quietly humorous recital of the flirtations of a London girl of middle-class society. Mr. J. Bernard Partridge gives us a delightful picture of the heroine and amusing ones of many of her numerous adorers. The girl Margaret interests and appeals to us, is a healthy-minded woman, and ends her flirtations where they ought to end—in a happy but totally unexpected marriage. The opinions of her sister Christina, who is slightly cynical as to the other sex, bring a spice of the dramatic into the book.

The new edition of the “Fate of Fenella”|| proves that the original plan upon which it was written (each of the 24 chapters being from the pen of a separate popular English author), is a laudable one, if success be any criterion.

“Muriel Howe,”¶ by Angelina Teal, published by Dodd, Mead & Co., is a very interesting and healthy story of American middle-class life. We note as a special

¶ Muriel Howe. By Angelina Teal. 12mo, pp. 280. New York: Dodd, Mead & Co. \$1.

feature the descriptions of the life of the Dunkers, among whose settlements in Indiana some of the scenes of the story are laid.

“The Las’ Day,”* by Imogen Clark, is a short, simple and touching story of the estrangement between man and wife which was healed forever by the death of their little child. The New England farmer, who is the husband, still young, relates his experience naturally and reservedly, in his homely dialect. There are several illustrations by Miss S. Olivia Rinehart.

From Mr. Frank Pope Humphrey’s pen comes “A New England Cactus and Other Tales.”† He pictures well the life—humorous or pathetic, human but not modern—which goes on in the quieter provincial corners of Yankeedom. One of these stories, “A Belated Letter,” was first printed in *Harper’s Bazar* for 1887.

Those who have not known the pleasure of reading George Sand’s “The Naïad”‡ in the French will be glad of having the opportunity of reading the just issued translation by Katherine Berry di Téréga, a translation, the preface states, long ago begun, but interrupted by personal sorrow. Another story with scenes laid across the water is a new novel by “Ouida,” entitled the “Tower of Taddeo,”§ a love story of Venice, written in the author’s characteristic, well-known style. In Italy, too, are some scenes of Mrs. Mary Fletcher Stevens’ story “By Subtle Fragrance Held,”|| though the “fragrance” (that of a pleasant garden belonging to a rarely sweet old lady) and the real home of the story are in familiar New England. The heroine is a young girl of society habits, tempted to surrender herself to the lower aims of society, but successful in her effort to resist, and finding her reward in marriage with a true man who loves her for herself. “Other Things Being Equal”¶ removes us a long way from Italy or New England. The author, Miss Emma Wolf, has chosen San Francisco as the field of her love story, which concerns itself somewhat with Jewish customs and life, the heroine, Ruth Levice, being a Jewess. The author of “At His Gates and Kirsleen” needs no introduction. Mrs. Oliphant’s new English story, “The Cuckoo in the Nest,”** will well sustain her present reputation. We continue to deal largely with English character and go back to Italy, the land of song and romance, for some of the scenes of Hesba Stretton’s story of a religious complexion—“Half Brothers.”†† Mrs. Elizabeth Boynton Harbert, Ph.D., dedicates her story “Amore,”‡‡ just published by Lovell, Gestefeld & Co., to her own children and “all the children of lesser or larger growth.”

Mrs. Boynton is known as a pleader for nobler views of the nature and free progress of woman, and for a philosophic and liberal religion."

For lighter reading we may turn to the good-natured English "frivolous tale" "Mr. Witt's Widow,"* by Anthony Hope, author of "A Man of Mark," etc., or to Mr. Rodrigues Ottolengui's "An Artist in Crime,"† a tragic detective story of the better class, with its scenes laid in the United States. Mrs. Amélie Rives Chanler has written a sequel to "The Quick and the Dead," which bears the title of "Barbara Dering."‡

SOME FAVORITE NOVELS IN NEW EDITIONS.

The countless admirers of Henry James, Jr., will be highly pleased with the superb way in which the Messrs. Harper & Brothers have published, in one volume, his "Daisy Miller"§ and "An International Episode." Mr. James' style and story would captivate if written in pencil upon the poorest paper; but the best of us have a love for fine illustrations (those before us are from drawings by Harry W. McVickar), and the worst of us have some sense of the fitness of things in binding and type and paper. It is absurd to suppose that there are people unacquainted with Henry James, but if such there were this volume would give a most happy initiation to his charms.

We may perhaps forget in part the political career of the lamented George William Curtis, noble-hearted as it was, but "Prue and I,"|| the product of his younger days, when life's stress was not too strong, will live as long as love and humor and reverie and kindly sympathy appeal to men's hearts. Harper & Brothers publish this month a new edition of that classic, adorned with very numerous beautiful illustrations from the drawings of Albert Edward Sterner and with the other features of the publisher's art in accordance therewith. The preface—"A word to the gentle reader"—is a fac-simile of the author's original autograph.

Two of the best and best-known works of fiction of the late Herman Melville are now republished. The author has been repeatedly called the "pioneer of South Sea romance," and these volumes ("Omoo"¶ is a sequel to "Typee"**) were the results of actual experience and residence in that region. Mr. Melville was a young man when "Typee" gave him a widespread reputation (in 1846), but his was one of those careers in which youthful work remains permanently and enters into a final estimate of the author. Mr. Melville's realism is natural and spontaneous, and has produced those stories of adventure in

§ Daisy Miller, and An International Episode. By Henry James, Jr. Octavo, pp. 296. New York: Harper & Brothers. \$3.50.

|| Prue and I. By George William Curtis. Octavo, pp. 291. New York: Harper & Brothers. \$3.50.

¶ Omoo. A Narrative of Adventures in the South Seas. A Sequel to "Typee." By Herman Melville. 12mo, pp. 378. New York: United States Book Company. \$1.50.

** Typee. A Real Romance of the South Seas. By Herman Melville. With Biographical and Critical Introduction by Arthur Stedman. 12mo, pp. 425. New York: The United States Book Company. \$1.50.

which healthy minds will never cease to delight. At the time of Melville's death in New York City, about a year ago, the REVIEW OF REVIEWS contained a spirited critical and biographical sketch from Mr. Arthur Stedman's pen. Mr. Stedman is the editor of the present works, and prefaces "Typee" with an interesting and intelligent review of Melville's life and works. The romancer was a personal friend of Hawthorne's, has always had a high place in England, and was a man of marked personality.

Dr. Edward Eggleston's "Hoosier Schoolmaster"* has, among many other honors, that of being the "file-leader" of the American dialect movement, in so far as it has concerned itself with other than New England material. A new "Library" edition of this popular novel from the publishing firm of the Orange Judd Company has the special distinction of having a considerable preface giving the history of the story, and notes upon the dialect used, both being written by Mr. Eggleston himself. This book will stand as one of the most genuine productions of American literature. Many of us would vote it about the first place among American novels smacking distinctively of the soil.

In their republication of Mr. F. Marion Crawford's novels, the Messrs. Macmillan have reached "Don Orsino,"† which they first gave to a grateful public last year. Mr. Crawford has been successful with scenes laid in other places besides Rome, but it seems to us that his novels of Roman life are very much the best "Sant' Ilario" was a sequel to "Saracinesca," and "Don Orsino" is a sequel to both. We follow the fortunes of the same noble old Roman families through successive political and social changes in the Eternal City. The stories are charming of themselves, but taken together these books have a special importance for what they reveal to us of the thought and the life of Rome as it was under Pope Pius IX. and the great Cardinal Antonelli, and as it has been since the downfall of the temporal power and the installation on the Tiber of the royal government of United Italy.

The beautiful new edition of Jane Austen's works, successive issues of which the REVIEW OF REVIEWS has noticed from month to month, are fortunately falling upon a market that shows a most agreeable revival of interest in the novels of this classical author. The best critics are coming forward to declare that they admire and prize Jane Austen above all the great names in English fiction, with the possible exception of Thackeray and George Eliot. The latest volumes in the Messrs. Robert Brothers' edition are "Persuasion"‡ and "Northanger Abbey,"§ each in a single volume. This beautiful set, comprising a dozen or more volumes, would make a most delectable present.

In the Messrs. Macmillan's new edition of Dickens' works, reprinted from the first edition, we have now to notice "Dombey and Son"|| and "Barnaby Rudge."¶ As the successive volumes appear we are continually more

DR. EDWARD EGGLESTON.

impressed by the value of the biographical and bibliographical introductions supplied to this edition by Mr. Charles Dickens, Jr. The republication of the original illustrations, of course, lends an added charm to these handsome and serviceably made volumes.

ILLUSTRATED HOLIDAY BOOKS FOR CHILDREN.

Much the handsomest juvenile book that has come to our table this year is Messrs. Houghton, Mifflin & Co.'s beautiful new edition of Hawthorne's "Wonder Book for Girls and Boys,"* with sixty designs by Walter Crane, many of them printed in several colors. Hawthorne's preface, written in 1851, explained the plan as follows: "The author has long been of opinion that many of the classical myths were capable of being rendered into very capital reading for children. In the little volume here offered to the public he has worked up half a dozen of them with this end in view. A great freedom of treatment was necessary to his plan, but it will be observed by every one who attempts to render these legends malleable in his intellectual furnace that they are marvelously independent of all temporary modes and circumstances. They remain the same after changes that would affect the identity of almost everything else." The myths chosen by Hawthorne were the "Gorgon's Head," "The Golden Touch," "The Paradise of Children," "The Three Golden Apples," "The Miraculous Pitcher" and "The Chimera." It would be superfluous to say anything of the wonderful charm of these tales as Hawthorne has told them. Mr. Crane's designs, classical in their drawing and their coloring, give the volume something of the character of an art album.

* A Wonder-Book for Boys and Girls. By Nathaniel Hawthorne. Illustrated by Walter Crane. Octavo, pp. 220. Boston: Houghton, Mifflin & Co. \$1.

Another of the charming old-fashioned holiday juveniles is Mr. Owen Wister's "The Dragon of Wantley,"* a delightful romance of the English crusading times, that older people will enjoy quite as well as the children, and that is distinctly a work of literary merit.

"The Admiral's Caravan"‡ is reprinted from *St. Nicholas* with Mr. Birch's numerous irresistible illustrations as well. The admiral and part of the caravan appear in gold and colors on the cover, and will greet the eyes of a good many girls and boys at Christmas time—for Dorothy, the little heroine, fell asleep on Christmas day, and saw a great many wonderful and charming things on that dreamland trip. Mr. Carryl here kindly gives us a report of them, which the little folks by all means ought to hear.

These cats of Mr. J. G. Francis‡ will make the young folks decidedly cheerful, and older heads will make a mistake if they do not look over the youngster's shoulders. We know not which to laugh at most, the illustrations or the rollicking nonsense of the verse. Cats do not have a monopoly, but dogs, owls, lions and other animals appear and behave in very strange and amusing way. Some of the material has appeared before in *St. Nicholas*.

The "Roundabout Books"§ are a series that will undoubtedly attain great popularity among the bright and eager lads of America. Messrs. Charles Brown & Co. have sent us the first nine of these "Roundabout Books," and the list thus far includes a tale of seafaring and adventure, entitled "Drifting Around the World," by Capt. C. W. Hall; "A Voyage in the Sunbeam," by Lady Brassey; "Our Boys in India," and "Our Boys in China," by Harry W. French; "Young Americans in Japan," "Young Americans in Tokio," and "Young Americans in Yezo," by Edward Grey; and "The Fall of Sebastopol," and "Fighting the Saracens," by G. A. Henty. All the volumes have numerous illustrations and are written in a highly entertaining fashion. They enter the juvenile book market in the same category with the famous "Zigzag" books of Hezekiah Butterworth, and remind us older boys of the "Rollo Books" of other days.

There is not a child's heart in our broad land which ought not to be made happy at Christmas time by the gift of a this year's "Chatterbox."|| As a veritable enchanted treasure house of information and fun and happy hours for rainy days, after all its years of success it hardly need fear a competitor now. Stories, anecdotes of the famous and the good, puzzles, gleanings from natural history, travel, all phases of human life—with just the amount of poetry interspersed which young folks want with all these resources, no one need hunt long for the secret of its popularity. Nor must we forget the illustrations—best of all, perhaps. Messrs. Estes & Lauriat, the publishers,

* The Dragon of Wantley: His Rise and His Downfall. A Romance. By Owen Wister. Quarto, pp. 149. Philadelphia: J. B. Lippincott Company. \$2.

‡ The Admiral's Caravan. By Charles E. Carryl. With Illustrations by Reginald B. Birch. Quarto, pp. 140. New York: The Century Company. \$1.50.

‡ A Book of Cheerful Cats and Other Animated Animals. By J. G. Francis. Oblong 4to, pp. 37. New York: The Century Company. \$1.

§ The Roundabout Books. Lithographed Covers, quarto, pp. about 300. Boston: Charles E. Brown & Co. \$1.25; cloth \$1.75.

|| Chatterbox for 1892. Illuminated Boards, Quarto, pp. 412. Boston: Estes & Lauriat. \$1.25.

have put themselves to special trouble this season in securing a paper which would still further enhance the perfection of the illustrations, and we have no doubt the increased sales (although the million mark was reached long ago) will justify their efforts.

Louisa de La Ramé, better known to us as "Ouida," has collected in the volume called "Bimbi" * some very beautiful and fascinating stories for children, and Mr. E. H. Garrett has entered well into their spirit in his illustrations. They are mainly tales of interesting child life in Germany, Italy and England, among which the "The Child of Urbino" gives us a fine little glimpse into the boyish characteristic of the great Raffalle. The author knows, too, the secrets of animal and plant life, as the story of "The Ambitious Rose Tree" and of the turkey testify. The cover is very tastily pictured.

We can remember the time when "the 'Katy' books" was a very familiar phrase to our childish ears. Susan Coolidge goes straight to the children's hearts whether she chooses prose or poetry to clothe her pleasant messages. Roberts Brothers send us her "Rhymes and Ballads for Girls and Boys," † strongly, handsomely bound and illustrated by Mr. Garrett, Miss Harriet Roosevelt Richards and others. The "jingle" of some of Miss Coolidge's rhymes makes most happy music; but she knows how to tell, in the way little folks like, many a story of nature or of history. The longest poem of this volume is a story of the children's crusade written in the ballad spirit.

STORIES FOR YOUNG PEOPLE.

One great argument for the morality of war is the fact that so many good stories grow out of that institution. Warren Lee Goss was an "old soldier;" he knows about army life and he has proved in more than one book that he knows about boys. If he has the noble purpose of teaching a true and non-sectional patriotism in his books that does not change the fact that he writes a story good *per se* in "Tom Clifton." ‡ Tom is originally a Yankee boy, but he moves to Minnesota a short time before the war, and has a little experience in pioneer prairie life before the outbreak of 1860 comes. He is in the stirring events along the Mississippi, at Shiloh, and follows Sherman to the sea. There are good illustrations, and the boys will examine carefully the reproduced bill for a sale of slaves.

"The Girls and I," § by Mrs. Molesworth is told by the "I"—a bright London boy of eleven who has numerous interesting sisters whom he loves and whose ways he dislikes in a true boy fashion. How much he loves them he realizes only when disease threatens to remove one. So skillfully has the author hid herself that we actually half-believe a boy wrote this entertaining little history after all. Mrs. Molesworth knows best. Mr. L. Leslie Brooke is the illustrator.

* *Bimbi. Stories for Children.* By Louisa de la Ramé ("Ouida"). Quarto, pp. 305. Philadelphia: J. B. Lippincott Company. \$1.50.

† *Rhymes and Ballads for Girls and Boys.* By Susan W. Coolidge. Quarto, pp. 143. Boston: Roberts Brothers. \$1.50.

‡ *Tom Clifton; or, Western Boys in Grant and Sherman's Armies.* By Warren Lee Goss. 12mo, pp. 427. New York: Thomas Y. Crowell & Co. \$1.50.

§ *The Girls and I. A Veracious History.* By Mrs. Molesworth. 16mo, pp. 198. New York: Macmillan & Co. \$1.

"Axel Ebersen" * is a good story of the boyhood and youth of an interesting Swedish character, by André Laurie, the author of several novels. There is something of the ruggedness and vigor of Scandinavian life in this tale, which is supposed to be told to his pupils by the old schoolmaster of Sonneborg in Dalecarlia.

Elizabeth W. Champney, the author of "Vassar Girls Abroad," has written a third member to her "Witch Winnie" series, called "Witch Winnie's Studio." † The pleasant way in which Miss Champney writes of girl life in America is well known. The plot of the present story turns upon a forged Rousseau painting which Witch Winnie is accused of selling. But it turns out that she is innocent, and she comes out of her trial nobly and charmingly. Mr. J. Wells Champney has illustrated the book. It would be especially adapted for a gift to the "King's Daughter" girls, their society's name being on the title page, and their symbol, the Maltese Cross, gleaming out from the cover.

In "More Good Times at Hackmatack" ‡ Mary P. Wells Smith continues her story of child life in the hill towns of western Massachusetts as it was some half century ago. Mrs. Smith believes in those times, and therefore writes in sympathy with them, but she does not allow her sympathy to lead her to a falsifying optimism; and, besides gaining a hearty enjoyment, the children of to day who read her book will learn many valuable things about the children of two generations ago.

We mention elsewhere a book of Miss Anna Chapin Ray's. T. Y. Crowell & Co. send us another also, "In Blue Creek Cañon," § which is a bright, breezy story of mountain life for boys and girls, growing out of a summer spent by the author in a Colorado mining camp.

Mrs. Evelyn H. Raymond also gives two stories to the world simultaneously. "Mixed Pickles" || is a little story of episode and humor, which introduces us to a jolly household in a Quaker farmhouse in America, in which household are the "Pickels," who turn out to be a German family brought over the sea on a visit to their American relatives. We breathe quite a different atmosphere in her second book—"Monica, the Mesa Maiden." ¶ Monica is a Spanish girl of Southern California, and the dreaminess of the region is woven into the story. The coming of American tourists brings a train of adventure and unfolds the thread of destiny. Mrs. Raymond has appended a vocabulary of Spanish terms to the tale. Both of her books will make good reading for the young of either sex.

"A Fisher Girl of France" ** is a story of the passions, the tragic trials and the life by and on the sea of the peasant girl Elise, from the French of Fernand Calmettes, and with the illustrations, by her. The mystery, the strength, the terror of the sea leave their deep effects on the human

* *Axel Ebersen, the Graduate of Upsala.* By André Laurie. 12mo, pp. 286. Philadelphia: J. B. Lippincott Company. \$1.50.

lives which come in contact with them, and they form the background of this intense story.

Mrs. Lydia Spencer Dane is a lady who saw a great deal of our army life of twenty to thirty years ago on the South-western and Western frontier. In her "I Married a Soldier" * she tells in a familiar and unpretentious way her experience as a soldier's wife in Kansas, Texas, New Mexico, Mexico, etc., from the year 1856 to about 1869. She portrays well the incidents, humorous, varied and very interesting, which belonged to that army life, now so nearly a thing of history merely.

"Polly Button's New Year," † by Mrs. C. F. Wilder, is a character sketch presenting the history of a plain, rather ignorant woman who grows out of her nominal Christianity into one of greater spiritual depth and greater practical usefulness. She becomes one of those reliable souls making up the rank and file upon which the world's salvation depends. The book's binding is one of the most unique of the season.

From Roberts Brothers also come two children's stories in prose; the first is by A. G. Plympton, author of "Dear Daughter Dorothy," etc., who very fittingly illustrates as well as writes the book.‡ It is the history of two little twin sisters who were adopted by families differing widely in social rank. The little girls discover one another after quite a long separation, and the less fortunate one is finally given a home with the other. The story is simple and tender. The second is "The Story of Juliette--A Child's Romance," § the name naturally indicating that the scene is in France; and where exists a more charming region in which to find the dragons and knights and enchanted castles of which little girls love to read? Yet after all, this story which Miss Beatrice Washington tells is a story of real life, as little folks will see if they read it aright.

"Uncle Bill's Children," || by Helen Milman (Mrs. Caldwell Crofton), recalls the flavor of "Helen's Babies" in its humorous insight into children's ways and thoughts. But humor is only a part of the story, which has its pathetic portions, and its thread of "grown-up" love, which will make it while away a profitable hour for the young-old folks.

Alice Weber is author of "When I'm a Man," etc. In "An Affair of Honour" ¶ she tells how a lovely little girl, Alicia, in her sweet, simple way leads some older people toward "the calm, bright land" of family peace. Miss Emily J. Harding has given us a considerable number of illustrations, in which Alicia appears very attractive.

Mr. Brander Matthews enters a new field in "Tom Paulding," ** and proves himself no less familiar with a boy's heart and reading appetite than he is with French dramatists, or the function of clear and sympathetic criticism. "Tom Paulding" lives in New York City, and searches for a

** Tom Paulding: The Story of a Search for Buried Treasure in the Streets of New York. By Brander Matthews. 12mo, pp. 254. New York: The Century Company. \$1.50.

buried treasure which was stolen and hidden in the streets long ago. He finds the money, which turns out to be nothing but counterfeit, but the lad's long and patient search is rewarded after all, for his uncle gives him the opportunity for a school of mines education, which is his heart's desire. A healthy, straightforward interesting story—in a word, what we might expect from Mr. Matthews.

Mr. Herbert D. Ward is not a new comer into the field of fiction. "The Captain of the Kittiewink" * is a story of the adventures—very adventuresome too, though naturally told—which two Massachusetts boys had in quite a lengthy yacht experience off the coast. Boy-like, they barely escape with their lives, and are the trial of their mother's heart, although she loves them dearly.

Stories of school life are always especially attractive to intelligent boys, if they are well told by one who is familiar with the ground. Such stories are "The Riverpark Rebellion," † of Homer Greene, and "The Cadets of Fleming Hall," ‡ by Anna Chapin Ray. "Riverpark" is the slightly changed name of a real boy's school on the Hudson, and all that fidelity to real life which boys want in a book is found in this one. "Fleming Hall" is in Connecticut, and though a woman essays something novel in writing a boy-school story, Miss Hall has been successful, and every lad's heart will bound as he reads the accounts of the boat race and other athletic events.

"Under the Water Oaks," § by Marian Brewster, is one of Roberts Brothers' boy books, this time telling us of the fun and adventure of a curious little darkey chap and his two white-boy companions among the water-oak regions somewhere in Dixie. The boys are brave, happy and natural.

THE REVIEW OF REVIEWS.

VOL. VI.

NEW YORK, JANUARY, 1893.

No. 36

THE PROGRESS OF THE WORLD.

THE REVIEW OF REVIEWS extends the compliments and good wishes of the season to its many readers, and is disposed to congratulate them upon the privilege they enjoy of living at so remarkably interesting a time as the beginning of the year 1893. To those who, like the ancient philosopher, hold nothing as alien to them that affects mankind, life is so thronged with matters of moment and so stimulating withal, that the pleasure of being a spectator of the world's magnificent drama is greater than at any former period. For the horizon has become amazingly extended, and we observe familiarly nowadays the doings of regions that twenty years ago were about as dimly known as Mars. Russia's terrible famine and her harsh expulsion of the Jews have come home to us closely; for we have ministered directly to the famine-stricken, and we have given hospitality to scores of thousands of those very refugee Hebrews. The cholera has come near enough to our own doors to revive our interest in Asiatic geography and to show us how, in spite of oceans and tariffs and all sorts of natural and artificial barriers, we are never safe from the ills that afflict any portion of our common humanity, and are part and parcel of a world whose interests are inextricably bound together. The fall of silver and the low prices of wheat and cotton have made our people discover that India bears appreciable relations to the economic welfare of every family in the Mississippi valley. A variety of circumstances have conspired to fix our attention upon the Spanish-American Republics south of us, and to give us such a sympathetic and intelligent interest in their affairs as we never possessed before. The great Northern half of our own continent affords a series of problems that appeal urgently to every instructed and discerning mind. The partition of Africa and the rapid strides that the European powers are making in the opening up of the Dark Continent present topics that are anything but dull. The social and political ferment of France, Germany, Italy and Austria, the ever-shifting phases of the Eastern Question, the Home-Rule struggle in the United Kingdom, the progress of a new Anglo-Saxon civilization in Australasia—all these movements are now in the full view of the whole world. This familiar command of affairs in all parts of the planet

is a distinctly new acquisition, and one that adds very much to the charm and worth of life.

Modern "News" and Its Triumphs.

The crowning triumph of our day is, simply, the day's news. "News" is not merely the passive and inactive reflection of the world's doings, but is in itself the most powerful creative agency the world has ever seen. News begets a myriad of activities. Of all the kinds of magic that the tellers of fairy tales ever invented, none was half so wonderful or potent as this modern magic that we term "news." It is federating the world; it is annihilating the false in religion and science, as well as in government and law; it is working out human freedom, creating an enlightened public opinion of world-wide authority, and promoting a common happiness, prosperity and elevation that had never before been conceived of as possible. It is in this magic sphere of the world's news in the highest sense of that term that the REVIEW OF REVIEWS endeavors to live, move and have its being, and thus in its measure to serve our day and generation. Each of its numbers endeavors to convey the essence and meaning of the world's best thinking and doing. The twelve issues for 1892, when one turns the leaves to recall the vanished year, do certainly seem to reconstruct for us that eventful twelve-month with a vividness and an actuality almost startling. And this may be claimed without a thought of boastfulness or self-praise, for the magazine has merely been as faithful as it could to the opportunity that each month in turn presented. It has lived in the very heart of the real news of the time, and that is the only secret of such success as it has achieved.

New Lines of Communication.

This disquisition about news in the higher sense suggests a word or two upon the growth of the tangible facilities for procuring and disseminating news, in the ordinary use of the word. The closing months of 1892 discovered several plans for extending the network of electric wires that already encompasses the more modern parts of the world. Thus active measures have been taken for a Pacific cable to unite our own coast with Japan, China, India and Australia by way of the Sandwich Islands, Samoa and other South

Sea groups. Commerce and civilization will be materially served by this much-needed line of telegraphic communication. A cable from Brazil to the Canary Islands and the west coast of Africa and thence to Southern Europe, is also announced as an early probability. Mr. Cecil Rhodes has just visited London from the scene of his large activities in South Africa, and he has proposed to the British Government to build at his own expense a telegraph line from Cape Town to Uganda, with the distinct intention that it shall, in the future, be extended to Khartoum and down the Nile Valley to Cairo and Alexandria, there to connect with the trans-Mediterranean lines to all parts of Europe. A telegraph line lengthwise of Africa, eventually to be followed by a railroad, appeals so boldly to the imagination that it makes the great trans-Siberian railway, now under active construction by Russia, seem a tame affair.

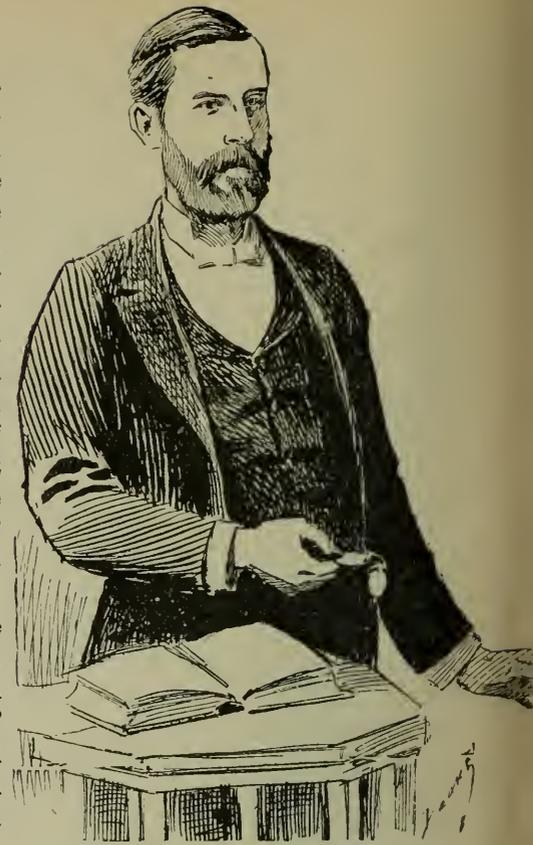

From
Cape Horn
to Capetown
by Rail.

It adds something to the zest of life—if one has a healthy, active fancy—to reflect that there are people now living who may travel by continuous rail from Cape Horn to the Cape of Good Hope. The plan of a “pan-American” railway to connect the South American systems, through Central America, with the systems of Mexico and the United States, is already well advanced. There are to be roads from the Canadian Pacific away up to the Peace River and Mackenzie Valleys; and it is not very hard to believe that these may ultimately be extended across the Rockies to the Ukon Valley in Alaska, and continued finally to the narrow and shallow Behring Straits, across which a connection would be made with the Siberian road. Continuous rail travel from Siberia to Constantinople will soon have become an accomplished fact, and the link from Constantinople to Egypt may be expected quite confidently. At the present rate of developments in Africa, the construction of a road from Egypt to the Cape ought to be realized within twenty-five years. The Channel tunnel will, of course, have been built, and electricity or some still more powerful motive force will have superseded steam; so that the Californians and Puget Sound denizens would naturally go to London by fast Alaskan and Siberian express. If they chose they might return by steamship, making the passage in two or three days from the West Coast of Ireland to Labrador or Halifax. In view of all that has been done in the past twenty-five years, such further development of traveling facilities is easily within the realm of sober prediction.

Will “Telepathy”
Become a Work-
ing Force?

The long-distance telephone is now a successful fact from New York to Chicago—a distance of nearly one thousand miles; and it is no longer particularly rash to predict the trans-oceanic telephone that will facilitate communication between the New York and London editorial offices of the REVIEW OF REVIEWS. As for the almost unlimited extension of telegraph lines, on land and under water, and of railroads in regions not yet invaded by the locomotive, the most timid imagination can contemplate it all without a shock.

But who knows what great discoveries in the realm of psychic force our men of science may shortly make, by which “telepathy” may be reduced to calculable uses, and mind communicate with mind regardless of distance, without paying tolls to the “Western Union” or the cable companies? In Mr. Stead’s remarkable Christmas novel, “From the Old World to the New,” a very sensational chapter is devoted to the rescue of a castaway on an iceberg by the steamship *Majestic*, through the clairvoyant and telepathic gifts of two passengers, one of whom foresees the castaway in a vision, while the other communicates regularly with the freezing man by a system of telepathic messages, while a third passenger is hypnotized, and in that state is able to predict accurately the course of the ship for a day or two ahead and to describe the icebergs which will be duly encountered. To most of us there may seem nothing prophetic in all this, but only nonsense and rubbish. Yet we must acknowledge that there are wise and learned people nowadays who think otherwise, and whose researches and experiments lead them to believe that strange new modes of exercising power and conveying intelligence are shortly to be discovered. Those to whom these ideas seem “unsettling” and dangerous may contentedly let them alone. As yet they have made good little or no claim upon the general attention. But on the other hand the psychical is just as legitimate a field of research as the electrical. And no actual discoveries of truth can ever possibly do us any harm. It is not every man’s business to be an experimenter or explorer in difficult or new fields of knowledge. Few of us are qualified for that kind of work. For most of us it is enough to keep an open and a candid mind; to reverence all truth, and to seek to live in accordance with truth. But it is a very poor business to quarrel or meddle with those who are trying to find out new things, or to test the precise merit of old and accepted things.

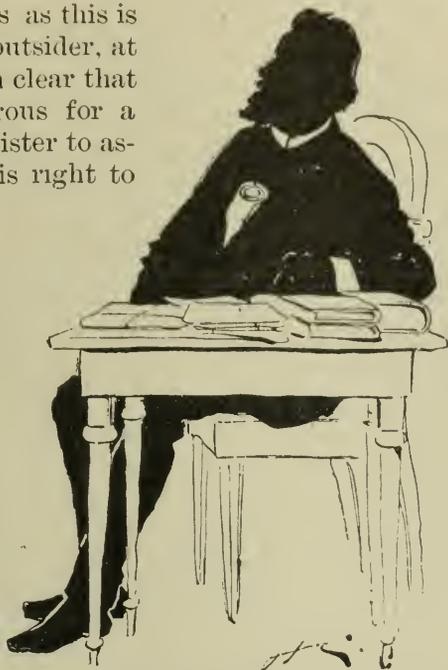

PROF. SMITH, OF CINCINNATI.

The Pending
Theological
Disputes.

This dictum may, if the reader please, be deemed to have some reference to certain pending theological controversies. Professor Briggs, of New York, and Professor Smith, of Cincinnati, declare that they accept the Bible as an inspired religious record and guide. They are eminent scholars,

and have thought it useful to find out everything possible about the Bible and the times and methods of its composition. Their announced discoveries and conclusions have led to trials for heresy, and Dr. Smith has now been convicted and deposed from the Presbyterian ministry by the Presbytery of Cincinnati. Dr. Briggs' trial is in progress as this is written. To an outsider, at least, it must seem clear that it is very dangerous for a Presbyterian minister to assume that it is his right to try to find out all he can about the Bible. Doubtless the opponents of Dr. Briggs and Dr. Smith are perfectly honest and sincere in their belief that it is improper to subject the Bible to the same sort of critical study that is bestowed upon Homer or other ancient writings. Yet, after all, what possible criterion can any man fall back upon except the conscientious use of his own reason? How else shall one decide that the Bible is better than the Koran, or that the accepted canonical books are better than the apocryphal books, or that the New Testament gospel is better than the Levitical law? And if one may apply himself to learn something about the Bible, why may he not apply himself to learn all that he possibly can? Moreover, how can those who have not studied the Bible thus profoundly dare to sit in intellectual judgment upon the men of scholarship? The work of Dr. Briggs and Dr. Smith would seem to have had no

PROFESSOR BRIGGS ON TRIAL.

very immediate bearing upon the case of the plain man who tries to order his life by the practical teachings of the Scriptures. Theories of inspiration are extremely difficult to formulate intelligibly, and every minister has his own. Differences lie

DR. BIRCH, OF THE PROSECUTION.

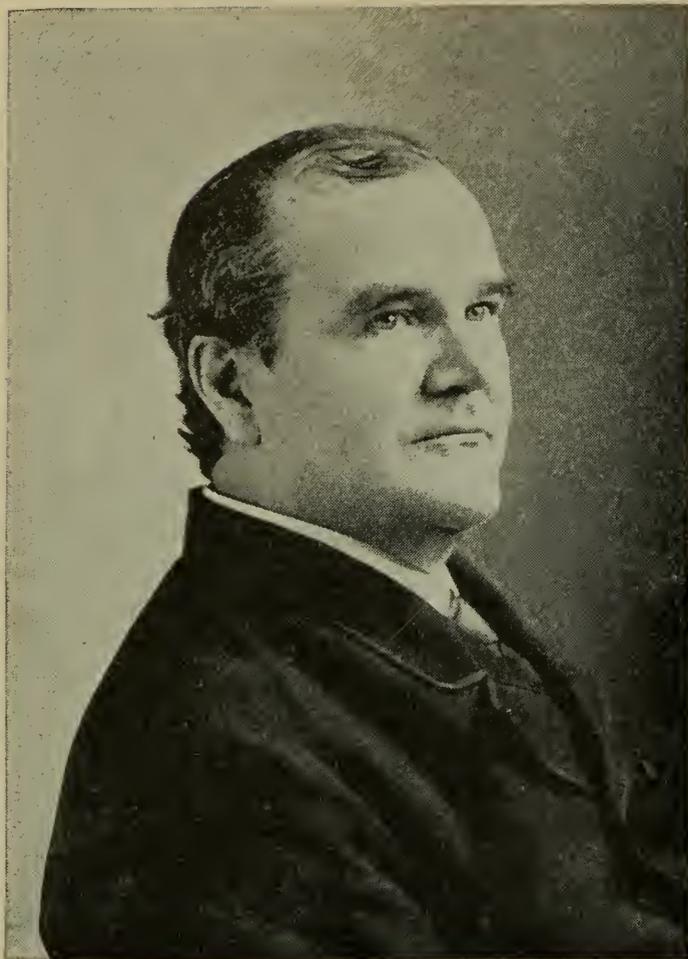

chiefly in the meaning men place upon certain words. If these verbal misunderstandings could be swept away, it is probable that no serious disagreement would remain between the two heretical professors of theology and their orthodox accusers. The controversy is not edifying, and it seems a great pity that the prosecutors allowed their consciences to be so troubled over the offenses of brethren whose own consciences were in a highly clear and healthy state. The heresy-seeking instinct is one that every man should always try his best to choke down, whether in theology, in medicine, in political economy or in any department of science or art.

Archbishop Satolli's Mission of Conciliation.

American Catholicism has been deeply aroused in these recent weeks by the presence and mission of Archbishop Satolli, who has come from the Vatican as a papal ablegate, and who is intrusted with the extraordinary duty of hearing and settling without further appeal all controversies between priests and their Bishops. The appeal to Rome, from this distance, is a tedious and difficult measure; and it is greatly in the interest of a prompt harmonizing of various long-standing disputes that Archbishop Satolli has been commissioned to settle everything on the ground. The most interesting reconciliation that has been announced as a result of his coming is that between Dr. McGlynn, the famous supporter of Henry George, and his immediate superior—Archbishop Corrigan. Dr. McGlynn's restoration to clerical rank and pastoral labors will

ARCHBISHOP SATOLLI.

REV. DR. M'GLYNN.

have given wide satisfaction. But Archbishop Satolli's most important errand has been to settle the heated controversies raging about the school question. He has communicated to the Catholic Archbishops an eminently wise and reasonable pronouncement. It distinctly acknowledges the educational function of the State, and approves the American public schools. In practical effect, this letter makes it permissible for Catholic parents to act upon their own judgment in selecting schools for their children. It merely insists that the parents and priests should see that Catholic children have regular religious instruction outside of school hours, if they attend public schools. The "Fairbault plan" is fully sanctioned as an alternative. In cases where parochial schools of as good quality as the public schools can be afforded, and where local circumstances make it appear that the public schools are anti-Catholic in their influence and teaching, the separate system is advised. The more narrow and bigoted elements in the Church have criticised the Satolli statement very bitterly, and have tried to make it believed that he was speaking his own personal views and not representing the Vatican authoritatively. But this objection is not valid. The Archbishop has, in fact, spoken with full authority. It is a great victory for Archbishop Ireland and the patriotic American wing of the Church. Pope Leo and his advisers have evidently mastered the real situation in the United States. The Holy See has intervened in favor of American Catholic parents, who can no

longer be restrained from sending their children to the public schools by priestly threats of excommunication or refusal of the sacraments. The Catholic church will be stronger by far when, in the spirit of Archbishop Satolli's statesmanlike address, it accepts the institutions of this country.

*Some
Deferred
Solutions.*

The year 1892 witnessed the defeat of the Republican party on the tariff issue; but the year 1893 is not likely to see the results. So slow are our political processes that no general tariff legislation can be expected until 1894. In like manner 1892 witnessed the overthrow of the Tories in Great Britain and the accession of Mr. Gladstone on a Home Rule platform. Yet, although British political processes are comparatively rapid in their movement, there is only a meager prospect that 1893 will see the enactment of a Home Rule measure. The old year witnessed a great cholera epidemic in Asia and Europe, and a successful attempt to repel the invader from our own country. But we are told by the physicians and experts that the coming season is almost sure to bring another struggle with the dreaded monster, so that Europe, at least, does not expect immunity until 1894. Thus in many other directions great forces have been set in motion or important determinations reached during the past year that cannot expend themselves or bring their fruition before 1894.

*Science and the
Cholera in
1893.*

If only the cholera can be kept fairly in check during this World's Fair year, 1893, it will be a great victory for science and statesmanship. Science is concerning itself with effective methods of isolating the disease, with quarantine details, with public and private sanitation, and—not least—with experimental inoculation as a preventive. The world may now reasonably hope that in M. Pasteur's famous laboratory at Paris, a "virus" or "lymph" has been discovered that will make inoculation against cholera as successful as vaccination for smallpox or the corresponding treatment—discovered by M. Pasteur—for hydrophobia. It is pleasant to note that M. Pasteur has just completed his seventieth year, full of honors and congratulations. It may be added that word comes from Berlin that Dr. Koch's "lymph" for the cure of tubercular disease has of late been greatly improved by additional discoveries. The method and the great importance of vaccination for cholera are well set forth in an article written for the REVIEW OF REVIEWS and published in this number. The article is from the pen of a young American lady, who has the honor to be the first woman upon whom the experiment of inoculation for cholera has been tried. It was written in Paris about December 1.

*Cholera and
Immigration
Problems.*

The measures of statesmanship that are under consideration in this country for protection against the cholera are the establishment of full national control of quarantine regulations, the establishment of an elaborate national health bureau, and the temporary suspension of immigration. The control of quarantine should un-

questionably be assumed as a direct function of the Federal authority. The immigration question is the difficult one. In view of the outrageous manner in which for years some of the steamship companies have incited the indiscriminate movement of European population to America for the sole purpose of gaining the passage money, it is not easy to view with patience the impudence of the steamship lobby at Washington that is now working against any effective measure of suspension, restriction or control. Too much else that is deeply important is involved to make the intrusion of the immigrant ship owners anything else than an impertinence; and if Congress allows legislation to be dictated by these subsidized European companies—which are, in fact, chiefly responsible for the great mass of undesirable immigrants with which we have been flooded in the past ten years—the American people may well be indignant. Our policy in this matter must not be prescribed by European governments or European ship owners. At present there seems a good prospect that Congress may suspend ordinary immigration for one year. The people of the country are ready to approve a sweeping measure that will give them a chance to adjust, properly distribute and suitably employ the people already here before the flood-gates are again thrown open to Europe's teeming hordes of outcasts and refugees.

*President Harrison's
Last Annual
Message.*

The President's message at the opening of the second session of the Fifty-second Congress was read on December 6. It is a long document, bristling rather formidably with statistics. But President Harrison knows how to use figures interpretatively, and this last of the four annual messages of his administration is a very careful and valuable *résumé* of our national affairs at home and abroad. It presents facts at length to show the unprecedented condition of prosperity in which the United States stands to-day, and it then proceeds to set forth the fiscal situation in epitome of the elaborate report of the Secretary of the Treasury. There is a tone of honest pride in the President's review of the magnificent work achieved by Secretary Tracy and the officials of the Naval Department during the period of this administration. A most lucid picture, also, is presented of the amazing expansion of our postal service, and of its thrifty and efficient conduct. In the summing up of the record of the Interior Department, the chief emphasis is rightly placed upon the great work now being accomplished for the transformation of the Indian tribes; their elevation to the rank of citizenship with separate family estates, and the restoration to the public domain and opening to general settlement of large areas hitherto reserved for the Indian population. There is a method and a purpose in our Indian policy to-day, such as existed at no former time. The President argues with evident strength of conviction for the protective policy, which he believes to have been so largely the means by which our astounding industrial and commercial development has been

attained, but he does not fail to acknowledge what he considers to be a popular verdict for the principle of a revenue tariff as against a protective tariff. He suggests, however, that the whole subject of tariff legislation should be left to the new Congress and should not engross legislative attention in the present session.

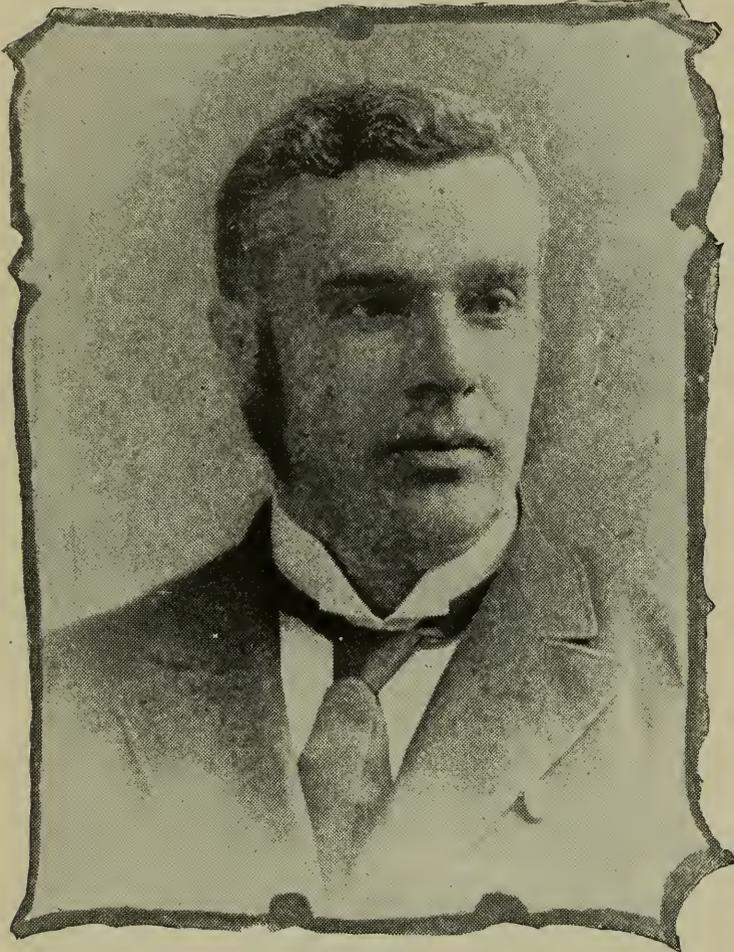

*"Well Done,
Good and
Faithful Servants!"*

It is less important that we should summarize the facts which President Harrison has laid before Congress and the country, than that we should give our strongest emphasis to certain fortunate circumstances under which President Harrison's administration will soon have reached its limit. A vast revenue has been collected and disbursed without the loss of a single dollar or the suspicion of serious dishonesty at any point in the government's highly ramified services. Every portfolio will cheerfully be made over to a successor of the opposition party without the slightest fear of any damaging disclosures. As against the scandalous revelations now exciting so much attention in Germany, showing that officials of the government and of the army have been in league with dishonest contractors to supply worthless small arms to the troops, our government can show the highest state of efficiency and the highest quality of construction in both military and naval supplies and equipments. While the French Republic has seemed of late on the very verge of dissolution, in consequence of the most colossal and all-pervading corruptions, our own national government is to-day the purest and the freest from scandal in all the world. This is cause for profound thankfulness on the part of the American people. President Cleveland and his official household found, when for the first time in a quarter-century the Republicans were dispossessed, that they had inherited an honestly conducted and efficiently organized mechanism of administration. When four years later the responsibility was given back to the Republicans, President Harrison and his executive corps again found that the great trust had not been abused during the four years of Democratic incumbency. And now when Mr. Cleveland returns to power he will receive at the hands of his retiring predecessor an administrative machine that has been improved, rather than disordered, during the past four years. Viewed in this light, the three recent changes from one party to the other will have been beneficial to the country, for they are greatly enhancing the respect of all our citizens for the government itself and for the men who are called upon to administer it.

*Our North and
South American
Neighbors.*

President Harrison considers with some detail the relations we sustain to the governments of our own hemisphere. He makes a favorable showing of what reciprocity has already accomplished, predicts a highly successful commercial future for the policy, defends once more the plan of steamship subsidies to promote direct and frequent communication with South Amer-

ican ports, and lays the utmost stress upon the necessity of our bringing the Nicaragua canal project to an early completion under the auspices of our own government. His expressions regarding Mexico show the most neighborly disposition; and inasmuch as this feeling is mutual in both countries, something substantial toward the lessening of trade barriers and the growth of business and social relations ought soon

SIR JOHN THOMPSON,
The New Canadian Prime Minister.

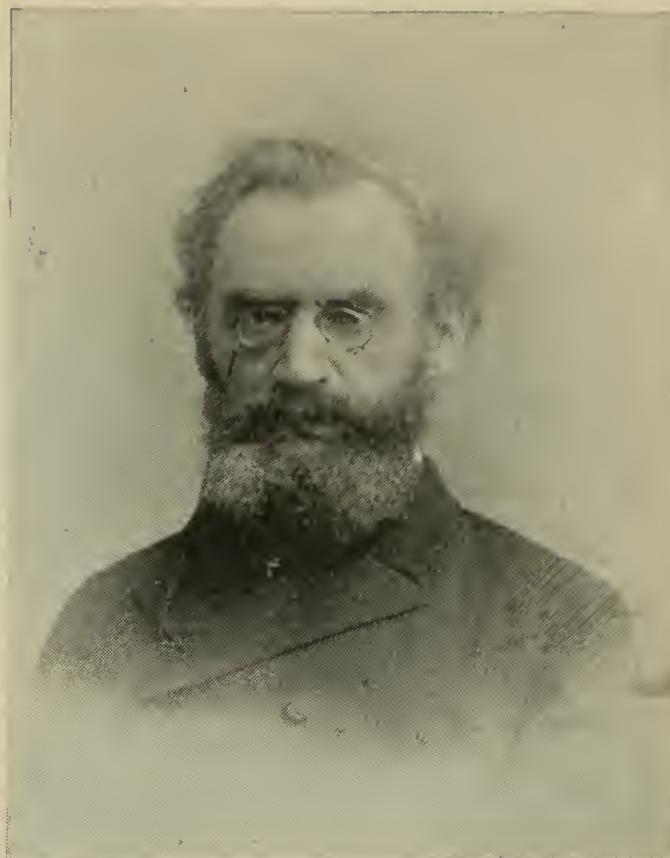

to be accomplished. It is to this end that the REVIEW OF REVIEWS has secured the highly noteworthy article upon "President Diaz and the Mexico of Today" which forms the most conspicuous feature of this number of the magazine. Upon our anomalous relations with Canada, and the various phases and topics of controversy between our own half and the northern half of this continent, the President's message also animadverts at length. His discussion is contemporaneous with the launching of what seems to be a concerted and organized movement in Canada in favor of what is now called "Continental Union." It is not generally conceded in the United States that the acquisition of Canada would be advantageous to us, and there is certainly no evidence of particular eagerness for such a consummation. Nevertheless, a majority of those citizens on this side of the boundary who have considered the subject most carefully are clearly of the opinion that "Continental Union" would be of great value to us in numerous ways. On the other hand, it is still more generally believed in the United States that Canada's interests would be

enormously promoted by the Union. Meanwhile, it is creditable rather than otherwise to the stability and character of the Canadian people that they cannot view lightly so grave and decisive a step; and that there should be a strong sentimental feeling for the Mother Country and "the Old Flag." While the attitude of the United States should be as friendly and sympathetic as possible toward Canada, the discussion of Continental Union must proceed chiefly in the Canadian provinces themselves. It is for them to decide, sooner or later, whether or not they desire to join their political fortunes, together with their commercial and social destinies, with their kinsmen on this side of the ocean rather than with their kinsmen on the other side. Sir John Thompson's accession to the premiership of Canada should be mentioned, by the way, as one of the most important political changes of the past few weeks.

Politics in Washington, New York and Elsewhere. Apart from the immigration question, there seems to be little likelihood of any very interesting general legislation at Washington this winter. From the time of its assembling on December 5 up to its Christmas recess, Congress had made a record of masterly inactivity. The annual appropriation bills will occupy most of the time of both houses from the resumption of sittings in January to the dissolution on the 4th of March. The politicians are much more interested in the game of making a cabinet for Mr. Cleveland, and in the wire-pulling that has been busily conducted in several States for seats in the Senate, than in anything the expiring Congress is likely to perform or omit. In the State of New York the Democrats have the control of the Legislature which will this winter choose a successor to Senator Frank Hiscock. Over the filling of this place a controversy has been raging between the two sharply-severed wings of the New York Democracy. The so-called machine candidate is Mr. Edward Murphy, Jr., of Troy. Mr. Murphy has long been a very powerful man in the practical organization which, under the headship of Mr. Hill, has controlled the Democratic party, and, through that party, the administration of the State government and of the chief cities of the State. No one would think of claiming that Mr. Murphy possesses the kind of attainments or of public experience that has in the past been thought requisite for a seat in the United States Senate. But, as between a successful politician like Mr. Murphy, who owes his advancement to skill and to hard-earned influence in the management of party machinery, and the typical senatorial plutocrat who merely buys his seat, the comparison is infinitely in Mr. Murphy's favor. It would seem a pity that the great State of New York should not choose to honor itself by trying to find a first-class statesman to fill this exalted position. The anti-Hill and anti-Tammany Democrats of New York have not settled upon one candidate, but have mentioned very prominently the Hon. Carl Schurz, the Hon. William R. Grace, Mr. Frederic Coudert, and one or two others. Mr. Schurz, who is certainly a gentleman of remark-

able attainments and versatility, would seem to be the favorite in the camp of the Mugwumps and the so-called "anti-snapper" Democrats. It is declared that Mr. Cleveland would regard the choice of Mr. Murphy as a movement distinctively hostile to himself. In various other States the preliminary contests for senatorial prizes are absorbing much attention. The position occupied by the Farmers' Alliance in several Western legislatures has given opportunity for a large amount of diplomacy. In several cases no one can yet tell what will be the political complexion of senators to be chosen by bodies in which no one of the three parties has a clear majority. Particular interest has been excited in the Kansas senatorial situation because of the novel candidacy of Mrs. Mary Lease, who has been the most eloquent apostle in that State of the overwhelmingly successful Populist movement.

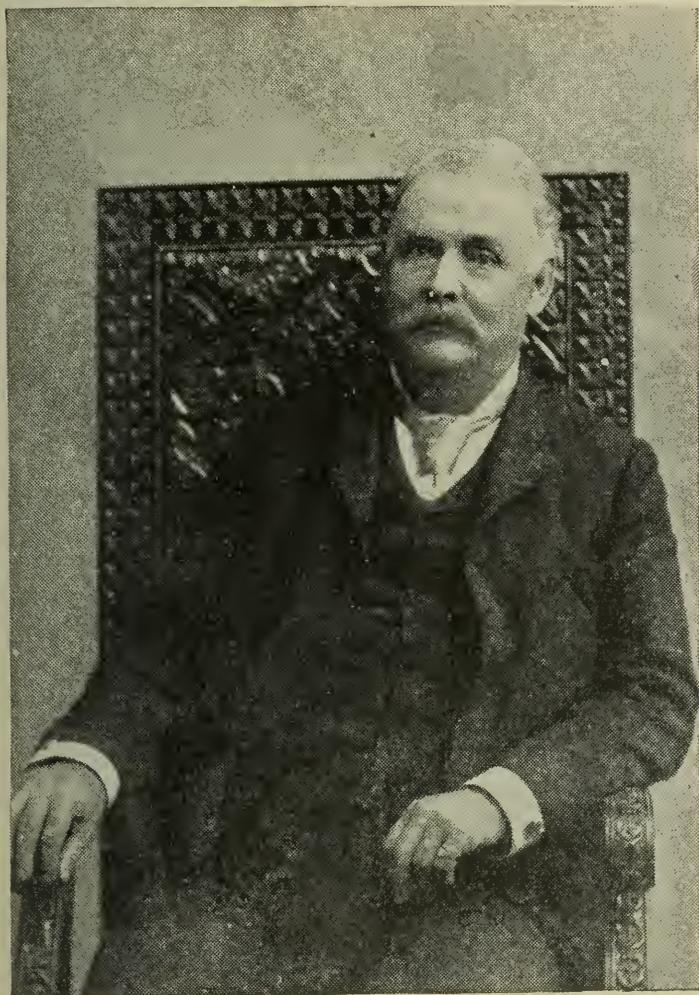

Speaking of the Populists and their strategic position in the West, the REVIEW OF REVIEWS would

HON. CARL SCHURZ.

what remarkable feat. There seemed, at political and newspaper centers in New York, no serious doubts as to the fact of the election of the gentlemen whose portraits we produced. But the final figures from Kansas, Colorado and Wyoming show that the Populist candidates for the governorship were the ones who received a plurality of the votes. In Kansas, the Hon. Loraine D. Lewelling, Populist, was chosen, whereas our frontispiece of last month gave the face of the Hon. A. W. Smith, Republican. In Colorado, Hon. Davis H. Waite is the victor, and the Hon. J. C. Helm is vanquished. As to Wyoming, where the situation seemed for some time to be in bitter dispute, it is now adjudged that the Hon. John E. Osborne, Populist, and not the Hon. Edward Iverson, Republican, is to assume the honor and responsibility of the Governor's chair. We present our compliments and congratulations to these successful Populist candidates, and make the best amends in our power by publishing their portraits in this number.

On the continent of Europe the past two months have been a time of great parliamentary activity. The November agitations culminated in the overthrow of the French ministry. The French Republic has at least proved that in politics there is no indispensable man. In twenty years the French have had twenty-six ministries, but the stability of their Republic does not seem to be related to the mere fact of the short innings of its administrations. The perpetually-recurring ministerial crises, which scandalize steady-going politicians in other lands, really supply the zest without which the

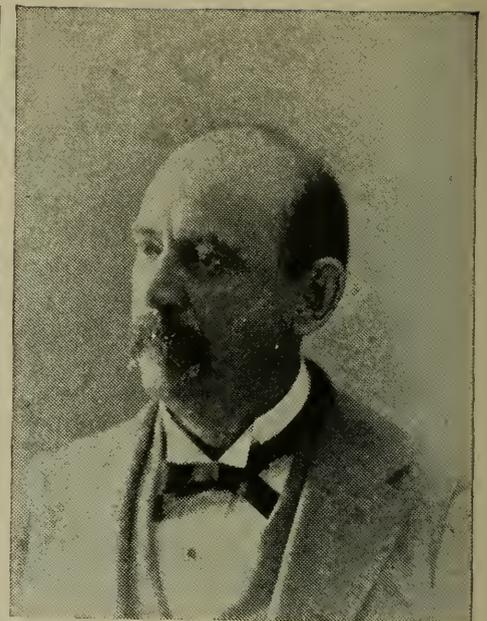

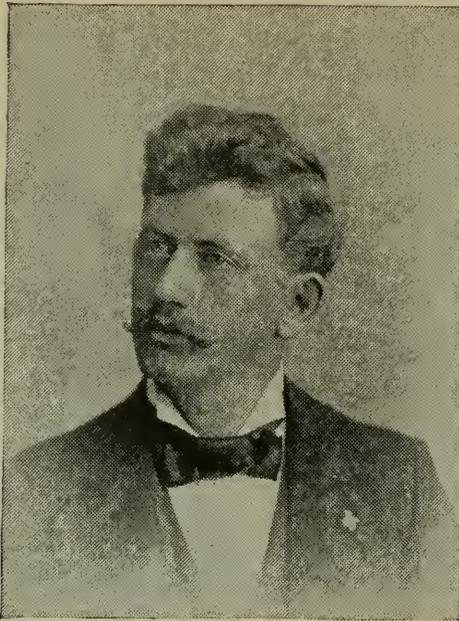

HON. EDWARD MURPHY, JR., OF TROY.

be guilty of an omission which it could have no possible desire to make, if it should fail to explain that in its two portrait groups last month, which included some thirty newly elected governors of States, the official returns from three States have since shown that it gave the honor to the wrong man. The gathering of these portraits and their reproduction in time for our December number was a some-

French politicians would find life not worth living. A French ministry has a short life, and, let us hope, a merry one, for no minister has ever fallen without at least half a dozen candidates for the vacant folio cropping up in the Chamber. The course of events which led to the downfall of M. Loubet began with the strike at Carmaux, which had the effect of bringing M. Clemenceau, "the king maker" of French politics—if we may apply that term to one who is much more remarkable for demolishing ministries than for making them—into line with the Socialists. It also created an uneasy impression on the part of the timid bourgeoisie that the Anarchist element was lifting its head again, and this impression was deepened by a dynamite explosion in the heart of Paris. M. Loubet was regarded as having been weak, and an attempt made by him to strengthen the law directed against incitement to outrage on the part of the press terminated, after a threatened crisis in something like a fiasco, the Chamber accepting the bill and then turning it inside out in committee.

*The
Panama
Scandal.*

The Carmaux strike was chiefly important as preparing the way for the upset which terminated the life of the Loubet Ministry. From his place in the Tribune M. Delahaye created a tremendous hubbub in France by declaring that the Panama Canal Company had obtained exceptional privileges which it had used for the purpose of defrauding the investors, by the bribery of no fewer than 100 Deputies. To all cries to name the offenders, the speaker replied by challenging the Government to appoint a Committee of Inquiry. The Government had already decided to prosecute M. de Lesseps and the rest of the Directors of the Canal Company on what was tantamount to a charge of fraud, and it was therefore most difficult to institute another inquiry by committee into the conduct of those who were already on trial before a judicial tribunal. Such, however, was the sensation produced by the charges launched from the Tribune against the honor of French Deputies, that the ministry consented to allow the whole question to be submitted to a parliamentary committee. The committee had not yet received much evidence of value, when in the middle of the investigation Baron Reinach, a banker who was accused of being the instrument or agent of much of the corruption of the Canal Company, opportunely died, and was buried. Death is seldom so convenient in coincidence; and rumor was soon busy. Before long it was roundly asserted by one set of gossips that Baron Reinach had poisoned himself, while an-

GOV.-ELECT OSBORNE, OF WYOMING. GOV.-ELECT LEWELLING, OF KANSAS.

other set maintained as positively that he was still alive, and that the coffin which was supposed to have contained his remains was filled with gravel. So confident did the rival rumorists wax in asserting their mutually contradictory stories, that the Committee of Inquiry decided to demand the exhumation of the coffin. Against this the Minister of Justice, M. Ricard, whose conduct throughout the prolonged crisis had been by no means calculated to exalt his reputation, protested; but in spite of his protests the Chamber, on November 28, defeated the government by a small majority. Thus, in order that a corpse should be exhumed, a moribund ministry was slain.

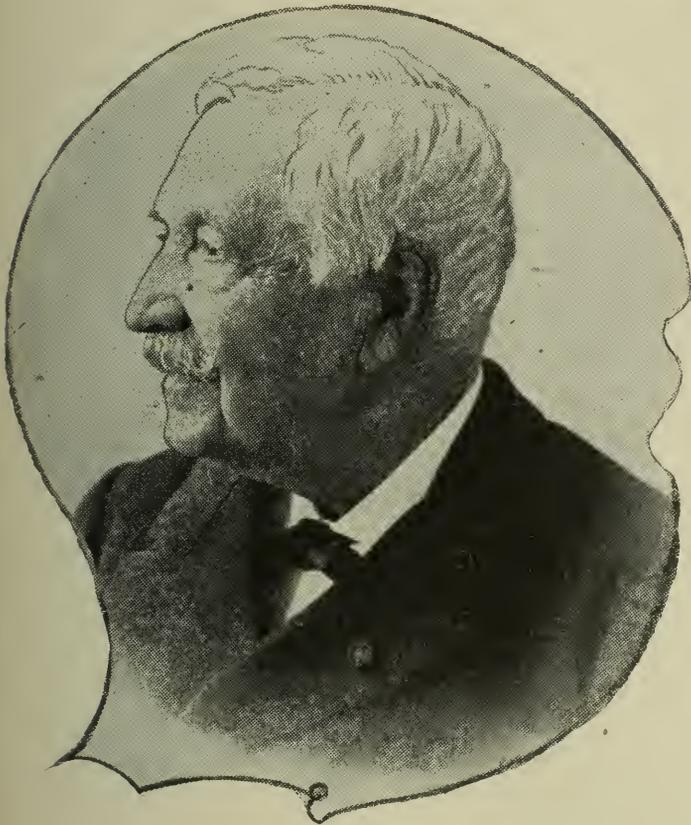

*Further
Developments
as to the Canal.*

As to the merits of the question in dispute, there is no doubt that the Panama Canal Company was the most gigantic fraud of our time. Three or four hundred millions of dollars of hard-earned money was sunk in what every one who looked into the matter must have known was an absolutely impossible attempt to cut a ship canal through a mountain range shaken with earthquakes and crossed by a devastating torrent. The glamor of M. de Lesseps' name was sufficient to blind investors to the risk which they were running, and the press was bribed by lavish advertisements. That the Panama Canal Company bribed the Deputies as well as the journalists is a matter upon which Parisian rumor for a long time past has had its mind made up affirmatively. Certainly, unless many deputies were grossly maligned, they would have had no moral scruple about "accepting" recompenses for voting for the Canal Company. We shall know more about the extent of the corruption in the Chamber itself when M. Brisson's committee reports, as it is expected to do on January 10. It is now known that although some \$500,000,000 of Panama bonds are outstanding, not more than about half that sum was

actually raised for the legitimate work of making the Canal, and evidences of not more than \$80,000,000 of honest investment could be shown at Panama when the collapse came. It cost millions upon millions to keep the bankers friendly to the enterprise and willing to help gull the hundreds of thousands of small investors. It cost millions more to keep the press of Paris from telling the people what was actually the situation at Panama. And it would seem that still other millions were required to keep government officials and members of the Chamber on the right side. As to poor Ferdinand de Lesseps, the "grand old man" of France, who is now 88 years of age and very feeble in mind and body, we shall prefer to believe that he has all along been the victim of his own enthusiasm and misled by the crowd of designing men who have made millions out of the limitless confidence the common people of France have long reposed in him. He was far too old to enlist in so stupendous an enterprise, and his diplomatic talents were always far greater than his ability either as engineer or financier.

M. Ribot at the Republic's Helm.

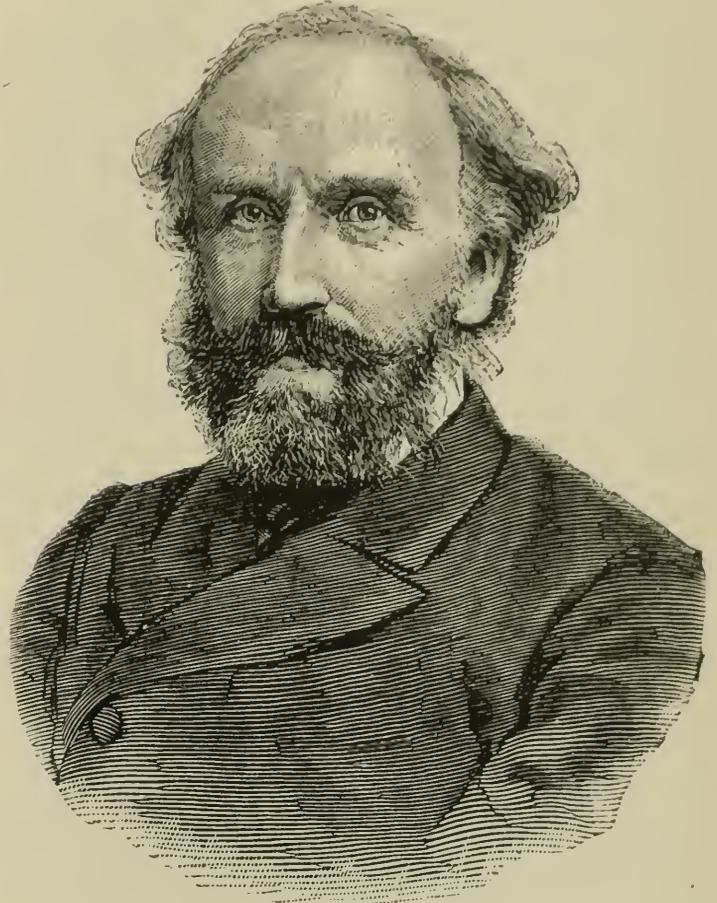

It was fortunate for France in this crisis that M. Ribot, so soon after the fall of M. Loubet, was able to form a new cabinet which was indorsed by a very heavy vote, upon

COUNT FERDINAND DE LESSEPS.

M. Ribot's bold refusal to do the very things which the self-same Chamber had within a week defeated M. Loubet for refusing to do. M. Ribot showed the Chamber the danger involved in violating the constitution, by mixing the functions of the legislature and the judiciary. He declined to give M. Brisson's

investigating committee the extraordinary powers of a judicial nature that were demanded. His eloquence and vigor convinced the Chamber; and, although he has had rough sailing, he bids fair to weather the gale. He retained all the members of the Loubet cabinet excepting two, and Loubet him-

M. RIBOT,
The New French Premier.

self remains in possession of a portfolio. While Brisson is probing the scandals by means of his legislative committee, Ribot is causing the public prosecutors and the judiciary to act with a boldness that outbids even the austere and fanatical Brisson. About the middle of December several of the directors of the Canal Company were arrested and imprisoned on charges of wholesale swindling. It has all been a terrific experience, but the lesson will be wholesome. France will emerge the better for it and French public life will be purified. The Republic, we both hope and confidently believe, will endure the shock and withstand the plots of its enemies.

Germany's "Grand Old Man."

While dark clouds have gathered over the head of France's Grand Old Man, across the Rhine the German G. O. M. has been doing his best to make his friends and admirers regret that when he retired from the Chancellorship he was not snatched by some beneficent eagle and carried to the knees of Jove. The cartoon which we reproduce from one of the Paris newspapers represents only too accurately the effect produced on the reputation of

one of the few remaining great names in Europe by the recent utterances of Prince Bismarck. If there was one thing more than another that turned the whole tide of European feeling against France at the beginning of the last great war, it was the announcement that the French Envoy, Benedetti, had forced the quarrel upon the King of Prussia by springing upon him a fresh demand that he should never recognize a Hohenzollern on the throne of Spain, immediately after he had succeeded in averting a quarrel by securing the withdrawal of the candidate. The Benedetti incident at Ems was accepted almost universally as a proof that the Emperor Napoleon was bent on forcing on a war. Prince Bismarck, in an interview published in a Leipzig paper, calmly announces that this famous insult was practically his own invention. His exact words were :

It is so easy to change completely the meaning of a speech by omissions and suppressions. I myself once tried this game as editor of the famous Ems dispatch, which the Social-Democrats have for twenty years been harping upon. The King sent me the dispatch, with instructions to publish it wholly or in part. After I had prepared it for publication, by omissions and contractions, Moltke, who was with me, exclaimed, "At first it was a call to a parley, and now it sounds the charge."

*Vindicated
Against His
Will.*

The effect produced by this confession can be imagined. A cry of vindictive delight arose from Paris, while the Germans were troubled and sore at heart. Count Caprivi, however, took an early opportunity of proving from his place in the Reichstag, by the production of the original dispatches, that Prince Bismarck had been maligning himself in order to deal a stab at the reputation of the Emperor William. It is evident from the dispatches which the Emperor sent to Bismarck, and which Bismarck subsequently edited and toned up with an eye to influencing public opinion, that the Emperor had put his foot down, and that the popular impression at the time was correct. Bismarck's excuse is that he believed war was inevitable, and knowing that the moment was propitious for Germany, he seized the opportunity of precipitating hostilities. His cue is to represent the Emperor William as hesitating and shivering on the brink of a resolution, while he, the Chancellor, forced the hand of his Imperial master. It is a sorry spectacle, and almost makes one wish that when great statesmen fall from power they should be treated as Oriental princes sometimes deal with those who have been trusted with State secrets—have their tongues cut out.

*The German
Army Bill.*

After defending Prince Bismarck against Prince Bismarck's imputations, General Caprivi proceeded to defend the new bill which provides for an increase of the German army. His exposition of the European situation was frank and outspoken. Germany was at peace; Germany wanted no more territory, had

sufficient colonies; Germany did not dream of attacking any of her neighbors. France had, however, recuperated her energies, and, singly, would be a formidable antagonist. Germany could not count, however, upon being left alone with France. Popular feeling in Russia against the Germans, General Caprivi stated, was very strong and was increasing. The Czar was peaceable, but no one could say, with this strong anti-German feeling in Russia, whether the Russian army, which was being more and more concentrated along the western frontier, might not be used against Germany. Therefore General Caprivi argued that it was indispensable that they should strengthen their armaments. Military service is to be reduced from three to two years, and the strength of the army on a peace footing raised to 492,068 men. The proposals were by no means received with enthusiasm; but it is probable that the force of facts and figures will induce the Reichstag reluctantly to pass the bill.

*The
Italian
Elections.*

The Italian Government has come back from the polls with a renewed expression of confidence. Signor Giuletti has 325 supporters out of a House of 508 members. This result has been received with great satisfaction in Germany and in Austria. The Triple Alliance, in spite of all the sacrifices which it demands, would seem to be more popular in Italy than had been imagined. Of course no general election in Italy can be said to represent the opinion of the Italians until the Pope allows the Catholic voters to go to the polls. Still, the Pope's interdict is not a thing of yesterday, and the general election may be taken as a clear indication that among the Italians who do go to the polls the Triple Alliance is more popular than the alternative suggestion of the Republicans, that the Italians should first depose their King, have a republic and strike hands with France.

*The Ministerial
Crisis
in Hungary.*

Hungarian politics attract little outside attention. Some years ago two smart Hungarian journalists went to London to arrange for corresponding with some London paper from Budapest. An Austrian correspondent in the English capital somewhat rudely enlightened these ingenuous young men as to the chance of success. "Daily correspondence," said he, "from Budapest! Why, there is not one Englishman in ten thousand who knows where Budapest is. Of those who do know where it is, not one in a million cares a straw for what happens there. You had better go home." The ministerial crisis has resulted in the formation of a ministry under the middle-class Protestant Dr. Wekerle, to succeed the Szapary ministry, which fell on the question of civil marriages. It is interesting to all civilized countries, because it is connected with a question of universal speculation. The Pope is wroth at the demand of the Hungarian Liberals that all marriages should be celebrated before a civil functionary. This is the law in France, where it is acquiesced

in by the Pope; but its introduction into Hungary excites the liveliest protests on the part of the Catholic hierarchy. A *modus vivendi* will probably be found, possibly upon the basis of the English system, by which the registrar representing the civil power will have to be present when the religious ceremony is celebrated. The new ministry is also pledged to the following measures: The registration of births by the State, the free practice of all religions, and the recognition of the Jewish faith as a so-called received religion. The controversy is one among many indications which show, even to the most careless, the power and influence still exercised by the Pope in countries nominally Protestant.

The Dahomey Campaign.

The French campaign in Dahomey has been terminated for a time by the hoisting of the French flag over the palace of the King at Abomey. Information trickles slowly in from the West Coast of Africa, but it seems evident that in the attack upon Kana, the sacred city of Dahomey, the French very narrowly escaped a crushing defeat. Their first assault was repulsed and the city was only taken by very severe fighting. It is interesting to hear that the Amazons fought much better than the men. Their superior intelligence was shown by the fact that they alone were allowed the use of the breechloader. The French may yet find that Dahomey is a Moscow on a small scale. King Behanzin, who has not been captured, set fire to his capital. He left it and is now with most of his chiefs in the Mahi country, which is in the Hinterland of Dahomey. It is probable that the cost of holding this famous negro stronghold will be heavy in human life.

England and Uganda. In the English Cabinet the issue has been joined upon the question of Uganda. Lord Rosebery stood to his guns, and the Cabinet—Mr. Gladstone bringing up the rear—agreed to let him have his way. The precise terms of the arrangements that will be made to secure the retention of British sovereignty in Uganda are not yet completely known, but it is understood that the Cabinet was confronted with the fact that if they gave up Uganda they must also give up Lord Rosebery. They decided that as they could not have Lord Rosebery without Uganda, they would keep them both. Lord Rosebery probably would not have been able to convince his colleagues so rapidly of the absolute necessity of reconsidering their ways on this matter if it had not been for the very significant expression of public opinion throughout the country, especially among English Churchmen and in Scotland, Captain Lugard doing yeoman's service as an agitator. On the top of memorials and resolutions, emanating from the most influential quarters, came Mr. Rhodes from the Cape, with his offer to lay a telegraph line, if need be at his own expense, from Mashonaland right up the Central Lakes to Uganda. This offer to back a given line of policy with £150,000 down is

understood to have settled things. Sir G. Portal has been appointed Commissioner for Uganda.

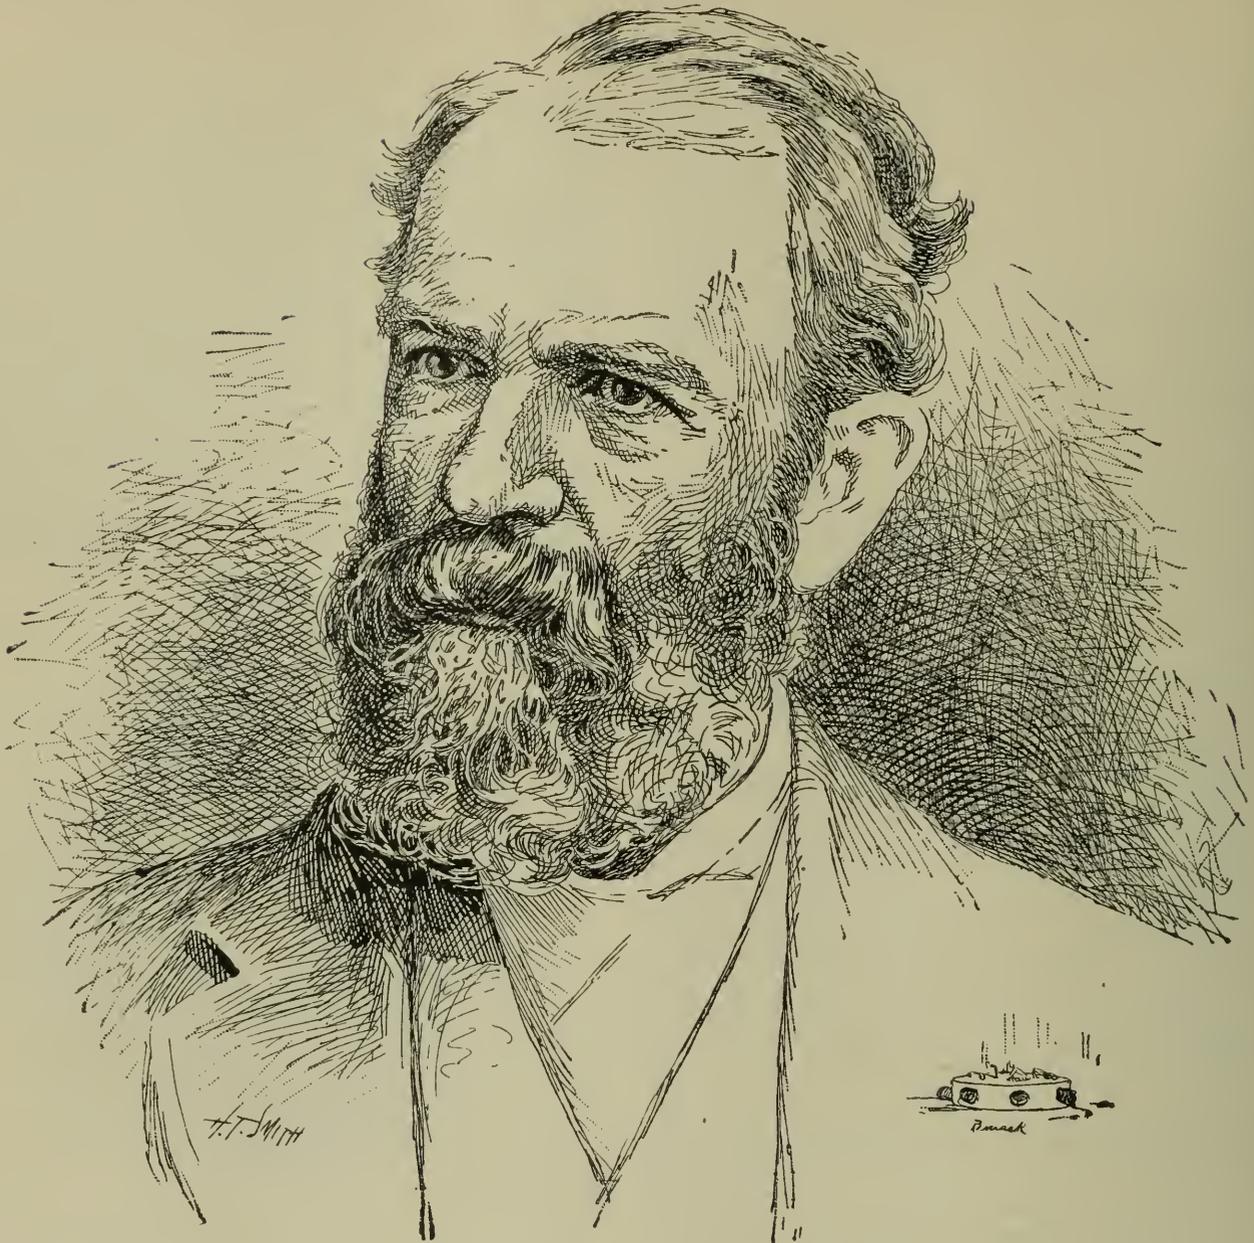

Prospects of the Ministry in England.

The Home Rule Bill is supposed to be in process of incubation at Hawarden, but very little is said about it or its details; and in the Cabinet and out of it there seems to be a praiseworthy unanimity in favor of acting in the direction of the old nursery formula: "Open your mouth, shut your eyes, and see what the G.O.M. will send you." Meanwhile, the impression is growing that the Cabinet will be lucky if it lasts till midsummer. The pessimists who predict an early dissolution pin their faith, first, upon the possibility of Mr. Gladstone's physical breakdown; and, secondly, upon the probability that the Home Rule bill, when he takes it out of his sleeve, will afford the Redmondites sufficient excuse for crying, "To your tents, O Israel."

CAPTAIN LUGARD.

Leaving Mr. Gladstone's health out of the question, it is argued that if a comparatively small section of the Irish Home Rulers respond to Mr. Redmond's appeal—and they are certain to have excuse enough in any Home Rule bill, no matter who drafts it—then the ministry will be so fatally weakened that it will certainly be beaten on points of detail. Being goaded on this side and that side, as a bull in the ring is tormented by the banderillas of the matadors, it will at last rush upon the sharp sword which gives the *coup de grâce*. The Irish do not need to vote against Mr. Gladstone to upset the Cabinet. They simply need to stay away, for it is obvious that, if the ideal of those English Radicals who wish to expel the Irish members was realized to-morrow, Lord Salisbury would be sent for at Windsor the day after. Add to these elements of danger the fact that the ministerial majority is largely composed of men who are in a hurry to legislate on English questions, and to put

From the original drawing by H. T. Smith for the *New York World*.

THE LATE JAY GOULD.

through what they regard as an indispensable labor programme before the inevitable dissolution, and the prospect of getting good work out of the present parliament next session seems to be extremely small.

The Death of Jay Gould. The most absorbing newspaper topic since the elections is the death of Mr. Jay Gould. The story of his life has been related by many pens, and his character has been discussed with a diligence and thoroughness that leave few points uncovered. We shall next month present Mr. Stead's ideas of the significance of Gould's career. Mr. Gould's personality was not familiar to the public. His face was known to very few men. He lived a reticent, unpretentious life. In a period more productive of bold speculation than any other our country has known, Mr. Gould emerged as the prince of daring Wall street operators. The great masters of our transportation systems have come into their power and holdings by two very distinct processes.

Some have risen through practical experience and great ability in the business of constructing and operating traffic lines. Others have risen through the mere manipulation of stocks—the betting and gambling methods known to the Stock Exchange. Mr. Gould's advancement in wealth and power was by the latter process. He was a shrewd operator. He became dominant in the "Western Union" Company not because he was a great manager or developer of telegraph facilities, but because by strict attention to opportunities in Wall street he became owner of a vast amount of the company's stock. And this was true of his railway interests, and of all his huge holdings of stocks and securities. That Mr. Gould had foresight and believed in the development of the country is doubtless true. But he studied its possibilities in order to make its growth advance his private fortunes. He reaped where other men had sown, and he secured a mighty harvest. He was little better or little worse than a host of other speculators.

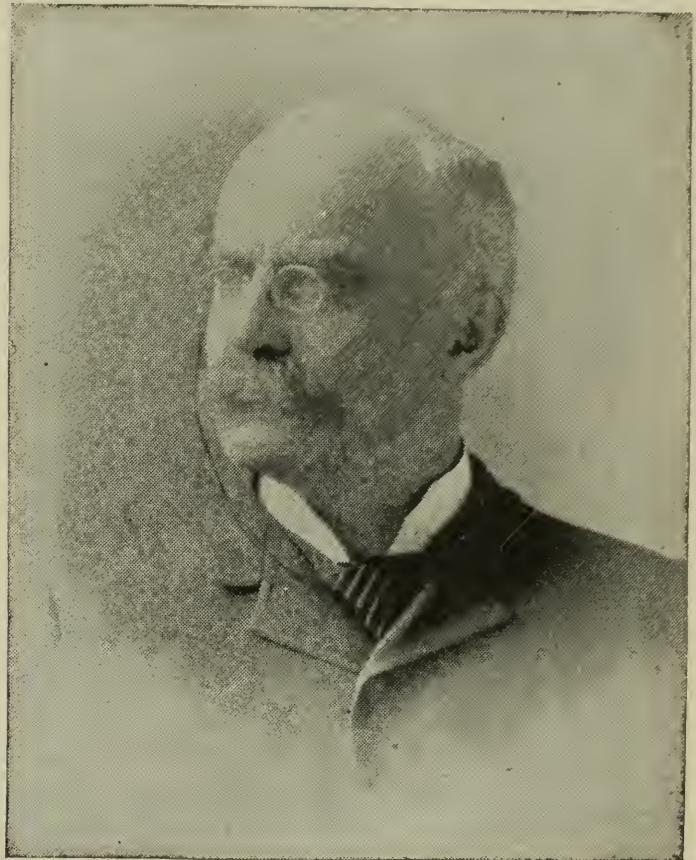

His game was on a larger scale because of his superior ability and audacity. Possibly some of his so-called success is due to the fact that at critical turning points in his business career he dared to do things that other men, from conscientious scruples or from timidity, would not have done. Much of Napoleon's military success was due to the fact that he acknowledged no restraints. Treaties were not sacred to him; promises were meaningless; the rights and claims of others did not concern him in the least. Other men could not compete with him because they were handicapped by scruples, by some sense of obligation, or by some traditional notion of respect for the laws of God or of men or of nations. Perhaps some of Mr. Gould's unprecedented acquisition of wealth was due to a large freedom of action resulting from a lack of the restraining sense of obligation. Doubtless he performed many kindly deeds, incidentally. But his career was to an extraordinary degree that of a man who seemed devoid of the sense of human brotherhood and social obligation. And so he came to be considered a phenomenon rather than an ordinary human being. He was regarded in many quarters as an evil genius to be dreaded and, therefore, if possible, to be propitiated. He is said to have been a religious man in the sense of adhering firmly to orthodox Presbyterian theology. But he did not make extensive use of his religion in the only practical way that is open to anybody, namely, the love of one's fellow-men. It is not pleasant nor is it necessary to multiply harsh words about Mr. Gould. But, on the other hand, one cannot have a changed opinion of his life and character merely because death has removed him. At least his disposal of his great wealth was manly and sensible. He loved his children and he left them his money. Their views of life will be broader and more generous than his, perchance. They may even be touched with some of that sense of obligation that many good men feel who account themselves nothing more than stewards, sacredly intrusted with wealth to be used for the world's betterment. It is to Mr. Gould's credit that he did not try to buy for his memory the esteem that men had withheld from him in his lifetime, by leaving money for some institution or philanthropy to be called by his name. He has left simply a group of immensely rich children. They are his offering to a world that did not highly esteem him. They have it in their power so to use the wealth he left at their disposal as to make the world for their sakes glad to forget his faults and to soften its judgment of him.

*The Stage, the Church
and the American
Public.*

The influence and position of the stage in this country is a subject that no thoughtful person can

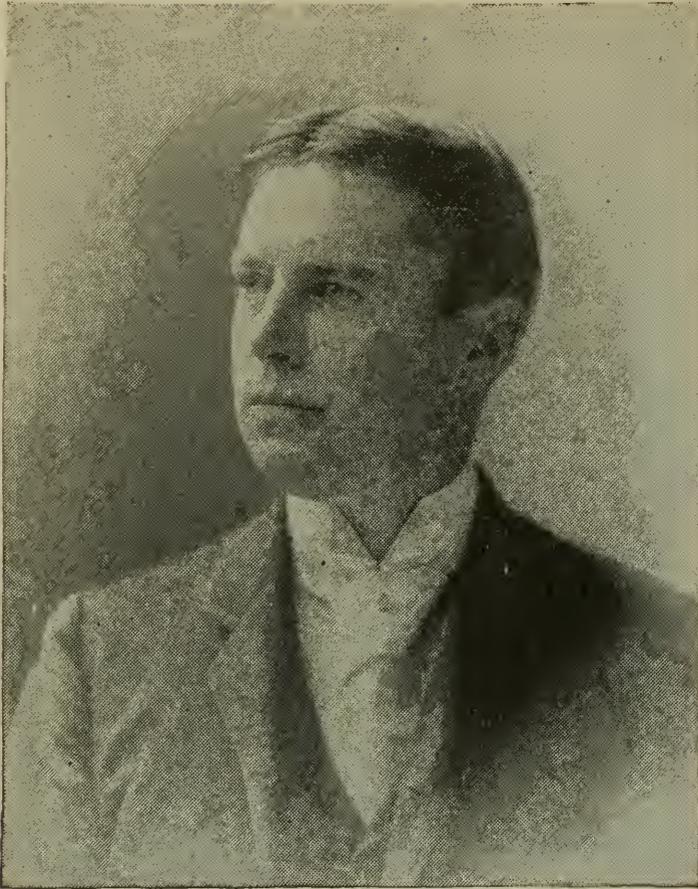

allow himself to dismiss as of minor importance. Dramatic art is a universal and inevitable fact, and its condition in any civilized country at any given moment ought to be deemed a matter of moment and serious concern. The rapid growth of city and town life; the high pressure of latter-day existence demand-

ing, as it does, a great variety of relaxations and amusements for relief from the strain; the influx of European populations and ideas; our general progress in esthetics and the fading away of old-time American asceticism, are all conspiring to give the stage a larger and more essential place in American life than it ever before occupied. Accepting the stage as a great present-day fact, the question arises as to what it ought to be and to accomplish. May it not afford recreation and amusement and at the same time convey sound ethics, help to promote good esthetic taste, bear some relation to our literary progress, assume a national and patriotic tone, mirror our own manners and characteristics, and, in short, play a respectable and an accepted part in our popular culture? In our opinion the answer may safely be affirmative. But the practical

MR. BRONSON HOWARD.

task of elevating the stage to its proper functions and dignities is not so easy. One way to go about it is to exercise sharp discrimination. The church is behaving very unscitantly toward the stage. It is not dealing frankly. It preserves a traditional attitude of distrust and opposition in theory, while pronouncing the *tolerari potest* in practice. Much better would it be to fight unsparingly an immoral drama or an indecent spectacle, while supporting with cordiality, as at once a duty and a pleasure, every play that refines, instructs or innocently amuses. The church would be more likely to gain than to lose in influence on its own account, by such a course. Fortunately, we have already a national stage, which, with proper encouragement, may hope for a great future. It is some-

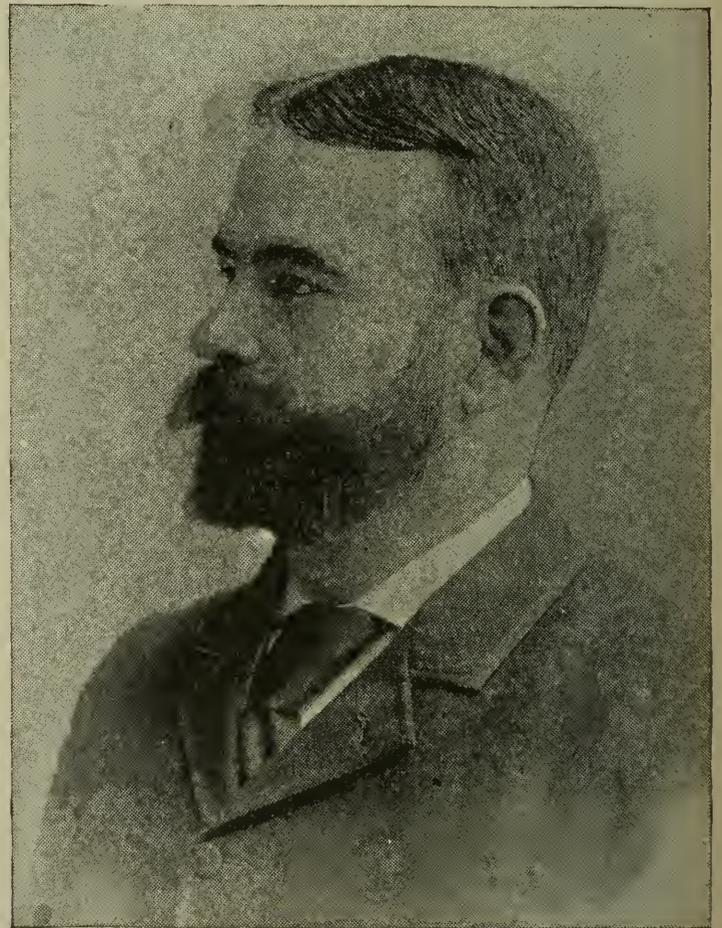

MR. AUGUSTUS THOMAS.

thing worth while to have had such an actor as Joseph Jefferson, with such an American play as "Rip Van Winkle." Denman Thompson and "The Old Homestead" are of the soil and are genuine. Even the scores of barn-storming companies that play "Uncle Tom's Cabin" perennially in every county town north of Mason and Dixon's line, are worth something as a protest against imported French plays. The dramas of Mr. Bronson Howard, on the other hand, while American to the core, are also highly artistic and altogether sound in tone and sentiment. Such a play as the "Henrietta" or "Shenandoah," for instance, atones for a multitude of dramatic shortcomings. And Mr. Howard no longer stands alone, for since Mr. Augustus Thomas has delighted the country North and South with that charming appeal to the finest sentiments of both sections, his "Alabama," there has been a wholly new appreciation of the patriotic possibilities of the American stage under the hand of a true master of the playwright's art. Still others, moreover, are giving us plays conceived in the admirable spirit shown by Messrs. Howard and Thomas, and it is pleasant to note evidences of a growing respect for the stage as a result of such offerings.

The Theatre of Arts and Letters. A unique and attractive departure in the direction of a more finished drama and of a firmer alliance between literature and the stage, is the New York Theatre of Arts and Letters. This review of the month cannot enter into

details. Suffice it, therefore, to say that the new Theatre, which will give five performances during the present season, is sustained by the subscriptions of its own members, and is intended to afford opportunity for the experimental production of plays upon their literary and artistic merits, regardless of financial considerations. The project can at least do no harm, and it bids fair to do no little good. What encouragement it may live to render to the development of a worthy national drama, no one can tell. At the very least, it adds another welcome agency to the few already at work for a refined and artistic stage, in keeping with our best American accomplishments in the other arts. Mr. Henry B. McDowell, in whose hands is the general direction of the Theatre of Arts and Letters, has the contagious enthusiasm that in so many ventures counts for all the difference between success and failure. The first performance was given on December 14, and the play was written

MR. HENRY B. M'DOWELL.

by Mr. Frederic J. Stimson, of Boston. The January performance will be devoted to a short play by Mr. Richard Harding Davis and a longer one by Mr. Frank R. Stockton. Mr. W. D. Howells is expected to furnish a play, and it is said that Mr. George W. Cable is to make his advent as a dramatist. The Theatre of Arts and Letters has the support of a most brilliant constituency, and it ought surely to find a way to render some high public services.

*Recent
Activities
of Women.*

The activity of women in a score of well-considered and useful ways has been especially noticeable during the past few months. The part they are taking in the preparations for the World's Fair is so large and valuable that we must beg to reserve the topic for somewhat elaborate treatment a month or two hence. American women have demonstrated their efficiency so fully that they seem destined to be drawn increasingly into public life, whether they wish it or not. The work of a great variety of women's clubs and societies has begun to show itself in the very appreciable elevation of the standards of culture in all our communities, great and small. The organizations and movements that are federated in the general association of women over which that accomplished and useful American woman, Mrs. May Wright Sewall, of Indianapolis, presides, stand for a great force in our national life that must within two decades produce some highly unexpected, though not objectionable, results. In the West, the social and practical usefulness of women is more fully recognized than in the East. The Prohibition and Farmers' Alliance movements have depended very largely upon women for their success. The proposition to send Mrs. Lease to the United States Senate from Kansas is an illustration of the drift of sentiment in a State which has not only given women the municipal franchise, but has elected numerous women to town councils and school boards and several to mayors' chairs. The Populists of South Dakota selected as their recent candidate for the State Superintendency of Education Mrs. Susan W. Hassell, of Redfield, a brilliant scholar of fine classical attainments, a graceful and ready public speaker, and a teacher of large experience and rare

MRS. SUSAN W. HASSELL, OF SOUTH DAKOTA.

success. A better candidate for that particular position could not have been found. Mrs. Hassell was not elected, because her name happened to be on the losing ticket; but she polled a very heavy vote, and doubtless her turn will come. There are a large number of women serving as elected County Superintendents of Schools in the West, and their efficiency averages rather higher than that of men occupying like posts.

There have of late been some notable gatherings of women. The Women's Congress in Minneapolis has won more than a local attention. The many women's organizations of the city—literary, esthetic and philanthropic—have for a year or two been associated in a sort of loose federation, under a Central Council composed of delegates. Once a year a full Congress of the constituent societies is held, and the exercises continue through several days. The Congress recently held in Minneapolis was particularly successful. The Council holds occasional receptions and entertains distinguished guests. It has real municipal significance of a high order. In England there was held, at about the same time, a Woman's Conference at Bristol. It is said to have been an unqualified success, and to have had papers and discussions on various themes affecting women workers that were practical and full of interest.

We have just now had the pleasure in this country

MRS T. B. WALKER,
President Minneapolis Woman's Council.

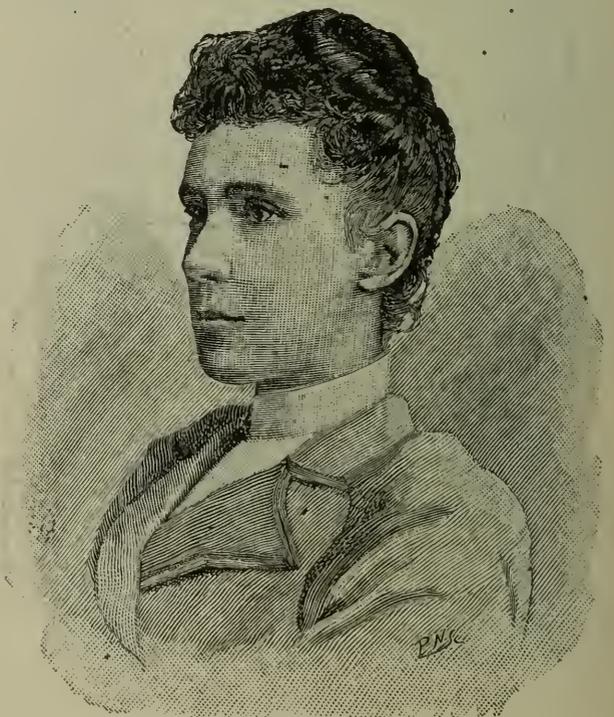

MRS. ERNEST HART, OF LONDON AND DONEGAL.

of a visit from a courageous and all-conquering English woman, Mrs. Ernest Hart, the story of whose exploits in behalf of the peasants of Donegal ought to

be made familiar to every school girl, as an example of what a woman can accomplish single-handed if her purpose is strong and her spirit is high. Mrs. Hart came here to obtain from the World's Fair authorities a concession for a typical Irish village on the grounds, in which to show the processes she has taught to thousands of poor people in the remote parts of rock-ribbed Donegal—the Northwestern corner of Ireland. Some ten years ago she visited Donegal with her husband on an inspection tour for famine relief. The misery of the population so impressed her that she resolved to alleviate it by introducing household industries. Her processes of spinning, dyeing and weaving homespun, and of making beautiful laces in artistic and original patterns from polished linen threads, together with the wood-carving and various other kinds of work she has introduced, are marvelously transforming all that part of Ireland. Her itinerant technical teachers have found eager learners everywhere, and the peasants of Donegal will have been redeemed from their misery and made happy and prosperous, probably through many generations, as a consequence of Mrs. Hart's faith, pluck, persistence and talent. Of course she got finally what she asked for at Chicago, though anybody else would have given up the case as hopeless. In New York she has exhibited an interesting collection of samples of the beautiful work now done by her peasants, and has won for her cause the favor of many influential people. A remarkable woman from Paris, of American origin, Madame Loyson, wife of the distinguished "Pere Hyacinthe," has recently been in this country, speaking almost constantly and surrounding herself with charmed and sympathetic auditors. Her mission was to awaken interest in the so-called Gallican Church movement of which her husband is the leader. The end desired is an independent French Church, separate from Rome and analogous to the Church of England.

DR. KATE MITCHELL.

MISS E. M. FIELD.

Two of the speakers at Bristol.

RECORD OF CURRENT EVENTS.

November 20.—The American delegates to the International Monetary Conference arrive in London.... Two steamers go ashore on Long Point, Lake Erie.... A. H. de Paulo Coelho appointed to represent Brazil at the World's Fair.... Baron Reinach, director of Panama Canal Company, dies in Paris before the beginning of the prosecution of his company by the French government.

November 21.—President Harrison gives orders to the heads of departments to cut down estimates for ensuing year.... A large gathering of general railroad passenger agents in Chicago to fix upon World's Fair rates.... The Continental Congress of the Salvation Army of the United States assembles in New York.... A heated debate and final decision in the French Chamber of Deputies to make a parliamentary inquiry into the Panama Canal Company's affairs.... The French troops finally capture Abomey, the Dahomans evacuating.... New cases of cholera appear in several European cities.... Mrs. Seth Low elected president of International Order of King's Daughters and Sons.

November 22.—Strikers returning to work at Homestead are required to sign an agreement not to join any labor organization.... Floods in the Northwest cause loss of life and great damage to property.... Four men killed and three fatally injured in a railroad collision near Grand Island, Neb.... The government loses the first case against the Chicago packers and the railroads for alleged rate discrimination under the Interstate Commerce law.... The German Reichstag opened by the Emperor with a speech from the throne.... International Monetary Conference opens in Brussels.... Mrs. Deacon wins the judgment from the French court.... General Assembly of Knights of Labor re-elects Terence V. Powderly Grand Master Workman.... The railroads decide on 20 per cent. reduction in fares to the Columbian Exposition.

November 23.—General Bussey, Assistant Secretary of the Interior, makes his annual report on the Pensions Bureau and Indian Department.... Sylvester Critchlow, the first Homestead striker indicted for murder, is acquitted by the jury.... The Senate Committee investigating the Pinkerton system begins its sessions in Pittsburg; Mr. Frick testifies.... Chancellor von Caprivi delivers a speech in the Reichstag on the New German Army Bill.... The Italian Parliament opened by King Humbert... The First Chamber of the Swedish Diet

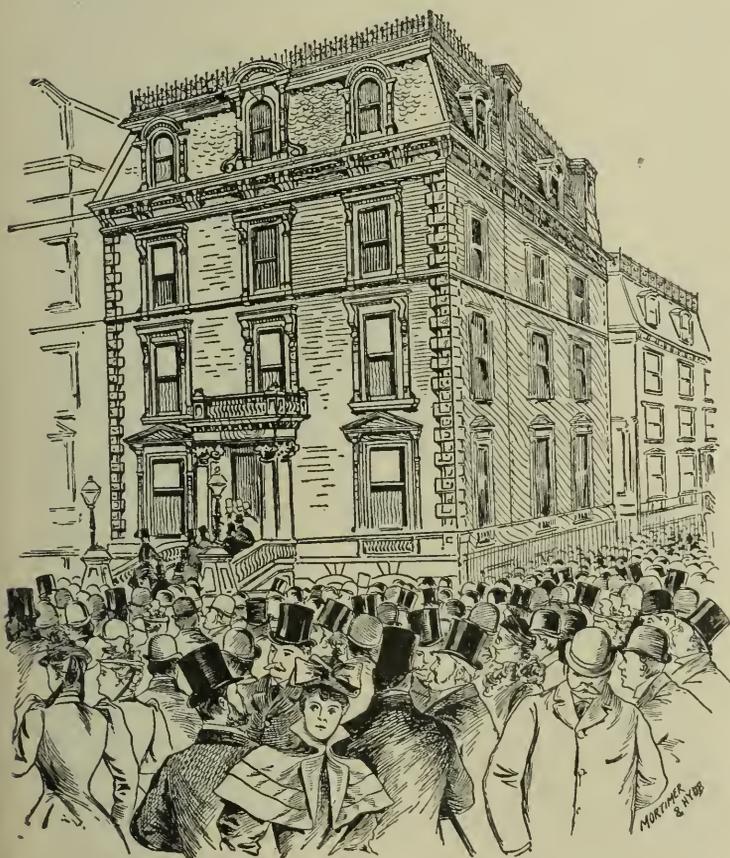

HON. DAVIS H. WAITE,
Governor-Elect of Colorado. (See page 568).

passes a bill to reorganize the army.... Meeting at Westminster, England, on the immigration of destitute foreigners.... Deputation visits Lord Ripon to protest against the transference of Swaziland to the Boer Republic.... Opening of the London Chamber of Commerce.... Stamboul lowers the stallion record to 2.07½ on the kite-shaped track at Stockton, Cal.

November 24.—Thanksgiving Day generally celebrated in the United States.... Meteoric displays witnessed in several parts of America.... The Senate Committee continues its investigation into the Pinkerton system.... The French Deputies Committee in the Panama Canal matter begins its work; M. Delahaye and Premier Loubet to be the first witnesses.... Definite proposals formulated by the American delegation to the Monetary Conference.... Sir John Abbott resigns the Canadian Premiership.... Dinner at Belfast to Liberal Unionist members for Ulster.... The Marquis of Bute elected Lord Rector of St. Andrew's University.... Yale defeats Princeton at football in New York, score 12-0.

November 25.—The American proposals to the Monetary Conference declare in favor of increasing use of silver.... Evacuation Day celebrated by Old Guards and Sons and Daughters of the Revolution.... Masked men rob the passengers in a sleeping car on the Northern Pacific.... Sir John Thompson succeeds Sir John Abbott as Premier of Canada.... Premier Loubet speaks before the Panama Canal investigation committee.... Appointment of a Royal Commission to inquire into the lands available for crofters' holdings in Argyll and other counties of England.... The Czar nominates the Czarewitch to be President of the Russian State Council.

November 26.—The Senate Committee on Immigration holds a preliminary meeting.... Robert Pinkerton examined by the Senate Investigation Committee.... A motion for urgency in the Panama Canal investigation

MR. GOULD'S FIFTH AVENUE RESIDENCE.
Scene after announcement of his death.

THE MARTYRS OF THE PANAMA CANAL.
From *Le Grélot* (Paris).

defeated in the French Chamber; the Government opposed to it... The Roumanian Parliament opened... The town of La Union, Salvador, destroyed by an earthquake; many persons killed... Lord Dunraven issues a challenge for a yacht race for the American cup.

November 27.—United States Treasurer Nebeker makes his annual report to the Secretary of the Treasurer... The strikers at the Carnegie mills at Pittsburg decide to continue their strike, notwithstanding the failures at Beaver Falls, Homestead and Duquesne... The police prevent Anarchists holding a meeting in Trafalgar Square, London... Dr. Kopp, Prince Bishop of Breslau, and Dr. Kremenz, Archbishop of Cologne, are created cardinals... In accordance with the new emigration laws all emigrants booked for the Cunard steamer from Queens-town take oath that they are going to join relatives in this country... The trial of Professor Briggs for heresy renewed in the New York Presbytery.

November 28.—Commodore Skerrett is appointed to command the Pacific station of the navy... The French Cabinet resign in consequence of an adverse vote in the Chamber of Deputies in regard to Baron Reinach's death... At the monetary conference in Brussels M. de Rothschild, the English delegate, proposes that Europe buy annually £5,000,000 of silver to keep up the price and that silver be made a legal tender up to £5... The Italian budget for 1892-93 shows a surplus of 436,000 lire... The strike of the electric wiremen settled, both sides making concessions.

November 29.—The Senate Committee on Immigration considers several proposals for the checking of immigration for one year... The New York Presbytery strikes out two charges of the indictment for heresy against Dr. Briggs... The sufficiency of the final charge against Prof. Henry P. Smith for heresy sustained in the Cincinnati Presbytery... President Carnot asks M. Brisson to form a new French Ministry... The Committee of the Monetary Conference to consider M. de Rothschild's proposals is announced... The German Minister of Commerce gives a dinner to Minister Phelps in Berlin... The trial by court martial of the officers of the British warship *Howe* begun... The Pawnee Indians agree to cede their lands to the United States.

November 30.—General Raum submits his annual report on the work of the Pension Bureau... The Nicaragua

Canal Convention opens its sessions in New Orleans with delegates present from every State and Territory... The Stone City Bank of Joliet, Ill., suspends; liabilities \$500,000... Important testimony regarding the cholera given before the Senate Immigration Committee... Mrs. A. A. Anderson gives \$350,000 to the Roosevelt Hospital... The Monetary Conference Committee holds its first meeting and decides upon secret sessions... The first English mail from China and Japan by way of Vancouver arrives at Halifax, N. S., whence it will proceed to England... Herr Richter severely criticises Chancellor von Caprivi's speech on the German army bill... A Japanese war-ship is sunk in a collision; eighty-five persons drowned... Major-General Sir George Stewart White appointed to succeed General Roberts as Commander-in-Chief of the forces in India.

December 1.—The Nicaragua Canal Convention adjourned *sine die* after passing resolutions calling on the Government to aid the enterprise... The Pittsburg authorities close all disorderly houses at the instigation of the clergy of the city... The Western Associated Press reorganizes in Chicago as "The Associated Press"... Several arrests made in St. Joseph, Mo., of persons indicted by the Grand Jury for renting property for disorderly purposes... Dr. Charles A. Briggs pleads not guilty to the charge of heresy before the New York Presbytery... E. Wyatt of the Dalton gang, for whose capture a reward of \$10,000 had been offered, is captured in Indiana... The Panama Investigation Committee of the French Chamber finds evidences of large sums paid by the late Baron Reinach to the Paris press... General Diaz formally inaugurated as President of Mexico... General Dodds withdraws from Abomey to Porto Novo to prepare for the complete occupancy of Dahomey by the French... Native insurgents attack English residents in Samoa... Striking miners at Liege make disorderly demonstrations on the public streets.

December 2.—Jay Gould dies in New York City leaving fortune estimated at \$72,000,000... The Grand Jury indicts Lizzie Borden, at Taunton, Mass., for the murder of her father and stepmother... The British steamship *Lundale* from Philadelphia for Copenhagen foundered at sea; her captain and crew brought to New York... The committee of the International Money Conference rejects the De Rothschild plan... M. Brisson abandons the effort to form a new French Ministry, and President Carnot requests M. Perier to undertake it... Mr. Labouche retires from the *Daily News* in London... The Ameer of Afghanistan is recognized as Suzerain of Chitral... Yellow fever rages at Rio de Janeiro.

December 3.—The National Prison Reform Association meets in Baltimore; annual address by ex-President Hayes... The exceptions filed by the city of New Orleans in the Italian lynching cases overruled, the cases thus going to the United States Supreme Court... The street railroad systems of New Orleans bought by a New York syndicate for \$10,000,000... The North German Lloyd steamer *Spree* was towed into Queenstown by the steamer *Lake Huron*, having broken her shaft 1,000 miles out at sea; the accident caused a panic on board... The freedom of the City of Liverpool presented to Mr. Gladstone... Cardinal Serafius Vannutelli promoted to be Archbishop of Bologna... Sir John Thompson completes the make-up of the Canadian Cabinet... Rector Ahlwardt, the anti-Semite, on trial at Berlin for libel, introduces documentary proof of his charges against the war ministry... Pope Leo refuses permission for the Jesuits to transfer their headquarters from Fiseola to Rome... Robert A. Pinkerton makes his report to the Senate Committee... Cardinal Gibbons declares in favor of Sunday opening of the World's Fair.

December 4.—Mrs. Besant, the Theosophist, lectures in New York... Large fire at Cranford, N. J... Twenty-three persons concerned in the cholera riots in Saraloff, Russia, sentenced to death... Medical convention in Mexico elects Dr. Durgin, of Boston, Mass., president... Heavy snowstorms in the United Kingdom.

December 5.—Secretary of the Interior Noble and Secretary of War Elkins submit their annual reports to the President... Linen mills in Minneapolis form a combine... Mgr. Satolli appointed by the Pope to decide all ecclesiastical questions in the American Church... Congress

convenes and waits over a day to receive the President's message.... Postmaster-General Wanamaker reports.... Senator Chandler prepares a bill suspending all immigration except from North and South America for one year.... The Governments of the United States, England and Germany agree to common action to restore order in Samoa; ships have been sent by the three nations to preserve peace.... December 15.—United States Commissioner Henry L. Hallett.... August Simeon Luce, of Paris, the historian and French scholar.... Ex-Congressman Leopold Morse, of Massachusetts.

December 16.—Jean Georges Hatchette, head of the well-known French publishing house.... Charles Bolmer, musical composer and writer, of St. Louis.

December 17.—Sir Richard Owen, the very famous scientist in comparative anatomy.... Col. Henry W. Hilliard, a prominent Southern politician of Atlanta.

CURRENT HISTORY IN CARICATURE.

The "Sydney Bulletin's" Caricaturist.

MR. HOPKINS, the brilliant Australian caricaturist, has the deplorably bad taste *not* to be an "Australian" at all, so far as the accident of birth goes. He was born in Ohio, and, as his own account goes, does not know definitely when he began to "make pictures;" though so far as he can recollect his first "works" were "executed" on the enduring slate.

MR. LIVINGSTONE HOPKINS.

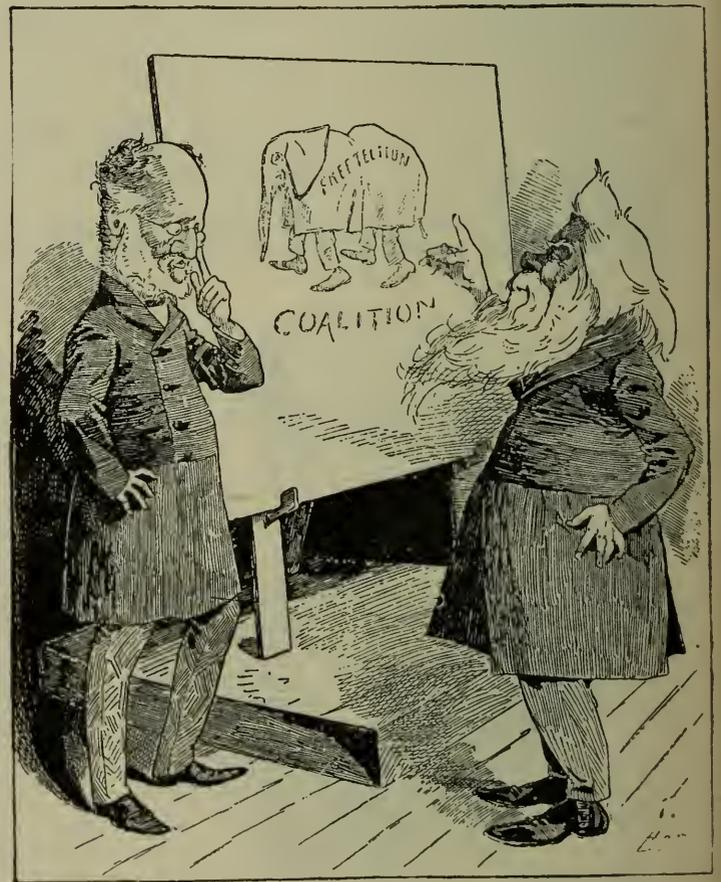

Leaving school at the age of fourteen, he started life in the commercial world with varying success for three years, during which period he beguiled his leisure moments in producing sketches for private circulation. One of these pictorial gems, at least, fell upon good ground and bore fruit, for it came into the hands of Dr. Miller, of the *Toledo Blade*. Dr. Miller's partner, Mr. D. R. Locke, in the character of "Petroleum V. Nasby," wrote a series of "letters" for the *Blade*, satirizing the slaveholding South and its Northern sympathizers during the Civil War. Mr. Hopkins was employed to illustrate some of these letters.

Soon after reaching his majority Mr. Hopkins was engaged upon the staff of a weekly country paper in the neighborhood of Chicago, for which he wrote paragraphs, kept accounts, reported sermons and baseball matches, and abused "our red-headed contemporary across the way." Once again, however, his artistic sins found him out. Dr. Miller, of the *Blade*, it seems, carried his aspiring friend's fame to New York, which led to an engagement in 1870 on *Scribner's Monthly*, then about to be started, in the dual capacity of writer and artist. His first interview with the projectors of this magazine was disconcerting. His literary ability was not questioned, but the art editor pronounced the sketches submitted for approval as "not ripe enough for use at present." Consequently, until such times as the editor was willing to decide favorably, young Hopkins was consigned to the occupation of addressing

wrappers and licking postage stamps. The day, however, did come, and with it the key to the situation. Work in the Nassau street studio kept Mr. Hopkins going for the next thirteen years. To both *St. Nicholas* and the *Century* Mr. Hopkins contributed sketches of his own conception, as well as illustrations for comic stories and verse. At last came an offer from the *Sydney Bulletin* of New South Wales, and he transferred his allegiance from the "Stars and Stripes" to the Southern Cross.

The pseudonym "Hop" is familiar all over Australia, and the sketches which are inscribed with it have undoubtedly added to the sum of human enjoyment throughout the colonies.

Mr. Hopkins has great and genuine talent, "Laughter holding both his sides" is his familiar spirit. He can translate the popular sentiment of the moment into some exquisitely humorous shapes with unerring skill and resistless effect. It is idle to compare him with other artists. His art is spontaneous and native; he simply conceives his idea vividly, and tells it in the language of caricature with a directness and force which Defoe, in another field of expression, might envy. "Hop's" satire is keen, as many a victim knows; his humor has sometimes the quality of flame and scorches. But if his art has sometimes a touch of artistic "wickedness" in it, it is never brutal, and it simply dances with fun. The following cartoon, from the *Sydney Bulletin*, is a fair sample of Mr. Hopkins' work.

A POLITICAL FORECAST FOR AUSTRALIA.

THE OLD 'UN: "Now, that's my hidea of a Government 'hunder the circumstances."
 SIR G. REPUBLICAN DIBBS: "Yes, but which of us is to be the foie-legs, and which the hind-legs?"
 PARKS: "Well, under our present Parliamentary system, it won't matter much. We shall accomplish nothing, but will create no hend of hamusement!"—From the *Sydney Bulletin*.

"JUST ABOUT EVEN."

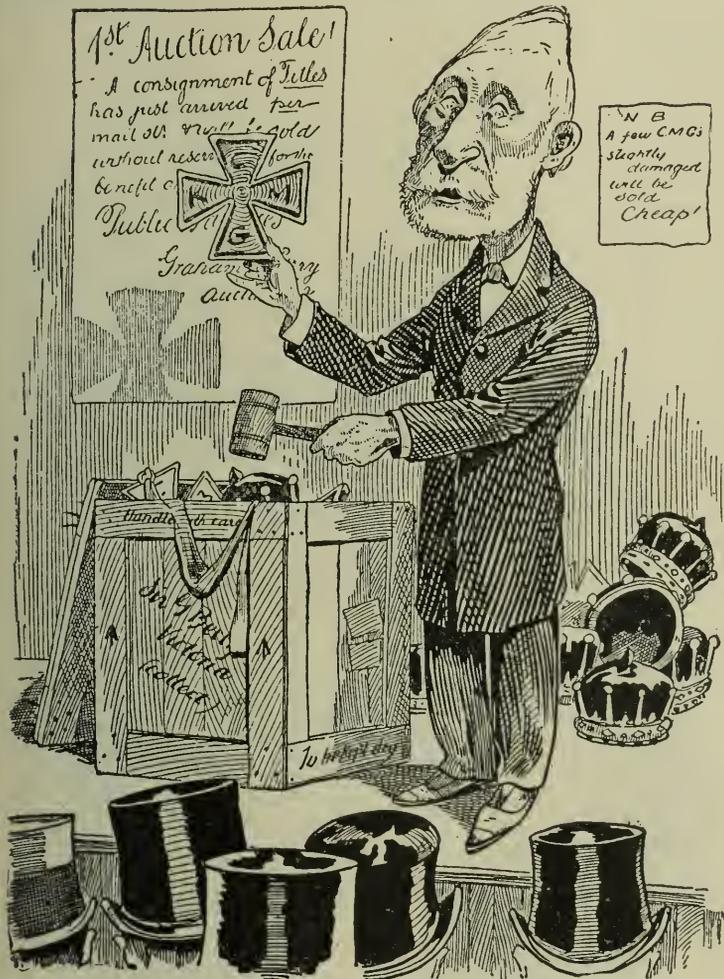

PUCK'S VIEW OF THE SENATORIAL CONTEST IN NEW YORK.

From *Puck*, December 14.

THE WEAKNESS OF THE REPUBLICAN PARTY.

YOUNG REPUBLICAN (To Republican Party): "A generation has been born and voted since the war; pensions have been amply provided for; new measures demand young men. We are sick of being led by old fossils on war issues, and the time has come when young Republicans must be recognized."
- From *Judge*, December 10.

A SUGGESTION FOR THE BRITISH FINANCES.

Let Sir Graham induce Her Majesty to send us out a case of titles in bulk, to be auctioned off locally for the benefit of the deficit. The titles would cost Her Majesty absolutely nothing, and would bring in thousands here. Good scheme, eh? From the *Melbourne Punch* (Australia).

TRUSTERS AND TRUSTEES.

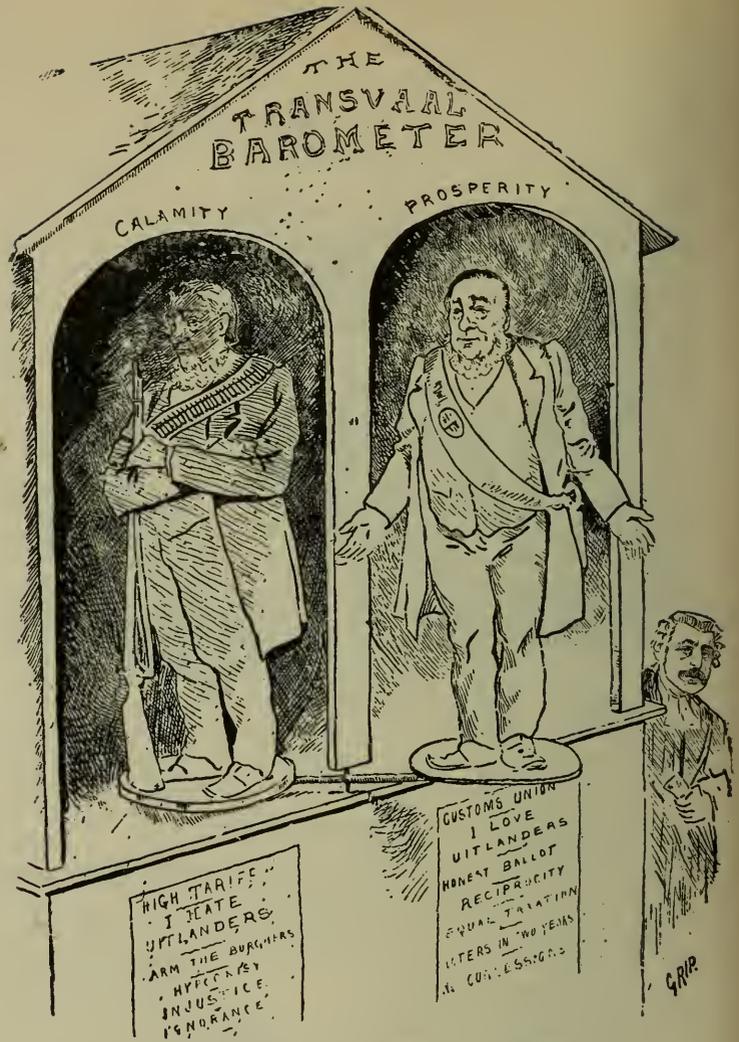

"If Oi git on yer back, sure, then, Oi can rache the money, Honey!"
"Och, Oi daresay, but Oi'd rayther be gettin' on *your* back."

From *Judy* (London).

GOING UP FOR THE HIGHER EXAMINATION.

(Apropos of the visit to England of Mr. Cecil Rhodes, Sir Henry Loch and Mr. Sievwright, all of Cape Colony.)

DIAZ IN THE FULL UNIFORM OF A MEXICAN GENERAL.

PRESIDENT DIAZ AND THE MEXICO OF TO-DAY.

BY HENRY WARE ALLEN.

GEN. PORFIRIO DIAZ was on December 1 inaugurated for the fourth time as President of Mexico.

Having assumed the responsibilities of this office in 1876, when the Republic was yet in a revolutionary ferment and its credit abroad demoralized, he has, during his occupancy of the Presidency, brought the country to a condition of absolute tranquillity, established its foreign credit upon a sound basis, provided vast internal improvements, and proved himself so able and patriotic an executive as to compel alike the admiration of friends and opponents.

As a *protégé* of the eminent patriot—his predecessor in the Presidential office—Don Benito Juarez—he crowned his military fame May 5, 1862, when the French invasion was repulsed at Puebla. But, though always imbued with the military passion, his greatest triumphs have been as President, when with rare tact the machinations of jealous opponents have been foiled and great measures of reform carried out in spite of strenuous opposition.

President Diaz's great ambition is to bring Mexico forward as rapidly as possible to advanced rank as a progressive and thoroughly modern nation. He has, for instance, recently stated in regard to the Columbian exhibit at Chicago that he wished Mexico to send, not a collection of antique curiosities, but rather such a display as would indicate the progress attained by modern Mexico.

The President is a great admirer of the indomitable push and business energy of the American people, and his readiness in favoring the railroads and other large enterprises that unite more closely the two republics has brought upon himself severe criticism of the conservative element in Mexico.

He knows that the real safety of the Republic, as well as its highest development, can only come when the population is enlightened; and so, with the desired end in view, strict laws have been enacted compelling school attendance. Large numbers of new schools have had to be established to accommodate the provisions of the law in this matter.

The President tolerates no departure from democratic simplicity in the routine of his daily life. During the summer months, when residing at Chapultepec, the carriage that takes him to the city, though first-class of its kind, is perfectly plain—the driver is without livery of any kind, unattended by a footman,

PRESIDENT PORFIRIO DIAZ.

and the horses have not even had their tails docked. This, too, on the Paseo de la Reforma—one of the world's fashionable boulevards, where hundreds of equipages every day vie with one another in lavish ostentation.

Anecdotes are constantly being told of the President illustrating this characteristic. He often takes an ordinary street car, and upon one occasion, not long ago, when some accident detained the car in which he was riding, he insisted that no exception be made in his favor, and so remained a long time—in conformity with the law—until the affair was reported to the proper authorities, and the car ordered to proceed.

On his birthday he is always presented with quan-

titles of costly gifts; but, such is his strict sense of propriety in the matter, the whole lot are annually consigned to a storehouse, where at the present time there is an accumulation that must be worth many thousands of dollars. He never allows these presents to be used by himself or members of his family, thus avoiding any obligations.

A HARDWORKING PRESIDENT.

President Diaz is one of the hardest working men in the Republic to-day. Though 62 years of age, he is apparently much younger, and, having lived a temperate life, he has the capacity, which he uses, of being able to labor early and late at his desk. His sole desire is to serve his country well, and to leave behind him the name of a patriot. As a consequence of this close application to official work, his private interests are often neglected. Such is General Diaz to-day, and it is with profound disgust that well-wishers of Mexico read in American newspapers paragraphs like the following:

The richest man in Mexico is Porfirio Diaz, President of the Republic. He was a poor man when he first took office, but during the time he has occupied the chair of President he has grown immensely wealthy. He owns thousands of acres of land, millions of dollars laid by, not only in Mexico but in the vaults of Europe, and there is hardly a big corporation or monopoly in Mexico that he does not own stock in. In fact, it is said, the price of a monopoly in Mexico is a block of stock in the enterprise, made out either in Diaz's name or that of a trusty lieutenant.

In regard to this the *Mexican Financier* said:

This remarkable accusation appears in a great American journal which lends its columns for the publication of a story which, in various forms, has been told of every prominent man and ruler in Mexico since Montezuma, even he being accused of the possession of treasures which tempted the cupidity of the Conquerors, and which even now people are seeking to discover in the Pedregal, or Lava Beds, near this city. Mexico is not the land of the Vanderbilts, the Astors, the Rockefellers or the Goulds. There are few colossal fortunes here; in fact, eight or ten million dollars is the maximum of individual possession. The President of the Republic, who lives in a manner which would not be accounted luxurious in a prosperous merchant, whose entire possessions do not amount to a twentieth part of those of some of his fellow-citizens, a man, in short, whose opportunities for the accumulation of vast wealth have been great, but who has scorned to make politics a speculative trade, is one of the last men in the world to be accused of corrupt practices. The enemies of Washington in like manner charged him with misusing his great office for money-making, but the accusation fell to the ground. Should General Diaz die to-morrow, his entire possessions would not equal those which Washington, twice President of the United States, left to his heirs.

And the *Two Republics* speaks as follows:

Here in Mexico, where there is not a breath of suspicion against the probity and sterling honesty of Porfirio Diaz, such paragraphs as the above cause just indignation among all classes of people. American journalists are every day taking a greater interest in Mexican affairs, but as yet they have much to learn concerning the country. Had the editor of the *Chicago Tribune* been well informed

concerning Mexico he would have consigned the article, "Rolling in Riches," to the waste basket, with all its absurd, if not malicious, statements. No matter what purpose may have actuated the writer in the *Tribune*—whether he is ignorant of the facts or moved by malice—he cannot injure the reputation of President Diaz, who is known to his countrymen and the world as an able statesman, an unselfish patriot and an honorable, upright man, and who has devoted so much of his time and talent to his country that he has not had an opportunity to acquire riches.

A DICTATOR PER FORCE.

General Diaz is criticised for assuming to the degree that he does the rôle of a dictator. His opponents emphasize the autocratic power exercised by him. But the Mexican Government is fortunate, as any government would be fortunate, in having few elective offices, and instead, the reposing of appointing power and great responsibility in an executive whose sole purpose is to secure for his country the best results.

If President Diaz were Governor of Massachusetts he would adapt himself to conditions prevailing there, exactly as Governor Russell would in Mexico exercise that arbitrary power necessary where so large a part of the population is totally incapable of self-government, and where strokes of policy that could not wait for action of Congress are imperative.

Not long ago American newspapers were filled with sensational accounts of an alleged revolution in Mexico, headed by one Garza. The absurdity of attaching any more national importance to that movement than could be given to the "rustlers" war in Wyoming is now admitted by everybody. But Mexico, conscious of what her past history had been, and jealous of the good name which she had at last earned, was injured in more ways than one by the Garza "revolution." The existence of this little band of raiders may have been due to those Mexicans who resented an enforced exile—it may have been that speculators in Mexican securities had a hand in the matter. In either event the war correspondents who were sent down by American newspapers must have returned with a poor opinion of the intelligence of their chiefs.

About this same time American newspapers printed a report wired from San Francisco, which recited in a most startling manner the existence of such a deplorable state of misgovernment in Mexico as would, without doubt, very soon provoke an outraged people to drive Diaz out of power. Of this the *Mexican Financier* said at that time:

American journals still continue to be deceived by Associated Press dispatches sent out from San Francisco, Cal., by some skulking enemy of Mexico and its Government. No name is ever given to substantiate the reports, and it is for that reason that we wonder why Mr. William Henry Smith, the head of the Associated Press in the United States, does not put a stop to the circulation of injurious rumors, the author of which has not the courage to declare himself. Mr. Smith owes it to his position as chief of an important news agency to refuse to publish manifestly absurd reports regarding Mexico until he has informed himself, which he may easily do, having

the cable at his command, of the true state of affairs here.

Our opinion of General Diaz, formed by close observation of his official acts and public life, is that he is a statesman of the first order, a man who, in any country, would easily rise to commanding influence. He is patriotic, honest and sincere; he is a friend of education, and one of the most laborious rulers on the planet. He is ambitious, but not for wealth; his personal fortune is moderate; his life is devoted to advancing the interests of the Mexican people. We have not always been in accord with some features of his administrative programme, but our impartial opinion, formed on a review of his public career, is that he is one of the ablest of living statesmen. Men of all political parties in this country have confirmed our views regarding the President. Some of his bitterest political enemies have, in conversation, admitted to us that he is a statesman of integrity and great force of character. What we ourselves have said before we will repeat here—viz., that Mexicans have never submitted to be ruled by intellectual pigmies. Men of the character of Porfirio Diaz cannot always act as Quakers and as enthusiastic members of the Universal Peace Society could wish. Mexico owes her present prosperity largely to the firmness and ability to act decisively of the present Chief Magistrate. Necessarily, the President has enemies; it is the penalty of greatness, the accompaniment of great and illustrious deeds. Envy always skulks behind Success.

The San Francisco *Dispatch* says that the people of this Republic have become poorer and poorer during the administration of Diaz. What utter rubbish! A country that has secured a transportation system, a great network of railways, a country where wages have steadily risen, and men live in better homes and wear better clothes than in former years, is growing poorer? A country that has more than doubled its foreign trade within a few years is poorer for it?

"Ever since the marriage of Diaz to an American Protestant the wrath of the masses has been nursed, but has grown now till it can be kept in bounds no longer." This is the supreme absurdity of the San Francisco *Dispatch*. We dislike to introduce into an article dealing with so disagreeable a subject any mention of that charming and cultivated lady who has won the love and admiration of the people of Mexico—who is in Mexico what Mrs. Cleveland is in the United States—the one person in whose praise all men, of all political opinions, speak alike. But something is due to truth. The charm and sweetness of Mexican womanhood is exemplified in that gracious lady who is the beloved and honored wife of the President of Mexico. A sincere Catholic, the friend of the poor, the champion of those humbler sisters of toil, who, in this capital, look up to her as their protectress. Sra. Carmen Romero Rubio de Diaz stands serenely apart from the conflicts of politics, and it is an outrage that her name should be employed by a fabricator of lying news reports. She is a Catholic lady in a Catholic nation, a Mexican by birth and blood, and in no possible way is she to be regarded as connected with contemporary politics in this country.

That a revolution is brewing here we emphatically deny. Nobody could be more unpopular than a revolutionary leader. The country is peaceful and prosperous. The tranquillity of Mexico is in striking contrast to the threatening aspect of affairs on the Continent of Europe. Men of all political parties here are busy in developing the resources of the country. It is an epoch of peaceful

industry, of steady progress, of advancing civilization in this magnificently endowed land. The malignant enemies of Mexico, who found no honest work to do here and so sought other lands; disappointed persons, who tried to plunder the treasury of Mexico by means of useless concessions and were rebuffed, and those in whom envy is the ruling passion, may carp and cavil, but the Republic will continue to march onward in the path of its splendid destiny.

SENORITA CARMELITA.

Mrs. Diaz is a most regal woman; a queen whose crown is the sincere regard and affection which all classes bestow upon her. She is spoken of by the common people as "Señorita Carmelita"—the diminutive of Carmen—expressing their affection for her. Upon the occasion of her Saint's day, the 16th of July

CARMEN ROMERO RUBIO DE DIAZ,
Wife of the President.

(which day all the Carmens celebrate), the President's wife is annually overwhelmed with countless floral tributes. She devotes much of her time to institutions and works of charity, and is always the center of activity in special missions of mercy. As the President's wife and as the daughter of Minister Rubio, she is of course the social leader in Mexico as well as the first lady of the Republic.

THE DIAZ MINISTRY.

President Diaz has surrounded himself with exceptionally able men, all of whom have given their country long and honorable service and who now act as a unit with the Executive in administering the affairs of the nation. These gentlemen hold their portfolios because of special fitness for special work.

HIS GRACE DON PROSPERO MARIA ALARCON, ARCHBISHOP OF MEXICO.

They have been thus honored as patriots, not as partisans, and would resent any fulsome eulogy.

Señor Don Matias Romero, Minister of Finance, is too well known to the American public to need any introduction. He left the mission at Washington (where he has represented Mexico most of the time since 1859) last spring only to enter for a while into greater usefulness in the Treasury Department where, since he took charge, the hand of a master mind has had and is having its effect for good. It was Minister Romero who really defeated Napoleon's schemes concerning Mexico by quietly guiding at Washington American sentiment in favor of his country. He is a patriot in the highest sense of the word, striving always to promote the happiest possible relations between the two republics. It may be superfluous to

add that the Minister is in favor of the freest possible trade.

With Minister Romero should be mentioned his able assistant, Señor Don José I. Limantour, whose training as a scholar and attainments as a political economist eminently qualify him for the work of his high position. The desire is frequently expressed that Señor Limantour may succeed to the Treasury portfolio if Minister Romero returns to Washington.

Señor Don Ignacio Mariscal, Secretary of Foreign Affairs, is especially well equipped for the position he holds on account of his thorough knowledge of all matters pertaining to international law. He is an eloquent orator and in private conversation is extremely bright and entertaining. He is very popular, and is greatly esteemed by all who know him. He is always favorably disposed toward American interests, and his tariff views accord with those of Minister Romero.

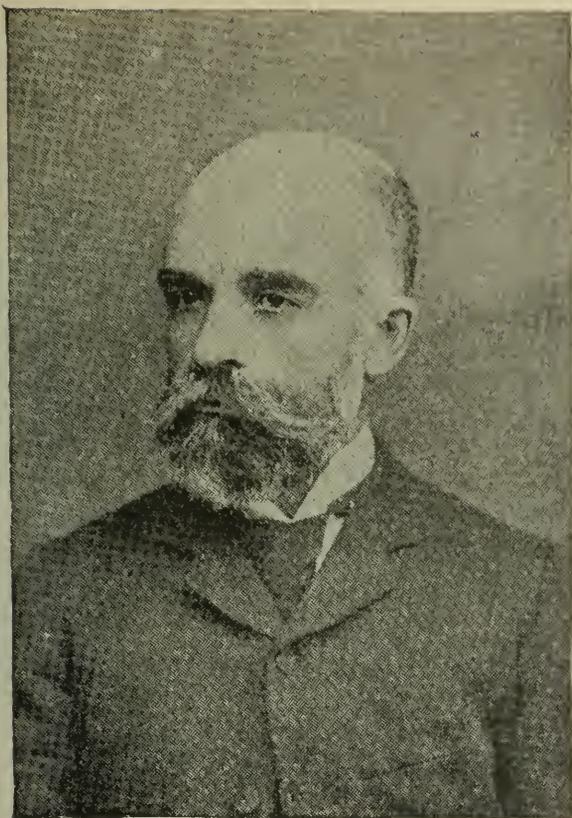

Señor Don Romero Rubio, Secretary of the Interior, was one of the framers of the present Constitution, is an able lawyer, and by the many reforms introduced into the Interior Department, has proved himself a thorough statesman.

Señor Don Joaquin Baranda, Secretary of Justice and Education, is the youngest member of the Cabinet, being fifty-two years of age. He comes of an old Campeche family, of which State he was Governor when only thirty-one years of age. As just the

right man in the place, he has, as cabinet officer, promoted the establishment of greatly improved educational facilities.

Señor Don Manuel Fernandez Leal, as Minister of Public Works, is perhaps better known to the commercial world than most of his associates. He was formerly professor of mathematics in the Preparatory School of Topographical and Hydraulic Engineers, and afterward Director of the School of Mines. As an engineer and scientist he has been a most useful public servant.

Gen. Pedro Hinojosa, Secretary of War, has been constantly in his country's service for nearly fifty years—in Congress as well as in all the recent wars. The department over which he presides has been greatly improved during his administration.

SENOR DON MATIAS ROMERO,
Minister of Finance.

The Department of Communications comprises a supervision of telegraphs, railways, public highways, harbors and the postal system. It is in charge of Gen. Manuel Gonzalez Cosio. The chief of this department was at one time Governor of his native State, Zacatecas, and has since served as Congressman, Senator and Mayor of the City of Mexico. He also has distinguished himself in the wars of his country.

THE CHURCH AND THE STATE.

The present Constitution was promulgated in 1857. The Church had at that time acquired most of the property of Mexico, and its power had become so enormous that the vital question of the hour was, which shall survive, the Church or the State? One or the other had to be crushed, and in that critical emergency Juarez led the Liberal party on to success. All church property was nationalized. The clergy were completely dispossessed of their immense holdings. Clerical corporations were dissolved and cannot today legally attain property, neither can any members of religious orders publicly appear in their distinctive garbs.

It is commonly believed that the Clerical or Conservative party carries with it a disaffected element that would be glad to see the Diaz administration overthrown, but a knowledge of their weakness prevents any active opposition, there having been, for instance, no opposing candidate brought forward in the recent election.

The policy of the Government in the matter of religion is so entirely neutral and fair that no grounds are offered for criticism at the present time. Catho-

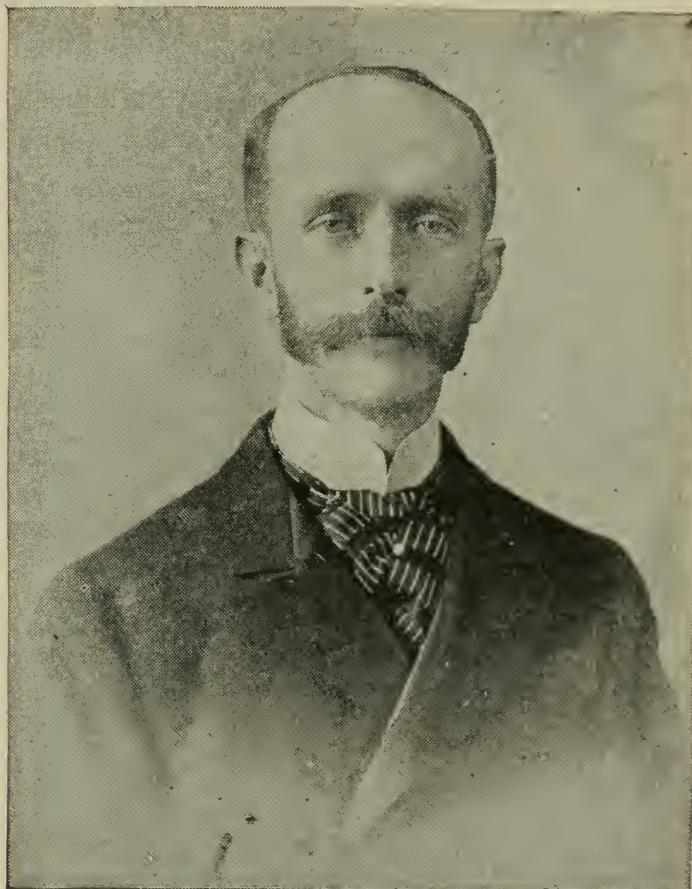

lics are treated with the utmost courtesy and Protestants are allowed to spend thousands of dollars annually in their endeavors to make good Baptists, Methodists or Presbyterians out of the Indians. As a rule, the men of Mexico are free-thinkers and their wives devoted Catholics.

AN IMPROVED CONSULAR SERVICE NEEDED.

The New York *Herald's* suggestion that the diplomatic service be abolished and an improved consular service be substituted is a good one. The American Minister at this capital receives \$17,500 gold annually, not to mention the fees that accrue to his office. The function of the Legation is purely ornamental, except the messenger service it is called upon to do for the State Department, the introducing of tourists to the President and the furnishing of free entertainment every week to the American colony. Why American residents in Mexico should be favored in this latter respect over the citizens of American villages does not appear. The Legation is in one part of the city, the Consulate in another—the business of both often getting mixed. For half of the present expenditure the United States Government might establish a first-class Consulate in this city, and allow the Legation to quietly drop out of existence.

ADMIRATION FOR AMERICAN INSTITUTIONS.

There is at national headquarters a profound admiration of American institutions, especially the successful operation of our Republican form of government. There is resentment for the invasion

SENOR DON JOSE I. LIMANTOUR,
Assistant Secretary of the Treasury and a Possible Future
President.

PANORAMA OF MEXICO—THE PALACE FROM THE CATHEDRAL.

and loss of territory in 1847, of course; but the past is forgiven, if not forgotten, by Mexican statesmen to-day. This war was waged under a Democratic administration. The War of the Rebellion, 1861-65, offering as it did possible opportunity and foothold for monarchical power in Mexico, as well as with the Confederate Government, was put down and European schemes thus frustrated by a Republican administration, and for this Mexico has rejoiced. Nevertheless, despite this predilection in favor of the Republican party, universal satisfaction prevailed at the Palace when Cleveland's election was made known, the admiration accorded Lincoln and his party having gradually merged itself into approbation of the Democratic party as new character was given it by its present leader.

THE CITY OF MEXICO.

Nestled in what may be likened to an immense oblong basin, the rough sides of which, two hundred miles in circumference, are occasionally in winter crested with snow, the City of Mexico reposes seven thousand feet above the level of the sea.

Centuries ago the city was a sort of Venice, intersected by canals whose names are now retained by principal streets; and to-day, although the waters have receded, there are in the valley six lakes, five of them being above the level of the city. Disastrous floods have visited the city in former times, but to-day it is made safe by dykes and pumping works. The city is now supplied with a network of sewers, and these are rapidly emptied into Lake Texcoco by the pumps whenever a heavy rain occurs. Of course, the city having now, and having had from time unknown, a large population, and the valley having so limited sanitary possibilities, conditions of soil and atmosphere greatly neutralize the otherwise salubrious climate. It may be on this account that the death rate in Mexico is only exceeded by one other city in the world—Constantinople. From early times, however, the possibility of draining the valley has suggested itself, and since 1885 the engineering work of tunneling through the side of the valley and constructing a huge connecting ditch from the city has

been vigorously pushed, and at great expense, something like \$15,000,000 having already been expended. It is hoped that the work will be completed within two or three years now, and that the climate of the valley will then be about perfect.

The temperature varies not more than thirty or forty degrees, Fahrenheit, the year round. There are no sudden changes, and the nights are always cool.

Fruits and fresh vegetables are always in market, and strawberries can be had every day in the year. The May or October of New England is perennial here. The grass is green always, and the leaves fade slightly in December, only to come out bright and green in February. April is the warmest month, and the rainy season coming a little later is welcome.

There are in the valley numerous villages, large and small, most of them reached by street cars, and from these places "peons" come to the metropolis with various products strapped to their backs, or to the backs of their burros.

From the castle of Chapultepec a magnificent view can, with clear weather, be enjoyed. From the base of this promontory the Paseo de la Reforma, 200 feet wide, with double rows of shade trees on either side, expanding at intervals where some statue rests in the center of a "glorietta" or circle four hundred feet in diameter, extends two miles in a straight line to the city.

Other less pretentious avenues across the green carpet of the valley cut the pasture lands and gardens into huge segments. The two white towers of the Cathedral rise above the flat level of city roofs. Beyond is the blue surface of Lake Texcoco, and to the left can be seen the famous little church of Guadalupe. Turning to the right one can see the villas and famous gardens of Tacubaya and San Angel, while a little beyond is the "pedregal" (bitter stone)—the barren expanse of lava that came from the grim and lofty volcano—Ajusco—beyond.

The grove of huge cypress trees, some of them forty and fifty feet in circumference, all draped with hanging moss, is remarkable for its stateliness, and the suggestion of those forests which Cortez found and ruthlessly destroyed.

The mountains about the valley are apparently without verdure, and their rugged outlines form a sharp silhouette of purple against the blue sky. This is varied at the distant end of the valley by stately Popocatepetl, whose summit rises nearly 18,000 feet above the sea level—the greatest elevation on the continent—and majestic Ixtaccihuatl, who appear to best advantage when their mantels of white are tinged with color by the setting sun.

The panorama to be viewed from the Cathedral towers was pronounced by Humboldt to be the most beautiful human eye ever rested upon. The almost romantic historical associations of the locality lend added interest. On this spot was the Aztec temple, of pyramidal shape and immense proportions. The accounts of the thousands of attendant priests, and especially the tales of such horrible sacrifices of human life and cannibalism as Bernal Diaz relates in

From photograph by Schlattman, Mexico.

CHAPULTEPEC—NATIONAL MILITARY ACADEMY AND PRESIDENT'S SUMMER HOME.

Prescott's Conquest, are, no doubt, great exaggerations. The ancient Mexicans were an intensely religious people, and human sacrifice was thought none too good for their divinities; but it is hardly fair to accept the stories of those who came to destroy their faith as other than prejudiced.

It was on the top of this temple, 400 years ago, Montezuma pointed out to Corvez the beauties of his immediate kingdom.

From the Cathedral towers to-day the point of first interest is the Plaza (the large public square) and the Zocalo (the little park within it). Here, on four days of the week, 24 hours in all, military bands supply good music, the crowds attendant being of the poorer class, though a motley collection of many types and races is often seen there. The Cathedral is artistically set off by flowering shrubs and shade trees. At one side is the flower market, and across the plaza the long white façade of the National Palace (department headquarters) shows up to good advantage.

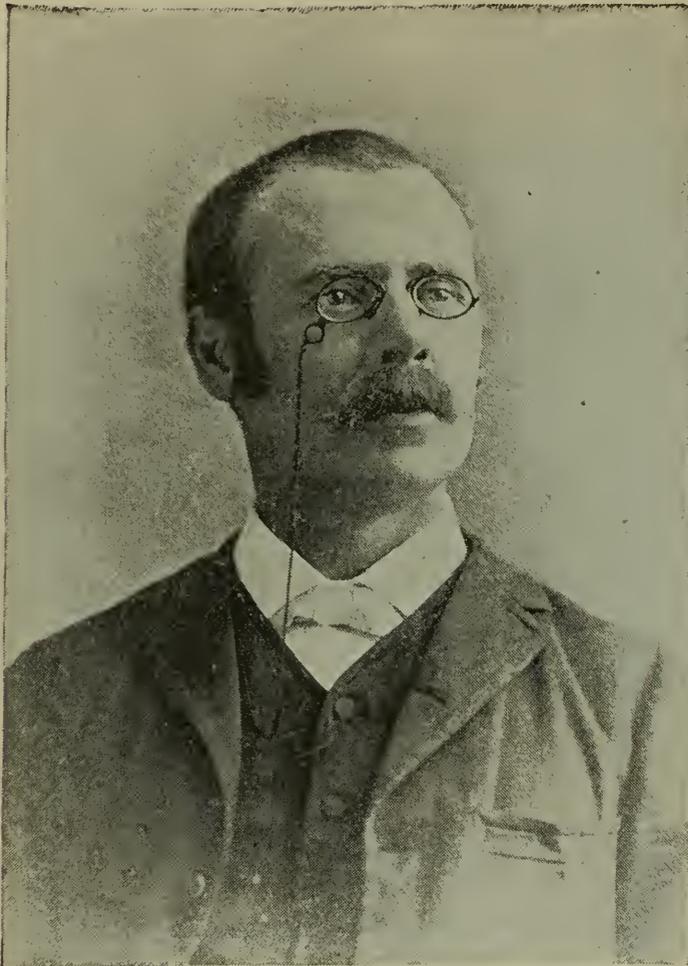

Not a chimney is to be seen rising from the dazzling multitude of flat roofs of the city, for charcoal is almost the only fuel used in Mexico, and the houses are never heated. This is to Americans a great drawback, for the rooms are apt to be dark and for two or three months uncomfortably cool in the evenings. The hotels are especially uncomfortable in this respect. They are nothing more than so many groups of uninviting rooms to let. The visitor has to explore the city in order to get something to eat. The comforts, not to mention the luxuries, of an American \$3 per day hotel cannot be had in Mexico at any price. The desirability of a good American hotel has often been stated in the newspapers, and the absolute

necessity of one if visitors are to be attracted is well known to Americans who have been here.

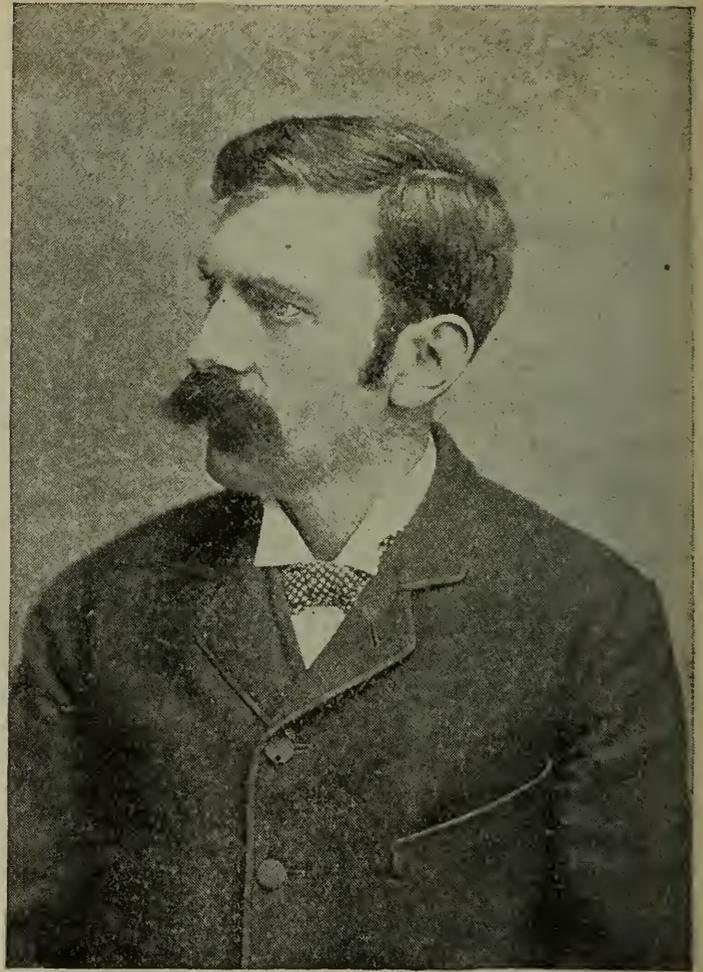

If a good American hotel were established in this city it would, without the slightest doubt, pay handsomely. The government is willing and ready to aid such an enterprise. Only a few new conditions are necessary to turn every season a part of the stream of travel now going to Europe south to the City of Mexico. Supposing that travel is sought mostly for rest and recreation, here is a land blest with salubrious climate, even temperature and capable of furnishing everything an epicure could desire; a land full of interest to the student of antiquity; a land to please the artist at every turn, and to delight the seeker after novelty. The City of Mexico is to-day only five days from New York, and when the Mexican National Railway Company gets its concessionized track straightened out, and widened to broad gauge, this time ought to be reduced ten or twelve hours.

Mexico is, or would be with hotels, an ideal winter resort; but if the North is a good place to leave when wintry winds are wailing and blustery blizzards blowing, is it not an equally desirable place to put behind one when the sunny skies are scorching? For Mexico is in the same degree inviting as a summer resort, the only special disadvantage at this season being the hot journey before the heights of Mexico are reached.

There are in this city, in addition to the Cathedral, some eighty or a hundred other churches, which are, as an American visitor recently put it, "always on tap." The city is also well supplied with schools, libraries and charitable institutions. The San Carlos Art Gallery contains a large collection of fine old

MR. J. MASTELLA CLARKE,
Editor *The Two Republics*.

J. P. TAYLOR.
Editor *The Mexican Trader*.

Spanish paintings and a variety of beautiful modern Mexican works, chiefly notable for brilliancy of coloring. In connection with this institution is an art academy, maintained at Government expense—tuition, even to the supplying of material, being free. The one prize striven for is an annual allowance of \$600 a year for six years, to enable the worthy pupil to continue his or her studies abroad.

The National Library, in a fine, large building, consists of nearly two hundred thousand volumes. There is also a prosperous Conservatory of Music.

THE POLICE SYSTEM.

The police system in Mexico is said to be one of the best in the world. At the crossing of all principal streets "gendarmes"—more soldiers than policemen, but having the authority of officers—are on duty day and night. The white cotton coverings to their caps identify them quickly in the daytime, while at night their lanterns, placed in the center of streets' junctions, attest to their presence. These officers are courteous and unusually intelligent. Their neat appearance and soldierly bearing are in marked contrast to the typical American policeman. There is never any doubt about finding one of these men exactly when wanted.

The laws of Mexico are strict, and strictly enforced, with neither fear nor favor shown. When an Indian is run over by some fashionable equipage, the whole

outfit is immediately arrested by officers of the law, and the perhaps wealthy occupants of the carriage made to surrender their property until the affair is investigated and damages fixed.

NEWSPAPERS.

The impression that Mexican newspapers are chained to Diaz's chariot, that any unfavorable criticism of the administration throws its author into jail, is erroneous, and can have for its foundation only the libel laws. These are strict; but the humblest citizen, as well as the President, has protection in them from malicious assaults upon his character. There is no persecution of journals on account of politics—opposition papers being allowed full scope both in caricature and criticism until they infringe the libel laws referred to.

When the Puritans of Massachusetts were burning witches, and Connecticut Yankees were framing blue laws, the Mexican gentleman was reading his illustrated paper—the first newspaper in the New World having been established here two hundred years ago.

There are in Mexico to-day twenty-two daily papers, some of them selling for one cent; and they are read more and more by the masses—this fact being significant of the general advance in popular education.

El Universal has a large daily circulation. Its editor and manager, Sr. Rafael Spindola, having

studied newspaper methods in New York, the paper takes front rank for its illustrations and general enterprise.

El Tiempo, the opposition Conservative organ, also has large circulation, especially with clergymen and large landed proprietors all over the country.

El Monitor Republicano is an independent Liberal paper, always opposed to the government.

El Nacional is an Administration, well edited and well arranged journal, and has an aristocratic circulation.

El Partido Liberal is a semi-official journal, carefully edited.

The *Two Republics*, supplying the English speaking colony with the daily news of the world, was established in 1867, and is still flourishing under the management and editorship of Mr. J. Mastella Clarke.

The *Mexican Financier*, since establishment in 1882, has been of immense service both in presenting to the financial world the true state of affairs in Mexico, and in furnishing to its Mexican readers a *résumé* of the world's progress in those matters of greatest interest to Mexico.

The *Mexican Trader*, recently founded, makes a very creditable appearance, and has entered into a career of great usefulness, particularly in its advocacy of taxation reform.

HOW THE MEXICANS LIVE.

Burglary and that twin dread to the housekeeper, fires, are almost unknown in Mexico. The houses, being constructed almost entirely of stone and plaster, are in no danger of conflagration, and each house

having all lower windows barred with iron, with but one door and that a huge one of oak bolted and braced at night, as if to withstand a battery, and guarded by

FREDERIC R. GUERNSEY,
Editor *Mexican Financier*.

a "portero" who sleeps by it, one feels when going to rest as if he were quite safe from all danger.

The houses face abruptly on the sidewalk, the Mexican's house being his castle, but within one always finds a square open "patio," often a garden adorned with statuary and fountains.

Mexican housekeeping is peculiar. Servants are generally faithful and honest and work for \$5 to \$10 per month. Rations, nine to eighteen cents a day, are always extra. A mat on the floor is generally accepted as a good enough couch, but cot beds are supplied in the better houses. Everything is done on a cash basis—the cook going to market for the day's supplies and rendering her account at night. Little or nothing is kept on hand; a few cents worth of this, that and the other being purchased every day.

Instead of stoves, little grates are fixed in masonry of brick, over which, on charcoal fires kept bright by fanning, everything is cooked. Kitchen utensils are almost entirely of earthen ware and cost but a trifle. The markets are in the morning great hives of chattering, expostulating, bargaining humanity—more business being accomplished with twenty-five cents than anywhere else in the world. There is no Chinese question in Mexico—John Chinaman would starve if he tried to compete with the "peon."

TRAITS AND MANNERS.

This is the land of contracts—none sharper than in the prices of commodities. Goods that have passed

SOME TYPES OF THE MEXICAN POPULATION.

the Custom House are often double or treble a normal price, while native products are sold for a pittance.

The venders of vegetables, fruits, etc., advertise their wares with cries peculiar to each article. For instance, at about seven o'clock every night the "tamale" women may be heard uttering their wailing, penetrating cry:

Com-pra-rau tamma-les de chile y de ca-pu-li-nes?

The people of Mexico are much misunderstood in the United States. Americans are apt to think of their Southern neighbors as "greasers," judging the nation by that type which is too numerous at the border on either side of the Rio Grande. But, as Cortez found here a civilization higher in many respects than that of Spain, so it happens now that visitors from the North find a great deal in Mexico that is superior.

An urchin at the public school who has never worn a shoe, and whose ancestors never saw one, will always say, "with your permission" when passing in front of his teacher, and when asked his name will add, in replying, "entirely at your service." That politeness which comes to an American child, if at all, only after much training, seems to be second nature to a Mexican.

When a servant is discharged, instead of raising her voice in wrath, she will say good-by quietly, at the same time asking to be forgiven for all her faults.

Kindest of parents, extremely courteous and polite, passionately fond of music and flowers, skillful in many branches of art, these people, the "peons" of Mexico, are away ahead of their environment.

Rich and poor are equally courteous to each other; the best of feeling seems to exist between them. A "cochero" will pull up his horses to allow "el Señor," who lifts his hat in acknowledgment, to pass. Indeed that "dream" in *Puck*, where two Broadway draymen, just after a collision, are pictured as begging each other's pardon, each claiming all blame in the politest language, is almost a realization in Mexico.

The spirit of democracy, the absence of snobbishness, is noticeable everywhere. Silks and Rags mingle freely in all public places and worship together in the churches. That Mexico City is the quietest and most orderly on the American Continent is due more to the disposition of the people than to the exceptionally good police service.

Sometimes undue importance seems to be given to customs of etiquette. Two Mexican gentlemen will bow and gesticulate before an open door, each urging the other's precedence, when Americans would save the time thus consumed. When walking together, each must take the inside; and the breaking up of a party is accompanied by endless hand shakings and farewells. Even on leaving street cars, if the ride has been one of any duration, a gentleman must raise his hat to those left behind, and purchasers at the stores commence and end their dealings by shaking

hands with the salesman. Sombreros are always lifted when passing church doors, and at noon, when the cathedral bells ring, every good Mexican within hearing uncovers.

THE PEON POPULATION.

The peon population of Mexico live in adobe houses

INDIAN VEGETABLE SELLER.

or shanties of corn-stalks; own but two or three garments each; sleep on straw mats, and exist on next to no wages. As an official of the Treasury Department recently stated it, "The population of Mexico is only half fed, a quarter clad and an eighth illuminated" (petroleum retails for 75 cents per gallon). Yet after all there is, without doubt, more real poverty, more distress and desperate hardship in a single New York tenement house ward than in the whole Republic of Mexico—for here the climate is gentle, nature is prodigal, the necessities of life are easily obtained and the horrors of many-storied tenement houses are unknown. On the one hand is a race of sunny-natured people whose condition is steadily improving, on the

other hand a race whose social adjustments are so out of order that an increasing proportion of the population is being crushed under the wheel of unavoidable poverty.

The peon is nothing if not contented. He could no more be induced to join a band of "calamity howlers" than could the most villainous "plutocrat" of Wall street. This characteristic is due partly to the fatalism which prevails, and is further a result of centuries of servitude. Fatalism is said to be a factor in the army. The Mexican soldier goes into battle believing that if death comes it was foreordained, and so he does not try to evade the danger.

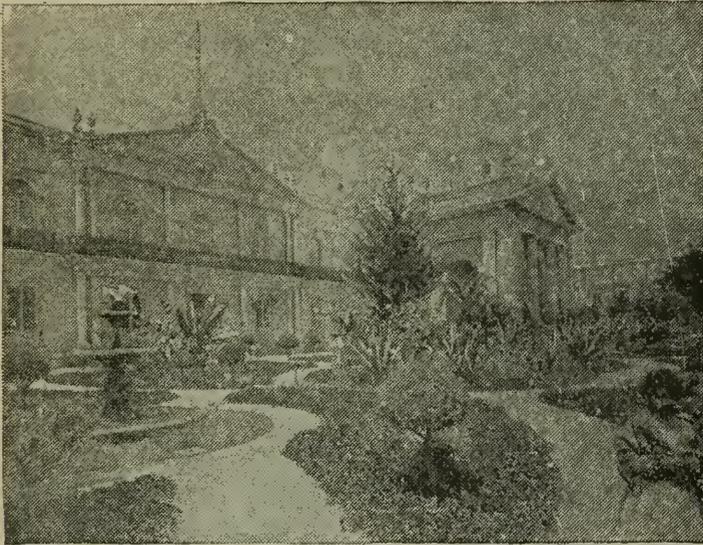

SOCIAL CUSTOMS.

The social event of each day is the promenade on the Paseo de la Reforma where, between the hours of four and seven in the evening—in greater numbers on Sundays, Thursdays and holidays—the world of fashion turns out to see and to be seen. In contrast to the wooden coachmen and footmen of Central Park, those in Mexico appear to fine advantage in the picturesque clothing of their country, with wide-brimmed sombreros to match.

On Sundays, between twelve and one o'clock, the fashion of the town is again promenading, this time on foot in the shaded walks of the Alameda. One or two of the best regimental bands furnish excellent music; hundreds of chairs along the shaded sides of principal walks are rented; Señoritas in almost ball-room attire pass in groups through the gauntlet main-

tained by scores of admirers ; babies are there to patronize the merry-go-round, to take home some miniature bull-fighter or other toy ; and the American colony is always well represented by those who like to listen to the music or to talk over the gossip of the week.

Courtship in Mexico is carried on under difficulties, the lover having to post himself under the window of his Juliet at regular times, regardless of the weather,

LAW SCHOOL AT GUADALAJARA.

satisfied if his attention is occasionally appreciated by some look or sign. This devotion is continued regardless of public observation, until at last the young man is allowed to enter the house, and an engagement is announced.

It is only just to say that the extreme chaperonage, in contrast to the prevailing lack of it in the United States, is gradually giving way to the forms of modern society.

American customs are, in many cases, being quietly adopted. American girls are universally admired, not to say envied, for their graceful dancing.

Paris sets the style, of course, and the graceful lace "mantilla" has, with all but elderly ladies, been superseded by the Parisian bonnet. No headgear is worn at the opera, however, nothing but full dress being in favor. During the Italian Opera season the large National Theatre presents a brilliant appearance. The fact of such full houses at high prices, and the gorgeous display of riches in two or three tiers of boxes, running all round the horseshoe, attest to the wealth of Mexico.

One peculiarity of Mexican theatres is the custom of charging so much per act. If the play is bad, or the patron weary, he may leave before the Collector comes around just previous to the third or fourth act. The acting, and of course the music, is generally creditable, some of the light operas comparing very favorably with those presented in New York.

BULL FIGHTING.

Bull-fighting still continues in some places, but was stopped in the capital several years ago, the police department finding it of demoralizing effect. An exception was made a year ago last October, when ten

or twelve thousand spectators seated themselves in the huge circular framework surrounding one of the rings. The occasion was a benefit for the Spanish flood sufferers, and was graced by the attendance of the President and party. Two military bands were present, and four companies of infantry were distributed so as to insure good order. The President's arrival was announced by the National Hymn being played, and the universal applause which greeted him was a sure indication of his popularity.

The programme opened by the entrance of five horsemen in Spanish costumes and well mounted. Following these came the fourteen bull-fighters, each in dazzling costume of satin, gold and lace, the "picadores" and supernumeraries of the ring.

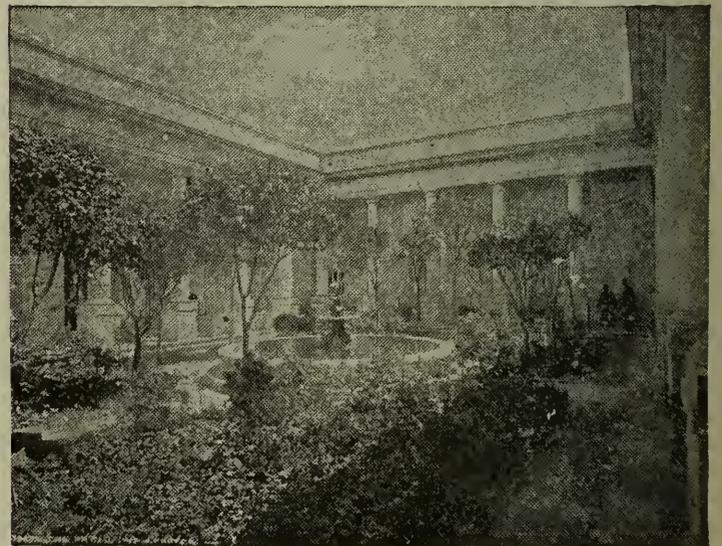

Nine bulls were successively introduced, only three of them retiring alive. Seven horses were killed in the sport, and there were several narrow escapes of human lives, though none were sacrificed. The fight was a great success so far as blood and tumbling were concerned, and it netted the beneficiaries something over \$20,000.

RAILROADS AND TRAVEL.

The "peon" is fond of traveling. Third class passenger cars are generally crowded. It is surmised that these people often have to walk one way, so fond are they of taking a long ride.

Each regular train is accompanied by an army officer, in some cases by a squad of soldiers, and it may be for this reason that express messengers are never held up in Mexico. If any attempt at wrecking is discovered, the guilty parties are immediately shot ; justice in such cases being administered by the "Rurales"—not by Judge Lynch.

The railways are the real missionaries of the country, radiating products and influences of a higher

VIEW OF PALACE COURT.

civilization at every point touched. Combined with the telegraph, they enable the centering of troops at any threatened point, thus insuring safety from those local disturbances which in former times were of so frequent occurrence.

The Mexican Railway (Vera Cruz to City of

THE NATIVE MEXICANS AS THEY LIVE AND WORK.

Mexico) is the oldest line in the Republic, and because of engineering difficulties in the sharp descent from the table-land to the hot country, and owing to various interruptions caused by revolutionary disorders, the cost of constructing about 300 miles of track was in the neighborhood of \$36,000,000.

Leaving Esperanza at the edge of the plateau, where climate and vegetation of a temperate zone prevail, one reaches, after three hours of careful rolling down steep grades, the town of Coadoba, more than 5,000 feet below, in the rich jungle of tropical vegetation.

During the passage down the mountain sides magnificent views of miniature "pueblos" with checkered variety of village streets, cultivated fields and green pastures thousands of feet below—snow-capped Orizaba, as many feet above—deep ravines and mountain streams, make one dizzy as the cars emerge from dark tunnels and cross high bridges.

The Interoceanic, narrow gauge, also connects Vera Cruz and the City of Mexico, making a principal station at Jalapa. From this town to Vera Cruz, about 80 miles, passage may be taken on cars drawn by four mules, who gallop along the down grade at a reckless pace, competing successfully with the steam railway, and affording the traveler a variety of fine scenery.

The Mexican National, narrow gauge, connects Laredo, Texas, with the City of Mexico, most of the distance on a plateau 6,000 feet above the sea. This line passes through the important cities of Monterey and San Luis Potosi, and at many points the scenery is extremely picturesque. When the train is creeping over the Toluca mountains passengers are apt to realize the altitude, 10,000 feet, as breathing becomes labored to many.

The Mexican Central connects with the Santa Fé system at El Paso, after a run of three nights and two days, covering 1,200 miles, from the City of Mexico. This line is standard gauge, and passengers can go to St. Louis without change.

The northern division of the Central runs through a great desert with mountains on either side. Water has to be brought from distant points, and, in compliance with the road's concession, it is furnished free of cost to inhabitants along the line. If this country could be supplied with water by the "rain-makers" the desert would be transformed into a garden, for the soil is rich.

The road passes through many cities of historic interest and commercial importance, chief of which are Chihuahua (Chi-wah-wah), Zacatecas, Irapuato and Queretaro. One branch road runs to Guadalajara, a city of 80,000 inhabitants, and often spoken of as the finest in the Republic, and another one runs from Aguas Calientes (hot springs) through San Luis Potosi to the gulf port of Tampico.

The street car system of Mexico City, the District Railway Company, one of the largest in the world, serves the public well. Nearly 500 cars, including platform, freight and funeral cars, are in daily use. The company owns 2,600 mules and horses and 5

locomotives for suburban use. Conductors receive \$1 per day, drivers 62 cents. There are 130 miles of track in use, all in first-class condition, steel "T" rails being used.

The number of passengers carried in 1891 was 15,585,917, and the gross earnings were reported as being \$1,208,826.04, and expenses as \$890,606.96. The item of expenses includes, however, cost of new rolling stock and construction of new lines, so that the annual report shows for the company a most prosperous condition of affairs. It is calculated that daily expenses are paid by 9.00 A.M.

The franchise of this company was, on the American plan, almost given away. The City of Toronto, with a smaller population, receives \$200,000 annually from its street railway lines, and there is no reason why the City of Mexico, nearly twice its size, should not be securing a much larger amount.

The various lines center at the "Plaza" in front of the Cathedral. Conductors have no bell punches, but the tickets sold are taken up by collectors who board the cars at certain points. The short line fares are 6 cents—passage to suburban towns costing 8 cents and upward for first class and about half as much for second class.

The tough little mules gallop along at a rapid pace and the approach to street corners is heralded by the drivers blowing a small brass horn.

As a relic of olden times when attacks were feared, the cars go in company, two, four, six or eight leaving together, so that after waiting 20 or 30 minutes, one is often favored with a half dozen cars at once. Of course the company would make money by dispatching the cars separately, but it is seemingly content to let well enough alone.

Special street cars are rented for the moving of furniture—wagons almost never being used for that purpose. The furniture is taken at the nearest available point, little sidings often being used, and is unloaded as near to destination as possible, "cargadores"—licensed porters, taking it the rest of the way.

Funeral cars are in constant use, there being no other service in the city. All grades of hearses are supplied, from those carrying sixteen bodies each, to the pretentious catafalque drawn by six black horses, each led by a groom, at an expense of \$140. Three to twelve dollars each are paid for cars. Occasionally as many as fifty cars follow the remains of some notable person.

MINING, MANUFACTURE AND AGRICULTURE.

Mining in Mexico has been carried on from ancient times and now the annual product of silver alone amounts to nearly \$50,000,000 (United States currency). There are at present about forty mining properties being worked by American companies and the ore from these mines is sent North in largely increasing quantities.

Fortunes are annually being made, but fortunes are also annually being lost in the mining industry; so it happens that the greatest wealth of the country is derived from agricultural holdings.

The most inviting field for investment to-day is coffee raising. The rush of investors to Florida orange groves of a few years ago is about to be duplicated in the attraction of capital to the coffee districts of Mexico. Mexican coffee has been sold in New York for a long time, but always under the name of Brazilian berries—so strong has been prejudice in the matter. But the exportation of last year was double that of three years ago, and the Mexican berry must soon be allowed to sell on its own merits. Many sections near both coasts are perfectly adapted by nature for coffee raising, and as new and scientific methods are adopted, splendid returns are being realized by investors. There are many instances of fortunes being made in a few years by those who have risked the dangers and solitudes of a pioneer's existence. It is impossible to give anything other than average figures, but it may be stated that the coffee plant begins

THE HERCULES COTTON MILL AT QUERETARO.

to bear in its fourth year, and that a year later all plants yield an average of one-half to three-quarters pound per tree. It is necessary that each plant be somewhat shaded, and for this purpose the banana tree is generally used. Some plantations comprise 300 acres with as many as 100,000 trees; and when once these groves are started, they are easily maintained by replacing dead or sickly trees with new plants. Coffee costing 8 cents to raise and prepare for the market brought 20 cents per pound last year.

The cotton mills of the country consume something like 26,000,000 pounds of cotton annually, a large portion of it, strange to say, being imported from New Orleans.

The sugar industry is also very backward; the product, as a rule, being of inferior quality and produced by primitive methods. Ordinary white sugar sells at retail for 12 cents per pound, and it comes in cones of twenty-five pounds each, which have to be broken up for use.

Good flour retails for 12 cents per pound, and the usual product is very inferior in quality.

Corn is the staple article of food with the masses of the people, 6,000 bushels being consumed daily in the City of Mexico alone. It is, of course, raised in great

quantities all over the Republic, the only drawback being the necessity of irrigating. When the water gives out a failure of crops is inevitable. Last year the failure was so general the Government kindly suspended import duties on corn, and thousands of carloads were sent down from the United States.

Tobacco, henequen, rubber and cocoa are the other chief agricultural products. It is surprising to find most fruits to be of very poor quality.

Varieties of beautiful Mexican onyx are quarried in large quantities, and a newly discovered quarry in the State of Morelos is now producing a charming ornamental stone called rose-garnet. It is harder than granite, full of yellow and rose-colored crystals, and takes a high polish. A large quantity of it will be sent to the World's Fair.

NATIONAL FETE AND GALA DAYS.

The Mexican people are patriotic. They enthusiastically celebrate those events in their country's history which have made Mexico what it is to-day. Chiefest of these holidays is the Sixteenth of September. This is the Mexican Fourth of July. As in 1776 the Americans declared their independence from Great Britain, so in 1810 Hidalgo, the Washington of Mexico, proclaimed his country's independence from Spain. And, although this patriot perished in an early stage of the rebellion against Spanish oppression, his personality was the inspiration of the uprising—and now, as "El Libertador" he is almost worshiped as a saint.

At eleven o'clock in the evening of September 15, 1810, in the "plaza" (public square) of the little town of Dolores, where the people were gathered in response to the ringing of church bells, Hidalgo, with a musket in one hand and a torch in the other, cried, "Long live our Mother most holy—Guadalupe! Long live America! and death to bad government!" This was the Declaration of Independence.

The anniversary celebration commences at 11 P.M. of September 15, in the grand public square—the Plaza. Long before that hour the entire ten acres are filled with a surging mass of humanity. Long lines of venders extend in every direction and all sorts of Mexican eatables, illuminated by the flickering light of burning fagots are advertised by peculiar wailing cries. Bands play the popular Mexican airs, but the cries of venders and the hum of conversation confine the music to a short radius. Neighboring façades are festooned with national colors—red, white and green; thousands of gaily colored lanterns are strung over the vast area, and the stately Cathedral, over which floats the national colors, is brilliantly illuminated. The picture is at once weird and grand, thrilling and fascinating. The mass of the people standing in their sandals, with picturesque "sombros," "zarapes" and "rebozos," are descendants of and undoubtedly very much like the gentle race that Cortez slaughtered so unmercifully. As evening wears on all eyes are directed to the illuminated clock on the Palace. It is nearly eleven; voices are hushed; all is expectancy; the hour has come. President Diaz appears on a balcony of the Palace waving the national colors over his head, he cries in a clear voice,

“ Mexicanos : Viva la Independencia ! Viva la Republica ! ” This is the “ Grito ; ” and upon being uttered the blare of trumpets, the cheers of tens of thousands of Mexicans, the music of military bands, explosions of fireworks, and most powerful of all, the tumultuous roar from scores of great bells in the two towers of the Cathedral, join together in a great jubilee chorus. This is kept up for nearly an hour, when the people disperse, many of them, in accordance with an old custom, dancing about the streets to the music of rude “ Bandurias ” for the rest of the night.

Early on the morning of the sixteenth troops arriving from distant points take position in readiness for the grand military parade. At 10 o'clock President Diaz, every inch a soldier as well as one of the ablest of living rulers, attended by other distinguished generals, takes his place at the reviewing stand. The procession consists entirely of regulars, thousands of them presenting a very creditable appearance in fresh uniforms. The infantry appear in heavy marching order, each company being officered by a graduate of Chapultepec. The regimental bands are all good and are accompanied by drum and bugle corps, but the large number of drummers—beating at every step while useful in giving time—interfere in the music. In contrast to these are some of the cavalry bands mounted, the Seventh Regiment being especially noteworthy. The event of the procession, however, is the passing of the “ Rurales,” the Rural Guards, the pride of the Republic. There are usually about one thousand of them in line, every man finely mounted. Each wears a large silver trimmed “ sombrero ” of gray felt, each a suit of buckskin set off by trimmings and necktie of red, and each carries a sword in hand, while rifle protrudes from saddle holsters. The saddles, especially of officers, are beautifully decorated and in many cases must cost small fortunes. A large number of this body of men are said to have been noted bandits, until their occupation became unprofitable in the Republic, and President Diaz, with characteristic diplomacy placed them in the national service, where their exceptional courage and daring are most useful in suppressing any threatened disorder.

Other features of the celebration, which lasts almost an entire week, are elaborate displays of fireworks at the Plaza and in many other parts of the city, balls given in the large theatres, where floral decorations cost thousands of dollars, banquets given to visiting officials and the distribution by Mrs. Diaz of presents to the poor.

The central fountain in the Alameda is converted into a huge floral piece and the streets are decorated with flags and bunting, wreaths of flowers, festoons of evergreens and moss.

The fifth of May, anniversary of the triumph of Zaragoza over the French at Puebla, is also a National Holiday, and celebrated similarly to September 16.

There can be no stronger contrast than that existing between the nervous, money-chasing Yankee and the complacent, easy-going Mexican. The latter must

have a long rest from business in the middle of each day. The stores are closed for a couple of hours at noon, when the streets become nearly deserted. The people live slowly, and the large number of holidays attest to a rational respect for the sunny side of life.

CHURCH HOLIDAYS.

The Church holidays bring with them a rather fantastic mixture of the festive and the religious. These “ Dias de Fiestas ” are like so many strange Christmases scattered over the calendar, as the giving to children of toys peculiar to each occasion is the chief characteristic of them all.

November 1 and 2 are, respectively, All Saints' and All Souls' days. The cemeteries are then crowded with, seemingly, the entire population, doing homage to the dead. Immense candles in huge candlesticks burn brightly over thousands of graves, bereaved ones watch all day long over the ashes of their dead, and the hosts return to the city at night as gay as if from a wedding. The Plaza contains hundreds of booths in which are sold, as toys for children, death images of every conceivable construction : jumping jacks, bull-fighters, fiddlers and dancers—all made as skeletons. Large white skulls of candy are sold in quantities, and countless happy children return to their homes pulling after them as many little toy hearses.

Everybody has his own especial feast day, which is celebrated, when possible, with fireworks, music and dancing. December 12 is honored by all the Guadalupe (the commonest name in Mexico, given almost equally to both sexes) and on that day tens of thousands from the city, the valley and from distant places gather at the little town of Guadalupe, three miles from the City of Mexico. Many of these pilgrims come hundreds of miles on foot, some on hands and knees, as a penance for sins committed. As the penitents approach the shrine *rebozos* (shawls) and *zarapes* (blankets) are spread in a continual path before the especially sinful ones to make their progress easier. The shades of night find an army of devotees sleeping by thousands with no roof but the sky. On the day of the 12th, from sunrise until high noon, certain Indians, attired in brilliant skirts adorned with feathers and shining ornaments, are allowed the time-honored privilege of dancing in front of the church and on top of the surrounding hills.

December is a month of festivities, the Christmas celebration commencing on the evening of the 16th and continuing every night until Christmas Day. On every one of these nine evenings all good Mexicans celebrate the “ Posada,” it being customary for nine families to meet at one another's houses in turn. The “ Posada ” commemorate the nine days' journey of Joseph and Mary from Nazareth to Bethlehem when the shelter of an inn (Posada) was sought for the Mother of Jesus. When the family and friends are assembled a candle is given to every one, a procession is formed, with the little ones going ahead and, to the music of one or more instruments, all pass around and around the corridor singing words of a song

that belongs to the occasion. In front of all is carried a little tableau composed of figures of the Holy Family. Occasionally a halt is made at some door, when the singing, supposed to be pleading for shelter, is responded to by voices from within refusing admission. At last, however, the response is satisfactory (Joseph having found a stable with manger) and with joyous music all enter the chief room of the house and enjoy refreshments and dancing. A "Pinate" (earthen jar dressed up as a figure and filled with candy and fruit) is then an object of attack from blindfolded children with sticks in hand who, when it is broken, scramble for the candies which fall. During all this time fireworks are exploded from the "patio" and at last every one is given a small memento, generally of chinaware.

At midnight Christmas Eve a really beautiful service is celebrated in the churches, when the women, each with a little pillow or cushion before her, on her knees and rocking herself backward and forward, sing together the lullaby "A la rorra" to the Infant Jesus. When Christmas day at length arrives everybody is well tired out, so that that day is not emphasized as it is in the North.

In Mexico, as elsewhere, an Easter Festival has been celebrated from time unknown. Early on the Friday morning preceding Palm Sunday La Viga Canal is crowded with canoes and barges of all sizes bringing to the city great quantities of brightly colored flowers. A little later crowds come from the city mostly by street cars, but the élite in their carriages or on horseback, to buy flowers and to enjoy a few hours promenade on the Boulevard beside the canal. Many "caballeros" place garlands around their horses' necks, and private carriages are covered—wheels, harness and all—with flowers. On these and similar occasions first-class music is always furnished by the military bands.

Palm Sunday brings the most picturesque scene of the year at the Cathedral. Palm branches, plain or worked into fancy shapes and decorated with poppies or corn flowers, are sold in front of the Cathedral, and every one takes one inside to have it blest by the Bishop. Thus the stately building becomes filled with a waving sea of long palm branches.

Holy Week is chiefly marked in Mexico by the silence of church bells and the rattling of "matracas." These rattles are toys, generally made of tin or wood, and they are heard continuously during the week. One church, at least, has a huge "matraca" in its belfry, which is used at this time in place of the bells.

At precisely 10 o'clock, Holy Saturday morning, effigies of Judas, constructed of paper and fireworks, generally suspended over the street, are exploded all over the city. The Jockey Club usually suspends three or four of these grotesque figures in front of its house, and with their destruction sombreros, saddles and articles of lesser value are scrambled for by hundreds of "peons" who crowd the street below.

On St. John's Day, June 24, the various bath establishments are crowded all day long.

August 6, Ascension Day, is celebrated in some churches by bringing out into the open air representa-

tions of the body of Christ, arrayed in wonderful garments, where it is treated to an explosion of fireworks and a tremendous amount of noise.

The graves of Mexican patriots—from Cuauhtemos, who defied Cortez and was tortured by him, to Juarez the Reformer—are kept green by annual commemorative exercises.

THE PROBLEM OF TAXATION IN MEXICO.

The problem of taxation has appeared to be an especially grave one in Mexico because of the fact that so great a proportion of the population is not what may be called tangible for purposes of taxation. Eight millions of "peons" exist in the most primitive fashion, living from hand to mouth, owning not a

GENERAL JOSE CEBALLOS,
Governor of the Federal District.

foot of land, a decent habitation nor scarcely a change of "clothes." The tax collector turns in despair from this vast population and concentrates his power upon the country's commerce, which is, of course, crippled in consequence to a frightful degree.

The revenues of Mexico are raised mostly by means of a customs tariff on importations. This has proved a convenient system. The tariff is applied to the net weights and measurements of articles, and is never ad valorem. To expose the absurdities of the Mexican tariff system would be an easy matter—but such a criticism by an American would, at least while the McKinley tariff law is unrepealed, be in poor taste. Suffice it to say that Mexico has required a large revenue, and she has done the best she was able to do in the matter of raising it.

PLAZA DE ARMAS AND CATHEDRAL.

Fortunately protected interests have not been strong enough to dictate a tariff policy. The desirability of lowering the tariff is thoroughly understood by the Administration. No group of statesmen at Washington are more thoroughly convinced of the desirability of free trade than are Secretary Romero, those who surround him in the Treasury Department, and Secretary Mariscal. It may safely be asserted that the statesmen of Mexico are as far in advance of their constituents on the tariff question as the American people are in advance of American politicians on the subject. Those politicians who, for instance, during the recent Presidential campaign said that it was *Republican* protection, not *Democratic* protection, that was robbery, no more reflected the intelligence of the American people or influenced the result of the election one way or the other than so many bubbles riding on a mountain stream influence its course.

For many years both political parties in the United States have been watched with the hope that measures would be favored by one or the other of them which would help trade relations between the two Republics. Attention was most strongly turned toward the party of Jefferson—that patriot to whom tradition attributes the sentiment “Freedom of commerce with all nations—entangling alliances with none,” but year after year has brought disappointment; for instead of that definite proposition expressed nearly a century ago, “tariff reform,” all things to all men, is now offered. With very few exceptions those statesmen at Washington who have dared assume the name “free-trader” have qualified the term with so many “buts” as to render it characterless. They would maintain certain tariffs, and just those tariffs, as it happens, which would fall heavily on Mexican products. If, as

seems probable, a special session of Congress shall be convened in March to repeal the McKinley law, and a purely revenue tariff substituted, Mexico will be likely to lose in many particulars by the change. For Mexican products being of another zone and, excepting ores, not producible in the United States, must, under a tariff for revenue only, be heavily taxed in place of those articles which come into competition with industries now protected. If, however, the Democratic party is loyal to the Chicago platform it will remove the last vestige of tariff taxes; for if *Republican* protection is robbery then it is only a juggling of words that denies *incidental* protection to be robbery also—and the smallest item in a customs tariff cannot exist without incidentally protecting some interest or interests.

The party of protection has builded the barrier to commerce between the two republics higher than ever, thus banishing all hope from that quarter.

The greater part of Mexico's population enjoys a civilization primitive and undeveloped, the only commerce interesting to which is that supplying the very simple necessities of life—all procurable in the immediate vicinity. It was this fact, and the assumption based upon it—namely, that the opening of Mexican markets promised little or nothing to American producers which, probably more than anything else, influenced the Ways and Means Committee of the Forty-ninth Congress to reject so contemptuously the proposed Grant-Romero reciprocity treaty. Mr. David A. Wells says of this in his “Study of Mexico:”

The Committee of Ways and Means of the Forty-ninth United States Congress (first session) reported, however, adversely to the ratification of the proposed commercial treaty with Mexico, and in consequence of this action and its sanction by the United States House of Representa-

tives, all negotiations in respect to the treaty have terminated. The reasons presented as having led the Committee (almost unanimously) to these conclusions were mainly four: *First*, Because Mexico is so poor. *Second*, Because "the American citizen living in Mexico and pursuing the peaceful avocations of industry and commerce is without adequate protection to life and property." *Third*, Because "permanent and desirable commercial relations with a government and people so estranged from us in sentiment are without promise of substantial and successful results," and, *Fourth*, Because "the trade which the United States would offer to Mexico under the treaty would be more valuable than the corresponding trade which Mexico would offer to the United States."

The first of these reasons is economic; the second political; the third, having due regard to its meaning, may be well termed "Mongolian," while the fourth is simply absurd.

MEXICO'S ATTITUDE TOWARD RECIPROCITY.

President Diaz, when asked by the New York *Herald's* correspondent last March to state Mexico's attitude toward reciprocity with the United States, said:

What reciprocity do you refer to? If you mean the negotiation of a formal treaty of reciprocity, I desire to say: A number of years ago the Grant-Romero treaty of reciprocity was negotiated and duly ratified by the Senates of both Mexico and the United States. But in order that the treaty should have force, it was necessary that the

IXTACCHIHUATL, FROM SACRAMONTE.

United States House of Representatives should pass an enabling act. In this body the treaty met opposition, and delays occurred. It became necessary that the time for the treaty be extended. This was done and still the House did not act. Finally the Ways and Means Committee brought in an adverse report couched in language highly offensive to Mexico. That report was signed by twelve of thirteen members of the committee. That was the death blow to the Grant-Romero treaty. Since then the United States has not proposed the negotiation of a similar treaty. In view of these facts it is clear that if a reciprocity treaty is not now in force between the two republics, it is not the fault of Mexico. As to the proposed reciprocity, based on the McKinley tariff, the facts are these: Minister Ryan was instructed to confer with the Mexican Government, which in its turn appointed Mr. José I. Limantour to conduct negotiations. Negotiations continued about two months when the commis-

sioners reached, or seemed to reach, an agreement. When the time for signing came, however, Mr. Ryan announced that he would first have to consult his government. That was about the end of last December. Since then the Mexican Government has heard nothing from Mr. Ryan on the subject.

It is worthy of mention that while delegates from Mexico to the Pan-American Congress were being dined, wined and flattered at Washington, the McKinley bill was being concocted, which a few months later fell with almost crushing weight upon Mexico's

POPOCATEPETL, FROM SACRAMONTE.

chief article of export to the United States, lead ores.

Thus has the United States Government come to be regarded by her weaker neighbors, as Mr. Wells puts it, "Much in the light of a great overgrown immensely powerful bully."

EFFECTS OF M'KINLEY TARIFF ON MEXICAN INDUSTRIES.

The present tariff wall separating Mexico from the United States is a great boon to European exporters, who would, if possible, build it still higher, and who fear that the two republics may come to their senses and remove this unnatural advantage which Europe now enjoys.

It is now evident that our Government at Washington "bit its own nose off to spite its face" by some of the provisions of the McKinley tariff law. For instance, the imposition of a tax of $1\frac{1}{2}$ cents per pound on all lead contained in silver ores coming from Mexico so handicapped American smelting companies in the procuring of their raw material that many of them were obliged to suspend operation—while American capitalists, quick to perceive special advantages in the new field for operations thereby thrown open, immediately established smelters in Mexico. Thus the American tariff on ores is seen to have had an effect diametrically opposite to what was intended; for it has virtually expatriated a large amount of American capital, which capital is now employed in paying wages to Mexican workingmen, paying freight charges to Mexican railroads, paying taxes to the Mexican Government; and, what is of more importance than all else, these recently established Mexican smelters

are enjoying an advantage in the American market over American smelting companies. For the *base bullion* (practically lead) produced by these Mexican smelters is allowed to enter the United States upon payment of only 2 cents per pound, while American smelting companies importing lead ores are obliged to do so at an expense per ton equal to the expense per ton of getting the Mexican smelter's product to the New York market. The conditions then were about equal until the McKinley tax of $1\frac{1}{2}$ cents on every pound of lead ore gave the Mexican smelter just that advantage.

So it happens that the McKinley tax on lead and silver ores is indirectly a measure of protection to Mexican industries at the expense of American industries.

It is only fair to state that the establishment of smelters in Mexico had been meditated for a long time before the McKinley bill was thought of on account of certain natural advantages which these Mexican smelters would have. Mexico's mineral wealth is practically inexhaustible; the Mexican smelter can work up the raw material near the mines, instead of having to pay freight charges on it over thousands of miles of railway, and he can employ labor for about one-third of what the American smelter has to pay. No, the founders of these plants established them upon something surer than the favor of fickle legislation: the latter was purely a bonus.

That Mexico would gain relatively more than the United States would gain by reciprocal free trade is as patent as that Texas would, if shut off from the rest of the Union, be the greatest gainer when free trade were restored. It is in accordance with the protective argument that Mexico should be deprived of this trade simply because she wants it. "Find out what your enemy wishes you to do," says Mr. McKinley, then "do exactly the opposite," and he classes all foreigners as enemies. What a spectacle it is, to be sure, that of the tremendously rich and powerful United States saying to little Mexico, "You would gain by free trade ten dollars to my one—therefore you shall not be allowed to have it."

Mexico needs all the money that she now receives through her Custom Houses, for she has incurred large obligations for internal improvements which must be taken care of. That she would have to reimburse her Treasury for the loss in Custom House receipts is perfectly well understood. In this matter Mexico is amply able to take care of herself. Mexico is not a poor country—quite the contrary. Fortunes are annually extracted from the great haciendas and from ground rents in the cities. But, by what seems to Americans a strange oversight, the values of these lands are practically not taxed at all: their owners,

many of whom are hostile to the Diaz Administration and live in Paris, Madrid or Rome, enjoying that fund (ground rents of Mexico) which properly belongs to the Mexican Government. Here is a great reservoir of wealth, annually created by the population of Mexico, which, under the existing system of taxation (discreetly ordained by the landowners who made the laws) is scarcely tapped for the benefit of the people who created it, and which if it were taken by the government would immediately relieve the necessity of that indirect taxation now so mercilessly imposed on commerce.

The *Mexican Financial Review* estimates the rural and city properties of Mexico to be worth at least two billion dollars. Now, if an annual tax of only two per cent. on its value were levied against this property the government would realize \$40,000,000—more than enough for her annual expenditures.

Or, to figure it another way, the area of Mexico is 751,664 square miles, or 481,064,960 acres. True, much of this land is arid and unproductive, but it is safe to say that on an average the land of Mexico could easily sustain a tax of ten cents per acre; for the land values of the cities and of the haciendas are, as is well known, enormous. If a land value tax averaging ten cents per acre were imposed it would return to the Federal Government an annual revenue of \$48,106,496. Mexico's disbursements during the fiscal year ended June 30, 1891, amounted to \$38,452,804, but much of this expense of government was for an army of customs officials and clerks, and the cost of printing and issuing revenue stamps, all of which could be done away with by a land value tax. Mexico, if thus relieved from the fetters now imposed by tariff taxation, would immediately enjoy unprecedented prosperity. The cost to the consumer of all imported articles would be reduced an average of at least thirty per cent.; foreign trade would be doubled within six months. Even the great landowners who now stand in the way of this reform would be agreeably surprised to find that the revival of prosperity would so "boom" their property that they would be more than compensated for the burden at first imposed upon them by the reform.

Whatever measures of taxation reform Mexico may adopt, however, is, of course, purely her own affair. It is enough to know that she has been quite as progressive as the United States upon the tariff question, and has always come more than half way when mutual concessions have been under consideration.

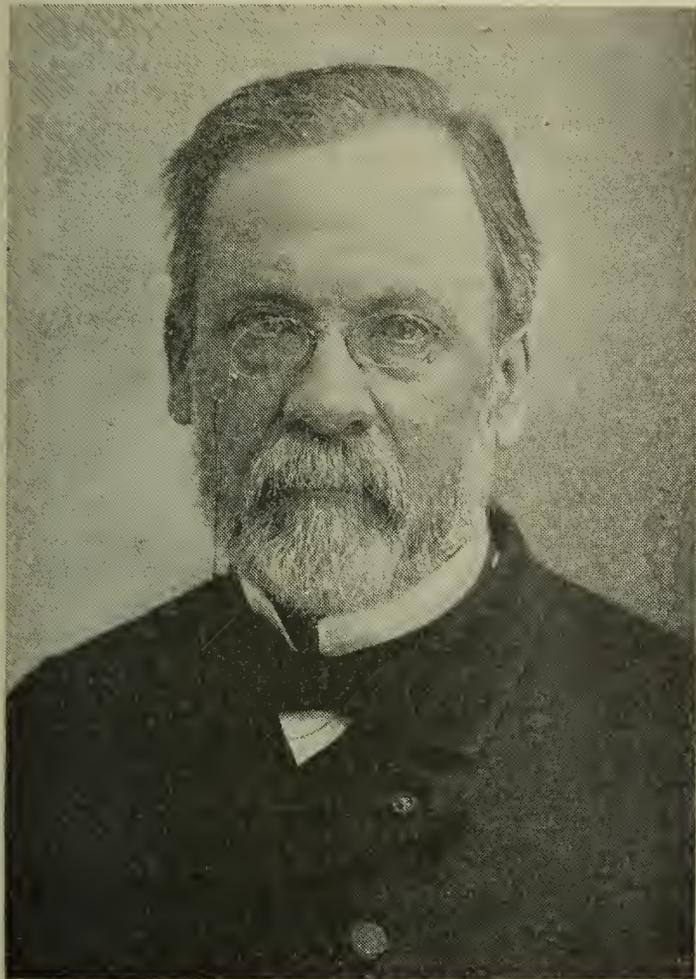

The United States has exactly the same problem to solve (how best to raise the revenue which must not be raised by a protective tariff), and there are evidences that the coming Congress will be ready with a proper solution of the difficulty.

VACCINATION AGAINST CHOLERA.

BY THE FIRST WOMAN WHO SUBMITTED TO THE EXPERIMENT.

‘GIVE a dog a bad name and hang him’ applies to cities as well as to people, and for many a day the saying has been pretty generally applied to Paris by those who do not look below the surface of things. One grows weary of the hackneyed simile, “Paris is like champagne, the froth once gone it soon falls flat and stale.”

To commonplace people the “City of Light” is represented by the Champs Elysees on a sunny afternoon

M. PASTEUR.

in the month of May, the shops in the Rue de la Paix, the Acacias from six to seven, the café concerts, masked balls, and so on to the end of the dull list.

The great world of thought and toil teeming behind this screen of frivolity is a dead letter to them. Yet this world exists with an intensity which had never been surpassed at any epoch during the history of mankind.

Notwithstanding their reputation to the contrary, Frenchmen have immense powers of patience. Not the plodding of the Germans, nor the “dogged” of the English, but strong, fine patience in the highest sense of the word. They will work steadily on the plan they have mapped out for themselves and if it is realizable they will carry it out; but they work

intelligently and, upon the principle that “all work and no play makes Jack a dull boy,” vary their labor by a number of outside interests that prevent them from ever settling down into mere drudgery.

Here we find surgeons who are sculptors, judges who are novelists, and novelists who are theatrical managers during their leisure hours; the *ensemble* produces men as unlike the average Anglo-Saxon conception of hard-working men as a *Moyenage* blunderbuss is unlike the fusil *lebel* of to-day.

In the last decade the whole world had benefited enormously by the discoveries of this “City of Light.” Dr. Alphonse Bertillon has revolutionized judicial procedure by his wonderful anthropometric system; Dr. Paul Richer of the *Salpetriere* has done away with the disproportionate in art in his *Anatomie artistique*, which had fixed certain canons of art once for all.

After dealing the death blow to the myth of spontaneous generation, discovering the laws of fermentation, the cure for the diseases of silk worms, the vaccination against splenic fever, *et cetera*, Pasteur saved humanity from the scourge of hydrophobia. He saved them against their will, it may be said, but he saved them, and the greater the opposition encountered the greater the glory in overcoming it. The intellectual movement of Paris, as of every capital of thought, is often impeded by the underhand workings of jealousy. The stronger the competition, the higher the average of talent, the greater becomes the power of the little green-eyed monster.

Few know the petty miseries, the delays, the futile conspiracies with which Pasteur had to contend before the truth of his discoveries was universally acknowledged. A man with less strength of character, less endurance and less tenacity of purpose would have given up the fight; but these qualities won the day and the facts he wrenched from nature are now admitted by all as unhesitatingly as the statement that two and two make four.

In addition to all his other brilliant qualities Pasteur has patience in application as well as in research. Since the Institut Pasteur was built by public subscription five years ago, in spite of his seventy years and of a paralytic stroke resulting from his studies relative to silk worms twenty-two years ago, he personally oversees the eighty or a hundred daily inoculations that are made in his laboratories.

A curious sight the place presents every morning for those who are not familiar with this corner of Paris. The institute, a large building divided into two sections, joined by a covered gallery, is situated in the Rue Dutot, beyond the Avenue de Breteuil, some distance behind the *Invalides*.

Pasteur and his family occupy the front section of the house or palace, the other is given up to the laboratories where chosen pupils, native and foreign,

have every opportunity given them for perfecting their bacteriological studies. Every day from ten to twelve the great square low ceiled room on the ground floor is crowded with as motley an assemblage as the imagination of man could very well picture to itself. Bedouins draped in their burnous, swarthy Egyptians, gracefully clad Portuguese, peasants from every corner of Europe are grouped together in animated knots, waiting their turn in the series of thirty inoculations compromising the treatment.

They chat together in the room, and in the great gravel court outside, with as much good humor and indifference as though they were whiling away the quarter of an hour preceding the opening of the village church. What greater compliment to M. Pasteur than this unconscious tribute of perfect faith? They all seem to have forgotten the attacks of the mad dog, and, were it not for an ugly scar here and there, an arm in a sling or a bandaged eye, one could scarcely believe that this good-natured crowd had lately been through such tragic experiences. The inoculations are made in a separate room. The syringe is first dipped in boiling oil (an antiseptic precaution which prevents the formation of abscess, the possible result of subcutaneous injections) is then filled with vaccinal matter and handed to the physician. The latter then makes one or two quick injections on the side of the abdomen, and the operation is over until the following day. The men stand it stoically enough, but the women generally have to be held, they look very much concerned over it all, and many of them forget themselves so far as to cry. As for the children, they simply howl. As a panacea for their woes, Pasteur keeps piles of sous on a table within reach, and a few disks of the shining metal usually dry even the tears of infancy in a wonderfully short space of time.

After the inoculation hours M. Pasteur oversees the studies of his pupils. For years discoveries of importance have been carried on in secrecy.

For a long time after the discussions upon the inoculations against rabies nothing would have induced the great scientist to introduce any new discovery to the public. He was so disgusted, so heart-sick with human stupidity that it required all his great courage to prevent his being tempted to leave mankind to reap the harvest of its own stubbornness.

Five years have rolled by since the inauguration of the Pasteur Institute; these years have passed in peace amidst the admiring approval of the entire world.

In the present December occurs a grand celebration of Pasteur's seventieth birthday. Testimonials, medals, addresses, tributes of all description are pouring into the Institute from every civilized country.

It may not be exaggerating to say, that among all these honors the thing that gives M. Pasteur the greatest satisfaction is the triumph of his brilliant disciple Monsieur W. M. Haffkine in having succeeded in transforming and inoculating the cholera microbe. M. Haffkine's studies in this direction have been carried on under M. Pasteur's advice during the last two

years. Not a word was breathed about them, either in scientific circles or the public at large until every scientific proof had been pushed to its utmost limits in the laboratory.

When the results were at last made known it is not strange that the attention of the whole world has been drawn toward the peaceful laboratories in the rue Dutal.

So great is the humanitarian problem now at stake that the veteran savant has buckled on his armor and descended once more into the arena of controversy in order to bring the problem to a successful issue by his sanction and authority.

Everybody has heard of Mr. Stanhope, of the New York *Herald*. He was among the first to be inoculated against cholera, and also subsequently exposed himself to all the horrors of the disease in the plague-stricken hospitals of Hamburg.

A few friends were discussing his experiment one evening last September. During the course of conversation the writer of the present paper said: "I quite understand how Stanhope had himself inoculated, and I think any one would do the same thing under certain conditions." The remark was greeted with an incredulous shrug of the shoulders and a general "Oh, that is very easy to say, but *you* would not be inoculated, would you?" The answer was an impetuous "Yes, I would." After everybody had gone home I thought the matter over and asked myself whether I had really meant what I had said and had not been carried away by the enthusiasm of a somewhat heated discussion. I found I was still of the same mind; the logical conclusion was a letter to M. Pasteur putting myself at his disposal in case he needed any new subjects for his experiments. The following morning I started for a week's country tour. To tell the truth, I did feel a bit uncomfortable about the impulsive offer I had made, and although determined to carry out my word I had the painful consciousness of an unavowed wish that the answer might be a refusal. Upon returning to Paris here is what I found.

DEAR MADAME: So far our experiments in anti-choleraic vaccination have been made upon men only. M. Pasteur is anxious to know its effect upon women and children. So we accept your offer. The experiment will have no ill effect upon your health, and its only presumable result will be to make you refractory to cholera. Please come to see me at the Pasteur Institute after your return. This letter will answer for an introduction card.

Please accept, etc.,

(Signed)

W. M. HAFFKINE.

The die was cast. There was nothing for it but to go on. I answered immediately that I would be at the Institute the following morning. The sensations of the next twenty-four hours would have made a good study for a psychologist; they were a strange mingling of exultation and hesitation. At last here was a small chance of doing something really useful, a chance of putting one's self to the test, of ascertaining whether you were capable of carrying out the projects of utility you had always nursed in the

bottom of your heart, but which, for want of opportunity, had always remained mere projects and nothing more.

To be sure the present opportunity was not a very great test of devotion, but to a certain extent it was an unpleasant one. The "*presumable result*" in Haffkine's letter had an uncanny suggestion about it that was anything but reassuring. Although a number of men had been inoculated with cholera, there was necessarily a doubt about the effect it would have upon women. Morally, I felt sure of myself, but having recovered a few months before from an attack of nervous prostration and suffering at the time from a severe cold, the physical part of the undertaking was less certain.

There was nothing to be gained by putting the thing off. Backing out of it was impossible—not from any false pride in the matter, but for the sake of one's own self-respect.

The moral side of the question won the day, and I never felt happier in my life than when I went to the Pasteur Institute the next day and found my way to Mr. Haffkine's laboratories on the second floor. I expected to meet some grizzly old savant, but was surprised to find that M. Haffkine was a very young man. He is thirty-two years old, but does not look a day over five-and-twenty. He is blond, tall, erect, remarkably well built, has deep gray-blue eyes, which are full of energy and purpose—eyes rarely possessed by those who do not carry out their purpose. His manner is a strange mixture of self-possession and timidity. He speaks somewhat slowly, almost weighing his words, with that precision so often found in men who pass their lives face to face with the great mysteries of Nature.

Almost the first question M. Haffkine asked was "Are you French?" A negative answer explained my presence. Foreigners are accustomed to see women of the Anglo-Saxon race take an active interest and play an active part in the movement of the intellectual and scientific world. French women make the influence felt by proxy; any independent action which might disturb the iron-bound laws of conventionality would lay them open to all sorts of ugly suspicions. Mrs. Grundy reduces them to playing the unsatisfactory rôle of modern Egerias.

The announcement that you are American or English—it is one and the same thing to them here—is somewhat like the Free Mason's "grip." You then meet on equal grounds; you understand each other (as a matter of course this applies exclusively to the sterner sex).

The first visit to M. Haffkine lasted over an hour. He showed me all the curiosities of his laboratories; a veritable treasure house of every ill that "flesh is heir to" in the shape of microbes preserved in glass tubes duly labeled and laid away in boxes kept in oaken cupboards lining the walls of the rooms.

The microbes are cultivated upon the surface of a solidified mixture of bouillon and gelose (or *agar-agar*, an extract of a Japanese aquatic plant). If their in-

dividuality is not sufficiently distinct when cultivated in this *milieu* it is replaced by gelatine.

The cholera microbe at present occupies the place of honor in the laboratory.

In the middle of the center table is a long row of tubes, each marked with the name and age of persons who died of cholera. The isolated germs of each disease are preserved in the bottles.

Cholera microbes are cultivated in many different kinds of *milieux*, such as potatoes, eggs, extracts of meat, etc. They are innocent looking microbes resembling little lines or commas made by a sharp pen.

Over forty people have been vaccinated for cholera so far. With the exception of Haffkine, Dr. Roux and one other person, two inoculations have been made in each case. M. Haffkine put my good will to the test by asking if I would be the fourth to undergo *three* operations.

Being a believer in the saying that you may as well be "hung for a sheep as a lamb," I consented.

The first inoculation was made with attenuated virus, which, having been preserved for a long time in phenic acid, consequently contained the venom produced by dead microbes only. The second was made with living attenuated, and the third with exalted virus. M. Haffkine began the operation by boiling the syringe until every microbe foreign to the subject had gone to the limbo of microbes that were. While the syringe was boiling he took a long pipette, stopped at the open end with cotton, broke off the thin closed end and heated the tube over a gas jet, after which he inhaled into it a little pure bouillon (containing neither germ nor any other solid substance). He then blew the bouillon into a test tube containing the gelose and microbes. When the microbes and bouillon were well mixed in the test tube he inhaled them into the pipette again and blew the emulsion into a small glass. Eight cubic centimetres of bouillon was then added and the preparations came to an end. (This description applies to the last two inoculations; the dead preserved virus is kept already prepared in diminutive glass tubes, made for exportation). As a last precaution the microbe was examined under the microscope, in order to avoid the possible intrusion of any other creature into the liquid; phenic acid was passed over the skin where the injection was to be made, and in a second the operation was over.

It is not more painful than the prick of a needle. For two or three hours you feel nothing abnormal, then distinct little pains begin at the point of inoculation and increase until getting up and sitting down become matters of serious reflection, especially when your family and friends have no idea that you have been trying to do the heroic.

Here is the report written for M. Haffkine during the hours immediately following the first inoculation. I choose this one because the symptoms were stronger and more characteristic, although analogous to those following the first and third experiments:

The second operation was made at 11:30 in the morning. My temperature was 37° 4 Centigrade, or 99° 3 Fahrenheit.

11 o'clock. Breakfasted well. So far I have only a slight pain at the point of inoculation in the right side.

If I remember last Monday's sensation correctly, I think that two hours after the first inoculation the 'injection point' was more painful than it is to-day. That may be because I know what to expect now, while the first time this pain was a surprise.

3.30 o'clock.—Temperature 37° 6 Centigrade or 99° 7 Fahrenheit. The point hurts, but not so much as it did the first time. It is not worse than the pressure of a shoe upon a somewhat painful corn.

7.30 o'clock.—Temperature 34° 6 Centigrade or 99° 7 Fahrenheit. My head is heavy, my cheeks burn and I have slight chills. The point in the side hurts about as much as it did the first time; not more. Walking is somewhat painful. The headache is scarcely worth mentioning, but it is irritating. I am out of temper. When I was a child I had the same vague wish to shake somebody when my hair was being combed. Dinner is announced, I am not hungry.

8.50 o'clock.—Temperature 37° 4 Centigrade, 99° 3 Fahrenheit. I ate a little, but without appetite. I am well with the exception of an insignificant pain in the left side.

10.40 p.m.—Temperature 37° 9 Centigrade or 100° 2 Fahrenheit. I am not so well. Headache, nausea; my cheeks are burning and icy chills are running from head to feet. I cannot overcome a horrible depression. To be frank, I should like to have a good cry, a luxury I don't often indulge in.

2 a. m.—Temperature 38° 7 Centigrade or 101° 1 Fahrenheit. Slept when I went to bed, but for a time that seemed interminable I have been half asleep and half awake. The most grotesque fancies come into my head, and I only wake entirely to say to myself that they are "only dreams," to begin the same thing again the next moment.

I have a burning sensation all over the body, but the headache has gone. The pain in the side is so intense that I can scarcely move. It reaches down the leg to the foot. Coughing is very painful. It is like tearing open a healing wound. I will blow out the light and try to go to sleep.

10 a. m., Sunday.—Temperature 37° 6 Centigrade or 99° 7 Fahrenheit. Slept until after nine, but the sleep was so agitated that it would have been preferable to be awake. I am both light and heavy headed. Have just taken my *café au lait* and am better, but the pain in the side is so strong that I don't know how I shall manage to dress.

11.30 a.m.—My cold bath did me good, and I am very much better and hope that in a few hours I will be quite well again.

11 p.m.—Temperature 37° 7 Centigrade or 99° 9 Fahrenheit. Have eaten a little and have had strong pain in the side all day. My back aches and I have been generally ill at ease; I am awfully fatigued, but this may be the effect of my cold.

Monday, 9 a.m.—Temperature 37° 0 Centigrade, or 98° 6 Fahrenheit. Passed a good night.

The only unpleasant souvenir of the second inoculation is sensitiveness in the right side.

This account, jotted down upon the spur of the moment and without the slightest view to its ever being published, tells all the story, in all sincerity, without either reticence or exaggeration.

The third experiment was very like the two others, with the exception that the headache, fever and chills were a trifle stronger, though lasting a shorter

time. On the other hand, the pain in the side was much less intense.

The bulletins of all those who have been inoculated so far agree with the above description in a greater or less degree.

In general, people who are predisposed to cholera suffer less from fever than those who would not easily have taken the disease.

The pains in the side are the most unpleasant feature of the operation, but they are much lighter than the pains accompanying a successful vaccination against smallpox.

A number of the people who have been inoculated so far have exposed themselves to every danger of catching cholera afterward. M. Haffkine, M. Hankin and a French journalist, M. Badaire, have swallowed the concentrated germs of cholera without having experienced the slightest inconvenience from the experiment.

Their having escaped the contagion is a probable, but not yet a positive, proof that the remedy is infallible. In order to test its efficacy to the utmost, M. Haffkine proposes to apply his method in the following way:

A village or district where cholera appears every year, as a regular thing, must be chosen as the center of operation. Before the periodic appearance of the disease half of the inhabitants must be inoculated.

When the epidemic is over the result can be easily verified by counting the relative number of deaths that have occurred among the inoculated and the uninoculated members of the community.

When Prince Damrong, the brother of the King of Siam, was in Paris, he begged M. Pasteur to let him know if he ever obtained a remedy against cholera, that disease being the bane of his native land.

The moment Pasteur was satisfied of Haffkine's discovery, he immediately officially announced the glad tidings to the King of Siam, at the same time requesting his permission for M. Haffkine to apply his method in one of the most afflicted villages of the country. Presumably there is no doubt as to what the answer will be.

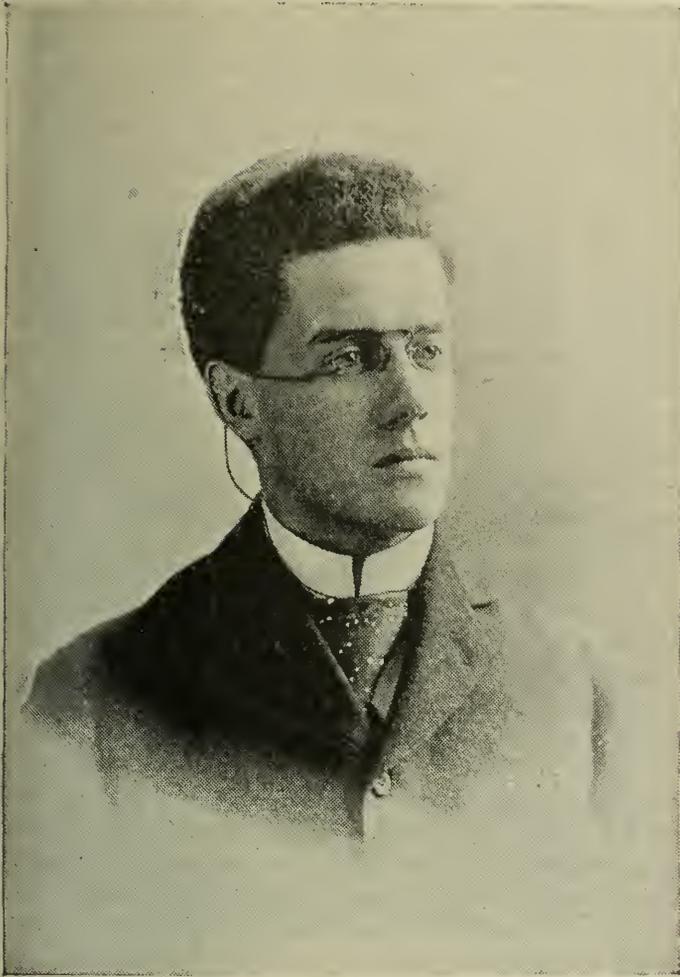

Everybody appreciates the comparative uselessness of the preventives so far employed against cholera. Scientific statistics prove that the disease will return with redoubled force this season. Our only chance of conquering it definitely comes from the Pasteur Institute.

I dash off the story of my little experiment in the hope that it may be of use.

No one can do more than his or her best for the sake of the general good. The memory of the quarantined ships, the crowded hospitals, and the crowded graveyards of last summer, should be a sufficient inducement to urge us to do everything in our power to avoid a repetition of these horrors.

If the public will help M. Haffkine in his efforts to master the disease, there is no reasonable doubt but that cholera may be stamped out within the next few years.

UNIVERSITY EXTENSION IN AMERICA.*

GEORGE F. JAMES,

General Secretary of the American Society for the Extension of University Teaching.

THE University Extension movement, begun in England about twenty years ago, attracted from the beginning the attention of thoughtful educationists on this side of the water. Even during the '70's proposals were made to introduce it here, but they did not result in any permanent work. A few lecture courses were given here and there throughout

* THE REVIEW OF REVIEWS for July, 1891, contained an elaborate article by Prof. Herbert B. Adams, of the Johns Hopkins University, entitled "University Extension and Its Leaders." The article was an admirable historical presentation of the beginnings in this country of a remarkable educational movement and of its progress up to that date. But far more remarkable than anything that had been accomplished here before the autumn of 1891 have been our achievements in University Extension during the past eighteen months; and the present article is designed to set forth from the time point of December, 1892, the state of that movement in all parts of the United States and in Canada. Dr. Adams' article was accompanied by excellent portraits of Professor Adams himself, the lamented Arnold Toynbee, Bishop John H. Vincent, President William R. Harper of the Chicago University, President Gilman of the Johns Hopkins, President Dwight of Yale, President Eliot of Harvard, President Patton of Princeton, President Low of Columbia, Provost Pepper of the University of Pennsylvania, President C. K. Adams then of Cornell now of Wisconsin University, President Northrop of the University of Minnesota, Mr. George E. Vincent of Chautauqua, Mr. Melvil Dewey, Mr. George Henderson, Prof. Edmund J. James and Prof. Richard G. Moulton. A prize was awarded Dr. Adams for this article by the University of the State of New York. Copies of the REVIEW for that month may be obtained from this office.

the country by college and university men, but they were not followed up by any system of organization, so that they failed of their full effect. Toward the close of the '80's the sudden and marvelous awakening in England on this subject, followed by a development of interest in the local centers which eclipsed all that had existed before, attracted again public attention on this side. Everything pointed toward a new realization of the importance of the movement. Addresses on the subject before societies and educational institutions, magazine articles, discussions before teachers' associations, all indicated a ripeness of conditions for a new educational impulse.

It was fortunate for the future of University Extension in the United States that it attracted at this juncture the attention and interest of one of the most prominent of American educators, the genial and accomplished Provost of the University of Pennsylvania, Dr. William Pepper. Other men had talked about the movement, had written for magazines concerning it, had argued in its behalf, had encouraged others to take it up, and some had even succeeded in persuading a few communities and lecturers to try experiments in a half-hearted and spasmodic way. But it was reserved for Dr. Pepper really to take up the subject in a vigorous and practical manner which ensured its success from the outset and thus encouraged others to follow in his footsteps. With that foresight and insight which characterizes all Dr. Pepper's actions and which has brought the University of Pennsylvania, under his direction, within the short period of ten years from the grade of a third or fourth rate college into the very front rank of American universities, a scheme of work was devised and put into execution which produced remarkable results within a very short time. Dr. Pepper realized, as no one else had done so clearly, that in order to start this movement it would be necessary to get funds. No attempt based on mere recommendations would, in his opinion, succeed. He put at the service of the cause those rare powers of persuasion which have made him one of the greatest college presidents of the time, and succeeded in interesting a large number of prominent business men in Philadelphia in the work of raising a guarantee fund. In a short time a fund of \$7,500 per year for five years, aggregating, therefore, some \$37,500, was subscribed. In this work the names of Charles C. Harrison, Justus C. Strawbridge, John H. Converse, Frederick B. Miles, Charlemagne Tower, Charles E. Bushnell, Craige Lippincott, Samuel Wagner, Stuart Wood, J. G. Rosengarten, John S. MacIntosh, Charles Wood, testify to the deep interest which representative Philadelphians feel in this great movement.

The most significant sign of the success attained was the widespread interest which was aroused in all the circles of municipal activity. The manufacturing firms of Bement, Miles & Co., the Baldwin Locomotive Works, and William Sellers have been as generous in their contributions and as close in their sympathy

as have the heads of such business houses as Strawbridge & Clothier and the J. B. Lippincott Co. Lawyers, physicians and ministers, prominent in their professions, have joined on the Local Council; the press has, from first to last, been untiring in its support, while such constant friends of education as Mr. C. C. Harrison and Mr. Joseph Wharton have added this cause to their already numerous interests.

Nor did these and similar men rest content with giving of their money, but many of them contributed their time and effort to help make the work succeed. The very general participation in the Extension work by busy men and women proves the remarkable influence of this method of instruction over the best minds in the community. A society was formed for the purpose of promoting the work of University Extension

PRESIDENT HENRY WADE ROGERS,
Of Northwestern University.

sion; the secretary of the society was sent to England to study the English movement on the ground, and to secure, if possible, the most successful English University Extension organizer and lecturer, Mr. Moulton, of Cambridge, for a season's work. The report of the secretary was so favorable that the society under Dr. Pepper's lead immediately closed with Mr. Moulton's terms, engaging him for five months' work. The enterprise thus begun was so immediately and unexpectedly successful that the organizers of the work determined to put it on such a foundation as would render it at once permanent and general.

As the first step in this movement the local society was reorganized and expanded to a national society with a distinct purpose of promoting the extension of the work in all parts of the country wherever people could be interested in it. To do this, however, it was necessary to secure as directing and organizing president of the Society some one of great execu-

tive ability; of broad and liberal training, of wide educational experience. The man was fortunately at hand in Prof. Edmund J. James, of the Wharton School of Finance and Economy, a man of the most extensive knowledge of educational theories and of educational institutions, and deeply interested in all forms of popular education. Professor James brought to the post a happy combination of the qualities necessary to broaden and deepen the foundations of this great work. An unusually large acquaintanceship among educational men of all grades and types enabled him from the start to secure the hearty cooperation of men prominent in the field of university, college and secondary instruction throughout the country. His own educational standing, evidenced anew lately by flattering calls to professorships in three of our greatest universities, created a confidence in the thoroughly educational character of the movement, and also a belief in the practicalness of any plans approved by his judgment; while the evidence of the probable stable character of the work, implied in the willingness of such a man to give liberally of his time and strength to its development, was the best encouragement to young men to prepare themselves for thoroughly efficient work in this field. The hopes entertained from his taking charge of the direction of the work have been more than realized. The Society has strengthened and broadened its work in every direction, until it is not too much to say that every successful University Extension experiment in the country owes a large debt of gratitude to the society. In what this service consists can be seen from a brief glance at what the American Society has done under his leadership.

THE WORK OF THE FIRST YEAR.

The experimental efforts of the first season, November, 1890, to May, 1891, had resulted in the formation of more than a score of local centers, many of them in Philadelphia and its immediate vicinity, others, however, in more distant parts of Pennsylvania, and in the neighboring States of New Jersey and Delaware. The well-defined aim of the Society has been to co-operate with existing organizations and to supplement by its own system their educational efforts. These centers were accordingly formed in connection with libraries, institutes, branches of the Young Men's Christian Association, literary clubs and various organizations of workingmen. Where there were no such institutions or where the existing body did not enter upon the active organization of the work, a representative local committee was formed for its guidance. To this broad view of its relations with other educational agencies the success attained by the Society was largely due. At the centers thus formed there were given during the first six months forty-three (43) lecture courses, covering a large number of subjects and including nineteen courses on literature, eight on history, and two or more on mathematics, physics, botany and zoology. The average attendance at the courses indicated that not less than 10,000 persons had profited within this short time by the advantages thus offered.

THE SEASON OF 1891-92.

At the opening of the season of 1891-92 the American Society, reorganized with a view to the deepening and broadening of its influence, entered upon its work with the concrete advantages of a year's successful experience, with well-trained local committees enthusiastic over the results already accomplished, and with a staff of distinguished lecturers who had added to the scholarship of the study and the training of the classroom, the skill in presentation and illustration which can best be acquired before a popular audience. The faculties of Princeton, Lehigh, Lafayette, Swarthmore, Haverford, Bryn Mawr and the University of Pennsylvania had given to its force many of their most successful teachers; while the staff of the general offices included several active and efficient organizers. Under these conditions the exceptional record of the Society during its second year is not surprising. Of the centers formed during the first year twenty-three continued well directed and well sustained work. To this number were added not less than thirty-nine (39) new centers, covering not only Pennsylvania, New Jersey and Delaware, but Connecticut and Virginia. Instead of the somewhat haphazard selection of subjects which had obtained during the first season, many centers arranged now for a well-chosen succession of courses along definite lines. The feature of lecture *series* which had already distinguished the University Extension movement from preceding efforts at adult education was thus still further emphasized. The subjects of literature and history, and to a less degree of physical and natural sciences, retained their popularity. For the first time in the history of Extension teaching, however, the subject of political economy was received with special favor, largely due, it must be said, to the scholarship, pedagogical skill and pleasing address of one of the staff lecturers of the Society, Mr. Edward T. Devine, Fellow of the Whar-

ton School of Finance and Economy. At the fifty-nine (59) active centers of this season, one hundred and twenty (120) lecture courses were given to an average attendance of not less than 25,000.

THE EXTENSION CIRCUIT.

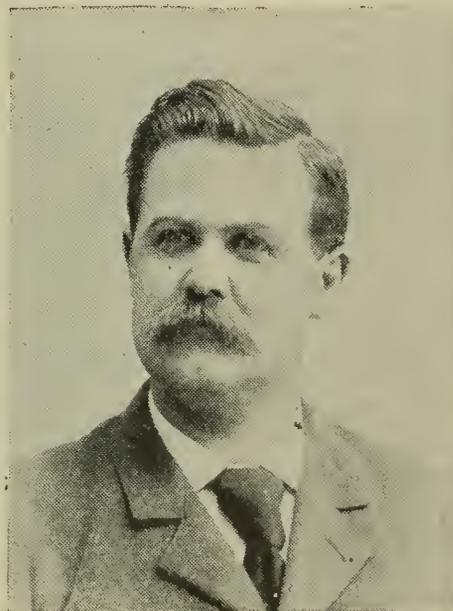

The Society was enabled to expand its work over a half-dozen States, not only by the careful co-operation of the colleges and universities affiliated with it, but also by the development of a special feature of its own, namely, the University Extension "circuit." The organization of local centers at considerable distances, not only from its general offices, but also from any higher educational institution, seemed at first hardly feasible. But by carefully choosing towns within easy distance of each other, and arranging for them lectures by the same instructor to continue on the different evenings of the week through the period of an Extension course, this problem was successfully solved and one more model lesson was offered by the Society to all engaged in Extension work throughout the country.

A TYPICAL CENTER.

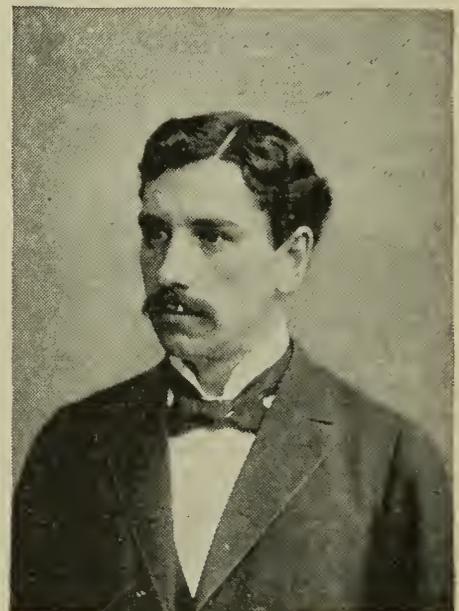

A singular example of the flexibility of the University Extension system, and of the possibility of adapting it to widely varying conditions, may be seen by a momentary comparison of some typical centers of very different kind. The largest local center of the country, and the one at which most courses have been given, is the Association Local Center in Philadelphia. At this center during the first year five lecture courses were given. During the second year no less than ten courses were given, aggregating sixty-three (63) lectures, and including among the subjects two courses on literature, four on political economy, and one on geography. For the first time in the history of the movement, a course on money was arranged for bank clerks, and courses on mathematics and physics were largely attended by mechanics and artisans. Such a variety of

HENRY W. ROLFE,
Staff Lecturer of the American Society.

PRESIDENT JOHN M. COULTER,
Indiana University.

EDWARD T. DEVINE,
Staff Lecturer of the American Society.

subjects could be offered only at a center in a populous community and one possessing a large and varied natural constituency. On the other hand, equally successful results attended the efforts of those directing Extension centers, not only in the towns and even in the small villages, but at almost isolated points to which farmers actually drove from miles in every direction.

UNIVERSITY EXTENSION LITERATURE.

It is safe to say that the thing which contributed largely to making these distant and widely differing centers parts of a homogeneous whole was the far-sighted policy of the Society in establishing a monthly journal, which should be its medium of communication with its own members and those attending the courses of the local centers. *University Extension* has, however, been much more than a local bulletin. It is rather a magazine of which the aim is to present a discussion of Extension methods and ideas, with reports from centers, societies and universities engaged in Extension teaching. It has been so conducted as to be of value not only to all connected with University Extension work, but to all interested in any new and important phase of educational progress. There have been discussions by university professors and other specialists of the best methods of Extension instruction, and there have been discussions and contributions from prominent Englishmen of questions which have arisen in that country. These features, with personal notices and editorial notes, have made the journal indispensable to educational specialists and interesting to general readers. The tone of the journal is hopeful, but not extravagant. Its editors have not hesitated to give frequent expression of their confidence in the future of University Extension and in the great value of the work now in progress; yet they do not hesitate to allow opportunity for the expression of any unfavorable criticism of particular features, or to give currency to any honest and well-founded doubts concerning the system itself.

This is, however, only a part of the publication work of the Society. The *Handbook of University Extension*—edited by the general secretary, George F. James—is supplemented by many important addresses delivered at the various meetings of the Society and printed for general distribution, and by monographs on various phases of the movement from men prominent in English and American education. These, with the various circulars of the Society and a large list of syllabi on the Extension subjects of instruction, have been of untold service in spreading an accurate idea of the aims and possibilities of the work. Wherever an effort has been made for the first time to introduce this system the publications of the Society have been invariably employed with the best possible results. On the early perception of the importance of this element has depended much of the efficiency of the Society, and to it is due the general recognition on both sides of the Atlantic that the United States has taken the lead in the production and publication of University Extension literature.

THE NATIONAL CONFERENCE OF 1891.

One of the most important events of the second year of Extension work was the National Conference on this subject, held under the auspices of the American Society in Philadelphia, on December 29-31, 1891. This was attended by delegates from nearly half the States in the Union and from more than fifty (50) institutions of higher learning, and led to an important increase in the interest taken in the movement throughout the country. Hon. William T. Harris, United States Commissioner of Education, took a prominent part in the exercises of the Conference, as did also Mr. Michael E. Sadler, student and steward of Christ Church, Oxford, and secretary of the Oxford Delegation for University Extension. The meeting was the most important ever held in the history of the movement and the "Proceedings" form a most important volume on the subject, and one which touches, as Mr. Sadler himself said, the "high water mark" of University Extension literature.

INCORPORATION OF THE AMERICAN SOCIETY.

At the end of the second year the Society had accomplished, not only for the Middle States in which its direct teaching activity was manifest, but also for the whole country, the definite results thus outlined. A careful consideration of the state of the movement and of the educational conditions of the country seeming to point so clearly to many benefits which could be secured through the American Society, and which would certainly not be obtained in any other way, led those who had so far been active in connection with it to ask for a charter of incorporation and to lay before the members of the Society and of the council chosen from the faculties of nearly a hundred co-operating colleges and universities such amendments to the constitution as were thus made necessary. On June 6th, at a meeting of the American Society held in Philadelphia, the constitution was accordingly revised and the incorporation of the Society, thus provided for and since completed, is full guarantee of the permanency of this valuable work.

THE UNIVERSITY EXTENSION SEMINARY.

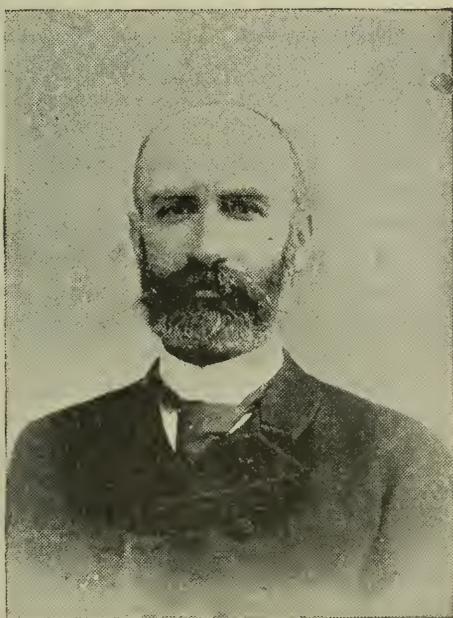

The year which has just opened has been already marked by two striking developments in the movement. The first was the University Extension Seminary for the training of lecturers and organizers, established in Philadelphia by the Society at the suggestion and largely through the efforts of the general secretary, George F. James. It is singular that in the history of twenty years of Extension work in England no plan has been devised for the training of lecturers, although the pressing need was constantly felt, and perhaps nothing more thoroughly justifies the mode of organization so far adopted in this country than does this important advance, which could not otherwise have been so easily or quickly accomplished. The correlating influence of the American Society may be seen by a glance at the names which appear on the list of lecturers before the seminary. President Charles De Garmo, of Swarthmore; President Isaac Sharpless, of Haverford; Hon. William T. Harris,

United States Commissioner of Education; President James MacAlister, of the Drexel Institute; Professors James, Patten and Fullerton, of the University of Pennsylvania, with a number of distinguished lecturers from other parts of the United States, and even from England, form a faculty which illustrates at once the universal interest in this subject and the common meeting ground of all workers afforded by the Society.

This helpful influence in correlating all active efforts in University Extension teaching has been strengthened by a plan of general co-operation proposed by the Society, to assist colleges and universities in this movement. The plan includes the offer, first, to place at the disposal of any university or college the circulars, addresses and syllabi of the Society, and even to distribute these publications from the office to the persons indicated by the institution as likely to be interested in the subject. Second, if closer co-operation should be preferred, to form centers in or near such institutions to be provided with lecturers from the institution itself. Or, third, to send if desired its own staff of lecturers, when circumstances will permit, to engage in Extension work under the auspices of the university or college; these lecturers to be considered members for the time being of the staff of the institution. The plan contemplates, moreover, the issuing of certificates by the Society, in connection with such co-operating institutions, for the lectures and examinations which they carry on.

EXTENSION IN NEW YORK.

In New York the University Extension movement has a special standing, through the action of the State Legislature in granting an appropriation for this purpose to be expended under the direction of the University of the State. To Mr. Melvil Dewey is due most largely the credit of showing clearly the importance of the movement to the members of the Legislature, which he accomplished by a systematic circulation of the publications of the American Society, and by a well organized campaign of education on the part of those connected with the higher institutions of the State. The efforts of the Regents in the line of University Extension were especially facilitated by the ad-

Director of University Extension for
Rhode Island.

BEVERLY E. WARNER,
Connecticut State Representative of
the American Society.

mirable equipment of the University in the State Library and in the Examination department, while the executive force of the University aided most effectively the work of organizing and administering the centers. Mr. Dewey has emphasized most fully the importance of the public library as the real corner-stone of University Extension, claiming

rightly that the mission of the University Extension lecturer is less to instruct than to inspire, and that his success is measured by that interest in his audience which leads them to read, and by the aid he gives in the use of books. During the first season of active work, 1891-92, centers were organized at Albany, Albion, Ballston, Binghamton, Brooklyn, Gloversville, Rochester, Watertown and Yonkers. The season opens this year with all these centers ready for active work and with new centers, which have been formed at Attica, Batavia, Lockport, Peekskill and Tarrytown. The appropriation from the State was not renewed by the last Legislature, but by economical management there are still funds for this purpose, and it is hoped that the work accomplished will lead to further grants from the State.

BROWN UNIVERSITY.

In New England, Brown University was the first to begin actively University Extension work, organizing it as a department of the University under the direction of Prof. Wilfred H. Munro. During the season of 1891-92 thirty-five courses (of 12 lectures each) were given in sixteen towns by fourteen lecturers. The peculiarity of the Brown University work is that it is largely of a class nature. The lecturer's fee for a course of twelve lectures is \$100, which makes possible the organization of centers in small towns, and results for the most part in classes of from thirty to fifty persons. Especially noteworthy is one course on practical physics, organized for the skilled workmen of a leading manufacturing company. On the opening of the work this season it is clear that much better results will be obtained, educationally speaking, than in the past. The number of centers remains about the same, with the prospect of further organization in the course of the winter. Centers are located, not only at various points in Rhode

Island, but also at Stonington, Conn., and Brockton, Clinton and Attleboro, Mass.

THE CONNECTICUT SOCIETY.

In Connecticut the most noteworthy Extension work done last year was at Bridgeport, where Mr. Devine, of the American Society, lectured on economics under the auspices of the Bridgeport Scientific Society. The course was especially remarkable as being the starting point in the organization of the state society. Mr. Beverly E. Warner, president of the Bridgeport Scientific Society, which had arranged for the first course, became interested in the movement, and through his efforts and the co-operation of the American Society and that of many active educators of the State, a meeting was arranged at Hartford on April 30 of representatives from Yale, Trinity, Wesleyan, Hartford Theological and other institutions. At this meeting the Connecticut Society was formally organized as a State branch of the American Society, with a council made up of representatives from the colleges and universities mentioned. Prof. Albert S. Cook, of Yale University, was chosen President, Mr. F. B. Hartranft, of the Hartford Theological Seminary, Secretary, and Rev. Beverly E. Warner was appointed the official representative of the American Society. The Connecticut Society is now extending its membership throughout the State and is actively organizing centers at important points.

In Northern New England, Bowdoin College offers Extension courses which have been given in several towns in the State. Colby University has also entered the field. Courses on mineralogy, by Prof. W. S. Bailey; French Revolution, by Prof. Shailer Matthews, and German literature, by Dr. A. Marquardt, have already been delivered.

SCIENCE TEACHING IN NEW JERSEY.

Extension work in New Jersey has been largely organized by the American Society. At nine active centers last year twenty-two courses in history, literature, economics and science were delivered by its staff lecturers, and others from the faculties of the Universities of Pennsylvania and Princeton. This work has been admirably supplemented on the scientific side by Rutgers, the Agricultural College of the State, which issued in the fall of 1891 circulars announcing the intention of the college to do Extension work. In the course of the year lectures were given on astronomy, agriculture, electricity, chemistry and botany in five of the largest towns of the State. The work is continued this year under the efficient management of Prof. Louis Bevier, Jr., the director of this department. The work has been of a specially practical nature, and has in several instances appealed especially to the farmers of the State.

EXTENSION WORK IN OHIO.

In Ohio the most effective organization so far developed is the Cleveland Society for the Extension of University Teaching, the success of which is largely due to the well-directed efforts of President Charles

F. Thwing, of Adelbert College and Western Reserve University. During 1891-92 sixteen courses were given at nine different points in the State, although the forming of centers was not begun until February. One of the most promising features of the work was the resulting formation of students' associations to continue the subjects of the different lecture courses during the summer months. As the result of the course on astronomy a club was formed for the study of the constellations, the members of which went every Monday evening through the summer to the observatory of Adelbert College for practical work with the telescope. Secretary E. O. Stevens reports courses in literature and science as now being given at six centers, with a total attendance of about 800. A noteworthy feature is a class for teachers at Association Hall, which is pursuing a course in American literature, especially arranged by the lecturer to adjust it to the needs of teachers in the public schools of Cleveland. The class began work with about three to four hundred in attendance. The society offers 48 courses by about two dozen lecturers from the faculties of Adelbert College and the College for Women of the Western Reserve University and the Case School of Applied Science.

At Toledo, Supt. W. W. Compton of the city schools, has been active in arranging Extension courses, which were given last year by professors from the University of Michigan and Oberlin University on economics, English literature, geology, chemistry and physics. The work is being pushed with equal energy and even better prospects this year.

The work in Cincinnati has been carried on by members of the faculty of the University of Cincinnati, especially for the benefit of teachers. The lectures are given on Saturday and included last year three courses of thirty lectures on Latin, chemistry and history. The courses offered this year include a wide variety of subjects, duplicating very largely the actual work within the college walls, with other courses arranged especially to lead up to these. Prof. W. O. Sproull, who has introduced and largely systematized the work, reports that it has done more for the cause of higher education in Cincinnati than any other movement during a score of years. It has impressed forcibly on the public mind the importance of higher education and strengthened the influence of the University not only among the teachers of the city, but among the ministers, editors, lawyers and business men who have attended the courses.

An effort to introduce greater system in the University Extension work of Ohio has taken the form of a state society, organized in the spring of 1892, of which President Charles W. Super, of the Ohio University, is the head. At a meeting of the Council on November 18, it was decided to secure a State organizer who should assist in developing the work in connection with the fourteen or fifteen colleges represented in the society.

THE UNIVERSITY OF INDIANA.

The first University Extension center in Indiana was formed by a committee of the Branch Associa-

LYMAN P. POWELL,
University of Wisconsin.

PROFESSOR FRANK W. BLACKMAR,
University of Kansas.

tion of Collegiate Alumnae, of which Mrs. Mary Wright Sewall was Chairman. The work was organized in affiliation with the American Society, and in the spring of 1890 Dr. J. W. Jenks, then of Indiana University, gave a course of twelve lectures on "The Elements of Political Economy." The growing interest in Extension teaching led the faculty of Indiana University to appoint in June, 1891, a committee on University Extension. In the fall of that year, courses were announced on a dozen different subjects, and during the year lectures were given by members of the faculty in Indianapolis, Evansville and New Albany, and in Louisville and Chicago. Prof. James A. Woodburn, chairman of the Extension committee, and himself one of the most successful lecturers on the staff, reports courses as now arranged in Evansville, New Albany, Jeffersonville, Indianapolis, Fort Wayne and Spiceland, and in Louisville, Ky., and in Chicago and Evanston, Ill. Six of these courses are double series of twelve lectures, making in all 108 lectures. The centers vary in size from 50 to 200 in the audience, 30 to 100 in the class, and are mostly made up of teachers with from ten to twenty per cent. of others. Much of the success of the work is due to President John M. Coulter, who has himself lectured on botany, and contributed much to the better organization of centers in the larger cities.

KENTUCKY AND TENNESSEE.

In Louisville, Ky., University Extension found an early supporter in Dr. James Louis Howe of the Polytechnic Society. For nearly twenty years lectures have been given by the society somewhat on the University Extension plan. Dr. Howe, having passed the summer of '91 in the study of the system as developed in the East, entered actively upon a plan of work which had been approved by the American Society and gave lectures on chemistry in the poly-

technic lecture room on Friday afternoons. During the past winter very successful courses on botany and literature were given by President J. M. Coulter and Prof. O. B. Clark of the University of Indiana, under the direction of the Teachers' Association. Later in the year Dr. Edward W. Bemis, then of Vanderbilt University, gave a course on economics in Louisville, which was repeated at Bowling Green, Frankfort and Lexington, and also at Evansville, Ind., and Nashville, Tenn. University Extension courses are continued this year at Louisville with a series of twelve lectures on dramatic literature by Professor Clark and a series of the same length on botany by President Coulter.

THE UNIVERSITY OF MICHIGAN.

The University of Michigan on November 18, 1891, took formal action on University Extension by appointing a committee, which reported in favor of the work, and by action of the Regents the University announced that "desiring to assist local bodies in the work of University Extension, the University has arranged the following courses of instruction according to the general plan of the American Society for the Extension of University Teaching." The first Extension center was established at Detroit and courses were given on literature, political economy and chemistry. During the year members of the faculty lectured also at Grand Rapids, Hillsdale, Kalamazoo, Bay City and Toledo, Ohio. The *University Record* of November, 1892, announces a list of twenty-three courses, from which selection can be made for the present year.

THE CHICAGO SOCIETY.

Chicago has become, as it was destined to be, the great center of University Extension work in the Mississippi Valley. On May 22, 1891, on invitation of many leading citizens of Chicago, President Edmund J.

James, of the American Society, gave an address on this subject, which was the first step toward the organization on November 28 of the Chicago Society for University Extension, formed by representatives of the Indiana and Illinois State Universities, of Northwestern, Lake Forest and DePauw Universities, and Beloit and Wabash Colleges. Mr. Jerome H. Raymond, secretary of the Society, reports active centers at the Newberry Library, Union Park, Oakland, the Central Y. M. C. A. of Chicago, and in Ravenswood, Wilmette, La Grange, Rochelle, Delphi, Aurora and Oak Park. The joint action of many

PROFESSOR EDWARD W. BEMIS,
University of Chicago.

leading institutions, covering in their natural area of influence a large extent of territory, is a most important feature in the development of the movement. The opportunity before the Chicago Society is one which is limited only by the energy of its agents and the amount of substantial financial support which the friends of the work in Chicago may be led to give it.

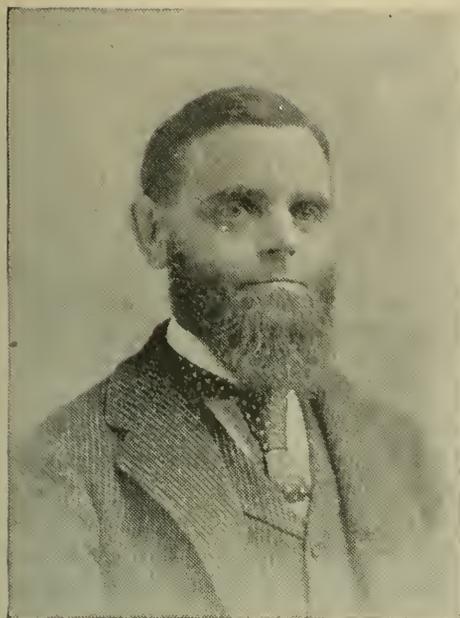

THE UNIVERSITY OF CHICAGO.

The University of Chicago, in the outline of its future activity, has given large space to the work of University Extension, which is organized as a distinct department of the University. Not only have arrangements been made for regular courses of lectures, with accompanying features of the syllabus, the class, the examination and certificate, but special

provision has been made for systematic courses of class instruction in Chicago and outside points, and also for the work of correspondence teaching in connection with the Chautauqua system. The large endowment of the University of Chicago has made possible the systematic development of the work beyond what has been attempted in any other place, and much benefit will doubtless accrue to the whole movement from the liberality shown it here. The Director of the Extension Department, Mr. George Henderson, who during his two years' connection with the American Society gained the fullest knowledge of the work, is assisted by several sub-secretaries, and the staff of lecturers is as fully provided for. In addition to a number of the regular faculty who will give a portion of their time to Extension work, President Harper has secured for the sole advantage of this department several of the most successful Extension lecturers of the United States and England, including Dr. Edward W. Bemis, of the Vanderbilt University, and Dr. Thomas J. Lawrence, of England. The important work of organization during this, the opening year of the University, will be largely aided by the experience and enthusiasm of Dr. Richard Green Moulton, who for six months is giving his entire time to the University. The large Extension force of the University of Chicago has already proved a great aid to the Chicago Society, before many of the centers of which its lecturers are now engaged.

UNIVERSITY EXTENSION IN WISCONSIN.

In many respects the most interesting development of the University Extension movement has been in the State of Wisconsin. In the fall of 1891 the faculty of the University announced the willingness of its members to fill, as far as circumstances should permit, engagements for outside work. It was not possible for the University fully to satisfy the demand for courses, which immediately made itself felt. Before the New Year came many of the faculty were forced to refuse further invitations, and in the course of the year one had given a course on literature seventeen times. A course on American history was given eight times, on geology seven, on bacteriology six, on economics three; and on electricity, Scandinavian literature and botany each, two times. Thirty-four towns and cities, ranging in size from Milwaukee, with a population of over 200,000 inhabitants, to Poynette, with 517 inhabitants, were visited, and fifty courses were given. Invitations from twenty-four other cities were received, many of them outside the State. An estimated average attendance on the lectures was 170 and on the classes 91. To 93, who passed the examinations, University certificates were awarded, accrediting them with a one-fifth study for one term at the University. As a result of the experience of the year and after a careful consideration of the relation of the University to this work, President C. K. Adams recommended as one of the first acts of his new administration the formation of an Extension department in the University and the addition to the faculty of men who should devote themselves principally to this work.

REPRESENTATIVE PHILADELPHIA FRIENDS AND "BACKERS" OF UNIVERSITY EXTENSION.

Mr. Lyman P. Powell was chosen secretary of the department, and on him was laid the responsibility of promoting the organization of centers, of editing a bulletin for State use, and also an Extension department in the *Wisconsin Journal of Education*. So far this year ten centers have been organized, many of them in the extreme portions of the State. The prospects are that more courses will be given than were delivered last year, thirty-five engagements having already been made. A special phase of University Extension activity in Wisconsin will doubtless be developed in connection with the Farmers' Institutes, which were established under the control of the University by a law passed in 1885, and for which the

General Assembly now appropriates \$12,000 annually. The close connection which is thus established between the University and the large farming population of the State will certainly contribute directly to the rapid and effective organization of centers. It is only fair to say that, judging by results, no university has so far organized University Extension so carefully, and that nowhere are conditions more favorable to the work than in Wisconsin, and under the direction of an active and efficient secretary, and aided by a large and growing staff of lecturers, University Extension in Wisconsin will certainly prove a most important factor in the education of the State.

THE UNIVERSITY OF MINNESOTA.

The first Extension courses given in Minnesota were started in the fall of '90 by Mr. Herbert Putnam, librarian of Minneapolis, who introduced four courses on international law, English literature, history and railroading. The lectures were given in the library with an average attendance of about 300. In the winter of 1891-92 the Minnesota branch of the Collegiate Alumnae took up the work and arranged two courses, one on astronomy, by Professor Payne of Carleton College, and the other a series of ten lectures on "Sixty Years' of American Politics," by Prof. Harry P. Judson. The average attendance was double that of the first year and the center closed with a surplus of \$400. Professor Judson also gave a course in Faribault, arranged especially by Superintendent West for the benefit of the High School, which was so successful that the work was continued during a second series of six lectures. Especial interest attaches to the Duluth University Extension Center, which was organized in the fall of 1891 by Mr. A. H. Viele. The great distance of Duluth from any university town made the experiment much more hazardous and expensive. The success, however, of the course of twelve lectures on economics, by Professor Folwell of the University of Minnesota, was such as to insure the continuance of the center during this year.

AT THE IOWA STATE UNIVERSITY.

The University of Iowa organized its Extension work in the fall of 1891, and during the winter courses were given in Davenport, Des Moines and Iowa City. Single lectures on subjects connected with university studies were given also at Muscatine, Burlington and other places, while one course on economics was given by a member of the faculty at Quincy, Ill. One course on "Early Colonial History" has been delivered this year at Davenport. A second course will be given at Davenport on natural science, and will be repeated at Muscatine.

EXTENSION WORK IN KANSAS.

Next to the work at Brown University and that in connection with the University of Wisconsin, the most efficient organization of Extension teaching by any independent institution is that of the University of Kansas, which announced in the fall of 1891 courses on the various subjects of the college curriculum. Work was begun in Topeka and Kansas City, Mo., with courses on electricity and economics, the latter by Prof. Frank W. Blackmar. The former course was repeated at Kansas City and additional courses on English and German literature were given at the same center. A second course at Topeka was given on political economy. Lectures were also given on chemistry at Olathe, astronomy and geology at Wichita, and a course on literature at Abilene. In the announcement of the present year are included thirty-one courses, four of which—electricity, literature, political economy and sanitation—are now being given at Wichita, Leavenworth and Kansas City.

Lectures on geology and paleontology are engaged by the Emporia center, and a course of twelve lectures on taxation has been called for by Kansas City. The work is much better organized than was the case last year, and its effectiveness has increased by fifty per cent.

COLORADO, WYOMING AND CALIFORNIA.

In Colorado the first University Extension work was done by the Denver Society, established in direct connection with the American Society. Of this, Chancellor William F. McDowell, of the University of Denver, is president, and many of the foremost educators of the State are on its executive committee. In addition to the work in Denver, where the Colorado State College and the University of Colorado co-operate with the University of Denver, courses have been established at various points in the State.

The Wyoming University Extension Association was organized at Laramie by President A. A. Johnson, of the State University, in October, 1891, and has already made its influence strongly felt. On the Pacific Coast California has not been behind the other States, and has used this system to extend the influence and benefits of its higher institutions. The University of California announced Extension courses in the fall of 1891, and during the winter courses on history, literature, mathematics, ethics and political economy were given in various parts of San Francisco, while outside of the city classes were organized in San José, Oakland, San Diego. The lectures chosen were on evolution, by President Jordan, of the Leland Stanford, on astronomy, by Professor Barnard, of the Lick Observatory, and on ethics, by Professor Howison, of the State University. The courses tended here, as everywhere else, directly to the advantage of the University in increasing public interest in its work. A clear proof of this was offered by the action of the class following the lectures on Shakespeare by Professor Charles M. Gayley, of the University of California, which generously contributed \$200 to the University for the purchase of books on this subject.

THE CANADIAN SOCIETY.

It is interesting to note that the successful organization of the Extension work in the United States has inspired our neighbor on the North to similar efforts. On November 5 and 6, 1891, a conference under the auspices of the Ministry of Education was held in Toronto to discuss this subject. The evening address of the first day was by President Edmund J. James, of the American Society, who pointed out the place of University Extension in a general scheme of popular education and emphasized the importance of the movement as supplementing the primary and secondary schools, and as extending greatly the influence of the higher institutions of learning. The account he gave of what had been accomplished in the United States was the first impulse toward the organization on the succeeding day of the Canadian Society for the Extension of University Teaching, the constitution of which was modeled on that of the Amer-

can Society. The late Sir Daniel Wilson, of Toronto University, was chosen president, and the Chancellors of Trinity, Queen and Laval Universities were elected on the advisory council. Centers were established during the first year at Toronto, London, Ottawa, Hamilton and St. John, and courses are now being given in a number of cities.

THE SECOND NATIONAL CONFERENCE.

The second National Conference on University Extension will have met in Philadelphia under the auspices of the American Society on December 28-30. The welcoming address of Provost William Pepper at the Drexel Institute, on Wednesday evening, December 28, was expected to recount not only the developments already mentioned, but also the formation by the American Society of centers in Maryland and West Virginia, in addition to those already founded in Pennsylvania, Connecticut, New Jersey, Delaware and Virginia. Reports from other parts of the United States indicate the successful work by the various city, district and State societies, and by colleges which have actively entered this extra-mural teaching. President Henry Wade Rogers, of the Northwestern University, one of the most active workers of the Chicago Society for University Extension, delivers the leading address of the first evening. The discussions of Thursday and Friday were to be practical in their nature, and include the consideration of general organization, administration of the local center, the duties and training of the lecturer, the distinctive features of University Extension work as compared with university instruction, the function of the library in this movement, and other questions of vital interest. The well-known hospitality of Philadelphia was generously extended to the delegates. The proceedings of the conference, to be published by the Society, will prove a most interesting and instructing volume.

OUR ENGLISH VISITORS.

The English University Extension leaders whom the American Society has invited each year to lecture under its auspices, have included the most prominent workers, both of Oxford and Cambridge. To Richard G. Moulton, of Cambridge, was due much of the success of the first year and to him University Extension in America owes a debt, fittingly acknowledged by the University of Pennsylvania in granting him at the time of the annual commencement of 1890 the degree of doctor of philosophy. Mr. Michael E. Sadler, of Christ Church, Oxford, whose pleasing and helpful presence at the first National Conference the delegates on that occasion will long remember, is, perhaps, the most active and enthusiastic of the young Englishmen who, refusing tempting offers in other professions, are devoting themselves to the cause of popular education. Mr. Sadler's colleague, Mr. Halford J. Mackinder, who has just been appointed student of Christ Church and director of the University Extension College at Reading, gave most successful courses at the leading centers of the American

Society in March and April of 1892. Fortunate as it has been in the past in the invitation it has extended to Englishmen, the Society is equally so in securing for a period of three months this winter Rev. W. Hudson Shaw, Fellow of Balliol College and the most popular and successful of the Oxford staff. Mr. Shaw has yielded the chance of high preferment in the church and resigned an important living to devote

MICHAEL E. SADLER.

Secretary of the Oxford University-Extension.

himself entirely to this work, especially to lecturing among workingmen's centers.

AMERICAN EXTENSION LECTURERS.

The kindly bonds which have thus been formed between the mother country and America were still further strengthened during the past summer by the invitation of the Oxford authorities to Mr. Edward T. Devine and Mr. Henry W. Rolfe, staff lecturers of the American Society, to lecture at the summer meeting of 1892. Mr. Devine's success as a University Extension lecturer, which has already been recognized by a leading university in the offer of a professorship in this subject, was quickly recognized on the other side, and varied qualities of high order made his lectures one of the special features of the meeting. Mr. Henry W. Rolfe, editor of *University Extension*, whose successful work had been noticed by Mr. Sad-

ler on his visit to this country, was invited especially to deliver a course on the "Authors of the Concord School."

CONCLUSION.

To the Extension lecturer, indeed, too much credit can hardly be given for the success of this work. University men already loaded with their academic duties have, from a high sense of their duty to American education, cheerfully undertaken the extra burden. The movement has been especially fortunate in the character of the men who have been attracted to it. In New England, President Andrews, of Brown, and Professor McCook, of Trinity; in New York, Professors Jenks and Ross, of Cornell; Professor Mace, of Syracuse; Professor Boyesen, of Columbia, and Professor Gilmore, of Rochester; in New Jersey, Dean Murray, Professors Young, Scott and Magie, of Princeton, are only a few of the distinguished scholars who have been foremost in the Extension field. President Warfield, of Lafayette; Professor Perrine, of Bucknell; Professors Giddings and Andrews, of Bryn Mawr; Professor Sherwood, late of the Wharton School, now of Johns Hopkins; Professors Thorpe, Cheyney and Penniman, of the University of Pennsylvania; Professors Demmon and Adams, of Michigan; Wright, of Oberlin; Boughton, of Ohio; Thwing,

Crew and Pearson, of Northwestern, and Turner, of Wisconsin, are others who have been most earnest supporters of the movement.

It is plain from the preceding account that University Extension in the United States has more than justified the most sanguine hopes of its supporters. It has taken root in all sections of the country, and all sections have contributed their share to its practical development. To Philadelphia institutions, Philadelphia men and Philadelphia money is due the credit of first organizing the work in a practical way in such a form as to stimulate and aid organization elsewhere. But Brown University was the first institution of high rank to incorporate the movement as a branch of University work; New York led the way toward State support and organization; Chicago has shown a broad conception of the work and a willingness to spend largely of University funds for the purpose, and to recognize its scholarly character by giving University standing for it. The University of Wisconsin has organized a whole State under its auspices, while Minnesota, Kansas, California, Iowa, Michigan, Indiana and Ohio have all through their State and private institutions given a strong impulse to this great cause through which, as Dr. Herbert B. Adams, of Johns Hopkins, so well says: "We may hope for the civic salvation of the American people."

F. MARION CRAWFORD, NOVELIST.

BY CHARLES D. LANIER.

IT has been but a scant ten years since a young man found time amid the exacting grind of a New York journalistic life to tell a story, which he considered a good one, to his uncle. That uncle, Mr. Samuel Ward, of epicurean celebrity, gave evidence of a discernment far above the discussion of terrapin when he advised his nephew to write out the tale and seek a publisher. For the tale was "Mr. Isaacs," and the young man was F. Marion Crawford, who, having acted on the avuncular judgment, woke up to the possession of an entirely unanticipated fame. Since then the marvelously prolific pen of the young author has given to us no less than twenty novels; and Mr. Crawford himself, after a most eventful career, has just returned to New York on the completion of the three serial volumes, which are the last and easily the most remarkable and important of the score—the trio of stories which relate the fortunes of the noble Roman house of Saracinesca.

NEW YORK, ROME AND INDIA.

For while we may lay claim to the author of "Mr. Isaacs," and to the merit of having discovered his genius, the Seven Hills have both a prior and a subsequent claim, being the place of his nativity and the

workshop in which he has fully developed his art. In early boyhood he came from Rome to New York with his widowed mother, and his school tasks were done, or rather, as he assures me, were *not* done, within a sufficiently short distance of Union Square to allow his presence at circus events in that now more dignified locality. One of the landmarks already present in those times was the Everett House, and Mr. Crawford still seeks out this corner of his old playground for a local habitation during his visits to New York. *En passant*, Mr. Crawford, unlike Mrs. Van Rensselaer, has sufficient modernity in his make-up to feel entirely reconciled to the loss of picturesqueness which has accompanied the tremendous growth of the metropolis, and, *very* unlike our late critic, Mr. Kipling, he considers that we have a fine city here, and insists on the adjective as he runs over his experience in the large towns of the East—Rome, Constantinople, Tunis, even the beautiful Tiflis. And it is worth while to hear from one who has lived beside the Coliseum and St. Peter's that our architecture is not near so bad as it has been painted.

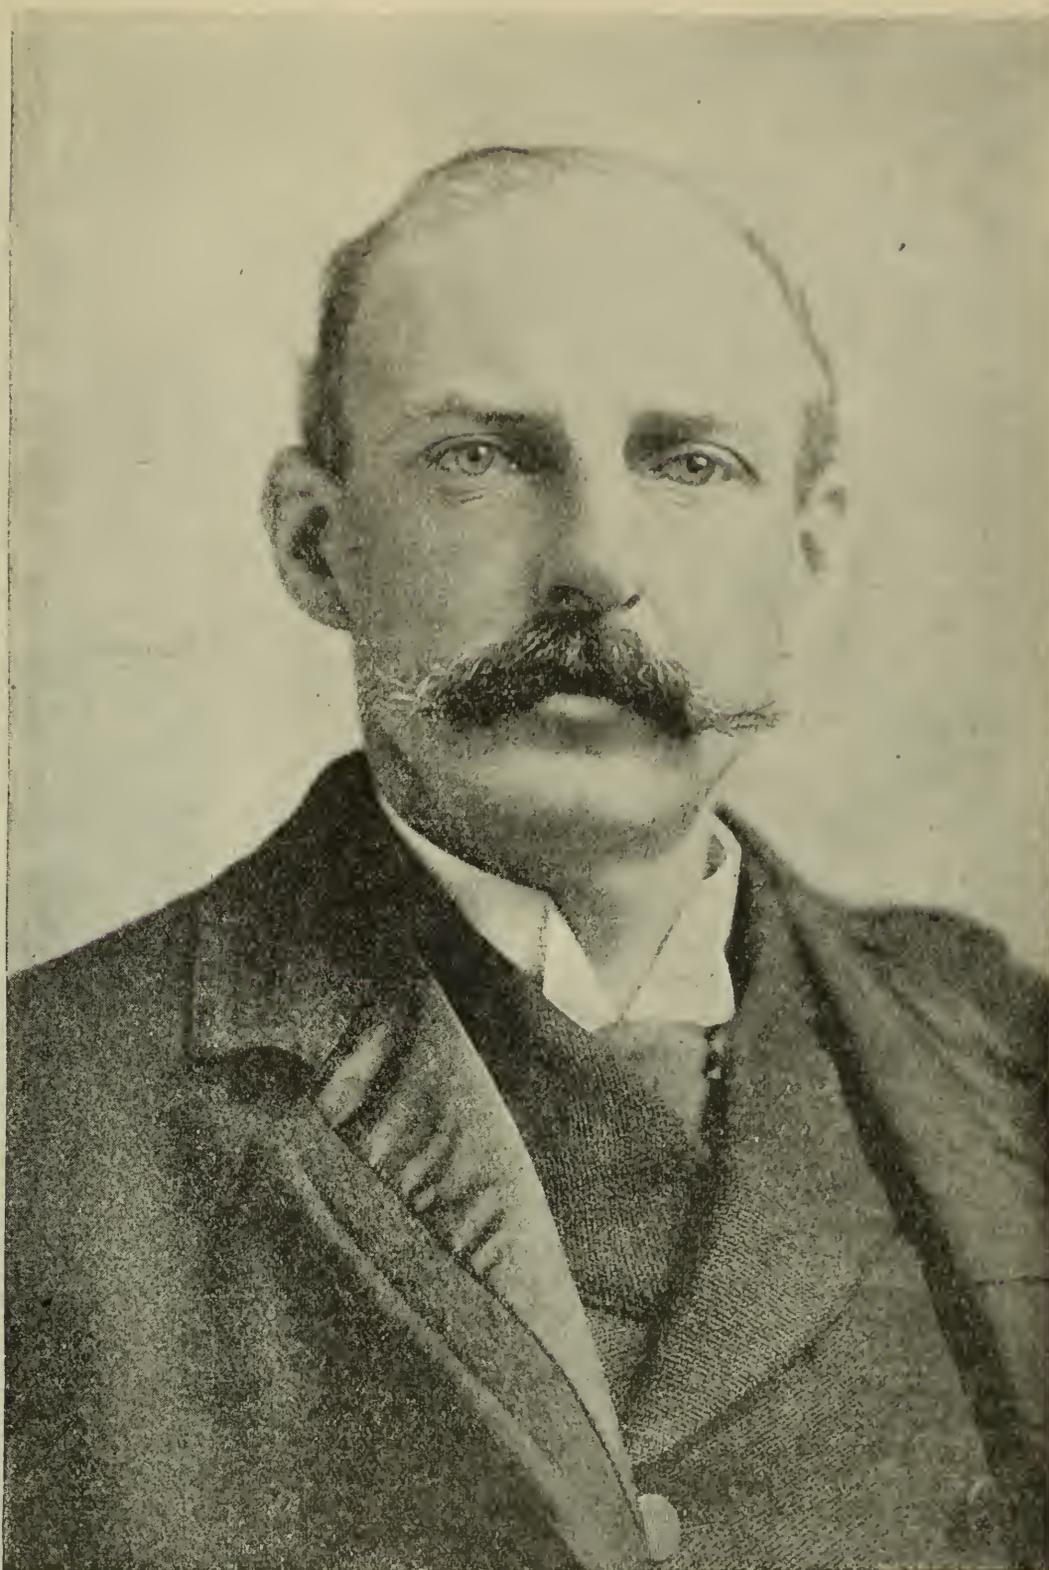

Having had his Harvard experience, Mr. Crawford was still in his early twenties when the untoward

financial happenings of 1873 brought destruction to his mother's large fortune and threw him most unexpectedly on his own resources. He launched out into journalism and visited in this calling many of the countries of Europe, with Italy his home as nearly as he possessed one. He even strayed so far as India, and during two years was practically the entire working force of a newspaper in the land of the Hindoo. It is amusing, in the light of "Mr. Isaacs," to hear that Mr. Crawford's cue while writing the editorial columns of this journal was to blackguard theosophy and its incarnation, Madame Blavatsky, on every available opportunity. Then came another New York phase, the writing of that first novel in his room on Clinton Place, and a final trip to Italy, where for several years he has been residing near Sorrento with his wife and children.

HOW TO WRITE TWO NOVELS A YEAR.

The chronicler of the Saracinesca told me recently that in twenty-five working days, broken only by Sundays, he had completed a story of over 150,000 words, and that in his own manuscript, without any aid whatsoever from amanuensis or stenographer. This gives the enormous average of 6,000 words per day, which would probably horrify Mrs. Elizabeth Stuart Phelps, as she assigns six weeks as the minimum limit which a careful writer should allow for writing a short story of from 5,000 to 6,000 words. To be sure, this phenomenal celerity or composition has resulted in making Cavour use one *bon mot* twice in the same story. Perhaps other morsels might fall to the lot of the critic who reads seeking whom he may devour.

Mr. Crawford manages it, he says, by living in the open air, by roughing it among Albanian mount-

From a new photograph taken in New York.

F. MARION CRAWFORD.

aineers, wandering by the sunny olive slopes and vineyards of Calabria and by taking hard work and pot luck with the native sailors on long voyages in their feluccas. His tall, athletic figure and bronzed complexion well attest this invigorating existence. And while hauling on halliards—or whatever stands for them in a felucca—and while establishing *modi vivendi* with Calabrian mules, the plot, even the conversational details of his story, form themselves in his mind, so that when he begins to make record of them they are all fairly crying out, like Dogberry, to be

written down, and it is but a matter of penmanship. Once started at his desk, he does not, save on the Seventh Days, appear abroad in the land until the thing is done and his "copy" is on its way to the publishers.

THE SARACINESCA BOOKS.

The three serial novels with which any notice of Mr. Crawford just at this time must especially be concerned are, aside from the charming story which runs through them, complete pictures of patrician life in modern Rome, and the economic conditions which surround it. Beginning with *Saracinesca* and passing through "*Sant'Ilario*" to the just completed "*Don Orsino*," they detail the history of one of the noblest and most ancient houses of Roman nobility—the *Saracinescas*.

Mr. Crawford knows this life which he portrays, and knows it thoroughly, from his long stay and intimacy with the gay life of the city by the Tiber. He knows it better than any of the really noted Americans who have used their pen in description of it, for he had the added and indispensable advantage of being a Catholic in religion, a circumstance that has not only allowed him a truer sympathy with the life there, but has afforded him an open sesame to many things which must be sealed books to Protestants. Many of his characters are to a greater or less extent portraits of his friends.

It is curious, when one has come to the end of "*Don Orsino*," to reflect that absolutely, with the exception of a sentence or two concerning a bribing incident, one has not left for a moment the patrician circle. We have lived in palaces and on great ducal estates, have attended the "first nights" and Embassy balls, and have gone a-hunting and a-duelling with princes. Nothing less, save perhaps an artist, and *he* had taken the *Grand Prix*! And when we come to think of it, there is an architect inserted, but only to avoid the common publicity of a great prince's name. Mr. Crawford openly avows that these are the folks he is going to introduce us to; he keeps his word, and the great merit and wonder of it all is that the individuals of this noble company never cease to be live, flesh-and-blood human beings, that we do not for a moment feel cold and dismal in the presence of those marble tables and regularly-positioned high-backed chairs. What is even better, no slightest taint of snobbishness marks his passage over the dangerous literary ground.

THE ROME OF '65.

The three novels taken together form a brilliant and accurate explanation of Roman society and politics as they existed during the last struggles of the Papacy for temporal power. The first of the series, "*Saracinesca*," introduces us on the scene of that conflict in the year 1865 when the great Cardinal Antonelli and the Holy Office were still all-powerful in Rome in the exercise of their rights of espionage; when, says Mr. Crawford, who is one of the most quotable of men, "the Second Empire was in its glory. Mr. Emile Zola had not written his '*Assomoir*.' Count Bismarck had just brought to a

successful termination the first part of his trimachy. *Sadowa* and *Sedan* were yet unfought. Garibaldi had won Naples, and Cavour had said: 'If we did for ourselves what we are doing for Italy we should be great scoundrels.' But Garibaldi had not yet failed at Mentana, nor had Austria ceded Venice. . . . Profound silence on the part of the governments and a still more guarded secrecy on the part of conspiring bodies were practiced as the very first principle of all political operations. No copyist at half a crown an hour had yet betrayed the English Foreign Office. In the beginning of the year 1865 people crossed the Alps in carriages and the Suez Canal had not been opened; the first Atlantic cable was not laid; Pius IX. reigned in the pontifical seat; Louis Napoleon was the idol of the French; President Lincoln had not been murdered—is anything needed to widen the gulf which separates those times from these?"

The actors which Mr. Crawford has chosen for his stage bring us, naturally, directly into the flow of the political events which led up to Garibaldi's defeat in 1867. Indeed, the Cardinal Antonelli is one of the active characters in the story.

The nobles themselves generally maintained a sturdy conservatism while these things were convulsing Italy. This little knot of patricians has furnished admirable subjects for Mr. Crawford's study and for our reading, who are apt to have our notions of Italian princedom governed by operatic paraphernalia, or by the animadversions of the comic papers on the relative values of armorial bearings and American dowries. We find them "good lovers and good haters," of a nature too simple to be calculating; arrogant, and justly so; clannish they are to a degree that would astonish a Scottish Highlander—gathering, generation after generation, about the family board in their great square palaces, which are apportioned off by inviolate tradition, the lower floor for the unmarried sons, this one for the married ones, that for the heads of the house. Thirty members of a house, we are told, will sometimes dine together with unbroken regularity, while the population of the palace may likely be a hundred.

Even more picturesque are the country estates, with their great castles dating back to the dark ages, and their feudal law of *emfiteuse*, by which the hundreds of peasants quartered on the prince's land hold hereditary rights over their farms, on condition of their paying to him a quarter of all products in kind. We have the heroine of the first story, who is altogether the most attractive character in the series and one of the noblest women ever conceived, devoting herself to the reform of abuses which have arisen out of this antiquated system.

THE THREAD OF THE STORY.

"*Sant'Ilario*" carries us on to the year 1867, when the charming Corona has been opportunely rid of the wreck of a man, three times her age, whom she has, in a passion of self-sacrifice, undertaken to call husband, and finds herself free to marry Giovanni *Saracinesca*. Their little son Orsino is evidently a favorite

of Mr. Crawford's from the first time he is put into the cradle before us. The author fondles him and gloats over him, in a literary sense, and when the tale is continued, after a score of years are supposed to have elapsed, in the third volume, "Don Orsino" is the title and is the center of interest. He is invested with all the pride and nobility and much of the narrowness of his race; but an entirely new factor steps in. He isn't lazy, and the disapprobation which this astonishing fact creates in the paternal bosom only chafes the young man into further restlessness. His mother, she of the reforming spirit, aids and abets him and the prince finally throws himself impetuously into the daring real estate operations which are the order of the day.

For Rome has gone mad with the fever of what we in America would call a building "boom." Prices are inflated and countless new houses are being put up regardless of the possibility of procuring tenants. Fortunes are made by bold speculators and the banks tax their credit accommodations to the last limit. Don Orsino's blood is fired by the activity and excitement, and he establishes a partnership with an architect and becomes a man of affairs, initiating himself through exacting drudgery into the mysteries of bookkeeping and business tactics. The bubble bursts to leave him at the mercy, financially, of the hereditary enemy of the Saracinesca, the banker Ugo del Ferice, who has been the villain of the play through the entire series. Orsino's pride, which word among the Saracinescas might be supplemented by life, is saved by the self-sacrifice of the woman who loves him, and who marries del Ferice.

This curious phase of Rome's latter-day economic history is very carefully studied by Mr. Crawford, who was on the scene and who numbered his friends among those caught in the speculative trap. The unused, often unfinished houses, with grass and wild flowers growing about their portals, still stand as monuments to the credulity and villainy of the period.

"Oh, he is young yet," said Mr. Crawford, when questioned as to any further designs he might have on that pet creation of his, Orsino. And being left free by that act of devotion, we shall, no doubt, hear from him again before long.

THE BEST NOVEL AND THE WORST.

One of the most readable of his critics said that Mr. Crawford had written the best novel ever produced by an American, and the worst, and that they were "Saracinesca" and "An American Politician." Whether or not this statement be as true as it is striking, no one will deny the infinite variety and great unevenness of his work. There is an alluring quality in the very dash and daring of his composition. As to method, he is subject to no school, and while his stories show unmistakably a romantic herit-

age, he reserves the right at any moment to out-Ibsen Ibsen, if Mr. Crawford and his subject are so disposed. But he is strangely free from the naturalism of the French school. Never does the dreary naughtiness of the Gallic *motif* affect him, save perhaps in "To Leeward." His love making, and he allows himself a very generous share, is singularly manly in tone. He is absolutely free from the sickly sentimental as well as from the more serious parodies.

This young journalist of a few years ago will sometimes write in successive pages of epigrams. Naturally, not all of them are perfect, but even then, how can he do it, or even dare to try it? The conversations, too, of which he is lavish, are astonishingly clever, especially when one considers the rate at which they are dashed off. Mr. Crawford explains this particular facility of expression through his phenomenal, though erratic memory, which will, he tells me, utterly refuse to keep the shortest verse forced upon it, but will, in the course of one of those literary incubating periods, bring back successions of whole conversations to its happy owner. The best examples of Mr. Crawford's style are indeed exceedingly good: witness the grace and delicacy of "A Roman Singer" and "With the Immortals;" the oriental gorgeousness of "Zoroaster" and "Khaled." Probably we have Mr. Crawford's polyglottous tendency largely to thank for this richness of style. Languages were his one passion at school and he speaks calmly of his surprise at finding in the course of a perusal of a Russian paper one of his own novels, and of having enjoyed another story all over again when he found it in the Danish vernacular. His novels are read in almost all of the European languages, having been translated, by the way, without his permission or knowledge.

Not that all Mr. Crawford's subjects are exotic. If they had been Mr. Egan would not have been able to credit him with the worst novel. "The Three Fates" and "An American Politician" fail to show the true conception of character that makes any actor picked at random from certain of his Roman novels so clear and distinct a type that one recognizes it through sources more subtle than any ulterior knowledge of the type itself.

It is to be hoped that Mr. Crawford will learn to know us from the novelist's point of view as thoroughly as he has mastered the Romans, now that he has once more appeared in our midst. His present mission is to fulfill a short engagement for readings from his own works, his first attempt at anything of the sort. He intends to give short selections from the more dramatic portions of his writings, and if his theory is substantiated that a reform is needed looking toward brevity in such proceedings, he contemplates a considerable extension of the tour.

LEADING ARTICLES OF THE MONTH.

SCIENCE AND RELIGION.

IN a second article dealing with the relation of physical and religious laws, the *Century* has Mr. H. S. Williams discussing "The Effect of Scientific Study upon Religious Beliefs." Mr. Williams explains his idea of the spiritual world and its Governor by analogy with our recognition of the material world. "We become conscious, through what we call *sensations*, of a world outside ourselves, which we call the material universe. We become conscious, through what we call *emotions*, of a somewhat which is not ourselves, to which, however, in every analysis of experience we are unable to find ourselves unrelated."

As to the alleged dismaying anachronisms and puzzles and paradoxes of the Bible, Mr. Williams questions the importance of the form in which these inspired sayings have come to us with much the same logic as Mr. Shields used last month in the first article of the series. He points to the continual changes in scientific formulæ and laws throughout the history of the human race, though nature, which these formulæ have partially revealed, has remained constant. "Hence I conclude," says Mr. Williams, "that the genuineness of a written revelation purporting to come from God is to be determined, not by the scientific precision of its language, but by the perfection with which it portrays the religious content which it sets out to reveal."

This great truth of the constant evolution of forms and creeds, and the consciousness that it is the interpreter of the formula who is at fault when he mistakes the form for the content, are two of the greatest goods that can come to us through contrasting and combining religious thoughts and scientific study.

"The result of deep scientific study, it seems to me, is to develop precision in distinguishing true from false formulations of our conceptions, to such a degree that the personal elements of religious belief become more sharply distinguished, so that the devout scientist may be constantly growing in the fullness of his religious belief, and still, all along the way, be dropping out tenets which he had held to—dropping them as he found them not elements of the truth which he grasped. The richness of his religious conceptions will grow by study, as those of his sensuous conceptions grow with his scientific study."

Following out his analogy, Mr. Williams finds that "the qualities of rightness and wrongness bear the same relation to an emotion that trueness and falseness do to our scientific conceptions. The cultivation of right emotions—this is the practice of religion."

But while there exists this analogy and while scientific study cannot only be not antagonistic to, but can reinforce and develop religious strength, yet it is not of itself religion, and if it be given first place

"religious growth must deteriorate in proportion to its neglect. The functions of religion must be exercised, or they will become incapable of action; they must be educated or they will become weak and useless."

THE FUTURE OF CHRISTIANITY.

MR. WILLIAM M. SALTER, a prominent leader in the "Ethical Culture" movement, writes in the *New World* on "The Future of Christianity." He does not say what the next step will actually be, but rather outlines the course which in his opinion the church ought to pursue. The thread of his argument is that the church should give freer room for the intellectual spirit of the time—should give to new and old theology equal right and standing.

"If the churches, says Mr. Salter, should come into contact with the real Jesus, it would be their regeneration. They might worship him less, they would follow him more. They would extend a hand to the reform movements of the time, and welcome them to their midst; they would be one with them in their soul if not in their letter. Instead of timidly, hesitatingly following the progressive moral spirit of the time, they would begin to lead it; and as the early Church struck blows at infanticide, gladiatorial shows, and other infamies of the Roman world, the Church now would begin to banish some of the barbarities of this nineteenth century civilization.

"The trouble is that the churches do not understand their Master; they do not catch the real drift of the New Testament. They have acquired such a factitious reverence for both that they do not study either with a scientific, truth-loving spirit; they have enveloped both in a sort of halo and see nothing distinctly. Liberal Christians think it a great achievement to discover that Jesus was a man; but there is no special value or inspiration in this discovery. The question is, what sort of a man was he? To regard him simply as the great teacher of the fatherhood of God and the brotherhood of man is about as vague and unreal as any other traditional method of interpretation. To preach the fatherhood of God and the brotherhood of man may be one way of helping the world, but Jesus looked for a new order of society. He thought the world as it was (and it has not changed essentially since His blessed voice was heard in it) ripe for judgment; He was for punishing and abasing as well as uplifting, for putting evil and evil men in chains. It is evident that, were He living to-day and breathing the modern intellectual atmosphere, He would be neither a sentimentalist nor a religious rhapsodist, but the leader of a great, thorough-going reform movement—finding it the will of His Father to do this, seeing that this is true religion, and that faith and

hope have their vital meanings in connection with it. Never would He have been content with what most of His followers now offer to the suffering and the wronged—the hope of recompense in another world; never would He have consented to let the earth be the Devil's and only Heaven be God's: He would have said, Justice is for here and now, and the will of God is to be done on earth even as it is done in heaven.

“What a new thing the Christian churches would be if they could catch this spirit! And who have so good a claim to it as they? How easy then would become some tasks that now seem giant-like in their proportion, so low is the tone of public sentiment, so little have the people the idea that religion means striving for justice and a just social order on earth!”

THE PRESENT POSITION OF THE CATHOLIC CHURCH.

MR. G. SANTAYANA, of Harvard University, undertakes to define within sixteen pages of the *New World* the present position of the Roman Catholic Church. He makes clear that the church of the Pope does not stand in the modern world merely as a survival, but is “partly an embodiment of new and vital forces of society and a natural form, not yet outgrown, of the spontaneous life of the people.”

First of all, in her political relations the Roman Church has shown a willingness to respond to the needs of the time: “A thousand historical ties bind her to the conservative parties and the dynasties of Europe. These embody and defend what remains of the times when the Church and her teachings were the life of the State, when things political, social and religious were inextricably mingled. But these ties, which history created, subsequent history might dissolve. This the Church has come to feel practically, so that we see the clergy in France encouraged by Rome to become republican, and the lower clergy in Spain, despairing of a Carlist restoration, becoming republican despite official and hierarchical influences. In fact, the only political alliance which is natural and proper for the Church is with the party whose policy is at the time most favorable to her cause. Belief in this identity of interests makes the Irish clergy Nationalists; it made Cardinal Manning a leader in humanitarian movements and even in industrial insurrection. It makes Cardinal Lavignerie the founder of a new military order, the ‘Armed Brothers of Africa,’ who, while checking the slave trade, will doubtless spread and maintain the Catholic religion after the glorious example of the Crusaders. It would be unjust to say that no direct and disinterested concern for the slaves is felt by these new knights, as it would surely be unjust to say that no natural kindness and pity prompt the sacrifices of the Sisters of Charity and the other charitable orders. What we may say is that religious zeal and devotion are the springs of their action, and that it is comparatively a matter of accident that their duties are of a beneficent nature.”

THE CATHOLIC CHURCH AND SOCIAL REFORM.

Another direction in which the Catholic Church is making advances to the modern spirit, says Mr. Santayana, is that of social and industrial reform. “This policy, of which the consequences may be very momentous, has been only recently adopted by the Vatican. The energies of Pius the Ninth and his advisers were spent in protestations. They had been overwhelmed and bitterly disappointed by the liberalism of their time, and they had no means of combating it except decrees and anathemas. Leo the Thirteenth is in a different position. He has not himself fled to Gaeta or been deprived of the temporal power. His pontificate has been spent in successful and flattering diplomatic labors, in receiving pilgrims, celebrating jubilees and composing scholarly encyclicals. Although the position of the Papacy remains unchanged in Italy, and, naturally, from the point of view of the Pope, is extremely unsatisfactory, yet time has softened somewhat even the bitterest animosities; compensations have been found in the freer international position of the Church, and in the proof that even without the temporal power she can exist and extend her spiritual authority. These considerations, added to the character of the Pope himself, have led to better feelings toward the modern status. The Pope is a man of diplomatic experience and an enthusiastic student of Thomas Aquinas; he spends his leisure in composing very graceful Latin verse, and he watches with the double dignity of a philosopher and a pontiff the movements of human affairs and the fortunes of princes. He has seen the fall of more than one who was not his friend, and not everything in the world can look black to him.

THE FUTURE OF THE CATHOLIC CHURCH.

“The Catholic Church seems at present, then, to be animated by the hope of regaining the confidence of the masses and becoming once more through their ascendancy the model of the imaginative and moral life of the world. Whether this vast ambition is capable of realization it is, of course, impossible to say. All that we may predict with safety is that, if it is realized, it will be in a form materially different from that intended. The Catholic may be allowed to believe that the Church is infinitely adaptable, and in all societies maintains the same doctrines and diffuses the same influences. But the impartial observer will nevertheless think that this elasticity of the Church is a property of its organization rather than of its religious content, and that the world has already seen more than one religion under the name of Catholicism. One age and country, even if it adopt the doctrine and worship of another with apparent docility, necessarily makes them the vehicle of its own spirit. The success of the Catholic Church in the future is a prophecy which must lose in definiteness what it is to gain in plausibility. Perhaps the democracy of a future age may call itself Catholic—even this would be a strange repetition of history. But that new Catholicism would be something different from what we know, and something to which our affection or our aversion would be only partially transferable.”

WHEN IS THE POPE INFALLIBLE?

THE Rev. S. M. Brandi, of the Society of the Jesuits, contributes to the *North American Review* an article in which he attempts to explain just when the Pope is infallible. He points out that in Catholic theology the infallible Pope does not mean one gifted with inspiration or commissioned to reveal to the Catholic world new dogmas. "The special assistance of the Holy Ghost is given to the Pope for the *only* purpose of preserving, explaining and defending the revelations already made to and through the Apostles.

"An infallible Pope cannot be said to be one who can never err in his private conversation or teachings; or who cannot make any mistake in politics, government, etc. For the gift of infallibility, as held by Catholics, belongs to the Pope *only* in his official capacity, as supreme teacher of the church, and *only* when, in virtue of his Apostolic power, he defines a doctrine that belongs to faith or morals. This and no other is the subject-matter of the Pope's infallible teaching."

THE PRIEST IN POLITICS.

IN the *Lyceum* there is an excellent article on "Bishops and Morality." The writer puts forward with firmness and great cogency the case in favor of the intervention of the priest in politics: "The law, as laid down by Mr. Justice Fitzgerald, in the Longford election case of 1870, was ludicrous in its absurdity: A layman—employer, landlord, magistrate—might speak as freely and as earnestly as he chose about the sin of voting for a particular candidate—a minister of religion was forbidden to do so. It might be a sin to vote in a particular way, but priests and bishops must not dare to say so. Worst of all—from the standpoint of politics—the success or failure of Parliamentary candidates was placed absolutely at the mercy of the clergy. If they wished to disqualify a candidate, they had only to 'appeal to the fears or terrors or superstition' of their people . . . 'with a view to influence a voter' in his favor—he was certain to be unseated on petition, and his opponent might, perhaps, be seated in his stead. The most troubled dreams of fevered Orangemen never pictured such possibilities of 'clerical dictation' as were opened up by Mr. Fitzgerald's Longford judgment. But, even were the law as foolish still as it was then declared to be—and the Act of 1883 has changed it greatly—it would be little likely to affect the conduct of the bishops. Civil law should not forbid what the Divine law commands. Unfortunately, it often does. In no country has it done so more cruelly and more persistently than in our own. But the traditions of the episcopal office, as well as the bishops' personal sense of what is due to it, are a sufficient guarantee that episcopal liberty will be carefully safeguarded, and, when need be, duly exercised, in spite of misrepresentation and abuse."

THE LOGIC OF ROME.

IN the current number of the *American Catholic Quarterly Review*, the Rev. Dr. Augustine F. Hewitt has the first place with an elaborate article on "The Catholic Idea in the New Testament." It is seldom we have found stated more compactly what Roman Catholics believe as to the Nemesis that awaits Protestantism:

"There is no refuge in rationalism. It is not better, but rather worse, than old Protestantism, because it is more logical and consistent. The better the logic, the worse and falser the conclusions, when the premises are bad and false. It is all destructive, and its final end is destruction. It can originate and construct nothing whatever, much less anything better than old genuine Christianity. Christianity, without the divinity of Christ, is not worth having. Without Christianity, Theism and Natural Religion cannot stand. Believe in God, and you must believe in Christ; believe in Christ, and you must believe in the Church. Reject the Church, and you must reject the true Christ of the Gospel, God and Man, the Redeemer of the World, the Crucified Risen Lord of Heaven and Earth. Reject the Son, and you must deny the Father, the Creator, the Giver of Immortality. The quicksands of agnosticism, universal skepticism, pessimism, nihilism, will swallow you up."

ST. AUGUSTINE ON SPIRIT COMMUNION.

IN the *Newbery House Magazine* the Rev. W. M. Rodwell discusses the question of the intercession of saints, in which he believes. In support of his theory he writes as follows as to the views of St. Augustine: "St. Augustine, while he acknowledges that we must confess that the dead do not know what is doing here below while it is in doing, nevertheless offers one or two suggestions as to the means whereby information of passing terrestrial events may be communicated to the departed saints. He suggests: 1. That they hear from those who go hence to them at their death, not indeed everything, but only what things they are allowed to make known who are permitted to remember them—things which it is meant for the one to impart and the other to hear. 2. He indicates the possibility that from the angels who are present at terrestrial events the dead do hear in part. 3. That the spirits of the dead learn some things which take place here, as well as future events, by express revelation of the Spirit of God. 4. That some from the dead are sent to the living, as St. Paul from the living was rapt into Paradise. And lastly, speaking a little further on with especial reference to the martyrs, he concludes: 'We are not to think, then, that to be interested in the affairs of the living is in the power of any departed who please. . . . but rather we are to understand that it must needs be by a Divine power that the martyrs are interested in affairs of the living, from the very fact that for the departed to be by their proper nature interested in affairs of the living is impossible.'"

ST. PILATE.

The Story of His Repentance.

THE Rev. A. Baker, R.N., writing in *Newbery House Magazine*, gives an account of an ancient manuscript, a single sheet of venerable parchment. This is a portion of a much larger volume which came into the possession of a naval officer serving in the front in the Abyssinian campaign. The officer was lost in the *Captain*, and it is to be feared that this book went down with him. One sheet, however, still remains. This sheet measures eleven inches by eight, and contains eight columns, four on either side of the parchment. The rest of the space is occupied by vividly colored paintings, which are divided into two large panels by a wide band of red. The picture represents the burial of our Lord by the women and Joseph of Arimathea. The lower panel represents Pilate in an attitude of prayer. Pilate in Abyssinia is a saint. The writing is Ethiopic, and Mr. James, of King's College, Cambridge, pronounces it to be a fragment of an apocryphal gospel which reached Abyssinia from a Koptic source.

The fragment opens with a controversy between the Jews and Pilate at the tomb. It seems as if some body had been substituted for that of our Lord, but by whom, and for what reason, does not seem clear. We give a few sentences from the conversation as a good example of the style:

... "The linen clothes, for he said: 'O, my brother, dost thou not behold how it smells and is beautiful, the fragrance of that linen cloth, and it is not like the smell of the dead, but like the fine linen (purple) of kings' wrappings?' The Jews therefore said to Pilate: 'Thou thyself knowest how Joseph put upon Him much spice (odor) and incense, and rubbed Him with myrrh and aloes, and this is the cause why they smell fragrant.' And Pilate said to them: 'Although there was put ointment upon the linen cloth, wherefore is that sepulchre as a chamber, which has in it musk and sweet spices, and is warm and smells fragrant?' And they said: 'This odor which is smelt, Pilate, that is the smell of the garden, which is what the winds blow into it.'"

Hence it is clear that Pilate has a large measure of faith, and his mind is stirred to a belief in the pretensions of the crucified Jesus.

Another short extract will show with what feelings the Jews regarded this new departure on the part of the Roman governor. Their indignation seems extremely natural, whether we are to regard them as the bitter enemies of the Lord or His sorrow-stricken friends, who would be slow to believe in the reality of his conversion, and did not yet realize what an ingathering of the Gentiles was shortly to take place. The conversation is as follows:

"They (the Jews) hearkened to him, and said to him: 'It is not proper or desirable for thee to come to this sepulchre, for thou (art) governor and the city desires thee; and lo! the elders of the priests and the chiefs of the Jews will learn this speech and deed of thine. And it is not a

proper thing for thee to cause a war among the Jews on account of a man (who) is dead.' And he said to him, 'Alas! O my brother, look on this great hatred wherewith the Jews hate Jesus. We have done their will and crucified Him; and all the world has come to ruin through their wickedness and injustice.'"

At this point it appears that at least a sheet of the MS. is lost, and it is therefore a very difficult matter to conjecture the full meaning of what follows. Still, it seems clear that an interview between our Lord Himself and Pilate is alleged to have taken place. Pilate is represented as offering prayer, in which he addresses our Lord as God, and the prayer concludes with an ascription of praise of a thoroughly Christian character. Here is Pilate's confession of faith: "'I believe that Thou hast risen and hast appeared to me, and Thou wilt not judge me, O my Lord, because I acted for Thee, fearing this from the Jews. And it is not that I deny Thy resurrection, O my Lord. I believe in Thy word, and in the mighty works which Thou didst work amongst them when Thou wast alive. Thou didst raise many dead.'"

Mr. Baker says, with these extracts before us it is impossible not to feel the deepest interest in this fragment, and to hope that something of truth may underlie what is here written is surely not unreasonable

OLD-FASHIONED NOTIONS ABOUT THE BIBLE.

MR. W. H. AITKEN, the successful evangelist of the Church of England, has been interviewed by the *Young Man* as to the effect modern ideas upon the Bible are likely to have upon religion. Mr. Aitken has no fear of the effect of Biblical criticism upon religion; his fear, indeed, is all the other way.

"I think," said Mr. Aitken, "that many of our old-fashioned notions with respect to the Bible will have to be very seriously modified in the next decade. It is very probable that the authorship of many of the books of the Bible will be found to be different from that which tradition assigns to them. But that would not in the least degree stagger my faith. It certainly would if I held the conventional views with respect to Inspiration which are still retained by so many earnest and good men. I do not believe in Inspiration less because I do not arbitrarily define it. To me it seems that the ordinary statement that everything is inspired because it is in the Bible assumes the highest degree of Inspiration for the compilers of the canon. And to assume that, it is necessary to be inspired oneself."

IN the *Sunday at Home* there is an interesting account of the story of the Christmas Letter Mission, of England, which this year attains its majority. In twenty-one years they have sent out 6½ million Christmas letters and an equal number of Gospel tract cards, and also between 300,000 and 400,000 books, booklets, etc.

THE RELIGIOUS CENSUS OF AUSTRALASIA.

IN the Australasian edition of the REVIEW OF REVIEWS for October, the Rev. E. L. Watkin has an interesting analysis of the result of the religious census of 1891 in Australia, including New Zealand and Tasmania. The population of these colonies was 3,801,605, exclusive of aborigines and Maories.

The following figures give the number of the adherents of the principal Churches :

Church of England.....	1,488,306
Roman Catholic.....	799,824
Presbyterian.....	493,483
Methodist.....	463,097
Independents.....	79,434
Baptists.....	87,185
Lutherans.....	76,432
Salvation Army.....	42,813
Jews.....	12,818

"In the Tasmanian census of 1881 no return was made of the religious beliefs of the people. Omitting Tasmania, the numerical growth of the population of Australasia between 1881 and 1891 was 1,028,103, or 39.13 per cent.

"The following table shows the numerical and centesimal increase of the principal Churches during the decade in all the colonies except Tasmania :

	1881.	1891.	Numerical increase.	Per cent.
Church of England.....	1,022,978	1,412,224	389,246	38.05
Roman Catholics.....	585,487	774,019	188,532	32.20
Presbyterian.....	359,775	483,727	123,952	34.45
Methodist.....	294,910	445,947	151,037	51.21
Independent.....	56,839	74,933	18,094	31.83
Baptist.....	58,718	83,900	25,182	42.88

"It will be observed that the increase of the Church of England, Roman Catholic, Presbyterian and Independent Churches did not equal, while that of the Methodist and Baptist Churches exceeded, the growth of the general population. No doubt the advent of the Salvation Army has interfered with the rate of progress of some of the Protestant Churches. Its 42,000 adherents may number among them a few who, at the census of 1881, were atheists, secularists, or who were returned as having no religion; but most of them belonged nominally to one or other of the Protestant Churches.

"The following statistics give the percentage of growth of the population, and of the churches in each colony, from 1881 to 1891 :

"NEW SOUTH WALES.—Population, 49.56; Church of England, 46.94; Roman Catholics, 33.38; Presbyterians, 50.77; Methodists, 74.68; Independents, 68.28; Baptists, 79.38.

"QUEENSLAND.—Population, 84.48; Church of England, 92.85; Roman Catholics, 70.59; Presbyterians, 101.86; Methodists, 115.09; Independents, 79.91; Baptists, 83.70.

"VICTORIA.—Population, 32.24; Church of England, 29.01; Roman Catholics, 22.24; Presbyterians, 25.97; Methodists, 37.36; Independents, 11.22; Baptists, 36.86.

"SOUTH AUSTRALIA.—Population, 14.49; Church of England, 17.75; Roman Catholics, 10.67; Presbyterians, 1.61; Methodists, 45.13; Independents, 19.92; Baptists, 25.52.

"WESTERN AUSTRALIA.—Population, 67.57; Church of England, 52.29; Roman Catholics, 48.15; Presbyterians, 98.90; Methodists, 120.48; Independents, 24.64.

"NEW ZEALAND.—Population, 27.90; Church of England, 23.41; Roman Catholics, 24.45; Presbyterians, 25.08; Methodists, 37.01; Baptists, 29.16; Independents, .20 (decreasing).

"The Protestants in Australia and Tasmania number 2,797,225, or nearly two millions more than the Roman Catholics. Leaving out the Tasmanian population from the calculation, the Protestant increase between 1881 and 1891 was 40.81, the Roman Catholics, 32.22."

THE CARE OF THE POOR.

TWO valuable articles on the care of the poor appear in the *Forum*; one by Professor Francis G. Peabody, of Harvard University, the other by Mr. Jacob A. Riis, author of "How the Other Half Lives." Professor Peabody shows that we in America have no well-defined principle of poor relief. Our plan of caring for the poor, so far as it may be called a plan, is a combination of the German or Elberfeld scheme, that of giving relief by personal and continual visitation, and the English plan, which aims to do as little for the needy class outside of institutions as is safe for the community. The official work of our cities is done for the most part under English tradition, and our private charity is guided more and more by the German model. The work of visitation carried on under our Associated Charity system is modeled closely upon the Elberfeld plan. Under both a large body of unpaid visitors is enrolled.

THE GERMAN METHOD.

But there are, says Professor Peabody, two points of difference between the way this work is conducted in Germany and in the United States: "First, it is noticeable that while in America the great proportion of such visitors are women, in Germany they are exclusively men, the Germans being as yet far from the American view of capacity of women for administration or even for discretion. Certainly in this point we have no lesson to learn of foreigners, and it seems strange to us that a system of the kind can have had any success where charity-visiting has seemed an unfeminine vocation. The second point of difference is more instructive. Cases of need in a German town are assigned, not, as with us, by the selecting of visitors, but by the districting of the town. Each city is ruled off into a large number of very small squares, and for the condition of each such square a single visitor, usually a resident in the near neighborhood, is responsible. If his little block comes to contain more cases of poverty than the number assigned as his limit (five in Dresden, four in Elberfeld), then it is divided and a new visitor enlisted. Thus in the year 1890 Dresden was districted into four hundred and thirty-eight such little squares, each regulated by a poor-relief visitor. This division

by space instead of by case is, it must be admitted, much more natural in a German city, where, by the custom of the country, the poor are scattered through the whole town and live for the most part in the cellars and attics of large houses. In every district of Dresden there are some persons of reasonable prosperity and some cases of poverty. There is, fortunately for the town, no region entirely occupied by the very rich, and there is no quarter which can be occupied with what we call city slums."

THE DISTRICT SYSTEM BEST.

Professor Peabody regards the system by space as the only thorough one, although he admits that it is much harder to administer in America than in European countries. He says: "The only positive and aggressive way to patrol a whole city is to make a certain sentinel responsible for all that lies within a certain beat, and to make the beat so small that he can easily cover the whole of it. This second point of difference is as much to the advantage of Germany as the first is to her disadvantage. These scattered visitors, each supervising his little square, are, first of all, united in small 'ward-conferences' (*Pflegevereinen*). Of these there are forty-three in Dresden, numbering from six to fourteen members each and meeting once a fortnight. The chairman of each conference is the intermediary between it and the central committee, and the forty-three conference representatives are from time to time called to confer with the central board on the more general questions involved in their work. The chairman of each ward-conference, moreover, has affixed to his house or shop a conspicuous placard bearing his title, and each case needing relief within the district applies first to him. By him the case is referred to the appropriate visitor, who may relieve immediate necessity by food or fuel pending the action of his conference and of the central board."

CHARITY AND CITIZENSHIP.

There is one conspicuous feature of the German method of which there is hardly a trace in America, and that is the relation between charity work and citizenship. Our Associated Charities' system waits for visitors to volunteer, while under the Elberfeld system the citizens are called into the service. In Germany the charity workers are recruited just as is the army, by actual draft and selecting. The Elberfeld system as a whole is not adaptable to American institutions, but Professor Peabody believes that it could at least be applied in this country as a private and voluntary scheme. On this point he says: "Why should not the Associated Charities, already so active and so beneficent in these larger cities, proceed more positively and aggressively than they have thus far done? Hitherto they have waited for volunteers and have assigned cases of need to such helpers as presented themselves. They have always lacked good visitors and have never really covered the ground. Why should they not proceed to district the city, or at least

its needier regions, and then invite to the inspection of limited blocks the men and women whom they judge most competent? Some would decline to serve, but a surprising number of persons would accept such service if the service were made specific, limited and real. The central committee should say to such a person: 'Will you, under printed instructions put into your hands, undertake to supervise the single block of houses from Fourth street to Fifth street on Avenue A, on condition that if you discover more than five cases needing continuous care your district shall be divided?' Many men who now believe themselves too busy for any such vocation would, I feel sure, be unable to refuse such specific work under a trustworthy plan. After a good deal of experience in begging money and enlisting recruits for affairs of public interest, I should wish to testify that the one thing which most deters benefactors and allies is not their own selfishness, but the vagueness, generality, and over-comprehensiveness of most plans urged upon their notice. People take slight interest in general movements for the relief of pauperism or the elevation of the human race, but if you ask them for money or for time to do a reasonable and definite work in a precisely-defined and practicable way, they are. I think, generally glad of the chance to make a safe investment."

A Central Labor Bureau for the Poor.

Mr. Riis in his article "The Needs of the Poor in New York," emphasizes especially the necessity for a great central labor bureau, "conducted by a thoroughly responsible organization, that could appeal to the community with a certainty, not only of enlisting the aid of the employers, but also of reaching the unemployed." He finds that fully one-half of those who apply to charity organizations for help, need work rather than alms, and believes that through this bureau many of these needy persons would be able to find employment. "The slightest push, the lift of a finger at the right moment, is sometimes enough to start a family that hovers on the edge of pauperism on the road to independence, even prosperity on a modest scale; while without it, it would certainly have taken the downward course from which there might never be any recovery. Two of the cases that gave a relief committee with which I was connected most courage and pleasure were those of an old Irishman and a consumptive Jew, both of whom we had really despaired of at the first survey. For the one ten dollars bought a push-cart and a load of garden truck that set him up in a business so successful that in a very few weeks he came to repay the loan, beaming with honest pride. In the case of the Jew we clubbed together with the United Hebrew Charities and bought him a pack, and that was the beginning of a new life for that family, which had just seemed so helpless."

This bureau would also serve to separate fraudulent from honest cases and thus simplify the problem of caring for the poor.

WHY THERE IS POVERTY AMONG US.

And How to be Rid of It.

IN that series which the *Century* calls its "Present Day Papers," the Rev. Dr. Washington Gladden discusses, in the December issue, "The Problem of Poverty." Dr. Gladden's article consists in large part of a review of Mr. Charles Booth's monumental work, with frequent reference, too, to the valuable publications of Jacob Riis, Mrs. Helen Campbell and the Rev. Louis Albert Banks.

THE EXTENT OF THE PROBLEM.

Mr. Booth's figures show—to skip over his elaborate classifications and deductions—that about 30 per cent. of the London people are poverty-stricken. We are inclined to object that in our American cities no such shameful state of affairs could exist, but Dr. Gladden says:

"If it be true, as all investigations indicate, that the greatest poverty is apt to be found in the densest populations, then the bad eminence must be assigned to New York; for while the most populous acre of London holds only 307 inhabitants, we have, according to the census, in the Eleventh Ward of New York 386 to the acre; in the Thirteenth Ward 428, and in the Tenth Ward 522. The death rate of the two cities is also greatly in favor of London; for while in 1889 there were in that city 17.4 deaths to every thousand of the population, in New York the rate was 25.19. One statement of Mr. Riis throws a lurid light upon this inquiry: One-tenth of all the burials from New York, he tells us, are in the Potter's Field. It is not, however, necessary to assume that the ratio of poverty to the population is greater in New York than in London."

THE CAUSES.

The important and surprising point in the recent thorough investigations has been the discovery that a comparatively small percentage of destitute families has been brought to that pass chiefly through the drink-evil. Mr. Booth found but 13½ per cent. of the poverty-stricken with whom this could be assigned as a direct cause. The common saying is that the poverty of the multitude is the fruit of their own vices. To a great degree this is true—to a greater degree than these figures indicate. For irregularity of work, and low wages, and physical infirmity, which figure in these statistics as principal causes, are themselves, in many cases, the effects of intemperate habits. Nevertheless, it is quite true that intemperance as a cause of poverty has been greatly overworked both by temperance reformers and by optimistic economists. It is a great cause, but it is not at all certain that it is the chief cause."

As for the rest, Mr. Gladden enumerates and discusses the vicious and unhygienic environment, indolence and intemperance, the modern system of industry "which will not work without some unemployed margin," the garret system of sweater working, the underpaying and consequent general depression of women's work, indiscriminating charity, the

tendency to crowd into cities, our own flood of pauper immigrants, and the greed of the landlord, as the most palpable causes of our huge pauperized population. As to the last, he makes the following striking statement: "It is probable that the very poor of New York pay more per cubic yard for the squalid quarters they occupy than do the dwellers on the fashionable streets for their salubrious and attractive homes."

REMEDIES.

For London a first step in remedy would be to abolish the domestic system of trade working and substitute the factory system with its lesser evils, to be rid of the economic conditions which give us the sweating system and the garret master. Perhaps it is a bolder remedy than one is apt to suspect at first sight that Dr. Gladden suggests in his advice to help the poorer classes of working-folk "to combine into organizations by which all work for which living prices are paid should bear some kind of stamp certifying to that fact." To give the children of the poor instruction in domestic economy is quite as important a step. The organization and humanizing of charity helpers and the union of public and private agencies are further steps against mendicancy, and the writer puts in a strong plea for the abolition of outdoor relief. "It is simply impossible that our overseers of the poor should intelligently administer relief to the multitude of applicants daily appearing before them. The State will not pay for the proper investigation of all these cases. Imposture flourishes under such a system and the dependent classes are steadily recruited."

From outside sources aid should come in the reformation and extension of municipal government. "When by the greed of landlordism any quarter of the city has become a nest of squalor, and the conditions of life are such as inevitably reduce the vigor and undermine the health of the inhabitants, it should be ruthlessly destroyed and rebuilt under stringent sanitary regulation. No city can afford to tolerate these pest-holes of pauperism." A clean and energetic city government should be reinforced by the philanthropic landlord—that is, the landlord who is willing to take five per cent. on his investment in a first-class tenement house instead of twenty-five per cent. from the shameful structures which are only too common.

In conclusion, Mr. Gladden points to two general tendencies of the age which have served to make the problem of poverty—*i. e.*, the growth of individuality and the consequent breaking away from family ties and mutually supporting duties, and, secondly, the decay of the "manly independence which is the substratum of all sound character."

"There is another explanation which I would not venture to offer as based upon my own opinion. But I heard, not long ago, these words from the lips of a brave soldier of the Union army—a man whose patriotism and devotion to that army no one who knows him will venture to dispute: "The one great cause of the increase of able-bodied paupers during the past few years is the lavish bestowal of pensions.

And this extravagance, he went on, 'is not so much to be charged upon the old soldiers, as upon the demagogues and pension agents who have pushed these schemes for their own aggrandizement.' I will add not one word of comment; I was not a soldier. Nor shall I reveal the name of my friend; I do not wish to expose him to a torrent of abuse."

HOW TO DEAL WITH THE UNEMPLOYED.

ENGLAND has indeed good cause to be proud of her workingmen, not merely as workmen, but as statesmen. The papers written by Mr. Burt and John Burns in the *Nineteenth Century* this month are admirable illustrations of the intellectual power, literary ability and practical sagacity which are to be found in those who have earned their daily bread in the factory and the mine. Mr. Burns' article comes first and is the more important of the two. It is a very masterly production. It has as its keynote the hoarse whisper of the prisoner in the exercising yard of Pentonville jail, who said to his fellow-criminal: "Stick to the unemployed, John! Work is our only hope." How to cope with the ever-recurring problem of finding profitable employment for men who seek work and find none is the perennial difficulty with which Mr. Burns essays to deal. Nor is it with man only, for, as Mr. Burns says, the position of a workless woman or girl in a city of great distances is even more pathetic than that of the unemployed male worker: "Before her the workhouse or the street, she bravely suffers in silence, and has no alternative to starvation but the eating of the crumb of charity or the loaf of lust. The industrial Andromeda that want of work has chained to a life she loathes incarnates all the poignant sorrow and desperation of the merciless struggle for existence amongst the poor, against which virtue, honor and labor fight often in vain."

Every one will agree with John Burns when he says that relief by finding work for the workless is the best mode of relief. But how to find it is the problem.

MR. BURNS' SOLUTION.

John Burns' solution is summarized by himself as follows: "Absorption of the unemployed by general reduction of hours, this followed by municipalization of industry and nationalization of monopolies, is the line of least resistance for all. It is regulation or riot, reduction or revolution."

He explains in detail how he hopes to attain the means by which he believes the problem could be solved.

I. AN EIGHT HOURS' DAY AND NO OVERTIME.

He would have first and foremost a compulsory eight hours' day. By this means he thinks an enormous number of the unemployed could be absorbed. On the railways alone an eight hours' day would help 100,000 men, a somewhat significant statement when taken together with his own figures, which state that the railway employees number 200,000 men. At this

rate each of these men must be working twelve hours a day.

II. MUNICIPALIZE LABOR.

In the General Post Office the stoppage of overtime would secure the employment of 800 more men. In addition to this stoppage of overtime and the reduction of the hours of work of the individual, he would, as far as possible, substitute permanent for casual labor, by transferring as much work as possible from contractors and private companies to public bodies. He would also, as far as possible, endeavor to equalize the employment, and keep the hands busy all the year round.

III. ESTABLISH LABOR BUREAUS.

The first thing to do, however, is to find out how many unemployed there are, and who they are. Mr. Burns would establish completely equipped labor bureaus in every district council or vestry area, and would establish it under the charge of a competent official in the local town hall. These bureaus should be in telegraphic or telephonic communication with each other throughout the country through a Central Labor Exchange and Imperial Labor Bureau, which would utilize 18,000 post offices for ascertaining and exchanging the various different local needs.

IV. RELIEF COMMITTEES.

Pending the formation of these labor bureaus, he would establish a Relief Committee "in each County Council area, on which representatives of the trade unions, Charity Organization Society, friendly societies, temperance and other bodies should sit, and, if possible, supplemented by a number of the guardians and vestrymen, whose local knowledge, together with that of the workmen, would be of great service in differentiating the workers from the loafers—a necessary and indispensable task. This committee should confine itself to disbursing relief in money or food only to those who through illness or inability to work should have relief, and who refuse to go into the workhouse because their distress was only temporary. This unofficial body would undertake temporarily the duties that should fall upon new District and Poor Law Councils that should soon be created on the broadest possible franchise for this and other purposes."

RESULTS.

Any subscriptions for the relief of the able-bodied poor should be handed over to the local authorities, whose surveyor or engineer should employ the unemployed in cleansing and sanitation, and necessary public works. No man should be employed unless he had at least resided three months in the district, and no man should be employed full time. Mr. Burns thinks that the Government could lend money on easy terms, and in many instances make a contribution to the unemployed, although in other respects each locality should be responsible for its own out-of-works. Mr. Burns says that he thinks if all the local authorities acted upon Mr. Fowler's circular, followed the example of the London County Council, and employed the unemployed at the rate at which Chelsea

employed them in 1886, they would give work to from 24,000 to 30,000 men in London alone, or about 200,000 throughout the country.

TWO REMARKS.

Two observations will naturally occur to every reader. The first is that at least one-half of the fund which Mr. Burns proposes should be secured for the payment of wages to the unemployed would be raised by docking the already employed of the extra earnings which they make by overtime. This may be right or it may be wrong. But whether right or wrong, it is not likely to be very popular with those who are going to lose their overtime money. Secondly, when everything is done that Mr. Burns proposes, there will still be the increase of population to be dealt with, and how it is to be faced excepting by such schemes as labor settlements, farm colonies at home and abroad and the like, which he brands as "social will-o'-the-wisps," we do not know, and Mr. Burns does not tell us. Possibly when Mr. Burns has given the same attention to that subject that he has to those which lie near to his hand, we shall have some more statesmanlike suggestions for the solution of the problem.

COMPULSORY ARBITRATION.

THE Rev. Dr. Lyman Abbott, who is an earnest advocate of compulsory arbitration for the settlement of labor difficulties, gives at length his views on this subject in the *Arena*. The substance of his article is contained in the following paragraphs :

HOW IT IS JUSTIFIABLE.

"Compulsory arbitration is simply the application to the settlement of industrial controversies of the same essential principle which is throughout the civilized world, and by all civilized states, employed for the settlement of other controversies. It devolves upon those who do not believe that this principle can be so applied to show why it is inapplicable.

"They have attempted to do this. It is said in the first place, in general terms, that there are serious objections to compulsory arbitration. Of course there are. There are serious objections to any plan proposed for securing peace in a community, the individual members of which are covetous, selfish, passionate, ambitious. All such plans are in the nature of makeshifts. They are lesser evils endured to escape greater evils. We pay annually enormous sums in support of judicial and police systems which would be rendered quite unnecessary if all men lived according to the Golden Rule ; but they do not, and we endure the taxation rather than suffer the injustice which anarchism would permit. No one, probably, supposes that compulsory arbitration is a specific for labor troubles. The question is not, Are there difficulties involved in compulsory arbitration? but, Would those difficulties be greater than those involved in a system which keeps labor and capital always alternating between open battle and an armed truce, and which in one-half year has inflicted on the

two great States of Pennsylvania and New York the two great labor wars at Homestead and Buffalo. There is no radical cure for labor troubles but character transformed and conduct controlled by Christian principles. Meanwhile compulsory arbitration is a device to protect the innocent from the injuries inflicted upon them by those whose character and conduct are not controlled by Christian principles, nor even by those of Moses or Confucius, but by the devil's maxim, 'Every man for himself.'

ITS POSSIBILITY OF ENFORCEMENT.

"We are asked how we would enforce compulsory arbitration. In the case of corporations the answer is very easy, and the principle should be applied at first only to corporations and perhaps only to certain classes of corporations, as to railroads and mining corporations, or possibly to those employing more than a certain definite number of employees, say fifty or a hundred. The corporation is an artificial creature. The State has made it ; the State can unmake. The only question for the State to consider is, Does the creation of this artificial creature help or harm the community? and if it harms, what limitation upon its power will prevent the harm? The State which has given it the power to inflict the injury has a right and a duty to so limit the power that no injury will be inflicted. The State then may say to the corporation, if you wish to exist, if you wish the peculiar privileges and prerogatives which a charter confers upon you, you must consent, if any question comes between you and your workingmen, to do, not what you think is right, but what we think is right. If you do not care to take a charter on these terms you can relinquish it. Only on these terms will we give you a charter; only on these terms will we allow a corporate existence.

A PROTECTION TO THE COMMUNITY.

"I advocate compulsory arbitration, then, first, in the case of all railroad corporations as custodians of the highways of the nation ; second, in the case of all mining corporations—the oil wells would be included—as possessing natural monopolies ; third, in the case of all corporations employing large bodies of men as possessing peculiar privileges, and therefore amenable to peculiar regulations and restrictions. I advocate compulsory arbitration—may I add that I have been advocating it for at least ten years by voice and pen—because it is a necessity in order to afford legal redress for possible wrongs for which the law now provides no redress ; because it is necessary to protect the community from injuries inflicted by the present no-system of *laissez-faire*; because it is in substantial accord with the methods adopted by all civilized countries for the settlement of their disputes ; because it is our own national method for the settlement of disputes between the States ; because what little light experience throws upon the subject is altogether favorable to this new application of this familiar principle ; and because it is in general harmony with the method which Jesus Christ has recom-

mended to His followers for the settlement of all disputes, whoever the parties and whatever the subject matter of the controversy."

SOCIAL WORK AT THE KRUPP FOUNDRIES.

THAT interesting field of social experiment, the Krupp foundries at Essen, Germany, which, by the way, have got beyond the point of experimentation, is elaborately described in the current issue of the *Annals of the American Academy of Political and Social Science*: "The total number of men employed by the Krupps and affected by their social experiments was, according to the census taken in this year, 25,200, and with their families amounted to 87,900 persons. This number was much smaller when the first experiments were begun, but we have here an opportunity to examine a series of experiments covering a period of a quarter of a century, and directly affecting a number of employees rising from 8,000 to 25,000, and a number of persons varying from 30,000 to over 85,000. So huge an undertaking on the part of the greatest industrial establishment in Germany, and one of the greatest in the world, is deserving of more than passing attention." The corporation builds and rents all the dwellings for its workmen, provides co-operative stores and boarding accommodations for unmarried men, attends to the prevention of sickness and disease by methods worthy of large consideration. The death rate in the workingmen's quarter of the city of Essen before the Krupp buildings were constructed was over five per cent. Since the beginning of the Krupp social scheme the highest death rate has been 1.7 per cent., and the lowest 0.8 per cent., and the average for the period only 1.23 per cent. "This is an exceedingly favorable state of affairs when we consider that no country taken as a whole shows a lower death rate than 1.79 per cent., and that the average for the German Empire is nearly four per cent."

The lives of all their employees are required by law to be insured, and in addition Mr. Krupp provides a pension and relief funds for the injured and bereaved.

THE KRUPP SCHOOLS.

"In order to raise the standard of family life and to maintain efficiency and contentment among the employees, something more was needed than cheap, sanitary dwellings, and Mr. Krupp soon gave careful consideration to plans for educational advantages, especially for the children, and to schemes for providing amusement and recreation. The firm, owing to the overcrowding of the district schools, established private common schools, and now the larger part of the children in all the colonies receive their education in the firm's schools. Instruction is free, and the entire cost of buildings, salaries and administration, together with a school library and a botanical garden, is paid by the firm.

"The advanced schools in Essen and in Altendorf are partially supported by, and are, by special arrangement, open free to apprentices of the works.

The instruction is elective, and courses in drawing, German, French, natural sciences, mathematics, mechanics, history, etc., are offered. A yearly school fee of \$1.50 is charged in Altendorf, and of \$4.50 in Essen. Over six hundred of the pupils in these schools belong to families connected with the Krupp works."

INDUSTRIAL SCHOOLS.

The industrial schools are divided into two classes—one for women and girls over fourteen, and the other for children. They teach sewing, knitting and crocheting. A fee of five cents a month is charged, but if a pupil remains five months the full amount paid, twenty-five cents, is placed to the child's credit in the savings fund. The education of apprentices also receives special attention. "The length of the working day is from 6 A.M. to 6 P.M., with three different intervals of rest aggregating a minimum of two hours per day. Night and day work is so arranged that it is equally divided among all; the length of time for night work is from 6 P.M. to 4½ A.M., with a half-hour pause. Excluding pauses, therefore, the actual working time is ten hours a day; formerly it was eleven and one-half hours per day, and, including pauses, thirteen hours. Lateness in arriving at work is punished by a fine, and promptness, to the extent of only one lateness in a year, is rewarded by a small money payment added to the wages at the end of the year. About thirty-four per cent. of the employees are entitled to this reward each year. Women and children are not employed in the works.

RELIGIOUS TEACHING.

"The religious teaching is left completely in the hands of the Catholic and Protestant clergymen, the salaries of several being paid by the Krupp firm. For the care of the sick, Evangelical and Catholic sisters have been supported, and workingmen's associations, libraries, kindergarten schools and various other forms of work affecting the laboring people have been done, in part, or at the sole cost of the firm, which has publicly announced itself willing to materially assist any and every practicable movement and effort on the part of third parties to improve the moral, physical and intellectual condition of their employees.

"The Krupp firm considers that it has been able, through its social work, to so fully centre the interests of its employees in the neighborhood in which they live, and so unite them with the interests of the firm, that they have exhibited less desire to change employment, have been less affected by labor disturbances in other parts of the country, and have been held at lower wages than would have otherwise been possible. Herein consist the advantages and the money return."

In the *Modern Review* for December Lady Florence Dixie has a characteristic article, entitled "Women's Position," in which, as she says, she does not mince her words. Her diatribe is comprehensive and universal, and includes a vigorous denunciation of women's dress.

WERE THE HOMESTEAD STRIKERS GUILTY OF TREASON?

IN the *Chicago Law Journal* Mr. John Gibbons, LL.D., quotes from Federal and State laws, and from the opinions of learned Justices, to prove that the Homestead strikers, in resisting the authority of Pennsylvania, were not guilty of treason, as it has been held by some. His argument is that the element "intent" is indispensable to the offense of treason and that, therefore, the strikers at Homestead did not commit this offense, as they "never intended to make war upon the commonwealth or overthrow its authority."

"I have nothing whatsoever in common with lawlessness or disorder of any kind, have no word of justification to offer in behalf of any man or set of men who violate their country's laws, but I have a deep, an abiding interest in the integrity and patriotism of the judiciary, that depository of power entrusted with the interpretation and enforcement of the law. If the men of Homestead combined and confederated together to forcibly resist the officers of the law and in carrying out that combination and confederacy they committed murder or arson, let them be tried, convicted or punished for either or both offenses; but, in what they did, there was no treason, no levying of war against the commonwealth or giving aid and assistance to its enemies, because it had no enemies except the strikers and, as already suggested, every one of them would lay down his life in defense of the honor of the commonwealth, and of the integrity of her laws."

HOW TO WEED OUT IMMIGRANTS.

THE *Century* has some impressive words in its editorial department on the imperatively-needed sifting of the immigrant swarm which is upon us. Some have suggested a branch quarantine service in certain foreign ports, from which alone emigrants should be allowed to leave for America, and then only after they have been satisfactorily examined as to their health, character and capacity for self-maintenance. "The American Consuls could assist in this work, and could give certificates, countersigned at the port of sailing, which would serve as passports, and be the only kind receivable for admission into the country."

Gen. Francis A. Walker's plan is that all immigrants shall, for ten years after, say, 1893, pay \$100 on their arrival in this country, which sum shall be refunded if they return home within three years, or if, at the expiration of that period, they can prove themselves to be law-abiding and self-supporting citizens.

"The restrictive measures are likely to appear in two forms, one set relating to quarantine regulations, and the other to direct checks upon the whole mass of immigration. In regard to quarantine regulations, a strong movement will surely be made for the establishment of a national quarantine, in place of State and local quarantines, with uniform jurisdic-

tion over all ports. The arguments in favor of this change are unanswerable. In the first place, the interests of the whole country are involved, and the Government of the whole country, and that of no single State, should be in charge of it. Over 90 per cent. of all the immigrants landing in this country come in by way of New York. The great body of transatlantic travelers come in through the same port, and the great bulk of the commerce of the whole country as well. That the government of the State of New York should have the power to regulate and control this travel and business, which belong to the whole country, is both unreasonable and unjust. The General Government has charge of all international commerce, and it should have charge of all international travel, for it is impossible to interfere with the latter without at the same time interfering with the former."

AFTER MR. GLADSTONE.

THE first place in the *New Review* is devoted to a characteristic article by Mr. Frederick Greenwood, entitled "His Last Campaign and After." "His," of course, refers to Mr. Gladstone. The article is frank and outspoken. After admitting that the Unionists, or many of them, heartily wish Mr. Gladstone dead, Mr. Greenwood passes on to consider whether the aged statesman is able to bear the wear and tear of the Premiership. He thinks he cannot and he strongly suggests that Mr. Gladstone should make over the Prime Ministership to somebody else and continue himself to serve as a Minister under the new chief. This arrangement, he hints, was contemplated when the cabinet was formed and he surmises that Lord Spencer was marked out as the figurehead who was to succeed Mr. Gladstone when the present Premier decided that he could best serve his country by attending exclusively to the Home Rule bill without undertaking any of the other burdens of the Premiership. This little plot, Mr. Greenwood thinks, was nipped in the bud by the expression of public opinion in favor of Lord Rosebery.

Mr. Greenwood does not think, however, that Lord Rosebery's popularity need stand in the way of Lord Spencer's consenting to act as a warming pan, for it would, no doubt, effectually bar the Premiership of Sir William Harcourt; but it is impossible to have Sir William Harcourt when Mr. Gladstone is in the House of Commons. However things are settled, Mr. Greenwood is certain there will be a cataclysm when Mr. Gladstone goes. He looks forward with gloomy eyes to the future, and is quite as gloomy about the Unionists under Mr. Chamberlain as he is about the Liberals after Mr. Gladstone. Speaking of Mr. Chamberlain, who is his *bête noire* next to Mr. Gladstone, he says:

"Radical in every fibre, he means to be chief of the Popular Party when Mr. Gladstone goes—and means it with all the determination of the Harcourts, Morleys and Laboucheres that he shall be nothing of the kind. And is there not a Tory Democratic Party to join in the *mêlée*—when the time comes? There is, or

there is to be ; its organization is now engaging the earnest thought of another little band of spirits which sees 'a future,' beyond the period of Mr. Gladstone's existence. Thus the imbroglio thickens ; and so we may see how probable it is that when Mr. Gladstone's last campaign is over the full effect of that bad day's work of his in 1886 will be witnessed in something like political cataclysm. A general breakup of parties is portended, certainly ; breakup amidst a clash of ambitions and a striving of factions which are already preparing for the struggle—and most of them preparing, too, as good though tardily-convinced revolutionists. Sometimes this enchanting future is recommended to us as all in accordance with the natural evolution of society ; but that is a mistake. There would have been no such future before us now if Lord Hartington and not Mr. Gladstone, had been leader of the Liberal party from the year 1880 till to-day."

MR. BALFOUR ON HOME RULE.

IN the *North American Review* for October we had Mr. Gladstone's "Vindication of Home Rule ;" in the current number the Rt. Hon. Arthur J. Balfour presents the Tory side of the question. Mr. Balfour first points out the difficulties which lie in the way of the passage of a Home Rule measure by the present House of Commons, chief of which is "that so far as Great Britain is concerned, the (distinctly) Home Rule party is in the minority, and so far as England alone is concerned, it is in a relatively small minority." He believes that when the test comes many of the English members who now help to constitute the Gladstone majority will be found against the government party. The difficulties are much greater, he asserts, since Mr. Gladstone has authoritatively promised to retain the Irish members at Westminster after Home Rule is granted, which promise, if fulfilled, would allow the Irish to intervene in English affairs, while the English, having no representatives in the Dublin parliament, could not intervene in theirs.

A DECEPTIVE MEASURE.

But it is not from the hostile English majority alone that Mr. Gladstone's English difficulties are likely to arise, we are told : "The English minority also may find that their assent to an Irish parliament has been wrung from them on false pretences. In truth, two very different schemes of Home Rule have been presented to the English and Irish people respectively. The Irish have been led to believe that they are to have a parliament and an executive practically independent and supreme so far as Ireland is concerned. The English have been taught to believe that, after Home Rule has been granted, the British parliament will still retain a supreme controlling power, to be exercised if and when, in their opinion, the Irish parliament abuses the powers which have been granted to it. The difference here indicated is fundamental. Both ideals cannot by any possibility be satisfied, and when the bill comes to be

laid on the table of the House it must inevitably be found, either that the English give more than they bargained for or that the Irish receive less than they expected. Which of the two sections among his followers will ultimately prove to have been the dupes Mr. Gladstone himself could not, probably, at the present moment inform us. The result will doubtless be determined by the 'higgling' of the political 'market,' and by the estimate which he may form of the relative obstinacy of the two parties, who cannot both get what they want, but who must both be induced to support him if he is to retain the 'confidence' of the House of Commons."

MR. GLADSTONE'S BILL WILL NOT SATISFY.

Mr. Balfour does not believe that Mr. Gladstone's proposed measure can, as his English followers have persuaded themselves, bring a settlement of the Irish difficulty, and for reasons which he states as follows : "The Nationalist movement is really based upon two diverse, though allied, elements. It is based partly upon the desire to shake off the connection with England, partly on the desire to remedy the wrongs inflicted by former confiscations by adding a new one to the number. In so far as the first of these still subsists by its own native strength and vigor, it would not be and could not be satisfied by the granting of a parliament even nominally subordinate to the Imperial parliament, and from whose deliberations are to be excluded the consideration of many subjects (such for instance as taxation and tariffs) which are freely granted to our self-governing colonies. But I believe myself that this feeling, though among certain sections of the population undoubtedly real, is in process, or, at least until the agitation of 1880 *was* in process, of rapid conversion into a harmless and purely sentimental affection for a condition of things supposed once on a time to have existed, but which no one in seriousness desired to see restored. In a generation it would have become as innocuous as the Jacobitism of 1760, and would have had as little in it hostile to the unity of the United Kingdom as have the feelings which we Scotchmen cherish for the heroism of Wallace or the victories of Bruce.

"Unfortunately, this patriotic sentiment is in Ireland inextricably associated with agrarian discontents. From this, and from this alone, did it derive the virulence which has characterized its different manifestations during the last twelve years. But it is plain that the Imperial parliament can never allow the perpetration in the nineteenth century of the iniquities that were barely tolerated in the seventeenth. There must be no new dispossession of the owners of the soil, no repetition, under modern forms, of ancient injustices. But if the Home Rule bill is neither to fulfill the wishes of those who, in their own phrase, wish to see Ireland a nation among the nations, nor the demands of those who want other people's land, how can it pretend to offer a final settlement of the Irish question? How can it satisfy the aspirations of that part of the population of Ireland which is understood to demand it?

THE BILL WILL AGGRAVATE, NOT REMEDY.

"In my view the remedy proposed by Mr. Gladstone must aggravate the disease it is intended to cure, for it is based upon a wrong diagnosis and conceived under a complete misapprehension of the life-history of the patient. No mere manipulation of the constitutional machinery can do any good. What is required is gradually to work the agrarian poison out of the system and to trust to time to complete the international amalgamation which is already so far advanced. Let us see that grievances are removed, that the law is obeyed, and that individual rights are maintained; but, while property in land is firmly supported, let us endeavor at the same time to facilitate, as far as possible, the acquisition of that property by the great mass of the occupying tenants. If this policy be consistently carried out, I make no question but that the process by which every great country in Europe has grown into a compact whole out of the scattered fragments left by the great storms of the middle ages, would at no distant date unite every section of the Irish people in the same sentiment of loyalty and affection to the Parliament of the United Kingdom as now prevails in Antrim or in Kent. While it seems to be equally certain that any of the inconsistent schemes described under the common name of Home Rule would, if carried into effect, inevitably aggravate every antipathy and prolong every evil which at present perplexes us in the treatment of the Irish question."

TASMANIA.

IN the *Young Man*, the Rev. Charles Bury has a good word to say for the ancient colony of Van Diemen's Land: "I spent a very pleasant time in this beautiful island. There are many signs of culture as well as comfort among the people. Higher education has been assisted by Government scholarships in England, and is occupying much attention just now in connection with a proposed revision of University provisions. Religion is ably expounded by the various churches, which have managed to secure quite a large proportion of gifted and devoted men. Literature is not yet to any extent a native product. Journalism seemed to me to be a reflection of the colonial life, and in no sense a creative agency in the shaping of new and nobler ideals. But I was greatly gratified to find how wide and thorough was the acquaintance of the average citizen with our English classic literature. The ordinary people, who are really the strength of the nation, are not too hurried to read and think. The result is a people who to material comfort add the enjoyment of mental pleasure. Altogether Tasmania is a desirable place. Its climate is life-giving, not so much because of its vigorous freshness as by its equability and richness. Its beauty of mantled hills and wooded dales affords ceaseless satisfaction to the eye. Its somewhat slow vitality is a welcome change from our unhealthy rush. Young men who are not in too great a hurry might do worse than choose Tasmania for a home.

Others who are not quite young would find it a delightful place to spend a winter or to furnish a residence for their declining years."

BIMETALLISM: AN ENGLISH VIEW.

IN the *Investor's Review* (London) Mr. Wilson has an article on Bimetallism in which he sets forth the faith that is within him with an energy and vigor that will make the good bimetallists blaspheme. The following is a very fair specimen of the style and conclusions of the article: "The whole world is at present the debtor of England, France, Germany, Holland, Belgium, and most of all the debtor of England and France. Of these debtor countries the poorer class could probably neither gain nor lose much by an international bimetallic 'combine,' to use the newest expressive American barbarism. They have little silver to send us to pay their debts, and not much means to buy it with for use at home. But countries like Chili, the United States, Mexico, Russia, Spain, Italy, India, China or Japan could all pour more or less considerable amounts of the white metal upon the London market in liquidation of their debts, and would all have the strongest motives so to do. Trade in useful products would become so restricted through this liberty to pay in bad money that many of these nations must soon succumb under the strain.

"But suppose they kept on sending the stuff, what in the name of all the gods could we do with it? Silver is not eatable. Were we to present all the 'fools' in the world with sugar spoons made of it, still some would be left, and the very spoons might become redundant. The working man, for whose welfare these bimetallists now express such tender regard, might have silver mugs for his beer—and no beer to put therein. Prices would fly up so that he might soon have to exchange his mug for a bit of bread. It would be old Spain over again—silver plate to dine on and nothing at all for dinner. None of the other creditor nations could relieve us of these mountains of useless metal—this trash—they would all have more than enough of their own. It is unsuitable for the manufacture of walking-sticks, and does not, we understand, make good fiddles. There would seem to be nothing for it but that we should construct a pyramid or two out of it, or half a score of 'Watkin Towers,' in memory of the crazy doctrinaires who hounded the country to its destruction.

"In sober earnest, can these bimetallists point to a single country at this present hour which, able to pay for more currency, wants it; or to one which, lacking what it needs, is able to pay for it? If they cannot, what are we to gain by inviting imports of a metal for which there is no market? How would that stimulate trade? If they would only learn, these men, that the world is bigger than they think, that the rise and decline of international exchanges are the expression of an incalculable variety of influences beside those embodied in silver and gold, and that there is no misfortune, not willfully brought about,

without its counterbalancing good, they would leave off wailing to governments to help them, and settle down to honest work. A depressed exchange, we repeat, is in every country at once a warning that it has overstrained its credit—that it is drifting toward the abyss of bankruptcy—and an opened door through which it may pour the products of its people's labor in ever-increasing quantities upon foreign markets, so as, if possible, to regain economic health. It is a curse, no doubt, but also a blessing. Therefore, to all theorizers, nostrum-mongers, and babblers of the market place, the wise man's answer should be that of Voltaire's *Candide*—'Cela est bien dit, mais il faut cultiver notre jardin.'

THE LEGALITY OF THE MISSISSIPPI LAW.

IN the December *Atlantic* Prof. Andrew C. McLaughlin discusses quite elaborately the constitutional bearings of the new State constitution of Mississippi, which was prepared by the convention of 1890, and went into effect without popular ratification. The educational suffrage qualification is of course the important point. Did the convention have any constitutional right to make such a restriction? And if so, what shall be done with the great body of voters disfranchised, in the estimate of Mississippi's electoral vote?

The specific act of 1870 readmitting the State to representation in Congress "established as a 'fundamental condition' that her constitution should never be amended so as to deprive any citizen, or class of citizens, of the right to vote who had such right under the constitution then recognized, unless such deprivation be because of crime." The recent constitutional provision for the educational qualification is clearly in open conflict with this. However, the writer argues that in the first place Mississippi was never really out of the Union, and that while Congress had an indubitable right to demand certain conditions for the fresh recognition that the State was at peace after the war, still the act of 1870 "includes a condition subsequent, a condition which is intended to be perpetually binding on the State. If this act is still in force, Mississippi is bound by limitations that are not in effect against the majority of her sister States, and we have a Union of unequal members. Such subsequent conditions are sometimes, without the least consideration, swept aside as illegal and void."

Nor can one find probable ground for belief that Congress could interfere under the Fourteenth and Fifteenth Amendments of the National Constitution. The Fifteenth forbids discrimination on account of race, color or previous condition of servitude. The Mississippi law does not on the face of it obey this provision in requiring a voter to read the Constitution or reasonably interpret it when read to him. But Professor McLaughlin argues that the plain intention and the inevitable result of the Mississippi law is to deprive a certain portion of the colored race of the franchise, and "the court has in more than one instance given relief where a law, valid on its face,

has been so administered as to deprive certain persons of equal protection of the laws."

Without following Professor McLaughlin through his whole course of reasoning, we find him admitting the possibility or probability that Congress is not able to interfere with the new law, but he questions the right of Mississippi to disfranchise so many voters and retain her original basis of representation. He quotes many authorities of various political leanings to prove that in the Fourteenth Amendment Congress intended to apply the penalty of loss of representation if the number of voters was cut down by means of an educational qualification. He calculates that at least 40 per cent. of all males over 21 years of age cannot read the Constitution and will be disfranchised. How the exact number of votes is to be determined, to be subtracted from the State's basis of representation, Professor McLaughlin is at a loss to suggest, nor how the law can be enforced at all. However, he says: "If the Fourteenth Amendment is to be construed as Senator Howard explained it, Congress is called upon to ascertain the number of persons who are not allowed to vote in Mississippi, and to reduce the representation of the State proportionally. It is evident that there are serious difficulties in the way, but it is a serious matter to have the National Constitution silently nullified."

THE ADMINISTRATION OF THE QUARANTINE LAWS OF THE PORT OF NEW YORK.

MR. E. L. GODKIN, editor of the *New York Evening Post*, replies in the current number of the *North American Review* to Health Officer Jenkins' article in the last number. Mr. Godkin was one of the passengers on board the quarantined *Nor-mannia*, and answers one by one as follows the statements made by Dr. Jenkins as to his method of administering the quarantine laws in the case of that vessel:

"All sick, as well as all suspects, were transferred to hospitals on Swinburne Island.' Not one of the sick or suspects was so transferred for thirty-six hours after the arrival of the ship.

"The dead were also landed.' The dead lay in the steerage in some cases twenty-four hours.

"I notified the Hamburg-American Packet Company to send down water-boats, so that a supply of Croton water might be on board.' No Croton water came on board for five days after the ship's arrival. The crew and stewards were during all that period drinking, and the passengers were washing, in the Elbe water taken on board at Cuxhaven. The Hamburg-American Packet Company sent down no water-boats, because the crews refused to go, and the authorities had not provided this indispensable instrument even of a proper old-fashioned quarantine. The ship arrived on Saturday morning, and fresh water only came on Wednesday night at 9 o'clock, just as the captain had determined to break bounds and go up to the wharf to get in.

"The company sent down a transfer boat, and all

the immigrants, with their baggage, were landed on Hoffman Island.' But not for thirty-six hours after the vessel's arrival.

" 'Dr. Sanborn, one of the most experienced assistants on my staff and a man who knew exactly what to do, took up his residence on board the steamship. It was largely owing to his efforts, I think, that everything went as well as it did.' Dr. Sanborn did not take up his residence on board until five days after the ship arrived, the captain having in the meantime been struggling to disinfect the ship with his own crew and a scanty supply of disinfectants sent him by the company.

" 'The dead were removed at night, to save the feelings of the living, and were cremated.' Some of the dead were removed with very little regard to decency in broad daylight, in my presence, and it was solely owing to the exertions of a few of the passengers in clearing the side of the ship on which the transfer boat lay, that the process was not witnessed by the whole of the cabin passengers.

" 'The baggage of the saloon passengers was washed down with the bichloride solution.' The baggage which the passengers had in their staterooms, and which was much more likely to be infected than that which was in the hold, and was enormous in quantity, was subjected to no process of disinfection or examination."

After this unsparing attack upon the Health Officer of the port of New York, Mr. Godkin concludes: "The New York quarantine is in no better condition to-day than it was on August 31 last. The danger which brought to light its defects in such a hideous way in the following month has not disappeared. The best opinion of the sanitarians is that cholera is likely to recur in the spring in Europe, if not here, and should it find us still unprepared 'national disgrace' will be a mild term, especially in the year of the Columbian Fair, to apply to our condition. If Congress and the President do not this winter put the whole business of protection from foreign infection into the hands of the Federal authorities, they will be guilty of almost criminal negligence. This done there would be a uniform system in every port, and at this port, the great gateway of the country, the quarantine service would be managed by the trained masters of organization who make our army and navy a subject of national pride, aided by the advice of our leading sanitarians who, as the London *Lancet* says, are in this field 'men of the highest eminence.'"

AN anonymous writer in the Naples *Rassigna* dwells on the probable or possible effects of the change in the English Government on its Egyptian policy. He seems to think that were the French, by evacuating Tunis, to cease threatening the liberty of the Mediterranean, there would be no further reason for continuing the English occupation of Egypt. "Egypt is of no importance to England except as regards her communications with India, and these are sufficiently guaranteed by the possession of Malta,

Cyprus and Aden." Failing this solution to the difficulty, the writer thinks the Italians will be then reduced to the alternative of either seeing their power and influence slowly destroyed by the combined action of France and England, or preparing for war. "The responsibility weighing on them is all the greater that it is not the necessity of events, but mistaken calculations of a foolish policy, that will have led to one or the other of these results."

A BRIGHTER VIEW OF JOURNALISM.

AS against Colonel Cockerill's recent arraignment of our journalistic methods and tendencies, Mr. Murat Halstead in the December *Cosmopolitan* takes a somewhat more hopeful view of what we are coming to with great newspaper corporations. After describing the gigantic strides in the perfection of mechanical devices for making the newspaper, a revolution in the industry which he has seen almost the whole of in his own journalistic experience, Mr. Halstead asks:

"What effect, the persons who are thoughtful of the press often inquire, has the telegraphy, the fast machinery and the production of paper at low figures—the diffusion of news so that the millions who move the world now survey the current history from day to day—what does all this do for the character and influence of newspaperdom? We are told newspapers do not control public opinion, as once upon a time. We are told also that individuality is lost in gigantic concerns that scatter printed leaves by the million; that we get the views of corporations or millionaires, not of men of labor, whose brains are in the excitement of creative activities rather than the repose of realized success; that the editorial 'we' is not somebody with convictions, purposes, principles, ardor, ceaseless energies, writing the lessons of experience with resolution and devotion, with some sense of manly responsibility to mankind, but that the 'we' is an association that invests, a machine that grinds jobs. There is truth in this, but it is not all the truth or the best of it.

"There is a tendency to exaggerate that which was done in the days of the giants. It is just as well that they always lived in some other time or place. However big they were, they knew their own troubles, and others found out their limitations. Given the man capable of great things in the press—to play the cables through the seas and the threads of copper and iron across the continents—heap his desk with the records of men and cities and nations, telling the story of the earth as it spins between light and darkness, and give him presses that set a-flying 100,000 papers an hour, and he will not find them disabilities, but the wires will serve him food, and through the press his hand touches the broad field of the world.

"The influences, mechanical and corporate, about the press may commend the commonplace, tempt the tainted and control the weak, but 'a man's a man for a' that,' as always, and integrity and intellect will subordinate money and machinery."

WAR CORRESPONDENT MACGAHAN.

MR. ARCHIBALD FORBES in his *Century* article on "War Correspondence as a Fine Art," calls J. A. MacGahan, who served with him on the *New York Herald's* staff, "the best war correspondent I have ever known." Telling of their joint experiences with F. D. Millet in the Turko-Russian war, Mr. Forbes says of his dauntless colleague :

"MacGahan was lame all through the war from an accident at its beginning, but lameness had no effect in hindering a man of his temperament from going everywhere and seeing anything; and he was one of

J. A. MACGAHAN.

three correspondents, all of American nationality, who, having taken the field at the beginning, were still at the post of duty when the treaty of San Stefano was signed."

The exertions which he credits to MacGahan in the latter's efforts to be everywhere at once, in the interests of his paper, seem scarcely credible.

MacGahan and Skobelev.

Under the title of "Sistovez-Vous!" Hermann Dalton publishes, in the November number of *Velhagen und Klasings Monatshefte*, reminiscences of General Skobelev and MacGahan, the famous war correspondent. The following one is interesting as showing the close friendship which existed between the general and the reporter :

Before the party had risen from table MacGahan entered unexpectedly and Skobelev rushed toward the new guest and embraced him as a brother. In the most exciting conversations it transpired that the close friendship between the two heroes dated from the campaign on the Oxus. MacGahan's ride from Kazala to the Oxus to join General Kaufmann and his army in order to take part in the taking of Khiva belongs to the most marvelous of achievements. It

was at Khiva he had met Skobelev and had also accompanied him in the bold chase of the Yomuds. How the two friends reveled now in the reminiscences of their adventures on the Oxus and what a treat it was for the other two comrades to listen to the stories of the two heroes!

In the evening, when Mr. Dalton had already sailed away in his boat, he espied MacGahan descending the hill and making signs that he, too, wished to cross over to Simnitsa. The boat was stopped, and in jumped MacGahan. "Oh, Rev. D.!" (he had evidently heard of the "German Pederstry"), "if you only knew what this roll is I have in my hand!" "I am not curious," replied Mr. Dalton. But the document seemed to give MacGahan great pleasure, and he was burning to reveal his secret. Mysteriously he opened out the roll, and it proved to be nothing less than Skobelev's confidential report, lent to the correspondent for the night, while a telegram arrived at the Imperial headquarters announcing that on account of sudden indisposition Skobelev could not deliver up his report till next day. Thus Skobelev showed his friend a last favor by intrusting the document to him as he was taking his leave; and thus it happened that the readers of the *London Daily News* had official particulars of the famous crossing of the Danube on June 27, 1877, before the Russian Emperor or any Russian newspaper could say a word on the subject. It made an immense sensation, that an English paper could publish news only known to the initiated; but no one suspected that it was a Russian General who had opened the sources of information for the English correspondent, and that a source reserved for the Emperor only.

"THE FIRST BANDIT OF EUROPE."

UNDER the title "The First Bandit of Europe" Mr. James Darmesteter, in the *Revue Bleue* of November 26, comments on the recent Bismarck revelations.

Prince Bismarck, he says, is not the first statesman who has lied in order to make two nations, desiring nothing but peace, go to war, while he knew that the war could only be full of catastrophes for the future, not because of the human carnage alone, but for the vengeance and the terror between two great nations for centuries thus brought about. Neither nation desired war, but two men did—the somnambulist of the Tuileries and the man of the iron will; the latter, not for the sake of German unity, but to transform that unity into one of defense and conquest—to transform the free union of States into an authoritative and centralist empire. He wanted war to take from France her provinces the most French at heart, and because he was sure of victory.

It was necessary, continues Mr. Darmesteter, that the war should be rendered inevitable and be declared by France, so that Prussia in the eyes of Europe should have the legal right, and could make a crusade against the aggressor, conscious of being the soldier of God.

OUIDA'S HOMILY ON SOCIETY.

OUIDA, having endeavored to regenerate mankind by writing a series of novels which hardly entitle her to rank among the great moralists of the world, now takes up her parable in her old age and rails against society in terms which show that she is capable of giving Mrs. Lynn Linton a long start and beating her.

The article which she publishes in the *Fortnightly Review*, under the title "The Sins of Society," leads up to the conclusion that Ravachol, who was not especially sound at the core himself, was nevertheless in agreement with most observant minds when he declared that society is so rotten that nothing could be done with it except destroy it. Ouida, who respects nothing—that is, at least, nothing in the shape of government or social organization—asks who that knows anything of the inner working of administrative life can respect any extant form of government?

SOCIALISM AND ITS TWO-LEGGED WILD BEASTS.

She has no hope in Socialism. It would only substitute a deadlier, triter monotony, and iron down humanity into one dreary, level, tedious and featureless desert.

"Its triumph would be the reign of universal ugliness, sameness and commonness! Mr. Keir Hardie, in baggy yellow trousers, smoking a black pipe close to the tea-table of the Speaker's daughters on the terrace of the House of Commons, is an exact sample of the 'graces and gladness' which the 'democratic' Republic would bestow on us.

"It is not the cap and jacket of the labor member, or the roar of the two-legged wild beasts escorting him, which will open out an era of more elegant pleasure, of more refined amusement, or give us a world more gracious, picturesque and fair."

ROYAL VULGARIANS MADE IN GERMANY.

If she sees no hope in Socialism or in the labor movement, she sees even less in the influence of the court. Of all barbarians she seems to think the court barbarians are about the most disgusting, and this she attributes very largely to the fact that royalty, like so much else, is made in Germany. "The diffusion of German influence, which has been general over Europe through the fatality which has seated Germans on all the thrones of Europe, has had more than any other thing to do with the vulgarization of European society. The German eats in public, kisses in public, drags all his emotions out into the public garden or coffee house, makes public his curious and nauseous mixture of sugar and salt, of jam and pickles, alike in his sentiments and in his cookery, and praises Providence and kisses his betrothed with equal unction under the trees of the public square."

THE ESSENCE OF ROYAL LIFE—VULGARITY.

The vulgarity of the age is at its highest in high places. Royal personages are always the first offenders and the worst examples. They are never still, they are never content. They are constantly taking ceaseless, useless, foolish, costly journeys. They

keep up many usages and obligations in society which are absolutely unpleasant and barbarous. Among those barbarous customs Ouida counts the habit of shaking hands. Every phase of human life is vulgarized, royalty leading the way. "Modern generations have made both marriage and death more absurd, more banal and more vulgar than any other period ever contrived to do; and it is not modern princes who will endeavor to render either of them simple, natural and dignified, for the essence and object of all royal life in modern times is vulgarity—*i. e.*, publicity.

FUNERALS AND WEDDINGS.

"Of all spectacles which society flocks to see, it may certainly be said that the funeral and the wedding are the most intolerably coarse and clumsy. There is indeed a curious and comical likeness between these two.

"The roughest and rudest marriage forms of savage nations are less offensive than those which are the received and admired custom of the civilized world. There cannot be a more Philistian jumble of greed, show, indecency and extravagance than are compressed into the marriage festivities of the cities of Europe and America.

"In all the annals of the social life of the world there has not been anything so atrocious in vulgarity as a fashionable wedding, whether viewed in its greedy pillaging of friends and acquaintances or in its theatrical pomp of costume, of procession and of banquet. It is the very apogee of bad taste, incongruity and indecency, from the coarse words of its rites to its sputtering champagne, its unvaried orations, and its idiotic expenditure."

A SOCIETY OF "PIGS IN MUD."

Turn wherever you will, there is nothing that pleases her. Our society is full of snobbishness, greed, haste and slavish adoration of wealth, in which it basks as pigs in mud. Over-eating, over-smoking, over-crowding, poison the life of man. Drinking, gaming, slaughtering, fill up the lives of society, which gobbles up its time breathlessly without tasting its flavor, as a greedy schoolboy gobbles up stolen pears without peeling them. The great malady of the age is the absolute inability to support solitude or to endure silence. The expense of continual visiting and inviting is ruining all the old families; and libraries, pictures, woods go to the hammer in order to keep up the incessant, breathless round of sport and pleasure danced on the thin ice of debt.

THE IDIOCY OF TROUSERS.

As we do not know how to live, neither do we know how to dress. All entertainments are unsightly, and a full concert room, lecture room, or church is a hideous sight. "The attire of the men is the most frightful, grotesque and disgraceful male costume which the world has ever seen. When the archæologists of the future dig up one of our bronze statues in trousers, they will have no need to go further for evidence of the inaptitude and idiocy of the age. A man who cannot clothe his own person

reasonably is surely a man incapable of legislating for himself and for his kind. This rule, however, if acted on, would disfranchise Europe and the United States."

THE SORDID BRUTALITY OF GREATER BRITAIN.

If the Old World is bad, the New World is worse. With the following characteristic passage we conclude the homily of Mrs. Jeremiah Ouida: "The man who lives in a shanty built of empty meat and biscuit tins on the plains of Nevada or New South Wales is by many degrees a more degraded form of humanity than his brother who has stayed among English wheat or Tuscan olives or French vines or German pine trees; many degrees more degraded, because infinitely coarser and more brutal, and more hopelessly soaked in a sordid and hideous manner of life. All the vices, meannesses and ignominies of the Old World reproduce themselves in the so-called New World, and become more vulgar, more ignoble, more despicable than in their original hemisphere. Under the Southern Cross of the Australian skies, cant, snobbism, corruption, venality, fraud, the worship of wealth *per se*, are more rampant, more naked and more vulgarly bedizened than beneath the stars of Ursa Major. It is not from the mixture of Methodism, drunkenness, revolver shooting, wire pulling and the frantic expenditure of *richards* who were navvies or miners a week ago, that any superior light and leading, any alteration for the better social life, can be ever looked for. All that America and Australia will ever do will be to servilely reproduce the follies and hopelessly vulgarize the habits of the older civilization of Europe."

HOW TO UTILIZE YOUNG LADIES.

IN the *Nineteenth Century* the Hon. Mrs. Lyttleton Gell has a very admirable article upon "Squandered Girlhood." Mrs. Gell points out that the postponing of marriage and the education of woman has brought into existence a class which did not exist before—namely, that of so-called girls between eighteen and thirty. These girls are bright, educated, capable women who are awaiting marriage, and instead of being given an interest in life and provided with something to do, they are launched into society with the idea that the proper thing for them to do is to give themselves up to the pursuit of pleasure. This is the canker which eats out the heart of independent home life. One result is that we have women after marriage taking very unkindly to the necessary slowness of domestic duties. They live for thrills, sensations and excitements. As these cannot be obtained from their husbands, they resort to expedients which, even if they do not land them in the divorce court, are absolutely fatal to real marriage. Leaving that on one side, however, Mrs. Gell, writing with special reference to English girls, reminds them that they also have to justify their existence. What are they contributing to the commonwealth? How will they justify before democracy the sacrifice of all the duties they owe to their neighbors to the dissipation of the

London season? How much longer, she asks, are these splendid resources of capacity and enthusiasm which underlie the society veneer of upper-class girlhood to go to waste in making sport for the Philistine? In the country and in London, around every well-to-do family there are multitudes of girls whose lives are one ceaseless round of toil. They have no time to organize for themselves anything in the way of culture or recreation. What are the upper-class girls doing for them? Even if they wish to help, society is so organized as to render it difficult, if not impossible. "The dear girls must have their season." The season, instead of being a few weeks of recreation, is such hard work that it requires a month at Homburg in order to restore their overstrained constitutions. After returning from the watering places, shooting parties begin. Instead of being the center of sweetness and light to the country-side the girl becomes a miserable, self-indulgent creature, who spends the very prime of her life in an incessant round of dissipation.

"The utter unsatisfactoriness of the life they thus lead is eating into the hearts of many girls who yet have not the independence of mind or will to shake themselves free from the yoke.

"They little realize that in themselves lies the very force the nation needs—a force in which we are superior to all other nations—a band of energetic, enthusiastic, cultivated women, capable enough with a little direction to help their poorer sisters in a thousand ways."

If they must have their evenings for society they should have their days for helping their neighbors:

"The organization of social evenings for the young women who serve them in shops—dressmakers' assistants and the like—would redress the balance of the sexes, relieve the congested ball-rooms, and give redoubled zest to the next dissipation, if that be desirable. There is also that vast desert of the middle classes to be considered—girls who are earning their own living as daily governesses, telegraph clerks or schoolmistresses."

They are alone. They have no bond of union; their natural leaders have abdicated; you must seek them in the marriage market of the London drawing-room. Mrs. Gell admits that the girls themselves often want to do better, but do not know how to begin. What she would like is to impress on their hearts that "whoever fears God, fears to sit at ease." The great leisured class of cultured women cannot be held guiltless if it evades individual responsibility and squanders the benefits of birth and education on its own amusement. She concludes by saying that a great work among the girlhood of England is waiting to be done by the girls.

MR. GRANT ALLEN, in the *English Illustrated*, describes Tennyson's homes at Aldworth and Farringford. The article is copiously illustrated with very pretty pictures. It was written before the death of Tennyson, and Mr. Allen has published it as it stood,

CHARACTER IN THE HAND.

IT should be explained at the outset that the article on "The Art of Reading Character in the Hand," by Herr Otto Moretus, has nothing to do with Palmistry. The system he expounds is that known as Chiromony, an attempt to discover the chief characteristics of a person by the shape and general appearance of the hand. Herr Moretus is chiefly indebted to the work of a Frenchman, Captain d'Arpentigny, for the interesting outline of the subject he has contributed to Heft 3 of *Vom Fels zum Meer*. He divides the hands into three parts—the wrist, the palm and the fingers; but as the wrist has little to do with character reading in the hand, his observations are confined to the palm and the fingers.

THREE TYPES OF FINGERS.

The palm chiefly betrays temperament, the passions, the energy and activity and the desires of the man, whereas the formation of the fingers leads to conclusions with regard to talent and intellectual gifts. The fingers, indeed, are of the highest importance in character reading, because in conjunction with the palm they give the key to the whole character of the individual. Three great types of fingers should be distinguished—flat fingers, broader at the ends than at the knuckles; angular, knotty fingers, with the extremities of the same breadth as the knuckles, and conical fingers, with tapering tips.

The first of these types shows that the individual is more inclined to the useful and practical than to the ideal, has a strong sense for the material, for physical strength, for industrial occupation, for the practice of the scientific and generally a decided aversion to philosophy, poetry and metaphysics.

Knotty fingers signify a preference for philosophy, the sciences and logic. Men with such fingers like the exact, the positive in science and life; they are inventive and happy in turning their knowledge to account; therefore they have business talent, but seldom know any higher or more poetical flight.

Men with conical tapering fingers are artistically gifted, and easily carried away; they strive for social independence, and incline to the ideal in art and life.

THE THUMB.

The thumb, too, takes an important position in character reading in the hand. It shows intellectual will, free decision, the power of logic. In this respect it is very significant that idiots, in whom reason and will are wanting, have in most cases undeveloped thumbs, and that young children roll up the thumb with their fingers and eliminate it, so to speak, till they begin to exercise their will.

A little, thin, unmarked thumb is peculiar to persons of undecided, hesitating character, who are guided more by feeling and instinct than by intellect and reason. Such thumbs are generally found in women who are patient and entirely submissive to their husbands. A woman of energy and power to rule will never have such a thumb.

On the other hand, individuals with large thumbs are usually intellectual powers; they know what they

want, and they act wisely. A small, thin and short thumb shows a character doubting and vacillating to a high degree, whereas a thick thumb denotes a self-consciousness, which may include haughtiness, pride and over-estimation.

SEVEN TYPES OF HAND.

It is the union of these two types of thumb in combination with the various palms and fingers that makes the most interesting blending of character and talent. But with regard to the entire hand, Captain d'Arpentigny is of opinion that a large hand usually denotes a sense for trivial matters and details, a medium-sized hand a sense for grasping things as a whole as well as in detail, and a little hand, if it is also broad and has angular joints, a quarrelsome nature. Taking the hand as a whole, he distinguishes seven types: the elementary hand; the spatulate hand; the artistic, conical hand; the useful, angular hand; the philosophical hand; the psychical hand; and the mixed hand.

The elementary hand is very broad and thick, the palm hard, and the fingers thick and stiff, while the thumb is short and thick, and often turned outward. This hand, of course, belongs to the coarse, rough man, who thinks little, has an undeveloped mind, and passes his days in idleness and indifference.

In the second type, the fingers show spatula-shaped enlargements, and the thumb is generally large. This hand shows decision and self-consciousness, activity and industry, love of work, especially of a mechanical sort. Men with such hands are faithful in love and in duty, but seldom show any enthusiasm for beauty and the ideal.

Of the artistic there are many varieties. If this hand is short and thick with large thumbs, it betrays love of fame and money, and the possessor will be inventive and lucky in his enterprises. If the hand is flexible, the palm of medium size, and the thumb small, enthusiasm and a sense of the beautiful may be ascribed to its possessor. If the hand shows remarkable breadth and firmness, it denotes sensuality. The conical fingers show inspiration, inclination for deep thought, an aversion to mechanical activity and a preference for the artistic, the beautiful and the poetical. Such men are less faithful in love; they are fond of pleasure and not particularly strict in their morals. These hands, however, show innumerable shades and blend with other types.

The fourth type, the practical hand, is large, the fingers knotty, the wrist well developed, the nails square, the thumb large and the palm hollow and tolerably firm. A hand of this type signifies that its owner has order, perseverance and a love of work, in which his organizing and regulating faculties are brought into play. Reason will guide him in all his undertakings; he is punctual and orderly in his dress and mode of life.

In the philosophical hand the palm is small, and the wrist is mostly large. Characteristic of this hand are the knotty fingers, with the ends partly of the knotty and partly of the conical type. The thumb is pretty broad and both joints are about equally developed.

Persons of this hand go more to the root of things, are more eager for truth than beauty; the essence of things interests them more than does their beautiful form. The knuckles point to a sense for calculation and methodical observation as opposed to art shown within conical knuckles. The combination of these two types, however, produces a preference for metaphysics, and men of such hands can be enthusiastic over the moral and the sublime; their guiding star is reason; in questions of faith they remain calm and critical, they analyze and classify on definite principles and ideas.

The sixth type is rare. The hand is small, the palm of medium size, the fingers straight, soft and arched, with fine, pointed tips. The thumb is slender and beautifully formed. The owner of this hand lives in the ideal and for the ideal, has no ambition and no sense for the practical. The low and the egotistical are far from him; he will die for his ideas, and has only energy to do things in which he sees some hope of the realization of his ideals. Such a nature is not strong physically, and it is more mental stimulus than physical strength that keeps him up and enables him to achieve anything. The apostles of great ideas have such hands, the so-called enthusiasts for world happiness, and often, too, the prophets who have no honor in their own country. Their longings and their thoughts are concentrated on the abstract-noble, the beautiful, the right, the sublime.

Of course the mixed hand is the commonest, and may unite two or several types. Naturally, too, it is the most difficult to read.

HERRMANN, THE MAGICIAN.

HERRMANN, the Magician, tells in the December *Cosmopolitan* something—not too much—about his marvels of jugglery, and a good deal—considerably more—about the tricks of other prestidigitateurs. He speaks of the ever-growing interest in these tricks, which has not died out with the departure of witches and broomsticks. Indeed, Mr. Herrmann himself, with his own theatre snugly filled nearly every night, is sufficient proof that an age of science and realism still produces people who are pleased to have white rabbits with pink eyes abstracted from their ears, and to see lusty fowl and indubitable dishes of water and gold fish produced from a handkerchief. But, far from being conservative, the art of magic must, if we are to believe Mr. Herrmann, constantly keep up or rather in advance of its time.

“A so-called magician, more than a poet, must be born with a peculiar aptitude for the calling. He must first of all possess a mind of contrarities, quick to grasp the possibilities of seemingly producing the most opposite effects from the most natural causes. He must be original and quick-witted, never to be taken unawares. He must possess, in no small degree, a knowledge of the exact sciences, and he must spend a lifetime in practice, for in the profession its emoluments come very slowly. All this is discouraging enough, but this is not all. The magician must

expect the exposure of his tricks sooner or later, and see what it has required long months of study and time to perfect dissolved in an hour. The very best illusions of the best magicians of a few years ago are now the common property of traveling showmen at country fairs. I might instance the mirror illusions of Houdin; the cabinet trick of the Davenport brothers, and the second sight of Heller—all the baffling puzzles of the days in which the respective magicians mentioned lived. All this is not a pleasant prospective picture for the aspirant for the honors of the magician.”

HALLUCINATIONS.

M. F. PAULHAN writes in the *Revue des Deux Mondes* on “Hallucinations and Mental Suggestion,” basing his essay on a great number of specialist works, among which are the publication of Messrs. Gurney, Myers and Podmore, and Dr. Maudsley’s “Natural Causes and Supernatural Seemings.” His deductions from the cases on record seem to amount to this: There is an undefined mental faculty which can receive sensations from events occurring at a distance (when they concern persons in whom the subject is deeply interested, or in magnetic *rapport*), as the senses receive impressions from objects within their reach. The nature and limitations of this faculty are but imperfectly known. Many persons appear to be altogether without it, and of those who have it, some possess it in a greater degree than others. Its operation also appears to vary, just as it depends upon circumstances whether we see a thing distinctly or the reverse with our bodily eyes. This is shown by cases where the hallucination merely gave a general impression without details, or where the details were imperfect or incorrect. The drift of the whole is that of many other writers on the subject: “We must not say a thing does not exist till we have *seen it not existing*”—and in the meanwhile wait for more light. “This old world” (says M. Paulhan) “is no doubt keeping plenty more surprises in reserve for us; we must hold ourselves in readiness to receive them with a good grace, and make use of them if we can. Besides, our universe is only one amid millions of possible universes, in which it is conceivable that the laws of nature and their connection with each other might be different from those known to us. Recent researches on unknown forces have, I am convinced, rendered positive service to science; and even had they done no more than enlarge the circle of our imagination, so as to make it embrace a world, which is possible, but forever without reality, the result would not be out of proportion to the efforts that have been expended.”

We suppose that by reality, in the last sentence, M. Paulhan means *material* reality (a contradiction in terms if we follow Plato and Bishop Berkeley)—otherwise, we own, we can scarcely follow his meaning. As to the possibility of a universe where two and two make five, that question, we frankly confess, is beyond us.

AN ARGUMENT FOR DRAMATIC ART.

THE *Dial*, of Chicago, has made most praiseworthy advance under the conduct of Mr. F. F. Brown, and contains in the number appearing December 1 a leading article on the literature of the stage, of especial timeliness and value, which reads as if it were written by Mr. William Morton Payne, that gentleman having contributed other of the more important features of the number. This is, of course, particularly apropos of the New York Theatre of Arts and Letters, which has recently been founded by a number of gentlemen of that city, chiefly literary. He calls attentions to the fact that among our dramatists who are really artists, Shakespeare is only partly recognized by our stage, while Browning, Swinburne, Shelley, Tennyson and Landor are not recognized at all.

THE DEGRADATION OF THE STAGE.

“The theatrical records of London, New York and Chicago alike give evidence of a noble art degenerated into a mere amusement, and the almost complete severance of literature from the stage. But talking about these evils is not likely to prove effective in removing them. The talking will be done by a few earnest people, and the unthinking masses will give, as before, the sanction of their support to the dramatic monstrosities that chiefly occupy our stage.

THE THEATRE OF ARTS AND LETTERS.

Of the New York circle of reformers, the writer says :

“The plans of the Theatre of Arts and Letters are as yet somewhat indefinite, but the association with the project of such men as Messrs. Edwin Booth, Joseph Jefferson, Augustin Daly, E. C. Stedman, T. B. Aldrich, W. D. Howells, R. W. Gilder and George E. Woodberry gives the best possible assurance of a serious aim, and the employment of methods consistent with both the dignity of literature and the best dramatic traditions. The production of new plays is the object of the New York organization, but we wish that it might join with this object that of the revival of old masterpieces. The recent production, by the London theatre, of Webster’s ‘Duchess of Malfy,’ offers a suggestion upon which it would be desirable to act. It reminds us that the century which has partly neglected Shakespeare has totally neglected the other men of that great race of Elizabethans above whose level it required the stature of a Shakespeare to tower.”

It is not a little significant to hear this excellent plea so well put from Chicago, and it is a fine mission for the *Dial* to espouse in its rise to the dignified position of one of America’s two or three really literary papers. The same number of the *Dial* contains a fine sonnet by Mr. Payne in the same vein, entitled “Ej Blot Til Lyst” (Not For Pleasure Only), the words inscribed above the stage of the Royal Theatre at Copenhagen.

Not merely for our pleasure, but to purge
The soul from baseness, from ignoble fear,
And all the passions that make dim the clear,
Calm vision of the world ; our feet to urge

On to ideal, far-set goals ; to merge
Our being with the heart of things ; brought near
The springs of life, to make us see and hear
And feel its swelling and pulsating surge.

Such, Thespian art divine, thy nobler aim ;
For this the tale of *Œdipus* was told,
Of frenzied *Lear*, *Harpagon*’s greed of gold.
And, knowing this, how must we view with shame
Thy low estate, and hear the plaudits loud
That mark thee now but pander to the crowd !

AN AMERICAN CRITIC OF WAGNER.

IN *Music*, the enterprising Chicago publication of Mr. W. S. B. Mathews, Clement Tetedoux is given over thirty pages for his opening article on “Wagner and the Voice.” Mr. Tetedoux goes quite deeply into the philosophy of his subject, though not so far as to prevent a sprightly treatment ; his main point is that Wagner’s music is antagonistic to the best efficiency of the voice in the opera, and that hence the productions of the master are doomed in the future to be looked back on as antiquities and curiosities. Mr. Tetedoux thinks that our senses are offended by the unnatural conjunction of the phenomena of singing with the subject matter which Wagner has chosen ; for, he argues, we sing about bright, happy things of little moment, and in tragedies the music goes out of the voice entirely.

THE INFLUENCE OF WAGNER.

“Deplorable as certainly are results obvious to all, and truly pernicious as may be declared the influence of Wagner on the present, it were doing the mighty master an injustice to overlook and undervalue his power for good in the future. His operas may perish. His reforms will survive. It will be with his influence as it was with his work, in which man was held for little, to which men were mercilessly sacrificed ; his faults will cause the fall of many musicians who should have stood, but music itself will be exalted by his excellencies.

“Wagner was a man of destiny, appeared when he was wanted, and filled inflexibly his mission. In the heat of the fight hard blows were dealt to the good and respectable. Contumely was heaped on illustrious heads. Sectarian proscription raged madly. In and out of his real field of action the same disregard of individuals and masses marked the passage in life and in art of the man and master. But he won the day, and accomplished his end.

“He may not make an attractive figure in history ; but his fierce warfare and grim victory stamp him as a giant. Compatriot and cotemporary of ‘the man of blood and iron,’ we can imagine Wagner, centuries hence, side by side with him in the gallery of the great ancestors, a stern image, like him, of grandeur and power, but unlike him contemplating with the cold smile on his lips the lasting effects and steady workings of his impress on all passing generations.”

OUR HORSES AND OTHERS.

COL. THEODORE AYRAULT DODGE, having told us in his series of papers which *Harper's* published last year all about riding horses, broadens the scope of his favorite subject in the *North American Review* of December, to which he contributes an article on "The Horse in America." He tells of the various extractions of our American breeds, where interminable crossing will allow any to be shown. The better classes of horses in the South possess purer blood than those of the North, and Col. Dodge asserts with commendable pluck, in the face of that incontrovertible authority, Fashion, that the Southern riding horses, with their carefully cultivated gaits, are far superior to the Anglomaniacal trotting saddle-horses of the North.

WE HAVE THE BEST HORSES.

"Probably more and better horses are owned in America per thousand of population than in any other country, and the farmer or corner groceryman, at least in the North and West, can and does afford to keep as good a roadster as the city nabob—often a better one. While the average horse lacks the distinctive characteristics of race, he has exceptionally good qualities. American horses are, as a rule, sure footed. There are more broken-kneed nags in cabs and livery stables in England four-fold than here. Smooth roads and level meadows uniformly breed horses less careful how they tread than rough roads and stony pastures. The Eastern granite soil produces safer steppers than the clay of the South. Our horses are of even disposition; one rarely sees a brute or a biting, striking, kicking devil in America. They are easily broken. In Kentucky the children ride the colts, often with only a stick to guide them. 'I consider,' said Herbert long ago, 'the general horse of America superior, not in blood or in beauty, but decidedly in hardihood to do and endure, in powers of travel, in speed, in docility, and in good temper to any other race of general horses in the known world.'"

"Except perhaps in the matter of trotting, the main distinction between the horse in England—as typical of Europe (for all Europe now is imitating England in matters equine)—and the horse in America has lain in the lack of system in breeding. Of very late years there has been considerable attention paid in this country to breeding, and the admixture of different bloods, which has produced 'nondescripts with which America is overrun,' is being avoided. That breeds have been kept separate in England is due to the fact that the raising of horses has largely been in the hands of great land owners or capitalists, and the farmers who raised horses had their intelligence as well as their stud to profit by; whereas in America, until of recent years, breeding of all but thoroughbreds was, with few exceptions, an entirely random affair."

OUR UNCONQUERED TROTTERS.

Our trotting horses are, in newspaper parlance, world-beaters. The Russians sent over their famous Orloff trotters to lower Uncle Sam's equine colors,

but while they were handsome, in racing they were so far behind that it "became a farce." Our dirt roads help to develop and perfect the trotter, and there has been a steady and rapid lowering of the mile record from the triumph of three minutes, seventy years ago, to the present rate of speed, almost a third greater, and but half a minute less than the running time. And the endurance of our famous trotting horses is as remarkable as their speed, though "the exertion called for by a mile trotted in 2:10 is quite as great as that by a mile run in 1:40."

HOW TO EDUCATE OUR DOCTORS.

PRESIDENT CHARLES F. THWING, of Northwestern Reserve University and Adelbert College, whose writings on educational topics have been among the most valuable recent contributions to pedagogical subjects, writes in *Education* on the "Best College Education for the Physician." President Thwing has written to various prominent educators throughout the country for their opinions on this subject and their answers show a general consensus of opinion that the physician should be educated apart from his technical training, though many advise in this general development of the faculties the substitution of modern languages and the sciences for the old classical and mathematical courses.

THE DOCTOR SHOULD BE A THINKER.

"The special function of the doctor is not to speak; his special function, we may say, is to think. There is no profession in which there is more need of all the qualities that go to make up the thinker than the medical profession. The doctor should have a mind intuitive, profound, comprehensive. As he sits down by the bedside of a patient his function is to weigh evidence. All that the eye sees, all that the ear hears, all that the touch feels, all that is made known to him through any sense, is to be regarded as evidence pointing to or necessitating a certain verdict. The value of this evidence his judgment is called upon to consider and to decide. The more true his diagnosis, the more probable is the achieving the desired end."

THE VALUE OF CHEMISTRY.

"Certain sciences have a direct professional value, as, for instance, chemistry. Every doctor must, in a degree, be a chemist. How far his direct professional purpose should be pursued in the college is so broad a question that I shall not venture here to discuss it. I shall, however, venture to say that he should know general chemistry so far as it is required in the practice of his profession. The special lines of the science should be, I think, taken up in the professional school. Furthermore, chemistry, or any science, promotes this quality of weighing evidence through the training of what may be called the scientific method. This method is simply induction; and each case to which the doctor is called represents an instance in which reasoning by induction must be followed."

THE PERIODICALS REVIEWED.

THE FORUM.

THE two articles on the care of the poor have been reviewed as "Leading Articles."

President Charles W. Eliot, of Harvard University, shows wherein popular education has failed. The chief fault which he has to find is that too little attention is given in our schools to the development and training of the reasoning faculty. He names four things in which the youth of the country should be thoroughly trained if his judgment and reasoning powers are to be systematically developed—namely: Observing accurately, recording correctly, comparing, grouping and inferring justly, and expressing cogently the results of these mental operations.

THE SCHOOLS OF ST. LOUIS AND INDIANAPOLIS.

Dr. J. M. Rice continues his criticisms of the public schools of the United States, this month dealing with those of St. Louis and Indianapolis. The methods of instruction followed in the schools of St. Louis are, he says, mechanical and calculated to crowd the memory with cut-and-dried facts. Little attention is paid to objective work. "Arithmetic is taught mechanically and abstractly almost from the start. The recitations in geography are so formal that children themselves frequently keep the ball rolling, the teacher's part in the lesson being limited to saying, 'Right,' 'Wrong,' 'Next,' 'Don't lean against the wall,' 'Keep your toes on the line.'"

Dr. Rice finds much to commend in Indianapolis schools. He says: "The scene presented in the Indianapolis classroom differs so widely from the scene presented in the schoolroom of St. Louis that it would scarcely appear that these two institutions had anything in common. This striking contrast is due to the fact that the Indianapolis schools abound in the element which St. Louis is so obviously lacking—consideration for the child, sympathy. The cold, hard and cruel struggle for results is here unknown. The teacher uses every means at her command to render the life of the child happy and beautiful, without endangering its usefulness."

The vast difference between the schools of these two cities is accounted for by Dr. Rice in a large part by the difference in their method of supervision. In St. Louis practically nothing is done by the superintendents toward improving the minds of their teachers. In Indianapolis the education of the teachers is the all-important aim of the supervision.

POLITICS AS A CAREER.

Ex-Senator Geo. F. Edmunds discusses politics as a career. His paper is an enlargement of the idea contained in the following paragraph: "Assuming, as may be safely done, that the great majority of young citizens are honest, the chances for them of a good political career have many attractions; but if that career is to be exclusive of the private pursuit of some business or profession, it will be found difficult and disappointing. Indeed, only those of assured competence could enter it. And the best efforts of the wisest and ablest man among them may keep him a whole lifetime in the minority, and neither the good to his fellow-men he wished to accomplish nor the laurels he might justly think ought to rest on his head may ever be definitely attained."

Mr. Edmunds concludes as follows: "He is the best

politician and will have the best political career whose every-day life and occupations are in contact and sympathy with those of his fellow-men. He accepts public employment and exercises public power as a duty, and it may be a pleasure, when called to do it; and thus he is able, in the changes and chances of political movements, to leave them without regret, and feel himself again happily at home in his former place among the people."

ARTISTIC TRIUMPH OF THE WORLD'S FAIR.

Mrs. M. G. Van Rensselaer, writing on the "Artistic Triumph of the Fair-Builders," says: "This fair of ours, in its general aspect and judged from the artistic point of view, is not only much more successful than, two years ago, we believed it could be: it is much more successful than any that has ever been created in this or another land. It is not only comparable to the beautiful Paris Exhibition of 1889, and not only equal to it; it is greatly superior. And its excellence is not an imitation or even an adaptation of any precedent, but has been achieved upon entirely new and original lines. Only those who know how hard it is to produce a high degree of beauty on a vast scale, and in complicated ways, will fully understand that they are beholding one of the most beautiful of sights and, considering its genesis, distinctly the most wonderful sight, in the world—a sight the character of which, I am not afraid to say, has not been paralleled since the Rome of the Emperors stood intact with marble palace, statue, terrace, bridge and temple, under an Italian sky no bluer than our own."

Mr. John W. Chadwick gives reasons why the World's Fair should be open on Sunday.

THE NORTH AMERICAN REVIEW.

WE have reviewed in another department Mr. Balfour's reply to Mr. Gladstone; "When Is the Pope Infallible?" by the Rev. S. M. Brandt, and Col. Theodore Dodge's article on "The Horse in America." There are besides these other articles of note.

OPPORTUNITIES FOR YOUNG MEN IN JAMAICA.

The Governor of Jamaica, Mr. Henry A. Blake, tells of the opportunities of young men in his country. He holds out as an inducement for those with capital the exceptionally good profits to be derived from the raising of horses and cattle on the Jamaica plains, and from the cultivation of sugar, coffee, fruit and fiber.

INTERNATIONAL YACHTING.

Earl Dunraven has an article on "International Yachting." What he favors is not a race for a perpetual challenge cup open to all the world, and to be sailed for at the annual regatta of the club holding the cup, but the sailing of a series of matches between two representative vessels for the championship of the seas. As America and England are famous in yachting matters, he thinks that they should take the lead in laying down regulations for International races.

"I should therefore invite, say, three Englishmen and three Americans, representative yachtsmen and members of the foremost clubs, to meet in New York or London, or in some other convenient place—Paris might be suitable—and sit down to discuss the matter thoroughly and draw up definite rules. Their labors having been brought to a conclusion, I should put six bits of paper—

one of them being marked—into a hat, shake them up and request the members of my drafting committee to draw lots. The nationality of the drawer of the marked lot should determine the waters in which the first race for the cup should be sailed, and he should nominate the yacht club in whose charge the cup should be first placed.

A BLOW AT THE FREEDOM OF THE PRESS.

Mr. Hannis Taylor discusses the legal points in the "Freedom of the Press" cases which have been acted upon by the United States Supreme Court, concluding that the power now recognized in Congress to arbitrarily deprive the citizen without a legal trial of the right to send his communications through the mail, the one agency which it does control, takes away the only substantial right which the first amendment to the Constitution was ever intended to guarantee.

THE ARENA.

THE leading article in the *Arena* is by Dr. Lyman Abbott, on "Compulsory Arbitration," a review of which appears elsewhere.

SUNDAY OPENING OF WORLD'S FAIR.

Bishop J. L. Spaulding, writing on the subject of opening the World's Fair on Sunday, says: "If the members of the churches use all their influence to exclude the laboring masses on the only day in the week on which they are free, from innocent and elevating recreation, they will do them a wrong; they will injure religion; they will retard the progress of civilization. It is not simply right to keep the gates of the Exposition open on Sundays; it is wrong to close them—in the afternoon, at least. In offering this unique opportunity for self-improvement to those who have no other free day than Sunday, the managers of the World's Fair will give good example to all the cities of the United States; they will teach them that while the Sunday is a day of worship, it is also a day on which the whole people should be invited to cultivate and improve themselves. Let those who boast of what they call the American Sunday learn to see things as they are, and they will recognize the growing tendency to desecrate the Lord's Day by making it a day of labor and dissipation. Let them unite to close the saloons and low places of amusement, to stop the running of freight trains and the working of factories on Sunday."

GOVERNMENT OWNERSHIP OF RAILWAYS.

Master Workman T. V. Powderly comes out strongly in favor of government ownership of railways. He says: "Governmental control of railroads has not succeeded and never will succeed. So long as it is in the power of a board of directors to increase stocks (all water), issue bonds and give rebates in secret, the people will have to pay for all the water and the interest on the bonds. Favors are shown to trusts and combines; the trusts and combines are made up of the directors and stockholders of the railroads; they secretly allow rebates to their favorites, such institutions as have railroad directors on the roll of stockholders having an undoubted advantage over their competitors. No system of governmental control can reach the offenders. Ownership must precede control, and the question must be solved in a very short time, or those who own the railroads will own the government."

Napoleon Ney, grandson of the famous marshal, writes on "Occultism in Paris," and Mr. B. O. Flower has a paper on "Religious Thought as Mirrored in Song and Poetry of Colonial Days."

CONTEMPORARY REVIEW.

THE *Contemporary Review* is hardly up to its usual average this month. We have noticed Mr. Stopford Brooke's article at length.

THE FUTURE OF THE RELIGIOUS DIFFICULTY IN ENGLISH SCHOOLS.

Archdeacon Wilson, of Rochdale, discusses from the point of view of a somewhat sanguine Churchman the probable solution of the controversy between the voluntary and Board schools of England. He says: "This, then, is my position. I believe that the Great Silent Creature, the British public, is maturing his judgment, among many distractions, on this great and vital question, a question far-reaching, affecting ourselves and our colonies for many generations to come. And he is coming to the conclusion that he must and will secure both a national system and a religious (and for the present that means a partly denominational) education. He will do this by assimilating the Board Schools to the denominational schools, by setting the teachers very much freer, and valuing more evidently and more highly their religious teaching and influence; and by assimilating the denominational schools to the Board schools, by insisting on better buildings and plant, by having School Board representatives on their boards of management, and by giving them a little help out of the rates when required."

THE REMEDY FOR RELIGIOUS DOUBT.

Professor Simon, writing on the "Idealistic Remedy for Religious Doubt," discusses Mr. Green's and Robert Elsmere's belief that "philosophical dogma, wrapped up in Pauline language, has the power of transforming weak and selfish human nature."

This, Professor Simon says, is Hegelianism, and he scouts the idea that the actual world can be saved by anything short of the objective Christianity of history. Relief should be sought in the present distress in, first and foremost, a direct intercourse with Christ, who is the beginning, middle and end of Christianity, who is living and working now, doing to-day what he professed, when in Judea, to have come to do.

"Let men investigate as critically as they like; think as hard as they like; speculate as boldly as they like—the more boldly the better, so long as they remember that, if what they are dealing with is anything objective at all and not an illusion, it is a living Lord, Redeemer, Friend, whose nature and words they are trying to understand. Thinking and speculating will then only quicken spiritual life. But if He be forgotten, thinking and speculation, even though their issue should be a theology or a philosophy absolutely without flaw, will convert us into hard, bigoted, self-conceited, blind leaders of the blind."

THE UGANDA PROBLEM.

Mr. Joseph Thomson writes a well-informed paper upon the retention by England of Uganda. He suggests that the English Government should subsidize the Company with \$50,000 a year, which is no more than Mr. Cecil Rhodes subsidizes the Government to secure the administration of Nyassaland. Mr. Thomson is a strong advocate for the construction of the railway, as he does not believe that the line of communication by way of Nyassa and Tanganyika can pretend to compete with the railway scheme through Masialand, but he does not disguise from himself the fact that the railway would not have business enough to keep it going. He says: "Meanwhile there is the present fact, which we cannot be blind to, that four or five trains in the year would probably suffice to bring down all the trade of which we can be absolutely certain,

while a train per month, or shall we say per week, would probably meet all the requirements of the traffic to Uganda."

OTHER ARTICLES.

Mr. Ernest Bell replies to Dr. Ruffer and Professor Horsey on "The Morality of Vivisection;" Mr. Stuart Glennie writes on "Aryan Origins," an article in which he discusses the origin of the Aryan race and the Aryan civilization, and endeavors to indicate the bearing of the new conception of the rise of a white Archaian race long before either Semites or Aryans entered the historical arena. Phil Robinson discourses pleasantly, as is his wont, concerning birds, squirrels and fallen leaves in an October garden, and Mr. Alfred Dowling gossips entertainingly concerning Christmas flora.

THE NINETEENTH CENTURY.

THE *Nineteenth Century* for December is not only far and away the best of the English periodicals of the month, but is one of the best numbers that Mr. Knowles has ever published. We notice elsewhere the articles by St. George Mivart, John Burns and Mrs. Lyttleton Gell.

MR. CHAMBERLAIN'S PROGRAMME.

Mr. Chamberlain's programme is discussed by four writers, Mr. Burt, Mr. Champion, Mr. Keir Hardie, and Mr. Woods. It is impossible to give an abstract of all their papers. It may be said, however, that the labor members agree in scouting Mr. Chamberlain's proposals as inadequate, and as vitiated by a desire to create party capital for his new allies at the expense of his old friends. Mr. Burt discusses in his common sense, practical fashion the various points raised by Mr. Chamberlain. One of his most notable observations is that the system of the Poor Law should be overhauled in the light of a more humane and discriminating treatment of the poor. Mr. Keir Hardie is very contemptuous, and Mr. Woods is not much better, the latter confining himself chiefly to Mr. Chamberlain's eight-hours' scheme. Mr. Champion's paper is characteristic and frankly cynical. He is not enthusiastic about Mr. Chamberlain's proposals, but thinks it is possible for the Labor party to deal with the Unionists. The Gladstonians, he says, have not the power, capacity, or will to carry out anything like so large a programme as Mr. Chamberlain's. He deems it possible that the Unionist party might introduce and pass such a bill, therefore Mr. Champion would give them a chance if they gave some evidence of really doing Mr. Chamberlain's bidding. In other words, Mr. Champion, speaking on behalf of the Independent Labor party, is ready to trade with Joseph. Of which, no doubt, Mr. Chamberlain will take due note.

RAILWAY MANAGEMENT.

Mr. W. M. Acworth's article on the subject of railway management is one of those papers which are the despair of the reviewer. It is an admirable paper of facts which defy condensation, and yet it is so full of pregnant suggestions and interesting facts, you feel that in justice to your readers you ought to quote from it at length. As that is impossible, we will only say that Mr. Acworth's paper is a very powerful plea for an intelligent and scientific study of railway economics. The science of railway economics, which is closely studied on the Continent and in the United States, is practically ignored in England. The result is that England has no steady principles, no scientific guidance, and her railways grow, or rather are ceasing to grow, by rule of thumb. She has no intelligible statistics, and the result is that new countries which are

laying out railroads go to Germany and to America rather than to that country. Another point which Mr. Acworth presses with great force is that expansion, especially of light-line railways, is practically killed in England, owing to the extravagant demands of the Board of Trade. Every other country in the world except England allows railways to be constructed on different principles to suit different localities. England alone insists that all new lines must be built on principles of construction adjusted to the trunk line between Liverpool and London. If her people were but content that railway traveling should be only a hundredfold less perilous than driving in the ordinary dogcart they might multiply railways in almost every direction. Mr. Acworth says: "If English agriculture is ever to be revived, it will not be, I am persuaded, by the improvement of legal machinery for the transfer of land half as much as by the development of communication by means of light railways and tramways, constructed and worked as cheaply as possible, and capable consequently of almost indefinite extension."

ONE HUNDRED AND NINETY MILLION DOLLARS PER ANNUM.

Mr. Jesse Collings has a short paper in which he calls attention to the fact that last year England imported agricultural produce, without reckoning corn and cattle, to the value of \$190,000,000, and he urges that the Small Holdings bill should be energetically carried out by the county councils, in order to enable her laborers to supply this enormous demand, instead of sending her money abroad to the uttermost parts of the world. Mr. Collings pleads for the expansion of practical agricultural education, and advocates the lending of Government money to the British laborer in the same way in which it was advanced to the small cultivator in Ireland. As to the difficulty of farm buildings, Mr. Collings mentions the fact that a landlord of Sleaford has shown that farm buildings, including dwelling house, can be erected for small holdings at a cost of from \$180 to \$200 each.

WANTED, A CANDIDATES' PROTECTION SOCIETY.

Mr. J. A. Farrar, a defeated candidate at the last election, has a half-sarcastic article, in which he pleads for the formation of a Candidates' Protection Society, which would undertake to defend the strength, leisure, purse and character of parliamentary candidates. He thinks that such a society could negotiate with the opposing candidates in order to dispense with personal canvassing and generally in making things easy for those who are seeking the suffrages of the electors. They might also agree to limit cut-throat competition in the matter of speeches and subscriptions. He would also have the society undertake the rigorous prosecution of any editor who infringed the libel law, and so forth, and so forth.

THE MORALITY OF VIVISECTION.

The Bishop of Manchester, replying to Professor Ruffer, states very briefly the moral grounds on which he objects to vivisection. In brief it is that as vivisectionists are constantly gazing unmoved upon the intense torture which they themselves inflict, will grow less sensitive to the sufferings of others and less reluctant to inflict such sufferings. These consequences have followed in Italy and the United States, and they would follow here if the checks of the vivisection law were relaxed.

A PLEA FOR SPHERES OF INFLUENCE.

Sir George Taubman-Goldie, of the Niger Company, has a cogent little article, in which he protests against the theories brought forward by some advocates of the retention by England of Uganda, with whom on the main ques-

tion he entirely agrees, that if she withdrew from the effective occupation of that country, any other European power would be free to invade it. He points out that this doctrine was expressly ruled out by France and Germany at the Berlin Conference. There must be effective occupation within a reasonable time of the coast-line of Africa when under the sphere of influence of any power. But in the interior no such stipulation was made, although England proposed it. Hence, even if England abandons Uganda to-morrow, she would have the right to warn off France, Germany or any other power that threatened to place a foot on the country. The conclusion of Sir George Taubman-Goldie's paper is devoted to the exposition of the excellence and indispensable services rendered by chartered companies in opening Africa.

OTHER ARTICLES.

Lady Grey Egerton gives a charming account of a twelve days' trip which she and a lady companion made to Alaska and its Glaciers. The Canadian Pacific will certainly not show its accustomed enterprise if it does not promptly organize tourist excursions to this most fascinating region with its glaciers, its whales and its totem-poles. Prince Krapotkin writes on "Recent Science," and Sir Charles Robinson shakes his head ponderously over the crush which prevails in the National Art Museums and Galleries of Great Britain.

THE FORTNIGHTLY.

MR. REDMOND'S plea for the amnesty of the dynamitards is somewhat disappointing. It deals solely with the cases of Daly and Egan, about which there has already been a good deal of controversy. Mr. Redmond's strong point is that, while these prisoners are kept in prison as dynamitards, they were not tried or convicted under the Explosives Act, but were prosecuted and sentenced as political prisoners under an act passed to deal with political offenses.

"This statute was never once used, and not a single one of these prisoners was convicted of any offense under it. One and all, they were tried and convicted of treason-felony under the Treason Felony Act of 1848. This statute was passed to meet the case of John Mitchel and the Young Irelanders. The offense with which it deals is what before that date was known to the law as high treason. It is the statute under which all the Fenian prisoners were convicted, and Daly and the others were charged, tried and convicted of Fenianism, of levying war against the Queen, upon evidence in many cases of acts deposed to by informers, and as old as the years 1868-70."

In describing Daly's case Mr. Redmond seeks "to show that his conviction was for an essentially political offense, and that the evidence given as to dynamite was of an unreliable character."

A POET'S DISCOVERY OF A LADY OF GENIUS.

Mr. Coventry Patmore, writing of Mrs. Meynell, poet and essayist, declares that at last one woman of distinction has arisen in the world of letters. He admires her poetry, but it is her prose, he thinks, which will give her a place among the classic writers of our English language.

"There is sufficient intellect and imagination in Mrs. Meynell's *preludes* to have supplied a hundred of that splendid insect, Herrick; enough passion and pure human affection for a dozen poets like Crashaw or William Barnes; they breathe, in every line, the purest *spirit* of womanhood, yet they have not sufficient force of that *ultimate* womanhood, the expressional *body*, to give her

the right to be counted among classical poets. No woman ever has been such a poet; probably no woman ever will be, for (strange paradox!) though, like my present subject, she may have enough and to spare of the virile intellect, and be also exquisitely womanly, she has not womanhood enough."

THE STRUGGLE FOR REFORM IN ENGLAND IN 1832.

Mr. Graham Wallas has an exceedingly interesting historical paper describing what most people at the present day have forgotten, or never learned, how serious were the measures taken to overawe the House of Lords when they refused to pass the First Reform bill. That which will interest most readers is the account which Mr. Wallas gives of the organized run on the Bank of England, which was brought about by placarding posters all over London containing the words, "To stop the Duke, go for gold." One million, five hundred thousand pounds were paid out of the Bank of England in a few days. It is specially interesting to read Mr. Wallas' story to-day, when England is once more approaching a struggle with the House of Lords. It would probably pass even the imagination of Mr. Frederic Harrison to conceive the possibility of a similar effervescence of popular protest against the House of Lords to-day, no matter what they proposed to do in Ireland. If Birmingham were ready to march on London and the city authorities were listening with enthusiasm to Birmingham deputations, Englishmen might hope to overawe the Peers; but until the decision of the people is much more unanimous in favor of Home Rule than it is at present there is little chance of bouncing it through.

SPECIALISTS IN SCIENCE.

Mr. Grant Allen has a very appreciative notice of Bates, of the Amazons. He knew Bates personally, and describes him as one of the profoundest scientific intellects he has ever known. In his reminiscences he quotes the following passage from Mr. Bates' conversation:

"'When I was a young man,' he said to me once in a fireside chat, 'I wanted to be a naturalist; but very soon I saw the days of naturalists were past, and that if I wanted to do anything I must specialize—I must be an entomologist. A little later I saw the days of entomologists, as such, were numbered, and that if I wanted to do anything I must be a coleopterist. By-and-by, when I got to know more of my subject, I saw no man could understand *all* the coleoptera, and now I'm content to try and find out something about the longicorn beetles.' The pronouncement was characteristic; yet, in spite of all this specialism, nothing could well have been more different than Bates from the ordinary type of narrow specialist."

AMERICAN ASTRONOMERS.

Sir Robert Ball, Astronomer Royal for Ireland, has an interesting paper on the fifth moon of Jupiter, which has just been discovered at Lick Observatory, and this gives him occasion to write as follows on the Americans as astronomers: "There is no civilized nation whose inhabitants would not have experienced a thrill of pride if such an achievement as the discovery of the two moons of Mars or of the fifth satellite of Jupiter had been made within its borders by one of its own people. As it happens, both these distinctions belong to America, and those who are fully acquainted with the matter know how valiantly the American astronomers have struggled with their difficulties and how triumphantly they have overcome them. Nor should it be forgotten in this connection that the great Lick telescope, as well as the Washington telescope, are both of American manufacture. They are

the products of the consummate optical skill of Messrs. Alvan Clark, of Massachusetts. Those who provided these grand instruments, those who made them, those who used them, and the nation which owns them, are all to be sincerely congratulated on the splendid results of their joint efforts."

There are several other articles not particularly noteworthy.

THE NATIONAL REVIEW.

PERHAPS the most useful paper in the *National Review* is Mr. Palliser's "Plea for the Reform of Parliamentary Registration" from a Conservative point of view. It is interesting to see that the Conservatives are opening their eyes to the necessity for dealing drastically with this scandalous nuisance of Parliamentary Registration.

Mr. Alfred Austin's paper upon the "Literary Sensitiveness of Tennyson" is very slight. To the very last, Tennyson was keenly sensitive to what was said and written about him. Mr. Alfred Austin seems to have somewhat curious notions about the Day of Judgment: "When that last great day arrives, when we shall all be reviewed, the Recording Angel will perhaps make disclosures not only about authors, but about critics likewise, whose humorous character will in some degree temper the terrors of that tragic moment."

Lord Meath repeats his sensible plea in favor of "Physical Education" of the children in English schools. There are 136 school boards in towns of over 15,000 inhabitants, and there are only 28 schools that are equipped, either fully or partially, with gymnastic appliances. The figures seem rather extraordinary. The number of schools in which physical education is taught is surely more than 46—it must be a misprint for "school boards."

Mr. Leonard H. Courtney, M.P., replies to Mr. Frederick Greenwood, and points out that the consumer under Free Trade does get the benefit of the falling prices. Lord Masham sets forth the Fair Traders' view of the case. Mr. James Edgcome follows in the same line. Mr. Keir Hardie, however, maintains that Fair Trade would do no good, and that before he will listen to Protection he would like to see a Protectionist country which had solved all the difficulties which surround us. Mr. Frederick Whetstone, of the Society of Engineers, hates Home Rule, and says so, and suggests that the working class would do well to look into the question of Protection. Mr. Stuart-Wortley explains what is being done by way of preventing the use of fraudulent marks on goods made abroad and sold as if they are made here. Sir W. T. Marriott writes upon the "Ruin of the Soudan," and declares that the Unionist Party must rally round Lord Salisbury if he is attacked by the Radicals. Probably their rallying round him will do more harm than the attack. The novelty in this number is an English rendering of Edouard Rod's novel, "The Private Life of an Eminent Politician."

TEMPLE BAR.

"TEMPLE BAR" continues to keep up its reputation as one of the best of the lighter magazines. In the December number the two stories, "God's Fool" and "Mrs. Bligh," by Maarten Maartens and Rhoda Broughton, are finished. Next number two new stories will be commenced, "Nemesis," by Miss Cholmondeley, and "Sunlight and Shadow," by a new writer. There is a capital story from Sarawak, which is said to be true, of an elopement which fortunately ended happily. There is an interesting description of St. Petersburg, slightly ex-

aggerated, and an account of Will's Coffee House. There is also an interesting paper on Jottings from a Moorland Parish. The article on Constable is noticed elsewhere.

THE NEW REVIEW.

WE have noticed elsewhere Mr. Greenwood's speculations as to the future of parties in England, which has the first place in the *New Review*. The last place is occupied with a special literary supplement by Mr. Gosse, Mr. Saintsbury and Mr. Traill. Mr. Barlow replies to Mr. Henry Irving on the subject of the English drama. Mr. Barlow writes with considerable smartness. Mr. Henry Irving is to him the chief and most successful purveyor of dramatic groceries, who regards a play as a picture, and the Lyceum a cross between a high-class Madame Tussaud's and a circus. Of all the successful dramatists of our time, which one has written a single line that will live, or a single play that can be read and that can endure as literature? Mr. Sims, Sir Augustus Harris, Mr. Buchanan produce multitudes of dramas of unspeakable worthlessness. Mr. Irving murders Shakespeare by speaking his verse as prose, and so forth.

There are a series of four articles under the misleading heading "Thrift for the Poor." Miss Clementina Black does not think that any thrift, except the paying of a subscription to a trades union, pays its expenses to the poorer class of wage-earners. Lady Frederick Cavendish lifts her voice against Free Dinners, and urges sensible women with time to spare to give their thoughts and efforts to Penny Dinners. Lady Montague of Beaulieu describes the work of parochial mission women, who it seems are employed at the rate of from \$2.50 to \$3.00 a week, but this, it is hoped, does not take any account of board and lodging. The Duchess of Rutland's paper is a pleasantly-written tract, suggesting how much personal services can be rendered by the well-to-do to the poorer classes. Major Le Caron replies to Michael Davitt in the accustomed manner. An anonymous writer discusses the speeches and speakers of to-day from the point of view of the Conservative M.P. Lord Meath pleads for small open spaces in the heart of the great cities. There are 183 undeveloped open spaces in London which are scenes of vice and crime, and only need a comparatively small expenditure to be turned into gardens. Mr. Ernest Hart, in an article entitled "Women, Clergymen and Doctors," hits out vigorously from the shoulder at Miss Cobbe and her allies. Lady Archibald Campbell's paper is noticed elsewhere.

THE YOUNG GENTLEWOMAN.

THE success which has attended the publication of the *Gentlewoman*, a sixpenny English weekly, has induced the proprietors to venture into the field of literature with the *Young Gentlewoman*, a journal for girls. The first place is given to an article by Mrs. Jopling, "A Talk to Those Who Wish to Become Artists." Lady Aberdeen's daughter—Lady Marjorie—tells a story of "Waif, the Scottish Terrier." Princess May of Teck appeals on behalf of the suffering children in the Victory Home for Children to be established at Margate. There are any number of illustrations, sketches and photographs, chiefly contributed by members of the Children's Salon, which is established in connection with the magazine. The magazine is edited by Mrs. Johnston, an admirable portrait of whom, under her *nom de plume* of "Levana," appears as the introduction to a story of "Three Lives." She begins the story, but twelve other readers have to continue it. The *Young Gentlewoman* deals largely in parodies, and also publishes music.

THE CENTURY.

THE December *Century* has given us material for "Leading Articles" in the paper by H. S. Williams, on "The Effect of Scientific Study on Religious Beliefs," the Rev. Washington Gladden's on "The Problem of Poverty," the editorial discussion of proposed immigration laws and Archibald Forbes' paper on war correspondence.

Nor do these exhaust the resources of the number, which is a holiday one, resplendent in a cover of green and gilt and gold. The Rev. Stopford A. Brooke's "Impressions of Browning and His Art" is, of course, of the highest order of literary criticism. It will be meat and drink for many who can read Browning without falling down in blind idolatry to persuade themselves that a harsh thing sounds sweet to hear: "It is a great pity that the ruggedness and the abruptness of Browning's style should have had these results. No doubt the style *was* the man, and we accept it for the sake of the great individual it represents. But then the artist ought to have improved his style. There are poems in which he uses it with simplicity, dignity, power and grace. That Browning did not—having created his style—make it a better vehicle for beauty than he did was a fault in him as an artist." Mr. Brooke is aided by a magnificent full-page woodcut portrait of the poet.

"Even you, young artist," says Mrs. Van Rensselaer, writing of "Picturesque New York," "born on the Pacific slope and now fresh from Parisian boulevards, can see that your New York is picturesque. But I wish that I could show you mine—mine, which is not mine of my infancy or mine of to day, but the two together, delightfully, inextricably, mysteriously, perpetually mixed.

"The deliberate hand of man has during this period (20 years) done for New York almost as much as flame did for Chicago. Old New York has been torn down and another city has arisen on its site, since the days when our streets rang to the tread of the returning armies of the Union."

The literary feature of the number is the first installment of a novel by the late Wolcott Balestier, entitled "Benefits Forgotten," accompanied by the best likeness that has yet appeared of the young author.

It is quite a number for interesting personal reminiscences, for in addition to the Browning essay on the literary side, the actor Salvini prints selections from his autobiography, and Ronald J. McNeill writes a taking sketch of the lovely and tuneful Jenny Lind.

HARPER'S.

THE December *Harper's* is a tremendously bulky volume. Of the opening article we give some extracts elsewhere. Miss May Wilkins is quite the thing in the fashion of magazine editors nowadays, and this month she casts her clever New England study into dramatic form and calls it "Giles Corey, Yeoman," Mr. Pyle furnishing four illustrations possessing that peculiar "Mayflower" flavor that he knows so well how to impart. Miss Wilkins appears later on in the magazine again, in a question of "Pastels in Prose," a recent literary innovation for which she is to be thanked—or, as some unappreciative people think, to be blamed. There are no less than seven short stories in addition to Miss Wilkins' contributions, which, with several poems, about sum up the number. In the Editor's Study, Mr. Charles Dudley Warner talks about the ever-ready subject of a distinctively American literature. He says: "While we have been expecting the American literature to come out from

some locality, neat and clean, like a nugget, or, to change the figure, to bloom any day like a century plant, in one striking, fragrant expression of American life, behold something else has been preparing and maturing, larger and more promising than our early anticipations. In history, in biography, in science, in the essay, in the novel and story, there are coming forth a hundred expressions of the hundred aspects of American life; and they are also sung by the poets in notes as varied as the migrating birds."

SCRIBNER'S.

THE Christmas *Scribner's* is a charming illustrated number and is especially taken up with art matters. We notice in another department the article on "The Nude in Art," by Will H. Lord and Kenyon Cox. The frontispiece is a colored reproduction of a painting by Marchetti, and is quite a creditable effort, especially as compared with the attempts made in this direction by the periodicals two or three years ago. Holiday reading prevails in the text of the number; a long humorous poem by Edward S. Martin, describing the career of one "Eben Pinchot," nearly equals in cleverness the classic Flora McFlimsey.

In the editorial department "The Point of View," M. Francisque Sarcey's views on book reviewing are heartily applauded. "M. Sarcey wished, if he took up a book at all, whether for praise or condemnation or each in part, to give his readers a very clear impression of the actual contents of the book, a succinct but careful and faithful description of it, a *catalogue raisonné*, not only of its virtues and defects, but of its essential features, an analysis of its author's purpose and methods. Finally was to come the comment. Not that every notice was to be divided in this way. Quite the contrary, the great dramatic critic thinking that the comment should be woven with the general or specific statement, and that the fundamental ideas on which he insists should be inferred rather than stated, but should always be the basis of the criticism."

"I am convinced," says *Scribner's* editor, "not only that the plan is a sound and practical one, but that the journal of means and position that adopts it would make for itself a class of permanent readers of great value. At present I recall but one journal that approaches it. The 'notices' of the daily press are, as a rule, singularly inadequate, and often inept. Even the better class of them make too much of a display of the critic, and leave the reader worse than ignorant of what the writer criticised has really done. The omission is the more remarkable because in this department there is much room for that element of 'news' for which American readers are supposed to be so eager, and American journalists so happily gifted."

In the "Historic Moments" series, Archibald Forbes describes the "Entry into Berlin."

THE first number of the *Harvard Graduate Magazine* comes to us—an imposing and bulky volume with red-black and mauve-gray cover. The new magazine is to be a quarterly and is edited by William R. Thayer, '81, with a university editor and a promising array of Harvard graduates as president, vice-presidents and councillors. The journal evidently aims to cover a wide field of interests, from the baseball and football records to "The New Movement in Humanity." The opening article is by Rev. A. P. Peabody, of the class of '26, on "The Worth of a University Education." He points out the apparent advantages of enjoying a university training, and states as the principal objection to such that it brings men too late into active life.

THE COSMOPOLITAN.

ON another page we give more space to Murat Halstead's paper on "The Varieties of Journalism," and Magician Herrmann's account of his "Black Art." Mr. Theodore Roosevelt's essay on our war poetry, under the title "A Colonial Survival," starts out trenchantly *in re* Mr. Kipling and his late animadversion on New York City:

"Mr. Kipling is a writer of note, and what he says attracts attention, and sometimes if a remark is very silly it will for the moment attract more attention than any other, although it is not attention of a flattering kind. If Mr. Kipling's master, Mr. Bret Harte, should suddenly describe London as a 'cesspool,' where Lord Salisbury habitually bought the House of Lords at so much a head, and where life was unsafe because of the multitude of Jack-the-Rippers who infested the streets after nightfall, unmolested by the police, his description would be about as intelligent as Mr. Kipling's recent sketch of New York, and while it would doubtless excite comment, the chief 'sensitiveness' aroused would be in the minds of the writer's friends."

Mr. Arthur Homblon, writing of "French journalists" in the midst of a score or more of illustrations is bold or flippant enough to say of *Le Temps* that "it is far from being an entertaining sheet. Its style is dull and prosy, and its space is usually taken up with solemn articles on scientific subjects, but scant space being allotted to the news of the day." He tells of Francisque Sarcey and his inevitable dramatic feuilleton in this journal, who "has been 25 years on the staff of *Le Temps*, and has written regularly each week a feuilleton of 12 columns. This makes about 1,700 articles or 1,000,000 lines on the subject of the drama alone."

LIPPINCOTT'S.

COL. RICHARD MALCOLM JOHNSTON is the author of the complete novelette of the month, and his story, "Pierce Amerson's Will," is far above the average of Lippincott's fiction. The story in question is of Middle Georgia life, the vein that Colonel Johnston has worked with such charming results ever since the "Goose Pond School" and other "Dikesborough Tales" appeared.

Clara Jessup Moore writes about Mr. Keely, of Motor fame, and takes the inventor far more seriously than the usual critics of his work.

"At the present time Keely is concentrating his efforts on the perfecting of his mechanical conditions to that point where, according to his theories, he will be able to establish, on the 'Ninths,' a sympathetic affinity with pure polar negative attraction minus magnetism. In his own opinion he has so nearly gained the summit, or completion of his system, as to feel that he holds the key to the infinitely tenuous conditions which lie before him to be conquered, before he can gain control of the group of depolar disks that he is now working upon. Twenty-six groups are completed, and, when the twenty-seventh group is under equal control, he expects to have established a circuit of vibratory force for running machinery both for aerial navigation and for terrestrial use. If this result be obtained, Keely will then be in a position to give his system to science and to demonstrate the outflow of the Infinite mind as sympathetically associated with matter visible and invisible. In commercial use he asserts that when the motion has been once set up, in any of his machines, it will continue until the material is worn out.

It is this claim which has caused him to be classed with perpetual-motion seekers."

Major Moses P. Handy varies the "Journalist Series" by telling of his great "beat" in reporting the *Virginian* incident in 1873 for the *New York Tribune*.

THE CALIFORNIAN ILLUSTRATED MAGAZINE.

THE Christmas *Californian* rejoices in a pretty and tasteful holiday cover, quite equal to any of the attempts of its older brethren. John Parsons Redpath makes a charming sketch of "An Ideal California Colony," which is accompanied by alluring pictures of some of the colony's fruit products. A land flowing with milk and honey, this seems to be, in Fresno County. The colony described is the California Raisin and Fruit Growers' Association. "Nearly all of the finest grapes and raisins which find their way to the East come from the San Joaquin at and about this famous colony. As far as the eye can reach, vast fields of grain reach away over the valley, through which flow the purling waters of the Fresno river. Here are vines bearing grapes of every kind, of enormous size and great delicacy of flavor. The soil is so rich that it produces marvelous results in the shortest time, suggestive of large returns. Wandering over the rich lands, watching the men at work, we learn some of the wonders of horticulture; in this land of the afternoon, we see 3,200 acres planted in the famous Muscat grape alone; hundreds of acres in peaches, apricots, fig trees; we are shown a small nursery worth \$11,000 in young trees alone, and are told that ten or twenty acres here is far more profitable than ten times the amount in the East. We are shown three-year-old vines that produce three tons of grapes per acre, and twenty acres which netted the fortunate owner \$2,900."

George Hamlin Fitch writes about "Early California Millionaires," and will astonish his Eastern readers with the array of them that he has to present. Bertha F. Herrick's article on "California Wild Flowers" gives an opportunity for pretty half-tone illustrations, while exotic subjects are well represented by P. C. Remondino's paper on "Some Heads of Napoleon," and other articles.

ATLANTIC MONTHLY.

WE review in another department the paper on "Mississippi and the Negro Problem." Dr. Edward Everett Hale, in his seventh chapter of "A New England Boyhood," tells of his journalistic work in Boston in the thirties, when the aspiring reporter boarded the clipper sailing ships arrived from Europe and tormented the captain into delivering up all the papers aboard to make a "beat."

"I remember that we had the news of the French Revolution of 1830, which threw Charles X. from the throne, on a Sunday morning. When such things happened, the foreman in the office made up what was really an 'Extra' by throwing together, as quickly as he had them in type, a few galleys of the news; in that case probably rapidly translated from the French papers. Then these galleys would be struck off on a separate handbill, and such handbills were circulated as 'Extras.' And it is to this habit that the present absurd nomenclature is due by which one buys every day an 'Extra' which is published at a certain definite time."

Miss Agnes Repplier has one of her bright little essays on the inspiring subject, "Wit and Humor," and never was the sense of the ridiculous more glorified. "Only a man afflicted with what Mr. Arnold mildly calls an 'inhuman

lack of humor could have written thus to a female friend: 'The French language you already know; and, if the great name of Rousseau did not redeem it, it would have been perhaps as well that you had remained ignorant of it.' Our natural pleasure at this verdict may be agreeably heightened by placing alongside of it Madame de Staël's moderate statement, 'Conversation, like talent, exists only in France.' And such robust expressions of opinion give us our clearest insight into at least one of the dangers from which a sense of the ridiculous rescues its fortunate possessor."

Mr. Marion Crawford ends his novel, "Don Orsino," in this number; and both that work and also its brilliant author are more particularly mentioned in another part of this magazine.

THE CHAUTAUQUAN.

THE conservative *Chautauquan*, too, has followed the popular taste for holiday embellishments and comes out in a green and white cover in honor of the season.

An immense array of rather striking figures are given by Major Joseph Kirkland in his article on the cost and resources of the World's Fair:

"If the estimate of visitors is correct (25,000,000), it is a number equal to the entire population of the United States in 1853.

"If the amount of money to be spent by the company and the various States and nations is correct—\$30,000,000—and if the individual exhibitors (who are expected to number 60,000) shall spend a like sum in the preparing and transporting of their exhibits, the total amount—\$60,000,000—will be \$2.40 a head for all the visitors; and each person paying half a dollar for his entrance ticket enters upon an entertainment whereof his own proportion of the cost is \$2.40."

Prof. Byron D. Halsted, of Rutgers College, writes on the land grant industrial agricultural colleges in existence under the Morrill bill of 1862, calling them "A New Factor in Education," and giving them the credit of being "practically the beginning of industrial education in this country.

"In agriculture, strictly so-called, experiments are being carried out with very nearly every field crop and in a great variety of ways, the practical end being to secure the best results by means of the best methods. The Western States are naturally most interested in grain growing and the raising of stock, and therefore the experiment stations of the interior region are solving problems concerned in the production of breadstuffs and meat. Dairying in all its phases of testing cows and their products, the influence of care, age, breed, etc., upon the growth of animals, receive the full measure of attention that the importance of the questions demands. In the older States, where the soil long ago has lost through severe cropping its fair fortune of virgin fertility, the stations are doing great service in analyzing fertilizers of every sort, and by recommending the good brands are protecting the farmers from those manufacturers who would intentionally or otherwise injure the crop growers. Many station botanists, each in his own way, are determining the nature of the various diseases of plants and the best methods of checking them, others are testing new sorts of forage plants, attempting to find out the laws that underlie the growth of crops, and are cross breeding for new and better sorts. Entomology offers a vast and practical field in the study of the injurious insects and of the best means of destroying these pests. Horticulturists, likewise, are busy testing new varieties of fruits and

vegetables, improving the old ones and determining the most favorable conditions for the production and preservation of each particular crop of the orchard and garden."

EDUCATIONAL REVIEW.

THE December *Educational Review* contains a good paper by Richard Jones on the requirements of the Oxford B.A. degree, and we quote from it in another department.

The current newspaper discussion concerning the best methods of teaching English composition lends some added interest to Prof. George R. Carpenter's article here on "English Composition in Colleges." "The important point overlooked," says he, in teaching this study, "is that no man or boy can be made to write really well unless he writes for the purpose of expressing thought." He advocates, to fill this gap, "reports, theses and the like, prepared (by the student) for his instructors in history, philosophy or science." Prof. Goldwin Smith writes of the "Educational Influence of Dr. Arnold," and finds that it was greatest and most lasting on the sides of religion and of the moral influence of the master on the character of the pupil." Professor Smith also points to the signal change of estimation Dr. Arnold brought his own calling by the elevation of it in his own person.

POPULAR SCIENCE MONTHLY.

WE review on another page "The Development of Our Young Women," by C. E. Brewster.

MR. KITSON'S OBJECTIONS TO POLITICAL ECONOMY.

Under the title "Fallacies of Modern Economists" Arthur Kitson "pitches into" the cult generally and into Mr. Henry George in particular. The first fallacy which he finds underlying the philosophy of the author of "Progress and Poverty" is the theory that wages are paid from the product of the wage-earner. He points to the multitude of non-productive and unremunerative enterprises and asserts that so many cases in which the wage comes evidently from the pocket of the capitalist clearly disproves the general law that Mr. George has advanced. Mr. Kitson then calls our attention to "another fallacy which is too gross to overlook, especially as it occurs in other schools of reform outside of the single-tax party. It is that of ascertaining some law applicable to a rude or elementary society, such as Robinson Crusoe and his man Friday on a desert island, and applying the same law to society in an advanced state." He argues to show how circumstances alter the cases so that one cannot safely reason from the fish-berry-and-game existence to the Wall street state of society. And the third main fallacy which Mr. Kitson points to is the attempted classification of social units into producers and non-producers, etc. He asserts that our society is too complex to allow any such division.

CONCERNING DOGS AND THEIR TAILS.

Louis Robinson contributes a readable paper on "Canine Morals and Manners," in which he gives the *raison d'être* of Fido's tail as follows:

"There are many reasons for the tail being the chief organ of expression among dogs. They have but little facial expression beyond the lifting of the lip to show the teeth and the dilatation of the pupil of the eye when angry. The jaws and contiguous parts are too much specialized for the serious business of seizing prey to be fitted for such purposes, as they are in man. With dogs which hunt by scent the head is necessarily carried low,

and is, therefore, not plainly visible except to those close by. But in the case of all hunting dogs, such as fox hounds or wolves which pack together, the tail is carried aloft, and is very free in movement. It is also frequently rendered more conspicuous by the tip being white, and this is almost invariably the case when the hounds are of mixed color. When ranging the long grass of the prairie or jungle, the raised tips of the tails would often be all that an individual member of the band would see of his fellows. There is no doubt that hounds habitually watch the tails of those in front of them when drawing a covert."

THE DIAL.

THE *Dial*, Chicago's admirable periodical devoted to literary criticism, has recently undergone a noteworthy enlargement. It is now a true "fortnightly" and is issued on the first and sixteenth days of each month as a journal of literary criticism, discussion and information. It has been conducted for some thirteen or fourteen years by Mr. Francis F. Browne, whose rare discernment as an editor and whose almost infallible taste and judgment in literary matters have become fully recognized in England as well as in America. Besides Mr. Browne's excellent work as editor, it is pleasant to observe the continued and increased service rendered by Mr. William Morton Payne to the high critical quality of this journal. We quote elsewhere Mr. Payne's little poem on the elevation of the stage, and we give place among the leading articles of the month to an extended review of the *Dial's* opening article, "Literature on the Stage."

THE LITERARY NORTHWEST.

THE *Literary Northwest*, which comes from St. Paul, has changed its form from a page similar to the *Christian Union's* to the regulation magazine size. It comes to us in an attractive, though somewhat faultily designed, new cover, and we are glad to be able to say of it that its editorial conduct is so able and its literary matter so sterling and valuable that it could well bear a considerable further improvement in the mechanical details of its execution. Although the editors' names do not appear, it is well known in the Northwest that Mrs. Mary H. Severance and Rev. Dr. John Conway are entitled to the credit of devising and editing this new periodical. Mrs. Severance is a Wellesley graduate who subsequently traveled and studied much in Europe, and Dr. Conway is the well-known editor of the *Northwestern Chronicle* and Archbishop Ireland's trusted friend and coadjutor. In St. Paul, Minneapolis and the group of communities and States of which the Twin Cities are the principal center, there are many people of marked literary aptitude and a number of writers of some experience and standing. The *Literary Northwest* has already shown how much can be done to arouse and focalize the literary activity of an important community and region by a periodical sympathetically and intelligently conducted. It has been enterprising enough to secure contributions from numerous writers who do not live west of Chicago and north of St. Louis, but the large majority of its contributors are genuine Northwesterners. The December number offers a varied programme. It begins with a group of articles on child culture; contains an article on political revolutions by Governor Merriam, of Minnesota, apropos of the recent election; informs us through the pen of Mrs. F. B. Clarke, of St. Paul, what the Minnesota women are preparing to do at the World's Fair; has several poems, one of them by Hamlin Garland; and contains a variety of literary comments and contributions which are of good quality and true contemporary interest. The D.

Merrill Company, of St. Paul, Minneapolis and New York, are publishers of the *Literary Northwest*, and are making for themselves a growing position among the standard American publishing houses.

THE CHARITIES REVIEW.

THE *Charities Review* for December has as its initial paper an account of the character and scope of the proposed exhibit of Charities and Correction at the World's Columbian Exposition in 1893, written by the Superintendent of the Bureau, Mr. N. S. Rosenau, who was a delegate from this country to the International Congress in Paris in 1887.

Mr. Joseph Lee disabuses the mind of the reader of some mistaken notions regarding the "sweater" in an article on the "sweating system," and gives an account of the effort being made in Massachusetts to stamp out the system.

Mrs. W. F. Allen contributes a paper on "Jennie Collins and Her Boffin's Bower," which not only records the interesting experiment in behalf of factory girls by one of their number, but contains valuable observations from the experience of this philanthropist.

"Léontine Nicolle: Her Life and Work" is the title of a contribution by Miss McIlrairie. The paper shows what Mlle. Nicolle did for the imbecile and epileptic children at La Salpêtrière.

A review of Winter's "Elmira Reformatory," by Dr. J. W. Jenks; "Notes on Recent Legislation Affecting the Dependent, Defective and Delinquent Classes," an announcement of the coming International Congress, and notes of the progress of the month complete the contents of this number.

THE ENGLISH CHRISTMAS NUMBERS.

THE literary features of the English Christmas numbers are better than ever before. The *Illustrated London News* is, perhaps, the best, with a weird story of the supernatural by Mr. Grant Allen, and stories by Mr. F. R. Stockton, Mr. Barry Pain and Mrs. Molesworth. *Black and White* has an excellent number, the first page of which contains a picture-story by René Bull, printed in colors. The stories are by Mr. Bret Harte, Mr. Eden Phillpotts, E. Nesbit, Oswald Barron and other writers. All the pictures in the *Graphic* are printed in colors and are very successful. The stories, all of them excellent, are by Mr. J. M. Barrie, Mr. Grant Allen and Mr. Henry James. Messrs. Cassell's Annual, *Yule Tide*, strikes out a new line with a story, "The New Babylon; or, the Dream, the Demolition and the New Democracy," profusely illustrated in black and white and in colors by Mr. Harry Furniss. The *Gentleman's Annual* contains "The Loudwater Tragedy," by T. W. Speight; and the Christmas numbers of *Good Words* and *Sunday Magazine* contain long illustrated stories by Mr. Gilbert Parker and Mrs. L. T. Meade respectively. *Truth* contains the usual political medley, illustrated by Mr. F. C. Gould. The *Queen's* best feature is a series of articles by well-known women as to how they made a start in life. *Sylvia's Home Journal* has a series of sketches of Women Workers in Many Fields, with portraits. The *Gentlewoman's* chief literary feature is "A Story of Seven Christmas Eves," by seven well-known writers. *Phil May's Winter Annual* is chiefly notable for Mr. May's excellent comic sketches, but it also contains a number of short stories by well-known writers, the best of which is Dr. Conan Doyle's "Jelland's Voyage." The *Lady's Pictorial* has a long story by Mrs. W. K. Clifford, "A Will Proxy."

THE FRENCH REVIEWS.

THE REVUE DES DEUX MONDES.

THE November number of the *Revue des Deux Mondes* is quite up to the usual standard of that periodical, and varied enough to suit all tastes.

M. Godefroy Cavaignac's article on "Agrarian Evolution in Prussia" is a study of the little-known conditions prevailing in the northeastern provinces of Germany, where serfage is a comparatively recent institution. It was as flourishing as ever in 1806, in spite of the measures taken for its suppression by the Hohenzollerns during the preceding century. The much-vaunted legislation of Stein (1807, 1808) produced no great effect, and was chiefly of value as a humanitarian protest. Hardenberg's work (1811-1816), whose importance has hitherto not been sufficiently recognized, was of a much more practical nature. These, however, only benefited the larger tenants; the great mass of the peasantry were still virtually subject to forced labor, and the result of the long-continued misery consequent on this state of things is seen to-day in wholesale emigration and the depopulation of the rural districts. The whole article is well worth reading.

A FRENCH PROTESTANT MYSTIC.

M. Emile Fagnet contributes an able and eloquent appreciation of Edgar Quinet. He lays great stress on the religious instinct which was so prominent a characteristic in this remarkable man. Born two centuries after his time, he had the soul of a Leaguer, or of Théodore de Bèze. "Quinet is a Protestant De Maistre—minus the wit, of which he had none; a Protestant Bonald—minus the logic, which in him was, to say the least of it, uncertain. Like both these men, and like all who are overpowered by one ruling idea, he had the passion for unity. A national unity, growing up around a religious unity and melting into it, is the thought which underlies all his consciousness." His fundamental principle is that the key to all history is to be found in religion: in other words, the history of each nation is directly determined by the religious ideas it has adopted. He did not altogether escape the dangers of those who start on their investigations with a preconceived theory; he was inclined to make his history fit in with his idea. Perhaps it was this insufficient appreciation of facts which threw him into the doubt and confusion that clouded his later days. And, strangely enough, his influence, so far as it goes, has been the direct opposite to what he himself desired and intended. "His passionate longing," says M. Fagnet, was for a religious France—religious after his fashion, but still religious. He has contributed—in the degree in which any thinker does contribute to these things, that is to say, a little—to the foundation of an anti-theist France.

SUGGESTION AND CONTAGIOUS EMOTION.

M. G. Valbert criticises the theory of Scipio Sighele, whose essay on "Criminal Crowds" formed the text of an article in the *Nouvelle Revue* some months ago. Referring to the passion for uniformity which induces the scientific men of to-day to apply the laws known to govern animate and inanimate nature to every fact of human consciousness, M. Valbert observes, most justly, "The higher one rises in the scale of being the more difficult and delicate does observation become, and the more carefully should

we abstain from giving laws a character of inflexible rigidity. Whether it be the principle of heredity or the action of a multitude in its component individuals that is in question, the moral sciences are the region of exceptions."

THE RULING RACES OF SOUTH AMERICA.

The Chilians, says M. Bastide, are the only nation in South America who can be said to have the invader's temperment, and have on this account been compared to the Germans. They are the best organized, the most enterprising and progressive people of the continent. In extending their dominions they are not likely to encounter any resistance worth mentioning toward the North. One might, indeed, confidently predict for them the position which England holds in Europe, were it not that, east of the Andes, a race is being elaborated which has not yet defined its type, being incessantly modified by immigration. There is a large French element in the Argentine—so much so that Buenos Ayres contains more Frenchmen than any other town outside French territories. M. Bastide compares this flourishing commercial capital to Carthage, but he does not undertake to forecast the issue of the struggle which will one day take place with the Romans of Chili.

THE NOUVELLE REVUE.

WE have reviewed in another department the article on "The Strategic Position of France in the Coming War." There is not much to say about the other articles in this number. Billaud Varenne's "Memoirs" are now complete; they strike one as hardly worth printing. They are stilted, pedantic and long-winded, and contain a very small allowance of incident to an intolerable deal of verbiage. There is a Japanese article by Motoyosi-Saizan, and a Persian one by Ahmed Bey, neither of very striking interest. General Caroll Tévis, in a short paper entitled "The Vitality of Parnellism," says that the Gladstone Ministry will be shipwrecked on the Irish question before six months are out. Mr. Gladstone's alleged majority of forty votes is only fictitious, for he cannot count on the passive obedience of the Labor Party; the Radicals, headed by Mr. Labouchere, will always be raising difficulties, and the eleven Parnellite votes will always turn the scale at the last moment. There is, according to this writer, only one way of saving Ireland and the Liberal Party—and that is to give Ireland all that Parnell demanded for her, and allow an Irish Parliament to legislate for her without restriction.

M. Frédéric Loliée's Tennyson article strikes an unexpected note. It is written somewhat grudgingly, in a tone which seems to imply that there is something wrong with a poet's character if his works prove a financial success. Perhaps the attitude of French publishers toward French poets may furnish the key to this point of view. M. Antoine Albalet contributes the first of a set of papers on Chateaubriand's love affairs, of which that poet had many, though he seems to have cared more for his sister Lucile than for any woman he ever met. M. Sénichal is disappointing in his "Histoire Etrange," which, if true, is not more remarkable than many other cases of somnambulism on record, and is too thin and not sufficiently well told to render it interesting as a story.

 December. (Illus.) A. C. Swinburne.

MR. RUDYARD KIPLING has a poem in the *Century*, entitled the
 "Gipsy Trail." It is a musical piece with a good lilt in it. We
 quote two stanzas :

Follow the Romany patteran
 North where the blue bergs sail,
 And the bows are grey with the frozen spray,
 And the masts are shod with mail.

Follow the Romany patteran
 Sheer to the Austral Light,
 Where the besom of God is the wild west wind,
 Sweeping the sea-floors white.

In the *Idler* Mr. Kipling has some verses entitled "Primum Tempus,"
 which describe how a poet in the neolithic age polished off his rivals by the
 summary process of taking their lives. He says :

So I stripped them scalp from skull, and my hunting-dogs fed full,
 And their teeth I threaded neatly on a thong,
 And I wiped my mouth and said : "It is well that they are dead,
 For I know my work is right, and theirs was wrong !"
 But my Totem saw the shame--from his ridge-pole shrine he came,
 And he told me in a vision of the night :
 "There are nine and sixty ways of constructing tribal lays,
 And every single one of them is right."

Centuries have rolled on, but still the tuneful tribe are given to fierce
 bickerings as in olden days :

Still, a cultured Christian age sees us scuffle, squeal and rage.
 Still we pinch and slap and jabber, scratch and dirk,
 Still we let our business slide (as we dropped the half-dressed hide)
 To show a fellow-savage how to work.

Once more he repeats :

"The wisdom as he learned it when the moose and the reindeer
 Roared where Paris roars to-night :
 There are nine and sixty ways of constructing tribal lays ;
 And every single one of them is right."

In the *Cosmopolitan* for December Bliss Carman has a long and very
 beautiful poem entitled "The Yule Guest," which describes how Yanna,
 "of the sea-gray eyes and harvest-yellow hair," sat up in Yule Tide mourn-
 ing her absent lover, for whose return she was waiting. Her lover has
 been wrecked, and at Yule Tide he returns. The following verses give a
 specimen of the poem :

"O Garvin! bonny Garvin!"
 She murmurs in her dream,
 And smiles a moment in her sleep
 To hear the white gulls scream.

Then, with the storm foreboding
 Far in the dim, gray South,
 He kissed her, not upon the cheek,
 Nor on the burning mouth,

But once, above the forehead,
 Before he turned away ;
 And ere the morning light stole in
 That golden lock was gray.

The poetry in *Lippincott* is somewhat above the average this month.
 Gertrude Morton's "Love, Come to Me," is pretty and sweet. Florence
 Earl Coates's "Be Thou My Guide" is good. There is another poem called
 the "Autonomy of Dreams," the last two verses of which are as follows :

Dreams dream themselves. Dear Mother Nature, yearning
 Over a lover she has laid to rest,
 Whispers a tale so sweet that, on returning
 To conscious life, all dreams to him are blest.

Dreams dream themselves. Yet, when the heart is breaking,
And darkness falls upon us like a pall,
We almost hope there will be no awaking—
That endless, dreamless sleep will cover all!

ART TOPICS.

THE American Magazine publishers restrict the field of their holiday embellishments to the cover, and for the Christmas of 1892 the *Century*, *Harper's*, *Scribner's*, *Chautauquan* and *New England Magazine* have new designs in attractive colors confronting the reader. In England it is the custom for the illustrated periodicals to issue large colored chromos as supplements to their Christmas numbers.

The picture to which many will this year adjudge the palm—not for novelty, certainly, but for cheery suggestion and pure homelike pathos—is issued with the Christmas number of the *Illustrated London News*. Mr. Fred. Morgan's "Willing Hand" has become well known since its appearance at the Academy. On a calm morning, before the sun has quite cleared the mists off the face of the flowing tide, a weather-beaten, red-capped old fisherman has taken his grandchild for a row. The baby's "willing hands" grasp the oars, which are held, too, by the sunburnt brawny ones of the grandsire. The expression of the faces, in particular that of the old man as he looks smilingly down on his tiny comrade, is touchingly rendered. It is a trifling blemish that the little one's mouth seems to have been in contact with the grandfather's paint pot.

The *Graphic* gives us "A Lucky Dog," from the painting by C. Burton Barber. A brown-haired lady, in evening dress, is fondling the fortunate little animal that gives the picture its title. The faces of the dog and his mistress, the flesh tints, and the sheen of the dress, are all admirably done; but the picture is not remarkable.

Black and White has a picture of a blooming damsel with laughing blue eyes, cherry-ripe lips and chestnut hair, who locks her fingers behind her neck, and says roguishly, in the words of the rhyme, "Nobody asked you, sir." The picture is a charming copy of a pastel by Mr. Van der Weyde.

The supplement to *Father Christmas* is a brightly-colored example of the homely rustic style, "Our Christmas Goose," from the picture by A. J. Elsley. A little boy struggles with the panic-stricken Christmas goose he is carrying to its doom. His smaller sister joins in the laughter as, holly in hand, she trots by his side. In the background another goose solemnly meditates on the vicissitudes of anserine affairs.

"Rose, Shamrock and Thistle" is the title of a copy of George W. Joy's allegorical picture issued with *Yule Tide*. It is much over-colored, but the types of English, Irish and Scottish beauty (after the Three Graces) somehow suggest a summer lesson in ethnography rather than Christmas good cheer when the snow is on the ground. The sky, too, is a very curious one for three such scantily attired young persons to be under.

"Flora," a smiling and pretty young lady, whose *entourage* is a confusion of flowers, is the Christmastide ambassadress of the *Lady's Pictorial*, from an original by F. Vine. It is a specimen of Berlin color-printing, and is too ornate for good art.

Much better from that point of view are the three plates issued with *Le Figaro Illustré*, depicting respectively "A Skating Lesson," "En Vedette," and "Falling Leaves." In the first grace is teaching inexperience how not to trip the light fantastic on the ice; in the second, a picturesque French hussar peers keenly from his post on the hillside; in the third, the falling leaves bring their sad memories to a figure garbed in black—it may be the husband, or it may be the first born, whose form lies under the turf that autumn is tenderly covering.

The *Gentlewoman* gives "A Winter Idyll," from a pastel by Mrs. Earnshaw—girl's face, with gleaming eyes under penciled lashes and brows, and a robin red-breast in her wraps to afford a speck of bright color. The distinction of this picture is that it is printed on satin. As a study in pocket handkerchiefs it can hardly be called successful; it wants hemming, and the satin is too stiff. As a work of art—well, perhaps it is genteel.

The largest Christmas picture published is one in *Chatterbox Christmas Box*—"A Christmas Raid," from a painting by Stanley Berkeley. A country boy who was carrying home the Christmas goose and sausages has come a cropper on the icy road, and some hungry dogs are off with the good fare, while a yokel grins in unsympathizing amusement. There are two smaller pictures.

"Bonnie Kate," given with the Christmas number of the *Illustrated Sporting and Dramatic News*, represents a pretty but rather sulky little girl, hunting crop in hand. It has an artistic tone. But why should Mr. Schmiechen append to his drawing as a motto the line from "The Taming of the Shrew"—"The prettiest Kate in Christendom?" That Kate was not a child by any means.

Colored plates of some merit are also issued with the Christmas numbers of *Pearson's Weekly*, *The Magazine of Short Stories* and *Sylvia's Home Journal*, the latter a large one. *Pen and Pencil* gives a number of good reproductions in monochrome and a pair of colored plates. Mr. Alf. Cooke, of Leeds, sends a sheaf of his artistic picture calendars. M. Jan van Beers has two plates in *Searchlight*.

MR. STEAD AT HIS DESK, MOWBRAY HOUSE, LONDON.

THE NEW BOOKS.

MR. STEAD'S NOVEL ON THE CHICAGO EXHIBITION.

THE AMERICAN REVIEW OF REVIEWS could hardly be expected to judge with severity any literary performance by its founder and its mentor, Mr. W. T. Stead. But certainly no prepossessions in favor of the author are needed to find that Mr. Stead's latest achievement is one of the most admirable and one of the most brilliant feats of what may be termed literary journalism that any man of our day has ever accomplished. In England it is somewhat customary for monthly and weekly periodicals to issue in December a special number, as novel and as attractive as its publishers can invent, usually containing more profuse illustrations than the regular issues. This Christmas number is not one of the regularly dated numbers, but in the case of a monthly it is a thirteenth issue, quite distinct from the December and the January numbers. In the United States, on the other hand, the leading periodicals as a rule mark the holiday season by giving the regular December number a special cover, or by adapting the contents of that number to the supposed demands of the Christmas time.

Two years ago Mr. Stead and the English REVIEW OF REVIEWS celebrated Christmas by bringing out the December number in double size with a vast number of illustrations, and while many other novel and original features were distributed through the number, an especially large amount of space was devoted to an illustrated guide to the books—especially the holiday publications—of the season. It was at that moment that Dr. Koch's great discovery was exciting the attention of the whole world, and a notable character sketch of Dr. Koch, with an account of his lymph and its supposed value, was the most conspicuous single feature of the number.

Last year Mr. Stead chose not to expand his December number into a special holiday publication, but brought out instead an extra number devoted to psychical research and to authentic narratives of occult experience. We need hardly add that this was the famous "Real Ghost Stories" of which an exceedingly large edition was sold out within a week or two after publication.

Mr. Stead is nothing if not original, and this year he has accomplished something as unique in its way, and in many respects decidedly more comfortable in its sensationalism, than his weird and creepy ghost stories of a twelve month since. It is perhaps within the bounds of truth to say that no other man in Europe has looked forward to the World's Fair at Chicago with such unbounded faith in it, such eager expectancy regarding its possibilities, and such profound belief in the influence it is destined to exert upon the world—particularly the English-speaking regions of the world—as Mr. Stead. His imagination has for a year hovered constantly about the great, smoky, rushing metropolis on Lake Michigan, and the new "White City" that has been rising as by magic in Jackson Park.

So keen has been his interest that he has absorbed information almost unconsciously. Although Mr. Stead has never crossed the Atlantic, he is well known to be the best interviewer the modern profession of journalism has anywhere produced; and he has so drawn upon the knowledge and the impressions of the many intelligent

Americans whom he constantly meets in London that out of their fragments of knowledge he has constructed a symmetrical conception of Chicago, and particularly of the World's Fair itself, that might well put to shame the less rounded view of any one of his informants. Moreover, Mr. Stead has been supplied with the most prodigious quantities of the pamphlets, special announcements and various publications which have from time to time for two years been issued in such bewildering profusion in the interest of the World's Fair.

Great numbers of English people naturally have been planning to visit the United States and Chicago in 1893. None of them are so well informed as they might be, and the large majority of them are particularly ill-informed, as to what awaits them. It occurred, therefore, to Mr. Stead that he might make his Christmas number of the REVIEW OF REVIEWS this year a Steadesque prospectus of the Chicago show, which should at once stimulate in the British mind an irresistible desire to go to America in 1893, and at the same time give some specific and intelligent direction to its plans and anticipations.

The more Mr. Stead thought about the World's Fair the more strongly he felt himself impelled to put on record his impressions of America before he had ever seen the country and to produce a sort of clairvoyant and anticipatory guide-book, in which there should be such a strange mixture of fact and fancy, of considerations material on the one hand and considerations ethereal and elusive on the other, with illustrations artistic and fanciful and illustrations as architectural and matter-of-fact as the World's Fair buildings and the Chicago Masonic Temple—such a Christmas dream, in short, of the World's Fair and of the journey from the old world to the new as to make men think, arouse their imaginations, and lead them to some glimmering notion of the tremendous symbolic significance of Chicago and its colossal exhibition in the last decade of the nineteenth century.

As this idea took on some definite form in Mr. Stead's mind it became clear to him that the book must be a novel; that a very pronounced and orthodox love story must run through it; that the initial scene of the story must be laid in England at Christmas time in the year 1892; that the characters, while British for the most part, must include representatives of the Continent and of the United States; and that the English situations in the preliminary chapters must afford an easy opportunity for conversations upon very recent questions of all sorts which should lay well the foundation for later observations and discussions in America, with due regard to strong effects of contrast.

It was also clear that the ocean would afford a neutral ground, so to speak, for the discussion of many topics of international range, and that the most exciting episodes and most interesting developments of the plot of the tale might well belong to the passage across the sea in one of the great liners. Successive chapters would be occupied with the landing at New York, some cursory visiting of the sights of Gotham and a discussion of American ways and matters that would most naturally strike a group of English visitors as unusual.

ROSE IN THE GARDEN AT ANN HATHAWAY'S COTTAGE.
(An Illustration from Mr. Stead's World's Fair Novel.)

Next it would be feasible to send members of the party by different railroad routes to Chicago, with, perchance, some brief visits on the way. Once arrived at Chicago, the visitors would have quite enough to do with contemplating the marvelous city itself and with their inspection to the World's Fair. It would then be easy to make it compatible with the purposes of the plot to send the visitors on tourist trips to the Yellowstone Park, to the Cañon of the Colorado, to the Yosemite Valley, or anywhere else that for guide-book purposes might be deemed desirable.

And all this, in fact, Mr. Stead has done, with the result of producing a highly amusing and decidedly instructive book, which at points is tremendously sensational and which, while it has its flagging passages, sustains its interest most absorbingly to the very end. Considered simply as a love story—and this by the way is Mr. Stead's first attempt at fiction—the book is decidedly good. A very charming romance could be culled from the volume and printed separately in about one-third of the compass; yet so skillfully are the other parts woven in that the story carries them very successfully. In its discussions of many of the most recent phases of thought and the most stirring topics of the day, the book does full justice to Mr. Stead's reputation as an aggressive thinker and an audacious and brilliant journalistic expositor.

Considered as a guide-book this volume is certainly not methodical. Yet the intending visitor to America who shall have made diligent practical use of Mr. Stead's Christmas number will be the gainer thereby, for it contains much ingenious information about traveling by land and by sea, has managed to tell of things in New York and Chicago with a remarkably good sense of proportion, and has set forth the plan and character of the World's Fair in such a way as to lodge in the minds of its readers a true idea of what in general to expect, and how in general to proceed in order to derive the best advantages from the visit.

Mr. Stead took his materials and his lively conception of the book up into a quiet Yorkshire retreat, where, with a stenographer or two (for he dictates with great precision and extraordinary rapidity) he gave tangible utter-

ance and form to his "Christmas dream." After an absence of ten days or two weeks, he brought back to London the bulk of his manuscript, and the final touches were added in his busy office on the Thames embankment near the Strand.

There are about one hundred and twenty-five large pages of the book, of the same size as the regular pages of the REVIEW OF REVIEWS. The illustrations are perhaps two hundred and fifty in number. They have the widest imaginable range, many of them of course being pictures of the World's Fair buildings, of Chicago scenes and the like, while, on the other hand, one finds a very large number of admirable drawings which illustrate the story itself. The most important of these are drawn by Mr. Arthur Twidle, an accomplished English illustrator. The book is printed on fine paper, and when one considers the costliness of its illustration, its size, and its character throughout, the statement will not be gainsaid in any quarter that never before has a new novel or special publication of so expensive and so valuable a character been put upon the market at so low a price as this (35 cents). It is a book which will on some accounts interest Americans even more than Englishmen; and a very large sale for it is predicted in both countries.

It contains two or three chapters which enter so boldly into the domain of clairvoyance and spiritualism that the book must on those accounts alone attract a very special attention. Mr. Stead has shown by his wonderful work on Oberammergau and the Passion Play, his guide to the Paris Exhibition, his guide to the London Naval Exhibition of two years ago, and now by this Chicago World's Fair book, that there is such a thing as putting genius into the making of guide-books—a branch of literature which had generally been regarded as one not particularly inviting to authors of an imaginative temperament. This latest book also shows that Mr. Stead can write love stories, and we may expect with some confidence that he will be emboldened by the success of this story, which has its *de-nouement* on the World's Fair grounds, to give us at some future time a novel of English and American life which shall not be hampered by any of the limitations of the guide-book maker.

SOME LONDON NOTES ON BOOKS AND AUTHORS.

BY GRANT RICHARDS.

I.—AS TO THE LAUREATESHIP.

READERS of the English magazines will remember that for many months before Tennyson's death the question of his successor in the Laureateship was candidly discussed, without, however, any definite conclusion being arrived at. Since the great poet has left us the discussion has been protracted almost interminably. The *Pall Mall Gazette* even went to the length of consulting the opinion of its readers in a *plébiscite*, which resulted rather foolishly in the election of Mr. Eric Mackay, the author of the "Love Letters of a Violinist," and other pleasing trifles which do not, however, raise him out of the crowd of minor poets. Whether the final appeal rests with the Queen or with Mr. Gladstone the problem is one of unusual difficulty. The time has gone by when any writer of neatly-turned verse would have done for the post; the days of Pye and of Nicholas Rowe have been succeeded

by those of Southey, Wordsworth and Tennyson, who by their acceptance of a somewhat discredited post have raised the Laureateship from a court appointment to a national honor. The great difficulty, then, is to find a writer worthy to succeed these three great poets. Of minor poets, of graceful writers of occasional verse, we have plenty and to spare; but have we any poet who, head and shoulders above his fellows, is worthy to follow, even at a distance, the genius of Tennyson? If we have such a one, all schools agree, Swinburne is his name.

But Swinburne's appointment has been rendered practically impossible, not only by his early violations of convention in, notably, "Poems and Ballads," but also by that magnificent ode of last year, in which he may be said to incite the Nihilists to fresh attempts against the life of the Emperor of Russia. Swinburne excluded, there remain some half dozen writers of equal popularity, if not of equal merit—William Morris, Coventry Patmore,

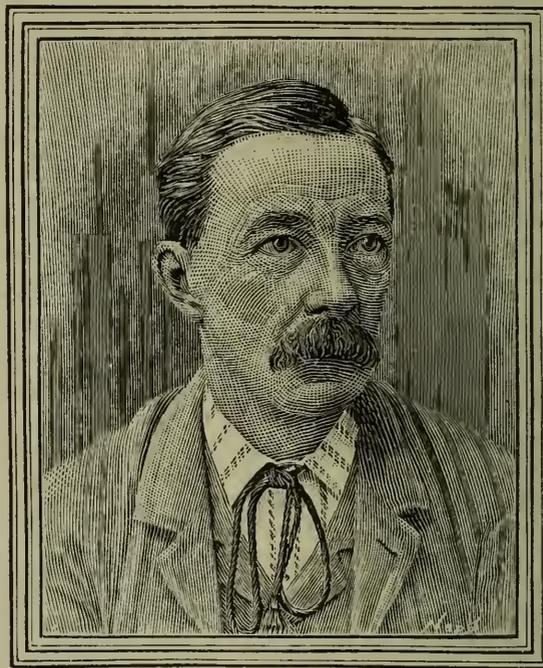

Lewis Morris, Alfred Austin, Sir Edwin Arnold and William Watson. It is, however, almost a matter of certainty that William Morris' well-known political opinions will interfere with his acceptance of the post even were it offered to him. With the withdrawal both of Mr. Swinburne and of Mr. Morris the post becomes one of very great difficulty. For some time it was thought that the authorities would solve the problem by the appointment of Sir Theodore Martin, a poet of no mean performance, mostly in the province of translation, a courtier and a great friend of the Queen. This, being purely a court appointment, would have angered no one but the disappointed competitors, the public seeing that the post was no longer to be looked upon as one of national importance, for Sir Theodore Martin does not, in popularity, come within the first half-dozen of our remaining English poets. Mr. Coventry Patmore is a writer of universally acknowledged excellence and his poems have a great perfection of workmanship, but his muse is so entirely conservative and so much of one class that his popularity has never been very great. The same may almost be said of Mr. Alfred Austin, a writer whose success has hardly been equal to his merits, but whose appointment would scarcely satisfy the critics. Sir Edwin Arnold has never fulfilled the promise of his "Light of Asia," and although he is by no means the least possible of the candidates, his appointment in literary circles would be very unpopular.

There had remained then Mr. Lewis Morris, the author of the "Epic of Hades," and Mr. William Watson, the author of "Wordsworth's Grave," a writer considerably younger than any of whom I have spoken. Whether the great objection which is taken against Mr. Lewis Morris' poetry is altogether justified is a question into which this is not the place to enter. One thing is certain—there is no appointment which would raise such derision and dissatisfaction among all schools of thought and criticism. Rightly or wrongly, Mr. Lewis Morris is always spoken of as the beloved of the *bourgeoisie*, and there is no class of readers that your superfine critic more despises.

Mr. William Watson's reputation as a poet rests upon a somewhat slender basis. His "Wordsworth's Grave," originally published in 1889, first attracted any considerable attention last year, since when his rise in public favor has been rapid and unchecked. His magnificent elegy upon Tennyson evoked enthusiastic praise from all quarters and showed its readers that English poetry was in no such desperate plight as many of the pessimists would have us believe. Messrs. Macmillan have just published a new volume of verse by Mr. Watson which contains, *inter alia*, "Lachrymæ Musarum," the poem in question. It is somewhat early to speak of the volume's merits, but a hurried glance shows that it contains nothing unworthy of Mr. Watson's reputation and that it contains much that will go to enhance it. Still this young poet's—not so young either for he is, I believe, in his thirties—achievement is still rather slender, although its quality is of the finest. Mr. Gladstone, the ubiquitous paragraphist tells us, is a great admirer of Mr. Watson's work, but he would have seemed, perhaps, somewhat overbold in appointing so young a man. Boldness, however, is somewhat necessary and Mr. Watson's record, scanty though it is, might have been sufficient justification. Now, however, the sudden and terrible loss of his reason which has compelled Mr. Watson's confinement, even though it should prove very temporary, will probably have removed him from all possibility of the appointment. And so the competition remains open.

II. FIVE NEW ENGLISH BOOKS.

The long-expected Life of Michelangelo Buonarroti,* by John A. Symonds, is a magnificent monument worthy even of the great Florentine of whom it treats. There is no English writer better qualified by gifts and by experience to write of Michelangelo than Mr. Symonds, whose Italian studies have endeared him to all lovers of literature. "In writing this biography," he says, "I have striven to exclude extraneous matter, so far as this was possible. I have not, therefore, digressed into the region of Italian history and comparative artistic criticism. My

JOHN ADDINGTON SYMONDS.

purpose was to give a fairly complete account of the hero's life and works, and to concentrate attention on his personality. Wherever I could, I made him tell his own tale by presenting original letters and memoranda; also, whenever the exigencies of the narrative permitted, I used the language of his earliest biographers, Condivi and Vasari. While adopting this method, I was aware that my work would suffer in regard to continuity of style; but the compensating advantages of veracity, and direct appeal to authoritative sources, seemed to justify this sacrifice of form." In a short preface, Mr. Symonds reviews critically the sources from which he has drawn the materials for his work. By far the most important is the Casa Buonarroti at Florence, in which is preserved a large collection of letters, poems and memoranda, mostly in Michelangelo's own autograph. Access to these priceless relics, however, was forbidden by the terms of the will of the last survivor of the artist's family, and it was only by special favor of the Italian Government that Mr. Symonds was allowed to examine them. As a monument of labor this work stands almost alone among recent biographies, and, coming from Mr. Symonds, it has a very great literary interest, even apart from its subject. The concluding chapters, in which he sums up, are particularly fine, and it is these chapters which the ordinary reader will most care for, although the excellent poetical translations of Michelangelo's poetry are full of interest. In discussing his temperament, Mr.

*The Life of Michelangelo Buonarroti. By John Addington Symonds. Two vols., 4to, pp. 469-443. London: John C. Nimmo. 32s.

Symonds comes to the conclusion that the theory that Michelangelo suffered from neurotic disorder is almost entirely without foundation. "The truth seems to be," he says, "that he did not possess a nervous temperament so evenly balanced as some phlegmatic men of average ability can boast of," and that he must be "considered as being gifted, above all his other qualities and talents, with a burning sense of abstract beauty and an eager desire to express this through several forms of art—design, sculpture, fresco painting, architecture, poetry." A word as to the *format* of these volumes. Even Mr. Nimmo has surpassed himself. The binding is thoroughly substantial and blazoned with the Buonarroti Simoni arms, is thoroughly tasteful; while paper and type are as fine as art and care can make them. More magnificent tomes have seldom appeared than these two broad-margined, ribbon-marked volumes. In reproducing the fifty illustrations, Mr. Symonds has been assisted by Mr. E. J. Poynter, R.A., and the results are eminently satisfactory; the portrait, etched by Damman, being one of the best etchings we have ever seen between the covers of a book.

Whether Mr. Watson's ode on Lord Tennyson's death is quite so magnificent a poem as some of its admirers would have us believe is open to question, but there can be no doubt that it is the most worthy of the many elegies which have appeared, and that it places beyond question the claims of its author to be reckoned among the few real poets who are left to us. The present volume* contains this elegy, together with a hitherto unpublished poem of some length, the "Dream of Man," and many shorter pieces and sonnets which have, with one or two exceptions, already appeared in the periodicals. Although not as perfect from the point of view of style and language as "Lachrymæ Musarum," the "Dream of Man" is undoubtedly the finest poem which Mr. Watson has yet given us. Informed throughout with the message of God's infinite love for mankind, it sounds a note of reaction against skepticism and doubt. Indeed, Mr. Watson is the antithesis of the "idle singer of an idle day:" his message is one of belief and of truth, and he neglects it in but few of the poems in the present volume. The remaining pieces include the very fine "Shelley's Centenary," "To London My Hostess," and "England My Mother," from the *Spectator*; and "Reluctant Summer," which shows how admirably Mr. Watson can work in the tradition of the Restoration lyrists. "Lachrymæ Musarum" marks a great advance upon "Wordsworth's Grave,"

Since Mr. Kipling's "Plain Tales" there has appeared no more distinctive, and at the same time excellent, volume of short stories than the "Tales of the Far North."† To Mr. Kipling, indeed, Mr. Parker evidently owes much, both of style and treatment; he is influenced also by the work of Mr. Bret Harte and of Mr. Marriott Watson, his fellow *conteur* on the *National Observer*. But after allowing for these influences there still remains a solid substratum of originality which marks Mr. Parker out as a writer whom future readers of fiction will be unable to ignore. The present stories are all laid in the territory of the Hudson Bay Company, virgin soil to the writer of serious fiction, and all combine a wealth of exciting incident with an unusual delicacy of literary finish. Although each story is entirely complete, the

same characters constantly reappear, as in the "Plain Tales;" Pierre, the half-breed outcast and gambler, cynic and prairie philosopher, being the thread which binds the stories together. Mr. Parker's style is almost always admirable; occasionally only has he conceived it his duty, like one of his characters, "to emancipate himself in point of style in language." And even then he is impressive. Mr. Parker is one of the few writers whose women are thoroughly lifelike.

Sir Henry Parkes has given us the most permanently valuable work of the historico-biographical kind issued recently in England.* The future historian of Australia will find these volumes invaluable. They are incomplete, egotistical, and open to criticism, but they are nevertheless interesting, valuable and indispensable. Sir Henry Parkes has lived through the making of Australia. He has had as much to do with it as any single man, and it is well to have in handy and accessible form the salient features of his record described by himself. Apart from its Australian interest it contains much to attract the general reader, notably his letters from Carlyle. In 1862 Mr. Carlyle drew up for him a list of books. He had asked the sage to recommend him the ten or twelve authors on whom a busy but imperfectly educated man should concentrate his attention and thoroughly master their books. The list is so odd that I quote it in full:

Pope's Works. Swift's Works (Gulliver, Battle of Books).

Lord Hailes' Annals of Scotland. Camden's Britannia. Heimskringla.

Anson's Voyages. Byron's Narrative.

Goldsmith's Vicar of Wakefield. Smollett's Humphrey Clinker. Arabian Tales. Don Quixote. (Richardson, Fielding, etc., if you like such things.)

Franklin's Essays and Autobiography.

Shenstone's Works. Boswell's Johnson, and Journey to Western Isles.

Plutarch's Lives. Fuller's Worthies of England. Chaucer.

To these he subsequently added Collins' Peerage. It is notable that not a single nineteenth century author is included, and neither Homer, Shakespeare nor Dante is mentioned. Shenstone and Pope are the only poets in the list. "Fifty Years of the Making of Australia" will help to make Australia more vivid and Sir Henry Parkes more popular. In England there is a danger that we may see him too much through the spectacles of the caricaturist of the *Sydney Bulletin*.

Major Wingate's "Ten Years' Captivity in the Mahdi's Camp"‡ is far and away the best volume of travel which has appeared for some months. It is compiled from the original manuscripts of Father Joseph Ohrwalder, who, at the outbreak of the war in the Soudan, was the priest of the Austrian mission station at Delen, in Kordofan. Captured by the Mahdi, Father Ohrwalder escaped many of the cruelties and indignities which were heaped upon his fellow prisoners, owing to the fact, we suppose, that his captors knew him to be a priest. Since 1885 he is the first European who has escaped from the Soudan, and consequently Major Wingate, as the director of military intelligence in the Egyptian Army, had to see a great deal of him in order to ascertain for official purposes the actual situation. His narrative, however, proved of such great inter-

* Fifty years in the Making of Australian History. By Sir Henry Parkes. Two vols., 8vo. London: Longmans. 32s.

† Ten Years' Captivity in the Mahdi's Camp, 1882-1892. By Major Wingate. Octavo, pp. 460. London: Sampson Low. 21s.

* Lachrymæ Musarum. By William Watson. Octavo, pp. 79. London: Macmillan. 4s. 6d.

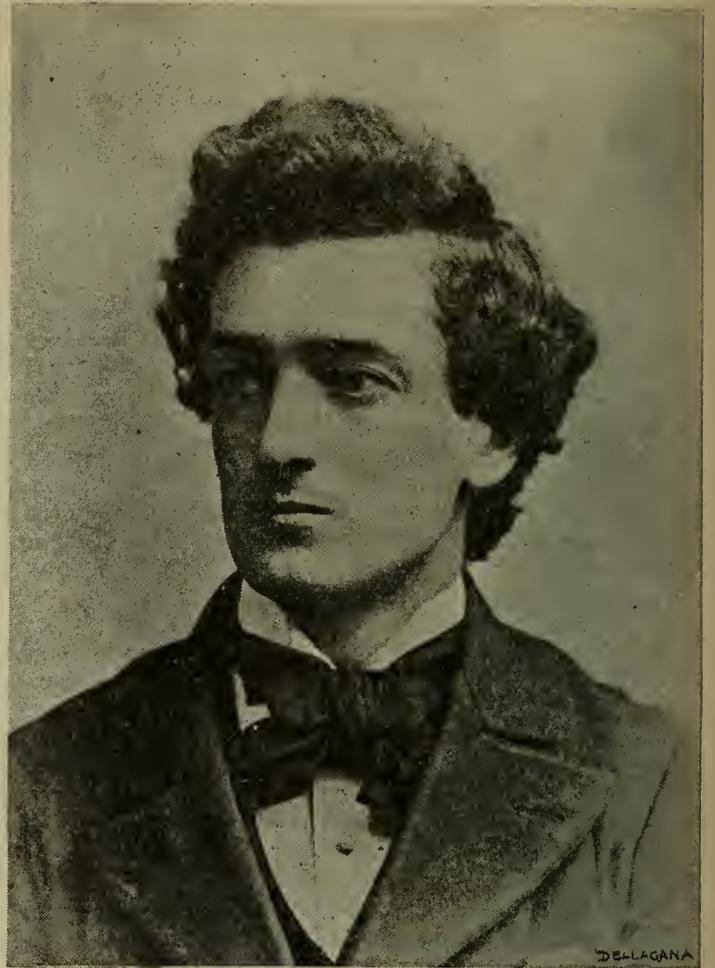

† Pierre and His People. By Gilbert Parker. Octavo, pp. 323. London: Methuen. 6s.

est and it threw so much light upon many obscure events that Major Wingate induced him to write the history of his varied and terrible experiences. This narrative makes its first appearance in England, as Father Ohrwalder desired to pay a "modest tribute to the nation which struggled so gallantly to effect the rescue of those unfortunate Europeans who, like himself, had fallen into the hands of a cruel and merciless enemy." The volume is well and profusely illustrated and has some excellent maps. Both from the point of view of historical interest and of personal adventure, it is one of the most important books of the season.

III. MEREDITH, LE GALLIENNE AND "Q." COUCH.

A new volume of poems by Mr. George Meredith—to contain some entirely new matter and various poems which have already seen the light in one or other of the magazines, is one of the season's announcements. And this reminds me that Mr. Harry Quilter, the editor and proprietor of the short-lived but very bright *Universal Review*, has Mr. Meredith's permission to issue in a somewhat unusual form a poem which the novelist contributed to an early number of the *Review*. The poem is of thirty-six stanzas, and for each stanza Mr. Quilter has prepared an illustration, while the text itself has been designed by the artist who also contributes a critical essay on Mr. Meredith's work. The volume is issued in a very limited edition. It is sure to rise in price directly after publication, as the collectors of Meredithiana are many and voracious.

As one looks back over what the past months have given us, it is clear that in many ways one of the most important books is Mr. Richard le Gallienne's "English Poems," as notable a collection as any the year has seen. There are those who eternally prate that poetry, good, bad or indifferent, is but a drug in the market. Such an idea is entirely negated by the success of the volume. Eight hundred copies were printed, and they were all exhausted even before publication. And it is not as if Mr.

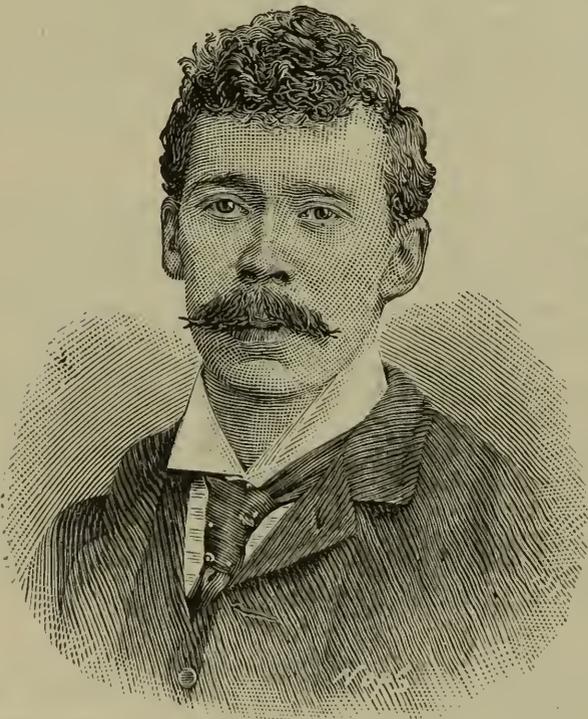

MR. RICHARD LE GALLIENNE.

Le Gallienne were really well known to the reading public. His fame has gone forth to all lovers of literature, but the vast conglomerate herd of indiscriminating readers have never heard of even his name. The book is, I expect, but the first note of the reaction which is taking place against the decadent spirit in poetry with which our admirers of modern French literature have thoroughly nauseated the public. The spirit of the book can be seen from these few lines from the dedicatory preface :

Art was a palace once, things great and fair,
And strong and holy, found a temple there ;
Now 'tis a lazar-house of leprous men.
O shall we have an English song again !
Still English larks mount in the merry morn,
An English May still brings an English thorn,
Still English daisies up and down the grass,
Still English love for English lad and lass,
Yet singers blush to sing an English song.

Mr. Le Gallienne's previous volumes of poetry, "My Lady's Sonnet," and "Volumes in Folio," are now extremely scarce and are eagerly snapped up when a copy appears in a second-hand bookseller's catalogue. He is also no mean critic. He has a singularly refined and pleasant style, and his book, "George Meredith : Some Characteristics," added very largely to the number of the novelist's admirers.

Mr. W. Quiller Couch ("Q") has this year given us no new fiction, but we are to have a small volume of poems, "Green Bays," which, if it is half as good as the parodies of Walt Whitman and others contributed to the old

MR. W. QUILLER COUCH.

Oxford Magazine, is bound to give him as high a place as a writer of verse as he has of a writer of short stories and of novels. The discussion on English prose style is likely to be raised again when Messrs. W. E. Heuley's and

Charley Whibley's "Book of English Prose: a Collection" appears through Messrs. Methuen & Co., who have also in the press a volume on "Oxford and Oxford Life," edited by Mr. S. Wells, M.A.

NEW AMERICAN PUBLICATIONS.

HISTORY, ECONOMICS AND POLITICS.

The Children of the Poor. By Jacob A. Riis. Square 12mo, pp. 311. New York. Charles Scribner's Sons. \$2.50.

The great value of Mr. Jacob A. Riis' book on tenement and slum life in New York entitled "How the Other Half Lives," was universally recognized when it made its appearance a year or two ago. He has supplemented that work with an equally valuable one entitled "The Children of the Poor," which gives us in a series of faithful descriptions an account of the conditions which tend to degrade and demoralize the teeming thousands of children in the congested districts of New York, and of the various philanthropic projects which have been devised from the mitigating of those conditions and for the proper care and instruction of the great city's neglected and forlorn children. The volume is most sympathetically and attractively written; but it is much more than a series of sentimental and superficial pictures. It is so painstaking and accurate a piece of work in practical sociology that it must of necessity take and keep a standard place.

The Old English Manor. A Study in English Economic History. By Charles McLean Andrews, Ph.D. Octavo, pp. 302. Baltimore: The Johns Hopkins Press. \$1.50.

The beginnings of Anglo-Saxon institutional life, both political and economic, have claimed the attention of a large number of writers and students, particularly within the past two decades. English, German and American scholarship has found an almost dangerous fascination in the contemplation of an ideal Teutonic village community life which was alleged—through various modifications—to have come down to our own days as the English parish and the American township. The Johns Hopkins University has been the center of the American study of early forms of Anglo-Saxon organization, and we now have from that University a volume by one of its recently graduated doctors of philosophy, presenting in a scholarly manner the whole discussion in its latest phases.

An Appeal to the Canadian Institute on the Rectification of Parliament. By Sandford Fleming, C.M.G. Octavo, pp. 176. Toronto: The Copp, Clark Co.

Dr. Sandford Fleming, a distinguished Canadian publicist, has induced the Canadian Institute to take up the question of a more modern form of parliamentary representation; and the Institute offers one thousand dollars for prize essays on "Electoral Representation and the Rectification of Parliament." The offer is open not only to Canadians, but to citizens of all the world. The conditions of the competition can be obtained from the secretary of the Canadian Institute, Toronto. Dr. Fleming's address on this subject to the Institute, together with a supplement containing important extracts from the writings of various authorities upon minority representation and kindred themes, forms a volume which is itself a valuable addition to this branch of political literature. The REVIEW OF REVIEWS will take further occasion to call public attention to this very important discussion in Canada.

Social Life in England from the Restoration to the Revolution, 1660-1690. By William Connor Sydney. 12mo, pp. 463. New York: Macmillan & Co. \$2.50.

Mr. William Connor Sydney reconstructs for us the conditions in which men lived and moved three hundred years ago in England. He tells us of the way people ate and drank, dressed, amused themselves, and violated the proprieties, in that notable period from the Restoration to the Revolution, 1660 to 1690. The book is at once scholarly and entertaining.

An Introduction to the Study of the Constitution. By Morris M. Cohn. Octavo, pp. 246. Baltimore: The Johns Hopkins Press. \$1.50.

Mr. Cohn has given us a profoundly learned and thoughtful study in the philosophy of government and political institutions. It has been his special purpose, as he says in his preface, "to produce a better understanding of all that is implied in the existence of the government of the United States of North America. The work aims to trace the play of physical and social factors in the production of law in general, including constitutional law."

A Particular Account of the European Military Adventurers of Hindustan. From 1784 to 1803. Compiled by Herbert Compton. 12mo, pp. 419. New York: Macmillan & Co. \$1.50.

In Messrs. Macmillan & Co.'s Adventure Series, which has included such volumes as "The Story of the Filibusters," "Robert Drury's Journal in Madagascar," etc., the latest number is "A Particular Account of the European Military Adventurers of Hindustan." These men, of whom De Boigne, George Thomas and Perron are the principal ones treated, were Europeans of French, Irish, English and other nationalities, who in connection with the native Indian powers raised great armies and lived wild exciting careers in Hindustan during the period from 1784 to 1803. Their names have for the most part faded from the page of history, but they are still prominent in the annals of adventure. The book has a sufficient map of modern India and several illustrations. The volume is a compilation by Herbert Compton from military memoirs, English government records and other sources.

Columbus and His Discovery of America. By Herbert B. Adams, Ph.D., and Henry Wood, Ph.D. Paper, 8vo, pp. 88. Baltimore: The Johns Hopkins Press. 50 Cents.

The Johns Hopkins University does not permit the occasion of the four-hundredth Columbian Anniversary to pass by without adding its contribution to the prolific Columbus literature of the day. We have as the latest number in the "University Studies in Historical and Political Science" a group of papers including a Columbus oration by Prof. H. B. Adams: one by Prof. Henry Wood; a curious little paper from the pen of Professor Kayserling of Hungary, on the Jews who were connected with the expedition of Columbus; a memorandum on "Columbus in Oriental Literature," by Dr. Cyrus Adler, and two valuable appendices by Mr. Charles W. Bump, one devoted to bibliographies of the discovery of America and the other to a list of public memorials of Columbus.

A Perplexed Philosopher. By Henry George. 12mo, pp. 319. New York: Charles L. Webster & Co. \$1.

We may well have occasion in another issue of the REVIEW OF REVIEWS to notice more at length Mr. Henry George's new book, which devotes itself to a consideration of the economic views of Mr. Herbert Spencer, particularly as regards the right of property in land and land taxation. It is one of the important books of the season.

Proceedings of the Tenth Republican National Convention, Held in the City of Minneapolis, Minn., June 7, 8, 9 and 10, 1892. Octavo, pp. 188. Minneapolis: Charles W. Johnson, Secretary. \$1.50.

The full proceedings of the Tenth Republican Convention are given in excellent and accurate form, with a valuable index, under the editorship of the Hon. Charles W. Johnson, Chief Clerk of the United States Senate, who was secretary of the Convention at Minneapolis.

BIOGRAPHY AND MEMOIRS.

Most Reverend John Hughes, First Archbishop of New York. By Rev. Henry A. Brann, D.D. "Makers of America" series. 16mo, pp. 182. New York: Dodd, Mead & Co. \$1.

Protestant readers would do well to know, far more intimately than most of them do, about the noble life work of that great Catholic prelate, Archbishop John Hughes—the first Archbishop of New York. Larger books have been written about him, but the present small volume in the "Makers of America" series thoroughly and accurately sums up his career and his services to America. He was born in the north of Ireland in 1797, came to America and landed at Baltimore in 1817, at the age of 20, was educated for the priesthood there, and rose very rapidly in the councils of the church. He was of eminent service to the Union cause during the early portion of the war, but died in January, 1864.

The Life and Times of Bishop White. By Julius H. Ward. "Makers of America" series. 16mo, pp. 199. New York: Dodd, Mead & Co. \$1.

A good companion volume to the biography of Archbishop Hughes is the Rev. Julius H. Ward's little volume on the career of Bishop White, who was the great ecclesiastic of the first half century of the Episcopal Church in the United States, and who died in 1836. Bishop White is the personal link between the Church of England and the Protestant Episcopal Church of this country.

The Personal Character of Dante as Revealed in His Writings. By Lucy Allen Paton. Paper, 8vo, pp. 44. Boston: Ginn & Co. 50 cents.

We have received number four of the series of "Fay House Monographs." "Fay House" is the main building of what is popularly known as the "Harvard Annex." This number is an essay on "The Personal Character of Dante as Revealed in His Writings," by Miss Lucy Allen Paton. It took "The Sara Greene Timmins Prize" in 1891, and was soon after published by the Dante Society. It has since been revised in accordance with the suggestions of the great Dante scholar—Prof. Charles Eliot Norton, of Harvard University. It needs no recommendation to students of Italian literature.

Within Royal Palaces. By the Marquise de Fontenoy. Octavo, pp. 630. Philadelphia: Hubbard Publishing Company.

"Within Royal Palaces" is a gossipy book on the personalities of the members of the royal families of Great Britain, Germany, Italy and many other European monarchies. It is written "from a personal knowledge of scenes behind the thrones," by the Marquise de Fontenoy, and will interest that large class of people who like to know how the world's sovereigns eat, dress, recreate, make love, marry and behave themselves generally. It contains many illustrations of princely people and places, and its external appearance is handsome.

ESSAYS, CRITICISM AND BELLES-LETTRES.

The History of Early English Literature. By Stopford A. Brooke. 12mo, pp. 514. New York: Macmillan & Co. \$2.50.

We have a most important addition to the history of English literature in Stopford Brooke's new volume, "The History of Early English Literature, Being the History of English Poetry from Its Beginnings to the Accession of King Aelfred." The full title is necessary to the comprehension of the scope of the work. We need to add a few sentences from the preface: "The English literature of this period is entirely poetry, and the book is mainly dedicated to that poetry. I have not put aside the life of the people, the Latin literature, or the political history of England, but I have only spoken of them so far as they bore upon the poetry or illustrated it. . . . In this Anglo-Saxon poetry of which I write we grasp most clearly the dominant English essence." We find it difficult to stop the quotation, but suffice it to say, that while Mr. Brooke owes his large indebtedness to the philologists who have done such scholarly work in this field, his own interest is more purely literary; he has caught the spirit and the secret of the metrical movement of Anglo-Saxon poetry and has translated considerable portions in metres which best give us the original effects. The work is a scholarly one, needed by every teacher and student of English literature. Besides a thorough treatment of the separate poets, it has chapters upon such important subjects as "The Sea," "Christianity

and Literature," "Monasticism and Literature," etc. By saying that it is needed by students we do not mean to imply that it is not adapted for the reading of every lover of the old Saxon spirit and faith. A map, notes and a thorough index are valuable additions to the volume.

Under the Evening Lamp. By Richard Henry Stoddard. 12mo, pp. 291. New York: Charles Scribner's Sons. \$1.25.

One of the most important literary volumes which we notice this month is a collection of biographical essays by Richard Henry Stoddard, which have appeared from time to time in the New York *Independent*, with the title "Under the Evening Lamp." In his preface Mr. Stoddard writes: "My sympathies were more strongly drawn toward those who had been worsted by misfortune. . . . I have been more interested in their lives than in their writings, my object being biographical rather than critical." But both the lover of English poetry and the student of the unhappy lives of the poets will be interested in these sympathetic, mature studies of some of the lesser-known English bards, such as Hogg, Blake, Hartley, Coleridge, Edward Fitzgerald and others.

Cameos from Ruskin: Selected and Arranged by Mary E. Cardwell. 12mo, pp. 89. New York: Charles E. Merrill & Co. \$1.

Aratra Pentelici: Seven Lectures on the Elements of Sculpture. By John Ruskin, LL.D. 12mo, pp. 307. New York: Charles E. Merrill & Co. \$2.75.

Lectures on Architecture and Painting. By John Ruskin, LL.D. 12 mo., pp. 272. New York: Charles E. Merrill & Co. \$2.75.

Under the heading "Cameos from Ruskin" Miss Mary E. Cardwell has selected and arranged a number of the *dicta* of the great art critic upon the relation of art to ethics, form, nature, etc. She has appropriately grouped them into sections on "Greatness in Art," "Taste," "Execution," etc. The volume is from the house of Charles E. Merrill & Co., which is now the authorized firm for the publication of Ruskin's works upon this side of the Atlantic. Their beautiful "Brantwood Edition"—the only one published in America with Mr. Ruskin's consent—is now ready and will be most acceptable to all lovers of the great thinker and writer. It is in twenty-one volumes, printed beautifully upon paper of restful tints; each of the prose works containing a special introduction by Prof. Charles Eliot Norton, of Harvard, which explains the purpose of the work and the circumstances under which it was produced. Prof. Norton has been long a very intimate friend of Ruskin, as well as a keen, discerning critic of his writings. The two volumes of poems in this edition are in chronological arrangement, with the poet's age at the top of each page; the illustrations of the edition "have been prepared under the author's personal supervision, and the type, paper and style of binding are in accordance with his suggestions." The library or individual not for all usual purposes satisfied with these volumes must be hard to suit.

Elizabethan and Jacobean Pamphlets. Edited by George Saintsbury. 16mo, pp. 307. New York: Macmillan & Co. \$1.

All students of English authorship know what an important place the "pamphlet" literature had in the first centuries after the invention of printing, before the system of periodicals was established. It has not generally been easy to get at this literature, however, and we are grateful for a volume before us entitled "Elizabethan and Jacobean Pamphlets." It belongs in the "Pocket Library of English Literature," edited by George Saintsbury, and contains in the original typography a pamphlet of each of the following writers: Lodge, Lyly, Nicholas Breton, Greene, Harvey, Nash and Dekker. There are sufficient notes.

Days with Sir Roger de Coverley. A reprint from "The Spectator." 12mo, pp. 120. New York: Macmillan & Co. \$1.50.

From Macmillan & Co we receive the third edition (the first appearing some six years ago) of "Days with Sir Roger de Coverley, a Reprint from the 'Spectator.'" The delightful flavor of the "Spectator" papers never palls on the taste. The days which we spend in company with the genial English country gentleman of the latter part of the eighteenth century are indeed golden days. The particular feature of this little volume is the abundance and the richness of the illustrations by Hugh Thomson. The cover of the book is as delightful as its *penetralia*.

Handy-Book of Literary Curiosities. By William S. Walsh. 12mo, pp. 1104. Philadelphia: J. B. Lippincott Company. \$3.50.

"The Handy-Book of Literary Curiosities" is the title of an extensive compilation by Mr. Wm. S. Walsh of "odds-and-ends" of entertaining information in regard to men, events, customs, things and phrases. The compiler frankly states that "primarily the aim of this handy-book is to entertain," which statement does not oppose the fact that a good deal of valuable instruction lies between the far separated covers. It is a useful luxury to have a few volumes of this class upon one's shelves.

The Wit and Wisdom of Charles Lamb. With Anecdotes by his Contemporaries. Selected and Arranged by Ernest Dressel North. 32mo, pp. 279. New York: G. P. Putnam's Sons. \$1.

The lovers of Charles Lamb will be pleased with a little daintily-dressed volume belonging to G. P. Putnam's Sons' series of "Knickerbocker Nuggets." It is "The wit and wisdom of Charles Lamb with Anecdotes by His Contemporaries, Selected and Arranged by Ernest Dressel North." Lamb is a very quotable author, and many of his brightest sayings are here found. The frontispiece portrait is from a drawing by Hancock, made when the author was only twenty-three.

What I Know About Books, and How to Use Them. By George C. Lorimer. 16mo, pp. 110. Boston: James H. Earle. 75 cents.

"What I Know About Books, and How to Use Them," is the title of a useful little volume by Dr. Geo. C. Lorimer, of Chicago, one of the most prominent Baptist clergymen of the country. Sound and competent, it ought to find a place in all young people's libraries and will be of special service to those who in the desire for self-improvement find themselves bewildered by the multiplicity of books.

Echoes of Old Country Life. Being Recollections of Sport, Politics and Farming in the Good Old Times. By J. K. Fowler. Octavo, pp. 276. New York: Macmillan & Co. \$2.50.

Mr. J. K. Fowler is an English agriculturist who speaks of himself as "a fair representative of middle-class life," and he has put into book form his "recollections of sport, politics and farming in the good old times," the "old times" embracing the past fifty years or thereabouts. Mr. Fowler has many entertaining little anecdotes to tell of public men and affairs. His book is unpretentious and written from a personal standpoint, but it is entertaining and has considerable value in picturing country life in England during the past two generations.

French Art. Classic and Contemporary Painting and Sculpture. By W. C. Brownell. 12mo, pp. 247. New York: Charles Scribner's Sons. \$1.25.

Mr. W. C. Brownell is favorably known to a wide public through his "French Traits." We have now from his pen a little work on "French Art" which treats of artists, schools and principles under the divisions "Classic Painting," "Romantic Painting," "Realistic Painting," "Classic Sculpture," "Academic Sculpture" and "The New Movement in Sculpture." This study is valuable not only *per se*, but as throwing light on the perplexing problems of conventionalism, idealism and realism appearing in all current discussions of art.

POETRY, MUSIC AND THE DRAMA.

The Cambridge Book of Poetry and Song. Selected from English and American Authors. By Charlotte Fiske Bates. Octavo, pp. 942. New York: Thomas Y. Crowell & Co. \$2.50.

"The Cambridge Book of Poetry and Song" is a compilation of selections from English and American authors made by Charlotte Fiske Bates, and belonging to Thomas Y. Crowell & Co.'s "Favorite Illustrated Edition of Popular Poets." Mrs. Bates has previously compiled "The Longfellow Birthday Book," etc., and is herself a poet. In the preface she explains the peculiar aim of this work to be: "To represent the genius of woman as fairly as that of man," to give just dues to poets who have not heretofore had them, and to give a goodly number of poems from the very latest volumes of Great Britain and America, and a "representation, through one poem at least, of those whose writings are as yet uncol-

lected." We have, therefore, selections from the times of old "Dan" Chaucer down to those of John Vance Cheney, arranged alphabetically according to authors. Reference to particular poems or authors is made easy by thorough indexing; and there are a number of illustrations of the subject matter of the poems by Fredericks, Church, Dielman and other artists, with a portrait of Longfellow as frontispiece. The general external appearance of the book is very attractive. A special feature of the book is the gathering into a group of some two hundred pages in length a large number of "Sportive, Satirical, Humorous and Dialect Poems."

The Poetry of Tennyson. By Henry Van Dyke. Third Edition. 12mo, pp. 396. New York: Charles Scribner's Sons.

The first edition of Rev. Henry Van Dyke's "The Poetry of Tennyson," in 1889, called forth very high commendation from lovers of the poet laureate and of the serious spiritual elements of poetic art. The only comment on the book which it is necessary to make is that it has now reached its third edition, which has "an altered and improved estimate of 'Maud,'" and which has been much enlarged in the Tennysonian chronology. Mr. Van Dyke's views of life and art are ennobling; his perception of form in poetry is subtle, but it only helps him to the comprehension of the more ideal elements. We do not know a more sympathetic, critical volume upon the main characteristics of Tennyson's poetic faith, growth, achievements and rank.

The Poetical Works of Alfred, Lord Tennyson. Complete Edition. Illustrated. Two vols., 12mo, pp. 939. New York: Thomas Y. Crowell & Co. \$3.

Those who wish an edition of Tennyson which will make a beautiful appearance upon the mantel or drawing room table and yet be most serviceable for use, will find it in Thomas Y. Crowell & Co.'s two-volume edition. The excellent illustrations are by such artists as Church, Dielman, Schell and others, and include two beautiful photogravures—one being a portrait of the poet-laureate. We commend these volumes with pleasure, and are glad to note the very reasonable sum which will obtain them.

Shakespeare's Works. The Ariel Edition. Seven Comedies. New York: G. P. Putnam's Sons. 75 cents each.

G. P. Putnam's Sons are publishing a new ("Ariel") edition of Shakespeare, in dainty little leather-covered volumes, each play making a separate volume. They are printed from excellent new type, contain the outline illustrations of Frank Howard (first published in 1833) and are of convenient size to be carried in the pocket. We could ask for no more desirable volumes to be read when we travel, when we wait, or when we attend a Shakespearean play. The first group, now ready, consists of seven of the comedies.

Lyrics and Ballads of Heine and Other German Poets. Translated by Frances Hellman. 16mo, pp. 267. New York: G. P. Putnam's Sons. \$1.50.

A very dainty little volume contains "Lyrics and Ballads of Heine and Other German Poets," translated by Frances Hellman. Somewhat more than half the pages are given up to Heine and the larger number of the remainder to Geibel, with some few poems of Goethe, Uhland and others. These delicate, fragile little lyrics of Heine are very difficult to translate without poetic loss. Those who can read the original will not be satisfied with any English rendering, but Miss Hellman's translations are very successful.

Love Songs of Robert Burns. Selected by Sir George Douglas, Bart. Cameo Series. 16mo, pp. 118. New York: Cassell Publishing Company.

Irish Love Songs. Selected by Katharine Tynan. Cameo Series. 16mo, pp. 118. New York: Cassell Publishing Company.

We take pleasure in noticing two volumes of love songs published in the "Cameo Series" of the Cassell Publishing Company. The first is a selection of the "Love Songs of Robert Burns," made by Sir George Douglas, Bart. The editor has written once more the never-tiresome story of Burns' Jean Armour, "Highland Mary," etc., in a pleasant introductory chapter, in which some new matter relating to "Highland Mary" has been incorporated. The prefatory note states the editor's aim to be "to illustrate the progress and variety of the genius of Burns, the love-poet. . . . As the book is intended for literary rather than general readers, no attempt at expurgation has been made." The frontispiece is a seemingly very good reproduction from the Skirving portrait of Burns.

The second volume is composed of "Irish Love-Songs" selected by Katharine Tynan. There is something very unique, very poetic in the flavor of these songs, some of which were written originally in English upon Irish models, some of which are translations from the Irish itself. Miss Tynan has herself contributed two of the poems. She states that after "Dark Rosaleen" her book owes most to Edward Walsh and Samuel Ferguson. A brief biographical notice of the authors is added and the frontispiece is a striking mask of James Clarence Mangan. To many readers of poetry this little volume will open the gate upon almost entirely new fields.

Rowen: "Second Crop" Songs. By H. C. Bunner. 16mo, pp. 109. New York: Charles Scribner's Sons. \$1.25.

Rowen, "Second Crop" Songs, is a goodly appearing little volume of the poetry of Mr. H. C. Bunner. Though Mr. Bunner's muse is most at home in the humorous region, she thoroughly understands how to sing in graver tone when there is occasion. The poems upon Grant and Sherman are among the best of the more serious order, and "At the Centennial Ball" is an inimitable poem in lighter vein.

With Trumpet and Drum. By Eugene Field. 16mo, pp. 137. New York: Charles Scribner's Sons. \$1.

Mr. Eugene Field has a deep insight into children's ways and an enviable power over ringing (especially over dactylic) verse. Particularly in the West his lullabies, touching little childhood reminiscences and other verses appropriate to child life have made his name familiar in many homes. "With Trumpet and Drum" is compiled from his earlier volumes and from the files of the "Youth's Companion" and other periodicals.

A Book of Day-Dreams. By Charles Leonard Moore. Second Edition. 12mo, pp. 100. New York: Henry Holt & Co. \$1.25.

Henry Holt & Co. have issued a second revised edition of Charles Leonard Moore's "Book of Day-Dreams." It includes one hundred Shakesperian sonnets, which are noticeable for the generally very smooth rhythmical movement and for the imaginative, idealistic mood to which they lead the reader. Their general tone is that of poetic and semi-passionate reverie. The sonnets form a closely-connected series, like those of Shakespeare and Spencer.

Poems. By George Murray. 16mo, pp. 46. Orange, N. J.: Published by the Author.

A little volume of "Poems" by Mr. George Murray, of Orange, N. J., in spite of defective rhymes and some very commonplace lines, shows a genuine poetic feeling. The music of some lines is as rich as it is defective in others.

Six Song Services, with Connective Readings for Christian Entertainment. By Philip Phillips and his Son. Paper, 12mo, pp. 70. New York: Funk & Wagnalls Company. 20 cents.

The celebrated evangelistic singer and musical composer has just sent out a little volume called "Six Song Services." It consists of standard hymns and songs, with accompanying Biblical selections, grouped under the heads "Thanksgiving in Song," "Christmas in Song," etc., and will be found of helpful use in special religious services.

Mr. Punch's Model Music Hall Songs and Dramas. By F. Anstey. 12mo, pp. 221. New York: United States Book Company. \$1.

Mr. F. Anstey has collected into a volume, with the caption "Mr. Punch's Model Music-Hall Songs and Dramas," a revised series of his contributions to the London "funny-paper," *Punch*. The illustrations are in keeping with the title and tone of the book.

Sound and Music. By The Rev. J. A. Zahm, C.S.C. Octavo, pp. 452. Chicago: A. C. McClurg & Co. \$3.

The Rev. J. A. Zahm, C.S.C., is professor of physics in the University of Notre Dame (Indiana). Last year he gave a course of lectures, with numerous experiments, in the Catholic University of America at Washington, D. C., on the subject of "Physical Acoustics and Its Simpler Relations to the Physical Basis of Musical Harmony." The lectures, thoroughly revised and explained by many illustrations of scientific apparatus and experiments, are now brought out in book form by A. C. McClurg & Co. Professor Zahm is evidently at home in the field of acoustics, and bases his lectures upon the exhaustive researches of Helmholtz and Koenig. The work is peculiarly interesting as an example of the tendency of modern musical study to rest itself upon a basis of physical

science. By students of physics and by musicians desirous of becoming better acquainted with the science correlative and fundamental to their art, this book ought to be highly appreciated. The style is clear and pleasant.

A Noble Art. Three Lectures on the Evolution and Construction of the Piano. By Fanny Morris Smith. Octavo, pp. 172. New York: G. Schirmer, Union Square.

Fannie Morris Smith gives a very entertaining volume to piano-players, students of music and lovers of the curious in "A Noble Art; Three Lectures on the Evolution and Construction of the Piano." We have often wondered why so little was written in a literary spirit on the construction of musical instruments. This little book grew out of careful, practical examination of piano-making and is adequately illustrated.

The School for Scandal: A Comedy. By Richard Brinsley Sheridan. Illustrated by Frank M. Gregory. Octavo, pp. 169. New York: Dodd, Mead & Co. \$3.50.

Dodd, Mead & Co. have just brought out in a superbly appearing volume that most famous and most rich English comedy of the eighteenth century—Sheridan's "School for Scandal." The text is accompanied by a large number of full-page and lesser illustrations by Frank M. Gregory—five of them being in colors, and all being in artistic touch with the spirit of the comedy. The prologue by Garrick, the epilogue by Colman, and the cast of players at the original presentation at Drury-Lane in 1777 are added, and the silhouette of "Lady Teazle" stands out in strong relief on the cover. This edition ought to satisfy the most fastidious admirer of "The School for Scandal."

The Technique of the Drama. By W. T. Price. 12mo, pp. 295. New York: Brentano's.

It is a pleasure when a reviewer can say of a book without qualms of the critical conscience "it fills a long-felt want." That phrase aptly applies to a new volume by Mr. W. T. Price, on "The Technique of the Drama." English literature knows many volumes on the history of the stage, on the features of the classical theatre and kindred subjects, but this little work is written from a practical, clear-sighted, present-day standpoint, and addresses itself to dramatic writers and critics and to the intelligent play-going public. Mr. Price writes of principles, is himself a practical dramatic critic, and has a very high ideal of the functions of dramatic art. Students and teachers of English literature as well as the classes mentioned above ought to possess the volume at once.

DESCRIPTION AND TRAVEL.

The Great Streets of the World. With One Hundred Illustrations. Large 8vo, pp. 266. New York: Charles Scribner's Sons. \$4.

One of the most felicitous and truly cosmopolitan series of papers that has recently appeared in any periodical was that in *Scribner's Magazine* entitled "The Great Streets of the World." The series was brilliantly initiated by Mr. Richard Harding Davis with a paper on Broadway, illustrated by Frost; Mr. Andrew Lang followed with a discursive essay on his favorite Piccadilly, the pictures by Douglas Almond; next came the Boulevards of Paris, written by Francois Sarcy, and illustrated by Jeannot; Mr. W. W. Story described the Roman Corso, with pictures by Ettore Tito; Mr. Henry James wrote of the Grand Canal, Venice; Mr. Paul Lindau of Berlin's Unter den Linden, and Miss Isabel F. Haggood on the Névsy Prospékt, St Petersburg. Messrs. Zezzos, Stahl and Répin respectively were illustrators of the last three papers. The seven have been brought together into a beautiful volume.

Sketches of Life and Character in Hungary. By Margaret Fletcher. 12mo, pp. 256. New York: Macmillan & Co. \$2.25.

This book is the result of wanderings in Hungary by Margaret Fletcher, who writes it, and Rose Le Quesne, who illustrates it with pen drawings. It adds at many points in a bright and winsome way to our knowledge of a land and a people whose fascination is always felt by foreigners who sojourn among them.

Flying Visits. By Harry Furniss. With illustrations by the Author. 12mo, pp. 302. New York: United States Book Company. \$1.

Mr. Harry Furniss, of London, visited many portions of England, Ireland and Scotland upon a lecturing tour, and in

the volume called "Flying Visits" he has recorded his impressions of the customs, characters, manners, etc., which he observed. The book is necessarily light, but it is amusing, especially from the very numerous pen sketches made by the author, and contains some interesting observations on United Kingdom life.

Afloat and Ashore on the Mediterranean. By Lee Meriwether. 12mo, pp. 382. New York: Charles Scribner's Sons. \$1.50.

Mr. Lee Meriwether is an enterprising traveler, with strong reportorial instincts, who gleans much information wherever he goes and who has had so much experience as a collector of industrial and sociological statistics that his most casual descriptions of travel and adventure are sure to be ballasted with facts and notes of considerable sober value. His account of journeyings in southern Europe and along the Mediterranean coast makes a much more valuable book than it pretends to be.

The London Daily Press. By H. W. Massingham. 16mo, pp. 192. New York; Fleming H. Revell Company. \$1.

If any one would know about the newspapers of London he cannot do better than to read Mr. Massingham's little volume. Mr. Massingham is one of the most brilliant of London journalists and one of the best informed. This volume tells us all about the *Times*, the *Daily News*, the *Standard*, *Daily Telegraph* and the *Daily Chronicle*, these being the principal morning papers, and about the *Pall Mall Gazette*, the *St. James Gazette* and the *Globe*, which are the penny evening papers, and the *Star*, *Echo* and *Evening News*, which are the afternoon half-penny papers.

RELIGION, THEOLOGY AND ETHICS.

Scenes from the Life of Christ, Pictured in Holy Word and Sacred Art. Edited by Jessica Cone. Quarto, 64 Illustrations from Paintings. New York: G. P. Putnam's Sons. \$5.

Miss Jessica Cone has edited and G. P. Putnam's Sons have published a richly bound volume of "Scenes from the Life of Christ, Pictured in Holy Word and Sacred Art." Upon the left-hand pages are printed selections from the New Testament narrative of the life of Christ, arranged chronologically, with occasional appropriate references from the Old Testament or bits of fitting poetry. Upon the right-hand pages are the reproductions of many of the great pictures which have made real and beautiful the Christ-story. The illustrations are about sixty in number and, besides many less known works, include the "Madonna of the Lily" and the "Last Supper" of Da Vinci; the "Raising of Lazarus" and the "Descent from the Cross" of Rubens; the "Divine Shepherd" of Murillo, and several of Doré's. The volume will be particularly appropriate for an Easter-tide gift.

The Fifth Gospel; or, The Land Where Jesus Lived. By J. M. P. Otts, LL.D. 12mo, pp. 367. New York: Fleming H. Revell Company. \$1.50.

Mr. J. M. P. Otts, LL.D., of Talladega College, Alabama, looks upon the land where Christ's work was done as "The Fifth Gospel," and his book by that name is a study of Palestine in connection with the Gospels, based upon travel and New Testament study. There are accompanying maps of the Holy Land and plans of Jerusalem. It is written in clear, satisfactory English, from the orthodox standpoint, and will doubtless prove of service to biblical students.

Ethics and the Belief in a God. An Address by W. L. Sheldon. Paper, 12mo, pp. 42. St. Louis: W. A. Brandenburger.

We acknowledge the receipt of a pamphlet on "Ethics and a Belief in God," being an address by Mr. W. L. Sheldon, lecturer of the ethical culture society of St. Louis. Many people are not aware of the vast importance of this ethical culture movement; the sympathy of a good many would be enlisted by the reading of a few just such addresses as this.

Our Elder Brother. Thoughts for Every Sunday in the Year, from the Life and Words of Jesus of Nazareth. By Sarah S. Barker. 16mo, pp. 298. New York: A. D. F. Randolph & Co. \$1.50.

In the neat little volume called "Our Elder Brother" we find a few pages of quiet religious thought for every Sunday in the year, centered about the person, the work and the fellowship of Christ. The thoughts are grouped under appropriate headings.

As It Is to Be. By Cora Linn Daniels. 12mo, pp. 258. Franklin, Mass.: Published by the Author. \$1.50.

Mrs. Cora Linn Daniels, of Franklin, Mass., has recently given the world two books which from their intensity and peculiar significance deserve a very wide notice. Her first volume, "Sardia, A Novel," called forth an immense press commendation. Mrs. Daniels' second publication is called "As It Is To Be," and is the record in absorbingly fascinating and elevated style of the revelations from the spiritual realm which have been uttered to her by the "Voices"—voices which to the majority of us are so unkindly dumb. Mrs. Daniels gives her experience unreservedly to the world from sincere aim to make known the truth. It is easy to affirm that Swedenborg and all kindred spirits which the world has known are crazy mystics, but after all, who knows why the "Voices" should not now and then speak of the mysterious realities of the spirits beyond to their chosen messengers? "As It Is to Be," whatever we may find of criticisable matter therein, demands an intelligent attention. A number of illustrations accompany the book, and the frontispiece is a handsome portrait of the author, from a photograph by Sarony.

Did a Hen or an Egg Exist First? or, My Talks with a Sceptic. By Jacob Horner. 12mo, pp. 96. New York: Fleming H. Revell Company. 75 cents.

Mr. Jacob Horner's experiences in traveling among English workmen leads him to the belief that they are generally respectful toward religion, but many are possessed of the idea that "Christian faith is giving way" before modern science. In the small volume which he humorously calls "Did a Hen or an Egg Exist First?" in a manly, common-sense, reverent way, he argues for the religious side of the question. The book takes the form of a series of talks with a supposed skeptical nephew. This is a thoroughly readable little book for all classes.

Where Is My Dog; or, Is Man Alone Immortal? By the Rev. Charles Josiah Adams. 12mo, pp. 202. New York: Fowler & Wells Company. \$1.

Rev. Charles Josiah Adams' book called "Where Is My Dog; or, Is Man Alone Immortal?" comes from the well-known publishers of phrenological and medical literature—Fowler & Wells Co. It is very moderate in its demands for the possibility of canine immortality, and is written in a humorous, anecdotal style, and makes very pleasant reading. While dealing with the interesting problem of future life for our animal friends, the real value of the book lies in its plea for their humane treatment while here and in its anecdotes of animal intelligence.

Short Talks on Character Building. By G. T. Howerton, M.S. 12mo, pp. 227. New York: Fowler & Wells Co. \$1.

"Short Talks on Character Building" is a small volume of disjointed, unpretentious advice, intended to reach the simpler class of minds, and written from the position of phrenology. The author is Mr. G. T. Howerton, M.S., a phrenological teacher.

The Duties of Man. Addressed to Workingmen. By Joseph Mazzini. Paper. 12mo, pp. 146. New York: Funk & Wagnalls Company. 15 cents.

This reprint of a famous essay of Mazzini to workingmen on practical duties toward God, the law, humanity, country, family, one's self, liberty, education, association and economic progress is exceedingly commendable and timely, and it would be a very creditable thing for a man of wealth to distribute a great number of copies among thoughtful workingmen.

FICTION.

Buffeting. By Jeannette Pemberton. 12mo, pp. 239. New York: Dodd, Mead & Co. \$1.

"Buffeting," by Jeannette Pemberton, is the story of a New York girl, of Southern extraction and accustomed to aristocratic wealth, who is forced after her father's death to work for a living. For a time the heroine is governess in a trying and commonplace family; but her hardest experience, and, to the reader, her most interesting, comes when she is companion to a nervous and at times insane young woman, who makes several attempts at the destruction of herself or others, and finally commits suicide, but after our heroine has left her service. The physician of this nervous patient falls in love with our heroine, and the story ends at the orthodox stopping-place of a love story—a happy marriage which solves all difficulties.

The Fever of Life. By Fergus Hume. 12mo, pp. 381.
New York: Tait, Sons & Co. \$1.

"The Fever of Life" is a tragical, sensational English story, which has considerable plot and might while away a few hours without harm if we had nothing better to read. One feature of the book raises it above the commonplace level. The heroine's father is an English aristocrat, but her maternal ancestry is of the Maori blood of New Zealand; her mother appears on the scene, and her fierce, barbarous nature, her strange contrast with the English characters, her instinctive, almost animal love for her child and hatred for her husband, have given the author opportunity for some telling strokes.

The Last Touches, and Other Stories. By Mrs. W. K. Clifford. 12mo, pp. 269. New York: Macmillan & Co. \$1.

Mrs. W. K. Clifford is author of "Love-Letters of a Worldly Woman," "Aunt Anne," etc. "Last Touches, and Other Stories" includes nine tales varied in treatment, but all written with considerable imaginative and stylistic power. We wish Mrs. Clifford had replaced her cynical and sensational pieces by others of the good quality of "Wooden Tony, An Anyhow Story," which closes this volume and is really an artistic piece of writing. The scene of all the stories is in England or on the Continent.

The Princes of Peele. By William Westall. 12mo, pp. 347. New York: Lovell, Gestefeld & Co. \$1.25.

There is a great deal of plot and counterplot in the Prince family, which is an English family of middle class, living in a small inland town. The above is a love story of much interest, which gives us some good views of English fox-hunting, etc., but which closes on this side of the water, with the events of the battle of Gettysburg and the marriage of the English hero with the American heroine in the Lutheran church at Gettysburg. It is clean and absorbing fiction.

A Princess of Fiji. By William Churchill. 22mo, pp. 351. New York: Dodd, Mead & Co. \$1.25.

"A Princess of Fiji" is a pleasant contribution to the romance literature of the South Pacific. The time of the story carries us back some fifty years to the simplicity and revolting savagery of the cannibals prior to evangelizing efforts. The story bears the semblance of truth in its essentials, the descriptions of the savage Fijian life on its good and bad sides are clear cut, as are the descriptions of scenery and the phenomena of nature. To us the style of the book seems remarkable for its clearness, its moderation and its purity, and in some places for its beauty also.

My Friend Pasquale, and Other Stories. By James Selwyn Tait. 12mo, pp. 333. New York: Tait, Sons & Co. \$1.

"My Friend Pasquale, and Other Stories" contains some half-dozen very readable stories of a somewhat sensational tendency, of which "Two Christmas Eves" introduces the element of hypnotism, and "My Friend Pasquale" that of double-consciousness. The "Pasquale" of the latter is a man who commits a number of murders of a peculiar type in London, while the "Pasquale sane" was at the same time acting as detective to ferret out the criminal. As a study in abnormal psychology it is ably written.

The Old Maids' Club. By I. Zangwill. 12mo, pp. 333. New York: Tait, Sons & Co. \$1.25.

Another volume coming from the publishing house of Tait, Sons & Company is "The Old Maids' Club," by I. Zangwill, the author of "The Bachelors' Club" and other books. It is a humorous, anecdotal tale of a freakish London girl of the aristocracy who fancies she does not wish to marry and founds an "Old Maids' Club." The characterization of the candidates for this club forms a considerable portion of the work. It is a light love story, containing quite a quantity of amusing verse and humorous *apropos* illustrations by F. H. Townsend.

Pocahontas: A Story of Virginia. By John R. Musick. "The Columbian Historical Novels." 12mo, pp., 366. New York: Funk & Wagnalls Co. \$1.50.

We have noticed favorably several numbers of the series of "Columbian Historical Novels," from the pen of Mr. John R. Musick and the publishing house of Funk & Wagnalls Co.

The fourth has just now appeared and treats of the period of the colonization of Virginia—"Pocahontas: A Story of Virginia"—in which the Indian maiden and Captain John Smith play principal parts. We recommend these books especially to the attention of teachers of American history. The fiction is good, but it is subordinate to the historical purpose.

Christmas Books. By Charles Dickens. A reprint of the first editions. 12mo, pp. 442. New York: Macmillan & Co. \$1.

Macmillan & Co. publish in one volume the five Christmas books of Charles Dickens, of which the two best known, perhaps, are "The Cricket on the Hearth" and the inimitable story which has brought unaffected tears to so many eyes at the Christmas season—"The Christmas Carol." The present volume is a reprint of the first editions, with their illustrations and with an explanation of the circumstances under which Dickens wrote the stories and notes on their history, in an introduction by the novelist's son, Charles Dickens the younger.

Kin-da-shon's Wife. An Alaskan Story. By Mrs. Eugene S. Willard. Octavo, pp. 281. New York: Fleming H. Revell Company. \$1.50.

Writing of Mrs. Eugene S. Willard, the author of "Kin-da-shon's Wife," Dr. Sheldon Jackson, the well-known authority on Alaska, says: "Mrs. Willard has gained a more intelligent knowledge of the native character, [of the Alaska tribes] of its needs and hindrances than perhaps any other person." Mrs. Willard has been among these people for a great many years, and her book will prove of sound value in the line of information. Though not claiming any high fictional power, we find the story entertaining and the style excellent. It may well be read by those interested in new realms for fiction, as well as by those interested in Alaska and missions. There are several illustrations, and Mrs. Willard has been kind enough to keep her page free from an incumbrance of native words. The author is a missionary of the Presbyterian churches, and the volume has a religious purpose, but it is not made obtrusive.

The Diary of a Nobody. By George Grossmith and Weedon Grossmith. 12mo, pp. 235. New York: Tait, Sons & Co. \$1.25.

In somewhat the same style as "The Old Maids' Club" is a volume called "The Diary of a Nobody," by George Grossmith and Weedon Grossmith, whose portraits and signatures appear as a frontispiece. These sketches, in light but wholesome and entertaining vein, first appeared in *Punch* and are the records of a fictitious, good-hearted, rather unlucky London clerk of middle age, "Mr. Charles Pooter." The book is tastefully bound and the illustrations, by Weedon Grossmith, are sometimes as "ridiculously funny" as the amusing incidents they record.

In the Service of Rachel Lady Russell. A Story. By Emma Marshall. 12mo, pp. 341. New York: Macmillan & Co. \$1.50.

Mrs. Emma Marshall has been a voluminous writer, and her later works have taken the form of pictures of English life in past centuries. Macmillan & Co. have just brought out in a very neatly appearing volume her "In the Service of Rachel Lady Russell." The story is strong. Its scenes are laid in the aristocratic English life of the latter part of the seventeenth century, and give us reliable views of such historic figures as Lord and Lady Russell, Archbishop Tillotson, King Charles Second, and others. The many who delight in historical novels in which the history rather predominates over the fiction will enjoy this work. There are several good illustrations.

Aunt Liefy. By Annie Trumbull Slosson. 12mo, pp. 50. New York: Anson D. F. Randolph & Co. 60 cents.

One interesting development of the "short story" is the publication of such stories as separate booklets. "Aunt Liefy" is a touching little account, autobiographically told, of the turning point in the life of a simple-hearted New England woman of the lower ranks, by Annie Trumbull Slosson, who wrote a successful story of the same type in "Fishin' Jimmy." There are several illustrations by G. F. Randolph.

Mr. Billy Downs and His Likes. By Richard Malcolm Johnston. 12mo, pp. 232. New York: Charles L. Webster & Co. 75 cents.

We have heretofore noticed favorably quite a number of books which have taken their place in the "Fiction, Fact

and Fancy Series" of Charles L. Webster & Co.'s publishing house, which is being edited by Mr. Arthur Stedman. The editor has a pleasant little note in the tenth volume of the series, which is "Mr. Billy Downs and His Likes," from the genial Georgian pen of Col. Richard Malcolm Johnston—the "dean of Southern men of letters," as he has been called. The characters and the speech of the Georgian types with which Colonel Johnston is so familiar stand out in truth, in distinctness and in attractiveness on his canvas, and "Billy Downs and His Likes" is a book which all lovers of Southern literature will wish to read and enjoy.

In Sunflower Land: Stories of God's Own Country. By Roswell Martin Field. 12mo, pp. 257. Chicago: F. J. Schulte & Co. \$1.25.

"In Sunflower Land: Stories of God's Own Country" contains about fifteen short character sketches and stories of typical Western life in Missouri and Kansas, by Roswell Martin Field. This is comparatively an unoccupied territory in fiction, and those who are acquainted with Mississippi Valley life know that it is a field distinct from that farther north, which Hamlin Garland has so happily occupied, and well worthy of the attention of story writers. Mr. Field knows whereof he writes, writes in a way characteristic of the West, writes ably, whether his subject is humorous, pathetic or neutral. He is particularly happy in treating of the republican traditions of the Sunflower State—as deep-lying in Kansas history as is Puritanism in that of New England. Humorous studies predominate in this interesting volume.

"Vic": The Autobiography of a Fox Terrier. By Marie More Marsh. 12mo, pp. 184. Chicago: F. J. Schulte & Co. \$1.

"Vic: The Autobiography of a Fox Terrier," by Marie More Marsh, is a pleasantly and clearly told account of a dog whose wanderings introduce us to several interesting families of various stations in life. We get glimpses of pathos and of love, of sacrifice and trouble, in a simple, natural way. The illustrations show us "Vic" in several of the important episodes of his career and he appears on the neat cover.

Christmas in Kentucky, 1862. By Elizabeth Bryant Johnston. Octavo, pp. 24. Washington: Gibson Brothers. 50 cents.

Christmas in Kentucky, 1862, is a charming dialect story of thirty years ago, with the interest centering in the reading of the Emancipation Proclamation by a master to his negro slaves. It will make an acceptable little holiday gift. The author is Miss Elizabeth Bryant Johnston, now of Washington, D. C.

Roland's Squires. A Legend of the Time of Charlemagne. By Harriet Pinckney Huse. Square 4to, pp. 39. New York: William R. Jenkins. 60 cents.

From the publishing house of Wm. R. Jenkins we receive a paper-cover booklet with the title in raised gilt letters—"Roland's Squires." It is a translation by Harriet Pinckney Huse of an episode of the Roland Cycle, from the German of Musaeus, and will prove pleasantly entertaining to all who love the old romances of chivalry and the enchanting legends which glorify Charlemagne and his companions.

BOOKS OF REFERENCE.

The Scientific American Cyclopaedia of Receipts, Notes and Queries. Edited by Albert A. Hopkins. Octavo, pp. 708. New York: Munn & Co. \$5.

For half a century the columns of the *Scientific American* have been the repository for multitudes of receipts, secrets and hints in regard to the technical arts of all kinds. These have been very varied, and, coming from specialists in the various branches of industry, have been very reliable. Mr. Albert A. Hopkins has now made a compilation called "The Scientific American Cyclopaedia of Receipts, Notes and Queries," on the basis of the contributions to the periodical, with collateral matter added. The work is an immense mine of information

upon all such topics as photography, chemistry, taxidermy, electricity, simple medicines, work in metals, leather, paints, etc.—in a word upon all subjects connected with the practical mechanical and chemical arts and kindred realms of knowledge. The print is good and the binding strong and well appearing, and the work will soon make itself indispensable to a great many people.

English Compound Words and Phrases. A Reference List, with Statement of Principles and Rules. By F. Horace Teall. Octavo, pp. 311. New York: Funk & Wagnalls Co. \$2.50.

Mr. F. Horace Teall has for some time made a special study of that vexing element of the English language—the compounding principle. Questions as to the proper use of the hyphen have tormented the brain of every writer of English words. Mr. Teall's study has been based on thorough comparison and on scientific inductions, and results in a number of principles and rules for compounding, together with a practical list of some 40,000 English compound words and phrases. The list has had high recommendation from many prominent users of the language, and the book in which it is contained may well find a place on the desk of teachers, authors, proof-readers, business men and others.

Useful Tables for Business Men. By C. A. Millener. Pp. 155. Desoronto, Ont.: C. A. Millener. \$1.25.

The morroco-bound compilation by C. A. Millener called "Useful Tables for Business Men" will be appreciated. It gives a great deal of intelligent, reliable tabulation in regard to money matters, accounts, measures and the like, and is highly commended by those competent to judge.

JUVENILE.

Little Arthur's History of Rome, from the Golden Age to Constantine. By Hezekiah Butterworth. 12mo, pp. 256. New York: Thomas Y. Crowell & Co. \$1.25.

Mr. Hezekiah Butterworth is known far and wide as editor of the "Youths' Companion," author of the "Zigzag Series" of travels, etc. He has sensible ideas of what children need, together with appreciative ideas of what they will like. His new volume for young people is called "Little Arthur's History of Rome, from the Golden Age to Constantine." It is rather a series of stories than a history, quotes largely from the classic authors and has the particular object of "preparing the young reader for an interest and zest in his classical studies." The numerous illustrations are well chosen. The boy's library will hardly be complete without this addition to its shelves.

Scenes in Fairyland; or, Miss Mary's Visits to the Court of Fairy Realm. By Canon Atkinson. 12mo, pp. 256. New York: Macmillan & Co. \$1.25.

Canon Atkinson has written and C. E. Brock has appropriately illustrated a book of merry and mysterious happenings among the elves, dwarfs and fairies—"Scenes in Fairyland, or Miss Mary's Visits to the Court of Fairy Realm." The style is, of course, fitted for children's reading, and little Miss Mary will be a good guide in the delightful region of fancy, which is so real to children until they finally lay down their fairy books regretfully, saying with Miss Mary: "Oh, mother, I am so sorry, there really are no fairies for me any longer!"

Cab and Caboose: The Story of a Railroad Boy. By Kirk Munroe. 12mo, pp. 269. New York: G. P. Putnam's Sons. \$1.25.

Wide-awake boys are instinctively interested in anything and everything about a railroad. In the "Rail and Water" series of G. P. Putnam's Sons a new member is "Cab and Caboose: The Story of a Railroad Boy." With its suggestive cover, good, clear print, illustrations, and the exciting railroad adventures in which the young hero plays an important part, it may well go on the shelf of the boy's library along with Trowbridge and Oliver Optic.
